Introduction

This document explains what a crashinfo file is, what a crashinfo file contains, and how to retrieve information from the crashinfo file.

Prerequisites

Requirements

There are no specific requirements for this document.

Components Used

The information in this document is based on these software and hardware versions:

- Cisco 1700, 3600, 7000, 7200, 7500, and 12000 Series Routers
- Cisco IOS® Software Release 11.1 and later

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Background

The crashinfo file is a collection of useful information related to the current crash stored in boot Flash or Flash memory.

When a router crashes due to data or stack corruption, more reload information is needed to debug this type of crash than just the output from the normal **show stacks** command. The reload information is written by

default to **bootflash:crashinfo** on the Cisco 12000 Gigabit Router Processor (GRP), the Cisco 7000 and 7500 Route Switch Processor (RSP), and the Cisco 7200 Series Routers. For the Cisco 7500 Versatile Interface Processor 2 (VIP2), this file is stored by default to **bootflash:vip2_slot_no_crashinfo** where the slot_no is the VIP2 slot number. For the Cisco 7000 Route Processor (RP), the file is stored by default to **flash:crashinfo**.

Generation of the default crashinfo file was first introduced in the following Cisco IOS software releases:

- For RSPs and RPs:
 - ◆ 11.1(13)CA1
 - ◆ 11.1(19)CC
 - ◆ 11.2(10)P
 - ◆ 11.3(1)
 - ◆ 11.3(1)T
- For Cisco 7200s:
 - ◆ 11.1(18)CA
 - ◆ 11.2(15)P
 - ◆ 11.3(6)
 - ◆ 11.3(6)AA
 - ◆ 11.3(6)NA
 - ◆ 11.3(6)T
- For Cisco 12000 GRPs:
 - ◆ 11.2(11)GS2.1
 - ◆ 11.2(9)GS7.2
 - ◆ 11.2(14)GS2.5

The crashinfo collection mechanism is available in Cisco IOS Software Releases 12.0, 12.1, and 12.2 for these platforms:

- For Cisco 1700s:
 - ◆ 12.1(2)
 - ◆ 12.1(2)T
 - ◆ 12.2(1)
- For Cisco 2600s:
 - ◆ 12.1(13)
 - ◆ 12.2(7)T
 - ◆ 12.2(7)
- For Cisco 3600s:
 - ◆ 12.2.(12)DA
 - ◆ 12.2(11)T
 - ◆ 12.2(11)

Contents of the Crashinfo File

The crashinfo file contains this information:

- limited error message (log) and command history

- description of the image running at the time of the crash
- **show alignment**
- malloc and free traces
- process level stack trace
- process level context
- process level stack dump
- interrupt level stack dump
- process level info
- process level register memory dump

Retrieving Information from the Crashinfo File

When a crashinfo is available in boot Flash, this appears at the end of the **show stack** command output:

```
*****
***** Information of Last System Crash *****
*****

Using bootflash:crashinfo_20000323-061850. 2000

CMD: 'no ip cef di' 03:23:58 UTC Thu Mar 2 2000
CMD: 'no ip cef distributed ' 03:23:58 UTC Thu Mar 2 2000
...
```

Issue these commands in order to retrieve a crashinfo file:

```
Router#dir bootflash:
Directory of bootflash:/

 1 -rw-      4088008   Oct 07 1999 04:51:29  rsp-boot-mz.120-6.6

```

Copying the Crashinfo File to a TFTP Server

Issue these commands in order to copy the crashinfo file to a Trivial File Transfer Protocol (TFTP) server:

```
Router#dir bootflash:
 1 -rw-      4088008   Oct 07 1999 04:51:29  rsp-boot-mz.120-6.6
 2 -rw-      178619    Mar 23 2000 06:18:50  crashinfo_20000323-061850

Router#copy bootflash:crashinfo_20000323-061850 tftp
Address or name of remote host []? 10.1.1.1
Destination filename [crashinfo_20000323-061850 ]?
!!
```

If the slave RSP has crashed, look in the **slavebootflash:**. For the Cisco 12000 GSR, look in the **sec-bootflash:**. Ensure there is enough free space in boot Flash by using the **dir bootflash:** command. In order to delete an old crashinfo file to make free space, issue the **delete bootflash:filename** command. The **delete bootflash:filename** command marks the file as deleted, but the file is still physically in memory and can be restored. In order to physically delete it from memory, issue the **squeeze bootflash:** command.

If the router has crashed multiple times, the crashinfo files can stack up with only the last one viewable. For example:

```
Router#dir /all bootflash:
#- ED --type-- --crc--- -seek-- nlen -length- -----date/time----- name
1  .. unknown  FD38E5C7  3FD81C   25  3921820 Oct 02 1998 14:43:56

3430064 bytes available (4172112 bytes used)
```

Note that one file is deleted and one is viewable.

```
Router#show file bootflash:crashinfo

```

Delete the file you just looked at:

```
Router#delete bootflash:crashinfo
```

```
Router#dir /all bootflash:
#- ED --type-- --crc--- -seek-- nlen -length- -----date/time----- name
1  .. unknown  FD38E5C7  3FD81C   25  3921820 Oct 02 1998 14:43:56

```

Restore the old file:

```
Router#undelete ?

```

```
Router#undelete 2
File undelete error (file not found)
```

```
Router#undelete 2 ?

3430064 bytes available (4172112 bytes used)

```

Examine the old file with the **show file bootflash:crashinfo** command. Repeat this procedure to review older crashes.
