Introduction

This document demonstrates how to configure a connection between a router and the Cisco VPN Client 4.x using Remote Authentication Dial-In User Service (RADIUS) for user authentication. Cisco IOS® Software Releases 12.2(8)T and later support connections from Cisco VPN Client 4.x. The VPN Clients 3.x and 4.x use Diffie Hellman (DH) group 2 policy. The **isakmp policy # group 2** command enables the VPN Clients to connect.

This document shows authentication on the RADIUS server, and authorization (such as assigning the Windows Internet Naming Service (WINS) and Domain Naming Service (DNS)) locally by the router. If you are interested in doing both authentication and authorization through the RADIUS server, refer to Configuring IPSec Between a Cisco IOS Router and a Cisco VPN Client 4.x for Windows Using RADIUS.

Note: IPSec VPN Accounting is now available. Refer to IPSec VPN Accounting for more information and sample configurations.

Refer to IPsec Tunnel Between IOS Router and Cisco VPN Client 4.x for Windows with TACACS+ User Authentication Configuration Example for more information about the scenario where the user authentication occurs externally with TACACS+ protocol.

Refer to Configuring Cisco VPN Client 3.x for Windows to IOS Using Local Extended Authentication for more information about the scenario where the user authentication occurs locally in the Cisco IOS router.

Refer to PIX/ASA 7.x and Cisco VPN Client 4.x for Windows with Microsoft Windows 2003 IAS RADIUS

Authentication Configuration Example for information on how to set up the remote access VPN connection between a Cisco VPN Client (4.x for Windows) and the PIX 500 Series Security Appliance 7.x using a Microsoft Windows 2003 Internet Authentication Service (IAS) RADIUS server.

Refer to IPSec – PIX to VPN Client Wild-card, Pre-shared, Mode Configuration with Extended Authentication for information on how to connect a VPN Client to a PIX Firewall using wildcards, mode-config, the **sysopt connection permit-ipsec** command, and extended authentication (Xauth).

Refer to IPsec Between a VPN 3000 Concentrator and a VPN Client 4.x for Windows using RADIUS for User Authentication and Accounting Configuration Example for information on how to establish an IPsec tunnel between a Cisco VPN 3000 Concentrator and a Cisco VPN Client 4.x for Windows using RADIUS for user authentication and accounting.

Prerequisites

Requirements

Ensure that you meet these requirements before you attempt this configuration:

- A pool of addresses to be assigned for IPsec
- A group called "3000clients" with a password of "cisco123"
- User authentication on a RADIUS server

Components Used

The information in this document is based on these software and hardware versions:

- A 2621XM Router that runs Cisco IOS Software Release 12.2(15)T2
- CiscoSecure ACS for Windows 2000 version 4.2 (any RADIUS server should work)
- Cisco VPN Client for Windows version 4.8 (any VPN Client 4.x and later should work)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

This is output from the **show version** command on the router:

```
vpn2621#show version
Cisco Internetwork Operating System Software
IOS (tm) C2600 Software (C2600-IK9S-M), Version 12.2(15)T2, RELEASE SOFTWARE (fc2)

RADIUS Server Configuration

Configure the RADIUS Server for User Authentication

Complete these steps in order to configure the RADIUS server:

1. Add an Entry for the router in the RADIUS server database.

The screenshot shows the Cisco Aironet Web Interface with the 'AAA Clients' configuration page. On the left is a vertical menu bar with icons for User Setup, Group Setup, Shared Profile Components, Network Configuration, System Configuration, Interface Configuration, Administration Control, External User Databases, Reports and Activity, and Online Documentation. The main content area has a title 'AAA Clients' with a help icon. Below it is a table with four rows. The first row contains the column headers: 'AAA Client Hostname', 'AAA Client IP Address', and 'Authenticate Using'. The second row contains the values: '340', '172.18.124.151', and 'RADIUS (Cisco Aironet)'. The third row contains the values: 'Aironet-340-Lab', '14.36.1.99', and 'RADIUS (Cisco Aironet)'. The fourth row contains the values: 'glenntest', '172.18.124.120', and 'RADIUS (Cisco IOS/PIX)'. At the bottom right of the table is a button labeled 'Add Entry'.

AAA Client Hostname	AAA Client IP Address	Authenticate Using
340	172.18.124.151	RADIUS (Cisco Aironet)
Aironet-340-Lab	14.36.1.99	RADIUS (Cisco Aironet)
glenntest	172.18.124.120	RADIUS (Cisco IOS/PIX)
router	172.18.124.150	TACACS+ (Cisco IOS)

2. Specify the IP address of the router "172.18.124.159", along with the shared secret key "cisco123". Choose **RADIUS** in the Authenticate Using drop-down box.

Add AAA Client

AAA Client Hostname: vpn2611

AAA Client IP Address: 172.18.124.159

Key: cisco123

Authenticate Using: RADIUS (Cisco IOS/PK)

Single Connect TACACS+ AAA Client (Record stop in accounting on failure).

Log Update/Watchdog Packets from this AAA Client

Log RADIUS Tunneling Packets from this AAA Client

Submit | Submit + Restart | Cancel

3. Add the Username for the VPN user in the CiscoSecure database. In the example, the username is cisco.

User: cisco

Find | Add/Edit

List users beginning with letter/number:

A	B	C	D	E	F	G	H	I	J	K	L	M
N	O	P	Q	R	S	T	U	V	W	X	Y	Z
0	1	2	3	4	5	6	7	8	9			

List All Users | Back to Help

4. On the next window, specify the password for the user cisco. In this example, the password is also cisco. You can map the user account to a group. Once you have finished, click **Submit**.

Supplementary User Info

Real Name:

Description:

User Setup

Password Authentication: CiscoSecure Database

CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Separate (CHAP/MS-CHAP/ARAP)

Password:

Confirm:

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Group to which the user is assigned: Group 19

Submit | Cancel

VPN Client 4.8 Configuration

Complete these steps in order to configure the VPN Client 4.8:

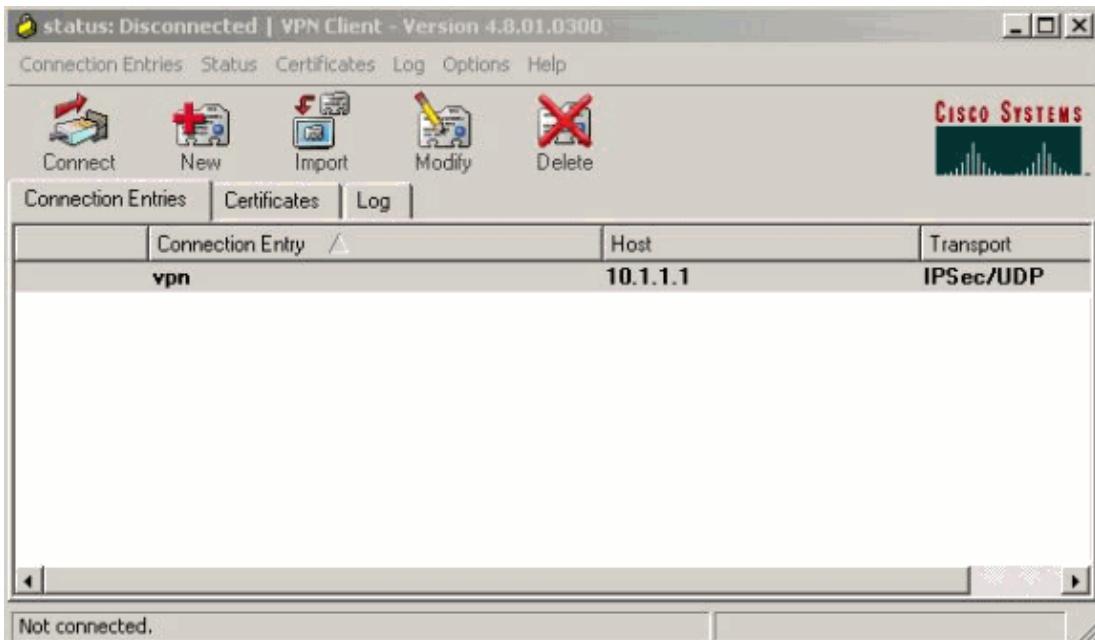

1. Choose **Start > Programs > Cisco Systems VPN Client > VPN Client**.
2. Click **New** to launch the Create New VPN Connection Entry window.

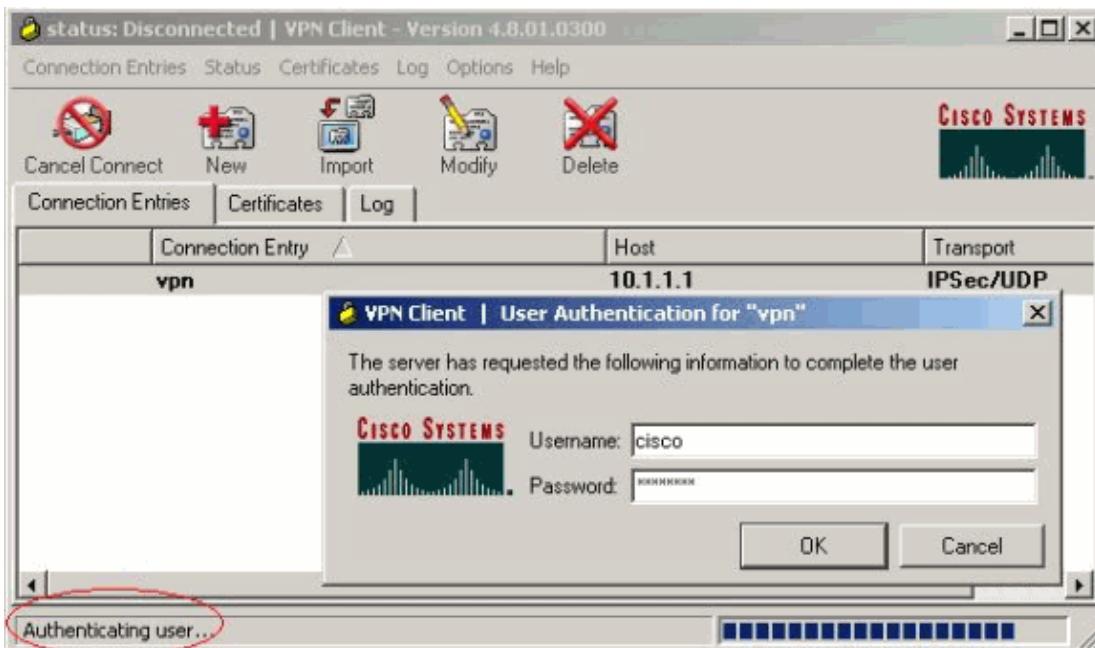

3. Enter the name of the Connection Entry along with a description. Enter the outside IP address of the router in the Host box. Then enter the VPN Group name and password and click **Save**.

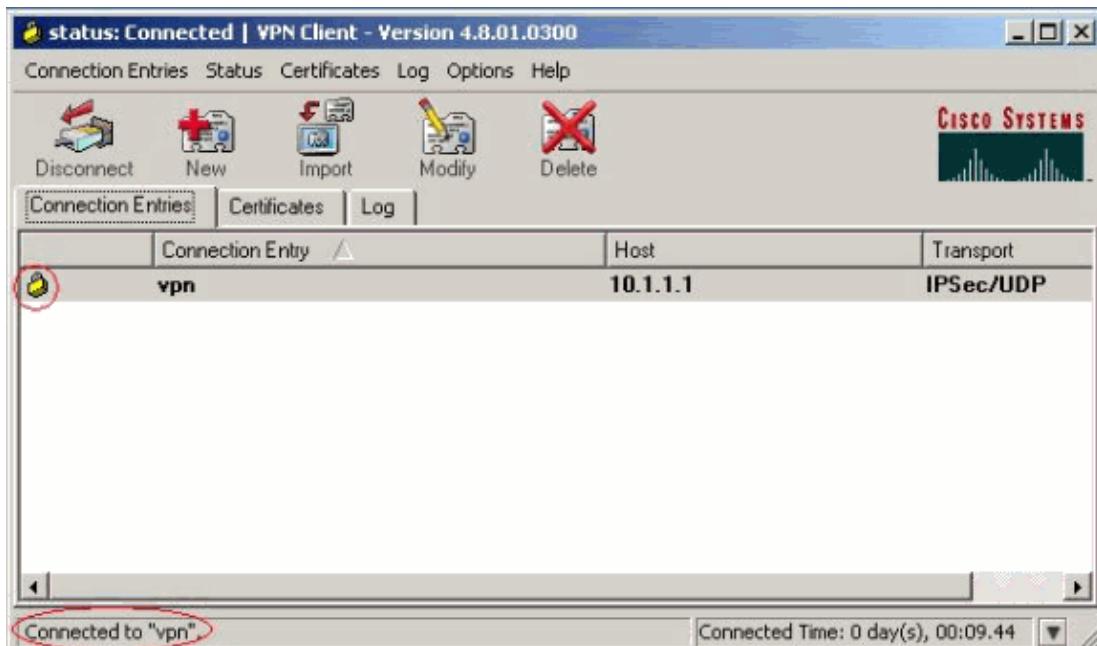

4. Click on the connection you would like to use and click **Connect** from the VPN Client main window.

5. When prompted, enter the Username and Password information for xauth and click **OK** to connect to the remote network.

The VPN Client gets connected with the router at the central site.

Enabling Split Tunneling

In order to enable split tunneling for the VPN connections, make sure that you have an access control list (ACL) configured on the router. In this example, the **access-list 108** command is associated with the group for split-tunneling purposes, and the tunnel is formed to the 14.38.X.X /16 network. Traffic flows unencrypted to devices not in ACL 108 (for example, the Internet).

```
access-list 108 permit ip 172.18.124.0 0.0.255.255 10.16.20.0 0.0.0.255
```

Apply the ACL on the group properties.

```
crypto isakmp client configuration group 3000client
key cisco123
dns 10.1.1.10
wins 10.1.1.20
domain cisco.com
pool ippool
acl 108
```

Configure RADIUS Server Fallback Feature

When the primary RADIUS server becomes unavailable, the router will failover to the next active backup RADIUS server. The router will continue to use the secondary RADIUS server forever, even if the primary server is available. Usually the primary server is high performance and the preferred server. If the secondary server is not available, the local database can be used for authentication using the **aaa authentication login userauthen group radius local** command.

Verify

Use this section to confirm that your configuration works properly.

The Output Interpreter Tool (registered customers only) (OIT) supports certain **show** commands. Use the OIT to view an analysis of **show** command output.

This is output from relevant **show** commands:

Troubleshoot

Use this section to troubleshoot your configuration.

Troubleshooting Commands

The Output Interpreter Tool (registered customers only) (OIT) supports certain **show** commands. Use the OIT to view an analysis of **show** command output.

Note: Refer to Important Information on Debug Commands before you use **debug** commands.

- **debug crypto ipsec** Displays debug information about IPSec connections.
- **debug crypto isakmp** Displays debug information about IPSec connections, and shows the first set of attributes that is denied due to incompatibilities on both ends.
- **debug crypto engine** Displays information from the crypto engine.
- **debug aaa authentication** Displays information on AAA/Terminal Access Controller Access Control System Plus (TACACS+) authentication.
- **debug aaa authorization raduis** Displays information on AAA/TACACS+ authorization.
- **debug radius** Displays information on troubleshooting communication between the RADIUS server and the router.

Debug Output

This section provides debug information from the router that you can use to troubleshoot your configuration.

Router Logs

```

vpn2621#show debug
General OS:
    AAA Authentication debugging is on
    AAA Authorization debugging is on

    Radius protocol debugging is on
    Radius packet protocol debugging is on

Cryptographic Subsystem:
    Crypto ISAKMP debugging is on
    Crypto Engine debugging is on
    Crypto IPSEC debugging is on

vpn2621#
*ISAKMP (0:0): received packet from 10.0.0.1 dport 500 sport 500 Global (N) NEW SA
*ISAKMP: Created a peer struct for 10.0.0.1, peer port 500
*ISAKMP: Locking peer struct 0x83166B20, IKE refcount 1 for
        crypto_ikmp_config_initialize_sa
*ISAKMP (0:0): Setting client config settings 82F0F82C
*ISAKMP (0:0): (Re)Setting client xauth list and state
*ISAKMP: local port 500, remote port 500
*ISAKMP: insert sa successfully sa = 83165694
*ISAKMP (0:1): processing SA payload. message ID = 0
*ISAKMP (0:1): processing ID payload. message ID = 0
*ISAKMP (0:1): peer matches *none* of the profiles
*ISAKMP (0:1): processing vendor id payload
*ISAKMP (0:1): vendor ID seems Unity/DPD but major 215 mismatch
*ISAKMP (0:1): vendor ID is XAUTH
*ISAKMP (0:1): processing vendor id payload
*ISAKMP (0:1): vendor ID is DPD
*ISAKMP (0:1): processing vendor id payload
*ISAKMP (0:1): vendor ID seems Unity/DPD but major 123 mismatch
*ISAKMP (0:1): vendor ID is NAT-T v2
*ISAKMP (0:1): processing vendor id payload
*ISAKMP (0:1): vendor ID seems Unity/DPD but major 194 mismatch
*ISAKMP (0:1): processing vendor id payload
*ISAKMP (0:1): vendor ID is Unity
*ISAKMP (0:1): Authentication by xauth preshared
*ISAKMP (0:1): Checking ISAKMP transform 1 against priority 3 policy
*ISAKMP:      encryption AES-CBC
*ISAKMP:      hash SHA
*ISAKMP:      default group 2
*ISAKMP:      auth XAUTHInitPreShared
*ISAKMP:      life type in seconds

```

```

*ISAKMP:      life duration (VPI) of 0x0 0x20 0xC4 0x9B
*ISAKMP:      keylength of 256
*ISAKMP (0:1): Encryption algorithm offered does not match policy!

66 16:52:40.280 06/18/03 Sev=Info/4 IPSEC/0x63700010
Created a new key structure

67 16:52:40.290 06/18/03 Sev=Info/4 IPSEC/0x6370000F
Added key with SPI=0xc62fbec0 into key list

68 16:52:40.290 06/18/03 Sev=Info/4 IPSEC/0x63700010
Created a new key structure

69 16:52:40.290 06/18/03 Sev=Info/4 IPSEC/0x6370000F
Added key with SPI=0x35c5ff56 into key list

70 16:52:41.562 06/18/03 Sev=Info/6 DIALER/0x63300008
MAPI32 Information - Outlook not default mail client

71 16:52:54.230 06/18/03 Sev=Info/5 IKE/0x63000055
Received a key request from Driver for IP address 1.1.1.2, GW IP = 10.1.1.1

72 16:52:54.250 06/18/03 Sev=Info/4 IKE/0x63000013
SENDING >>> ISAKMP OAK QM *(HASH, SA, NON, ID, ID) to 10.1.1.1

73 16:52:54.731 06/18/03 Sev=Info/5 IKE/0x6300002F
Received ISAKMP packet: peer = 10.1.1.1

74 16:52:54.731 06/18/03 Sev=Info/4 IKE/0x63000014
RECEIVING <<< ISAKMP OAK QM *(HASH, SA, NON, ID, ID, NOTIFY:STATUS_RESP_LIFETIME)
from 10.1.1.1

75 16:52:54.741 06/18/03 Sev=Info/5 IKE/0x63000044
RESPONDER-LIFETIME notify has value of 3600 seconds

76 16:52:54.741 06/18/03 Sev=Info/5 IKE/0x63000045
RESPONDER-LIFETIME notify has value of 4608000 kb

```

77      16:52:54.741  06/18/03  Sev=Info/4          IKE/0x63000013
SENDING >>> ISAKMP OAK QM *(HASH) to 10.1.1.1

78      16:52:54.741  06/18/03  Sev=Info/5          IKE/0x63000058
Loading IPsec SA (Message ID = 0x41A55AFF OUTBOUND SPI = 0xCCEDA620
INBOUND SPI = 0x0C5B3DB2)

79      16:52:54.771  06/18/03  Sev=Info/5          IKE/0x63000025
Loaded OUTBOUND ESP SPI: 0xCCEDA620

80      16:52:54.781  06/18/03  Sev=Info/5          IKE/0x63000026
Loaded INBOUND ESP SPI: 0x0C5B3DB2

81      16:52:54.781  06/18/03  Sev=Info/4          CM/0x63100021
Additional Phase 2 SA established.

82      16:52:55.472  06/18/03  Sev=Info/4          IPSEC/0x63700010
Created a new key structure

83      16:52:55.472  06/18/03  Sev=Info/4          IPSEC/0x6370000F
Added key with SPI=0x20a6edcc into key list

84      16:52:55.472  06/18/03  Sev=Info/4          IPSEC/0x63700010
Created a new key structure

85      16:52:55.472  06/18/03  Sev=Info/4          IPSEC/0x6370000F
Added key with SPI=0xb23d5b0c into key list

86      16:52:55.472  06/18/03  Sev=Info/4          IPSEC/0x63700019
Activate outbound key with SPI=0x20a6edcc for inbound key with SPI=0xb23d5b0c
