

# Release Notes for Cisco Connected Analytics for Network Deployment Software Release 1.5

---

**July 27, 2015**

This document provides the features and open caveats for Cisco® Connected Analytics for Network Deployment (CAND) Release 1.5. For further information about CAND functionality, see the [Related Documentation](#) section of this document.

## Contents

This document contains the following sections

- [Enhancements](#)
- [Supported Browsers](#)
- [Supported OS Types](#)
- [Open Issues](#)
- [Product Coverage](#)
- [Related Documentation](#)

# Enhancements

CAND Release 1.5 implements features and improvements in the following areas:

- Support for the Common Services Platform Collector (CSPC): With the introduction of release 1.5, CAND now supports the CSPC VSEM format natively. For customers who do not already have the CSPC as part of Smart Net Total Care (SNTC) or Network Optimization Services (NOS), you can now download, install, and configure the CSPC software appliance for use with CAND on hardware or virtual machines provisioned by the customer.
- Additional Product Coverage: CAND 1.5 adds support for over 100 Cisco platforms. Review the complete list in the [Product Coverage](#) section.

# Supported Browsers

The following browsers are supported when using the CAND portal:

- Apple Safari 8.x on OSX only
- Mozilla Firefox 39.x
- Google Chrome 42.x and 43.x

# Supported Cisco OS Types

Supported Cisco operating system types include: CAND:

- Cisco IOS®
- Cisco CatOS
- Cisco NX-OS
- Cisco IOS-XR
- Cisco IOS-XE
- Cisco wireless devices
- Cisco ASA
- Cisco UCS® NX-OS

# Open Issues

Table 1 outlines a list of open issues in this software release.

**Table 1.** Open Issues

CDETS ID	Headline	Severity	Details
CSCur62559	Breakdown drop-down issue when last one quarter for Cisco managed cases	Minor	In “All Support Cases,” when using the breakdown option for “software version,” if there are no records for this selection then the entire breakdown option disappears. This happens for both bar charts and line charts.  Workaround: Refresh the screen.
CSCur62562	Pie chart breakdown by severity has overlapping text	Minor	In “All Support Cases” there is an overlapping of text when there are no records.
CSCut05392	Sorting mark is not present in the column	Cosmetic	When a user visits the tabular data for the first time, the sorting indicator is not available. Once the user clicks on the column header, the sorting mark appears.
CSCut07553	Sorting functionality behaves differently than expected on the hardware or software device details page	Minor	Records are sorted using a case-sensitive algorithm. Therefore, as an example, records starting with ‘a’ and ‘A’ are grouped separately.
CSCut15093	Extra, unneeded column is exported in the CSV file	Cosmetic	Some CSV export files contain an extra column called “Group ID,” which is not required. This column may be ignored.
CSCut15106	Cluster name mismatch between UI and exported CSV file	Minor	Extra characters are added into the cluster name within the CSV export file, so that the name does not match between the exported file and UI.
CSCut42980	Delete functionality is missing from the "My Report" link	Minor	Delete functionality is missing from the "My Report" link. Users are not able to delete any reports. This does affect the function of the tool.
CSCuu22581	Export functionality is not available under support case management	Severe	On the Support Case Management dashboards, both chart view and table view cannot be exported.  Workaround: Users may export case details from the Deployment Analysis Summary dashboard. This does not contain the exact same details as Support Case Analysis, so this is considered a partial workaround.
CSCuu54978	Policy device export functionality is showing an extra column in the exported file	Cosmetic	An additional column labeled ‘Original_row’ is present in the exported file. This column may be ignored.
CSCuu68398	Columns missing in the exported “All Contracts” file	Moderate	The column labeled “Duration” is missing in the exported contract file.
CSCuu71926	Misleading detail regarding the path of device when using a device search	Moderate	After selecting a search result on the detailed deployment analysis page, the breadcrumbs displayed near the top (hierarchical link) do not match the path of the selected search result. Instead the path shown is based on the path taken prior to launching the search.
CSCuu82173	Compile Date & Time is shown blank on Hardware Details section for WLC devices	Minor	When drilled-down to hardware details for wireless devices, the compile date and time is blank.

## ■ Product Coverage

CSCuu97518	Exported data of “Flagged Devices” shows additional columns	Moderate	After exporting the tabular data of “Flagged Devices,” the exported data shows two additional columns (“Updated” and “DeviceId”) which can be ignored.
CSCuv00141	Default collection date changes when switching from “Analysis” to “Summary”	Moderate	The default collection date shown in the “Detailed Deployment Summary” page changes when switching to the “Detailed Deployment Analysis” page and again when returning to the “Detailed Deployment Summary” page. Workaround: Use the date dropdown or one of the KPI trend charts to switch to the desired date.
CSCuv00612	The consistency and feature utilization indices displayed on the “Detailed Deployment Summary” page does not change when filtering by product family	Moderate	The consistency and feature utilization indices (KPIs) can be viewed at the product family level by viewing the bubble chart located below the KPIs.

## Product Coverage

For a complete list of supported devices, refer to the [CAND supported devices list](#).
