Introduction

This document explains how to install the fax to mail driver without installing ViewMail for Outlook (VMO), on the client side. The information in this document is based on Cisco Unity for Exchange with Fax, in 2.4.6 and earlier.

Prerequisites

Requirements

There are no specific requirements for this document.

Procedure

Complete these steps in order to install the fax to mail driver without installing VMO:

1. Make sure the generic printer driver for the client operating system is installed.
2. Run the fax to mail setup from the CD. The setup is located under \Fax\Windows\FaxToMail.
