Introduction

This document explains how to uninstall Cisco WAN Manager from your system.

Prerequisites

Requirements

There are no specific requirements for this document.

Components Used

The information in this document applies to Cisco WAN Manager versions 9.2 and 10.x installed on Solaris.

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

Uninstall Procedures

Uninstall Cisco WAN Manager 10.5 on Solaris 2.7

Follow these steps:

1. Stop the core of Cisco WAN Manager.

As root user, type these commands:

```
cd /usr/users
```

```
rm -fR svplus inform* corba
```

2. Remove the users **svplus** and **informix** from the files `/etc/passwd`, `/etc/shadow`, and `/etc/group`.

Uninstall Cisco WAN Manager 10.5 on Solaris 2.7

Follow these steps:

1. Stop the core of Cisco WAN Manager.

As root user, type these commands:

```
cd /usr/users
rm -rf corba informix* svplus
```

2. Type these commands in order to uninstall CiscoView:

```
cd /opt/CSCOpX/bin
uninstall.sh
```

3. In order to uninstall the Java plugin, go to the directory where the plug-in can be found and type:

```
./pam.sh (... and select option 2)
```

4. Type **pkgrm NSCPcom** in order to uninstall Netscape.
5. Remove the users **svplus** and **informix** from the files `/etc/passwd`, `/etc/shadow`, and `/etc/group`.

Verify

There is currently no verification procedure available for this configuration.

Troubleshoot

There is currently no specific troubleshooting information available for this configuration.
