July 27, 2016

This document provides the features and defects addressed in Connected Analytics for Collaboration (CAC) Release 2.0.3. For further information about CAC functionality, see the Related Documentation section of this document.

Contents

This document contains the following sections

Features/Defects addressed

CAC Release 2.0.3 implements new features and addresses the defects in the following areas:

1. Geographical Segmentation (LDAP Geo locations – mismatch of City/Country Mapping)

2. CAC Analytics Studio features included:

   - Performance and response time improvements

   - SSO with CEC credentials

   - Inclusive of all usage data collected and processed by CAC

3. Fixed the defect where, in cases where there is 'no data,' the KPI for Active Users/Total Users shows 0% instead of 100%.

4. Fixed the defect where, in cases where there is 'no data,' all KPIs other than Active Users/Total Users show three dashes (---) instead of "NaN."

5. Fixed the defect where active users could show more usage than the overall total usage.
