## Introduction

This document provides information on how to export media/content from the Content Distribution Manager (CDM) in Application and Content Networking System (ACNS) 4.x.x.

## Prerequisites

### Requirements

There are no specific requirements for this document.

### Components Used

This document is not restricted to specific software and hardware versions.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

### Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

## Export the Media/Content

From a client workstation, complete these steps to export media/content from a CDM in ACNS 4.x.x:

1. Launch Windows Explorer.
2. In the address window, type `\\CDM_IP_address\vod_fs\`
3. Log in with the Admin account.

A list of folders named after the various channels configured on the CDM appears.

4. Open the folder.

The media/content is visible.

5. Drag and drop the media/contents onto your desktop.

**Note:** In order to use Samba in ACNS 4.2, you need to restart the "symbolic link building" process. You can restart this process from the CDM global-configuration page whose URL is <http://cdmipaddr/cgi-bin/restricted/global-config>.

## NetPro Discussion Forums – Featured Conversations

Networking Professionals Connection is a forum for networking professionals to share questions, suggestions, and information about networking solutions, products, and technologies. The featured links are some of the most recent conversations available in this technology.
