## Introduction

This document explains improvements that have been made to Decision Editor.

## Prerequisites

## Components Used

The information in this document is based on Cisco Unified Call Studio, Universal Edition.

## Conventions

Refer to Cisco Technical Tips Conventions for more information on document conventions.

## Background Information

**Symptoms:** N/A

**Resolution:** When **Session Data** is chosen in the Argument Type combo box, the Variable Name field is changed from a text field to an editable combo box. This combo box lists known session data and allows the user to enter a new value, which adds more flexibility and ease of operation.

When **Element Data** is chosen in the Argument Type combo box, the Variable Name field is changed from a text field to an editable combo box. This combo box lists known element data and allows the user to enter a new value, which adds more flexibility and ease of operation.

When **Caller Activity** is chosen in the Argument Type combo box and **Number of Times the Exit State** is chosen in the Activity Type combo box, the Exit State field is changed from a text field to a combo box. This combo box lists the exit states of the element selected in the Element Name combo box. This reduces the possibility of errors caused due to entered invalid exit states.

## NetPro Discussion Forums – Featured Conversations

Networking Professionals Connection is a forum for networking professionals to share questions, suggestions,

and information about networking solutions, products, and technologies. The featured links are some of the most recent conversations available in this technology.
