Introduction

This document demonstrates how to configure a connection between a Cisco IOS Router and the Cisco VPN Client 4.x using RADIUS for group authorization and user authentication. Cisco IOS® Software Release 12.2(8)T and later support connections from Cisco VPN Client 3.x. The VPN Clients 3.x and 4.x use Diffie Hellman (DH) group 2 policy. The **isakmp policy # group 2** command enables the VPN Clients to connect.

Note: IPSec VPN Accounting is now available. Refer to IPSec VPN Accounting for more information and sample configurations.

Prerequisites

Requirements

Ensure that you meet these requirements before you attempt this configuration:

- A pool of addresses to be assigned for IPSec
- A group called "3000clients" with a pre-shared key of "cisco123"
- Group authorization and user authentication on a RADIUS server

Note: RADIUS Accounting is not supported at this time.

Components Used

The information in this document is based on these software and hardware versions:

- A 2611 Router that runs Cisco IOS Software Release 12.2(8)T.

- Cisco Secure ACS for Windows (any RADIUS server should work)
- Cisco VPN Client for Windows version 4.8 (any VPN Client 4.x should work)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

This is output from the **show version** command on the router:

```
vpn2611#show version
Cisco Internetwork Operating System Software

16384K bytes of processor board System flash (Read/Write)

Configuration register is 0x2102
```

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Background Theory

This document shows authentication and authorization, such as assigning the Windows Internet Naming Service (WINS) and Domain Naming Service (DNS), by the RADIUS server. If you are interested in performing authentication by the RADIUS server and authorization locally by the router, refer to [Configuring IPsec Between a Cisco IOS Router and a Cisco VPN Client 4.x for Windows using RADIUS for User Authentication](#).

Configure

In this section, you are presented with the information to configure the features described in this document.

Note: Use the Command Lookup Tool (registered customers only) to find more information on the commands used in this document.

Network Diagram

This document uses this network setup:

Note: The IP addresses in this example network are not routable in the global Internet because they are private IP addresses in a lab network.

RADIUS Server Configuration

Configure the RADIUS Server for AAA Clients (router)

Complete these steps:

1. Click **Add Entry** to add the router to the RADIUS server database.

AAA Clients		
AAA Client Hostname	AAA Client IP Address	Authenticate Using
340	172.18.124.151	RADIUS (Cisco Aironet)
Aironet-340-Lab	14.36.1.99	RADIUS (Cisco Aironet)
glentest	172.18.124.120	RADIUS (Cisco IOS/PIX)
router	172.18.124.150	TACACS+ (Cisco IOS)

[Add Entry](#)

- [Network Device Groups](#)
- [Adding a Network Device Group](#)
- [Renaming a Network Device Group](#)
- [Deleting a Network Device Group](#)
- [AAA Clients](#)
- [Adding a AAA Client](#)
- [Editing a AAA Client](#)
- [Deleting a AAA Client](#)
- [AAA Servers](#)
- [Adding a AAA Server](#)
- [Editing a AAA Server](#)
- [Deleting a AAA Server](#)
- [Proxy Distribution Table](#)
- [Adding a Proxy Distribution Table Entry](#)
- [Sorting Proxy Distribution Table Entries](#)

2. Specify the IP address of the router "172.18.124.159" along with the shared secret key "cisco123" and choose **RADIUS** in the Authenticate Using drop-down box.

Add AAA Client

AAA Client Hostname:

AAA Client IP Address:

Key:

Authenticate Using:

Single Connect TACACS+ AAA Client (Record stop in accounting on failure).

Log Update/Watchdog Packets from this AAA Client

Log RADIUS Tunneling Packets from this AAA Client

Buttons:

- [AAA Client Hostname](#)
- [AAA Client IP Address](#)
- [Key](#)
- [Network Device Group](#)
- [Authenticate Using](#)
- [Single Connect TACACS+ AAA Client](#)
- [Log Update/Watchdog Packets from this AAA Client](#)
- [Log RADIUS Tunneling Packets from this AAA Client](#)

AAA Client Hostname

The AAA Client Hostname is the name assigned to the AAA client.

[\[Back to Top\]](#)

AAA Client IP Address

Configure the RADIUS Server for Group Authentication and Authorization

Complete these steps:

1. Click **Add/Edit** to add a User named **3000client** to the RADIUS server.

User:

Buttons:

List users beginning with letter/number:

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 0 1 2 3 4 5 6 7 8 9

Buttons:

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, delete users in the database.

User Setup and External User Databases

Before Cisco Secure ACS can authenticate users with an external database, you must:

- You must have the database up and running on the external server.
- You must have configured the applicable parameters in the external database.

2. Specify the password **cisco** for this user.

This password is a special keyword for Cisco IOS, which indicates a group profile must be referenced. You can map the user to a Cisco Secure group if you prefer. Make sure that **No IP address assignment** is chosen.

CISCO SYSTEMS

User Setup

User Setup ?

Password Authentication:

CiscoSecure Database

CiscoSecure PAP (Also used for CHAP/MS-CHAP/ARAP, if the Separate field is not checked.)

Password

Confirm Password

Separate (CHAP/MS-CHAP/ARAP)

Password

Confirm Password

When using a Token Card server for authentication, supplying a separate CHAP password for a token card user allows CHAP authentication. This is especially useful when token caching is enabled.

Group to which the user is assigned:

Group 20

Callback

Use group setting

No callback allowed

Callback using this number

Dialup client specifies callback number

Use Microsoft NT callback settings

Client IP Address Assignment

Use group settings

No IP address assignment

Assigned by dialup client

Assign static IP address

Assigned by AAA client pool

Submit Delete Cancel

3. Specify the group authorization parameters that will be passed down by this user account back to the VPN Client.

Make sure you have **cisco-av-pair** enabled with these attributes:

- ◆ ipsec:key-exchange=ike
- ◆ ipsec:key-exchange=preshared-key
- ◆ ipsec:addr-pool=ippool
- ◆ ipsec:inacl=108 (only needed if you use split tunneling on the router)

Also, make sure that you have these IETF RADIUS Attributes enabled:

- ◆ Attribute 6: Service-Type=Outbound
- ◆ Attribute 64: Tunnel-Type=IP ESP
- ◆ Attribute 69: Tunnel-Password=cisco123 (this is your group password on the VPN Client)

Once you have finished, click **Submit**.

Checking this option will PERMIT all UNKNOWN Services

Default (Undefined) Services

Cisco IOS/PIX RADIUS Attributes ?

[009\001] cisco-av-pair

```
ipsec:key-exchange=ike
ipsec:key-exchange=preshared-key
ipsec:addr-pool=ippool
ipsec:inac1=100
```

IETF RADIUS Attributes ?

[006] Service-Type

[007] Framed-Protocol

[027] Session-Timeout

[028] Idle-Timeout

[064] Tunnel-Type

Tag Value

Tag Value

[069] Tunnel-Password

Tag Value

Tag Value

Submit Delete Cancel

Under Vendor Specific Attributes, you can also enable these optional attributes:

- ◆ ipsec:default-domain=
- ◆ ipsec:timeout=
- ◆ ipsec:idletime=
- ◆ ipsec:dns-servers=
- ◆ ipsec:wins-servers=

Configure the RADIUS Server for User Authentication

Complete these steps:

1. Click **Add/Edit** to add the VPN user in the Cisco Secure database.

In this example, the username is cisco.

- [User Setup and External User Databases](#)
- [Finding a Specific User in the CiscoSecure User Database](#)
- [Adding a User to the CiscoSecure User Database](#)
- [Listing Usernames that Begin with a Particular Character](#)
- [Listing All Usernames in the CiscoSecure User Database](#)
- [Changing a Username in the CiscoSecure User Database](#)

User Setup enables you to configure individual user information, add users, and delete users in the database.

2. On the next window, specify the password for the user **cisco**. The password is also **cisco**.

You can map the user account to a group. Once you have finished, click **Submit**.

- [Account Disabled](#)

- [RADIUS Vendor-Specific Attributes](#)

Account Disabled Status
Select the Account Disabled check box to disable this account; clear the check box to enable the account.
[\[Back to Top\]](#)

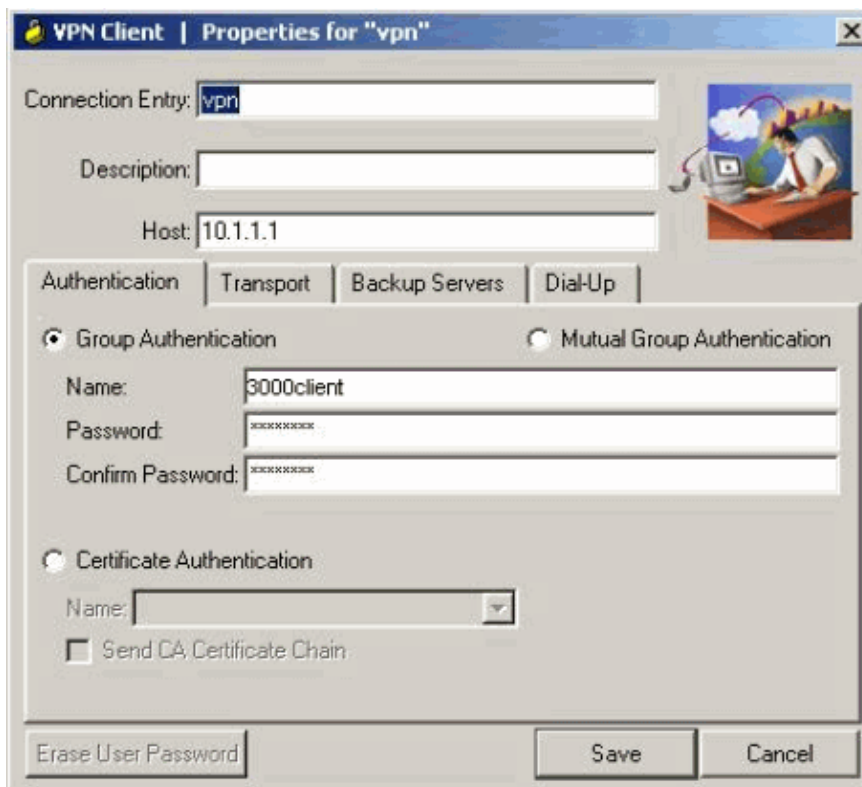

VPN Client 4.8 Configuration

Complete these steps in order to configure the VPN Client 4.8:

1. Choose **Start > Programs > Cisco Systems VPN Client > VPN Client**.
2. Click **New** to launch the Create New VPN Connection Entry window.

3. Enter the name of the Connection Entry along with a description. Enter the outside IP address of the router in the Host box. Then, enter the VPN Group name and password and click **Save**.

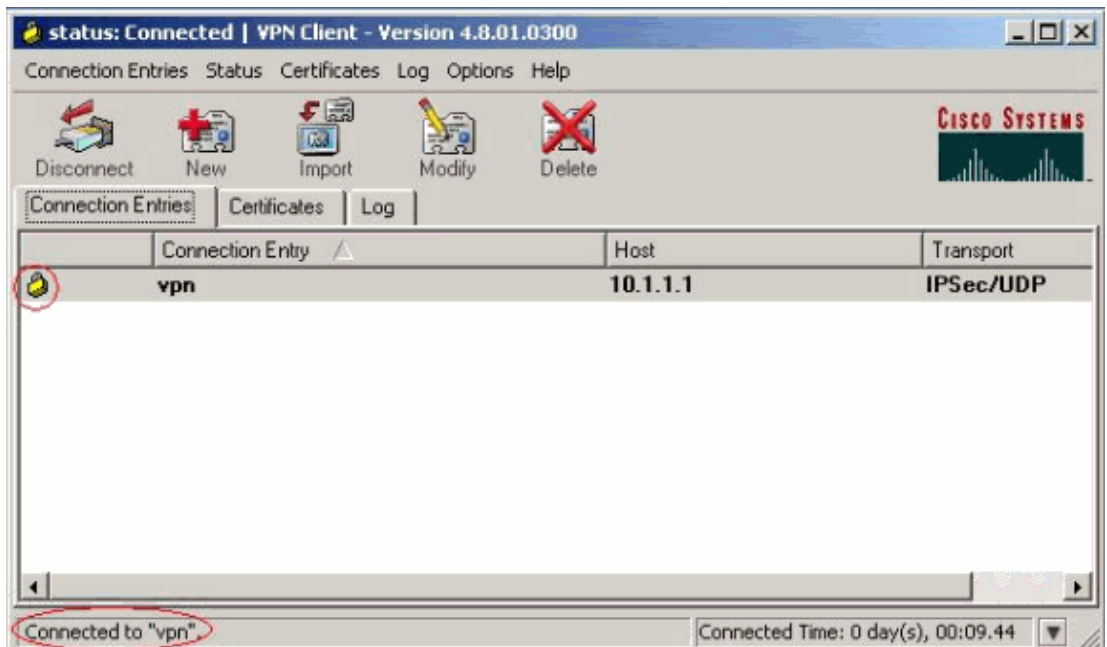

4. Click on the connection you want to use and click **Connect** from the VPN Client main window.

5. When prompted, enter the Username and Password information for xauth and click **OK** to connect to the remote network.

The VPN Client gets connected with the router at the central site.

Verify

Use this section to confirm that your configuration works properly.

The Output Interpreter Tool (registered customers only) (OIT) supports certain **show** commands. Use the OIT to view an analysis of **show** command output.

Troubleshoot

Use this section to troubleshoot your configuration.

Troubleshooting Commands

The Output Interpreter Tool (registered customers only) (OIT) supports certain **show** commands. Use the OIT to view an analysis of **show** command output.

Note: Refer to Important Information on Debug Commands before you use **debug** commands.

- **debug crypto ipsec** Displays debug information about IPsec connections.
- **debug crypto isakmp** Displays debug information about IPsec connections, and shows the first set of attributes that are denied due to incompatibilities on both ends.
- **debug crypto engine** Displays information from the crypto engine.
- **debug aaa authentication** Displays information on AAA/TACACS+ authentication.
- **debug aaa authorization radius** Displays information on AAA/TACACS+ authorization.
- **debug radius** Displays information on troubleshooting communication between the RADIUS server and the router.

Debug Output

This section provides debug information from the router that you can use to troubleshoot your configuration.
