

5 ways to get more agility from your network

Innovate and adapt while reducing cost and complexity with Cisco DNA.

1 Say hello to easy deployment and management.

Networks don't have to be so complicated. Get faster time to service and reduced operational overhead by automating provisioning and configuration. Make your bandwidth work for you by deploying a software-defined WAN solution, and benefit from ongoing innovation with flexible software licensing.

2 Say goodbye to operational complexity.

Jobs that used to take half an hour now take just a few minutes.¹

— Greg Fisbeck, program manager, Whirlpool Corporation

It's time to free up your IT resources with network functions virtualization. Get a simple, flexible interface; use design templates to help you manage services faster; and automate the deployment and compliance checking of network policies. All without replacing infrastructure.

3 Use insights to improve performance.

Get valuable information about network users and applications, peak usage times, and traffic routing so you can optimize your network infrastructure. Easily improve capacity planning and security incident detection, helping you lower your operation costs. You can also improve the quality of user experiences through visibility and control of your applications.

Organizations using Cisco TrustSec® reported a reduction in operational costs ranging from **25–80%²**

4 Get security that doesn't compromise agility.

Network security needs to be part of your strategy. Now you can control all access from one place across wired, wireless, and VPN connections. Cascade and enforce policies easily with software-defined segmentation—so you can control access and security policy consistently and efficiently without compromising agility.

5 Make your move to the cloud.

Deploy and manage your network more quickly and easily than ever. Cisco Meraki® Cloud Networking provides centralized cloud management, device and application visibility, real-time web-based diagnostics, monitoring, reporting, and security—without the cost and complexity of controller appliances or overlay management software.
