

Cisco Unified Communications Manager 10.0(1) Database Dictionary

This document describes the data stored in the primary CUCM database for the Cisco Unified Communications Manager 10.0(1) release. It is automatically generated from the development data dictionary used to create the SQL scripts that install the CCM database.

2.0 Table Details

2.1 Table Relationships

pkid is the primary key ID. It is always of type GUID (a 36 character UUID).

Fields that begin with the letters "fk" represent foreign keys into another table. The name of the field following the "fk" prefix up to but not including an underscore character is the name of the related table. The field in related table is always pkid. and is a GUID.

Fields that begin with the letters "ik" represent internal keys into the same table.

Fields that begin with a "tk" represent an enumerated type. This field is related to a table whose name begins with "Type" and ends with the name of the field following the prefix up to but not including an underscore character. The field in the related table is always "enum" and is an integer.

Some tables do not allow insert or delete. These tables are populated by installation programs and migrated.

Some tables do not allow any modifications at all and are populated by installation only.

Some fields do not allow modification. These fields are populated by triggers in response to changes in other records, or they are set when the record is inserted.

2.2 Field Types

DN

This field is a directory number. This is currently defined as a variable length string of max length 23.

enum

This field is related to another table. The table name begins with "Type" and is followed by the field name without the "tk" prefix.

GUID

This is a globally unique ID. It is represented as a string of length 36 (string representation of UUID).

long

This is an integer stored as signed 4 byte value (+/-2³¹-1). Refer to the Check Constraint for limitations on possible values.

string

This is a variable length string. The maximum length will be specified in bytes. The database stores string data using UTF-8 encoding. Refer to the Validation for limitations on characters and length of strings.

2.3 Table Level Rules and Field Details

Unless otherwise indicated, all tables and data are replicated throughout the cluster.

Note for developers

The Data Dictionary source is the same set of CSV files used to create the database. Each table, field, rule, and constraint has an ID next to it (in parentheses)

that indicates the source. The codes are always <type>-number. The type codes are as follows:

TI	Table Information from TypeTableInfo.csv
FI	Field Information from TypeFieldInfo.csv
RFI	Related Field Information from TypeRelatedFieldInfo.csv
MFI	Mult-Field Index from TypeMultiFieldIndex.csv
RI	Rule Information from TypeRuleInfo.csv

For example, RFI-21 is Related Field Info for enum = 21 in TypeRelatedFieldInfo.csv.

Error messages from business rule violations have two components - Error code and SQL Exception. For example, Error: java.sql.SQLException: 37131, SQL State: IX000, Error Code: -746. Error Code -746 indicates an exception based on database rules. If specific error message text is not displayed, it can be found in TypeDbErrors table where SQLException value is the value in the enum column. SQLException values above 25,000 also correlate directly to data dictionary entries at follows:

- Errors occurring because of validation or check constraints defined in TypeRelatedFieldInfo have a number that is equal to 25,000 plus the related field info rule number in datadictionary. For example, if an error 25142 occurs while updating ApplicationDialRule table, you can find the associated constraint with 25142-25000 = (RFI-)142. Check the constraints below the field definitions in the table (or just search this document for "RFI-142").
- Errors occurring because of validation or check constraints defined in TypeFieldInfo will have a number that is equal to 35,000 plus the field number. For example, if an error 37131 occurs while updating FACInfo table, you can find the associated rule with 37131-35000 = (FI-)2131. Then check the format of input data against the validation for the "FACInfo.Code" field (or just search this document for "FI-2131").

Legend for Tables

Elements defining a table
Field Name (with links to referenced tables)
Elements defining a field
Elements defining a rule
Multi-column uniqueness (combination of columns is unique)

2.3.1 aardialprefixmatrix (TI-182)

Description:	Defines the assigned digits to prepend to dialed digits to specified from and to AAR neighborhoods.	
Fields:	2.3.1.1 dialprefix (FI-1117)	
	Type:	string [24]
	Default Value:	EMPTY

	Validation:	^[0-9A-D*#+]{0,24}\$	
	Remarks:	The prefix digits to use for automated alternate routing within this AAR group.	
	2.3.1.2 fkaarneighborhood_from (FI-1115)		
	Type:	guid (Cascade Delete, Not Modifiable)	
	Remarks:	Specifies the AAR Neighborhood from which a call is being made. Inserted by trigger.	
	2.3.1.3 fkaarneighborhood_to (FI-1116)		
	Type:	guid (Cascade Delete, Not Modifiable)	
	Remarks:	Specifies the AAR Neighborhood to which a call is being made. Inserted by trigger.	
	2.3.1.4 pkid (FI-1114)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
Uniqueness:	fkaarneighborhood_from + fkaarneighborhood_to is unique. (MFI-55)		
Rules:	Rule (RI-1):	Type:	Active (Insert) This table is modified by this rule.
		Rule Name:	Insert AAR Matrix
		Description:	On insert of a new AARNeighborhood the matrix must be filled out with records from the new AARNeighborhood to itself and to every existing AARNeighborhood
		Test Condition:	Insert into AARNeighborhood

2.3.2 aarneighborhood (TI-181)

Description:	Automated alternate routing (AAR) provides a mechanism to reroute calls through the PSTN or other network by using an alternate number when Cisco CallManager blocks a call due to insufficient location bandwidth.		
Fields:	2.3.2.1 name (FI-1113)		
	Type:	string [20] (Unique)	
	Validation:	^[a-zA-Z 0-9._-]{1,20}\$	
	Remarks:	Logical name of the AAR group	
	Rule (RI-1):	Type:	Active (Insert)
		Rule Name:	Insert AAR Matrix

		Description:	On insert of a new AARNeighborhood the matrix must be filled out with records from the new AARNeighborhood to itself and to every existing AARNeighborhood
		Test Condition:	Insert into AARNeighborhood
	2.3.2.2 pkid (FI-1112)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	Rule (RI-1):	Type:	Active (Insert)
		Rule Name:	Insert AAR Matrix
		Description:	On insert of a new AARNeighborhood the matrix must be filled out with records from the new AARNeighborhood to itself and to every existing AARNeighborhood
		Test Condition:	Insert into AARNeighborhood
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-1):	Type:	Active (Insert) Rule applied when record is inserted.
		Rule Name:	Insert AAR Matrix
		Description:	On insert of a new AARNeighborhood the matrix must be filled out with records from the new AARNeighborhood to itself and to every existing AARNeighborhood
		Test Condition:	Insert into AARNeighborhood

2.3.3 alarmconfig (TI-145)

Description:	Records alarm settings per node (server) per service per monitor. These records are inserted at install time. Insert/Delete is not allowed.		
Fields:	2.3.3.1 enablealternativelog (FI-5192)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Enable Alternative Logging for the Alarm Settings from Syslog Server.	
	2.3.3.2 fkprocessnodeservice (FI-810)		
	Type:	guid (Cascade Delete)	

	Remarks:	Specifies the node/service combination for this alarm configuration.
	2.3.3.3 monitorstatus (FI-887)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	True if this monitor is on.
	2.3.3.4 pkid (FI-809)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.3.5 server (FI-886)	
	Type:	string [1280]
	Default Value:	EMPTY
	Remarks:	Application managed container for remote syslog destination server information. No DB format support, validation, or special migration.
	2.3.3.6 tkalarmseverity (FI-822)	
	Type:	enum
	Remarks:	The alarm severity.
	2.3.3.7 tkmonitor (FI-812)	
	Type:	enum
	Remarks:	The type of monitor (event log, sys log, etc.) being configured.
Uniqueness:	fkprocessnodeservice + tkmonitor is unique. (MFI-28)	

2.3.4 alarmmonitorcapabilities (TI-161)

Description:	Used to determine which monitors are allowed with each service. These records are inserted at install time. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.4.1 enum (FI-896)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.4.2 tkmonitor (FI-897)	
	Type:	enum

	2.3.4.3 tkservice (FI-898)
	Type: enum
Uniqueness:	No multicolumn uniqueness constraints

2.3.5 alarmusertext (TI-369)

Description:	User defined text for alarms
Fields:	2.3.5.1 alarmname (FI-2722) Type: string [255] (Indexed) 2.3.5.2 catalogname (FI-2721) Type: string [500] 2.3.5.3 pkid (FI-2720) Type: guid (Unique, Indexed, Not Modifiable) Default Value: newid() Remarks: Unique ID to identify a record. 2.3.5.4 userdefinedtext (FI-2723) Type: string [500]
Uniqueness:	No multicolumn uniqueness constraints

2.3.6 alternatenumbers (TI-2582)

Description:	Stores the Enterprise and E164 numbers linked to a directory number (from Numplan table).
Fields:	2.3.6.1 dnderived (FI-25567) Type: string [50] (Indexed, Not Modifiable) Default Value: EMPTY Remarks: Derived value of directory number Rule (RI-2101): <div> Type: Active (Insert/Update) Rule Name: Calculate the value of DNDerived. Description: Use the DNOrMask and parent NumPlan.dnorpattern to calculate the DNDerived. If DNOrMask is NULL, use parent NumPlan.dnorpattern as-is. If DNOrMask contains wildcard, apply it to NumPlan.dnorpattern to generate the DNDerived. </div>

Rule (RI-2101):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Calculate the value of DNDerived.
	Description:	Use the DNOrMask and parent NumPlan.dnorpattern to calculate the DNDerived. If DNOrMask is NULL, use parent NumPlan.dnorpattern as-is. If DNOrMask contains wildcard, apply it to NumPlan.dnorpattern to generate the DNDerived.
Rule (RI-2103):	Type:	Validation (Insert/Update)
	Rule Name:	AlternateNumber DNOrMask uniqueness
	Description:	Alternate number must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.
Rule (RI-2105):	Type:	Active (Update)
	Rule Name:	USN from Alternate Number modification
	Description:	If the Alternate Number changes, create a USN for new value and create a tombstone for the old value
	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value
Rule (RI-2113):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for Alternate Number
	Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
	Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
	Error Message:	Various

2.3.6.2 dnormask (FI-25565)

Type:	string [50] (Indexed, Null OK)		
Remarks:	SIP alternate number, may be a mask.		
Rule (RI-2101):	Type:	Active (Insert/Update)	
	Rule Name:	Calculate the value of DNDerived.	
	Description:	Use the DNOrMask and parent NumPlan.dnorpattern to calculate the DNDerived. If DNOrMask is NULL, use parent NumPlan.dnorpattern as-is. If DNOrMask contains wildcard, apply it to	

NumPlan.dnorpattern to generate the DNDerived.

2.3.6.3 doroutebyroutestring (FI-25568)

Type: bool

Default Value: FALSE

Remarks: Indicates whether other clusters may route to this URI or number using route string.

Rule (RI-2104):

Type: Active (Insert)

Rule Name: USN from Alternate Number creation

Description: Create USN for new value of Alternate Number

Test Condition: INSERT into USN

Rule (RI-2105):

Type: Active (Update)

Rule Name: USN from Alternate Number modification

Description: If the Alternate Number changes, create a USN for new value and create a tombstone for the old value

Test Condition: UPDATE USN to reflect new value and INSERT USN tombstone for the old value

Rule (RI-2106):

Type: Active (Delete)

Rule Name: USN from Alternate Number deletion

Description: Create a USN tombstone for the old Alternate Number

Test Condition: INSERT USN tombstone for the old value

Rule (RI-2113):

Type: Validation (Insert/Update)

Rule Name: Validate consistency of columns for Alternate Number

Description: Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.

Test Condition: On INSERT/UPDATE on AlternateNumber validate values of columns

Error Message: Various

2.3.6.4 doroutelocal (FI-25569)

Type: bool

Default Value: FALSE

Remarks:	Indicates whether the alternate number may be used for routing on the cluster on which it is defined.
----------	---

Rule (RI-2103):	Type:	Validation (Insert/Update)
	Rule Name:	AlternateNumber DNOrMask uniqueness
	Description:	Alternate number must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.

2.3.6.5 [fknumplan \(FI-25563\)](#)

Type:	guid (Cascade Delete, Not Modifiable)
-------	---------------------------------------

Remarks:	The directory number to which the alternate number belongs.
----------	---

Rule (RI-2101):	Type:	Active (Insert/Update)
	Rule Name:	Calculate the value of DNDerived.
	Description:	Use the DNOrMask and parent NumPlan.dnorpattern to calculate the DNDerived. If DNOrMask is NULL, use parent NumPlan.dnorpattern as-is. If DNOrMask contains wildcard, apply it to NumPlan.dnorpattern to generate the DNDerived.

Rule (RI-2102):	Type:	Active (Insert)
	Rule Name:	Validate DN association of AlternateNumber.
	Description:	Alternate number can only be associated to directory number or line template.

Rule (RI-2103):	Type:	Validation (Insert/Update)
	Rule Name:	AlternateNumber DNOrMask uniqueness
	Description:	Alternate number must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.

Rule (RI-2104):	Type:	Active (Insert)
	Rule Name:	USN from Alternate Number creation
	Description:	Create USN for new value of Alternate Number
	Test Condition:	INSERT into USN

Rule (RI-2105):	Type:	Active (Update)
	Rule Name:	USN from Alternate Number modification
	Description:	If the Alternate Number changes, create a USN for new value and create a tombstone for the old value
	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value

Rule (RI-2106):	Type:	Active (Delete)
	Rule Name:	USN from Alternate Number deletion
	Description:	Create a USN tombstone for the old Alternate Number
	Test Condition:	INSERT USN tombstone for the old value
Rule (RI-2113):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for Alternate Number
	Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
	Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
Error Message:		Various

2.3.6.6 [flroutepartition \(FI-25564\)](#)

Type:	guid (Null OK)	
Default Value:	NULL	
Remarks:	The partition to which the URI belongs.	
Rule (RI-2103):	Type:	Validation (Insert/Update)
	Rule Name:	AlternateNumber DNOOrMask uniqueness
	Description:	Alternate number must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.

2.3.6.7 [isaar \(FI-25570\)](#)

Type:	bool	
Default Value:	FALSE	
Remarks:	Indicates whether this number is valid for dialing on the PSTN.	
Rule (RI-2104):	Type:	Active (Insert)
	Rule Name:	USN from Alternate Number creation
	Description:	Create USN for new value of Alternate Number
	Test Condition:	INSERT into USN

Rule (RI-2105):	Type:	Active (Update)
	Rule Name:	USN from Alternate Number modification
	Description:	If the Alternate Number changes, create a USN for new value and create a tombstone for the old value
Rule (RI-2106):	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value
	Type:	Active (Delete)
	Rule Name:	USN from Alternate Number deletion
Rule (RI-2113):	Description:	Create a USN tombstone for the old Alternate Number
	Test Condition:	INSERT USN tombstone for the old value
	Type:	Validation (Insert/Update)
Rule (RI-2113):	Rule Name:	Validate consistency of columns for Alternate Number
	Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
	Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
Rule (RI-2113):	Error Message:	Various

2.3.6.8 istemplate (FI-25571)

Type:	bool (Indexed, Not Modifiable)	
Default Value:	FALSE	
Remarks:	Distinguish the Universal Line Template with the real alternate number.	
Rule (RI-2102):	Type:	Active (Insert)
	Rule Name:	Validate DN association of AlternateNumber.
	Description:	Alternate number can only be associated to directory number or line template.
Rule (RI-2102):	Type:	Active (Insert) This field is modified by this rule.
	Rule Name:	Validate DN association of AlternateNumber.
	Description:	Alternate number can only be associated to directory number or line template.
Rule (RI-2103):	Type:	Validation (Insert/Update)

		Rule Name:	AlternateNumber DNOOrMask uniqueness
		Description:	Alternate number must be unique within the Partition
		Test Condition:	The value of URI must be unique within the Partition.
	Rule (RI-2113):	Type:	Validation (Insert/Update)
		Rule Name:	Validate consistency of columns for Alternate Number
		Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
		Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
		Error Message:	Various

2.3.6.9 isurgent (FI-25572)

Type:	bool (Indexed)
Default Value:	FALSE
Remarks:	Indicates whether the alternate number is urgent.

2.3.6.10 pkid (FI-25562)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-2103):	Type:	Validation (Insert/Update)
	Rule Name:	AlternateNumber DNOOrMask uniqueness
	Description:	Alternate number must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.
Rule (RI-2105):	Type:	Active (Update)
	Rule Name:	USN from Alternate Number modification
	Description:	If the Alternate Number changes, create a USN for new value and create a tombstone for the old value
	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value

	Rule (RI-2106):	Type:	Active (Delete)
		Rule Name:	USN from Alternate Number deletion
		Description:	Create a USN tombstone for the old Alternate Number
		Test Condition:	INSERT USN tombstone for the old value
	Rule (RI-2113):	Type:	Validation (Insert/Update)
		Rule Name:	Validate consistency of columns for Alternate Number
		Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
		Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
		Error Message:	Various
	2.3.6.11 tkglobalnumber (FI-25566)		
	Type:	enum (Not Modifiable)	
	Default Value:	100	
	Remarks:	Functional classification, applies only to TEL URI.	
	Rule (RI-2113):	Type:	Validation (Insert/Update)
		Rule Name:	Validate consistency of columns for Alternate Number
		Description:	Cannot change number type of an Alternate Number. Only one AlternateNumber designated as AAR per DN. Only one instance of each number type per DN. May not publish a number twice as the same type. For AAR Alternate Number, get all the advertised URIs attached to my DN, and for each of them, if there is an advertised URI with the same value attached to a different DN, throw an exception.
		Test Condition:	On INSERT/UPDATE on AlternateNumber validate values of columns
		Error Message:	Various
Uniqueness:	No multicolumn uniqueness constraints		

2.3.7 analogaccess (TI-2)

Description: This subclasses the device table for analog access information not in the Device table.

Fields:

2.3.7.1 fkdevice (FI-14)

Type:	guid (Unique, Indexed, Cascade Delete)												
Migration Source:	convert from DeviceName												
Remarks:	Points to the device record being "subclassed." Device.tkModel must be analog access.												
Rule (RI-13):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>AnalogAccess device</td></tr><tr><td>Description:</td><td>The records in AnalogAccess table must reference a device using AnalogAccess device protocol</td></tr><tr><td>Test Condition:</td><td>AnalogAccess.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)</td></tr><tr><td>Error Message:</td><td>AnalogAccess table may only reference devices with matching Device Protocol (AnalogAccess).</td></tr><tr><td>Remedy:</td><td>Correct the fkDevice value to refer to an Analog Access device.</td></tr></table>	Type:	Validation (Insert/Update)	Rule Name:	AnalogAccess device	Description:	The records in AnalogAccess table must reference a device using AnalogAccess device protocol	Test Condition:	AnalogAccess.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)	Error Message:	AnalogAccess table may only reference devices with matching Device Protocol (AnalogAccess).	Remedy:	Correct the fkDevice value to refer to an Analog Access device.
Type:	Validation (Insert/Update)												
Rule Name:	AnalogAccess device												
Description:	The records in AnalogAccess table must reference a device using AnalogAccess device protocol												
Test Condition:	AnalogAccess.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)												
Error Message:	AnalogAccess table may only reference devices with matching Device Protocol (AnalogAccess).												
Remedy:	Correct the fkDevice value to refer to an Analog Access device.												

2.3.7.2 pkid (FI-13)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.7.3 tktrunkselectionorder (FI-15)

Type:	enum
Migration Source:	TrunkSelectionOrder
Remarks:	IE. Bottom up or top down.

Uniqueness: No multicolumn uniqueness constraints

2.3.8 analogaccessport (TI-3)

Description: Analog access ports associated with an analog access Device.

Fields:

2.3.8.1 attendantdn (FI-22)

Type:	dn
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	EMPTY
Validation:	^[0-9*#+]{0,50}\$
Migration Source:	AttendantNumber

Remarks:	For Ground Start and Loop Start ports, enter the number to which you want incoming calls routed; for example, zero or a directory number for an attendant.	
Rule (RFI-4):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkTrunk = 1 OR tkTrunk = 2
	DN Type:	DN_TYPE_ALL_DIGITS
	Constraint:	
	Validation:	[0-9*#]{0,24}
	Null Allowed:	null
	Remarks:	Attendant DN has Invalid format. It should contain no more than 24 numbers, * and #. Regular expression used for validation is [0-9*#]{0,24}

2.3.8.2 calleriddn (FI-37)

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	NULL
Validation:	^[0-9*#+X]{0,32}\$
Migration Source:	CallerId
Remarks:	If specified, use this for the CallerID.

2.3.8.3 e164dn (FI-5280)

Type:	string [16]
Default Value:	EMPTY
Validation:	^(\+)([0-9]{1,15})\$
Remarks:	E164 Directory Number

2.3.8.4 expecteddigits (FI-26)

Type:	long
Check Constraint:	(ExpectedDigits >= 0) AND (ExpectedDigits <= 32)
Migration Source:	ExpectedDigits
Remarks:	Enter the number of digits that are expected on the inbound side of the trunk. For this rarely used field, leave zero as the default value if you are unsure.

2.3.8.5 fkdevice (FI-18)

Type:	guid (Indexed, Cascade Delete)
-------	--------------------------------

Migration Source:	convert from DeviceName												
Remarks:	device::tModel must be analog access												
Rule (RI-14):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>AnalogAccessPort device</td></tr> <tr> <td>Description:</td><td>The records in AnalogAccessPort table must reference a device using AnalogAccess device protocol</td></tr> <tr> <td>Test Condition:</td><td>AnalogAccessPort.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)</td></tr> <tr> <td>Error Message:</td><td>AnalogAccessPort table may only reference devices with matching Device Protocol (AnalogAccess).</td></tr> <tr> <td>Remedy:</td><td>Correct the fkDevice value to refer to an Analog Access device.</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	AnalogAccessPort device	Description:	The records in AnalogAccessPort table must reference a device using AnalogAccess device protocol	Test Condition:	AnalogAccessPort.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)	Error Message:	AnalogAccessPort table may only reference devices with matching Device Protocol (AnalogAccess).	Remedy:	Correct the fkDevice value to refer to an Analog Access device.
Type:	Validation (Insert/Update)												
Rule Name:	AnalogAccessPort device												
Description:	The records in AnalogAccessPort table must reference a device using AnalogAccess device protocol												
Test Condition:	AnalogAccessPort.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 3)												
Error Message:	AnalogAccessPort table may only reference devices with matching Device Protocol (AnalogAccess).												
Remedy:	Correct the fkDevice value to refer to an Analog Access device.												

2.3.8.6 inboundcalleridenable (FI-36)

Type:	bool
Migration Source:	InboundCallerIdEnable
Remarks:	If true, CallerID is enabled.

2.3.8.7 numdigits (FI-24)

Type:	long
Check Constraint:	(NumDigits >= 0) AND (NumDigits <= 32)
Migration Source:	NumDigits
Remarks:	Enter the number of significant digits to collect. Cisco CallManager counts significant digits from the right (last digit) of the number called. Use this field for the processing of incoming calls and to indicate the number of digits starting from the last digit of the called number that is used to route calls coming into the PRI span. See Prefix DN.

2.3.8.8 pkid (FI-17)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.8.9 portnum (FI-19)

Type:	long
Migration Source:	PortNum
Remarks:	1-8 For Vega; 1 for MGCP_STATION; 1 for MGCP_TRUNK and tkDeviceProtocol=AnalogAccess

2.3.8.10 prefixdn (FI-23)

Type:	dn (Null OK)
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	NULL
Validation:	^[0-9*#+]{0,50}\$
Migration Source:	Prefix
Remarks:	The prefix digits that are appended to the digits that this trunk receives on incoming calls. The Cisco CallManager adds prefix digits after it truncates the number in accordance with the Num Digits setting.

2.3.8.11 sigdigits (FI-25)

Type:	bool
Migration Source:	SigDigits
Remarks:	Obsolete - NumDigits is always used. Flag to allow only certain amount of digits.

2.3.8.12 smdiportnumber (FI-932)

Type:	long
Default Value:	0
Check Constraint:	(SMDIPortNumber >= 0) AND (SMDIPortNumber <= 4096)
Remarks:	Use this field for analog access ports that connect to a voice-mail system. Set the SMDI Port Number equal to the actual port number on the voice-mail system to which the analog access port connects.

2.3.8.13 timer1 (FI-30)

Type:	long
Check Constraint:	Timer1 >= 0
Migration Source:	Timer1
Remarks:	In Milliseconds

2.3.8.14 timer2 (FI-31)

Type:	long
Check Constraint:	Timer2 >= 0
Migration Source:	Timer2
Remarks:	In Milliseconds

2.3.8.15 timer3 (FI-32)

Type:	long
Check Constraint:	Timer3 >= 0
Migration Source:	Timer3

Remarks: In Milliseconds

2.3.8.16 timer4 (FI-33)

Type: long

Check Constraint: Timer4 >= 0

Migration Source: Timer4

Remarks: In Milliseconds

2.3.8.17 timer5 (FI-34)

Type: long

Check Constraint: Timer5 >= 0

Migration Source: Timer5

Remarks: In Milliseconds

2.3.8.18 timer6 (FI-35)

Type: long

Check Constraint: Timer6 >= 0

Migration Source: Timer6

Remarks: In Milliseconds

2.3.8.19 [tkcallingpartyselection \(FI-39\)](#)

Type: enum

Migration Source: CallingPartySelection

Remarks: Source of the calling party number: originator = 1, first redirect = 2, last redirect = 3

2.3.8.20 [tkdigitsending \(FI-623\)](#)

Type: enum

Default Value: 0

Remarks: DTFM, MF, etc.

2.3.8.21 [tkpresentationbit \(FI-40\)](#)

Type: enum

Migration Source: PresentationBit

Remarks: CLID presentationBit: allowed = 1, restricted = 2

2.3.8.22 [tksilencesuppressionthreshold \(FI-38\)](#)

Type: enum

Migration Source: SilenceSuppressionThreshold

Remarks: in dbm0

2.3.8.23 [tkstartdialprotocol \(FI-624\)](#)

Type: enum

Default Value: 0

Remarks: Immediate, Wink Start, etc.

2.3.8.24 [tktrunk \(FI-20\)](#)

Type: enum

Migration Source: PortType

Remarks: The type of trunk. (Ground Start, Loop Start, DID, POTS, E&M)

2.3.8.25 [tktrunkdirection \(FI-21\)](#)

Type: enum

Migration Source: Direction

Remarks: Inbound, outbound and both are valid Directions. Outbound equates to DOD. Both only allowed on Ground Start (GS)

2.3.8.26 [tktrunklevel \(FI-306\)](#)

Type: enum

Migration Source: was "ApplicationType"

2.3.8.27 [tktrunkpad_rx \(FI-28\)](#)

Type: enum

Migration Source: RxPad

2.3.8.28 [tktrunkpad_tx \(FI-29\)](#)

Type: enum

Migration Source: TxPad

2.3.8.29 [unattendedport \(FI-2387\)](#)

Type: bool (Null OK)

Default Value: FALSE

2.3.8.30 [xml \(FI-935\)](#)

Type: string [24000] (Null OK)

Default Value: NULL

Remarks: Product specific configuration XML not used by CCM

	Rule (RI-196):	Type:	Validation (Insert/Update) This field is modified by this rule.
		Rule Name:	AnalogAccessPort.xml validation
		Description:	Product specific information for each AnalogAccess gateway port needs to be validated before storing in xml column. Validation is now performed using client side script at Admin pages. This involves reading the display instance xml (from scratch table) for the specific product, then for each parameter , read the corresponding rule xml record (scratch table) and validate the parameter value as defined in the rule.
		Test Condition:	On Insert/Update of AnalogAccess port (FXS gateway port)
Uniqueness:	fkdevice + portnum is unique. (MFI-1)		

2.3.9 applicationdialrule (TI-252)

Description: Holds Dial Rule Info.

Fields:	2.3.9.1 description (FI-1771)	
	Type:	string [200]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%\\&<>]{0,50}\$
	2.3.9.2 digitsremoved (FI-1774)	
	Type:	long
	Default Value:	0
	Check Constraint:	(Digitsremoved >=0) AND (Digitsremoved <=100)
	2.3.9.3 name (FI-1770)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~]{1,50}\$
	2.3.9.4 numbeginwith (FI-1772)	
	Type:	string [50]
	Default Value:	EMPTY
	Validation:	^[0-9*#+]{0,50}\$
	2.3.9.5 numofdigits (FI-1773)	
	Type:	long

	Default Value:	0
	Check Constraint:	(numofdigits >=0) AND (numofdigits <=100)
	2.3.9.6 pkid (FI-1769)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.9.7 prefix (FI-1775)	
	Type:	string [50]
	Default Value:	EMPTY
	Validation:	^[0-9*#+]{0,50}\$
	2.3.9.8 priority (FI-1776)	
	Type:	long
	Default Value:	0
	2.3.9.9 tkapplicationdialrule (FI-2885)	
	Type:	enum
	Remarks:	The type of Dial Rule. (Basic, Directory)
Uniqueness:	priority + tkapplicationdialrule is unique. (MFI-89)	
Constraints:	Rule (RFI-142):	Type: Inter-field Condition and Constraint
		Constraint: (Digitsremoved >0) OR (Prefix <> ")
		Remarks: Either Prefix pattern must be defined, or Digits to be removed must be > 0

2.3.10 applicationuser (TI-230)

Description: Special Application users of CCM system. These users will not show up in a list of users shown to a customer

Fields:	2.3.10.1 aclallowreplace (FI-2590)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Whether SIP header replacement allowed
	2.3.10.2 acloobsubscription (FI-2485)	

Type:	bool
Default Value:	FALSE
Remarks:	Obsolete

2.3.10.3 acloodrefer (FI-2486)

Type:	bool
Default Value:	FALSE

2.3.10.4 aclpresencesubscription (FI-2487)

Type:	bool
Default Value:	FALSE

2.3.10.5 aclunsolicitednotification (FI-2488)

Type:	bool
Default Value:	FALSE

2.3.10.6 [fkmatrix_presence \(FI-2508\)](#)

Type:	guid
Default Value:	ad243d17-98b4-4118-8feb-5ff2e1b781ac
Remarks:	Pkid for Presence Group Matrix record. This is required for extension mobility. Appuser table does not need this because appuser cannot do extension mobility.

2.3.10.7 isstandard (FI-2047)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	Created during installation.

2.3.10.8 name (FI-1659)

Type:	string [50] (Unique, Indexed)
Remarks:	Records inserted by install.

Rule (RI-57):	Type:	Validation (Insert/Update)
	Rule Name:	AppUser Name Uniqueness
	Description:	An AppUser Name cannot be the same as an EndUser UserID
	Test Condition:	IF (AppUser.Name IN (SELECT userid FROM EndUser)) THEN throw exception
	Error Message:	AppUser Name already exists as an EndUser. AppUser Name cannot be the same as an EndUser's userid.

		Remedy:	Provide a unique name for the Application User that is not the same as an EndUser userid.
2.3.10.9 passwordreverse (FI-2388)			
Type:	string [128] (Null OK)		
Default Value:	69c4f936f9cdf45f6bbca2570c31215629bb5d6fb97493478b8ff3db6fffb55		
Validation:	^[a-zA-F0-9]{0,128}\$		
Remarks:	Used for digest authentication		
2.3.10.10 pkid (FI-1658)			
Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
Rule (RI-398):	Type:	Active (Insert)	
	Rule Name:	Automatically Insert Credential (Password only) record for ApplicationUsers	
	Description:	When an ApplicationUser is inserted, automatically generate Credential record for Password with default policy specified in CredentialPolicyDefault table. Policy is not applied until Credential is updated for the first time.	
	Test Condition:	ON INSERT INTO ApplicationUser:	
Rule (RI-2138):	Type:	Validation (Delete)	
	Rule Name:	Self-Provisioing App User deletion not allowed	
	Description:	Application User selected in the self provisioning configuration cannot be deleted	
	Test Condition:	On Delete (select count(*) from globalsetting where tkglobalsetting=TypeGlobalSetting.GLOBAL_SETTING_SELF_PROVISIONING_IVR_APPUSER and settingvalue=applicationuser.pkid) < 1	
	Error Message:	This Application User is being used in the Self Provisioing Configuration hence cannot be deleted.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.11 applicationusercapfmap (TI-353)			
Description:	1-N relation between App User to CAPF		
Fields:	2.3.11.1 authenticationstring (FI-2622)		
	Type:	string [50]	

Default Value: EMPTY

2.3.11.2 [fkapplicationuser \(FI-2630\)](#)

Type: guid (Indexed, Cascade Delete, Not Modifiable)

Migration Source: ApplicationUser.pkid

2.3.11.3 [instanceid \(FI-2631\)](#)

Type: string [128] (Unique, Indexed, Not Modifiable)

Validation: ^[a-zA-Z0-9]{1,128}\$

Remarks: To distinguish multiplicity for a single user.

Rule (RI-321):

Type: Validation (Insert/Update)

Rule Name: InstanceID unique across App and EndUserCAPFMaps

Description: InstanceID must be unique across both UserCAPFMap tables (ApplicationUserCAPFMap and EndUserCAPFMap)

Test Condition: ON INSERT/UPDATE IN ApplicationUserCAPFMap OR EndUserCAPFMap IF (SELECT COUNT(*) FROM <table> WHERE lower(InstanceID) = lower(@instanceID)) > 1 THEN throw exception

Error Message: Cannot insert duplicate instance ID in EndUserCAPFMap or ApplicationUserCAPFMap

Remedy: Make sure the instance ID is unique across both the Application and End-User CAPF instances and try again.

2.3.11.4 [packetcaptureduration \(FI-2621\)](#)

Type: long (Null OK)

Default Value: 0

2.3.11.5 [pkid \(FI-2629\)](#)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

Rule (RI-314):

Type: Active (Delete)

Rule Name: cascade delete in NumPlanASMap

Description: on enduserASMap delete, delete NumPlanASMap

Test Condition: delete enduserASMap record

Rule (RI-373):

Type: Active (Insert)

Rule Name:	Insert Dynamic Records for ApplicationUserCAPFMap Table
Description:	When an Application User is mapped to a credentials (CAPF record), insert a record for the frequently updated fields
Test Condition:	ON INSERT INTO ApplicationUserCAPFMap

2.3.11.6 subjectname (FI-2879)

Type:	string [128]
Default Value:	EMPTY
Remarks:	Subject name of the certificate

2.3.11.7 tkauthenticationmode (FI-2625)

Type:	enum
Default Value:	2

2.3.11.8 tkcertificate (FI-2627)

Type:	enum
Default Value:	0

2.3.11.9 tkcertificateoperation (FI-2628)

Type:	enum
Default Value:	1
Remarks:	Certificate Operation

2.3.11.10 tkcertificatestatus (FI-2623)

Type:	enum
Default Value:	1

2.3.11.11 tkkeysize (FI-2626)

Type:	enum
Default Value:	2

2.3.11.12 tkpacketcapturemode (FI-2620)

Type:	enum
Default Value:	0

2.3.11.13 upgradefinishtime (FI-2624)

Type:	string [50]
Default Value:	EMPTY

Uniqueness: fkapplicationuser + instanceid is unique. (MFI-82)

2.3.12 applicationusercapfmapdynamic (TI-442)

Description: Frequently updated settings for Application User CAPF settings

Fields:

2.3.12.1 datetimestamp (FI-3311)

Type: long

Default Value: 0

Rule (RI-400):

Type:

Active (Insert/Update)

Rule Name:

Update the DateTimeStamp for Dynamic records

Description:

When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value

Test Condition:

ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

Rule (RI-400):

Type:

Active (Insert/Update)
This field is modified by this rule.

Rule Name:

Update the DateTimeStamp for Dynamic records

Description:

When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value

Test Condition:

ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

2.3.12.2 fkapplicationusercapfmap (FI-3310)

Type: guid (Unique, Cascade Delete)

2.3.12.3 fkprocessnode (FI-2878)

Type: guid (Cascade Delete, Null OK)

Default Value: NULL

Check Constraint: fkProcessNode != '00000000-1111-0000-0000-000000000000'

Remarks: The server to which this user, with this certificate, has opened a CTI provider.

2.3.12.4 pkid (FI-3309)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

2.3.12.5 userstate (FI-3016)

	Type:	long
	Default Value:	0
Uniqueness:	No multicolumn uniqueness constraints	

2.3.13 applicationuserdevicemap (TI-297)

Description:	Maps controllability between App Users & Devices.	
Fields:	2.3.13.1 description (FI-2076)	
	Type:	string [200]
	Default Value:	EMPTY
	Validation:	^[^"''"]]{0,50}\$
	Remarks:	ApplicationUser-entered description of a controlled device (allows Unicode).
	2.3.13.2 fkapplicationuser (FI-2078)	
	Type:	guid (Cascade Delete)
	2.3.13.3 fkdevice (FI-2077)	
	Type:	guid (Cascade Delete)
	2.3.13.4 pkid (FI-2079)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.13.5 tkuserassociation (FI-2390)	
	Type:	enum
Uniqueness:	fkdevice + fkapplicationuser + tkuserassociation is unique. (MFI-76)	

2.3.14 applicationuserdirgroupmap (TI-238)

Description:	Similar to UserGroupMap to group ApplicationUser into a DirGroup	
Fields:	2.3.14.1 fkapplicationuser (FI-1685)	
	Type:	guid (Cascade Delete)
	2.3.14.2 fkdirgroup (FI-1686)	

	Type:	guid (Cascade Delete)
	Rule (RI-201):	Type: Validation (Update/Delete)
		Rule Name: Standard CCM Super Users Group Restriction
		Description: The CCM Super Users Group must contain at least one application user at all times to prevent locking primary administrator out of the system.
		Test Condition: ON DELETE FROM ApplicationUserDirGroupMap IF (DirGroup = 'CCM Super User') AND (SELECT COUNT(*) FROM ApplicationUserDirGroupMap = 0) THEN throw exception; ON UPDATE ApplicationUserDirGroupMap IF (DirGroup = 'CCM Super User') AND (old_fkDirGroup <> new_fkDirGroup) THEN throw exception
		Error Message: CCM Super User Group must contain at least one application user at all times.
		Remedy: Add another Application User to be the CCM Super User before removing the current user.
2.3.14.3 isstandard (FI-2052)		
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	If standard set true during installation. Standard groups are only modifiable by installations.
2.3.14.4 pkid (FI-1684)		
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	fkdirgroup + fkapplicationuser is unique. (MFI-75)	

2.3.15 applicationusernumplanmap (TI-355)

Description: To keep M-N relation between App User & NumPlan

Fields:	2.3.15.1 fkapplicationuser (FI-2645)	
	Type:	guid (Cascade Delete)
	2.3.15.2 fknumplan (FI-2646)	
	Type:	guid (Cascade Delete)
	2.3.15.3 pkid (FI-2644)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()

	Remarks:	Unique ID to identify a record.
	2.3.15.4 tkdnusage (FI-2647)	
	Type:	enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.16 appserver (TI-372)

Description: Denotes the various Application servers that a CCM communicates with

Fields:	2.3.16.1 administrationurl (FI-3564)	
	Type:	string [255]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9!#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	Remarks:	Used to create a link to the Administrative application for the AppServer
	2.3.16.2 enduserurl (FI-3567)	
	Type:	string [255]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9!#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	Remarks:	Used to create a link to the EndUser application for the AppServer
	2.3.16.3 fkprocessnode (FI-3716)	
	Type:	guid (Null OK)
	Default Value:	NULL
	Remarks:	Allows an application server's settings to be associated with a specific server in the cluster
	2.3.16.4 ipaddr (FI-2758)	
	Type:	string [15]
	Default Value:	EMPTY
	Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
	Remarks:	IP Address of the App server.
	2.3.16.5 name (FI-2756)	
	Type:	string [50]
	Rule (RI-420):	Type: Validation (Insert/Update)

		Rule Name:	AppServer.Name with .localdomain restriction
		Description:	For each type of application server, only one instance can have the .localdomain suffix in the name. For tkAppServer=3, AppServer.Name cannot have duplicate values. AppServer.Name cannot have a value already existing for ProcessNode.Name
		Test Condition:	ON INSERT/UPDATE IN AppServer: Check that there is only one AppServer entry with .localdomain per tkAppServer type. Check that new AppServer.Name is not equal to any old Appserver.Name for tkAppServer=3.Check that new AppServer.Name is not equal to existing ProcessNode.Name
		Error Message:	Cannot assign more than one localdomain AppServer record per AppServer type.Cannot not have more than one Cisco Unified Presence Server with the same name as another Cisco Unified Presence Server or a Cisco Unified Communications Manager Server.
		Remedy:	Check the server name you entered to make sure it does not already exist as an Application Server or Cisco Unified Communications Manager Server
	Rule (RI-474):	Type:	Validation (Update)
		Rule Name:	Preserve .localdomain suffix for CUCM BE Unity AppServer
		Description:	For Business Edition (co-res) install, an AppServer entry for Cisco Unity Connection is created with .localdomain suffix in the name. On update, make sure .localdomain is not removed.
		Test Condition:	ON UPDATE IN AppServer: IF (old_tkAppServer = APP_SERVER_UNITY_1_X) AND (old_name LIKE ('%.localdomain') AND new_name NOT LIKE ('%.localdomain') THEN throw exception END IF
		Error Message:	Cannot remove the .localdomain suffix for Cisco Unity Connection application server
	Rule (RI-690):	Remedy:	Include the .localdomain suffix in the appserver name.
		Type:	Validation (Insert/Update)
		Rule Name:	AppServer Name is not a valid format for RemoteSyslog Server Type
		Description:	Cisco Unified Communications Manager shall validate that AppServer name for Remote Syslog Server type is generally a valid FQDN (up to 255 characters) or IP Address.
		Test Condition:	Make sure AppServer Name is ip, hostname or domain name
	Rule (RI-945):	Remedy:	1
		Type:	Active (Update/Delete)
		Rule Name:	Update/Delete on AppServer to sync it up with UCSERVICE
		Description:	On Deletion of a record from AppServer table, set the corresponding fkAppServer field to NULL in UCSERVICE table. On an Update on AppServer table with name getting changed, update the hostnameorip field in UCSERVICE table to match (only if it does not already match).

Test Condition:	ON DELETE FROM AppServer, UPDATE UCService SET fkAppServer = NULL WHERE fkAppServer = AppServer.pkid; ON UPDATE ON AppServer with name getting changed, IF (AppServer.name <> UCService.hostnameorip) THEN UPDATE UCService SET hostnameorip = AppServer.name WHERE fkAppServer = AppServer.pkid;
-----------------	---

2.3.16.6 pkid (FI-2755)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

Rule (RI-945):	
----------------	--

Type:	Active (Update/Delete)
-------	------------------------

Rule Name:	Update/Delete on AppServer to sync it up with UCService
------------	---

Description:	On Deletion of a record from AppServer table, set the corresponding fkAppServer field to NULL in UCService table. On an Update on AppServer table with name getting changed, update the hostnameorip field in UCService table to match (only if it does not already match).
--------------	---

Test Condition:	ON DELETE FROM AppServer, UPDATE UCService SET fkAppServer = NULL WHERE fkAppServer = AppServer.pkid; ON UPDATE ON AppServer with name getting changed, IF (AppServer.name <> UCService.hostnameorip) THEN UPDATE UCService SET hostnameorip = AppServer.name WHERE fkAppServer = AppServer.pkid;
-----------------	---

2.3.16.7 tkappserver (FI-2757)

Type:	enum
-------	------

Rule (RI-420):	
----------------	--

Type:	Validation (Insert/Update)
-------	----------------------------

Rule Name:	AppServer.Name with .localdomain restriction
------------	--

Description:	For each type of application server, only one instance can have the .localdomain suffix in the name. For tkAppServer=3, AppServer.Name cannot have duplicate values. AppServer.Name cannot have a value already existing for ProcessNode.Name
--------------	---

Test Condition:	ON INSERT/UPDATE IN AppServer: Check that there is only one AppServer entry with .localdomain per tkAppServer type. Check that new AppServer.Name is not equal to any old Appserver.Name for tkAppServer=3. Check that new AppServer.Name is not equal to existing ProcessNode.Name
-----------------	---

Error Message:	Cannot assign more than one localdomain AppServer record per AppServer type. Cannot not have more than one Cisco Unified Presence Server with the same name as another Cisco Unified Presence Server or a Cisco Unified Communications Manager Server.
----------------	--

Remedy:	Check the server name you entered to make sure it does not already exist as an Application Server or Cisco Unified Communications Manager Server
---------	--

Rule (RI-474):	
----------------	--

Type:	Validation (Update)
-------	---------------------

		Rule Name:	Preserve .localdomain suffix for CUCM BE Unity AppServer
		Description:	For Business Edition (co-res) install, an AppServer entry for Cisco Unity Connection is created with .localdomain suffix in the name. On update, make sure .localdomain is not removed.
		Test Condition:	ON UPDATE IN AppServer: IF (old_tkAppServer = APP_SERVER_UNITY_1_X) AND (old_name LIKE ('%.localdomain') AND new_name NOT LIKE ('%.localdomain')) THEN throw exception END IF
		Error Message:	Cannot remove the .localdomain suffix for Cisco Unity Connection application server
		Remedy:	Include the .localdomain suffix in the appserver name.
	Rule (RI-690):	Type:	Validation (Insert/Update)
		Rule Name:	AppServer Name is not a valid format for RemoteSyslog Server Type
		Description:	Cisco Unified Communications Manager shall validate that AppServer name for Remote Syslog Server type is generally a valid FQDN (up to 255 characters) or IP Address.
		Test Condition:	Make sure AppServer Name is ip, hostname or domain name
		Remedy:	1
	Rule (RI-2150):	Type:	Validation (Insert)
		Rule Name:	Cannot Insert IM & Presence node as AppServer
		Description:	On INSERT of AppServer, it would ensure that it is not inserting IM & Presence node because same is to be added in processnode table with appropriate role.
		Test Condition:	On Insert
	Uniqueness: No multicolumn uniqueness constraints		

2.3.17 appserverapplicationusermap (TI-407)

Description:	This table will hold the relationship on the CCM side between application server and application user used to log into application server		
Fields:	2.3.17.1 content (FI-3341)		
	Type:	text (Null OK)	
	2.3.17.2 fkapplicationuser (FI-3029)		
	Type:	guid (Cascade Delete)	
	2.3.17.3 fkappserver (FI-3028)		
	Type:	guid (Cascade Delete)	
2.3.17.4 pkid (FI-3027)			

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.18 appserverinfo (TI-373)

Description:	Contains info pertaining to App servers	
Fields:	2.3.18.1 content (FI-2761)	
	Type:	text (Null OK)
	Default Value:	NULL
	2.3.18.2 fkappserver (FI-2763)	
	Type:	guid (Cascade Delete)
	2.3.18.3 pkid (FI-2760)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.18.4 tkappservercontent (FI-2762)	
	Type:	enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.19 availdialplan (TI-405)

Description:	Available DialPlan table Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.19.1 availableversion (FI-3012)	
	Type:	string [15] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Version number of the Dial Plan installer
	2.3.19.2 description (FI-3011)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Description of the Dial Plan (e.g., North American Numbering Plan)
	2.3.19.3 dialplan (FI-3010)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Name of the Dial Plan (e.g., NANP)
	2.3.19.4 pkid (FI-3009)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.19.5 systemdialplan (FI-3031)	
	Type:	guid (Not Modifiable)
	Remarks:	Unique ID of the Dial Plan as it appears in the DialPlan table (DialPlan.pkid)
	Uniqueness: availableversion + systemdialplan is unique. (MFI-92)	

2.3.20 axlchangenotifyclient (TI-540)

Description: Lists all applications that can subscribe for AXL Change Notification.

Fields:	2.3.20.1 bitmap (FI-9992)	
	Type:	string [32] (Unique, Null OK)
	Validation:	^[01]{32}\$
	Remarks:	To store the unique value for each client.
	2.3.20.2 clientname (FI-9983)	
	Type:	string [32]
	Validation:	^[a-zA-Z 0-9._-]{1,32}\$
	Remarks:	Name of the application that can subscribe for Change Notification.
	2.3.20.3 networkid (FI-9982)	
	Type:	string [32]

	Validation:	^[a-zA-Z 0-9._-]{1,32}\$
	Remarks:	NetworkID of Client.
	2.3.20.4 pkid (FI-9981)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID for the table.
	2.3.20.5 pollingstarttime (FI-9991)	
	Type:	long (Null OK)
	Remarks:	Time from which Notification will be monitored.
	2.3.20.6 subscriberid (FI-9984)	
	Type:	long (Unique, Indexed, Not Modifiable)
	Check Constraint:	(SubscriberId >= 1) AND (SubscriberId <= 10)
	Remarks:	Subscription Unique Id whose value would be between 1 and 10.
Uniqueness:	networkid + clientname is unique. (MFI-173)	

2.3.21 axlchangenotifysubscribe (TI-541)

Description:	Maps each AXL Change Notify Client to the subscription type.	
Fields:	2.3.21.1 fkaxlchangenotifyclient (FI-9988)	
	Type:	guid (Cascade Delete)
	Remarks:	Unique ID of the AXLChangeNotifyClient.
	2.3.21.2 pkid (FI-9987)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID for the table.
	2.3.21.3 tkchangenotifysubscribe (FI-9989)	
	Type:	enum
	Remarks:	Determines the class of Change Notification subscription : 0=User,1=Line,2=Phone.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.22 batfileinfo (TI-344)

Description: Information of BAT Files

Fields:

2.3.22.1 datecreated (FI-2552)

Type: long

Remarks: Date when the file is uploaded

2.3.22.2 enduser (FI-2553)

Type: string [50]

Default Value: EMPTY

Remarks: User who created this job

2.3.22.3 isfilefound (FI-2605)

Type: bool

Default Value: TRUE

Remarks: Date when the file is uploaded

2.3.22.4 name (FI-2547)

Type: string [100]

Validation: ^[a-zA-Z 0-9._-]{1,100}\$

Remarks: BAT File Name

2.3.22.5 pkid (FI-2546)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

2.3.22.6 tkbatfunction (FI-2549)

Type: enum

Remarks: File Transaction

Uniqueness: No multicolumn uniqueness constraints

2.3.23 batfileinfojobmap (TI-347)

Description: Mapping of Fileinfo and job

Fields:	2.3.23.1 fkbatfileinfo (FI-2571)	
	Type:	guid (Cascade Delete)
	2.3.23.2 fkbatjob (FI-2572)	
	Type:	guid (Cascade Delete)
	2.3.23.3 pkid (FI-2570)	
	Type:	guid (Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.24 batinputdata (TI-345)

Description:	Input data other than csv files	
Fields:	2.3.24.1 data (FI-2557)	
	Type:	string [32000]
	Default Value:	EMPTY
	Remarks:	Input Data for BAT Jobs
	2.3.24.2 name (FI-2556)	
	Type:	string [50]
	2.3.24.3 pkid (FI-2555)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.24.4 tkbatfunction (FI-2607)	
	Type:	enum
	Remarks:	Type of Input Data
	2.3.24.5 tkbatusage (FI-2558)	
	Type:	enum
	Remarks:	Type of Input Data
Uniqueness:	No multicolumn uniqueness constraints	

2.3.25 batinputdatajobmap (TI-348)

Description: Mapping pf BATInputData and Job

Fields:

2.3.25.1 [fkbatinputdata \(FI-2574\)](#)

Type: guid (Cascade Delete)

2.3.25.2 [fkbatjob \(FI-2575\)](#)

Type: guid (Cascade Delete)

2.3.25.3 [pkid \(FI-2573\)](#)

Type: guid (Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

Uniqueness: No multicolumn uniqueness constraints

2.3.26 batjob (TI-341)

Description: Job submitted via BAT

Fields:

2.3.26.1 [description \(FI-2538\)](#)

Type: string [400]

Default Value: EMPTY

Validation: ^[^\x00-\x1F""%\\&<>]{0,100}\$

Remarks: Description of the Job

2.3.26.2 [enduser \(FI-2649\)](#)

Type: string [50]

Default Value: EMPTY

Remarks: User who created this job

2.3.26.3 [fkdevice \(FI-2535\)](#)

Type: guid (Cascade Delete, Null OK)

Remarks: Template Information is provided from this device

2.3.26.4 [fkenduser \(FI-2663\)](#)

Type:	guid (Cascade Delete, Null OK)
Remarks:	Template Information is provided for this User

2.3.26.5 [fkmgcp \(FI-2536\)](#)

Type:	guid (Cascade Delete, Null OK)
Remarks:	Template Information is provided from this MGCP

2.3.26.6 [fknumplan \(FI-2537\)](#)

Type:	guid (Cascade Delete, Null OK)
Remarks:	Template Information is provided from this DNorPattern

2.3.26.7 [frequencyjobend \(FI-2533\)](#)

Type:	long (Null OK)
Remarks:	Denotes when a recurring job ends

2.3.26.8 [jobid \(FI-2847\)](#)

Type:	long (Unique, Indexed)
Remarks:	unique ID to track Jobs.

2.3.26.9 [pkid \(FI-2527\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.26.10 [scheduleddatetime \(FI-2531\)](#)

Type:	long
Remarks:	Denotes the job schedule time.

2.3.26.11 [sequence \(FI-2530\)](#)

Type:	long
Check Constraint:	(sequence >= 0) AND (sequence <= 20)
Remarks:	A number to resolve job execution order when they are scheduled together.

2.3.26.12 [submitdatetime \(FI-2532\)](#)

Type:	long
Remarks:	Denotes when the job is submitted

2.3.26.13 [tkbatfrequency \(FI-2534\)](#)

Type:	enum
-------	------

	2.3.26.14 tkbatfunction (FI-2528)	
	Type:	enum
	2.3.26.15 tkbatjobstatus (FI-2606)	
	Type:	enum
	Remarks:	Holds the Status of the Job
Uniqueness:	No multicolumn uniqueness constraints	

2.3.27 batjobresults (TI-346)

Description:	Results of BAT Jobs	
Fields:	2.3.27.1 fkbatjob (FI-2561)	
	Type:	guid (Cascade Delete)
	Remarks:	Job for which the results are displayed
	2.3.27.2 isfilefound (FI-2608)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	Status of the Job
	2.3.27.3 launchdatetime (FI-2567)	
	Type:	long
	Default Value:	0
	Remarks:	Data time when job is started
	2.3.27.4 logfilename (FI-2562)	
	Type:	string [100]
	Default Value:	EMPTY
	Remarks:	Name of the log file
	2.3.27.5 numrecordsfailed (FI-2565)	
	Type:	long
	Default Value:	0
	Remarks:	Number of Records Failed
	2.3.27.6 numrecordsprocessed (FI-2664)	

	Type:	long
	Default Value:	0
	Remarks:	Total Number of Records processed
	2.3.27.7 numrecordstotal (FI-2566)	
	Type:	long
	Default Value:	0
	Remarks:	Total Number of Records processed
	2.3.27.8 pkid (FI-2560)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.27.9 tkbatresultstatus (FI-2568)	
	Type:	enum
	Remarks:	Status of the Job
Uniqueness:	No multicolumn uniqueness constraints	

2.3.28 billingserver (TI-386)

Description:	Off cluster billing server	
Fields:	2.3.28.1 directory (FI-2868)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.28.2 enablecdroffloading (FI-6238)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	If set to false, CDRs are not offloaded to that particular billing server
	2.3.28.3 hostname (FI-2865)	
	Type:	string [255]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\\-]{0,255}\$

	Remarks:	FQDN or IP
	2.3.28.4 password (FI-2867)	
	Type:	string [128]
	Default Value:	EMPTY
	2.3.28.5 pkid (FI-2863)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.28.6 preserve (FI-2998)	
	Type:	bool
	Default Value:	FALSE
	2.3.28.7 resendonfailure (FI-3702)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	Tells CDRM whether or not to send CDR/CMR files after FTP connection is restored.
	2.3.28.8 selorder (FI-2864)	
	Type:	long
	Default Value:	1
	Check Constraint:	((selorder >= 1) AND (selorder <=3))
	Remarks:	order of server
	2.3.28.9 tkbillingserverprotocol (FI-2869)	
	Type:	enum
	Default Value:	0
	Remarks:	conf Bridge location
	2.3.28.10 userid (FI-2866)	
	Type:	string [255]
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.29 blfdirectedcallpark (TI-426)

Description: Busy lamp monitor entries for Directed Call Park feature

Fields:

2.3.29.1 blfindex (FI-3231)

Type:	long
Check Constraint:	blfindex > 0
Remarks:	This field identifies the Directed Call Park Monitor button on the phone (for example, 1, 2, 3, or 4).

2.3.29.2 fkdevice (FI-3232)

Type:	guid (Cascade Delete)								
Rule (RI-347):	<table><tr><td>Type:</td><td>Documentation (Developer notes only)</td></tr><tr><td>Rule Name:</td><td>BLF Directed CallPark device restriction</td></tr><tr><td>Description:</td><td>Device referenced in BLFDirectedCallPark table should support the Directed Call Park feature; Database does not enforce a hard rule on the relationship between this table and device. Instead the feature is available if a phone has a BLF Directed Call Park button.</td></tr><tr><td>Test Condition:</td><td>No check performed. Feature is available or not depending on whether or not a phone button for the feature is configured on the device.</td></tr></table>	Type:	Documentation (Developer notes only)	Rule Name:	BLF Directed CallPark device restriction	Description:	Device referenced in BLFDirectedCallPark table should support the Directed Call Park feature; Database does not enforce a hard rule on the relationship between this table and device. Instead the feature is available if a phone has a BLF Directed Call Park button.	Test Condition:	No check performed. Feature is available or not depending on whether or not a phone button for the feature is configured on the device.
Type:	Documentation (Developer notes only)								
Rule Name:	BLF Directed CallPark device restriction								
Description:	Device referenced in BLFDirectedCallPark table should support the Directed Call Park feature; Database does not enforce a hard rule on the relationship between this table and device. Instead the feature is available if a phone has a BLF Directed Call Park button.								
Test Condition:	No check performed. Feature is available or not depending on whether or not a phone button for the feature is configured on the device.								
Rule (RI-421):	<table><tr><td>Type:</td><td>Active (Insert/Update/Delete records)</td></tr><tr><td>Rule Name:</td><td>devicerelatedversionstamp versionstamp on direct call park busylampfield</td></tr><tr><td>Description:</td><td>Any operation on direct call park busylampfield, update devicerelatedversionstamp record</td></tr><tr><td>Test Condition:</td><td>update dpark busylampfield</td></tr></table>	Type:	Active (Insert/Update/Delete records)	Rule Name:	devicerelatedversionstamp versionstamp on direct call park busylampfield	Description:	Any operation on direct call park busylampfield, update devicerelatedversionstamp record	Test Condition:	update dpark busylampfield
Type:	Active (Insert/Update/Delete records)								
Rule Name:	devicerelatedversionstamp versionstamp on direct call park busylampfield								
Description:	Any operation on direct call park busylampfield, update devicerelatedversionstamp record								
Test Condition:	update dpark busylampfield								

2.3.29.3 fknumplan (FI-3233)

Type:	guid (Cascade Delete)										
Rule (RI-348):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>BLF Directed CallPark number must be a Directed Call Park destination</td></tr><tr><td>Description:</td><td>The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.</td></tr><tr><td>Test Condition:</td><td>ON INSERT/UPDATE in BLFDirectedCallPark: SELECT tkPatternUsage, DNOrPattern INTO patternUsage, pattern FROM NumPlan WHERE pkid = new_fkNumPLAN; IF (patternUsage <> PATTERN_USAGE_DIRECTED_CALL_PARK) OR (re_compare(pattern, "^[0-9*#]+\$") <> 1) THEN throw exception;</td></tr><tr><td>Error Message:</td><td>The BLF Directed Call Park number must be a dialable Directed Call Park Destination</td></tr></table>	Type:	Validation (Insert/Update)	Rule Name:	BLF Directed CallPark number must be a Directed Call Park destination	Description:	The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.	Test Condition:	ON INSERT/UPDATE in BLFDirectedCallPark: SELECT tkPatternUsage, DNOrPattern INTO patternUsage, pattern FROM NumPlan WHERE pkid = new_fkNumPLAN; IF (patternUsage <> PATTERN_USAGE_DIRECTED_CALL_PARK) OR (re_compare(pattern, "^[0-9*#]+\$") <> 1) THEN throw exception;	Error Message:	The BLF Directed Call Park number must be a dialable Directed Call Park Destination
Type:	Validation (Insert/Update)										
Rule Name:	BLF Directed CallPark number must be a Directed Call Park destination										
Description:	The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.										
Test Condition:	ON INSERT/UPDATE in BLFDirectedCallPark: SELECT tkPatternUsage, DNOrPattern INTO patternUsage, pattern FROM NumPlan WHERE pkid = new_fkNumPLAN; IF (patternUsage <> PATTERN_USAGE_DIRECTED_CALL_PARK) OR (re_compare(pattern, "^[0-9*#]+\$") <> 1) THEN throw exception;										
Error Message:	The BLF Directed Call Park number must be a dialable Directed Call Park Destination										

		Remedy: Make sure the Destination is a dialable Directed Call Park number and try again.
	2.3.29.4 label (FI-3234)	
	Type:	string [200]
	Default Value:	EMPTY
	Validation:	^[^"'"'%&<>]{0,50}\$
	Remarks:	The text that appears for the BLF Directed Call Park button (allows Unicode).
	2.3.29.5 labelascii (FI-3235)	
	Type:	string [50]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~\\-]{0,50}\$
	Migration Source:	BLF.label if all chars are less than 127
	Remarks:	A safe version of the BLF Directed Call Park Button Label using only English letters (a to Z) and punctuation.
	2.3.29.6 pkid (FI-3236)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	blfindex + fkdevice is unique. (MFI-98) fkdevice + fknumplan is unique. (MFI-99)	

2.3.30 blfspeeddial (TI-350)				
Description:	Keeps line status of internal DNs			
Fields:	2.3.30.1 blfdestination (FI-2713)			
	Type:	string [255]		
	Default Value:	EMPTY		
	Migration Source:	Value_		
	Remarks:	This is the number or url that the system dials when the user presses the speed-dial button.		
	Rule (RI-326):	Type:	Validation (Insert/Update)	
		Rule Name:	Check BLF SpeedDial Destination for URI	

	Description:	Destinations can be URIs only if the phone supports the additional feature BLF Speed Dial with URI
	Test Condition:	ON INSERT/UPDATE IN BusyLampField (IF BLFDestination LIKE '%@%' AND SELECT COUNT(*) FROM ProductSupportsFeature where tkProduct = @product AND tkDeviceProtocol IN (@DeviceProtocol, 99) AND tkSupportsFeature = 62) = 0 THEN throw exception
	Error Message:	This device does not support URI dialing.
	Remedy:	Make sure the Destination is numeric and try again.
Rule (RI-896):	Type:	Active (Insert/Update)
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null
Rule (RI-896):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null

2.3.30.2 blfindex (FI-2596)

Type:	long
Migration Source:	Index_
Remarks:	This field identifies the speed-dial button on the phone (for example, 1, 2, 3, or 4).

2.3.30.3 blfsdoptionbitmask (FI-3529)

Type:	long
Default Value:	0
Check Constraint:	(BLFSOptionBitmask >= 0) AND (BLFSOptionBitmask <= 1)
Remarks:	A Bitmask comprised of valid combinations of values from TypeBLFSpeedDialOption (0 or 1 in this release)

2.3.30.4 fkdevice (FI-2593)

Type:	guid (Indexed, Cascade Delete)	
Migration Source:	pkid from Device	
Rule (RI-313):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	devicerelatedversionstamp versionstamp on busylampfield
	Description:	Any operation on busylampfield, update devicerelatedversionstamp record
	Test Condition:	update busylampfield

Rule (RI-326):	Type:	Validation (Insert/Update)
	Rule Name:	Check BLF SpeedDial Destination for URI
	Description:	Destinations can be URIs only if the phone supports the additional feature BLF Speed Dial with URI
	Test Condition:	ON INSERT/UPDATE IN BusyLampField (IF BLFDestination LIKE '%@%' AND SELECT COUNT(*) FROM ProductSupportsFeature where tkProduct = @product AND tkDeviceProtocol IN (@DeviceProtocol, 99) AND tkSupportsFeature = 62) = 0 THEN throw exception
	Error Message:	This device does not support URI dialing.
	Remedy:	Make sure the Destination is numeric and try again.

2.3.30.5 [fknumplan \(FI-2855\)](#)

Type:	guid (Cascade Delete, Null OK)
Default Value:	NULL
Remarks:	pointer to dn and partition if null use destination

2.3.30.6 label (FI-2592)

Type:	string [120]
Default Value:	EMPTY
Validation:	^[^"'"%&<>]{0,30}\$
Migration Source:	NULL
Remarks:	The text that appears for the BLF Speed Dial button (allows Unicode).

2.3.30.7 labelascii (FI-2597)

Type:	string [30]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~\-\-]{0,30}\$
Migration Source:	BLF.label if all chars are less than 127
Remarks:	A safe version of the BLF Speed Dial Button Label using only English letters (a to Z) and punctuation.

2.3.30.8 pkid (FI-2594)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Uniqueness:	blfindex + fkdevice is unique. (MFI-93)		
Constraints:	Rule (RFI-187):	Type:	Inter-field Condition and Constraint
		Constraint:	((BLFDestination = ") AND (fkNumPlan IS NOT NULL)) OR ((BLFDestination <> ") AND (fkNumPlan IS NULL))
		Remarks:	Either an existing internal DN or an external destination can be specified for BLF Speed Dial, but not both.

2.3.31 blockingcsslookup (TI-582)

Description: Cisco BE: To store a mapping between allowed calls and blocking CSS detailsS
Is not replicated.

Fields:

2.3.31.1 allowcallpark (FI-6049)	
Type:	bool
Default Value:	FALSE
Remarks:	check for callpark
2.3.31.2 allowcallpickup (FI-6050)	
Type:	bool
Default Value:	FALSE
Remarks:	check for callpickup
2.3.31.3 allowemergencycalls (FI-6048)	
Type:	bool
Default Value:	FALSE
Remarks:	check for emergency calls
2.3.31.4 fkcallingsearchspace (FI-6051)	
Type:	guid
Remarks:	Reference to CallingSearchSpace
2.3.31.5 pkid (FI-6046)	
Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for the record
2.3.31.6 tkcosrouting (FI-6047)	

	Type:	enum
	Remarks:	reference to cosrouting
Uniqueness:	No multicolumn uniqueness constraints	

2.3.32 callerfilterlist (TI-450)

Description: List of allowed or blocked callers for Mobility

Fields:

2.3.32.1 description (FI-3397)														
Type:	text													
Default Value:	EMPTY													
Validation:	^[^\x00-\x1F\x7F"""]{0,128}\$													
2.3.32.2 fkenduser (FI-3399)														
Type:	guid (Cascade Delete, Not Modifiable, Null OK)													
Default Value:	NULL													
Remarks:	Owner of CallerFilterList													
Rule (RI-387):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>CallerFilterList limited to 250 per EndUser</td></tr><tr><td>Description:</td><td>An End-User may create up to 250 CallerFilterLists</td></tr><tr><td>Test Condition:</td><td>ON INSERT INTO CallerFilterList: IF (SELECT COUNT(*) FROM CallerFilterList where fkEndUser = new_fkEndUser) > 250 THEN throw exception</td></tr><tr><td>Error Message:</td><td>Cannot have more than 250 CallerFilterLists for an EndUser</td></tr><tr><td>Remedy:</td><td>Remove some CallerFilterLists or consider combining some lists</td></tr></table>		Type:	Validation (Insert/Update)	Rule Name:	CallerFilterList limited to 250 per EndUser	Description:	An End-User may create up to 250 CallerFilterLists	Test Condition:	ON INSERT INTO CallerFilterList: IF (SELECT COUNT(*) FROM CallerFilterList where fkEndUser = new_fkEndUser) > 250 THEN throw exception	Error Message:	Cannot have more than 250 CallerFilterLists for an EndUser	Remedy:	Remove some CallerFilterLists or consider combining some lists
Type:	Validation (Insert/Update)													
Rule Name:	CallerFilterList limited to 250 per EndUser													
Description:	An End-User may create up to 250 CallerFilterLists													
Test Condition:	ON INSERT INTO CallerFilterList: IF (SELECT COUNT(*) FROM CallerFilterList where fkEndUser = new_fkEndUser) > 250 THEN throw exception													
Error Message:	Cannot have more than 250 CallerFilterLists for an EndUser													
Remedy:	Remove some CallerFilterLists or consider combining some lists													
2.3.32.3 isallowedtype (FI-3398)														
Type:	bool (Not Modifiable)													
Default Value:	FALSE													
Remarks:	False = Blocked; True = Allowed													
2.3.32.4 name (FI-3396)														
Type:	string [200] (Indexed)													
Validation:	^[^'"%&\\<>]{0,50}\$													
2.3.32.5 pkid (FI-3395)														

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	fkenduser + name is unique. (MFI-102)	

2.3.33 callerfilterlistmember (TI-451)

Description:	Members of CallerFilterLists		
Fields:	2.3.33.1 dnmask (FI-3402)		
	Type:	dn	
	DN Type:	DN_TYPE_ALL_DIGITS	
	Default Value:	EMPTY	
	Validation:	^[!0-9*#+X]?[0-9*#+X]{0,46}[!0-9*#+X]?\$	
	Remarks:	DN mask (allows 0-9, *, #, mask character X and +). Pattern can start and end with wildcard character (!)	
	Rule (RFI-155):	Type:	Inter-field Condition and Constraint
		Test Condition:	tkCallerFilterMask = 0
		Constraint:	(DNMask <> ")
		Remarks:	Directory Number filter cannot have an empty DN Mask.
	Rule (RFI-156):	Type:	Inter-field Condition and Constraint
		Test Condition:	tkCallerFilterMask <> 0
		Constraint:	(DNMask = ")
		Remarks:	DN Mask is only used for Directory Number filter (not used with private number or number-not-available filter).
	Rule (RI-389):	Type:	Validation (Insert/Update)
		Rule Name:	CallerFilterListMember DNMask must be unique within list
		Description:	The DNMask values within a CallerFilterList must be unique (if not empty); Number Not Available and Private Number filters do not use a DNMask
		Test Condition:	ON INSERT/UPDATE INTO CallerFilterListMember:
		Error Message:	The specified DN Mask already exists for this Caller Filter List.
		Remedy:	Check the DN Mask and make sure it is unique for this list.

Default Value:	NULL
Remarks:	Call Forward All

2.3.35.5 [fkcallingsearchspace_scfa \(FI-2765\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Migration Source:	from CSSforCFA Clause
Remarks:	Secondary Call Forward All

2.3.35.6 [fknumplan \(FI-3298\)](#)

Type:	guid (Unique, Cascade Delete)	
Rule (RI-837):	Type:	Active (Insert/Update)
	Rule Name:	Store Most Recent Call Foward History Record
	Description:	For each NumPlan DN maintain a history of the most 5 recent Call Foward destinations specified.
	Test Condition:	On Insert or Update of CallFoward Destination for a Numplan record

2.3.35.7 [pkid \(FI-3297\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Uniqueness: No multicolumn uniqueness constraints

2.3.36 [callforwardhistorydynamic \(TI-595\)](#)

Description: To store the last 5 Call Forward destination DN updates done on a line
Insert/Delete is not allowed.

Fields:	2.3.36.1 datetimestamp (FI-6129)	
	Type:	long
	Remarks:	Uniform Integer representation of the most recent time that the corresponding DNOrPattern was used as a forward destination for the associated line
	2.3.36.2 dnorpattern (FI-6128)	
	Type:	dn (Not Modifiable)
	DN Type:	DN_TYPE_MASK
	Remarks:	Indicates the CallForward DN associated with a line for a given timestamp
	2.3.36.3 fknumplan (FI-6127)	
	Type:	guid (Indexed, Not Modifiable)
	Remarks:	Represents the line on which Call Forward was updated. This field is intentionally marked as NOT cascade delete since its a CUBA table
	2.3.36.4 pkid (FI-6126)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.37 callingsearchspace (TI-73)

Description: For Dial Plan - devices call to a calling search space made up of route partitions.

Fields:	2.3.37.1 clause (FI-695)	
	Type:	memo (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	Ordered list of colon separated RoutePartition Names via CallingSearchSpaceMember
	Rule (RI-5):	Type:
		Active (Insert/Update/Delete records) This field is modified by this rule.
		Rule Name:
		CSS Clause Update on Member Insert/Delete
		Description:
		When a new CSS Member record (new partition) is inserted, or an existing record is modified, the CSS Clause of the referenced CSS (CallingSearchSpaceMember.fkCallingSearchSpace) must be updated to reflect the change

	Test Condition:	Insert or Update in CallingSearchSpaceMember
Rule (RI-6):	Type:	Active (Insert/Update/Delete records) This field is modified by this rule.
	Rule Name:	CSS Clause Update on Member Update
	Description:	If any information about a CSS Member changes (sort order, referenced partition), the CSS Clause must be updated to reflect the change
	Test Condition:	Updates in CallingSearchSpaceMember
Rule (RI-7):	Type:	Active (Insert/Update/Delete records) This field is modified by this rule.
	Rule Name:	CSS Clause Update on Route Partition Name Update
	Description:	If the name of a Route Partition changes, any CSS Clause containing that partition must be updated to reflect the new name
	Test Condition:	RoutePartition.Name changes

2.3.37.2 description (FI-133)

Type:	Active (Insert/Update)						
Rule Name:	callmanager versionstamp						
Description:	on change to anything in callmanager table, update device versionstamp						

	Test Condition:	update device
--	-----------------	---------------

2.3.39.6 mgcpkeepaliveport (FI-635)

Type:	long
-------	------

Default Value:	2428
----------------	------

Check Constraint:	(MGCPKeepAlivePort >= 1024) AND (MGCPKeepAlivePort <= 49151)
-------------------	--

Remarks:	Cisco CallManager uses this TCP port to exchange keepalive messages with its associated MGCP gateway. Accept the default port of 2428 unless this port is already in use on your system. Ensure all port entries are unique. Valid port numbers range from 1024 to 49151.
----------	---

Rule (RI-8):	
--------------	--

Type:	Validation (Insert/Update)
-------	----------------------------

Rule Name:	CallManager TCP/IP Port Uniqueness
------------	------------------------------------

Description:	The TCP/IP Ports used by a CallManager must be unique - two port settings may not have the same value
--------------	---

Test Condition:	CallManager.AnalogAccessPort != CallManager.DigitalAccessPort != CallManager.EthernetPhonePort != CallManager.MGCPKeepAlivePort != CallManager.MGCPListenPort
-----------------	---

Rule (RI-270):	
----------------	--

Type:	Active (Insert/Update)
-------	------------------------

Rule Name:	callmanager versionstamp
------------	--------------------------

Description:	on change to anything in callmanager table, update device versionstamp
--------------	--

Test Condition:	update device
-----------------	---------------

2.3.39.7 mgcplistenport (FI-634)

Type:	long
-------	------

Default Value:	2427
----------------	------

Check Constraint:	(MGCPListenPort >= 1024) AND (MGCPListenPort <= 49151)
-------------------	--

Remarks:	Cisco CallManager uses this TCP port to detect messages from its associated MGCP gateway. Accept the default port of 2427 unless this port is already in use on your system. Ensure all port entries are unique. Valid port numbers range from 1024 to 49151.
----------	---

Rule (RI-8):	
--------------	--

Type:	Validation (Insert/Update)
-------	----------------------------

Rule Name:	CallManager TCP/IP Port Uniqueness
------------	------------------------------------

Description:	The TCP/IP Ports used by a CallManager must be unique - two port settings may not have the same value
--------------	---

Test Condition:	CallManager.AnalogAccessPort != CallManager.DigitalAccessPort != CallManager.EthernetPhonePort != CallManager.MGCPKeepAlivePort !=
-----------------	---

	CallManager.MGCPListenPort
Rule (RI-270):	Type: Active (Insert/Update)
	Rule Name: callmanager versionstamp
	Description: on change to anything in callmanager table, update device versionstamp
	Test Condition: update device

2.3.39.8 name (FI-164)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~-]{1,50}\$
Migration Source:	Description
Remarks:	Name of this CallManager.

2.3.39.9 pkid (FI-163)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.
Rule (RI-270):	Type: Active (Insert/Update)
	Rule Name: callmanager versionstamp
	Description: on change to anything in callmanager table, update device versionstamp
	Test Condition: update device
Rule (RI-332):	Type: Active (Insert/Update)
	Rule Name: Prevent port conflict between CCMs and SIP Tunk Security Profiles
	Description: on I/U of SecurityProfile and CCM
	Test Condition: prevent bad port combinations
Rule (RI-605):	Type: Active (Insert)
	Rule Name: RTMT Reporting Record Insert
	Description: On insert of a callmanager record, insert the RTMT reporting records
	Test Condition: ?

2.3.39.10 resettoggle (FI-3129)

Type:	bool								
Default Value:	FALSE								
Remarks:	Should this device or group be reset								
Rule (RI-270):	<table> <tr> <td>Type:</td><td>Active (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>callmanager versionstamp</td></tr> <tr> <td>Description:</td><td>on change to anything in callmanager table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Insert/Update)	Rule Name:	callmanager versionstamp	Description:	on change to anything in callmanager table, update device versionstamp	Test Condition:	update device
Type:	Active (Insert/Update)								
Rule Name:	callmanager versionstamp								
Description:	on change to anything in callmanager table, update device versionstamp								
Test Condition:	update device								

2.3.39.11 sipport (FI-2391)

Type:	long								
Default Value:	5060								
Check Constraint:	(SIPPort >= 1024) AND (SIPPort <= 49151)								
Migration Source:	EthernetPhonePort (if no record, read from SCM.ini or default to 2000)								
Remarks:	Cisco CallManager uses this port to communicate with the Cisco IP Phones on the network for SIP protocol. Accept the default port of 5060 unless this port is already in use on your system. Ensure all port entries are unique. Valid port numbers range from 1024 to 49151.								
Rule (RI-332):	<table> <tr> <td>Type:</td><td>Active (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Prevent port conflict between CCMs and SIP Tunk Security Profiles</td></tr> <tr> <td>Description:</td><td>on I/U of SecurityProfile and CCM</td></tr> <tr> <td>Test Condition:</td><td>prevent bad port combinations</td></tr> </table>	Type:	Active (Insert/Update)	Rule Name:	Prevent port conflict between CCMs and SIP Tunk Security Profiles	Description:	on I/U of SecurityProfile and CCM	Test Condition:	prevent bad port combinations
Type:	Active (Insert/Update)								
Rule Name:	Prevent port conflict between CCMs and SIP Tunk Security Profiles								
Description:	on I/U of SecurityProfile and CCM								
Test Condition:	prevent bad port combinations								

2.3.39.12 sipsecuredport (FI-2392)

Type:	long								
Default Value:	5061								
Check Constraint:	(SIPSecuredPort >= 1024) AND (SIPSecuredPort <= 49151)								
Remarks:	Cisco CallManager uses this port for secured communication with the Cisco IP Phones on the network for SIP protocol. Accept the default port of 5061 unless this port is already in use on your system. Ensure all port entries are unique. Valid port numbers range from 1024 to 49151.								
Rule (RI-332):	<table> <tr> <td>Type:</td><td>Active (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Prevent port conflict between CCMs and SIP Tunk Security Profiles</td></tr> <tr> <td>Description:</td><td>on I/U of SecurityProfile and CCM</td></tr> <tr> <td>Test Condition:</td><td>prevent bad port combinations</td></tr> </table>	Type:	Active (Insert/Update)	Rule Name:	Prevent port conflict between CCMs and SIP Tunk Security Profiles	Description:	on I/U of SecurityProfile and CCM	Test Condition:	prevent bad port combinations

Rule Name:	Prevent port conflict between CCMs and SIP Tunk Security Profiles								
Description:	on I/U of SecurityProfile and CCM								
Test Condition:	prevent bad port combinations								

	2.3.39.13 tkreset (FI-3130)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Set by DeviceReset stored procedure.	
Uniqueness:	No multicolumn uniqueness constraints		
Constraints:	Rule (RFI-125):	Type:	Inter-field Condition and Constraint
		Constraint:	(EthernetPhonePort NOT IN (MGCPKeepAlivePort , MGCPListenPort)) AND (MGCPKeepAlivePort NOT IN (MGCPListenPort))
		Remarks:	Ports on an IP based system node must be unique.
Rules:	Rule (RI-2):	Type:	Active (Insert) Rule applied when record is inserted.
		Rule Name:	Generate CTI ID value
		Description:	On insert of a new record generate a unique 32-bit integer value and store the result in the CTI ID field
		Test Condition:	On Insert
	Rule (RI-168):	Type:	Validation (Insert/Update) Rule applied when record is inserted.
		Rule Name:	Max 255 CallManagers per Cluster
		Description:	A Cisco CallManager cluster may have no more than 255 CallManagers defined.
		Test Condition:	IF ((SELECT COUNT(*) FROM CallManager) > 255) THEN throw exception
		Error Message:	A Cisco CallManager cluster may have no more than 255 CallManagers defined.

2.3.40 callmanagergroup (TI-6)	
Description:	Used for redundancy and rehomings of devices
Fields:	2.3.40.1 name (FI-170)
	Type: string [50] (Unique)
	Validation: ^[a-zA-Z 0-9._-]{1,50}\$
	Migration Source: Description, create one if none exist, make default

Remarks:	Name of the CallManager group.
----------	--------------------------------

2.3.40.2 pkid (FI-169)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Migration Source:	Generated
-------------------	-----------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

Rule (RI-9):	
--------------	--

Type:	Validation (Insert)
-------	---------------------

Rule Name:	Set CallManager Group TFTP Default
------------	------------------------------------

Description:	Only one CallManagerGroup can be the default for TFTP; when a CallManagerGroup is made the default, the existing default must be updated to set CallManagerGroup.TFTPDefault to 0
--------------	---

Test Condition:	Set CallManagerGroup.TFTPDefault = 1 on Insert or change setting from 0 to 1 on Update
-----------------	--

2.3.40.3 resettoggle (FI-3126)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Should this device or group be reset
----------	--------------------------------------

2.3.40.4 tftpdefault (FI-283)

Type:	bool (Not Modifiable)
-------	-----------------------

Default Value:	0
----------------	---

Migration Source:	DefaultGroup
-------------------	--------------

Remarks:	Whether this Cisco CallManager group is the default Cisco CallManager group when auto-registration is enabled. Note : Each Cisco CallManager cluster can have only one default auto-registration group.
----------	---

Rule (RI-9):	
--------------	--

Type:	Validation (Insert)
-------	---------------------

Rule Name:	Set CallManager Group TFTP Default
------------	------------------------------------

Description:	Only one CallManagerGroup can be the default for TFTP; when a CallManagerGroup is made the default, the existing default must be updated to set CallManagerGroup.TFTPDefault to 0
--------------	---

Test Condition:	Set CallManagerGroup.TFTPDefault = 1 on Insert or change setting from 0 to 1 on Update
-----------------	--

Rule (RI-10):	
---------------	--

Type:	Validation (Delete)
-------	---------------------

Rule Name:	Delete CallManager Group TFTP Default
------------	---------------------------------------

Description:	There must be a CallManagerGroup TFTP Default in the system at all times. The current default CallManager Group cannot be deleted
--------------	---

		Test Condition:	Delete record where CallManagerGroup.TFTPDefault = 1
		Error Message:	Cannot delete the TFTP Default CallManager Group.
		Remedy:	Make another CallManager Group the TFTP Default before deleting this CallManager Group.
	Rule (RI-11):	Type:	Validation (Update)
		Rule Name:	CallManager Group TFTP Default Required
		Description:	There must be a CallManagerGroup TFTP Default in the system at all times. Cannot set the current default to 0 manually; it is set to 0 by rule when another CallManager Group is made the TFTP Default.
		Test Condition:	Change CallManagerGroup.TFTPDefault from 1 to 0
		Error Message:	A Default CallManager Group for TFTP is required. You cannot remove the TFTP Default setting of this CallManager Group.
		Remedy:	Make another CallManager Group the TFTP Default. The TFTP Default setting for this CallManager Group will automatically be set to false.
	2.3.40.5 tkreset (FI-3127)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Set by DeviceReset stored procedure.	
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-9):	Type:	Validation (Insert) This table is modified by this rule.
		Rule Name:	Set CallManager Group TFTP Default
		Description:	Only one CallManagerGroup can be the default for TFTP; when a CallManagerGroup is made the default, the existing default must be updated to set CallManagerGroup.TFTPDefault to 0
		Test Condition:	Set CallManagerGroup.TFTPDefault = 1 on Insert or change setting from 0 to 1 on Update
	Rule (RI-10):	Type:	Validation (Delete) Rule applied when record is deleted.
		Rule Name:	Delete CallManager Group TFTP Default
		Description:	There must be a CallManagerGroup TFTP Default in the system at all times. The current default CallManager Group cannot be deleted
		Test Condition:	Delete record where CallManagerGroup.TFTPDefault = 1
		Error Message:	Cannot delete the TFTP Default CallManager Group.

	Rule (RI-12):	Remedy:	Make another CallManager Group the TFTP Default before deleting this CallManager Group.
		Type:	Validation (Insert/Update) Rule applied when record is inserted.
		Rule Name:	CallManager Group limited to 3 CallManagers
		Description:	The can be no more than three (3) Cisco CallManagers in a CallManager Group
		Test Condition:	SELECT Count(*) FROM CallManagerGroupMember WHERE fkCallManagerGroup = @CallManagerGroup.pkid > 3
		Error Message:	A Cisco CallManager Group may not contain more than 3 Cisco CallManagers

2.3.41 callmanagergroupmember (TI-7)

Description: Ordered membership of CallManagers in CallManagerGroups

Fields:

2.3.41.1 [fkcallmanager \(FI-173\)](#)

Type:	guid (Cascade Delete)
Migration Source:	convert from CallManagerGroupList.CallManagerID

2.3.41.2 [fkcallmanagergroup \(FI-172\)](#)

Type:	guid (Indexed, Cascade Delete)
Migration Source:	convert from CallManagerGroupList.CallManagerGroupID

Rule (RI-12):	Type:	Validation (Insert/Update)
	Rule Name:	CallManager Group limited to 3 CallManagers
	Description:	The can be no more than three (3) Cisco CallManagers in a CallManager Group
	Test Condition:	SELECT Count(*) FROM CallManagerGroupMember WHERE fkCallManagerGroup = @CallManagerGroup.pkid > 3
	Error Message:	A Cisco CallManager Group may not contain more than 3 Cisco CallManagers

2.3.41.3 [pkid \(FI-171\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-269):	Type:	Active (Insert/Update/Delete records)

		Rule Name:	callmanagergroupmember versionstamp
		Description:	on change to anything in callmanagergroupmember, update device versionstamp
		Test Condition:	update callmanager group member
	2.3.41.4 priority (FI-174)		
	Type:	long	
	Check Constraint:	Priority >= 0	
	Migration Source:	CallManagerGroupList.Priority	
	Remarks:	CallManager Groups are made up of an ordered list of from one to three CallManagers. This field orders the members of the group. There is no requirment for a member in a group to be at priority 0. Nor is there a requirment that the priorities be sequential within a CallManager Group.	
Uniqueness:	fkcallmanagergroup + fkcallmanager is unique. (MFI-2) fkcallmanagergroup + priority is unique. (MFI-3)		

2.3.42 carrierselectcodedetails (TI-1085)

Description:	Cisco BE: Code details for particular carrier Is not replicated.		
Fields:	2.3.42.1 fkcarrierselectprofile (FI-10145)		
	Type:	guid (Cascade Delete)	
	Remarks:	Reference to Carrier Select Profile entry	
	2.3.42.2 pkid (FI-10144)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique identifier for the record	
	2.3.42.3 tkcarrierselectcode (FI-10146)		
	Type:	enum	
	Default Value:	0	
	Remarks:	Reference to TypeCarrierSelectCode	
	2.3.42.4 value (FI-10147)		
	Type:	long	
	Remarks:	Reference to TypeCarrierSelectCode	

Uniqueness: fkcarrierselectprofile + tkcarrierselectcode is unique. (MFI-771)

2.3.43 carrierselectprofile (TI-1084)

Description: Cisco BE: Profiles for different carriers
Is not replicated.

Fields:

2.3.43.1 description (FI-10143)

Type:	string [200]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%&<>]{0,50}\$
Migration Source:	N/A
Remarks:	Description for CS Profile.

2.3.43.2 name (FI-10142)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Migration Source:	N/A
Remarks:	Unique name

2.3.43.3 pkid (FI-10141)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for the record

Uniqueness: No multicolumn uniqueness constraints

2.3.44 carrierselectprofiletrunkmap (TI-1086)

Description: Cisco BE: Mapping between Profile and Trunks
Is not replicated.

Fields:

2.3.44.1 fkcarrierselectprofile (FI-10149)

Type:	guid (Cascade Delete)
Remarks:	Reference to Carrier Select Profile entry

2.3.44.2 fkdevice (FI-10150)

	Type:	guid (Cascade Delete)
	Remarks:	indirect from DeviceName
	2.3.44.3 pkid (FI-10148)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
Uniqueness:	fkcarrierselectprofile + fkdevice is unique. (MFI-772)	

2.3.45 ccaprofile (TI-2583)

Description:	This profile contains CCA-ID, Softswitch ID, Object Class field, Subscriber Type field, SIP Alias suffix, Sip User Name field suffix made configurable.		
Fields:	2.3.45.1 ccaid (FI-25576)		
	Type:	string [32] (Unique)	
	Validation:	^[a-zA-Z 0-9.-]{1,32}\$	
	Remarks:	The LDAP server that stores the Directory Number Alias records uses this field to appropriately authorize subsequent updates of the records in the LDAP Database. The Directory Number Alias server will only allow update operations on a record originating from the CUCM cluster that originally added the record by identifying the CUCM Cluster Identifier set in this field.	
	Rule (RI-2111):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate USNs for CCAProfile
		Description:	Generate update sequence numbers for table CCAProfile.
		Test Condition:	On INSERT/UPDATE/DELETE on CCAProfile, generate USN as necessary.
	2.3.45.2 ccaprofile_id (FI-25575)		
	Type:	long (Unique, Indexed, Not Modifiable)	
	Remarks:	Unique id to CCAProfile which would be use in numplan table	
	Rule (RI-2110):	Type:	Active (Insert) This field is modified by this rule.
		Rule Name:	Generate CCProfile ID value
		Description:	On insert of a new record generate a unique integer value and store the result in the CC_Profile ID field

	Test Condition:	On Insert
--	-----------------	-----------

2.3.45.3 objectclass (FI-25578)

Type:	string [32]
-------	-------------

Validation:	^[a-zA-Z 0-9.-]{0,32}\$
-------------	-------------------------

Remarks:	This field when configured specifies the object class in the LDAP Routing database to which the Directory Number record will belong to when the Directory Number is pushed by the DN Alias Sync server
----------	--

Rule (RI-2111):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	Generate USNs for CCAPProfile
	Description:	Generate update sequence numbers for table CCAPProfile.
	Test Condition:	On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.

2.3.45.4 pkid (FI-25574)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Migration Source:	Generated
-------------------	-----------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

Rule (RI-2110):	Type:	Active (Insert)
	Rule Name:	Generate CCProfile ID value
	Description:	On insert of a new record generate a unique integer value and store the result in the CC_Profile ID field
	Test Condition:	On Insert

Rule (RI-2111):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	Generate USNs for CCAPProfile
	Description:	Generate update sequence numbers for table CCAPProfile.
	Test Condition:	On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.

2.3.45.5 primaryccasoftswitchid (FI-25577)

Type:	string [32]
-------	-------------

Validation:	^[a-zA-Z 0-9.-]{1,32}\$
-------------	-------------------------

Remarks:	The LDAP server that stores the Directory Number Alias records uses this field to appropriately authorize subsequent updates of the records in the LDAP Database. The Directory Number Alias server will only allow update operations on a record originating from the CUCM Primary Soft Switch that originally added the record by identifying the CUCM
----------	--

	Primary Soft Switch Identifier set in this field.
Rule (RI-2111):	Type: Active (Insert/Update/Delete records)
	Rule Name: Generate USNs for CCAPProfile
	Description: Generate update sequence numbers for table CCAPProfile.
	Test Condition: On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.

2.3.45.6 secondaryccasoftswitchid (FI-25596)

Type:	string [32] (Null OK)
Validation:	^[a-zA-Z 0-9.-]{0,32}\$
Remarks:	The LDAP server that stores the Directory Number Alias records uses this field to appropriately authorize subsequent updates of the records in the LDAP Database. The Directory Number Alias server will only allow update operations on a record originating from the CUCM Secondary Soft Switch that originally added the record by identifying the CUCM Secondary Soft Switch Identifier set in this field.
Rule (RI-2111):	Type: Active (Insert/Update/Delete records)
	Rule Name: Generate USNs for CCAPProfile
	Description: Generate update sequence numbers for table CCAPProfile.
	Test Condition: On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.

2.3.45.7 sipaliasuffix (FI-25580)

Type:	string [32] (Null OK)
Validation:	^[a-zA-Z 0-9.@-]{0,32}\$
Remarks:	This field when configured specifies the prefix that is added to the full Commercial number before it is stored in the SIP Alias field in the LDAP Routing database.
Rule (RI-2111):	Type: Active (Insert/Update/Delete records)
	Rule Name: Generate USNs for CCAPProfile
	Description: Generate update sequence numbers for table CCAPProfile.
	Test Condition: On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.

2.3.45.8 sipusernamesuffix (FI-25581)

Type:	string [32] (Null OK)
Validation:	^[a-zA-Z 0-9.@-]{0,32}\$
Remarks:	This field when configured specifies the prefix that is added to the User ID field before it is stored in the SIPUserName field in the LDAP Routing database.

	Rule (RI-2111):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate USNs for CCAPProfile
		Description:	Generate update sequence numbers for table CCAPProfile.
		Test Condition:	On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.
	2.3.45.9 subscribertype (FI-25579)		
	Type:	string [32] (Null OK)	
	Validation:	^[a-zA-Z 0-9.@-]{0,32}\$	
	Remarks:	This field when configured specifies the Subscriber Type in the LDAP Routing database of the Directory Number when the Directory Number is pushed by the DN Alias Sync server	
	Rule (RI-2111):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate USNs for CCAPProfile
		Description:	Generate update sequence numbers for table CCAPProfile.
		Test Condition:	On INSERT/UPDATE/DELETE on CCAPProfile, generate USN as necessary.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.46 ccdadvertisingserviceprofile (TI-506)

Description:	Call Control Discovery Advertising Profile for Call Manager		
Fields:	2.3.46.1 fkccddhosteddngroup (FI-3837)		
	Type:	guid (Unique)	
	Remarks:	pkid of Hosted DN Group	
	Rule (RI-625):	Type:	Validation (Insert/Update/Delete)
		Rule Name:	CCDHostedDNGroup can not be empty for CCD service
		Description:	CCD Hosted DN Group needs to associate with at least one Hosted DN if it is associated with CCD service
		Test Condition:	CCD Hosted DN Group needs to associate with at least one Hosted DN if it is associated with CCD service
		Error Message:	CCD Hosted DN Group needs to associate with at least one Hosted DN if it is associated with CCD service
	2.3.46.2 fkdevice_ict (FI-3828)

	Default Value:	80
	Check Constraint:	((highwatermark >= 70) AND (highwatermark <= 90))

	Remarks:	percentage
	2.3.50.6 lowwatermark (FI-2862)	
	Type:	long
	Default Value:	40
	Check Constraint:	((lowwatermark >= 30) AND (lowwatermark <=50))
	Remarks:	percentage
	2.3.50.7 pkid (FI-2856)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.50.8 window size (FI-2859)	
	Type:	long
	Default Value:	30
	Check Constraint:	((window size >= 2) AND (window size <= 30))
	Remarks:	number of days of CDR files to preserve
Uniqueness:	No multicolumn uniqueness constraints	

2.3.51 certificate (TI-660)

Description:	Certificate Information Insert/Delete is not allowed.	
Fields:	2.3.51.1 certificate (FI-5395)	
	Type:	string [4096] (Not Modifiable)
	Remarks:	Certificate
	2.3.51.2 ipv4address (FI-5396)	
	Type:	string [15] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	IPv4Address
	2.3.51.3 ipv6address (FI-5397)	
	Type:	string [50] (Not Modifiable)

Default Value:	EMPTY
Remarks:	IPv6Address

2.3.51.4 issuername (FI-5393)

Type:	string [255] (Not Modifiable)
Remarks:	Name of issuer

2.3.51.5 pkid (FI-5390)

Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Migration Source:	Generated		
Remarks:	Unique ID to identify Certificate record		
Rule (RI-714):	Type:	Active (Insert)	
	Rule Name:	Insert into certificatehashmapdynamic for each record of hash	
	Description:	On insert on certificatedynamic insert record in certificatehashmapdynamic for each hash	
	Test Condition:	On insert on certificatedynamic	

2.3.51.6 serialnumber (FI-5394)

Type:	string [42] (Not Modifiable)
Remarks:	hex representation of serial number

2.3.51.7 servername (FI-5391)

Type:	string [255] (Not Modifiable)
Remarks:	Name of the server

2.3.51.8 subjectname (FI-5392)

Type:	string [255] (Not Modifiable)
Remarks:	Name of subject

2.3.51.9 timetolive (FI-5398)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(TimeToLive >= 0)

Uniqueness: issuername + serialnumber is unique. (MFI-128)

2.3.52 certificatehashmap (TI-672)

Description: Certificate Hash Map
Insert/Delete is not allowed.

Fields:

2.3.52.1 fkcertificate (FI-5458)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: Reference to Certificate record

2.3.52.2 hash (FI-5460)

Type: string [256] (Null OK)

2.3.52.3 pkid (FI-5457)

Type: guid (Unique, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify certificatehashmapdynamic record

2.3.52.4 tkhash (FI-5459)

Type: enum (Not Modifiable)

Default Value: 1

Uniqueness: fkcertificate + tkhash is unique. (MFI-136)

2.3.53 certificateprocessnodemap (TI-670)

Description: Certificate Process Node Mapping
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.53.1 fkcertificate (FI-5682)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: References Certificate Record

2.3.53.2 fkprocessnode (FI-5683)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: associated processnode

2.3.53.3 ipv4address (FI-5685)

Type: string [15] (Not Modifiable)

Default Value: EMPTY

	Remarks:	IPv4Address
	2.3.53.4 ipv6address (FI-5686)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	IPv6Address
	2.3.53.5 pkid (FI-5681)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify CertificateProcessNodeMap record
	2.3.53.6 servername (FI-5684)	
	Type:	string [255] (Not Modifiable)
	Remarks:	Name of the server
Uniqueness:	No multicolumn uniqueness constraints	

2.3.54 certificateservicecertificatemap (TI-980)		
Description:	Maps each certificate service to its respective certificate	
Fields:	2.3.54.1 fkcertificate (FI-5730)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	Pkid of the Certificate for the corresponding Certificate Service
	2.3.54.2 pkid (FI-5729)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a CertificateServiceCertificateMap record
	2.3.54.3 tkcertificateservice (FI-5731)	
	Type:	enum
	Remarks:	The enum value of Certificate service defined in the TypeCertificateService table
Uniqueness:	fkcertificate + tkcertificateservice is unique. (MFI-162)	

2.3.55 certificatetrustrolemap (TI-661)

Description: Certifiacte Trust Role
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.55.1 fkcertificate (FI-5400)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: Reference to certificate

2.3.55.2 pkid (FI-5399)

Type: guid (Unique, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify CertificateRoleMapDynamic record

2.3.55.3 tktrustrole (FI-5401)

Type: enum (Not Modifiable)

Remarks: Reference to typetrustrole

Uniqueness: fkcertificate + tktrustrole is unique. (MFI-129)

2.3.56 cmcinfo (TI-304)

Description: Contains the authorization information for Client Meta Code

Fields:

2.3.56.1 code (FI-2127)

Type: string [16] (Unique, Indexed)

Validation: ^[0-9]{1,16}\$

Remarks: All Digits

2.3.56.2 description (FI-2126)

Type: string [200]

Default Value: EMPTY

Validation: ^[\x00-\x1F""%\\&<>{ }\\[\]]{0,50}\$

2.3.56.3 pkid (FI-2128)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.57 codeclist (TI-1104)

Description:	This table documents the existence of a named, ordered list of the codecs supported by the system. Records marked as IsStandard are not eligible for user modification nor are their associated member lists eligible for user change.	
Fields:	2.3.57.1 description (FI-10210)	
	Type:	string [400]
	Validation:	^[^\x00-\x1F""%&<>]{0,100}\$
	Remarks:	Localizable description of the Codec List.
	2.3.57.2 isstandard (FI-10211)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Indicates whether the Codec List is Standard or not. A Standard Codec List is not eligible for user modification nor its associated member lists eligible for a user change. Created during installation. 2 Standard Codec Lists - Lossy,Low-Loss.
	2.3.57.3 name (FI-10209)	
	Type:	string [50] (Unique, Indexed)
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Remarks:	Name of the Codec List supported by the system. Records marked as isStandard are not eligible for user modification nor are their associated member lists eligible for a user change.
	2.3.57.4 pkid (FI-10208)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.58 codeclistmember (TI-1105)

Description:	This table records the ordered set of codecs for each defined CodecList. Records associated with a CodecList which is NOT IsStandard may be re-ordered.	
--------------	---	--

Fields:	2.3.58.1 fkcodeclist (FI-10213)	
	Type:	guid (Cascade Delete, Null OK)
	Default Value:	NULL
	Remarks:	Unique ID of the Codec List. Identifies the Codec to be a Lossy or Low-Loss Codec.
	2.3.58.2 pkid (FI-10212)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.58.3 preferenceorder (FI-10215)	
	Type:	long
	Remarks:	Determines the preference of Codec within a single Codec List. The same Codec in two different lists (Lossy and Low-Loss) can have different preference order in both the lists. The preference order can be changed by the user.
	2.3.58.4 tkcodec (FI-10214)	
	Type:	enum (Not Modifiable)
	Remarks:	Determines the type of Codec. Refers to the Codec supported by the system.
Uniqueness:	fkcodeclist + tkcodec is unique. (MFI-773)	

2.3.59 commondeviceconfig (TI-421)

Description: Used for DeviceMobility. Have user oriented fields.

Fields:	2.3.59.1 calreference (FI-21075)	
	Type:	long
	Default Value:	-1
	Remarks:	user can assign confidential access level value to the group of devices
	2.3.59.2 fkmlppdomain (FI-1955)	
	Type:	guid (Null OK)
	Default Value:	NULL
	Migration Source:	mlppdomainid
	Remarks:	This is the MLPP domain associated with this profile. If this field is blank, this devices using this profile inherit the MLPP domain from the value set for the MLPP Domain Identifier enterprise parameter.
	2.3.59.3 fksoftkeytemplate (FI-1128)	

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	This is the softkey template that is associated with the devices using the profile.

2.3.59.4 holdpartynetworkholdmohaudiosourceid (FI-1000)

Type:	long (Null OK)
Default Value:	NULL
Remarks:	This is the audio source to use for music on hold (MOH) when the network initiates a hold action.

2.3.59.5 holdpartyuserholdmohaudiosourceid (FI-999)

Type:	long (Null OK)
Default Value:	NULL
Remarks:	This is the audio source to use for music on hold (MOH) when a user initiates a hold action.

2.3.59.6 name (FI-3229)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$

2.3.59.7 pkid (FI-3228)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-346):	Type:	Active (Insert/Update)
	Rule Name:	commondeviceconfig versionstamp
	Description:	on change to anything in commondeviceconfig table, update device versionstamp
	Test Condition:	update device

2.3.59.8 resettoggle (FI-3239)

Type:	bool	
Default Value:	FALSE	
Remarks:	Should this device or group be reset	
Rule (RI-346):	Type:	Active (Insert/Update)
	Rule Name:	commondeviceconfig versionstamp
	Description:	on change to anything in commondeviceconfig table, update device versionstamp

Test Condition: update device

2.3.59.9 [tkcalmode \(FI-21076\)](#)

Type: enum (Null OK)

Remarks: user can assign confidential access level mode to the group of devices

2.3.59.10 [tkipaddressingmode \(FI-3656\)](#)

Type: enum

Default Value: 2

Remarks: Indicates the IPaddressingMode of device, ipv4, ipv6 or both type of IP addresses

2.3.59.11 [tkipaddressingmodeprefcontrol \(FI-3657\)](#)

Type: enum

Default Value: 2

Remarks: Indicates what IP type device should connect to UCM if device has both IP's availab

2.3.59.12 [tkpreemption \(FI-1298\)](#)

Type: enum

Default Value: 2

Remarks: This setting specifies whether devices using the profile and capable of preempting calls in progress will use the capability when the devices place an MLPP precedence call. Note : Do not configure a profile with the following combination of settings: MLPP Indication is set to Off or Default (when default is Off) while MLPP Preemption is set to Forceful.

2.3.59.13 [tkreset \(FI-3240\)](#)

Type: enum

Default Value: 2

Remarks: Set by DeviceReset stored procedure.

2.3.59.14 [tkstatus_allowipv6autoconfigforphones \(FI-3699\)](#)

Type: enum

Default Value: 2

2.3.59.15 [tkstatus_allowipv6duplicateaddressdetection \(FI-25645\)](#)

Type: enum

Default Value: 2

Remarks: Allow Duplicate Address Detection for CommonDeviceConfig.This parameter determines whether the duplicate address detection should be performed on each of the addresses in any identity associations(IAs) it receives in the

	Reply message before using that address for traffic.
--	--

2.3.59.16 [tkstatus_ipv6acceptredirectmessages \(FI-25646\)](#)

Type:	enum
Default Value:	2
Remarks:	Accept Redirect Messages for CommonDeviceConfig.This parameter provides an ability to accept or ignore the redirect messages.

2.3.59.17 [tkstatus_ipv6replymulticastechorequest \(FI-25647\)](#)

Type:	enum
Default Value:	2
Remarks:	Reply Multicast Echo Request for CommonDeviceConfig.This parameter allows the phone to enable or disable the ability to send an Echo Reply message in response to an Echo Request message sent to an IPv6 multicast or anycast address.

2.3.59.18 [tkstatus_mlppindicationstatus \(FI-1297\)](#)

Type:	enum
Default Value:	2
Remarks:	This setting specifies whether devices using the profile and capable of playing precedence tones will use the capability when the devices place an MLPP precedence call. Null means uses enterprise value. Note : Do not configure a profile with the following combination of settings: MLPP Indication is set to Off or Default (when default is Off) while MLPP Preemption is set to Forceful.

2.3.59.19 [tkstatus_viprenabled \(FI-5247\)](#)

Type:	enum
Default Value:	2
Remarks:	Is ViPR enabled on this device common config

2.3.59.20 [tkuserlocale \(FI-1036\)](#)

Type:	enum (Null OK)
Default Value:	NULL
Remarks:	This is the locale that is associated with the phones and gateways using the profile. The user locale identifies a set of detailed information to support users, including language and font. Note : If this is null, the locale that is specified in the Cisco Unified CallManager clusterwide parameters as Default User Locale applies.

2.3.59.21 [usetrustrustedrelaypoint \(FI-3480\)](#)

Type:	bool
Default Value:	FALSE

	Remarks:	Indicates whether Trusted Relay Point should be used if available	
	2.3.59.22 versionstamp (FI-3230)		
	Type:	string [47] (Null OK)	
	Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963	
	Remarks:	New guid plus seconds past midnight 1970 are concatenated	
	Rule (RI-346):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	commondeviceconfig versionstamp
		Description:	on change to anything in commondeviceconfig table, update device versionstamp
		Test Condition:	update device
	Rule (RI-346):	Type:	Active (Insert/Update)
		Rule Name:	commondeviceconfig versionstamp
		Description:	on change to anything in commondeviceconfig table, update device versionstamp
		Test Condition:	update device
	Uniqueness:	No multicolumn uniqueness constraints	

2.3.60 commonphoneconfig (TI-384)

Description: Common Profile Information (only applies to SIP intially)

Fields:

2.3.60.1 description (FI-2984)	
Type:	string [512]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,128}\$
2.3.60.2 fkfeaturecontrolpolicy (FI-5716)	
Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Feature Control Policy Record
2.3.60.3 fkvpngroup (FI-5441)	
Type:	guid (Null OK)
Default Value:	NULL

Remarks: References VPNGroup Record Null allowed, null by default

2.3.60.4 [fkvpnprofile \(FI-5442\)](#)

Type: guid (Null OK)

Default Value: NULL

Remarks: References VPNProfile Record Null allowed, null by default

2.3.60.5 [fkwifihotspotprofile \(FI-25825\)](#)

Type: guid (Null OK)

Remarks: Reference to WiFi HotspotProfile.

2.3.60.6 **isstandard (FI-2986)**

Type: bool (Not Modifiable)

Default Value: FALSE

Remarks: Whether it is standard

2.3.60.7 **name (FI-2985)**

Type: string [50] (Unique)

Validation: `^[a-zA-Z 0-9._-]{1,50}$`

2.3.60.8 **pkid (FI-2852)**

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

Rule (RI-274):

Type: Active (Insert/Update)

Rule Name: commonphoneconfig versionstamp

Description: on change to anything in commonphoneconfig table, update device versionstamp

Test Condition: update device

Rule (RI-581):

Type: Active (Insert)

Rule Name: Insert XML Records for CommonPhoneConfig Table

Description: When a CommonPhoneConfig record is inserted, insert records for CommonPhoneConfigXML.

Test Condition: ON INSERT INTO CommonPhoneConfig

Rule (RI-947):

Type: Validation (Delete)

Rule Name: Cannot delete Standard Common Phone Profile

	Description:	Cannot delete Standard Common Phone Profile having pkid=ac243d17-98b4-4118-8feb-5ff2e1b781ac from CommonPhoneConfig
	Test Condition:	On Delete from CommonPhoneConfig AND IF pkid=ac243d17-98b4-4118-8feb-5ff2e1b781ac THEN THROW EXCEPTION

2.3.60.9 resettoggle (FI-3237)

Type:	bool								
Default Value:	FALSE								
Remarks:	Should this device or group be reset								
Rule (RI-274):	<table> <tr> <td>Type:</td><td>Active (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>commonphoneconfig versionstamp</td></tr> <tr> <td>Description:</td><td>on change to anything in commonphoneconfig table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Insert/Update)	Rule Name:	commonphoneconfig versionstamp	Description:	on change to anything in commonphoneconfig table, update device versionstamp	Test Condition:	update device
Type:	Active (Insert/Update)								
Rule Name:	commonphoneconfig versionstamp								
Description:	on change to anything in commonphoneconfig table, update device versionstamp								
Test Condition:	update device								

2.3.60.10 sshpassword (FI-3755)

Type:	string [200]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+.,/:;=?@[^_`{ }~-]{0,200}\$
Migration Source:	SSH Password
Remarks:	SSH Password

2.3.60.11 sshuserid (FI-3756)

Type:	string [50]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+.,/:;=?@[^_`{ }~-]{0,50}\$
Migration Source:	SSH UserID

2.3.60.12 [tkdndoption \(FI-3284\)](#)

Type:	enum
Default Value:	0
Remarks:	Type of call handling while DND is enabled (0=Ringer Off, 1=Call Reject); depends on product support

2.3.60.13 [tkphonepersonalization \(FI-3457\)](#)

Type:	enum
Default Value:	3

2.3.60.14 [tkphoneservicedisplay \(FI-3627\)](#)

Type:	enum
Default Value:	3
Remarks:	Identifies which services are displayed for a button (services, directories, messages): Internal, External, Both, or Default (use Enterprise Parameter value)

2.3.60.15 [tkreset \(FI-3238\)](#)

Type:	enum
Default Value:	2
Remarks:	Set by DeviceReset stored procedure.

2.3.60.16 [tkringsetting_dnd \(FI-3285\)](#)

Type:	enum
Default Value:	5
Check Constraint:	((tkRingSetting_DND = 1) OR (tkRingSetting_DND = 2) OR (tkRingSetting_DND = 5))

2.3.60.17 [tkstatus_alwaysuseprimeline \(FI-3706\)](#)

Type:	enum
Default Value:	2
Remarks:	Determines off-hook behavior of phones with active calls present

2.3.60.18 [tkstatus_alwaysuseprimelineformv \(FI-3707\)](#)

Type:	enum
Default Value:	2
Remarks:	Determines Voice Message retrieval behavior of phones

2.3.60.19 [versionstamp \(FI-3114\)](#)

Type:	string [47] (Null OK)	
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963	
Remarks:	New guid plus seconds past midnight 1970 are concatenated	
Rule (RI-274):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	commonphoneconfig versionstamp
	Description:	on change to anything in commonphoneconfig table, update device versionstamp
	Test Condition:	update device

	Rule (RI-274):	Type:	Active (Insert/Update)
		Rule Name:	commonphoneconfig versionstamp
		Description:	on change to anything in commonphoneconfig table, update device versionstamp
		Test Condition:	update device
	2.3.60.20 zzbackgroundimageaccess (FI-2806)		
	Type:	bool	
	Default Value:	TRUE	
	Remarks:	is background Image Access Enabled	
	2.3.60.21 zzunlockpassword (FI-2821)		
	Type:	string [15]	
Default Value:	EMPTY		
Remarks:	unlock password		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.61 commonphoneconfigxml (TI-550)			
Description:	XML configuration for Common Phone Config Insert/Delete is not allowed.		
Fields:	2.3.61.1 fkcommonphoneconfig (FI-3751)		
	Type:	guid (Unique, Indexed, Cascade Delete)	
	Rule (RI-591):	Type:	Active (Update)
		Rule Name:	Update CommonPhoneConfig.XML for CommonPhoneConfigXML change
		Description:	When CommonPhoneConfigXML.XML changed, the CommonPhoneConfig is updated.
		Test Condition:	ON UPDATE IN CommonPhoneConfigXML: THEN UPDATE CommonPhoneConfig SET versionstamp = versionstampgenerator() where pkid = fkCommonPhoneConfig; END IF;
	2.3.61.2 pkid (FI-3750)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.61.3 xml (FI-3752)		

	Type:	string [16000] (Null OK)	
	Default Value:	NULL	
	Remarks:	Product configuration XML not used by CCM	
	Rule (RI-591):	Type:	Active (Update)
		Rule Name:	Update CommonPhoneConfig.XML for CommonPhoneConfigXML change
Description:		When CommonPhoneConfigXML.XML changed, the CommonPhoneConfig is updated.	
Test Condition:		ON UPDATE IN CommonPhoneConfigXML: THEN UPDATE CommonPhoneConfig SET versionstamp = versionstampgenerator() where pkid = fkCommonPhoneConfig; END IF;	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.62 componentversion (TI-368)

Description:	RPM versions of components	
Fields:	2.3.62.1 fkprocessnode (FI-2716)	
	Type:	guid (Indexed, Cascade Delete)
	2.3.62.2 installationcomponent (FI-2717)	
	Type:	string [100]
	2.3.62.3 pkid (FI-2715)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.62.4 softwarecomponent (FI-2718)	
	Type:	string [100]
	2.3.62.5 version (FI-2719)	
	Type:	string [100]
Uniqueness:	No multicolumn uniqueness constraints	

2.3.63 confidentialaccesslevel (TI-2113)

Description:	Access level and Text selection	

Fields:	2.3.63.1 enum (FI-21045)	
	Type:	enum (Unique, Indexed)
	Remarks:	unique identifier for ConfidentialaccessLevel
	2.3.63.2 name (FI-21046)	
	Type:	string [16]
	Validation:	^[a-zA-Z0-9 !@#\$\$%^&*()_+/{ }-]{1,16}\$
	Remarks:	Unique name given to this specific Confidential Access Level
Uniqueness:	No multicolumn uniqueness constraints	

2.3.64 confidentialaccesslevelmatrix (TI-2114)

Description:	Selection Resultant based upon incoming and outgoing CAL level	
Fields:	2.3.64.1 confidentialaccesslevel_in (FI-21048)	
	Type:	enum
	Remarks:	Incoming confidential access level which would be assigned to device or trunk or line
	2.3.64.2 confidentialaccesslevel_out (FI-21049)	
	Type:	enum
	Remarks:	Outgoing confidential access level which would be assigned to device or trunk or line
	2.3.64.3 confidentialaccesslevel_result (FI-21050)	
	Type:	enum
	Remarks:	Resolved confidential access level from the incoming and outgoing confidential access level
	2.3.64.4 enum (FI-21047)	
	Type:	enum (Unique, Indexed)
	Remarks:	unique identifier for Records of the confidential access level matrix
Uniqueness:	No multicolumn uniqueness constraints	

2.3.65 credential (TI-446)

Description:	Authentication information and policies for App and End Users Records may be modified only by installation and/or DB triggers.	
Fields:		

2.3.65.1 cantchange (FI-3349)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	A flag indicating whether the user can set this credential.

2.3.65.2 credentials (FI-3358)

Type:	string [288] (Not Modifiable, Null OK)
Default Value:	NULL
Migration Source:	Binary in CUC; encrypted string App/EndUser.password or PIN
Remarks:	The PIN or password, for a user. The credentials are stored in an encrypted format.

2.3.65.3 credmustchange (FI-3350)

Type:	bool (Not Modifiable)
Default Value:	TRUE
Remarks:	A flag indicating whether the user must change their credentials (PIN or password) at the next login.

2.3.65.4 doesntexpire (FI-3352)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).

2.3.65.5 [fkapplicationuser \(FI-3347\)](#)

Type:	guid (Cascade Delete, Not Modifiable, Null OK)								
Default Value:	NULL								
Remarks:	The unique identifier of the Application User to which this credential belongs.								
Rule (RI-399):	<table><tr><td>Type:</td><td>Active (Insert)</td></tr><tr><td>Rule Name:</td><td>Insert Dynamic Records for Credentials</td></tr><tr><td>Description:</td><td>When a credential record gets inserted, create the corresponding record in the CredentialDynamic table</td></tr><tr><td>Test Condition:</td><td>ON INSERT INTO Credential: INSERT INTO CredentialDynamic (pkid, fkCredential) values (newid(), new_pkid)</td></tr></table>	Type:	Active (Insert)	Rule Name:	Insert Dynamic Records for Credentials	Description:	When a credential record gets inserted, create the corresponding record in the CredentialDynamic table	Test Condition:	ON INSERT INTO Credential: INSERT INTO CredentialDynamic (pkid, fkCredential) values (newid(), new_pkid)
Type:	Active (Insert)								
Rule Name:	Insert Dynamic Records for Credentials								
Description:	When a credential record gets inserted, create the corresponding record in the CredentialDynamic table								
Test Condition:	ON INSERT INTO Credential: INSERT INTO CredentialDynamic (pkid, fkCredential) values (newid(), new_pkid)								

2.3.65.6 [fkcredentialpolicy \(FI-3351\)](#)

Type:	guid (Not Modifiable)
-------	-----------------------

Default Value:	9454babf-48d0-4e16-9b80-2d0da4b38750
Remarks:	The unique identifier of the CredentialPolicy that is associated with this credential.

2.3.65.7 [fkenduser \(FI-3346\)](#)

Type:	guid (Cascade Delete, Not Modifiable, Null OK)
Default Value:	NULL
Remarks:	The unique identifier of the End User to which this credential belongs.

2.3.65.8 [imsinfo \(FI-3359\)](#)

Type:	long (Not Modifiable)
Default Value:	0
Remarks:	Information used by IMS to encrypt data

2.3.65.9 [pkid \(FI-3345\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-399):	Type:	Active (Insert)
	Rule Name:	Insert Dynamic Records for Credentials
	Description:	When a credential record gets inserted, create the corresponding record in the CredentialDynamic table
	Test Condition:	ON INSERT INTO Credential: INSERT INTO CredentialDynamic (pkid, fkCredential) values (newid(), new_pkid)

2.3.65.10 [timeadminlockout \(FI-3357\)](#)

Type:	long (Not Modifiable, Null OK)
Default Value:	NULL
Remarks:	The date and time that the credential was locked by an administrator.

2.3.65.11 [timechanged \(FI-3354\)](#)

Type:	long (Not Modifiable)
Remarks:	The date and time when the credentials were last changed. The date and time is recorded in this column whenever a user credential is created or changed.

2.3.65.12 [tkcredential \(FI-3348\)](#)

Type:	enum (Not Modifiable)
Default Value:	4

	Remarks:	The type of credential such as password, PIN, Windows or Domino credential.
Uniqueness:	fkapplicationuser + fkenduser + tkcredential is unique. (MFI-103)	

2.3.66 credentialdynamic (TI-458)

Description:	Frequently updated settings for Credentials Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.66.1 datetimestamp (FI-3432)	
	Type:	long (Not Modifiable)
	Default Value:	0
	Remarks:	Time value for last change (for replication conflict resolution)
	Rule (RI-400):	Type: Active (Insert/Update) Rule Name: Update the DateTimeStamp for Dynamic records Description: When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value Test Condition: ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	Rule (RI-400):	Type: Active (Insert/Update) This field is modified by this rule. Rule Name: Update the DateTimeStamp for Dynamic records Description: When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value Test Condition: ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	2.3.66.2 fkcredential (FI-3431)	
	Type:	guid (Unique, Cascade Delete, Not Modifiable)
	Remarks:	Parent record for which this record holds the dynamic settings
	2.3.66.3 hackcount (FI-3353)	
	Type:	long (Not Modifiable)
	Default Value:	0
	Remarks:	The number of logons attempted that failed due to invalid credentials. The Unity system or external authentication provider determined that the credentials supplied as part of a user logon attempt were invalid.
	2.3.66.4 lastsuccessfullogintime (FI-3799)	

	Type:	long (Not Modifiable)
	Default Value:	0
	Remarks:	Time value for the last successful login reported by IMS
	2.3.66.5 pkid (FI-3430)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.66.6 timehackedlockout (FI-3355)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	The date and time that the credential was locked due to too many hacks. The date and time is recorded in this column whenever a user credential is locked due to too many hacks based on the credential policy.
	2.3.66.7 timelastaccessed (FI-3428)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	0
	Remarks:	Time value for the last access of the credential (create, read or update)
	2.3.66.8 timelasthacked (FI-3356)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	The date and time of the last logon attempt with an invalid user credential.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.67 credentialhistory (TI-448)

Description:	Stores past credentials for enforcement of password history restrictions (non-reuse) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.67.1 changeid (FI-3371)	
	Type:	long
	Remarks:	A historical index of credential changes. Allows the fetching of the last 'n' credentials, if desired.
	2.3.67.2 credentials (FI-3375)	
	Type:	string [288]

	Remarks:	The credential, e.g., PIN or password created by this change. Credentials can be an encoded PIN or password.
	2.3.67.3 fkapplicationuser (FI-3373)	
	Type:	guid (Cascade Delete, Null OK)
	Remarks:	The unique identifier of the ApplicationUser object for which this credential change occurred.
	2.3.67.4 fkenduser (FI-3372)	
	Type:	guid (Cascade Delete, Null OK)
	Remarks:	The unique identifier of the EndUser object for which this credential change occurred.
	2.3.67.5 pkid (FI-3370)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.67.6 timechanged (FI-3376)	
	Type:	long
	Remarks:	The date and time the credential was created or changed.
	2.3.67.7 tkcredential (FI-3374)	
	Type:	enum
	Remarks:	The type of credential such as a password or PIN.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.68 credentialpolicy (TI-447)

Description:	Settings for enforcement of credential policy (password strength, expiration, etc.)	
Fields:	2.3.68.1 displayname (FI-3361)	
	Type:	string [255] (Unique)
	Validation:	^[^\x00-\x1F\x7F"""]{1,64}\$
	Remarks:	The unique text name (e.g., "Administrator Password Policy") of the credential policy to be used when displaying entries in the administrative console, e.g. Cisco Unified CallManager Administration
	2.3.68.2 expirywarningdays (FI-3423)	
	Type:	long
	Default Value:	0

Check Constraint:	(ExpiryWarningDays >=0) AND (ExpiryWarningDays <= 90)
Remarks:	Number of days prior to Credential Expiring that warning message should be presented to the user. A value of 0 means no warning is given.

2.3.68.3 hackresettime (FI-3362)

Type:	long
Default Value:	30
Check Constraint:	(HackResetTime >= 1) AND (HackResetTime <= 120)
Remarks:	The length of time (in minutes) after which if no failed logon attempts occur, the count of failed logon attempts is cleared

2.3.68.4 isstandard (FI-3424)

Type:	bool (Not Modifiable)												
Default Value:	FALSE												
Remarks:	Indicates installed standard Credential Policy - cannot be modified or deleted												
Rule (RI-396):	<table> <tr> <td>Type:</td><td>Active (Update/Delete)</td></tr> <tr> <td>Rule Name:</td><td>Cannot modify or delete Standard Credential Policy</td></tr> <tr> <td>Description:</td><td>The installed standard Credential Policy cannot be modified or deleted (even using IMS). It is not necessary to use this policy if more secure policies exist, and the policy is maintained for backward compatibility only. The installed policy is the only policy where IsStandard is true.</td></tr> <tr> <td>Test Condition:</td><td>ON UPDATE/DELETE IN CredentialPolicy: IF (old_IsStandard = 'T') THEN throw exception;</td></tr> <tr> <td>Error Message:</td><td>Cannot modify or delete the installed standard Credential Policy.</td></tr> <tr> <td>Remedy:</td><td>Create and assign more secure Credential Policies for passwords and PINs.</td></tr> </table>	Type:	Active (Update/Delete)	Rule Name:	Cannot modify or delete Standard Credential Policy	Description:	The installed standard Credential Policy cannot be modified or deleted (even using IMS). It is not necessary to use this policy if more secure policies exist, and the policy is maintained for backward compatibility only. The installed policy is the only policy where IsStandard is true.	Test Condition:	ON UPDATE/DELETE IN CredentialPolicy: IF (old_IsStandard = 'T') THEN throw exception;	Error Message:	Cannot modify or delete the installed standard Credential Policy.	Remedy:	Create and assign more secure Credential Policies for passwords and PINs.
Type:	Active (Update/Delete)												
Rule Name:	Cannot modify or delete Standard Credential Policy												
Description:	The installed standard Credential Policy cannot be modified or deleted (even using IMS). It is not necessary to use this policy if more secure policies exist, and the policy is maintained for backward compatibility only. The installed policy is the only policy where IsStandard is true.												
Test Condition:	ON UPDATE/DELETE IN CredentialPolicy: IF (old_IsStandard = 'T') THEN throw exception;												
Error Message:	Cannot modify or delete the installed standard Credential Policy.												
Remedy:	Create and assign more secure Credential Policies for passwords and PINs.												

2.3.68.5 lockoutduration (FI-3363)

Type:	long
Default Value:	30
Check Constraint:	(LockoutDuration >= 0) AND (LockoutDuration <= 1440)
Remarks:	The length of time (in minutes) that a user who is locked out must wait until they can attempt to access the system again with this credential. A value of "0" means the user is locked out until the credential/account is unlocked by an administrator.

2.3.68.6 maxdays (FI-3364)

Type:	long
Default Value:	180

Check Constraint:	(MaxDays >= 0) AND (MaxDays <= 365)
Remarks:	The maximum number of days before the credential must be changed. A value of "0" means the credential will never expire.
2.3.68.7 maxhacks (FI-3365)	
Type:	long
Default Value:	3
Check Constraint:	(MaxHacks >= 0) AND (MaxHacks <= 100)
Remarks:	The maximum number of failed logon attempts (hacks) before action is taken. A value of "0" means an unlimited number of logon attempts (i.e., no lockout) are allowed.
2.3.68.8 maxinactivedays (FI-3429)	
Type:	long
Default Value:	0
Check Constraint:	(MaxInactiveDays >= 0) AND (MaxInactiveDays <= 5000)
Remarks:	The number of days after which a credential is disabled if not used. A value of 0 means the credential is never disabled because of inactivity
2.3.68.9 minduration (FI-3366)	
Type:	long
Default Value:	0
Check Constraint:	(MinDuration >= 0) AND (MinDuration <= 129600)
Remarks:	The minimum number of minutes that must pass from the time of the last change before the credential can be changed. A value of "0" means that there are no restrictions on how often the user can change the credential.
2.3.68.10 minlength (FI-3367)	
Type:	long
Default Value:	8
Check Constraint:	(MinLength >= 1) AND (MinLength <= 64)
Remarks:	The minimum number of characters or digits (PIN) required for the credential.
2.3.68.11 pkid (FI-3360)	
Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.
2.3.68.12 prevcredcount (FI-3368)	

	Type:	long	
	Default Value:	12	
	Check Constraint:	(PrevCredCount >= 0) AND (PrevCredCount <= 25)	
	Remarks:	The number of credentials to store. A value of "0" means that a new credential is not compared with previous credentials; thus a user can reuse a credential.	
	2.3.68.13 trivialcredchecking (FI-3369)		
	Type:	bool	
	Default Value:	TRUE	
	Remarks:	A flag indicating whether to check against trivial credentials for extra security; True = check to make sure credentials are not trivial; False = do not check for trivial credentials (check length and valid characters only)	
Uniqueness:	No multicolumn uniqueness constraints		
Constraints:	Rule (RFI-162):	Type:	Inter-field Condition and Constraint
		Constraint:	((MaxDays > 0) AND (MaxDays*60*24 >= MinDuration)) OR (MaxDays =0)
		Remarks:	Minimum Duration Between Credential Changes should be shorter that Credential Expires After days

2.3.69 credentialpolicydefault (TI-459)

Description:	Specifies the default CredentialPolicy for each combination of user and credential type Insert/Delete is not allowed.	
Fields:	2.3.69.1 cantchange (FI-3472)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	A flag indicating whether the user can set this credential.
2.3.69.2 credentials (FI-3447)		
	Type:	string [288] (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	The default PIN or password for new credentials. The credentials are stored in an encrypted format.
2.3.69.3 credmustchange (FI-3473)		
	Type:	bool (Not Modifiable)
	Default Value:	TRUE

Remarks:	A flag indicating whether the user must change their credentials (PIN or password) at the next login.
----------	---

2.3.69.4 **doesntexpire (FI-3474)**

Type:	bool (Not Modifiable)
-------	-----------------------

Default Value:	FALSE
----------------	-------

Remarks:	A flag indicating whether this user credential will expire, and therefore the user must change the credential periodically. However, if the credential does not expire (value = "1"), the user still may change the credential (if allowed by CantChange).
----------	--

2.3.69.5 **fkcredentialpolicy (FI-3437)**

Type:	guid
-------	------

Remarks:	The default Credential Policy for new credentials of the specified type (credential and user)
----------	---

2.3.69.6 **imsinfo (FI-3448)**

Type:	long (Not Modifiable)
-------	-----------------------

Default Value:	0
----------------	---

Remarks:	Default Information used by IMS to encrypt data
----------	---

2.3.69.7 **pkid (FI-3436)**

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

2.3.69.8 **tkcredential (FI-3438)**

Type:	enum (Not Modifiable)
-------	-----------------------

Remarks:	Used in combination with type of Credential User to establish a default
----------	---

2.3.69.9 **tkcredentialuser (FI-3439)**

Type:	enum (Not Modifiable)
-------	-----------------------

Remarks:	Used in combination with type of Credential to establish a default
----------	--

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.70 **crsapplication (TI-248)**

Description:	Application specific data for CRS
--------------	-----------------------------------

Fields:	2.3.70.1 aakeypadmapping (FI-1689)
---------	--

Type:	string [129]
-------	--------------

Default Value:	EMPTY	
Remarks:	The mapping of aapromptname to numbers only	
Rule (RI-291):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Map name to keypad
	Description:	On I/U, take map alpha chars to keypad, abc=2, def=3, etc.
	Test Condition:	on insert/update of aapromptname
	Error Message:	Only keys mapping to 0 to 9 allowed
Rule (RI-291):	Type:	Active (Insert/Update)
	Rule Name:	Map name to keypad
	Description:	On I/U, take map alpha chars to keypad, abc=2, def=3, etc.
	Test Condition:	on insert/update of aapromptname
	Error Message:	Only keys mapping to 0 to 9 allowed

2.3.70.2 aapromptname (FI-1690)

Type:	string [129]	
Default Value:	EMPTY	
Remarks:	The letter representation of the search name using IVR	
Rule (RI-291):	Type:	Active (Insert/Update)
	Rule Name:	Map name to keypad
	Description:	On I/U, take map alpha chars to keypad, abc=2, def=3, etc.
	Test Condition:	on insert/update of aapromptname
	Error Message:	Only keys mapping to 0 to 9 allowed

2.3.70.3 [fkenduser \(FI-1688\)](#)

Type:	guid (Cascade Delete)
-------	-----------------------

2.3.70.4 fnamealtpronun (FI-2896)

Type:	string [1024]
Default Value:	EMPTY
Remarks:	First Name Alternate Pronunciations delimited by a separator

2.3.70.5 lnamealtpronun (FI-2897)

	Type:	string [1024]
	Default Value:	EMPTY
	Remarks:	Last Name Alternate Pronunciations delimited by a separator
	2.3.70.6 pkid (FI-1687)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.71 crsuserclusterspecific (TI-410)

Description:	Stores user information for the CRS Application	
Fields:	2.3.71.1 administratorlevel (FI-2898)	
	Type:	long
	Default Value:	0
	Remarks:	Whether an Administrator
	2.3.71.2 clustername (FI-3047)	
	Type:	string [60]
	2.3.71.3 fkenduser (FI-3046)	
	Type:	guid (Cascade Delete)
	2.3.71.4 issupervisor (FI-2899)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Whether a Supervisor
	2.3.71.5 pkid (FI-3045)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	fkenduser + clustername is unique. (MFI-94)	

2.3.72 cubacountryregionalinfo (TI-1053)

Description: Cisco BE: Table to store Country Regional Packs on Cuba platform.
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:	2.3.72.1 pkid (FI-9917)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
	2.3.72.2 tkcountry (FI-9918)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Country id from typecountry table.
	2.3.72.3 xml (FI-9919)	
	Type:	string [32000] (Not Modifiable)
	Remarks:	Ring Tones and Other Region Specific Product configuration XML not used by CCM
Uniqueness:	No multicolumn uniqueness constraints	

2.3.73 cubaproductsupport (TI-597)

Description: Cisco BE:CubaProductSupport table to store the models that are supported in Pajaro system
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:	2.3.73.1 displayname (FI-9923)	
	Type:	string [100] (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.73.2 enum (FI-6142)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.73.3 tkcubaproductdisplaygroup (FI-9924)	
	Type:	enum (Not Modifiable)
	Default Value:	2
	Remarks:	A number to identify the record
	2.3.73.4 tkdeviceprotocol (FI-6145)	

	Type:	enum (Not Modifiable)
	Default Value:	99
	Remarks:	Enum of Device Protocol record
	2.3.73.5 tkmodel (FI-6144)	
	Type:	enum (Not Modifiable)
	2.3.73.6 tkproduct (FI-6143)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.74 customannouncement (TI-617)

Description: subset of TypeAnnouncement with rows having AllowCustom = 1

Fields:	2.3.74.1 description (FI-6270)	
	Type:	string [1024] (Null OK)
	Validation:	^[^'"%&\\<>:]{0,255}\$
	Remarks:	Description of the custom announcements
	2.3.74.2 issystem (FI-6271)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	isSystem is an internal control for ipvms install to pre-configure some CustomAnnouncement entries with UI restriction (user cannot edit some fields). Records which have initial contents may be altered by the administrator, but may not be removed.
	2.3.74.3 name (FI-5138)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,50}\$
	2.3.74.4 pkid (FI-5137)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.74.5 tkannouncementfile (FI-5140)	

	Type:	enum (Indexed, Null OK)
	Default Value:	NULL
	Remarks:	A number to identify the record
	2.3.74.6 tkannouncements (FI-5139)	
	Type:	enum (Unique, Indexed)
	Remarks:	A number to identify the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.75 customannouncementlocale (TI-618)

Description:	null	
Fields:	2.3.75.1 description (FI-5147)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	2.3.75.2 filename (FI-5142)	
	Type:	string [128]
	Validation:	^[a-zA-Z 0-9._-]{1,128}\$
	2.3.75.3 fkcustomannouncement (FI-5143)	
	Type:	guid
	Migration Source:	reference to CustomAnnouncement
	2.3.75.4 highsourcefiledatetime (FI-5145)	
	Type:	long
	2.3.75.5 isenabled (FI-5148)	
	Type:	bool
	Default Value:	TRUE
	2.3.75.6 lowsourcefiledatetime (FI-5146)	
	Type:	long
	2.3.75.7 pkid (FI-5141)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()

	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.75.8 tkuserlocale (FI-5144)	
	Type:	enum (Indexed)
	Remarks:	reference to TypeUserLocale
Uniqueness:	fkcustomannouncement + tkuserlocale is unique. (MFI-126)	

2.3.76 customuserattributedata (TI-545)

Description:	Stores data to be synchronized to respective Custom Field Attribute. Each Record is associated to an End User and mapped to each supported TypeCustomUserAttributes	
Fields:	2.3.76.1 fkenduser (FI-10012)	
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)
	Remarks:	Key Reference to the User to whom the data in the Value column applies.
	2.3.76.2 pkid (FI-10010)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.76.3 tkcustomuserattribute (FI-10011)	
	Type:	enum (Not Modifiable)
	Remarks:	This field is to map one of the 5 available custom field to the Data in CustomUserAttributeName table.
	2.3.76.4 value (FI-10013)	
	Type:	string [255] (Null OK)
	Remarks:	Data retrieved from LDAP for the specified Custom Attribute for the user associated with this record.
Uniqueness:	tkcustomuserattribute + fkenduser is unique. (MFI-203)	

2.3.77 customuserattributename (TI-544)

Description:	Records in this table contain Configurable friendly names to all the Custom Field attributes defined in TypeCustomUserAttributes	
Fields:	2.3.77.1 customfieldattributename (FI-10008)	
	Type:	string [256] (Unique)

	Validation:	^[a-zA-Z 0-9]{1,64}\$
	Remarks:	CustomFieldAttributeName field stores the name of the attribute during LDAP synchronization of EndUsers.
	2.3.77.2 pkid (FI-10007)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.77.3 tkcustomuserattribute (FI-10009)	
	Type:	enum (Unique, Not Modifiable)
	Remarks:	This field is to map one of the 5 available custom field to the Name in CustomUserAttributeName table.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.78 datetimesetting (TI-10)

Description:	Common/shared date time zone and format settings	
Fields:	2.3.78.1 datetemplate (FI-154)	
	Type:	string [6]
	Default Value:	M-D-Y
	Validation:	^(M-D-Y M/D/Y M.D.Y D-M-Y D/M/Y D.M.Y Y-M-D Y/M/D Y.M.D)A?\$
	Migration Source:	DateTimeGroup.DateTemplate
	Remarks:	Template to be used to display date on an IP Phone. If the last character is 'A' then it is 24 hour time. If the last character is 'a', it is 12 hour time.
	2.3.78.2 name (FI-153)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Migration Source:	DateTimeGroup.GroupName
	Remarks:	A descriptive name for the Date/Time group.
	2.3.78.3 pkid (FI-152)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated

	Remarks:	Unique ID to identify a record.	
	Rule (RI-216):	Type:	Active (Insert/Update)
		Rule Name:	device versionstamp
		Description:	on change to anything in device xml file, update versionstamp
		Test Condition:	update device
	2.3.78.4 resettoggle (FI-3135)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Should this device or group be reset	
	Rule (RI-216):	Type:	Active (Insert/Update)
		Rule Name:	device versionstamp
		Description:	on change to anything in device xml file, update versionstamp
		Test Condition:	update device
	2.3.78.5 tkreset (FI-3071)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Set by DeviceReset stored procedure.	
	2.3.78.6 tktimezone (FI-155)		
	Type:	enum	
	Default Value:	21	
	Migration Source:	DateTimeGroup.TimeZone	
	Remarks:	Time zone for the CallManager group. The option "local time zone of CallManager" copies the time zone information from the operating system of the server where Cisco CallManager is installed.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.79 defaults (TI-11)			
Description:	CallManager specific default attributes for devices Insert/Delete is not allowed.		
Fields:	2.3.79.1 fkdevicepool (FI-240)		

Type:	guid (Null OK)								
Default Value:	NULL								
Migration Source:	convert from DevicePoolID								
Remarks:	Device pool that is associated with each type of device. The device pool defines common characteristics for all devices in the pool.								
Rule (RI-283):	<table> <tr> <td>Type:</td><td>Active (Update)</td></tr> <tr> <td>Rule Name:</td><td>defaults versionstamp</td></tr> <tr> <td>Description:</td><td>on change to loadinfo in defaults table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Update)	Rule Name:	defaults versionstamp	Description:	on change to loadinfo in defaults table, update device versionstamp	Test Condition:	update device
Type:	Active (Update)								
Rule Name:	defaults versionstamp								
Description:	on change to loadinfo in defaults table, update device versionstamp								
Test Condition:	update device								

2.3.79.2 [fkphonetemplate \(FI-241\)](#)

Type:	guid (Null OK)												
Default Value:	NULL												
Migration Source:	convert from PhoneTemplateID												
Remarks:	This is the phone template to assign to a device that auto-registers. It must be usable on the specified model.												
Rule (RI-16):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Phone Template required</td></tr> <tr> <td>Description:</td><td>Devices that use a phone button template must have a template specified</td></tr> <tr> <td>Test Condition:</td><td>SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 13 AND tkModel = @Defaults.tkModel AND tkDeviceProtocol IN (@Defaults.tkDeviceProtocol,99)</td></tr> <tr> <td>Error Message:</td><td>A device that uses Phone Templates have a specific Phone Template assigned.</td></tr> <tr> <td>Remedy:</td><td>Specify a Phone Template.</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Phone Template required	Description:	Devices that use a phone button template must have a template specified	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 13 AND tkModel = @Defaults.tkModel AND tkDeviceProtocol IN (@Defaults.tkDeviceProtocol,99)	Error Message:	A device that uses Phone Templates have a specific Phone Template assigned.	Remedy:	Specify a Phone Template.
Type:	Validation (Insert/Update)												
Rule Name:	Phone Template required												
Description:	Devices that use a phone button template must have a template specified												
Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 13 AND tkModel = @Defaults.tkModel AND tkDeviceProtocol IN (@Defaults.tkDeviceProtocol,99)												
Error Message:	A device that uses Phone Templates have a specific Phone Template assigned.												
Remedy:	Specify a Phone Template.												
Rule (RI-17):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Phone Template Model</td></tr> <tr> <td>Description:</td><td>The model must match for a device default and the specified phone template for that device type.</td></tr> <tr> <td>Test Condition:</td><td>@Defaults.tkModel = (SELECT PhoneTemplate.tkModel FROM PhoneTemplate WHERE PhoneTemplate.pkid = @Defaults.tkPhoneTemplate)</td></tr> <tr> <td>Error Message:</td><td>The Phone Template model does not match the device model.</td></tr> <tr> <td>Remedy:</td><td>Specifiy a Phone Template for the correct model.</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Phone Template Model	Description:	The model must match for a device default and the specified phone template for that device type. Description:	The model must match for a device default and the specified phone template for that device type.												
Test Condition:	@Defaults.tkModel = (SELECT PhoneTemplate.tkModel FROM PhoneTemplate WHERE PhoneTemplate.pkid = @Defaults.tkPhoneTemplate)												
Error Message:	The Phone Template model does not match the device model.												
Remedy:	Specifiy a Phone Template for the correct model.												
Rule (RI-283):	<table> <tr> <td>Type:</td><td>Active (Update)</td></tr> <tr> <td>Rule Name:</td><td>defaults versionstamp</td></tr> </table>	Type:	Active (Update)	Rule Name:	defaults versionstamp								
Type:	Active (Update)												
Rule Name:	defaults versionstamp												

	Description:	on change to loadinfo in defaults table, update device versionstamp
	Test Condition:	update device

2.3.79.3 inactiveloadinformation (FI-242)

Type:	string [50]
Default Value:	EMPTY
Remarks:	The filename of the inactive firmware load that is used with phone models that support dual-bank firmware (background download). The file is fed to the phones via TFTP but is not active. This can be overridden at the device level. If not overridden, then all devices of this model will download this firmware load file as the inactive load.

2.3.79.4 loadinformation (FI-239)

Type:	string [50]	
Default Value:	EMPTY	
Migration Source:	Load_	
Remarks:	The filename of the firmware load that is used with a particular type of hardware device model. The file is fed to the phones via TFTP. This can be overridden at the device level. If not overridden, then all devices of this model will use this firmware load file.	
Rule (RI-283):	Type:	Active (Update)
	Rule Name:	defaults versionstamp
	Description:	on change to loadinfo in defaults table, update device versionstamp
	Test Condition:	update device

2.3.79.5 pkid (FI-237)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-283):	Type:	Active (Update)
	Rule Name:	defaults versionstamp
	Description:	on change to loadinfo in defaults table, update device versionstamp
	Test Condition:	update device

2.3.79.6 resettoggle (FI-3090)

Type:	bool
-------	------

Default Value:	FALSE								
Remarks:	Should this device or group be reset								
Rule (RI-283):	<table> <tr> <td>Type:</td><td>Active (Update)</td></tr> <tr> <td>Rule Name:</td><td>defaults versionstamp</td></tr> <tr> <td>Description:</td><td>on change to loadinfo in defaults table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Update)	Rule Name:	defaults versionstamp	Description:	on change to loadinfo in defaults table, update device versionstamp	Test Condition:	update device

		Test Condition:	update device
Uniqueness:	tkmodel + tkdeviceprotocol is unique. (MFI-81)		

2.3.80 defaultucuserprofile (TI-2611)

Description:	Indicates which UCUserProfile record is the System Default if left unspecified where needed. Insert/Delete is not allowed.		
Fields:	2.3.80.1 <u>fkucuserprofile (FI-25757)</u>		
	Type:	guid	
	Remarks:	Defines which UCUserProfile should be used when one is required but left unspecified.	
	2.3.80.2 <u>pkid (FI-25756)</u>		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.81 destinationcodecontrol (TI-971)

Description:	Allows configuration of outbound traffic throttling for a specific dialing plan destination, (Route Pattern), in accordance with DOD UCR 2008 specifications related to Destination Code Control, (DCC).		
Fields:	2.3.81.1 blockedcallpercentage (FI-9834)		
	Type:	long (Null OK)	

	Default Value:	0
	Check Constraint:	(BlockedCallPercentage >= 0) AND (BlockedCallPercentage <= 100)
	Remarks:	This value specifies the percentage of lower precedence calls made to this destination that get blocked by the route pattern. This percentage limits the lower precedence calls only, the flash and higher precedence calls made to this destination are allowed at all times.
	2.3.81.2 enabledccenforcement (FI-9832)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Allows the application and enforcement of the restrictions specified in this DCC record to be enabled or disabled so that the specifications may be left intact without being active.
	2.3.81.3 fknumplan (FI-9833)	
	Type:	guid (Unique, Cascade Delete, Not Modifiable)
	Remarks:	Indicates the associated DN or Pattern, (RoutePattern), to which this record's DCC specifications apply
	2.3.81.4 pkid (FI-9831)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.82 device (TI-1)

Description: Lists every device in system from the CallManager perspective

Fields:	2.3.82.1 allowcticontrolflag (FI-2618)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	If true, this device allows CTI Control.
	Rule (RFI-132):	Type: Inter-field Condition and Constraint
		Test Condition: tkModel = 72 OR tkModel = 73
		Constraint: AllowCTIControlFlag = 't'
		Remarks: CTI Ports and CTI Route Points must always be CTI Controlled
	2.3.82.2 allowhotelingflag (FI-831)	

Type:	bool												
Default Value:	FALSE												
Remarks:	If true, this device allows extension mobility.

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(CalledUnknownStripDigits >= 0) AND (CalledUnknownStripDigits <= 24)
Remarks:	Called Unknown Strip Digits

2.3.82.12 calreference (FI-21054)

Type:	long
Default Value:	-1
Remarks:	user can assign confidential access level value to the device

2.3.82.13 ctiid (FI-12)

Type:	identity (Unique, Not Modifiable)	
Migration Source:	DeviceList.DeviceId	
Remarks:	Trigger set on insert. (one greater than highest). 32 bit value for Computer Telephony Interface	
Rule (RI-2):	Type:	Active (Insert) This field is modified by this rule.
	Rule Name:	Generate CTI ID value

	Description:	On insert of a new record generate a unique 32-bit integer value and store the result in the CTI ID field
	Test Condition:	On Insert

2.3.82.14 datetimeinserted (FI-2667)

Type:	string [30] (Null OK)
Remarks:	Date and Time when Phone was inserted. Will be provided by an active B-Rule on device insert. Format is YYMMDD:HrMinSec

2.3.82.15 defaultdtmfcapability (FI-592)

Type:	long
Default Value:	0
Remarks:	Is this a dead field?

2.3.82.16 description (FI-3)

Type:	string [512]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,128}\$
Migration Source:	DeviceList.Description

Rule (RI-964):	Type:	Active (Insert/Update)
	Rule Name:	Copy truncated version of device Description to device nDescription
	Description:	Up to 254 characters of device Description is copied to nDescription on inserts and updates. nDescription can be used for collated ordering.
	Test Condition:	ON INSERT/UPDATE set nDescription = description

2.3.82.17 deviceleveltraceflag (FI-824)

Type:	bool
Default Value:	FALSE

2.3.82.18 dialplanwizardgenid (FI-677)

Type:	long (Indexed, Null OK)
Default Value:	NULL
Remarks:	This record created by DialPlanWizard

2.3.82.19 dndtimeout (FI-3286)

Type:	long
Default Value:	0

Check Constraint: (DNDDTimeout >= 0) AND (DNDDTimeout <= 120)

Remarks: Period in minutes to remind the user that DND is active

2.3.82.20 earlyoffersupportforvoicecall (FI-10230)

Type: bool

Default Value: FALSE

Remarks: True-AS-SIP endpoints supports early offer for voice calls; False-AS-SIP endpoints supports delayed offer for voice calls. The default value is False.

2.3.82.21 enablebfcf (FI-9996)

Type: bool

Default Value: FALSE

Remarks: Boolean flag to control whether or not Binary Floor Control Protocol (BFCP) is enabled for this device.

2.3.82.22 enablecallroutingtordwhennoneisactive (FI-25715)

Type: bool

Default Value: FALSE

Remarks: This flag is used to determine if Call has to be forwarded to all Remote destinations or not.

Rule (RI-2129):	Type:	Validation (Insert/Update)
	Rule Name:	Rule to validate INSERT/UPDATE on column EnableCallRoutingToRdWhenNoneIsActive
	Description:	INSERT/UPDATE operation to set value of new column to true should be rejected for all devices except CTI Remote Device
	Error Message:	Cannot perform insert/update operation as the current value is not applicable to the device type

2.3.82.23 enablegatewayrecordingqsig (FI-21027)

Type: bool

Default Value: f

Remarks: Allow sending recording control adpu on qsig link.

2.3.82.24 enableixchannel (FI-6278)

Type: bool

Default Value: FALSE

Remarks: Boolean flag to control whether or not iX Channel is enabled for this device.

2.3.82.25 fkaarneighborhood (FI-1120)

Type: guid (Null OK)

Default Value:	NULL	
Remarks:	Used by both gateway and Phone	
Rule (RI-22):	Type:	Validation (Insert/Update)
	Rule Name:	AAR feature support required
	Description:	Device.fkAARNeighborhood and Device.fkCallingSearchSpace_AAR can only be specified for devices that support the AAR feature
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 21 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)

Check Constraint:	(NationalStripDigits >= 0) AND (NationalStripDigits <= 24)
Remarks:	National Strip Digits

Rule (RFI-227):	Type:	Inter-field Condition and Constraint
	Test Condition:	(NationalPrefix = 'Default') OR (NationalPrefix = 'default')

	Constraint:	NationalStripDigits IS NULL
	Remarks:	Cannot use StripDigits when the Default prefix is used.

2.3.82.86 ndescription (FI-21293)

Type:	string [255] (Indexed, Not Modifiable)	
Default Value:	EMPTY	
Remarks:	Copy of Description used for collating	
Rule (RI-964):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Copy truncated version of device Description to device nDescription
	Description:	Up to 254 characters of device Description is copied to nDescription on inserts and updates. nDescription can be used for collated ordering.
	Test Condition:	ON INSERT/UPDATE set nDescription = description

2.3.82.87 networkholdmohaudiosourceid (FI-839)

Type:	long (Null OK)	
Default Value:	NULL	
Rule (RI-60):	Type:	Validation (Insert/Update)
	Rule Name:	Network Hold Audio Source Restriction
	Description:	Only devices that support Music On Hold feature use the Network Hold Audio Source setting
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 4 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
	Error Message:	Network Hold Audio Source can only be used for devices that support the Music On Hold feature.
	Remedy:	Check device type and Music On Hold feature support before specifying a Network Hold Audio Source.
Rule (RI-60):	Type:	Validation (Insert/Update) This field is modified by this rule.
	Rule Name:	Network Hold Audio Source Restriction
	Description:	Only devices that support Music On Hold feature use the Network Hold Audio Source setting
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 4 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
	Error Message:	Network Hold Audio Source can only be used for devices that support the Music On Hold feature.
	Remedy:	Check device type and Music On Hold feature support before specifying a Network Hold Audio Source.

2.3.82.88 packetcaptureduration (FI-1911)

Type:	long (Null OK)
Default Value:	0
Check Constraint:	(PacketCaptureDuration >= 0) AND (PacketCaptureDuration <= 300)
Remarks:	Duration in minutes

2.3.82.89 pkid (FI-1)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Rule (RI-16):	Type:	Validation (Insert/Update)
	Rule Name:	Phone Template required
	Description:	Devices that use a phone button template must have a template specified
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 13 AND tkModel = @Defaults.tkModel AND tkDeviceProtocol IN (@Defaults.tkDeviceProtocol,99)
	Error Message:	A device that uses Phone Templates have a specific Phone Template assigned.
	Remedy:	Specify a Phone Template.

Rule (RI-26):	Type:	Validation (Insert/Update)
	Rule Name:	Device Name Validation
	Description:	For products that are configured as devices, name validation is based on the content of devicenameformat in specified for the product (TypeProduct). The exceptions are gateways for which the names are generated based on unit/subunit/slot position, and virtual devices used for extension mobility and configuration only (User Device Profiles, Autogenerated Profiles, Templates). Virtual devices allow ASCII names up to 50 characters including most punctuation.
	Test Condition:	ON INSERT/UPDATE IN Device
	Error Message:	The device name format is not valid or contains invalid characters.
	Remedy:	Check the name to make sure it is valid for specified product and try again.

Rule (RI-184):	Type:	Validation (Insert/Update)
	Rule Name:	Insert/Update of Device for an MGCP Endpoint
	Description:	When a new MGCP endpoint device is created/ updated, the devicename should follow the name pattern for that device. This pattern is in Gateway layout table for that MGCP Product, slot position,

			MGCPSlotModule and MGCPVic.
		Test Condition:	On Insert or Update of MGCP Gateway endpoint.
		Error Message:	Device name format is not correct.
	Rule (RI-199):	Type:	Validation (Insert/Update)
		Rule Name:	Device Security Feature validation
		Description:	Valid Device Security Modes for each device type are determined by the ProductSupportsFeature records for the security features. Devices that do not support any security feature must be set to non-secure mode. Devices that support other security modes can be set to Default, Not-Secure, or one of the supported security modes (Authentication or Encryption as determined in ProductSupportsFeature).
		Test Condition:	On Insert/Update of tksecuritymode on Device table.
		Error Message:	The security feature is not supported for this device
		Remedy:	Either unselect the desired feature or choose another device.
	Rule (RI-202):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate Default Device Profile for Model
		Description:	Create a Default Device Profile for a device type if one does not already exist, and extension mobility is enabled on a device of that type (e.g., create the Default Device Profile for a Cisco 7960 if it does not exist and EM is enabled on a 7960).
		Test Condition:	IF (NEW.AllowHotelingFlag is true) and ((select count(*) from device where tkmodel = NEW.tkmodel and tkdeviceprofile = 3) = 0)
		Error Message:	No default model profile, no mismatch login performed
	Rule (RI-216):	Type:	Active (Insert/Update)
		Rule Name:	device versionstamp
		Description:	on change to anything in device xml file, update versionstamp
		Test Condition:	update device
	Rule (RI-223):	Type:	Active (Insert)
		Rule Name:	Add a VGC Gateway to MGCP on Device update
		Description:	On Insert only
		Test Condition:	?
	Rule (RI-263):	Type:	Active (Insert)
		Rule Name:	Set QSIG on Device

		Description:	When a device is inserted, the QSIG setting for the device is determined automatically as follows: For trunks other than Inter-cluster trunk, the device is treated as H.323; inter-cluster trunk is treated as Mixed-Non-QSIG. Digital Access PRI gateways using QSIG protocol are considered QSIG, H.323 Gateways are considered H.323, and all other gateways (including Digital Access PRI with a non-QSIG protocol) are Mixed-Non-QSIG. All other devices except Route Lists are considered Mixed-Non-QSIG. For Route Lists, see rule "Set QSIG on Route List"
		Test Condition:	On Insert into Device
	Rule (RI-297):	Type:	Validation (Insert/Update)
		Rule Name:	SRTP and Outbound Faststart Conflict
		Description:	The SRTPAllowed and EnableOutboundFastStart settings (for H.323 devices) are mutually exclusive - only one may be true at any given time.
		Test Condition:	IF (Device.SRTPAllowed = 't') AND (H323Device.EnableOutboundFastStart = 't') THEN throw exception
		Error Message:	SRTP and Outbound FastStart cannot be enabled at the same time.
		Remedy:	Disable either SRTP or Outbound FastStart and try again.
	Rule (RI-305):	Type:	Active (Insert)
		Rule Name:	device insert versionstamp
		Description:	on insert of a device, generate a deviceversionstamp record
		Test Condition:	insert device
	Rule (RI-310):	Type:	Active (Update)
		Rule Name:	(obsolete) Insert DeviceEMSyn record if auto sync of auto generated profile is needed
		Description:	When EM is on (Device.AllowHotelingFlag = true), if the default Device Profile is the auto generated Device Profile for the current device, and the value of service parameter (enableAutoDeviceProfileSynChronize) is true, then insert a record into DeviceEMSyn table with the pkid of auto-generated profile and the pkid of the current device. Later DbMon will process the change notification of DeviceEMSyn to re-generate the auto-generated profile of the current device.
		Test Condition:	Device.AllowHotelingFlag = true
	Rule (RI-316):	Type:	Active (Insert/Update)
		Rule Name:	Prevent applying secure profile where not supported.
		Description:	on I/U of Device
		Test Condition:	Only endpoints on gateways with secure mode support may be set to use Security Profiles marked for secure mode. Further, all endpoints on analog gateways must remain consistent in either all operating in

		secure mode or all in non-secure mode
Rule (RI-320):	Type:	Validation (Insert/Update)
	Rule Name:	Device Restriction for SIP Dial Rules
	Description:	SIP Dial Rules for 7905/7912 may only be associated with 7905 and 7912 model phones. All other phones must use 7940/7960/TMP dial rules.
	Test Condition:	ON INSERT/UPDATE IN Device IF (DialRules.tkDialPattern = 0 and Device.tkProduct IS NOT IN (7905, 7912) OR DialRules.tkDialPattern == 1 AND Device.tkProduct IS IN (7905, 7912)) THEN throw exception
	Error Message:	Cannot assign Dial Rules of this type to the specified device (model and rule types are mismatched).
	Remedy:	Check the dial rule and device type to make sure they are compatible (e.g., 7905 dial rule for a 7905 device).
Rule (RI-336):	Type:	Validation (Delete)
	Rule Name:	Deletion of In use Device Profile is not allowed
	Description:	on D of Device Profile
	Test Condition:	prevent deletion of device profile
Rule (RI-338):	Type:	Validation (Insert)
	Rule Name:	One default profile per model
	Description:	Only one EM device default profile allowed per model
	Test Condition:	SELECT COUNT(*) FROM Device where tkdeviceprofile = 3 AND tkmodel = @tkmodel
	Error Message:	Only one device default profile is allowed per model
Rule (RI-339):	Type:	Validation (Delete)
	Rule Name:	Device default profile cannot be deleted
	Description:	The device default profile cannot be deleted when there is still extension mobility enabled device for that model
	Test Condition:	IF EXISTS (SELECT name FROM Device where allowhotelingflag = 't' and tkmodel = @tkmodel)
	Error Message:	There is still some devices have extension mobility enabled for this model, device default profile cannot be deleted
Rule (RI-343):	Type:	Validation (Insert/Update)
	Rule Name:	EM Logout Profile Model and Protocol Restriction
	Description:	The model and protocol of a phone and a User Device Profile selected as the logout profile must both

			match
		Test Condition:	ON INSERT/UPDATE IN Device IF (Device.tkModel <> Profile.tkModel) OR (Device.tkDeviceProtocol <> Profile.tkDeviceProtocol) THEN throw exception
		Error Message:	Logout Profile is not the same model and protocol as the device
		Remedy:	Select a logout profile that is the same model and protocol as the phone and try again
	Rule (RI-359):	Type:	Active (Delete)
		Rule Name:	Remove MGCP Member from MGCP when Device is Deleted
		Description:	When the endpoint device in an MGCP gateway is deleted, cascade the delete to the MGCPDeviceMember table if that record has not already been removed. MGCPDeviceMember and Device records should always be deleted together.
		Test Condition:	ON DELETE in Device: DELETE FROM MGCPDeviceMember WHERE fkDevice = @pkid
	Rule (RI-372):	Type:	Active (Insert)
		Rule Name:	Insert Dynamic Records for Device Table
		Description:	When a device record for a phone is inserted, insert records for DND, Privacy, Mobility and Hunt Group Log (Hlog) as needed based on product feature support.
		Test Condition:	ON INSERT INTO Device
	Rule (RI-376):	Type:	Active (Insert/Update)
		Rule Name:	Insert Dynamic Records for Extension Mobility
		Description:	When Extension Mobility (EM) is enabled on a phone, create the corresponding record in the ExtensionMobilityDynamic and EMCCDynamic and EMRemoteDynamic
		Test Condition:	ON INSERT/UPDATE INTO Device
	Rule (RI-405):	Type:	Active (Update)
		Rule Name:	Setting MTPRequired='F' or fkMRL=NULL sets H323Device.EnableOutboundFaststart='F'
		Description:	When EnableOutboundFastStart is true for a H.323 device, the MTPRequired field must also be true, and a Media Resource Group List must be selected. If the MTPRequired is subsequently changed to False, or the Media Resource Group List is removed from the device, the EnableOutboundFaststart setting is automatically turned off.
		Test Condition:	ON UPDATE in Device: If (newTkDeviceProtocol = 2) AND ((new_MTPRequired = 'F' AND old_MTPRequired = 'T') OR (old_fkMediaResourceList IS NOT NULL AND new_fkMediaResourceList IS NULL)) THEN UPDATE H323Device SET EnableOutboundFaststart = 'F' WHERE fkDevice = new_pkid AND EnableOutboundFaststart = 'T'; END IF;
	Rule (RI-411):		

		Type:	Active (Update)
		Rule Name:	Device.fkEndUser_Mobility change removes RemoteDestinations
		Description:	When the EndUser associated with a Dual-mode or Remote Destination Profile device is changes, any Remote Destinations associated with that device are removed because the use data is no longer valid.
		Test Condition:	ON UPDATE IN Device: IF (NVL(old_fkenduser_mobility,"") <> NVL(new_fkenduser_mobility,"")) THEN DELETE FROM remotestination WHERE (fkdevice_dualmode = old_pkid) OR (fkdevice_remotestination = old_pkid) END IF;
Rule (RI-418):		Type:	Active (Insert)
		Rule Name:	DeviceTFTPDynamic rebuildToggle
		Description:	update entry in DeviceTFTPDynamic
		Test Condition:	insert into DeviceTFTPDynamic
Rule (RI-423):		Type:	Active (Delete)
		Rule Name:	Remove Individual phone templates
		Description:	When a phone with individual Phone Templates is deleted, the individual Phone Templates must be deleted.
		Test Condition:	ON DELETE in Device: if phonetemplate.name like '%Individual Template' DELETE FROM phonetemplate WHERE PhoneTemplate.pkid = device.fkphoneTemplate
Rule (RI-440):		Type:	Active (Update)
		Rule Name:	Setting isRpidEnabled='F' sets sipdevice.tkpresentationbit_connectedline=DEFAULT
		Description:	When IsRpidEnabled is set to FALSE in the Device Table the tkPresentationBit_ConnectedLine will be set to DEFAULT (0x00) in sipdevice table
		Test Condition:	ON UPDATE in Device: IF IsRpidEnabled='F' THEN UPDATE SIPDEVICE SET tkPresentationBit_ConnectedLine = DEFAULT; END IF;
		Error Message:	Value of tkpresentationbit_connectedline is not Compatible
Rule (RI-441):		Type:	Active (Update)
		Rule Name:	Setting IsRpidEnabled='F' sets SIPDevice.tkPresentationBit_ConnectedName=DEFAULT
		Description:	When IsRpidEnabled is set to FALSE in the Device Table the tkPresentationBit_ConnectedName will be set to DEFAULT (0x00) in SIPDevice table
		Test Condition:	ON UPDATE in Device: IF IsRPIDEnabled='F' THEN UPDATE SIPDevice SET tkPresentationBit_ConnectedName = DEFAULT; END IF;
		Error Message:	Value of tkpresentationbit_connectedname is not Compatible

	Rule (RI-468):	Type:	Active (Delete)
		Rule Name:	Remove default intercom device from Numplan when Device is Deleted
		Description:	When a device is deleted, update all Numplan records where this device is used as fkDevice_IntercomDefault
		Test Condition:	ON DELETE in Device: UPDATE Numplan set fkDevice_IntercomDefault = NULL WHERE fkDevice_IntercomDefault = @pkid
	Rule (RI-473):	Type:	Validation (Insert/Update)
		Rule Name:	DN restrictions for Protected device (secure tone)
		Description:	Do not allow a "protected" phone to have a shared line
		Test Condition:	ON INSERT/UPDATE IN Device, DeviceNumplanMap:
		Error Message:	Protected device can not support shared line.
		Remedy:	Protected device does not support shared line.
	Rule (RI-484):	Type:	Active (Update)
		Rule Name:	Clear RemoteDestination if Smart Client disabled
		Description:	If a Dual-mode device is configured with Mobile Smart Client enabled and a Remote Destination exists that is using the smart client, the RemoteDestination.fkDevice_MobileSmartClient field must be set to NULL if the Dual Mode is updated to disable the Mobile Smart Client (device.fkMobileSmartClientProfile is set to NULL).
		Test Condition:	ON UPDATE IN Device: IF (new_IsDualMode = 't') AND (new_fkMobileSmartClientProfile IS NULL) AND (old_fkMobileSmartClientProfile IS NOT NULL) THEN UPDATE RemoteDestination SET fkDevice_MobileSmartClient = NULL WHERE fkDevice_MobileSmartClient = new_pkid END IF;

		Description:	SAF Enabled trunk only supports non secure profile
		Test Condition:	SAF Enabled trunk only supports non secure profile
		Error Message:	SAF Enabled trunk only supports non secure profile
	Rule (RI-613):	Type:	Validation (Insert/Update)
		Rule Name:	EMCC SIP Trunk validation
		Description:	EMCC Trunk has to have SendGeolocation as true, MTPRequired as false, UnattendedPort as false
		Test Condition:	EMCC Trunk has to have SendGeolocation as true, MTPRequired as false, UnattendedPort as false

	Error Message:	EMCC Trunk has to have SendGeolocation as true, MTPRequired as false, UnattendedPort as false
Rule (RI-711):	Type:	Active (Update)
	Rule Name:	Configuration of E1 links that are PRI EURO protocol type for MLPP is allowed.
	Description:	If device is E1 and MLPP Indication <> 0 Or MLPP Preemption <> 0 Then if PriProtocol <> PRI_EURO then throw exception
	Test Condition:	On update of Device Table
Rule (RI-780):	Type:	Active (Insert)
	Rule Name:	Devicerelatedversionstamp Update
	Description:	When a new Device is added, insert corresponding record in Devicerelatedversionstamp table with generated versionstamp.
	Test Condition:	ON INSERT IN Device : versionstamp = versionStampGenerator()
Rule (RI-785):	Type:	Active (Insert)
	Rule Name:	Insert RemoteDestination Records for Device Table
	Description:	When a device record for a phone is inserted, insert records for RemoteDestination as needed based on product feature support(SUPPORTS_FEATURE_MOBILITY_SIPLINE).
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 109 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
Rule (RI-821):	Type:	Active (Update)
	Rule Name:	when device.tkStatus_DeviceMobilityMode is set to 0 - off, then set the DeviceMobilityDynamic.fkDevicePool_DeviceMobility
	Description:	Need to add a rule that sets (UPDATE) the fkDevicePool_DeviceMobility to NULL when we disable the devicemobility of the device
	Test Condition:	ON UPDATE, IF(device.tkStatus_DeviceMobilityMode=0) Then DeviceMobilityDynamic.fkDevicePool_DeviceMobility= NULL;
Rule (RI-866):	Type:	Active (Insert/Update)
	Rule Name:	Insert/Delete entry into DeviceCERDynamic
	Description:	When Device.RequireCERLocation is enabled,insert a record into DeviceCERDyanmic
	Test Condition:	ON UPDATE TO DEVICE.REQUIRECERLOCATION INSERT/DELETE INTO DEVICESCERDYNAMIC
Rule (RI-874):	Type:	Validation (Insert/Update)

		Rule Name:	Mobility Check on EndUser for CTI Remote Device
		Description:	EndUser associated with CTI Remote Device should be Mobility Enabled.
		Test Condition:	Check description for complete rule. ON INSERT INTO Device: SELECT fkenduser_mobility INTO theEndUser FROM device WHERE pkid = device.pkid; SELECT EnableMobility INTO mobility FROM enduser WHERE pkid = theEndUser; IF (mobility = 'F') THEN throw exception END IF;
		Error Message:	Cannot add the device for EndUser that does not have Mobility enabled.
		Remedy:	Enable Mobility on the EndUser associated with CTI Remote Device and try again.
	Rule (RI-888):	Type:	Active (Insert)
		Rule Name:	Insert Dynamic Records for Registration of Phones
		Description:	When a device record gets inserted where tkclass=1 (phone), create the corresponding record in the RegistrationDynamic table.
		Test Condition:	ON INSERT INTO Device: IF (tkClass = 1) THEN INSERT INTO RegistrationDynamic (pkid, fkDevice) values (newid(), new_pkid)
	Rule (RI-936):	Type:	Active (Insert/Update)
		Rule Name:	On Insert/Update of Device set SIPProfile to NULL for non SIP device
		Description:	On Insert/Update of Device, SET SIPProfile to NULL for non SIP device.
		Test Condition:	For INSERT/UPDATE of Device, IF tkdeviceprotocol <> 11,UPDATE Device SET fkSIPProfile = NULL
	Rule (RI-941):	Type:	Validation (Insert/Update)
		Rule Name:	Token User can own only CDT device
		Description:	Token User can own only CDT device or be used for mobility only for CDT
		Test Condition:	On I/U of Device: FOR fkEndUser or fkEndUser_Mobility ,If tkUserProfile=3 AND (tkModel<>645 AND tkProduct<>530) THEN THROW EXCEPTION
		Error Message:	Token EndUser can be associated with CDT only or used for mobility
	Rule (RI-2137):	Type:	Validation (Delete)
		Rule Name:	Self-Provisioing CTI RP deletion not allowed
		Description:	CTI RP selected in the self provisioning configuration cannot be deleted
		Test Condition:	On Delete (select count(*) from globalsetting where tkglobalsetting=TypeGlobalSetting.GLOBAL_SETTING_SELF_PROVISIONING_IVR_CTIROUTEPOINT and settingvalue=device.pkid) < 1
		Error	This CTI Route Point is being used in the Self Provisioing Configuration hence cannot be deleted.

Message:

2.3.82.90 pstnaccess (FI-5271)

Type: bool

Type:	enum
Default Value:	0

Remarks: TypeKeyAuthority

2.3.82.121 **tkmodel (FI-4)**

Type: enum (Not Modifiable)

Migration Source: DeviceList.Type

Remarks: Redundant. Use tkProduct to look up tkModel in TypeProduct table.

Rule (RI-16):

Type: Validation (Insert/Update)

Rule Name: Phone Template required

Description: Devices that use a phone button template must have a template specified

Test Condition: SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 13 AND tkModel = @Defaults.tkModel AND tkDeviceProtocol IN (@Defaults.tkDeviceProtocol,99)

Error Message: A device that uses Phone Templates have a specific Phone Template assigned.

Remedy: Specify a Phone Template.

Rule (RI-17):

Type: Validation (Insert/Update)

Rule Name: Phone Template Model

Description: The model must match for a device default and the specified phone template for that device type.

Test Condition: @Defaults.tkModel = (SELECT PhoneTemplate.tkModel FROM PhoneTemplate WHERE PhoneTemplate.pkid = @Defaults.tkPhoneTemplate)

Error Message: The Phone Template model does not match the device model.

Remedy: Specifiy a Phone Template for the correct model.

Rule (RI-26):

Type: Validation (Insert/Update)

Rule Name: Device Name Validation

Description: For products that are configured as devices, name validation is based on the content of devicenameformat in specified for the product (TypeProduct). The exceptions are gateways for which the names are generated based on unit/subunit/slot position, and virtual devices used for extension mobility and configuration only (User Device Profiles, Autogenerated Profiles, Templates). Virtual devices allow ASCII names up to 50 characters including most punctuation.

Test Condition: ON INSERT/UPDATE IN Device

Error Message: The device name format is not valid or contains invalid characters.

Remedy: Check the name to make sure it is valid for specified product and try again.

Rule (RI-64):

Type: Validation (Insert/Update)

		Rule Name:	Route List Enabled Restriction
		Description:	Only Route List device may set the RouteListEnabled setting to true.
		Test Condition:	IF (@Device.RouteListEnabled = TRUE) AND (@Device.tkModel != 90) THEN throw exception
		Error Message:	Route List Enabled can be true only for Route List devices.
		Remedy:	Check device type and try again.
	Rule (RI-67):	Type:	Active (Insert) This field is modified by this rule.
		Rule Name:	Set tkModel on Insert
		Description:	The model of a device is determined by the settings in the TypeProduct table in the database. A device's model is set at insert and cannot be modified.
		Test Condition:	SET Device.tkModel = (SELECT tkModel FROM TypeProduct WHERE Enum = @Device.tkProduct)
	Rule (RI-67):	Type:	Active (Insert)
		Rule Name:	Set tkModel on Insert
		Description:	The model of a device is determined by the settings in the TypeProduct table in the database. A device's model is set at insert and cannot be modified.
		Test Condition:	SET Device.tkModel = (SELECT tkModel FROM TypeProduct WHERE Enum = @Device.tkProduct)
	Rule (RI-202):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate Default Device Profile for Model
		Description:	Create a Default Device Profile for a device type if one does not already exist, and extension mobility is enabled on a device of that type (e.g., create the Default Device Profile for a Cisco 7960 if it does not exist and EM is enabled on a 7960).
		Test Condition:	IF (NEW.AllowHotelingFlag is true) and ((select count(*) from device where tkmodel = NEW.tkmodel and tkdeviceprofile = 3) = 0)

	Test Condition:	On update of Device Table

2.3.82.128 [tkproduct \(FI-662\)](#)

Type:	enum	
Rule (RI-19):	Type:	Validation (Insert/Update)
	Rule Name:	AllowHotelingFlag - EM feature support required
	Description:	Device.AllowHotelingFlag can only be true for devices that support Extension Mobility.
	Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 9 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)

		Error Message:	Extension Mobility can only turned on for devices that support Extension Mobility feature.
		Remedy:	Check device type and Extension Mobility feature support before enabling Extension Mobility.
	Rule (RI-22):	Type:	Validation (Insert/Update)
		Rule Name:	AAR feature support required
		Description:	Device.fkAARNeighborhood and Device.fkCallingSearchSpace_AAR can only be specified for devices that support the AAR feature
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 21 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
		Error Message:	AAR Group and Calling Search Space can only be used for devices that support the AAR feature.
		Remedy:	Check device type and AAR feature support before specifying an AAR Group or AAR Calling Search Space.
	Rule (RI-24):	Type:	Validation (Insert/Update)
		Rule Name:	Invalid Device Profile setting
		Description:	Only a phone that supports extension mobility can be configured as a device profile
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 9 AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99) AND tkDeviceProfile != 0
		Error Message:	Device Profile can only be created for devices that support Extension Mobility feature.
		Remedy:	Check the device type and feature support and try again.
	Rule (RI-26):	Type:	Validation (Insert/Update)
		Rule Name:	Device Name Validation
		Description:	For products that are configured as devices, name validation is based on the content of devicenameformat in specified for the product (TypeProduct). The exceptions are gateways for which the names are generated based on unit/subunit/slot position, and virtual devices used for extension mobility and configuration only (User Device Profiles, Autogenerated Profiles, Templates). Virtual devices allow ASCII names up to 50 characters including most punctuation.
		Test Condition:	ON INSERT/UPDATE IN Device
		Error Message:	The device name format is not valid or contains invalid characters.
		Remedy:	Check the name to make sure it is valid for specified product and try again.
	Rule (RI-37):	Type:	Validation (Insert/Update)
		Rule Name:	SoftkeyTemplate Restriction
		Description:	Softkey Templates can be assigned only to devices that support Softkeys

		Test Condition:	IF (@Device.fkSoftkeyTemplate IS NOT NULL) AND ((SELECT COUNT(*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 18 AND tkProduct = @Device.tkProduct AND tkDeviceprotocol IN (@Device.tkDeviceProtocol,99)) = 0) THEN Throw Exception
		Error Message:	Softkey Template is not valid for this type of device.
		Remedy:	Remove the Softkey Template setting and try again.
	Rule (RI-41):	Type:	Validation (Insert/Update)
		Rule Name:	(obsolete) Device Login Duration Restriction
		Description:	Login Duration is only valid on devices supporting Extension Mobility
		Test Condition:	IF (@Device.LoginDuration IS NOT NULL) AND ((SELECT COUNT(*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 9 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)) = 0) THEN Throw Exception
		Error Message:	Login Duration is valid only for devices that support Extension Mobility feature.
		Remedy:	Remove the Login Duration setting from the device and try again.
	Rule (RI-42):	Type:	Validation (Insert/Update)
		Rule Name:	(obsolete) Device Login Time Restriction
		Description:	Login Time is only valid on devices supporting Extension Mobility
		Test Condition:	IF (@Device.LoginTime IS NOT NULL) AND ((SELECT COUNT(*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 9 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)) = 0) THEN Throw Exception
		Error Message:	Login Time is valid only for devices that support Extension Mobility feature.
		Remedy:	Remove the Login Time setting from the device and try again.
	Rule (RI-60):	Type:	Validation (Insert/Update)
		Rule Name:	Network Hold Audio Source Restriction
		Description:	Only devices that support Music On Hold feature use the Network Hold Audio Source setting
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 4 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
		Error Message:	Network Hold Audio Source can only be used for devices that support the Music On Hold feature.
		Remedy:	Check device type and Music On Hold feature support before specifying a Network Hold Audio Source.
	Rule (RI-61):	Type:	Validation (Insert/Update)
		Rule Name:	User Hold Audio Source Restriction
		Description:	Only devices that support Music On Hold feature use the User Hold Audio Source setting

		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 4 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
		Error Message:	User Hold Audio Source can only be used for devices that support the Music On Hold feature.
		Remedy:	Check device type and Music On Hold feature support before specifying a User Hold Audio Source.
	Rule (RI-66):	Type:	Active (Insert)
		Rule Name:	Set tkClass on Insert
		Description:	The class of a device is determined by the settings in the TypeModel table in the database. A device's class is set at insert and cannot be modified. Class is determined by Model, and Model is determined by Product.
		Test Condition:	SET Device.tkClass = (SELECT tkClass FROM TypeModel WHERE Enum = (SELECT tkModel FROM TypeProduct WHERE Enum = @Device.tkProduct))
	Rule (RI-67):	Type:	Active (Insert)
		Rule Name:	Set tkModel on Insert
		Description:	The model of a device is determined by the settings in the TypeProduct table in the database. A device's model is set at insert and cannot be modified.
		Test Condition:	SET Device.tkModel = (SELECT tkModel FROM TypeProduct WHERE Enum = @Device.tkProduct)
	Rule (RI-69):	Type:	Validation (Insert/Update)
		Rule Name:	Device Protocol Setting
		Description:	The valid Device Protocol settings for a device are determined by the content of the ProductCapabilities table for that device type and feature.
		Test Condition:	@Device.tkDeviceProtocol IN (SELECT EnumValue FROM ProductCapabilities WHERE (tkProductConfig = 7) AND (tkProduct = @Device.tkProduct))
		Error Message:	The specified Device Protocol is not valid for this device.
		Remedy:	Check the Device Protocol support and device type and try again..
	Rule (RI-70):	Type:	Validation (Insert/Update)
		Rule Name:	Protocol Side Setting
		Description:	The valid Protocol Side settings for a device are determined by the content of the ProductCapabilities table for that device type and feature. Most devices are only User side. Only gateways and trunks are configured as Network Side when necessary.
		Test Condition:	@Device.tkProtocolSide IN (SELECT EnumValue FROM ProductCapabilities WHERE (tkProductConfig = 18) AND (tkProduct = @Device.tkProduct))

		Error Message:	The specified Protocol Side is not valid for this device.
		Remedy:	Check the Protocol Side support and device type and try again.
	Rule (RI-71):	Type:	Active (Insert)
		Rule Name:	MLPP Preemption Default Setting
		Description:	If a product supports MLPP Preemption (SUPPORTS_FEATURE_PREEMPTION), then the Default value is PREEMPTION_DEFAULT; otherwise the default value is PREEMPTION_DISABLED
		Test Condition:	IF (SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 35 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)) = 0 THEN SET Device.tkPreemption = 0 ELSE SET Device.tkPreemption = 2
	Rule (RI-72):	Type:	Validation (Insert/Update)
		Rule Name:	MLPP Preemption Restriction
		Description:	Only devices that support MLPP Preemption feature may set the Preemption setting to a value other than DISABLED (0).
		Test Condition:	IF ((SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 35 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)) = 0) AND (Device.tkPreemption != 0) THEN throw exception
		Error Message:	MLPP Preemption must be disabled on devices that do not support the MLPP Preemption feature.
		Remedy:	Check the MLPP Preemption feature support and device type and try again.
	Rule (RI-74):	Type:	Validation (Insert/Update)
		Rule Name:	MLPP Indication Restriction
		Description:	Only devices that support MLPP Indication feature may set the Indication setting to a value other than OFF (0).
		Test Condition:	IF ((SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 34 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)) = 0) AND (Device.tkStatus_MLPPIndicationStatus != 0) THEN throw exception
		Error Message:	MLPP Indication must be off on devices that do not support the MLPP Indication feature.
		Remedy:	Check the MLPP Indication feature support and device type and try again.
	Rule (RI-75):	Type:	Validation (Insert/Update)
		Rule Name:	User Locale Restriction
		Description:	Only devices that support Localization feature use the User Locale setting
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 17 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)

		Error Message:	User Locale can only be set for devices that support the Localization feature.
		Remedy:	Check the Localization feature support and device type before specifying a User Locale.
	Rule (RI-199):	Type:	Validation (Insert/Update)
		Rule Name:	Device Security Feature validation
		Description:	Valid Device Security Modes for each device type are determined by the ProductSupportsFeature records for the security features. Devices that do not support any security feature must be set to non-secure mode. Devices that support other security modes can be set to Default, Not-Secure, or one of the supported security modes (Authentication or Encryption as determined in ProductSupportsFeature).
		Test Condition:	On Insert/Update of tksecuritymode on Device table.
		Error Message:	The security feature is not supported for this device
		Remedy:	Either unselect the desired feature or choose another device.
	Rule (RI-263):	Type:	Active (Insert)
		Rule Name:	Set QSIG on Device
		Description:	When a device is inserted, the QSIG setting for the device is determined automatically as follows: For trunks other than Inter-cluster trunk, the device is treated as H.323; inter-cluster trunk is treated as Mixed-Non-QSIG. Digital Access PRI gateways using QSIG protocol are considered QSIG, H.323 Gateways are considered H.323, and all other gateways (including Digital Access PRI with a non-QSIG protocol) are Mixed-Non-QSIG. All other devices except Route Lists are considered Mixed-Non-QSIG. For Route Lists, see rule "Set QSIG on Route List"
		Test Condition:	On Insert into Device
	Rule (RI-379):	Type:	Validation (Insert/Update)
		Rule Name:	Device DND Option feature restriction
		Description:	DND Option can only be set to non-Zero on devices that support the DND feature (in ProductSupportsFeature table). For those devices that support the feature, only the Ringer Off (0) is valid, unless a parameter is present in the PSF record. If a parameter value of 1 exists in PSF table, only Call Reject is valid. If the param value is (2), all options including Use Common Profile (2) are valid. Dual mode and remote destination profile only support the Call Reject option.
		Test Condition:	ON INSERT INTO Device: IF((tkproduct=112 or isdualmode = 't') and (tkDNDOption <> 1)) throw exception; ELSE IF (new_tkDNDOption <> 0) THEN SELECT parameter INTO restriction FROM ProductSupportsFeature WHERE (tkSupportsFeature = SUPPORTS_FEATURE_DND) AND (tkProduct = new_tkProduct) AND (tkDeviceProtocol IN (new_tkDeviceProtocol,99); IF (rows returned = 0) THEN throw exception ELSE IF (NVL(restriction, ") <> ") THEN IF (new_tkDNDOption <> restriction) THEN throw exception END IF; END IF; END IF; END IF
		Error Message:	This device does not support the selected DND Option

	Rule (RI-380):	Remedy:	Do not set a DND Option, or check for restrictions on which options are valid for this device.
		Type:	Validation (Insert/Update/Delete)
		Rule Name:	One server should have exactly one software device (CFB, MTP, MOH, ANN) each type
		Description:	One IP Media Streaming software device each type is install by default on all servers cannot be deleted
		Test Condition:	ON DELETE or Insert Device: IF (old_tkProduct IN (28, 30, 51, 89)) THEN throw exception;
		Error Message:	Cannot insert or delete the IP Media Streaming software devices installed on a server by default.
		Remedy:	Disable the service or remove the device from Media Resource Groups where it appears.
	Rule (RI-381):	Type:	Active (Insert)
		Rule Name:	DualMode device type (in PSF) is marked isDualMode = True
		Description:	If a device type is marked as Dual Mode in the ProductSupportsFeature table, then the Device and RemoteDestination records for the device are automatically updated to set IsDualMode field to true.
		Test Condition:	ON INSERT INTO Device
	Rule (RI-395):	Type:	Validation (Insert/Update)
		Rule Name:	Device Outbound Call Rollover Feature Restriction
		Description:	The Device.tkOutboundCallRollover setting can only be non-default (other than None) for devices that support the Automatic Outbound Call Rollover feature.
		Test Condition:	ON INSERT/UPDATE IN Device: IF (new_tkOutboundCallRollover <> 0) THEN IF (SELECT COUNT(*) FROM ProductSupportsFeature WHERE (tkSupportsFeature = SUPPORTS_FEATURE_AUTOMATIC_OUTBOUND_CALL_ROLLOVER) AND (tkProduct = new_tkProduct) AND (tkDeviceProtocol IN (new_tkDeviceProtocol,99) = 0 THEN throw exception; END IF; END IF;
		Error Message:	This device does not supports Automatic Outbound Call Rollover.
		Remedy:	Set the OutboundCallRollover option to No Rollover for this device.
	Rule (RI-415):	Type:	Validation (Insert/Update)
		Rule Name:	Join Across Lines Restriction
		Description:	Only devices that support Join Across lines can have a value other than zero for tkStatus_joinacrosslines
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 78 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
		Error Message:	Join Across Lines can only be set for devices that have the Join Across Lines Feature
		Remedy:	Check the Join Across Lines feature support and device type before specifying a Join Across Lines value.

	Rule (RI-416):	Type:	Validation (Insert/Update)
		Rule Name:	Single Button Barge Restriction
		Description:	Only devices that support Join Across lines can have a value other than zero for tkBarge
		Test Condition:	SELECT COUNT (*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 78 AND tkProduct = @Device.tkProduct AND tkDeviceProtocol IN (@Device.tkDeviceProtocol,99)
		Error Message:	Single Button Barge can only be set for devices that have the Single Button Barge Feature
		Remedy:	Check the Single Button Barge feature support and device type before specifying a Single Button Barge value.
	Rule (RI-431):	Type:	Validation (Insert/Update)
		Rule Name:	Phone Personalization Feature Support restriction
		Description:	Only devices that support the Phone Personalization can have a non-default value for Device.tkPhonePersonalization.
		Test Condition:	ON INSERT/UPDATE IN Device: IF (new_tkPhonePersonalization <> 3) AND (SELECT COUNT(*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 80 AND tkProduct = new_tkProduct AND tkDeviceProtocol IN (99, new_tkDeviceProtocol) = 0 THEN throw exception; END IF
		Error Message:	Phone Personalization feature is not supported on the specified device type.
		Remedy:	Do not change the setting (tkPhonePersonalization) from Default (value = 3)
	Rule (RI-447):	Type:	Validation (Insert/Update)
		Rule Name:	Device.fkCallingSearchSpace_CdPNTransform is allowed for all gateways other than FXS ports
		Description:	Device.fkCallingSearchSpace_CdPNTransform is allowed for all gateways other than FXS ports
		Test Condition:	ON INSERT/UPDATE
		Error Message:	Device.fkCallingSearchSpace_CdPNTransform is allowed for all gateways other than FXS ports

		Rule Name:	(obsolete) Insert DeviceEMSyn record if auto sync of auto generated profile is needed
		Description:	When EM is on (Device.AllowHotelingFlag = true), if the default Device Profile is the auto generated Device Profile for the current device, and the value of service parameter (enableAutoDeviceProfileSynChronize) is true, then insert a record into DeviceEMSyn table with the pkid of auto-generated profile and the pkid of the current device. Later DbMon will process the change notification of DeviceEMSyn to re-generate the auto-generated profile of the current device.
		Test Condition:	Device.AllowHotelingFlag = true
	Rule (RI-468):	Type:	Active (Delete) Rule applied when record is deleted.
		Rule Name:	Remove default intercom device from Numplan when Device is Deleted
		Description:	When a device is deleted, update all Numplan records where this device is used as fkDevice_IntercomDefault
		Test Condition:	ON DELETE in Device: UPDATE Numplan set fkDevice_IntercomDefault = NULL WHERE fkDevice_IntercomDefault = @pkid

2.3.83 deviceaddonmodulemap (TI-167)

Description: Map device to phone template for add-on-modules

Fields:

2.3.83.1 fkdevice (FI-979)

Type: guid (Cascade Delete)

Rule (RI-77):

Type: Validation (Insert/Update)

Rule Name: DeviceAddOnModule Limit & KEM(s) can only be added to devices that support them

Description: The number of Add-on Modules supported by a device (phone) is indicated in the MaxAddOnModules column of the TypeProduct table. When a record is inserted into the DeviceAddOnModuleMap table, the number of records for the specified device cannot exceed the MaxAddOnModules for that device type (product). Also, The KEM can only be assigned to a phone that supports it.

Test Condition: ON INSERT/UPDATE INTO DeviceAddOnModuleMap (IF (SELECT COUNT(*) FROM DeviceAddOnModuleMap WHERE fkDevice = @Device.pkid) > (SELECT MaxAddOnModules FROM TypeProduct WHERE Enum = @Device.tkProduct) THEN throw exception.

		Error Message:	Cannot insert additional Add-on Modules for this device OR This Device Model does not support this type of expansion module.
		Remedy:	Check the number of Add-on Modules supported and configured for this device and try again OR this Device Model does not support this type of expansion module.
	Rule (RI-176):	Type:	Validation (Insert/Update)
		Rule Name:	Device Add-on Module Map Model Restriction
		Description:	The model referenced by a DeviceAddonModuleMap record must be in the Add-on Module class (16).
		Test Condition:	IF (@DeviceAddonModuleMap.tkModel NOT IN (SELECT Enum FROM TypeModel WHERE tkClass = 16)) THEN throw exception
		Error Message:	The specified Model is not an Add-on Module.
		Remedy:	Check the class of the model you selected to make sure it is an addon module, and try again.
	Rule (RI-284):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	deviceaddonmodulemap versionstamp
		Description:	on change to anything in deviceaddonmodulemap table, update devicerelatedversionstamp versionstamp
		Test Condition:	update devicerelatedversionstamp
	Rule (RI-469):	Type:	Validation (Insert/Update)
		Rule Name:	KEM(s) cannot not be mixed on the same device
		Description:	If the KEM has been set to one type on a given device it cannot be assigned a second KEM of another type
		Test Condition:	ON INSERT/UPDATE IN DeviceAddOnModuleMap: SELECT tkmodel INTO theModel from DeviceAddOnModuleMap where pkid <> new_Pkid and fkdevice = new_fkdevice; IF (new_tkmodel <> theModel) THEN theMoniker='DEVICE_KEM_MIXED_TYPES'; END IF;
		Error Message:	Expansion Modules can not be of mixed types.
		Remedy:	Two types of Expansion Modules have been selected for the same Device. Please select only one type of Expansion Module.

Remedy:	Change the subnet mask to match the size												

Uniqueness: subnet + subnetmasksz is unique. (MFI-101)

2.3.93 devicenumplanmap (TI-77)

Description: Ordered association of NumPlan records with a device (line appearance)

Fields:	2.3.93.1 busytrigger (FI-1350)		
	Type:	long	
	Default Value:	1	
	Check Constraint:	BusyTrigger > 0	
	Rule (RI-79):	Type:	Default (Defines a default value)
		Rule Name:	Busy Trigger Default Setting
		Description:	When a device supports Multiple Call Display (ProductSupportsFeature.tkSupportsFeature = SUPPORTS_FEATURE_MULTIPLE_CALL_DISPLAY), the default for Busy Trigger is the lesser of a) the Default BusyTrigger setting in the Product Supports Feature record's parameter value or b) the MaxCalls default for the current line. If the Multiple Call Display feature is not supported, BusyTrigger defaults to 2 if the device supports CallWaiting, or 1 if the device doesn't support Call Waiting (ProductSupportsFeature.tkSupportsFeature = SUPPORTS_FEATURE_CALL_WAITING).
		Test Condition:	SELECT ParamValue FROM ProductSupportsFeature WHERE (tkSupportsFeature = 30) AND (tkProduct = @Device.tkProduct)
	Rule (RI-82):	Type:	Validation (Insert/Update)
		Rule Name:	Busy Trigger and No Call Waiting
		Description:	Busy Trigger must be set to 1 if there is no record for current device type (Device.tkProduct) to indicate that the device supports Call Waiting (ProductSupportsFeature.tkSupportsFeature = SUPPORTS_FEATURE_CALL_WAITING) (6)
		Test Condition:	IF (SELECT COUNT(*) FROM ProductSupportsFeature WHERE tkSupportsFeature = 6 AND tkProduct = @Device.tkProduct) = 0 AND (DeviceNumPlanMap.BusyTrigger != 1) THEN throw exception
		Error Message:	Busy Trigger cannot be greater than 1 because the specified device type does not support Call Waiting
		Remedy:	Check the Call Waiting support and device type and try again. If the device does not support Call Waiting, Busy Trigger must be set to 1.
	Rule (RI-94):	Type:	Validation (Insert/Update)
		Rule Name:	Maximum MaxCalls Per Device/Line

		Description:	The upper limit for Maximum Calls for a Line Appearance (DeviceNumPlanMap.MaxCalls) is calculated on a per-line basis as follows: If the device supports feature Multiple Call Display (ProductSupportsFeature.tkSupportsFeature = SUPPORTS_FEATURE_MULTIPLE_CALL_DISPLAY), the limit is read from the parameter in ProductSupportsFeature. The parameter indicates MaxCalls (total for device) : Default Max Calls : Default Busy Trigger. The current value must be less than MaxCalls limit for the device minus the sum of MaxCalls configured for all lines on the phone excluding the current line. If Multiple Call Display is not supported, MaxCalls is set to 2
		Test Condition:	?
	Rule (RI-94):	Type:	Validation (Insert/Update) This field is modified by this rule.
		Rule Name:	Maximum MaxCalls Per Device/Line
		Description:	The upper limit for Maximum Calls for a Line Appearance (DeviceNumPlanMap.MaxCalls) is calculated on a per-line basis as follows: If the device supports feature Multiple Call Display (ProductSupportsFeature.tkSupportsFeature = SUPPORTS_FEATURE_MULTIPLE_CALL_DISPLAY), the limit is read from the parameter in ProductSupportsFeature. The parameter indicates MaxCalls (total for device) : Default Max Calls : Default Busy Trigger. The current value must be less than MaxCalls limit for the device minus the sum of MaxCalls configured for all lines on the phone excluding the current line. If Multiple Call Display is not supported, MaxCalls is set to 2
		Test Condition:	?

2.3.93.2 callinfodisplaymask (FI-1351)

Type:	long
Default Value:	9
Check Constraint:	(CallInfoDisplayMask >= 0) AND (CallInfoDisplayMask <=15)

2.3.93.3 ctiid (FI-600)

Type:	identity (Unique, Not Modifiable)	
Migration Source:	NumPlan.ID	
Remarks:	Trigger set on insert. 32 bit value for Computer Telephony Interface	
Rule (RI-2):	Type:	Active (Insert)
	Rule Name:	Generate CTI ID value
	Description:	On insert of a new record generate a unique 32-bit integer value and store the result in the CTI ID field
	Test Condition:	On Insert

Rule (RI-225):	Type:	Active (Insert) This field is modified by this rule.

2.3.93.4 dialplanwizardgenid (FI-678)

Type:	long (Indexed, Null OK)
Default Value:	NULL
Remarks:	This record created by DialPlanWizard

2.3.93.5 display (FI-317)

Type:	string [120]
Default Value:	EMPTY
Validation:	^[^]"'""""%<>[& { }]{0,30}\$
Migration Source:	NumPlan.Display
Remarks:	The localized name to display for internal Caller ID

Rule (RI-83):	Type:	Warning (Message for UI only)
	Rule Name:	Display Name (Caller ID) is a Number
	Description:	Internal Caller ID should not appear to be a Directory Number because this could hide the actual calling number for call information. It is allowed, but not recommended, where a specific Calling Number should appear that is different from the actual calling number. This does not effect the calling number sent in call setup messages.
	Test Condition:	DeviceNumPlanMap.Display contains only digits
	Error Message:	Display text for a line appearance is intended for displaying text such as a name instead of the directory number for internal calls. If you specify a number, the person receiving a call may not see the proper identity of the caller.

2.3.93.6 displayascii (FI-1789)

Type:	string [30]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+.,/:;=?@\\^_` }~-]{0,30}\$
Remarks:	A safe version of the Caller ID Display text using only English letters (a to Z) and punctuation, used when endpoints are using different language groups.

Rule (RI-83):	Type:	Warning (Message for UI only)
	Rule Name:	Display Name (Caller ID) is a Number
	Description:	Internal Caller ID should not appear to be a Directory Number because this could hide the actual calling number for call information. It is allowed, but not recommended, where a specific Calling Number should appear that is different from the actual calling number. This does not effect the calling number sent in call setup messages.
	Test Condition:	DeviceNumPlanMap.Display contains only digits
	Error Message:	Display text for a line appearance is intended for displaying text such as a name instead of the directory number for internal calls. If you specify a number, the person receiving a call may not see the proper identity of the caller.

2.3.93.7 e164mask (FI-617)

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	NULL
Validation:	^[0-9*#+X]{0,24}\$
Remarks:	masked against NumPlan.DnOrPattern to get full number to display on Telecaster

2.3.93.8 [fkcallingsearchspace_monitoring \(FI-3261\)](#)

Type:	guid (Null OK)	
Default Value:	NULL	
Remarks:	CallingSearchSpace used for monitoring if supported by associated device	
Rule (RI-364):	Type:	Validation (Insert/Update)
	Rule Name:	Monitor feature restriction
	Description:	The Monitor CSS can only be set on a line if the device supports the Monitor feature
	Test Condition:	ON INSERT/UPDATE IN DeviceNumPlanMap IF (@fkCallingSearchSpace_Monitoring IS NOT NULL) AND (SELECT tkProduct, tkDeviceProtocol from Device where pkid = @fkDevice) NOT IN (Select tkproduct, tkdeviceprotocol from PSF where tkSupportsFeature = SUPPORTS_FEATURE_MONITOR) THEN throw exception;
	Error Message:	Monitoring is not supported on the device where this line appears
	Remedy:	Do not set a Calling Search Space for Monitoring.
Rule (RI-364):	Type:	Validation (Insert/Update) This field is modified by this rule.
	Rule Name:	Monitor feature restriction

Description:	The Monitor CSS can only be set on a line if the device supports the Monitor feature
Test Condition:	ON INSERT/UPDATE IN DeviceNumPlanMap IF (@fkCallingSearchSpace_Monitoring IS NOT NULL) AND (SELECT tkProduct, tkDeviceProtocol from Device where pkid = @fkDevice) NOT IN (Select tkproduct, tkdeviceprotocol from PSF where tkSupportsFeature = SUPPORTS_FEATURE_MONITOR) THEN throw exception;
Error Message:	Monitoring is not supported on the device where this line appears

	Remarks:	New guid plus seconds past midnight 1970 are concatenated and is generated every time this device is updated
Uniqueness:	No multicolumn uniqueness constraints	

2.3.102 devicereset (TI-253)

Description:	For device reset functionality. Records inserted into this table will inform CCM to reset the device. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.102.1 devicepkid (FI-2098)	
	Type:	guid (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	Set by DeviceReset stored procedure.
	2.3.102.2 fkcallmanager (FI-2046)	
	Type:	guid (Cascade Delete, Not Modifiable)
	Remarks:	Set by DeviceReset stored procedures.
	2.3.102.3 name (FI-1781)	
	Type:	string [129] (Not Modifiable, Null OK)
	Default Value:	EMPTY
	Remarks:	Set by DeviceReset stored procedure.
	2.3.102.4 pkid (FI-1780)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.102.5 resetgrouping (FI-3021)	
	Type:	guid (Unique, Indexed, Not Modifiable)

	Default Value:	newid()
	Remarks:	Unique ID to identify a record. will be same for all reset requests
	2.3.102.6 tkmodel (FI-1783)	
	Type:	enum (Not Modifiable)
	Remarks:	Set by DeviceReset stored procedure.
	2.3.102.7 tkreset (FI-1782)	
	Type:	enum (Not Modifiable)
	Remarks:	Set by DeviceReset stored procedure.
	2.3.102.8 tkresethandshake (FI-3018)	
	Type:	enum (Not Modifiable)
	Remarks:	Set the reset to ensure tftp reacts to it before actual device reset.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.103 devicesipdevicemap (TI-2156)

Description:	Keep multi function device records for mapping between Device and SIPDeivce record.	
Fields:	2.3.103.1 fkdevice (FI-21273)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	Reference to a specific Device
	2.3.103.2 fksipdevice (FI-21274)	
	Type:	guid (Indexed)
	Remarks:	Points to the corresponding SIP Device record.
	2.3.103.3 pkid (FI-21272)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.104 devicetftpdynamic (TI-465)

Description: VersionStamp Mismatch Recovery
Cisco Unified Communications Manager, Release 10.0(1)

Fields:	2.3.104.1 fkdevice (FI-3470)	
	Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)
	Migration Source:	convert from DeviceName
	Remarks:	Points to the device record being "subclassed." Device.tkModel must be tkclass=1.
	2.3.104.2 pkid (FI-3469)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.104.3 rebuildtoggle (FI-3471)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Should this device be rebuilt
Uniqueness:	No multicolumn uniqueness constraints	

2.3.105 [devicexml16k \(TI-937\)](#)

Description:	Defines the product specific configuration for devices:16K Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.105.1 fkdevice (FI-5740)	
	Type:	guid (Unique, Indexed, Cascade Delete)
	Migration Source:	convert from Device
	Remarks:	Pkid of the Device corresponding to the XML column of DeviceXML16L table
	2.3.105.2 pkid (FI-5739)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.

Remarks:	IP Address for secondary cisco tftp (option 66)

2.3.109.21 tftpservername (FI-2093)

Type:	string [64]
Default Value:	EMPTY
Validation:	^[0-9a-zA-Z._-]{0,64}\$

	Remarks: tftp server name (option 150)
Uniqueness:	fkdhcpserver + subnet is unique. (MFI-69)

2.3.110 dialplan (TI-107)

Description:	List of known dial plans Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.110.1 description (FI-552)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Validation: <code>^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~-]{0,50}\$</code></div> <div>Migration Source: automatic</div> <div>2.3.110.2 name (FI-550)</div> <div>Type: string [50] (Unique, Not Modifiable)</div> <div>Validation: <code>^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~-]{1,50}\$</code></div> <div>Migration Source: automatic</div> <div>2.3.110.3 pkid (FI-549)</div> <div>Type: guid (Unique, Indexed, Not Modifiable)</div> <div>Default Value: newid()</div> <div>Migration Source: Generated</div> <div>Remarks: Unique ID to identify a record.</div> <div>2.3.110.4 version (FI-3032)</div> <div>Type: string [15]</div> <div>Default Value: 1.1(0)</div> <div>Remarks: Version number of the installed Dial Plan</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.111 dialplandetails (TI-573)

Description:	Cisco BE: This table will be used to store different parameters for dial plan e.g. Extension no length, FeaturePrefix etc. Is not replicated.
--------------	--

Fields:	2.3.111.1 defaultvalue (FI-6003)	
	Type:	string [40] (Null OK)
	Remarks:	Default value for parameters in dialplandetail table
	2.3.111.2 paramname (FI-6001)	
	Type:	string [50]
	Remarks:	ParamName for dialplandetails
	2.3.111.3 paramvalue (FI-6002)	
	Type:	string [40]
	Validation:	^[a-zA-Z 0-9,#@-]{1,40}\$
	Remarks:	ParamValue for dialplandetails
	2.3.111.4 pkid (FI-6000)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique id for dialplandetails table
Uniqueness:	No multicolumn uniqueness constraints	

2.3.112 dialplantag (TI-97)

Description: Tag name for a portion of a directory number used by digit analysis
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.112.1 fkdialplan (FI-561)	
	Type:	guid (Cascade Delete, Not Modifiable)
	2.3.112.2 pkid (FI-392)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.112.3 suppressfromroutefilter (FI-762)	
	Type:	bool (Not Modifiable)

	Default Value:	FALSE
	Remarks:	Don't show this tag in RouteFilterMember.
	2.3.112.4 tag (FI-455)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Migration Source:	automatic
	2.3.112.5 <u>tkoperator_max</u> (FI-761)	
	Type:	enum (Not Modifiable)
	Default Value:	3
	Remarks:	Maximum value for operator in RouteFilterMember for this tag
Uniqueness:	tag + fkdialplan is unique. (MFI-23)	

2.3.113 dialrules (TI-330)

Description:	Dial Rules	
Fields:	2.3.113.1 description (FI-2854)	
	Type:	string [100] (Null OK)
	Default Value:	EMPTY
	Remarks:	Description of the dial rule
	2.3.113.2 isstandard (FI-2459)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Whether standard dial rule
	2.3.113.3 name (FI-2457)	
	Type:	string [50] (Unique, Indexed)
	Remarks:	Name of dial rule
	2.3.113.4 pkid (FI-2456)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.

Rule (RI-301):	Type:	Active (Insert/Update)
	Rule Name:	dialrules versionstamp
	Description:	on change to anything in dialrules, update versionstamp in dialrules table
	Test Condition:	update dialrules

2.3.113.5 resettoggle (FI-3074)

Type:	bool
Default Value:	FALSE
Remarks:	Should this device or group be reset

Rule (RI-301):	Type:	Active (Insert/Update)
	Rule Name:	dialrules versionstamp
	Description:	on change to anything in dialrules, update versionstamp in dialrules table
	Test Condition:	update dialrules

2.3.113.6 tkdialpattern (FI-2458)

Type:	enum
Default Value:	2
Remarks:	Pkid of Dial Pattern record

2.3.113.7 tkreset (FI-3075)

Type:	enum
Default Value:	2
Remarks:	Set by DeviceReset stored procedure.

2.3.113.8 versionstamp (FI-3117)

Type:	string [47] (Null OK)
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
Remarks:	New guid plus seconds past midnight 1970 are concatenated

Rule (RI-301):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	dialrules versionstamp
	Description:	on change to anything in dialrules, update versionstamp in dialrules table
	Test Condition:	update dialrules

	Rule (RI-301):	Type:	Active (Insert/Update)
		Rule Name:	dialrules versionstamp
		Description:	on change to anything in dialrules, update versionstamp in dialrules table
		Test Condition:	update dialrules
Uniqueness:	No multicolumn uniqueness constraints		

2.3.114 dialrulespatternmap (TI-329)

Description:	DialRules Pattern Map		
Fields:	2.3.114.1 description (FI-2871)		
	Type:	string [100] (Null OK)	
	Default Value:	EMPTY	
	Remarks:	Description of pattern on dial rule	
	2.3.114.2 fkdialrules (FI-2453)		
	Type:	guid (Cascade Delete)	
	Remarks:	Pkid of DialRules record	
	Rule (RI-260):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	dialrules versionstamp
		Description:	on change to anything in dialrulespatternmap, patternparametermap, update versionstamp in dialrules table
		Test Condition:	update dialrules
	2.3.114.3 pkid (FI-2452)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.114.4 selectionorder (FI-2455)		
	Type:	long	
	Remarks:	Selection order	
	2.3.114.5 tkpattern (FI-2454)		
Type:	enum		

	Remarks:	Enum of TypePattern record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.115 digitalaccessbri (TI-223)

Description: Digital access BRI information not in Device table

Fields:	2.3.115.1 acceptinboundrdnis (FI-1608)	
	Type:	bool
	Default Value:	FALSE
	2.3.115.2 calleriddn (FI-1587)	
	Type:	dn (Null OK)
	DN Type:	DN_TYPE_MASK
	Default Value:	NULL
	Validation:	^[0-9*#+X]{0,32}\$
	2.3.115.3 dchannelenable (FI-1600)	
	Type:	bool
	Default Value:	TRUE
	2.3.115.4 displayie (FI-1605)	
	Type:	bool
	Default Value:	FALSE
	2.3.115.5 firstdelay (FI-1584)	
	Type:	long
	2.3.115.6 fkdevice (FI-1575)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	device::tModel must be digital access
	Rule (RI-104):	Type: Validation (Insert/Update)
		Rule Name: DigitalAccessBri device
		Description: The records in DigitalAccessBri table must reference a device using DigitalAccessBri device protocol (10).
		Test Condition: DigitalAccessBri.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 10)

Error Message:	DigitalAccessBri table may only reference devices with matching Device Protocol (DigitalAccessBri).
Remedy:	Correct the fkDevice value to refer to a Digital Access BRI device.

2.3.115.7 gclearenable (FI-10004)

Type:	bool
Default Value:	FALSE
Remarks:	Enables G.Clear support for a BRI trunk (using values specified in G.Clear related Service Parameters)

2.3.115.8 intradelay (FI-1585)

Type:	long
-------	------

2.3.115.9 numberie (FI-1606)

Type:	bool
Default Value:	FALSE

2.3.115.10 numdigits (FI-1580)

Type:	long
Check Constraint:	((NumDigits >= 0) AND (NumDigits <= 32)) OR (NumDigits = 99)

2.3.115.11 pkid (FI-1574)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.115.12 prefix (FI-1578)

Type:	dn (Null OK)
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	NULL
Validation:	^[0-9*#+]{0,50}\$

2.3.115.13 sendrestart (FI-1583)

Type:	bool
-------	------

2.3.115.14 setupnonisdnpiflag (FI-1607)

Type:	bool
Default Value:	FALSE

2.3.115.15 sigdigits (FI-1579)

Type:	bool
Default Value:	FALSE
Remarks:	Must be 1 if (NumDigits >= 0) AND (NumDigits <= 32), or 0 if (NumDigits = 99)

2.3.115.16 stablein4 (FI-2166)

Type:	bool
Default Value:	FALSE

2.3.115.17 statuspoll (FI-1581)

Type:	bool
-------	------

2.3.115.18 stripcountout (FI-1586)

Type:	long
-------	------

Type:	guid (Indexed, Cascade Delete)
Migration Source:	convert from Device
Remarks:	device::tModel must be digital access

Rule (RI-28):	Type:	Active (Insert/Update)
	Rule Name:	Set QSIG on DigitalAccessPri device and Configuration of E1 links that are PRI EURO protocol type for MLPP is allowed.
	Description:	Update the QSIG setting on the Digital Access device whenever the PRI Protocol settings is changed from QSIG to non-QSIG, or non-QSIG to QSIG. And if device is E1 and MLPP Indication <> 0 Or MLPP Preemption <> 0 Then if PriProtocol <> PRI_EURO then throw exception
	Test Condition:	ON INSERT/UPDATE/DELETE IN DigitalAccessPRI IF (@tkPriProtocol <> tkPriProtol) THEN (set tkqsig on device where device.pkid = digitalaccesspri.fkdevice)

Rule (RI-40):	Type:	Validation (Update)
	Rule Name:	QSIG Protocol Change Restriction
	Description:	If a Digital Access PRI gateway is a member of a Route Group, the PRI Protocol of the gateway cannot be changed from a non-QSIG protocol to QSIG, or from a QSIG to non-QSIG PRI Protocol.
	Test Condition:	SELECT COUNT(*) FROM RouteGroupDeviceMap WHERE fkDevice = @Device.pkid AND Device.tkDeviceProtocol = 1

		Error Message:	Cannot change a QSIG device to a non-QSIG PRI Protocol while the device is a member of a Route Group.
		Remedy:	Remove the device from the Route Group to which it belongs and then change the PRI Protocol.
	Rule (RI-105):	Type:	Validation (Insert/Update)
		Rule Name:	DigitalAccessPri device
		Description:	The records in DigitalAccessPri table must reference a device using DigitalAccessPri device protocol (1)
		Test Condition:	DigitalAccessPri.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol = 1)
		Error Message:	DigitalAccessPri table may only reference devices with matching Device Protocol (DigitalAccessPri).
		Remedy:	Correct the fkDevice value to refer to a Digital Access PRI device.
	Rule (RI-599):	Type:	Validation (Insert/Update)
		Rule Name:	GClear can not be enabled for E1 gateway
		Description:	GClear can not be enabled for E1 gateway
		Test Condition:	On Insert or Update DigitalAccessPri
		Error Message:	GClear can not be enabled for E1 gateway
	Rule (RI-632):	Type:	Validation (Insert/Update)
		Rule Name:	Route Class Signaling support required for Route Class Signaling Enable
		Description:	Route Class Signaling Enabled setting must be OFF for devices that do not support Route Class Signaling feature (tkSupportsFeature = 94)
		Test Condition:	ON INSERT/UPDATE IN DigitalAccessPRI:
		Error Message:	This Device does not support Route Class Signaling (RouteClassSignalingEnabled setting)
		Remedy:	Set RouteClassSignalingEnabled to off and try again
	Rule (RI-716):	Type:	Validation (Insert/Update)
		Rule Name:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.
		Description:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.
		Test Condition:	On Insert or Update DigitalAccessPri
		Error Message:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.

2.3.116.9 gclearenable (FI-3483)

Type:	bool
Default Value:	FALSE
Remarks:	Enables G.Clear support for a PRI trunk (using values specified in G.Clear related Service Parameters)

Rule (RI-599):	Type:	Validation (Insert/Update)
	Rule Name:	GClear can not be enabled for E1 gateway
	Description:	GClear can not be enabled for E1 gateway
	Test Condition:	On Insert or Update DigitalAccessPri
	Error Message:	GClear can not be enabled for E1 gateway

Rule (RI-716):	Type:	Validation (Insert/Update)
	Rule Name:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.
	Description:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.
	Test Condition:	On Insert or Update DigitalAccessPri
	Error Message:	G.Clear is not supported on the PRI interface on this type of gateway. Make sure EnableGClear is set to false and try again.

Check Constraint:	Timer1 >= 0
Migration Source:	Timer1
Remarks:	In Milliseconds

2.3.118.13 timer2 (FI-84)

Type:	long
Check Constraint:	Timer2 >= 0
Migration Source:	Timer2
Remarks:	In Milliseconds

2.3.118.14 timer3 (FI-85)

Type:	long
-------	------

Check Constraint:	Timer3>= 0
Migration Source:	Timer3
Remarks:	In Milliseconds

2.3.118.15 timer4 (FI-86)

Type:	long
Check Constraint:	Timer4>= 0
Migration Source:	Timer4
Remarks:	In Milliseconds

2.3.118.16 timer5 (FI-87)

Type:	long
Check Constraint:	Timer5>= 0
Migration Source:	Timer5
Remarks:	In Milliseconds

2.3.118.17 timer6 (FI-88)

Type:	long
Check Constraint:	Timer6>= 0
Migration Source:	Timer6
Remarks:	In Milliseconds

2.3.118.18 [tkcallerid \(FI-720\)](#)

Type:	enum
Default Value:	0

2.3.118.19 [tkcallingpartyselection \(FI-92\)](#)

Type:	enum
Migration Source:	CallingPartySelection
Remarks:	Source of the calling party number: originator = 1, first redirect = 2, last redirect = 3

2.3.118.20 [tkdigitsending \(FI-564\)](#)

Type:	enum
Default Value:	0
Remarks:	DTMF or MF

2.3.118.21 [tkpresentationbit \(FI-93\)](#)

Type:	enum
Migration Source:	PresentationBit
Remarks:	CLID presentationBit:allowed = 1, restricted = 2

2.3.118.22 [tksilencesuppressionthreshold \(FI-91\)](#)

Type:	enum
Migration Source:	SilenceSuppressionThreshold
Remarks:	in dbm0

2.3.118.23 [tkstartdialprotocol \(FI-625\)](#)

Type:	enum
Default Value:	0

2.3.118.24 [tktrunk \(FI-73\)](#)

Type:	enum
Migration Source:	PortType

2.3.118.25 [tktrunkdirection \(FI-74\)](#)

Type:	enum
Migration Source:	Direction
Remarks:	Inbound Outbound and Both are valid Directions. Outbound equates to DOD. Both only allowed on Ground Start (GS)

2.3.118.26 [tktrunklevel \(FI-80\)](#)

Type:	enum
Migration Source:	ApplicationType
Remarks:	used to set PAD level

Type:	enum
Migration Source:	RxPad
Remarks:	+/- 32db

2.3.118.28 [tktrunkpad_tx \(FI-82\)](#)

Type:	enum
Migration Source:	TxPad
Remarks:	+/- 32db

2.3.118.29 [unattendedport \(FI-2848\)](#)

	Type:	bool (Null OK)
	Default Value:	FALSE
	2.3.118.30 versionstamp (FI-2170)	
	Type:	string [47] (Not Modifiable, Null OK)
	Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
	Remarks:	New Guid is generated when the port XML change
	Rule (RI-261):	Type: Active (Insert/Update)
		Rule Name: digitalaccesst1port versionstamp
		Description: on change to anything in digitalaccesst1port, update versionstamp
		Test Condition: update digitalaccesst1port
	Rule (RI-261):	Type: Active (Insert/Update) This field is modified by this rule.
		Rule Name: digitalaccesst1port versionstamp
		Description: on change to anything in digitalaccesst1port, update versionstamp
		Test Condition: update digitalaccesst1port
	2.3.118.31 xml (FI-936)	
	Type:	string [24000] (Null OK)
	Default Value:	NULL
	Remarks:	Product configuration XML not used by CCM
	Rule (RI-197):	Type: Validation (Insert/Update) This field is modified by this rule.
		Rule Name: DigitalAccessT1Port.xml validation
		Description: Product specific information for each digitalAcces Gateway Port needs to be validated before storing in xml column. Validation is now performed using client side script at Admin pages. This involves reading the display instance xml (from scratch table) for the specific product, then for each parameter , read the corresponding rule xml record (scratch table) and validate the parameter value as defined in the rule.
		Test Condition: On Insert/Update of DigitalAccessT1 port (T1CAS gateway ports)
Uniqueness:	fkdevice + portnum is unique. (MFI-5)	

2.3.119 digitdiscardinstruction (TI-105)

Description: Digit Discard Instruction clauses
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.119.1 clause (FI-694)	
	Type:	memo (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.119.2 digitanalysisid (FI-619)	
	Type:	long (Unique, Not Modifiable)
	2.3.119.3 fkdialplan (FI-547)	
	Type:	guid (Cascade Delete, Not Modifiable)
	Migration Source:	automatic
	2.3.119.4 name (FI-541)	
	Type:	string [50] (Not Modifiable)
	Migration Source:	automatic
	Remarks:	Removed Unique key constraint on name field
	2.3.119.5 pkid (FI-540)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.119.6 resettoggle (FI-3076)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Should this device or group be reset
	2.3.119.7 tkreset (FI-3077)	
	Type:	enum
	Default Value:	2
	Remarks:	Set by DeviceReset stored procedure.

Uniqueness: name + fkdialplan is unique. (MFI-36)

2.3.120 digitdiscardinstructionmember (TI-100)

Description: List of tags per Digit Discard Instruction
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.120.1 fkdialplantag (FI-469)	
	Type:	guid (Not Modifiable)
	Migration Source:	automatic
	2.3.120.2 fkdigitdiscardinstruction (FI-468)	
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)
	Migration Source:	automatic
	2.3.120.3 pkid (FI-556)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	fkdialplantag + fkdigitdiscardinstruction is unique. (MFI-20)	

2.3.121 directorypluginattribute (TI-259)

Description: attributes to be synced from LDAP server

Fields:	2.3.121.1 diobjectclassattrname (FI-1832)	
	Type:	string [128]
	Default Value:	EMPTY
	2.3.121.2 fkdirectorypluginconfig (FI-1831)	
	Type:	guid (Cascade Delete, Not Modifiable)
	2.3.121.3 pkid (FI-1830)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.121.4 tkldapserverattr (FI-1833)	

	Type: enum
Uniqueness:	fkdirectorypluginconfig + tkldapserverattr is unique. (MFI-43)

2.3.122 directorypluginconfig (TI-249)

Description: Configuration data for the corporate Directory connector

Fields:	2.3.122.1 agreementstatus (FI-1711)
	Type: long
	2.3.122.2 applymask (FI-25768)
	Type: bool
	Default Value: FALSE
	Remarks: When true, the Mask field will be applied on the telephone number
	2.3.122.3 applypoollist (FI-25769)
	Type: bool
	Default Value: FALSE
	Remarks: When true, the extension number will selected from the pool
	2.3.122.4 connectedldaphost (FI-1899)
	Type: string [128]
	Default Value: EMPTY
	2.3.122.5 fkfeaturegrouptemplate (FI-21213)
	Type: guid (Indexed, Null OK)
	Remarks: Reference to Featuregrouptempate for common enduser fields
	2.3.122.6 fkldapfilter (FI-1964)
	Type: guid (Null OK)
	Remarks: Empty means use the default filter for the directory host type associated with the agreement. Otherwise use the specified filter for which the host type should match the associated host type for the agreement.
	2.3.122.7 fullsyncstatus (FI-1894)
	Type: long (Null OK)
	Default Value: -1
	2.3.122.8 highestcommittedusn (FI-1828)

Type:	string [128]
-------	--------------

Default Value:	EMPTY
----------------	-------

2.3.122.9 incsyncstatus (FI-1777)

Type:	long (Null OK)
-------	----------------

Default Value:	-1
----------------	----

2.3.122.10 invocationid (FI-1893)

Type:	string [128]
-------	--------------

Default Value:	EMPTY
----------------	-------

2.3.122.11 ldapdn (FI-1714)

Type:	string [256]
-------	--------------

Default Value:	Manager Distinguished Name
----------------	----------------------------

2.3.122.12 ldappassword (FI-1715)

Type:	string [129]
-------	--------------

Default Value:	9e1cb76005b4b718276f4f3662d11f4474dbf844c91298f70fa00d71a9151211
----------------	--

Rule (RI-763):	Type:	Validation (Insert/Update)
	Rule Name:	LDAPPassword length restriction for DirectoryPluginConfig Table
	Description:	on insert/update to check the lenght of the ldappassword field and throw an error accordingly
	Test Condition:	On Insert to DirectoryPluginConfig
	Error Message:	The encrypted form of the password is too large to be stored. Use a shorter or less complex password.

2.3.122.13 ldapsynchronizationbase (FI-1716)

Type:	string [256]
-------	--------------

Default Value:	Search Base
----------------	-------------

2.3.122.14 mask (FI-25767)

Type:	string [24] (Null OK)
-------	-----------------------

Default Value:	EMPTY
----------------	-------

Validation:	^[0-9Xx]{1,24}\$
-------------	------------------

Remarks:	Mask to be applied on the telephone number
----------	--

2.3.122.15 name (FI-1962)

Type:	string [40] (Indexed)
-------	-----------------------

2.3.122.16 pkid (FI-1710)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.122.17 syncnow (FI-1892)

Type:	long (Null OK)
Default Value:	0

2.3.122.18 tkldapdirectoryfunction (FI-21173)

Type:	enum
Default Value:	0
Remarks:	Reference to TypeLDAPDirectoryFunction

Rule (RI-961):	Type:	Validation (Insert/Update)
	Rule Name:	Restricting the number of AliasSync, Lookup Record to one for DirectoryPluginConfig Table
	Description:	User can store the 3 types of record DirSync, AliasSync, Lookup in DirectoryPluginConfig Table. This rule doesn't allow the user to store the more than one record of AliasSync and Lookup. Check the number of record of AliasSync, Lookup and throw an error accordingly
	Test Condition:	On Insert/Update to DirectoryPluginConfig
	Error Message:	Already Alias Sync and Lookup record is present
	Remedy:	Delete the existence record of AliasSync or look up and insert the new record of AliasSync or lookup

Uniqueness: name + tkldapdirectoryfunction is unique. (MFI-790)

2.3.123 directorypluginconfigdirgroupmap (TI-2143)

Description: Stores a preprovisioned list of DirGroups to be associated with endusers inserted from ldap

Fields:

2.3.123.1 fkdirectorypluginconfig (FI-21211)

Type:	guid (Indexed, Cascade Delete)
Remarks:	Reference to sync agreement

2.3.123.2 fkdirgroup (FI-21212)

Type:	guid (Indexed, Cascade Delete)
Remarks:	Reference to groups that are applied to end users added by this sync agreement

2.3.123.3 pkid (FI-21210)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Uniqueness: fkdirectorypluginconfig + fkdirgroup is unique. (MFI-781)

2.3.124 directorypluginhost (TI-260)

Description: Host names of LDAP servers

Fields:

2.3.124.1 fkdirectorypluginconfig (FI-1835)

Type: guid (Cascade Delete, Not Modifiable)

2.3.124.2 hostname (FI-1836)

Type: string [128]

Default Value: Host Name

2.3.124.3 ldapportnumber (FI-1938)

Type: long

2.3.124.4 pkid (FI-1834)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

2.3.124.5 priority (FI-1837)

Type: long

2.3.124.6 sslenabled (FI-1901)

Type: bool

Default Value: FALSE

Uniqueness: fkdirectorypluginconfig + hostname is unique. (MFI-44)

2.3.125 directorypluginpoollist (TI-2613)

Description: Pool List for a particular Directory Plugin Config

Fields:

2.3.125.1 dnprefix (FI-25817)

Type:	string [13] (Null OK)
Default Value:	EMPTY
Validation:	^[0-9]{0,13}\$
Remarks:	DN prefix for the poolrange.

2.3.125.2 enddn (FI-25772)

Type:	string [7]
Default Value:	EMPTY
Validation:	^[0-9]{0,7}\$
Remarks:	Ending DN in the pool.

2.3.125.3 fkdirectorypluginconfig (FI-25775)

Type:	guid (Indexed, Cascade Delete, Null OK)
Remarks:	Reference to DirectoryPluginConfig for this pool list.

2.3.125.4 nextdn (FI-25773)

Type:	string [7]
Default Value:	EMPTY
Validation:	^[~]?[0-9]{0,7}\$
Remarks:	Next DN in the pool.

2.3.125.5 pkid (FI-25770)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	unique ID to identify a record.

2.3.125.6 priority (FI-25774)

Type:	long
Remarks:	Priority of the pool list.

2.3.125.7 startdn (FI-25771)

Type:	string [7]
Default Value:	EMPTY

	Validation:	^[0-9]{0,7}\$
	Remarks:	Starting DN in the pool.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.126 directorypluginroutingdatabase (TI-2132)

Description: This table holds the Data specific to DN Alias Sync and Lookup LDAP servers

Fields:	2.3.126.1 cacheage (FI-21177)	
	Type:	long
	Default Value:	0
	Remarks:	It represents the age of the records present in the Cache
	2.3.126.2 cacheenable (FI-21175)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	Boolean field to user records caching state for the DN Alias Sync. If true, the user records are cached before syncing to DN Alias Sync otherwise no caching happens.
	2.3.126.3 cachesize (FI-21176)	
	Type:	long
	Default Value:	3000
	Remarks:	User can spefiy the number of records to be cache before the sync to the DN Alias Sync
	2.3.126.4 fkdirectorypluginconfig (FI-21165)	
	Type:	guid (Cascade Delete, Not Modifiable)
	Remarks:	Reference to DirectoryPluginConfig
	2.3.126.5 ldapkeepalivesearchdn (FI-21164)	
	Type:	string [256] (Null OK)
	Remarks:	It serches the specified user Distinguished Name in DN Alias Sync and Lookup LDAP servers
	2.3.126.6 pkid (FI-21163)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated

	Remarks:	Unique ID to identify a record.
	2.3.126.7 sipaliassuffix (FI-25816)	
	Type:	string [32] (Null OK)
	Validation:	^[a-zA-Z 0-9.@-]{0,32}\$
	Remarks:	This field when configured specifies the prefix that is added to the full Commercial number before it is stored in the SIP Alias field in the LDAP Routing database.
	2.3.126.8 tkkeepaliveinterval (FI-21166)	
	Type:	enum
	Default Value:	1
	Remarks:	Reference to TypeKeepAliveTimeInterval
Uniqueness:	No multicolumn uniqueness constraints	

2.3.127 directorypluginschedule (TI-261)

Description:	Schedule for directory plugin task	
Fields:	2.3.127.1 active (FI-1840)	
	Type:	bool
	Default Value:	FALSE
	2.3.127.2 fkdirectorypluginconfig (FI-1839)	
	Type:	guid (Unique, Cascade Delete, Not Modifiable)
	2.3.127.3 intervalvalue (FI-1843)	
	Type:	long (Null OK)
	2.3.127.4 nextexectime (FI-1841)	
	Type:	string [32]
	Default Value:	EMPTY
	2.3.127.5 pkid (FI-1838)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.127.6 repeatable (FI-1842)	

	Type:	bool
	Default Value:	TRUE
	2.3.127.7 tkscheduleunit (FI-1844)	
	Type:	enum
	Default Value:	2
Uniqueness:	No multicolumn uniqueness constraints	

2.3.128 dirgroup (TI-231)

Description:	Categorizes users and Application users		
Fields:	2.3.128.1 isstandard (FI-2002)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	
	Remarks:	Created during installation.	
	2.3.128.2 name (FI-1662)		
	Type:	string [128] (Unique, Indexed)	
	Validation:	^[a-zA-Z 0-9._-]{1,128}\$	
	2.3.128.3 pkid (FI-1661)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-201):	Type:	Validation (Update/Delete) Rule applied when record is inserted or updated.
		Rule Name:	Standard CCM Super Users Group Restriction
		Description:	The CCM Super Users Group must contain at least one application user at all times to prevent locking primary administrator out of the system.
		Test Condition:	ON DELETE FROM ApplicationUserDirGroupMap IF (DirGroup = 'CCM Super User') AND (SELECT COUNT(*) FROM ApplicationUserDirGroupMap = 0) THEN throw exception; ON UPDATE ApplicationUserDirGroupMap IF (DirGroup = 'CCM Super User') AND (old_fkDirGroup <> new_fkDirGroup) THEN throw exception

Error Message:	CCM Super User Group must contain at least one application user at all times.
Remedy:	Add another Application User to be the CCM Super User before removing the current user.

2.3.129 dmmsdevice (TI-416)

Description: Cellular Subscriber data not in Device Table

Fields:

2.3.129.1 cnumber (FI-3144)

Type:	dn (Null OK)
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	NULL
Validation:	^[0-9*#+]{0,50}\$
Remarks:	Subscriber cellular number

2.3.129.2 disableappdialrules (FI-3142)

Type:	bool
Default Value:	FALSE

2.3.129.3 enablefollowme (FI-3145)

Type:	bool
Default Value:	TRUE

2.3.129.4 fkdevice (FI-3141)

Type:	guid (Unique, Indexed, Cascade Delete)
-------	--

2.3.129.5 fkdevice_wsm (FI-3143)

Type:	guid (Indexed, Cascade Delete)
-------	--------------------------------

2.3.129.6 pkid (FI-3140)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Uniqueness: No multicolumn uniqueness constraints

2.3.130 dnaliassynckeymap (TI-2155)

Description:	This table holds the mapping between the Key used by the CUCM database to identify a Number and the Key used by the DNAlias Sync LDAP server Is not replicated.		
Fields:	2.3.130.1 ccaid (FI-21261)		
	Type:	string [32]	
	Validation:	^[a-zA-Z 0-9.-]{1,32}\$	
	Remarks:	The LDAP server that stores the Directory Number Alias records uses this field to appropriately authorize subsequent updates of the records in the LDAP Database. The Directory Number Alias server will only allow update operations on a record originating from the CUCM cluster that originally added the record by identifying the CUCM Cluster Identifier set in this field.	
	2.3.130.2 dnaliassynckey (FI-21260)		
	Type:	string [30] (Indexed, Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	this field holds the User Id that was pushed to the DNAlias Sync Server which will be used as a key by the DNAlias Sync Server	
	2.3.130.3 pkid (FI-21267)		
	Type:	guid	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.131 dnddynamic (TI-440)

Description:	Frequently updated settings for Do Not Disturb (DND) Insert/Delete is not allowed.		
Fields:	2.3.131.1 datetimestamp (FI-3292)		
	Type:	long	
	Default Value:	0	
	Remarks:	for replication and conflict resolution	
	Rule (RI-400):	Type:	Active (Insert/Update)
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return

			currentTime (INTO DateTimeStamp);
	Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	2.3.131.2 dndstatus (FI-3291)		
	Type:	bool	
	Default Value:	FALSE	
	2.3.131.3 fkdevice (FI-3290)		
	Type:	guid (Unique, Cascade Delete)	
2.3.131.4 pkid (FI-3289)			
Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.132 dntracelogging (TI-972)

Description:	Allows configuration of Called Party DN to trace a call back to the original party, this is in accordance with DOD UCR 2008 specifications related to Dynamic / Destination Call Tracing	
Fields:	2.3.132.1 description (FI-9848)	
	Type:	string [200]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%&<>]{0,50}\$
	Remarks:	Describes the Traced called party DN, documenting the owner / destination and / or a reason / reference for the trace.
	2.3.132.2 directorynumber (FI-9846)	
	Type:	dn (Unique, Indexed, Not Modifiable)
	DN Type:	DN_TYPE_ALL_DIGITS
	Validation:	^[a-zA-D0-9*#]{3,50}\$

	Remarks:	Indicates the Called Party DN on which tracing is enabled	
	Rule (RI-822):	Type:	Validation (Insert)
		Rule Name:	Limit CallTrace DN count to 50
		Description:	Rule to limit Called Party Trace DN count to maximum of 50. Rules fires on insert and checks that there are no more than 50 records in DNTraceLogging table
		Test Condition:	SELECT COUNT(*) INTO nRows FROM DNTraceLogging; IF (Mode = 'I') and (nRows>50) THEN throw exception; END IF;
		Error Message:	Exceeded Called Party Trace DN limit of 50
		Remedy:	Please reduce the number of DN and try again.
	Rule (RI-822):	Type:	Validation (Insert) This field is modified by this rule.
		Rule Name:	Limit CallTrace DN count to 50
		Description:	Rule to limit Called Party Trace DN count to maximum of 50. Rules fires on insert and checks that there are no more than 50 records in DNTraceLogging table
		Test Condition:	SELECT COUNT(*) INTO nRows FROM DNTraceLogging; IF (Mode = 'I') and (nRows>50) THEN throw exception; END IF;
		Error Message:	Exceeded Called Party Trace DN limit of 50
		Remedy:	Please reduce the number of DN and try again.
	2.3.132.3 pkid (FI-9845)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.133 dpcallrecordserver (TI-688)

Description:	Diagnostic Portal Call Record Server		
Fields:	2.3.133.1 alternatename (FI-5556)		
	Type:	string [255]	
	Default Value:	EMPTY	
	Validation:	^[a-zA-Z0-9._-]{0,255}\$	

2.3.133.2 alternatport (FI-5557)

Type: long (Null OK)

2.3.133.3 clusterid (FI-5547)

Type: string [255] (Null OK)

Remarks: This is only for UCM ,UCMBE

2.3.133.4 description (FI-5546)

Type: string [512]

Default Value: EMPTY

Validation: ^[^\s""%&\\<>]{0,128}\$

2.3.133.5 domainname (FI-5811)

Type: string [255]

Default Value: EMPTY

Validation: ^[0-9A-Za-z_.-]{0,255}\$

2.3.133.6 ikdpcallrecordserver_primary (FI-5548)

Type: guid (Null OK)

Remarks: This is the PKID for Primary (peer) call record server

2.3.133.7 instancename (FI-5812)

Type: string [255]

Default Value: EMPTY

Validation: ^[0-9A-Za-z_.-]{0,255}\$

2.3.133.8 name (FI-5545)

Type: string [255]

Validation: ^[a-zA-Z0-9_.-]{1,255}\$

Remarks: Diagnostic Portal CallRecord Server Name or ip address

2.3.133.9 password (FI-5553)

Type: string [255]

Default Value: EMPTY

2.3.133.10 pkid (FI-5544)

Type: guid (Unique, Not Modifiable)

Default Value: newid()

2.3.133.11 port (FI-5554)

Type: long (Null OK)

2.3.133.12 [tkdpdeviceprotocol \(FI-5550\)](#)

Type: enum

Remarks: TypeDeviceProtocol

2.3.133.13 [tkdpproduct \(FI-5549\)](#)

Type: enum

Remarks: TypeProduct

2.3.133.14 [tkdpverificationstatus \(FI-5551\)](#)

Type: enum

Default Value: 0

Remarks: TypeVerificationStatus - One of the following: 0 (notdone), 1 (Failed) or 2(Success)

2.3.133.15 username (FI-5552)

Type: string [255]

Default Value: EMPTY

2.3.133.16 verificationfailurereason (FI-5558)

Type: string [255]

Default Value: EMPTY

2.3.133.17 verificationtimestamp (FI-5814)

Type: long

Default Value: 0

Remarks: UTC time of Verification

2.3.133.18 version (FI-5813)

Type: string [50]

Default Value: EMPTY

Uniqueness: name + port is unique. (MFI-172)

2.3.134 dpcertificate (TI-1031)

Description: Diagnostic Portal Certificate

Fields:	2.3.134.1 certificate (FI-5818)	
	Type:	string [4096]
	Remarks:	Diagnostic Portal Certificate
	2.3.134.2 issuername (FI-5817)	
	Type:	string [255] (Not Modifiable)
	Validation:	^[^'"%&\\<>]{0,255}\$
	2.3.134.3 pkid (FI-5815)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.134.4 serialnumber (FI-5821)	
	Type:	string [42] (Not Modifiable)
	Remarks:	hex representation of serial number
	2.3.134.5 subjectname (FI-5816)	
	Type:	string [255]
	Validation:	^[^'"%&\\<>]{0,255}\$
	2.3.134.6 validfromdate (FI-5819)	
	Type:	long
	Default Value:	0
	Remarks:	UTC time
	2.3.134.7 validtodate (FI-5820)	
	Type:	long
	Default Value:	0
	Remarks:	UTC time
Uniqueness:	issuename + serialnumber is unique. (MFI-171)	

2.3.135 dpdevice (TI-679)

Description:	Diagnostic Portal Device	
Fields:	2.3.135.1 alternateaccessname (FI-5484)	
	Type:	string [255]

Default Value:	EMPTY
Validation:	^[a-zA-Z0-9._-]{0,255}\$

2.3.135.2 clusterid (FI-5594)

Type:	string [255] (Null OK)
Remarks:	ClusterID

2.3.135.3 description (FI-5482)

Type:	string [512]
Default Value:	EMPTY
Validation:	^[^'"%&\\<>]{0,128}\$

2.3.135.4 isseeddevice (FI-5485)

Type:	bool
Default Value:	FALSE
Remarks:	Is seed device

2.3.135.5 name (FI-5481)

Type:	string [255]
Validation:	^[a-z0-9._-]{1,255}\$
Remarks:	Diagnostic Portal Device - This is groupHost name or IP v4 address

Rule (RI-743):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	On Insert/Update DPDevice
	Description:	on insert/update of DPDevice convert data for the name field to lower case
	Test Condition:	ON INSERT/UPDATE DPDevice convert the value for name field to lowercase

Rule (RI-743):	Type:	Active (Insert/Update)
	Rule Name:	On Insert/Update DPDevice
	Description:	on insert/update of DPDevice convert data for the name field to lower case
	Test Condition:	ON INSERT/UPDATE DPDevice convert the value for name field to lowercase

2.3.135.6 nodeid (FI-5593)

Type:	string [255] (Null OK)
Remarks:	NodeID

2.3.135.7 pkid (FI-5480)

	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.135.8 tkdpproduct (FI-5483)	
	Type:	enum
	Remarks:	The enum value of the corresponding device type defined in the TypeDPPProduct table
	2.3.135.9 version (FI-5806)	
	Type:	string [50] (Null OK)
Uniqueness:	name + tkdpproduct is unique. (MFI-137)	

2.3.136 dpdeviceaccess (TI-682)

Description:	Diagnostic Portal Device Access Method definition	
Fields:	2.3.136.1 alternatport (FI-5498)	
	Type:	long (Null OK)
	2.3.136.2 fkdpdevice (FI-5494)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Device can be there in many groups
	2.3.136.3 password (FI-5496)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.136.4 pkid (FI-5492)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.136.5 port (FI-5497)	
	Type:	long (Null OK)
	Default Value:	NULL
	2.3.136.6 tkdpdeviceprotocol (FI-5493)	
	Type:	enum
	Remarks:	TypeDeviceProtocol
	2.3.136.7 tkdpverificationstatus (FI-5499)	

	Type:	enum
	Default Value:	0
	Remarks:	TypeVerificationStatus - One of the following: 0 (notdone), 1 (Failed) or 2(Success)
	2.3.136.8 username (FI-5495)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.136.9 verificationfailurereason (FI-5500)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.136.10 verificationtimestamp (FI-5807)	
	Type:	long
	Default Value:	0
	Remarks:	UTC time of Verification
Uniqueness:	No multicolumn uniqueness constraints	

2.3.137 dpdevicecallrecordservermap (TI-689)

Description:	Diagnostic Portal Device to Call Record Server mapping	
Fields:	2.3.137.1 fkdpcallrecordserver (FI-5561)	
	Type:	guid (Cascade Delete)
	2.3.137.2 fkddevice (FI-5560)	
	Type:	guid (Cascade Delete)
	2.3.137.3 pkid (FI-5559)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	fkddevice + fkdpcallrecordserver is unique. (MFI-142)	

2.3.138 dpdevicegroupmap (TI-681)

Description:	Diagnostic Portal Devices mapping into Groups	
Fields:		

	2.3.138.1 fkdpdevice (FI-5491)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Device can be there in many groups
	2.3.138.2 fkdpgroup (FI-5490)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Group can have many devices
	2.3.138.3 pkid (FI-5489)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	fkdpgroup + fkdpdevice is unique. (MFI-139)	

2.3.139 dpdevicejobcomponent (TI-683)

Description:	Diagnostic Portal Jobs for device and component	
Fields:	2.3.139.1 componentpath (FI-5506)	
	Type:	string [1024]
	Remarks:	"/" separated list of component nodes from root to leaf node. Derived from ListTraceComponent and ListLogComponent command results.
	2.3.139.2 customcookiestring (FI-5507)	
	Type:	string [2560] (Null OK)
	Remarks:	Custom Cookie String
	2.3.139.3 fkdpdevice (FI-5502)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Device can be there in many groups
	2.3.139.4 fkdpjob (FI-5503)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Device can be there in many groups
	2.3.139.5 islogcollectable (FI-5508)	
	Type:	bool
	Default Value:	TRUE

2.3.139.6 istracecollectionselected (FI-5604)

Type:	bool
Default Value:	FALSE
Remarks:	True - collect traces associated with the job; False - do not collect traces.

2.3.139.7 istracecomponent (FI-5603)

Type:	bool
Default Value:	TRUE
Remarks:	True(default) - Trace Component and False - Log Component

2.3.139.8 pkid (FI-5501)

Type:	guid (Unique, Not Modifiable)
Default Value:	newid()

2.3.139.9 tkdptracelevel (FI-5504)

Type:	enum (Null OK)
-------	----------------

2.3.139.10 tkdptracelevel_previous (FI-5505)

Type:	enum (Null OK)
-------	----------------

2.3.139.11 tkdpwebprotocol (FI-5602)

Type:	enum
Default Value:	0
Remarks:	TypeDPWebProtocol - One of the following: 0 (REST) default, 1 (SOAP) or 2 (Not Applicable)

Uniqueness: No multicolumn uniqueness constraints

2.3.140 dpdeviceproductcomponent (TI-680)

Description: Diagnostic Portal Device Product Component

Fields:

2.3.140.1 fkddevice (FI-5488)

Type:	guid (Cascade Delete)
Remarks:	Product Component Relation to Device

2.3.140.2 name (FI-5487)

Type:	string [255]
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{1,255}\$

	Remarks:	Name of the Product component
	2.3.140.3 pkid (FI-5486)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	name + fkddevice is unique. (MFI-138)	

2.3.141 dpdevicetraceservermap (TI-690)

Description:	Diagnostic Portal Device to Trace Server mapping	
Fields:	2.3.141.1 fkddevice (FI-5563)	
	Type:	guid (Cascade Delete)
	2.3.141.2 fkdptraceserver (FI-5564)	
	Type:	guid (Cascade Delete)
	2.3.141.3 pkid (FI-5562)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	fkddevice + fkdptraceserver is unique. (MFI-143)	

2.3.142 dpemail (TI-685)

Description:	Diagnostic Portal Email addresses	
Fields:	2.3.142.1 name (FI-5527)	
	Type:	string [255] (Unique)
	Validation:	^[0-9A-Za-z@_-.]{1,255}\$
	Remarks:	Email address for notifications
	2.3.142.2 pkid (FI-5526)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	No multicolumn uniqueness constraints	

2.3.143 dpemaillist (TI-1032)

Description: Diagnostic Portal List of Email addresses

Fields:	2.3.143.1 description (FI-5805)	
	Type:	string [512] (Null OK)
	Validation:	^[^'"%&\\<>:]{0,128}\$
	2.3.143.2 name (FI-5804)	
	Type:	string [255] (Unique)
	Validation:	^[0-9A-Za-z@_-.]{1,255}\$
	Remarks:	List of Email addresses for notifications
	2.3.143.3 pkid (FI-5803)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	No multicolumn uniqueness constraints	

2.3.144 dpemaillistmap (TI-1033)

Description: Maps Diagnostic Portal Email address to the List of Email addresses

Fields:	2.3.144.1 fkdpemail (FI-5823)	
	Type:	guid (Cascade Delete)
	Remarks:	Reference to an Email Address
	2.3.144.2 fkdpemaillist (FI-5824)	
	Type:	guid (Cascade Delete)
	Remarks:	Reference to a list of Diagnostic Portal Email Addresses
	2.3.144.3 pkid (FI-5822)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	fkdpemail + fkdpemaillist is unique. (MFI-170)	

2.3.145 dpftpserver (TI-695)

Description: Defines the FTP Server for the Diagnostic Portal

Fields:	2.3.145.1 description (FI-5585)	
	Type:	string [512]
	Default Value:	EMPTY
	Validation:	^[^'"%&\\<>]{0,128}\$
	2.3.145.2 destinationdirectory (FI-5591)	
	Type:	string [1024]
	Default Value:	EMPTY
	Remarks:	Path
	2.3.145.3 name (FI-5584)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9._-]{1,255}\$
	Remarks:	Diagnostic Portal TFTP Server Name
	2.3.145.4 password (FI-5589)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.145.5 pkid (FI-5583)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.145.6 port (FI-5590)	
	Type:	long
	2.3.145.7 tkdpdeviceprotocol (FI-5586)	
	Type:	enum
	2.3.145.8 tkdpverificationstatus (FI-5587)	
	Type:	enum
	Default Value:	0
	Remarks:	TypeVerificationStatus - One of the following: 0 (notdone), 1 (Failed) or 2(Success)
	2.3.145.9 username (FI-5588)	
	Type:	string [255]
	Default Value:	EMPTY

	2.3.145.10 verificationfailurereason (FI-5592)	
	Type:	string [255]
	Default Value:	EMPTY
Uniqueness:	name + port is unique. (MFI-146)	

2.3.146 dpgroup (TI-678)

Description:	Diagnostic Portal Group	
Fields:	2.3.146.1 description (FI-5479)	
	Type:	string [512]
	Default Value:	EMPTY
	Validation:	^[^'"%&\\<>]{0,128}\$
	2.3.146.2 name (FI-5478)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z0-9._-]{1,50}\$
	Remarks:	Name of Diagnostic Portal Group
	2.3.146.3 pkid (FI-5477)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	No multicolumn uniqueness constraints	

2.3.147 dpjob (TI-684)

Description:	Diagnostic PortalJob definition	
Fields:	2.3.147.1 creationtime (FI-5521)	
	Type:	long (Null OK)
	2.3.147.2 description (FI-5511)	
	Type:	string [512] (Null OK)
	Validation:	^[^'"%&\\<>]{0,128}\$
	2.3.147.3 downloadlocation (FI-5523)	

Type:	string [1024]
-------	---------------

Default Value:	EMPTY
----------------	-------

2.3.147.4 endtime (FI-5513)

Type:	long
-------	------

Default Value:	0
----------------	---

Remarks:	UTC format (32 bit integer)
----------	-----------------------------

2.3.147.5 failurereason (FI-5522)

Type:	string [255]
-------	--------------

Default Value:	EMPTY
----------------	-------

Remarks:	Reason For Failure
----------	--------------------

2.3.147.6 frequency (FI-5828)

Type:	long
-------	------

Default Value:	1
----------------	---

Check Constraint:	(Frequency > 0)
-------------------	-----------------

Remarks:	Frequency of the Diagnostic Portal Job
----------	--

2.3.147.7 groupname (FI-5809)

Type:	string [50]
-------	-------------

Default Value:	EMPTY
----------------	-------

Validation:	^[0-9A-Za-z_.-]{0,50}\$
-------------	-------------------------

2.3.147.8 isemailnotificationrequired (FI-5525)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

2.3.147.9 isscheduledtracesetting (FI-5524)

Type:	bool
-------	------

Default Value:	TRUE
----------------	------

2.3.147.10 macaddress (FI-5520)

Type:	string [12]
-------	-------------

Validation:	^[0-9a-fA-F]{12}\$
-------------	--------------------

Remarks:	MAC Address of subject
----------	------------------------

2.3.147.11 name (FI-5510)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z0-9._-]{1,50}\$
Remarks:	User Defined job name

2.3.147.12 noofbytestransferred (FI-5517)

Type:	long (Null OK)
-------	----------------

2.3.147.13 nooffilestransferred (FI-5518)

Type:	long (Null OK)
-------	----------------

2.3.147.14 pkid (FI-5509)

Type:	guid (Unique, Not Modifiable)
Default Value:	newid()

2.3.147.15 starttime (FI-5512)

Type:	long
Default Value:	0
Remarks:	UTC format (32 bit integer)

2.3.147.16 statusoflastrun (FI-5515)

Type:	long (Null OK)
-------	----------------

2.3.147.17 templatename (FI-5810)

Type:	string [50]
Default Value:	EMPTY
Validation:	^[0-9A-Za-z_.-]{0,50}\$

2.3.147.18 timeoflastrun (FI-5516)

Type:	long (Null OK)
-------	----------------

2.3.147.19 timezone (FI-5514)

Type:	string [100]
-------	--------------

2.3.147.20 [tkdpjobfeature \(FI-5808\)](#)

Type:	enum
Default Value:	0
Remarks:	TypeDPJobFeature - One of the following: 0 (Scheduled Collection) or 1 (Scheduled Trace Modification and Collection)

2.3.147.21 [tkdpjobstatus \(FI-5519\)](#)

	Type:	enum
	Remarks:	The enum value defined in the TypeDPJobStatus table
Uniqueness:	No multicolumn uniqueness constraints	

2.3.148 dpjobemaillistmap (TI-686)

Description:	Maps Diagnostistic Portal Jobs to list of email addresses for notifications	
Fields:	2.3.148.1 fkdpe maillist (FI-5531)	
	Type:	guid (Cascade Delete)
	Remarks:	Reference to a list of Diagnostic Portal Email Addresses
	2.3.148.2 fkd pjob (FI-5530)	
	Type:	guid (Cascade Delete)
	Remarks:	DP Device can be there in many groups
	2.3.148.3 pkid (FI-5529)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	fkdpjob + fkdpe maillist is unique. (MFI-140)	

2.3.149 dpmailserver (TI-694)

Description:	Defines the Mail Server for the Diagnostic Portal	
Fields:	2.3.149.1 description (FI-5579)	
	Type:	string [512]
	Default Value:	EMPTY
	Validation:	^[^'"%&\\<>]{0,128}\$
	2.3.149.2 name (FI-5578)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9._-]{1,255}\$
	Remarks:	Diagnostic Portal Mail Server Name
	2.3.149.3 pkid (FI-5577)	

	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.149.4 port (FI-5581)	
	Type:	long
	Remarks:	Port used for SMTP protocol
	2.3.149.5 senderemail (FI-5827)	
	Type:	string [255]
	Default Value:	EMPTY
	Validation:	^[0-9A-Za-z@_-.]{0,255}\$
	2.3.149.6 tkdpverificationstatus (FI-5580)	
	Type:	enum
	Default Value:	0
	Remarks:	TypeVerificationStatus - One of the following: 0 (notdone), 1 (Failed) or 2(Success)
	2.3.149.7 verificationfailurereason (FI-5582)	
	Type:	string [255]
	Default Value:	EMPTY
Uniqueness:	name + port is unique. (MFI-145)	

2.3.150 dpntpserver (TI-1034)

Description:	Diagnostic Portal NTP Server	
Fields:	2.3.150.1 name (FI-5826)	
	Type:	string [255] (Unique)
	Validation:	^[0-9A-Za-z_-.]{1,255}\$
	2.3.150.2 pkid (FI-5825)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
Uniqueness:	No multicolumn uniqueness constraints	

2.3.151 dptemplate (TI-692)

Description:	Defines the template for the Diagnostic Portal Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.151.1 description (FI-5572)		
	Type:	string [512] (Null OK)	
	Validation:	^[^'"%&\\<>]{0,128}\$	
	2.3.151.2 isstandard (FI-5596)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	
	Remarks:	Created during installation.	
	2.3.151.3 name (FI-5571)		
	Type:	string [50] (Unique)	
	Validation:	^[a-zA-Z0-9._-]{1,50}\$	
	Remarks:	Name of Diagnostic Portal Template	
	2.3.151.4 pkid (FI-5570)		
	Type:	guid (Unique, Not Modifiable)	
	Default Value:	newid()	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.152 dptemplatecomponentdata (TI-693)

Description:	Defines the template Component Data for the Diagnostic Portal Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.152.1 fkdptemplate (FI-5574)		
	Type:	guid (Cascade Delete)	
	2.3.152.2 fkdptemplatemetacomponentlist (FI-5575)		
	Type:	guid	
	2.3.152.3 isstandard (FI-5597)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	
	Remarks:	Created during installation.	

	2.3.152.4 pkid (FI-5573)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.152.5 tkdptracelevel (FI-5576)	
	Type:	enum (Null OK)
	Remarks:	This is trace level
Uniqueness:	fkdpptemplate + fkdpptemplatemetacomponentlist is unique. (MFI-144)	

2.3.153 dptemplatemetacomponentlist (TI-691)

Description:	Defines the TemplateMetaComponentList for Diagnostic Portal Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.153.1 componentpath (FI-5567)	
	Type:	string [1024]
	Remarks:	"/" separated list of component nodes from root to leaf node. Derived from ListTraceComponent and ListLogComponent command results.
	2.3.153.2 islogcollectable (FI-5569)	
	Type:	bool
	Default Value:	TRUE
	2.3.153.3 isstandard (FI-5595)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Created during installation.
	2.3.153.4 istracesetable (FI-5568)	
	Type:	bool
	Default Value:	TRUE
	2.3.153.5 pkid (FI-5565)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	2.3.153.6 tkdpproduct (FI-5566)	
	Type:	enum

	Remarks:	The enum value of the corresponding device type defined in the TypeDPProduct table
Uniqueness:	No multicolumn uniqueness constraints	

2.3.154 dptraceserver (TI-687)

Description:	Diagnostic Portal Trace Server	
Fields:	2.3.154.1 alternatename (FI-5541)	
	Type:	string [255]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9._-]{0,255}\$
	2.3.154.2 alternatport (FI-5542)	
	Type:	long (Null OK)
	2.3.154.3 description (FI-5534)	
	Type:	string [512]
	Default Value:	EMPTY
	Validation:	^[^'"%&\\<>]{0,128}\$
	2.3.154.4 homedirectory (FI-5539)	
	Type:	string [1024]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,1024}\$
	Remarks:	Home Directory.
	2.3.154.5 name (FI-5533)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9._-]{1,255}\$
	Remarks:	Diagnostic Portal Trace Server Name or ip address
	2.3.154.6 password (FI-5537)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.154.7 pkid (FI-5532)	
	Type:	guid (Unique, Not Modifiable)

	Default Value:	newid()
	2.3.154.8 port (FI-5538)	
	Type:	long
	2.3.154.9 tkdpdeviceprotocol (FI-5535)	
	Type:	enum
	Remarks:	TypeDeviceProtocol
	2.3.154.10 tkdpverificationstatus (FI-5540)	
	Type:	enum
	Default Value:	0
	Remarks:	TypeVerificationStatus - One of the following: 0 (notdone), 1 (Failed) or 2(Success)
	2.3.154.11 username (FI-5536)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.154.12 verificationfailurereason (FI-5543)	
	Type:	string [255]
	Default Value:	EMPTY
Uniqueness:	name + port is unique. (MFI-141)	

2.3.155 drfcomponent (TI-288)

Description: Disaster recovery framework status and dependency

Fields:	2.3.155.1 fkprocessnodeservice (FI-2009)	
	Type:	guid (Cascade Delete)
	Remarks:	Associated server
	2.3.155.2 id (FI-2013)	
	Type:	long
	Default Value:	0
	Remarks:	ID from registration
	2.3.155.3 ikdrfcomponent (FI-2012)	
	Type:	guid (Null OK)

	Default Value:	NULL
	Remarks:	service that must be started first
	2.3.155.4 pkid (FI-2010)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.155.5 tkdrfregistered (FI-2011)	
	Type:	enum
	Default Value:	0
	Remarks:	Registration status
Uniqueness:	No multicolumn uniqueness constraints	

2.3.156 drfscript (TI-289)

Description:	Disater recovery framework configured scripts	
Fields:	2.3.156.1 fkdrfcomponent (FI-2014)	
	Type:	guid (Cascade Delete)
	Remarks:	Registered drf component associated with script
	2.3.156.2 name (FI-2017)	
	Type:	string [255] (Unique)
	Validation:	^[a-zA-Z0-9._-]{1,255}\$
	Remarks:	script name
	2.3.156.3 orderid (FI-2018)	
	Type:	long
	Default Value:	0
	Remarks:	order of scripts to be run per component during backup or restore
	2.3.156.4 pkid (FI-2015)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()

	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.156.5 tkdrfscrip (FI-2019)	
	Type:	enum
	Default Value:	0
	Remarks:	type backup or restore
Uniqueness:	No multicolumn uniqueness constraints	

2.3.157 e911messages (TI-1081)

Description:	Table used for storing legal disclaimer messages sent to phone for off premise e911.			
Fields:	2.3.157.1 message (FI-10128)			
	Type:	string [2048]		
	Remarks:	Message text that will be sent to phone (allows Unicode).		
	2.3.157.2 pkid (FI-10125)			
	Type:	guid (Unique, Indexed, Not Modifiable)		
	Default Value:	newid()		
	Remarks:	Unique ID to identify a record.		
	2.3.157.3 tke911message (FI-10127)			
	Type:	enum		
	Remarks:	This is the message type for e911.		
	Rule (RI-922):	Type:	Validation (Insert/Update)	
		Rule Name:	There cannot be more than one E911 message with the same type(tke911message) and locale(tkuserlocale)	
		Description:	There cannot be more than one E911 message with the same type(tke911message) and locale(tkuserlocale)	
		Test Condition:	ON INSERT/UPDATE TO e911messages IF (SELECT count(*) into nrows FROM e911messages WHERE tkuserlocale = new_tkuserlocale AND tke911message = new_tke911message >1) THEN throw exception	
Error Message:		Do not insert or update records that will cause records with duplicate tkuserlocale and tke911message values.		
Remedy:		Cannot have more than one E911 message with the same type(tke911message) and		

		locale(tkuserlocale)
2.3.157.4 tkuserlocale (FI-10126)		
Type:	enum	
Remarks:	This is the locale associated with the e911 message.	
Rule (RI-922):	Type:	Validation (Insert/Update)
	Rule Name:	There cannot be more than one E911 message with the same type(tke911message) and locale(tkuserlocale)
	Description:	There cannot be more than one E911 message with the same type(tke911message) and locale(tkuserlocale)
	Test Condition:	ON INSERT/UPDATE TO e911messages IF (SELECT count(*) into nrows FROM e911messages WHERE tkuserlocale = newTkuserlocale AND tke911message = new_tke911message >1) THEN throw exception
	Error Message:	Do not insert or update records that will cause records with duplicate tkuserlocale and tke911message values.
	Remedy:	Cannot have more than one E911 message with the same type(tke911message) and locale(tkuserlocale)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.158 emccdynamic (TI-520)

Description: Dynamic data for the EMCC base phone when a user remotely logs in. Insert/Delete is not allowed.

Fields:	2.3.158.1 addonmoduleinfo (FI-5350)	
	Type:	string [40] (Null OK)
	Default Value:	NULL
	Remarks:	AddOn Module Info
	2.3.158.2 datetimestamp (FI-5747)	
	Type:	long
	Default Value:	0
	Remarks:	Time stamp
	Rule (RI-400):	Type: Active (Insert/Update)
		Rule Name: Update the DateTimeStamp for Dynamic records

	Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
	Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Update the DateTimeStamp for Dynamic records
	Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
	Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

2.3.158.3 devicename (FI-3954)

Type:	string [50]
Default Value:	EMPTY
Remarks:	Device name fro the remote login device

2.3.158.4 [fkdevice \(FI-3953\)](#)

Type:	guid (Unique, Cascade Delete, Not Modifiable)
Remarks:	EMCC base phone record

2.3.158.5 [fksecurityprofile \(FI-3999\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Foreign Key to Security Profile Set by EMDB by matching Product, Protocol, non-secure, isStatnard

2.3.158.6 geolocationinfo (FI-3966)

Type:	string [2048] (Null OK)
Default Value:	NULL
Remarks:	geolocationInfo from the remote cluster for the remote login device

2.3.158.7 locationname (FI-10402)

Type:	string [50] (Null OK)
Default Value:	NULL
Remarks:	Reference to remote location name for EMCC device

2.3.158.8 locationpkid (FI-10401)

Type:	guid (Indexed, Null OK)
-------	-------------------------

Default Value:	NULL
Remarks:	Reference to remote location pkid for EMCC device

2.3.158.9 locationremotecusterpkid (FI-10400)

Type:	guid (Indexed, Null OK)
Default Value:	NULL
Remarks:	Reference to EMCC remote cluster pub's pkid

2.3.158.10 md5hash (FI-10055)

Type:	string [64] (Null OK)
Default Value:	EMPTY

2.3.158.11 pkid (FI-3952)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.158.12 publickey (FI-10056)

Type:	string [2048] (Null OK)
Default Value:	EMPTY

2.3.158.13 remotesipsrstip (FI-3964)

Type:	string [15] (Null OK)
Default Value:	NULL
Remarks:	Sip address for SRST GW

2.3.158.14 remotesipsrstport (FI-3965)

Type:	long (Null OK)
Default Value:	NULL
Remarks:	Sip port for SRST GW

2.3.158.15 remotesrstip (FI-3962)

Type:	string [15] (Null OK)
Default Value:	NULL
Remarks:	IP address for the SRST GW in visiting cluster for the remote login device

2.3.158.16 remotesrstoption (FI-3961)

Type:	string [50] (Null OK)
-------	-----------------------

Default Value:	NULL
Remarks:	Srst.srstOption.name

2.3.158.17 **remotesrstport (FI-3963)**

Type:	long (Null OK)
Default Value:	NULL
Remarks:	The port number for the SRST in visiting cluster for the remote login device

2.3.158.18 **tftpencryptedflag (FI-10053)**

Type:	bool
Default Value:	FALSE
Remarks:	TFTP Encrypted Flag

2.3.158.19 **tkclass (FI-3958)**

Type:	enum
Default Value:	249
Remarks:	Remote login device class type

2.3.158.20 **tkdeviceprotocol (FI-3957)**

Type:	enum
Default Value:	99
Remarks:	Remote login device protocol type

2.3.158.21 **tkdevicesecuritymode (FI-10051)**

Type:	enum (Null OK)
-------	----------------

2.3.158.22 **tkipaddressingmode (FI-3959)**

Type:	enum
Default Value:	0
Remarks:	Porting form visiting cluster realDevice.commonDeviceConfig.ipAddressingMode

2.3.158.23 **tkkeyauthority (FI-10054)**

Type:	enum
Default Value:	0
Remarks:	TypeKeyAuthority

2.3.158.24 **tkmodel (FI-3955)**

Type:	enum
-------	------

	Default Value:	15
	Remarks:	Remote login device model
	2.3.158.25 tkproduct (FI-3956)	
	Type:	enum
	Default Value:	15
	Remarks:	Remote login device product type
	2.3.158.26 tkstatus_allowipv6autoconfigforphones (FI-3960)	
	Type:	enum
	Default Value:	2
	Remarks:	Porting form visiting cluster realDevice.commonDeviceConfig.tkstatus_allowipv6autoconfigforphones
	2.3.158.27 tkstatus_allowipv6duplicateaddressdetection (FI-25633)	
	Type:	enum
	Default Value:	2
	Remarks:	Allow Duplicate Address Detection for EMCCDynamic.This parameter determines whether the duplicate address detection should be performed on each of the addresses in any identity associations(IAs) it receives in the Reply message before using that address for traffic.
	2.3.158.28 tkstatus_ipv6acceptredirectmessages (FI-25634)	
	Type:	enum
	Default Value:	2
	Remarks:	Accept Redirect Messages for EMCCDynamic.This parameter provides an ability to accept or ignore the redirect messages.
	2.3.158.29 tkstatus_ipv6replymulticastechorequest (FI-25635)	
	Type:	enum
	Default Value:	2
	Remarks:	Reply Multicast Echo Request for EMCCDynamic.This parameter allows the phone to enable or disable the ability to send an Echo Reply message in response to an Echo Request message sent to an IPv6 multicast or anycast address.
	2.3.158.30 tktransport (FI-10052)	
	Type:	enum
	Default Value:	4
Uniqueness:	No multicolumn uniqueness constraints	

2.3.159 emergencylocidnumber (TI-700)

Description:	Stores the static portion of the Emergency Location Id Numbers for devicepools. The information to be stored includes fkdevicepool, LocIdNumber		
Fields:	2.3.159.1 fkdevice (FI-6231)		
	Type:	guid (Indexed, Null OK)	
	Default Value:	NULL	
	Remarks:	Device (SIP Trunk for FXO Port) associated with the Emergency Location ID Number (ELIN)	
	2.3.159.2 fkdevicepool (FI-6180)		
	Type:	guid (Null OK)	
	Remarks:	reference to device pool	
	2.3.159.3 locidnumber (FI-6181)		
	Type:	string [24] (Unique)	
	Validation:	^[0-9]{3,24}\$	
	Remarks:	To identify the location of the emergency calls	
	2.3.159.4 pkid (FI-6179)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.159.5 trunkprefix (FI-6186)		
	Type:	string [4]	
	Default Value:	EMPTY	
	Remarks:	Prefix used to route emergency calls to a specific analog trunk for an ELIN. If no prefix use any available trunk or gateway.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.160 emergencylocidnumberdynamic (TI-701)

Description:	Stores the dynamic portion of the Emergency Location Id Numbers. The information to be stored includes origCallingExtension, Datetimestamp, fkEmergencyLocIdNumber Is not replicated.		
Fields:			

	2.3.160.1 datetimestamp (FI-6185)	
	Type:	long
	Default Value:	0
	Remarks:	Time stamp
	2.3.160.2 fkemergencylocidnumber (FI-6183)	
	Type:	guid (Unique, Cascade Delete, Not Modifiable)
	Remarks:	Indicates the ELIN which is used for an emergency call
	2.3.160.3 origcallingdn (FI-6184)	
	Type:	string [24]
	Validation:	^[0-9]{3,24}\$
	Remarks:	original calling DN
	2.3.160.4 pkid (FI-6182)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.161 emremotedynamic (TI-521)

Description:	Common dynamic data for both visiting cluster and home cluster. Insert/Delete is not allowed.	
Fields:	2.3.161.1 datetimestamp (FI-5748)	
	Type:	long
	Default Value:	0
	Remarks:	Time stamp
	Rule (RI-400):	Type: Active (Insert/Update)
		Rule Name: Update the DateTimeStamp for Dynamic records
		Description: When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition: ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Update the DateTimeStamp for Dynamic records
	Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
	Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

2.3.161.2 emuri (FI-3970)

Type:	string [255] (Null OK)
Default Value:	NULL
Remarks:	The URI for the visiting EM service. This is always the visiting EM URI.

2.3.161.3 [fkdevice \(FI-3968\)](#)

Type:	guid (Unique, Cascade Delete, Not Modifiable)
Remarks:	Link back to the EMCC base phone in home cluster. Link back to the real phone in visiting cluster

2.3.161.4 lastremoteuserid (FI-3976)

Type:	string [128] (Null OK)
Default Value:	NULL
Remarks:	The userid string for the last remote login user. Should be set to Null for the home cluster

2.3.161.5 logintime (FI-5193)

Type:	long (Not Modifiable, Null OK)
Default Value:	NULL
Remarks:	When the user logged in. This is a time_t value stored as a long. Set by the Login stored procedure.

2.3.161.6 pkid (FI-3967)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Rule (RI-614):	Type:	Active (Update)
	Rule Name:	Update versionstamp for emremotedynamic table
	Description:	When the emremotedynamic record changes, the versionstamp needs to be re-generated
	Test Condition:	ON UPDATE IN EMRemoteDynamic: versionstamp = versionStampGenerator()

2.3.161.7 remotecclusterid (FI-3969)

Type:	string [50]
Default Value:	EMPTY
Remarks:	The cluster ID for the remote login user in visiting cluster. The cluster ID for the remote login device in home cluster

2.3.161.8 remoteuserid (FI-3975)

Type:	string [128] (Null OK)
Default Value:	NULL
Remarks:	The userid string for the remote login user. This is mainly for administrative report purpose on remote cluster. Should be set to Null for the home cluster

2.3.161.9 temptftp1v4 (FI-3971)

Type:	string [255] (Null OK)
Default Value:	NULL
Remarks:	The TFTP IP address for the home TFTP. It is set during remote login procedure in both remote and home cluster

2.3.161.10 temptftp1v6 (FI-3972)

Type:	string [255] (Null OK)
Default Value:	NULL
Remarks:	The TFTP IP address for the home TFTP. It is set during remote login procedure in both remote and home cluster

2.3.161.11 temptftp2v4 (FI-3973)

Type:	string [255] (Null OK)
Default Value:	NULL
Remarks:	The TFTP IP address for the home TFTP. It is set during remote login procedure in both remote and home cluster

2.3.161.12 temptftp2v6 (FI-3974)

Type:	string [255] (Null OK)
Default Value:	NULL
Remarks:	The TFTP IP address for the home TFTP. It is set during remote login procedure in both remote and home cluster

2.3.161.13 versionstamp (FI-5194)

Type:	string [47] (Not Modifiable)				
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963				
Rule (RI-614):	<table> <tr> <td>Type:</td><td>Active (Update) This field is modified by this rule.</td></tr> <tr> <td>Rule Name:</td><td>Update versionstamp for emremotedynamic table</td></tr> </table>	Type:	Active (Update) This field is modified by this rule.	Rule Name:	Update versionstamp for emremotedynamic table
Type:	Active (Update) This field is modified by this rule.				
Rule Name:	Update versionstamp for emremotedynamic table				

		Description:	When the emremotedynamic record changes, the versionstamp needs to be re-generated
		Test Condition:	ON UPDATE IN EMRemoteDynamic: versionstamp = versionStampGenerator()
	Rule (RI-614):	Type:	Active (Update)
		Rule Name:	Update versionstamp for emremotedynamic table
		Description:	When the emremotedynamic record changes, the versionstamp needs to be re-generated
		Test Condition:	ON UPDATE IN EMRemoteDynamic: versionstamp = versionStampGenerator()
Uniqueness:	No multicolumn uniqueness constraints		

2.3.162 enduser (TI-228)

Description: Lists the end users for the system

Fields:

2.3.162.1 allowcticontrolflag (FI-3054)	
Type:	bool
Default Value:	TRUE
Remarks:	If true, when a user logs in to device, the device allows CTI Control.
2.3.162.2 assocpc (FI-10)	
Type:	string [50]
Default Value:	EMPTY
Migration Source:	DeviceList.AssocPC
Remarks:	pingable DNS name (not dotted IP address)
2.3.162.3 building (FI-1803)	
Type:	string [64]
Default Value:	EMPTY
2.3.162.4 deletedtimestamp (FI-1996)	
Type:	long (Null OK)
2.3.162.5 department (FI-1648)	
Type:	string [64] (Indexed)
Default Value:	EMPTY
Remarks:	User's department number.
2.3.162.6 directoryuri (FI-10115)	

Type:	string [254] (Null OK)								
Default Value:	EMPTY								
Remarks:	URI for Cisco Unified Communications								
Rule (RI-911):	<table> <tr> <td>Type:</td><td>Active (Update)</td></tr> <tr> <td>Rule Name:</td><td>Creates/Deletes/Modifies Directory URIs when an UPDATE to EndUser,NumPlanURI is done and a related Entry to EndUserNumPlanMap exists.</td></tr> <tr> <td>Description:</td><td>On Update to NULL delete URI if one exists, On Update to a VALUE update or create the Directory URI in NumplanURI.</td></tr> </table>	Type:	Active (Update)	Rule Name:	Creates/Deletes/Modifies Directory URIs when an UPDATE to EndUser,NumPlanURI is done and a related Entry to EndUserNumPlanMap exists.	Description:	On Update to NULL delete URI if one exists, On Update to a VALUE update or create the Directory URI in NumplanURI.		
Type:	Active (Update)								
Rule Name:	Creates/Deletes/Modifies Directory URIs when an UPDATE to EndUser,NumPlanURI is done and a related Entry to EndUserNumPlanMap exists.								
Description:	On Update to NULL delete URI if one exists, On Update to a VALUE update or create the Directory URI in NumplanURI.								
Rule (RI-2159):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Check for duplicate IDs in Enduser fields.</td></tr> <tr> <td>Description:</td><td>EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields</td></tr> <tr> <td>Test Condition:</td><td>On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Check for duplicate IDs in Enduser fields.	Description:	EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields	Test Condition:	On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc
Type:	Validation (Insert/Update)								
Rule Name:	Check for duplicate IDs in Enduser fields.								
Description:	EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields								
Test Condition:	On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc								

2.3.162.7 discoveryuseridentity (FI-25826)

Type:	string [128] (Indexed)								
Default Value:	EMPTY								
Remarks:	A unique ID (similar to UserPrincipalName in Active Directory) used to determine if a user exists and is local to this UCM cluster.								
Rule (RI-2159):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Check for duplicate IDs in Enduser fields.</td></tr> <tr> <td>Description:</td><td>EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields</td></tr> <tr> <td>Test Condition:</td><td>On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Check for duplicate IDs in Enduser fields.	Description:	EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields	Test Condition:	On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc
Type:	Validation (Insert/Update)								
Rule Name:	Check for duplicate IDs in Enduser fields.								
Description:	EndUser table validation for duplicate records in MailID, DiscoveryUserIdentity, DirectoryURI, KeyPadEnteredAlternateIdentifier fields								
Test Condition:	On Insert/Update INTO EndUser : IF (old_mailid <> new_mailid) THEN my_lower(new_mailid) <> (SELECT my_lower(mailid) FROM enduser WHERE pkid='new_pkid');etc								

2.3.162.8 enablecalendarpresence (FI-10435)

		Rule Name: Remove Deleted EndUser from Device and IMPA and Log Out User
		Description: If an EndUser is deleted while they are still referenced in Device or IPMA settings or logged into a

			phone, the enduser references (fk's) must be removed and the enduser must be logged out before the user is deleted.
		Test Condition:	SET Device.fkEndUser = NULL where Device.fkEndUser = @deletedUser; SET Device.fkEndUser_LastLogin = NULL where Device.fkEndUser_LastLogin = @deletedUser; SET ikIPMALineInfo = NULL WHERE ikIPMALineInfo IN (SELECT pkid FROM IPMALineInfo WHERE fkEndUser = old_fkEndUser);

2.3.163 enduserappservermap (TI-376)

Description:	Which App servers service which end user(s)		
Fields:	2.3.163.1 content (FI-2775)		
	Type:	text (Null OK)	
	Rule (RI-314):	Type:	Active (Delete)
		Rule Name:	cascade delete in NumPlanASMap
		Description:	on enduserASMap delete, delete NumPlanASMap
		Test Condition:	delete enduserASMap record
	2.3.163.2 fkappserver (FI-2774)		
	Type:	guid (Cascade Delete)	
	2.3.163.3 fkenduser (FI-2773)		
	Type:	guid (Cascade Delete)	
	2.3.163.4 pkid (FI-2772)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.164 endusercapfmap (TI-354)

Description:	1-N relation between End User to CAPF		
Fields:	2.3.164.1 authenticationstring (FI-2634)		
	Type:	string [50]	

Default Value: EMPTY

2.3.164.2 **fkenduser (FI-2642)**

Type: guid (Indexed, Cascade Delete, Not Modifiable)

Migration Source: EndUser.pkid

2.3.164.3 **instanceid (FI-2643)**

Type: string [128] (Unique, Indexed, Not Modifiable)

Validation: ^[a-zA-Z0-9]{1,128}\$

Remarks: To distinguish multiplicity for a single user.

Rule (RI-321):

Type: Validation (Insert/Update)

Rule Name: InstanceID unique across App and EndUserCAPFMaps

Description: InstanceID must be unique across both UserCAPFMap tables (ApplicationUserCAPFMap and EndUserCAPFMap)

Test Condition: ON INSERT/UPDATE IN ApplicationUserCAPFMap OR EndUserCAPFMap IF (SELECT COUNT(*) FROM <table> WHERE lower(InstanceID) = lower(@instanceID)) > 1 THEN throw exception

Error Message: Cannot insert duplicate instance ID in EndUserCAPFMap or ApplicationUserCAPFMap

Remedy: Make sure the instance ID is unique across both the Application and End-User CAPF instances and try again.

2.3.164.4 **packetcaptureduration (FI-2633)**

Type: long (Null OK)

Default Value: 0

2.3.164.5 **pkid (FI-2641)**

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

Rule (RI-374):

Type: Active (Insert)

Rule Name: Insert Dynamic Records for EndUserCAPFMap Table

Description: When an End User is mapped to a credentials (CAPF record), insert a record for the frequently updated fields

Test Condition: ON INSERT INTO EndUserCAPFMap

2.3.164.6 **subjectname (FI-2881)**

Type:	string [128]
Default Value:	EMPTY
Remarks:	Subject name of the certificate

2.3.164.7 [tkauthenticationmode \(FI-2637\)](#)

Type:	enum
Default Value:	2

2.3.164.8 [tkcertificate \(FI-2639\)](#)

Type:	enum
Default Value:	0

2.3.164.9 [tkcertificateoperation \(FI-2640\)](#)

Type:	enum
Default Value:	1
Remarks:	Certificate Operation

2.3.164.10 [tkcertificatestatus \(FI-2635\)](#)

Type:	enum
Default Value:	1

2.3.164.11 [tkkeysize \(FI-2638\)](#)

Type:	enum
Default Value:	2

2.3.164.12 [tkpacketcapturemode \(FI-2632\)](#)

Type:	enum
Default Value:	0

2.3.164.13 [upgradefinishtime \(FI-2636\)](#)

Type:	string [50]
Default Value:	EMPTY

Uniqueness: fkenduser + instanceid is unique. (MFI-83)

2.3.165 endusercapfmapdynamic (TI-443)

Description: Frequently updated settings for End User CAPF settings

Fields:	2.3.165.1 datetimestamp (FI-3314)		
	Type:	long	
	Default Value:	0	
	Rule (RI-400):	Type:	Active (Insert/Update)
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	2.3.165.2 <u>fkendusercapfmap (FI-3313)</u>		
	Type:	guid (Unique, Cascade Delete)	
	2.3.165.3 <u>fkprocessnode (FI-2880)</u>		
	Type:	guid (Cascade Delete, Null OK)	
	Default Value:	NULL	
	Check Constraint:	fkProcessNode != '00000000-1111-0000-0000-000000000000'	
	Remarks:	The server to which this user, with this certificate, has opened a CTI provider.	
	2.3.165.4 pkid (FI-3312)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.165.5 userstate (FI-3017)		
	Type:	long	
	Default Value:	0	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.166 enduserdevicemap (TI-229)

Description: Control association between users and devices (many to many)

Fields:	2.3.166.1 defaultprofile (FI-1657)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This device is the default EM profile for this user.
	Rule (RI-185):	Type: Validation (Insert/Update)
		Rule Name: End User Default Device Profile Restriction
		Description: The Default Device Profile for an End User must be a User Device Profile (DEVICE_PROFILE_USER_PROFILE), not a real device or autogenerated profile.
		Test Condition: IF (SELECT tkDeviceProfile FROM Device WHERE pkid = @EndUserDeviceMap.fkDevice) != 1 THEN throw exception
		Error Message: The Default Profile for an End User must be a User Device Profile.
		Remedy: Check the Device Profile type of the specified device is User Device Profile and try again.
	Rule (RI-186):	Type: Active (Insert/Update/Delete records) This field is modified by this rule.
		Rule Name: Set End User Default Profile on change
		Description: When an End User's associated Device Profile is made the default for that user, any previous default profile must be set to non-default. Rule must fire AFTER determining that current device is a valid default profile.
		Test Condition: IF (@EndUserDeviceMap.defaultprofile = TRUE) THEN (UPDATE EndUserDeviceMap SET defaultprofile = FALSE WHERE fkEndUser = @EndUserDeviceMap.fkEndUser AND fkDevice != @EndUserDeviceMap.fkDevice)
	2.3.166.2 description (FI-1936)	
	Type:	string [200]
	Default Value:	EMPTY
	Validation:	^[^"''"]{0,50}\$
	Remarks:	User-entered description of a controlled device (allows Unicode).
	2.3.166.3 fkdevice (FI-1656)	
	Type:	guid (Cascade Delete)

Rule (RI-185):	Type:	Validation (Insert/Update)
	Rule Name:	End User Default Device Profile Restriction
	Description:	The Default Device Profile for an End User must be a User Device Profile (DEVICE_PROFILE_USER_PROFILE), not a real device or autogenerated profile.
	Test Condition:	IF (SELECT tkDeviceProfile FROM Device WHERE pkid = @EndUserDeviceMap.fkDevice) != 1 THEN throw exception
Rule (RI-281):	Error Message:	The Default Profile for an End User must be a User Device Profile.
	Remedy:	Check the Device Profile type of the specified device is User Device Profile and try again.
	Type:	Active (Insert/Update/Delete records)
	Rule Name:	enduserdevicemap versionstamp
Rule (RI-327):	Description:	on change to anything in enduserdevicemap table, update devicerelatedversionstamp versionstamp
	Test Condition:	update devicerelatedversionstamp
	Type:	Validation (Insert/Update)
	Rule Name:	No more than one EndUser Associated to device for Digest In
Rule (RI-938):	Description:	Only one user may be specified as the user for Digest In association
	Test Condition:	ON INSERT/UPDATE IN EndUserDeviceMap IF (SELECT COUNT(*) FROM EndUserDeviceMap WHERE fkDevice = @deviceID AND tkUserAssociation = 3) > 1 THEN throw exception
	Error Message:	Cannot associate multiple users with a device for Digest In
	Remedy:	Make sure the User and Device are correct and try again.
Rule (RI-938):	Type:	Validation (Insert/Update)
	Rule Name:	Only CDT can be associated with token user
	Description:	Only CDT can be associated with Token EndUser
	Test Condition:	On I/U of DeviceNumPlanMap: If tkUserProfile=3 AND (tkModel<>645 AND tkProduct<>530) THEN THROW EXCEPTION
Rule (RI-938):	Error Message:	Token EndUser can be associated with CDT only or used for mobility

2.3.166.4 [fkenduser \(FI-1655\)](#)

Type:	guid (Cascade Delete)		
Rule (RI-327):	Type:	Validation (Insert/Update)	
	Rule Name:	No more than one EndUser Associated to device for Digest In	

		Description:	Only one user may be specified as the user for Digest In association
		Test Condition:	ON INSERT/UPDATE IN EndUserDeviceMap IF (SELECT COUNT(*) FROM EndUserDeviceMap WHERE fkDevice = @deviceID AND tkUserAssociation = 3) > 1 THEN throw exception
		Error Message:	Cannot associate multiple users with a device for Digest In
		Remedy:	Make sure the User and Device are correct and try again.
	Rule (RI-938):	Type:	Validation (Insert/Update)
		Rule Name:	Only CDT can be associated with token user
		Description:	Only CDT can be associated with Token EndUser
		Test Condition:	On I/U of DeviceNumPlanMap: If tkUserProfile=3 AND (tkModel<>645 AND tkProduct<>530) THEN THROW EXCEPTION
		Error Message:	Token EndUser can be associated with CDT only or used for mobility
	2.3.166.5 pkid (FI-1654)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.166.6 tkuserassociation (FI-2484)		
	Type:	enum	
	Rule (RI-327):	Type:	Validation (Insert/Update)
		Rule Name:	No more than one EndUser Associated to device for Digest In
Description:		Only one user may be specified as the user for Digest In association	
Test Condition:		ON INSERT/UPDATE IN EndUserDeviceMap IF (SELECT COUNT(*) FROM EndUserDeviceMap WHERE fkDevice = @deviceID AND tkUserAssociation = 3) > 1 THEN throw exception	
Error Message:		Cannot associate multiple users with a device for Digest In	
Remedy:		Make sure the User and Device are correct and try again.	
Uniqueness:	fkdevice + fkenduser + tkuserassociation is unique. (MFI-80)		

2.3.167 enduserdirgroupmap (TI-232)

Description: Many to many relationship between EndUser and DirGroup

Fields:	2.3.167.1 fkdirgroup (FI-1665)	
	Type:	guid (Cascade Delete)
	2.3.167.2 fkenduser (FI-1664)	
	Type:	guid (Cascade Delete)
	2.3.167.3 pkid (FI-1663)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	fkdirgroup + fkenduser is unique. (MFI-74)	

2.3.168 enduserlicense (TI-418)

Description:	Licensable feature for end users	
Fields:	2.3.168.1 enablecupc (FI-3163)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Obsolete. Separate licenses (DLUs) are no longer needed for CUP Clients. This table to be removed in future releases.
	Rule (RI-935):	Type: Active (Insert/Update) This field is modified by this rule.
		Rule Name: On Insert/Update of EndUserLicense,enableCUPS and enableCUPC values should be same
		Description: On Insert/Update of EndUserLicense, compare enableCUPS and enableCUPC and updates the row with same values.
		Test Condition: For INSERT/UPDATE of EndUserLicense,UPDATE EndUserLicense SET enableCUPC = enableCUPS
	2.3.168.2 enablecups (FI-3162)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Obsolete. See EndUser.EnableCUPS instead to check if presence is enabled. CUPS no longer requires separate license (DLUs). This table to be removed in future releases.
	Rule (RI-935):	Type: Active (Insert/Update)
		Rule Name: On Insert/Update of EndUserLicense,enableCUPS and enableCUPC values should be same

		Description:	On Insert/Update of EndUserLicense, compare enableCUPS and enableCUPC and updates the row with same values.
		Test Condition:	For INSERT/UPDATE of EndUserLicense,UPDATE EndUserLicense SET enableCUPC = enableCUPS
	Rule (RI-2119):	Type:	Active (Delete)
		Rule Name:	Update Enduser.EnableCUPS when EndUserLicense row is deleted
		Description:	While transitioning to new schema to combine CUPS and UCM keep the EnableCUPS setting in sync between Enduser and EndUserLicense tables.
		Test Condition:	UPDATE enduser set EnableCUPS = enduserlicense.EnableCUPS)
	2.3.168.3 fkenduser (FI-3161)		
	Type:	guid (Unique, Cascade Delete)	
	Remarks:	Foreign key back to end user identifying the end user association	
	Rule (RI-935):	Type:	Active (Insert/Update)
		Rule Name:	On Insert/Update of EndUserLicense,enableCUPS and enableCUPC values should be same
		Description:	On Insert/Update of EndUserLicense, compare enableCUPS and enableCUPC and updates the row with same values.
		Test Condition:	For INSERT/UPDATE of EndUserLicense,UPDATE EndUserLicense SET enableCUPC = enableCUPS
	Rule (RI-2119):	Type:	Active (Delete)
		Rule Name:	Update Enduser.EnableCUPS when EndUserLicense row is deleted
		Description:	While transitioning to new schema to combine CUPS and UCM keep the EnableCUPS setting in sync between Enduser and EndUserLicense tables.
		Test Condition:	UPDATE enduser set EnableCUPS = enduserlicense.EnableCUPS)
	2.3.168.4 pkid (FI-3160)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		
Constraints:	Rule (RFI-312):	Type:	Inter-field Condition and Constraint
		Constraint:	(NOT EXISTS (SELECT 1 FROM LicenseServer LS, TypeLicensingState TLS WHERE

		TLS.enum = LS.tkLicensingState AND NOT TLS.AllowProvisioning))
	Remarks:	The system has exceeded its time limit to resolve license non-compliance issue. No more provisioning operations are allowed until the license compliance issues are resolved.

2.3.169 endusermlppauthentication (TI-1067)

Description: Settings for Enduser MLPP authentication.

Fields:	2.3.169.1 fkenduser (FI-10041)
	Type: guid (Unique, Cascade Delete)
	Remarks: The end user can be associated with zero or one numeric id.
	2.3.169.2 mlpppassword (FI-10216)
	Type: string [129] (Null OK)
	Validation: ^[a-zA-F0-9]{0,128}\$
	Remarks: The MLPPPassword is used to authenticate the End User requesting MLPP escalated call when they dial their ID when placing an Assured Services call
	2.3.169.3 numericuserid (FI-10040)
	Type: string [21] (Unique, Indexed)
	Validation: ^[0-9]{6,20}\$
	Remarks: The Numeric User Identifier is used to determine which End User is requesting an MLPP escalated call when they dial their ID when placing an Assured Services call.
	2.3.169.4 pkid (FI-10038)
	Type: guid (Unique, Indexed, Not Modifiable)
	Default Value: newid()
	Remarks: Unique ID to identify a record.
	2.3.169.5 tkpatternprecedence (FI-10039)
	Type: enum
	Default Value: 5
	Remarks: MLPP Precedence Levels.
Uniqueness:	No multicolumn uniqueness constraints

2.3.170 endusernotification (TI-1058)

Description: Storage of notification messages that are unread by a user who logs in to the application

Fields:	2.3.170.1 clause (FI-9938)	
	Type:	string [128]
	Default Value:	EMPTY
	Validation:	^[1-9][0-9]?:[10]:[10](,[1-9][0-9]?:[10]:[10]){0,18}\$
	Remarks:	Clause shows the messages and status of each message for the user. For each message, the clause contains message id (tkUserNotificationMessage) followed by its enabled and read status. Multiple messages are separated by commas (e.g., 3:1:1,6:1:0).
	2.3.170.2 enablenotify (FI-9937)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	Enable or Disable User notification message store
	2.3.170.3 fkenduser (FI-9936)	
	Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)
	Remarks:	Unique ID of enduser who would receive the notification messages
	2.3.170.4 pkid (FI-9935)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.171 endusernumplanmap (TI-240)

Description: Many to many relationship between EndUsers and DNs.

Fields:	2.3.171.1 fkenduser (FI-1736)		
	Type:	guid (Cascade Delete)	
	Rule (RI-910):	Type:	Active (Insert)
		Rule Name:	Creates Directory URIs when a EndUserNumPlanMap is added and the DirectoryURI column on the Enduser table is not NULL.

	Description:	Adds new rows to the NumPlanURI table for DirectoryURIs.
Rule (RI-913):	Type:	Validation (Update)
	Rule Name:	Can not change the value of fkEndUser or fkNumPlan once a row has been added to EndUserNumPlanMap.
	Description:	Changes to fkNumplan and fkEndUser are not permitted.
	Test Condition:	On UPDATE check that fkEndUser and fkNumPlan haven't changed. If they have throw exception.
Rule (RI-2121):	Type:	Active (Insert)
	Rule Name:	Update Numplan table on insert to EndUserNumPlanMap
	Description:	Initialise the global variables for replacement of Placeholder tags, then update the Numplan tables with actual data
	Test Condition:	On Insert
Rule (RI-2148):	Type:	Active (Insert)
	Rule Name:	Unique ID generation on enduser
	Description:	Unique ID generation for an end user associated with particular extension number
	Test Condition:	For UPDATE on enduser: Update enduser set KeypadEnteredAlternateIdentifier= id

2.3.171.2 [fknumplan \(FI-1737\)](#)

Type:	guid (Cascade Delete)	
Rule (RI-910):	Type:	Active (Insert)
	Rule Name:	Creates Directory URIs when a EndUserNumPlanMap is added and the DirectoryURI column on the Enduser table is not NULL.
	Description:	Adds new rows to the NumPlanURI table for DirectoryURIs.
Rule (RI-913):	Type:	Validation (Update)
	Rule Name:	Can not change the value of fkEndUser or fkNumPlan once a row has been added to EndUserNumPlanMap.
	Description:	Changes to fkNumplan and fkEndUser are not permitted.
	Test Condition:	On UPDATE check that fkEndUser and fkNumPlan haven't changed. If they have throw exception.
Rule (RI-2121):	Type:	Active (Insert)
	Rule Name:	Update Numplan table on insert to EndUserNumPlanMap
	Description:	Initialise the global variables for replacement of Placeholder tags, then update the Numplan tables

		with actual data
	Test Condition:	On Insert
Rule (RI-2148):	Type:	Active (Insert)
	Rule Name:	Unique ID generation on enduser
	Description:	Unique ID generation for an end user associated with particular extension number
	Test Condition:	For UPDATE on enduser: Update enduser set KeypadEnteredAlternateIdentifier= id

2.3.171.3 pkid (FI-1735)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-910):	Type:	Active (Insert)
	Rule Name:	Creates Directory URIs when a EndUserNumPlanMap is added and the DirectoryURI column on the Enduser table is not NULL.
	Description:	Adds new rows to the NumPlanURI table for DirectoryURIs.
Rule (RI-2148):	Type:	Active (Insert)
	Rule Name:	Unique ID generation on enduser
	Description:	Unique ID generation for an end user associated with particular extension number
	Test Condition:	For UPDATE on enduser: Update enduser set KeypadEnteredAlternateIdentifier= id

2.3.171.4 sortorder (FI-10278)

Type:	long (Null OK)
Remarks:	The SortOrder column allows a User's associated Extensions in the EndUserNumPlanMap table to have a logical EXTENSION NUMBER defined. This may be used in automated template based device setup.

2.3.171.5 tkdnusage (FI-1738)

Type:	enum	
Rule (RI-910):	Type:	Active (Insert)
	Rule Name:	Creates Directory URIs when a EndUserNumPlanMap is added and the DirectoryURI column on the Enduser table is not NULL.
	Description:	Adds new rows to the NumPlanURI table for DirectoryURIs.
Rule (RI-913):	Type:	Validation (Update)

		Rule Name:	Can not change the value of fkEndUser or fkNumPlan once a row has been added to EndUserNumPlanMap.
		Description:	Changes to fkNumplan and fkEndUser are not permitted.
		Test Condition:	On UPDATE check that fkEndUser and fkNumPlan haven't changed. If they have throw exception.
	Rule (RI-2148):	Type:	Active (Insert)
		Rule Name:	Unique ID generation on enduser
		Description:	Unique ID generation for an end user associated with particular extension number
		Test Condition:	For UPDATE on enduser: Update enduser set KeypadEnteredAlternateIdentifier= id
Uniqueness:	fkenduser + fknumplan + tkdnusage is unique. (MFI-108)		

2.3.172 enterprisenode (TI-2587)

Description: All of the IM & Presence nodes in the enterprise
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.172.1 fkprocessnode (FI-25622)

Type: guid (Indexed, Cascade Delete, Not Modifiable, Null OK)
Default Value: NULL
Remarks: The owning processnode for local nodes. This helps with management of local entries

2.3.172.2 id (FI-25615)

Type: long (Unique, Indexed, Not Modifiable)
Remarks: Unique ID to identify a record.

2.3.172.3 islocal (FI-25621)

Type: bool (Not Modifiable)
Default Value: FALSE
Remarks: True if the entry is from a local user

2.3.172.4 isprimary (FI-25620)

Type: bool (Indexed, Not Modifiable)
Default Value: FALSE
Remarks: True if this is the primary node of a subcluster

2.3.172.5 jsmid (FI-25618)

	Type:	string [128] (Not Modifiable, Null OK)	
	Remarks:	Id of home Jsm component for node 1	
	2.3.172.6 name (FI-25617)		
	Type:	string [255] (Unique, Indexed, Not Modifiable)	
	Remarks:	Name of the Node	
	2.3.172.7 peerid (FI-25619)		
	Type:	guid (Indexed, Not Modifiable, Null OK)	
	Remarks:	Which cluster did this entry originate. local is the local node, pkid is a value from cupsinterclusterpeers.pkid	
	2.3.172.8 pkid (FI-25614)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record (UCM standard).	
	2.3.172.9 remotefkprocessnode (FI-25623)		
	Type:	string [36] (Indexed, Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	The remote cluster pkid for the node, used for tracking by ICSA	
	2.3.172.10 remoteid (FI-25624)		
	Type:	long (Indexed, Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	The remote cluster id for the 8.5.x and greater node, used for tracking by ICSA	
	2.3.172.11 subclusterid (FI-25616)		
	Type:	long (Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	Subcluster ID	
Uniqueness:	islocal + subclusterid is unique. (MFI-788) name + peerid is unique. (MFI-789)		
Constraints:	Rule (RFI-662):	Type:	Inter-field Condition and Constraint
		Constraint:	(fkProcessnode IS NULL) OR (EXISTS (SELECT 1 FROM Processnode P, TypeProcessNodeRole TPR WHERE P.pkid = fkProcessnode AND P.tkprocessnoderole = TPR.enum and TPR.moniker = 'PROCESS_NODE_ROLE_PRESENCE'))

		Remarks:	EnterpriseNode table may only reference IM & Presence Servers
--	--	----------	---

2.3.173 enterprisephoneconfigxml (TI-551)

Description: XML configuration for Common Phone Config
Insert/Delete is not allowed.

Fields:

2.3.173.1 pkid (FI-3753)

Type: guid (Unique, Indexed, Not Modifiable)

Remarks: Unique ID to identify a record.

2.3.173.2 xml (FI-3754)

Type: string [16000] (Null OK)

Default Value: NULL

Remarks: Product configuration XML not used by CCM

Rule (RI-590):

Type: Active (Update)

Rule Name: Update GroupVersionStamp for EnterprisePhoneConfigXML changes

Description: When EnterprisePhoneConfigXML.XML changed, the GroupVersionStamp is updated.

Test Condition: ON UPDATE IN EnterprisePhoneConfigXML: THEN UPDATE TypeGroupVersionStamp SET versionstamp = versionstampgenerator() where enum = 1; END IF;

Uniqueness: No multicolumn uniqueness constraints

2.3.174 enterprisesubcluster (TI-2586)

Description: All of the IM & Presence subclusters in the enterprise
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.174.1 description (FI-25604)

Type: string [128] (Not Modifiable)

Default Value: EMPTY

Remarks: Admin entered description for the subcluster

Rule (RI-2156):

Type: Validation (Insert/Update)

Rule Name: EnterpriseSubcluster field validation

	Description:	Validation to be performed on field values in EnterpriseSubcluster table conditionally if CUP migration is not occurring
	Test Condition:	On insert/update

2.3.174.2 haenabled (FI-25610)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	Identifies if HA has been enabled for the subcluster

2.3.174.3 id (FI-25602)

Type:	long (Unique, Indexed, Not Modifiable)
Remarks:	Unique ID to identify a record.

2.3.174.4 islocal (FI-25609)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	True if the entry is from a local user

2.3.174.5 name (FI-25603)

Type:	string [128] (Unique, Not Modifiable)	
Rule (RI-2156):	Type:	Validation (Insert/Update)
	Rule Name:	EnterpriseSubcluster field validation
	Description:	Validation to be performed on field values in EnterpriseSubcluster table conditionally if CUP migration is not occurring
	Test Condition:	On insert/update

2.3.174.6 peerid (FI-25608)

Type:	guid (Indexed, Not Modifiable, Null OK)
Remarks:	Which cluster did this entry originate. local is the local node, pkid is a value from cupsinterclusterpeers.pkid

2.3.174.7 pkid (FI-25601)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record (UCM standard).

2.3.174.8 remoteid (FI-25612)

Type:	long (Not Modifiable, Null OK)
-------	--------------------------------

	Remarks:	Remote id for 8.5.x subclusters and later
	2.3.174.9 remotepkid (FI-25611)	
	Type:	string [36] (Not Modifiable, Null OK)
	Remarks:	Remote pkid for 8.0.x subclusters and earlier
	2.3.174.10 sipport (FI-25605)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	5060
	Remarks:	Port to use for SIP communications
	2.3.174.11 siptransport (FI-25606)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	1
	Remarks:	Transport to use for SIP communications, default is TCP
	2.3.174.12 srvname (FI-25607)	
	Type:	string [128] (Not Modifiable, Null OK)
	2.3.174.13 supportsxcp (FI-25613)	
	Type:	bool (Not Modifiable)
	Default Value:	TRUE
	Remarks:	Is this subcluster from an 8.0.x and later cluster
Uniqueness:	No multicolumn uniqueness constraints	

2.3.175 extensionmobilitydynamic (TI-444)

Description:	Settings updated for EM login/logout; record inserted by trigger when EM is enabled for a device, and deleted by trigger when EM is disabled. Insert/Delete is not allowed.	
Fields:	2.3.175.1 allowcticontrolflag (FI-3323)	
	Type:	bool
	Default Value:	FALSE
	2.3.175.2 ctiidbase (FI-3324)	
	Type:	long (Not Modifiable)
	Default Value:	0

Remarks: Used by CTI to uniquely identify lines and pick up changes

2.3.175.3 [datetimestamp \(FI-3325\)](#)

Type: long (Not Modifiable)

Default Value: 0

Rule (RI-400):

Type:	Active (Insert/Update)
Rule Name:	Update the DateTimeStamp for Dynamic records
Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

Rule (RI-400):

Type:	Active (Insert/Update) This field is modified by this rule.
Rule Name:	Update the DateTimeStamp for Dynamic records
Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

2.3.175.4 [fkcallingsearchspace_emcc \(FI-3951\)](#)

Type: guid (Null OK)

Default Value: NULL

Remarks: Need to be copied over from deviceprofile during EMCC login. Device Profile stores the value in Device.fkCallingSearchSpace column. This field is used by EMCC only.

2.3.175.5 [fkcallingsearchspace_restrict \(FI-3326\)](#)

Type: guid (Null OK)

Default Value: NULL

2.3.175.6 [fkdevice \(FI-3322\)](#)

Type: guid (Unique, Cascade Delete, Not Modifiable)

2.3.175.7 [fkdevice_currentloginprofile \(FI-1021\)](#)

Type: guid (Null OK)

Default Value: NULL

Remarks: GUID for current login device profile. Set by the Login stored procedure if AllowHotellingFlag is true.

2.3.175.8 [fkenduser \(FI-3327\)](#)

Type:	guid (Null OK)
-------	----------------

		Description: When the FeatureControlPolicy record changes, the versionstamp needs to be re-generated
		Test Condition: ON UPDATE IN FeatureControlPolicy: versionstamp = versionStampGenerator()
	Uniqueness:	No multicolumn uniqueness constraints

2.3.181 featuregrouptemplate (TI-1107)		
Description:	Stores the provisioning data needed to a template of settings used when creating new end users	
Fields:	2.3.181.1 allowcticontrolflag (FI-10251)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	When AllowCTIControlFlag is enabled, all users created based on this template will when a user logs to device, the

	device allows CTI Control
--	---------------------------

2.3.181.2 cupsenabled (FI-10242)

Type:	bool
Default Value:	FALSE
Remarks:	When CUPSEnabled is enabled, all users created based on this template will have CUPS client enabled

2.3.181.3 description (FI-10241)

Type:	string [400]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""'%&<>]{0,100}\$
Remarks:	A localizable administrative description of the Feature Group Template

2.3.181.4 enablecalendarpresence (FI-10436)

Type:	bool (Indexed)	
Default Value:	FALSE	
Migration Source:	From CUP database	
Remarks:	Determines whether others are allowed to see the meeting information for the user in Presence status	
Rule (RFI-323):	Type:	Inter-field Condition and Constraint
	Test Condition:	CUPSEnabled = 'f'
	Constraint:	EnableCalendarPresence = 'f'
	Remarks:	Calendar (Meeting) Information in Presence can be enabled only when IM and Presence is enabled.

2.3.181.5 enableemcc (FI-10247)

Type:	bool
Default Value:	FALSE
Remarks:	When enableEMCC is enabled, all users created based on this template will have capability to access EMCC feature

2.3.181.6 enablemobilevoice (FI-10253)

Type:	bool
Default Value:	FALSE
Remarks:	When EnableMobileVoice is enabled, all users created based on this template Enable IVR/Two-stage Dialing access

2.3.181.7 enablemobility (FI-10255)

Type:	bool (Indexed)
Default Value:	FALSE

Remarks:	When EnableMobility is enabled, all users created based on this template Indicates whether a user has been licensed to use Mobility (SNR) features
----------	--

2.3.181.8 [fkcallingsearchspace_restrict \(FI-10252\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Reference CallingSearchSpace record that defines restriction.

2.3.181.9 [fkmatrix_presence \(FI-10250\)](#)

Type:	guid
Default Value:	ad243d17-98b4-4118-8feb-5ff2e1b781ac
Remarks:	Reference to Presence Group Matrix record. This is required for extension mobility. Appuser table does not need this because appuser cannot do extension mobility

2.3.181.10 [fkucserviceprofile \(FI-10248\)](#)

Type:	guid (Indexed, Null OK)
Remarks:	Reference to UC Service Profile record that defines UC Services for the end user.

2.3.181.11 [fkucuserprofile \(FI-25733\)](#)

Type:	guid (Null OK)
Remarks:	Used to define for users created via this FGT the optional UCUserProfile with which, if present, they should be associated.

2.3.181.12 [islocaluser \(FI-10257\)](#)

Type:	bool (Indexed)
Default Value:	TRUE
Remarks:	When IsLocalUser is enabled, all users created based on this template Indicate whether the user is local to the UCM cluster

2.3.181.13 [maxdeskpickupwaittime \(FI-10254\)](#)

Type:	long
Default Value:	10000
Check Constraint:	(MaxDeskPickupWaitTime >= 0) AND (MaxDeskPickupWaitTime <= 30000)
Remarks:	All users created based on this template will have Max wait time for desk phone pickup in milliseconds

2.3.181.14 [name \(FI-10240\)](#)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$

	Remarks:	Unique name to Identify the Feature Group Template
	2.3.181.15 pkid (FI-10239)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
	2.3.181.16 remotetdestinationlimit (FI-10256)	
	Type:	long
	Default Value:	4
	Check Constraint:	(RemoteDestinationLimit >= 1) AND (RemoteDestinationLimit <= 10)
	Remarks:	All users created based on this template will have this Max number of remote destinations associated with the EndUser (Mobility must also be enabled)
	2.3.181.17 tkuserlocale (FI-10249)	
	Type:	enum (Null OK)
	Remarks:	all users created based on this template will have this Locale associated with the user. The user locale identifies a set of detailed information to support users, including language and font.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.182 functionrole (TI-233)

Description: A role comprises a function which is a set of permissions on resource-action tuples.

Fields:	2.3.182.1 description (FI-1667)	
	Type:	string [128]
	Default Value:	EMPTY
	2.3.182.2 isstandard (FI-1787)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.182.3 name (FI-1668)	
	Type:	string [128] (Unique)
	2.3.182.4 pkid (FI-1666)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()

	Remarks:	Unique ID to identify a record.
--	----------	---------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.183 functionroledirgroupmap (TI-234)

Description:	Many to many relationship between FunctionRole and DirGroup
--------------	---

Fields:	
---------	--

2.3.183.1 fkdirgroup (FI-1671)

Type:	guid (Cascade Delete)
-------	-----------------------

Rule (RI-334):	Type:	Validation (Insert/Update/Delete)
	Rule Name:	Standard DirGroup Functional Role Restriction
	Description:	The Functional Roles associated with a standard DirGroup may not be changed in any way
	Test Condition:	ON INSERT/UPDATE/DELETE IN FunctionRoleDirGroupMap IF (SELECT isStandard FROM DirGroup WHERE pkid = @fkDirGroup) = 'T' THEN throw exception
	Error Message:	Cannot modify the Functional Roles associated with a standard DirGroup
	Remedy:	Create a new DirGroup with the desired Roles and assign users to that role instead.

2.3.183.2 fkfunctionrole (FI-1670)

Type:	guid (Cascade Delete)
-------	-----------------------

Rule (RI-334):	Type:	Validation (Insert/Update/Delete)
	Rule Name:	Standard DirGroup Functional Role Restriction
	Description:	The Functional Roles associated with a standard DirGroup may not be changed in any way
	Test Condition:	ON INSERT/UPDATE/DELETE IN FunctionRoleDirGroupMap IF (SELECT isStandard FROM DirGroup WHERE pkid = @fkDirGroup) = 'T' THEN throw exception
	Error Message:	Cannot modify the Functional Roles associated with a standard DirGroup
	Remedy:	Create a new DirGroup with the desired Roles and assign users to that role instead.

2.3.183.3 pkid (FI-1669)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

Uniqueness:	fkfunctionrole + fkdirgroup is unique. (MFI-96)
-------------	---

2.3.184 functionroleresourcemap (TI-237)

Description: Captures what roles have what permissions.

Fields:

2.3.184.1 [fkfunctionrole \(FI-1681\)](#)

Type: guid (Cascade Delete)

Rule (RI-335):

Type: Validation (Insert/Update/Delete)

Rule Name: Standard Functional Role Resource Restriction

Description: The Resources and Permissions associated with a standard Functional Role may not be changed in any way

Test Condition: ON INSERT/UPDATE/DELETE IN FunctionRoleResourceMap IF (SELECT isStandard FROM FuntionRole WHERE pkid = @fkFunctionRole) = 'T' THEN throw exception

Error Message: Cannot modify the Permission and Resources associated with a standard Functional Role.

Remedy: Create a new Role with the desired resources and use that role instead.

2.3.184.2 [permission \(FI-1683\)](#)

Type: long

Rule (RI-335):

Type: Validation (Insert/Update/Delete)

Rule Name: Standard Functional Role Resource Restriction

Description: The Resources and Permissions associated with a standard Functional Role may not be changed in any way

Test Condition: ON INSERT/UPDATE/DELETE IN FunctionRoleResourceMap IF (SELECT isStandard FROM FuntionRole WHERE pkid = @fkFunctionRole) = 'T' THEN throw exception

Error Message: Cannot modify the Permission and Resources associated with a standard Functional Role.

Remedy: Create a new Role with the desired resources and use that role instead.

2.3.184.3 [pkid \(FI-1680\)](#)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

2.3.184.4 [tkresource \(FI-1682\)](#)

Type: enum

Rule (RI-335):

Type: Validation (Insert/Update/Delete)

		Rule Name:	Standard Functional Role Resource Restriction
		Description:	The Resources and Permissions associated with a standard Functional Role may not be changed in any way
		Test Condition:	ON INSERT/UPDATE/DELETE IN FunctionRoleResourceMap IF (SELECT isStandard FROM FuntionRole WHERE pkid = @fkFunctionRole) = 'T' THEN throw exception
		Error Message:	Cannot modify the Permission and Resources associated with a standard Functional Role.
		Remedy:	Create a new Role with the desired resources and use that role instead.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.185 gatekeeper (TI-138)

Description: Gatekeeper information in not in Device table

Fields:

2.3.185.1 enabledevice (FI-1181)		
Type:	bool	
Default Value:	TRUE	
2.3.185.2 <u>fkdevice</u> (FI-778)		
Type:	guid (Indexed, Cascade Delete)	
Rule (RI-113):	Type:	Validation (Insert/Update)
	Rule Name:	Gatekeeper device
	Description:	A record in the Gatekeeper table must reference a device that is a Gatekeeper (Model = 122).
	Test Condition:	Gatekeeper.fkDevice IN (SELECT pkid FROM Device WHERE tkModel = 122
	Error Message:	Gatekeeper table may only reference devices that are Gatekeepers (model = 122).
	Remedy:	Correct the fkDevice value to refer to a Gatekeeper device.
2.3.185.3 pkid (FI-764)		
Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
2.3.185.4 retrytimeout (FI-770)		
Type:	long	

	Default Value:	300
	Check Constraint:	(RetryTimeout >= 30) AND (RetryTimeout <= 600)
	2.3.185.5 rrqtimetolive (FI-766)	
	Type:	long
	Default Value:	60
	Check Constraint:	(RRQTimeToLive >= 30) AND (RRQTimeToLive <= 300)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.186 gatewaylayout (TI-178)

Description:	Static table for MGCP gateway layout. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.186.1 endpointformatstring (FI-1097)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Migration Source:	was ProductMGCPVicCompat.EndPointFormatString before
	2.3.186.2 enum (FI-1090)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.186.3 lev1header (FI-1092)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	2.3.186.4 lev2header (FI-1093)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	2.3.186.5 slotposition (FI-1094)	
	Type:	long (Not Modifiable)
	Default Value:	1
	2.3.186.6 tkdeviceprotocol (FI-2171)	
	Type:	enum

	Default Value:	12
	2.3.186.7 tkmgcpslotmodule (FI-1095)	
	Type:	enum (Not Modifiable)
	Default Value:	0
	2.3.186.8 tkmgcpvic (FI-1096)	
	Type:	enum (Not Modifiable)
	Default Value:	0
	2.3.186.9 tkproduct (FI-1091)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.187 gatewaynetworkdetail (TI-590)

Description:	Cisco BE: GatewayNetworkDetail table to store the network details for the Gateway. Is not replicated.	
Fields:	2.3.187.1 defaultgateway (FI-6110)	
	Type:	string [15] (Null OK)
	Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
	Remarks:	DefaultGateWay for the gateway table
	2.3.187.2 fkmgcp (FI-6105)	
	Type:	guid
	Remarks:	Reference to MGCP
	2.3.187.3 ipaddress (FI-6108)	
	Type:	string [15] (Indexed, Null OK)
	Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
	Remarks:	ipAddress for the gateway table
	2.3.187.4 isdhcp (FI-6106)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	check for DHCP

2.3.187.5 pkid (FI-6104)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for the record

2.3.187.6 primarydns (FI-6111)

Type:	string [15] (Null OK)
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
Remarks:	PrimaryDNS for the gateway table

2.3.187.7 secondarydns (FI-6112)

Type:	string [15] (Null OK)
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
Remarks:	SecondaryDNS for the gateway table

2.3.187.8 subnetmask (FI-6109)

Type:	string [15] (Null OK)
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
Remarks:	SubNetMask for the gateway table

Uniqueness: No multicolumn uniqueness constraints

2.3.188 geolocation (TI-552)

Description: Used to store the GeoLocation for devices

Fields:

2.3.188.1 a1 (FI-5010)

Type:	string [200]
Default Value:	EMPTY
Validation:	^[^'"%&\\<>:]{0,50}\$
Remarks:	National Subdivision

2.3.188.2 a2 (FI-5011)

Type:	enum
-------	------

	Remarks:	Refers to the Logical Partition Device type
	2.3.191.6 tklogicalpartitionpolicy (FI-5077)	
	Type:	enum
	Remarks:	Refers to the Logical Partition Policy
Uniqueness:	fkgeolocationpolicy_a + tkgeolocationdevice_a + fkgeolocationpolicy_b + tkgeolocationdevice_b is unique. (MFI-109)	

2.3.192 globalsetting (TI-589)

Description:	Definition records for use by various applications as persistent global settings. Useful in pointing to a record in another table as a default setting or where referential or control rules are needed. Insert/Delete is not allowed.		
Fields:	2.3.192.1 pkid (FI-6123)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	GUID based surrogate primary key for unique application reference to the GlobalSetting type definition record	
	2.3.192.2 settingvalue (FI-6125)		
	Type:	string [255] (Null OK)	
	Remarks:	Contains the actual Setting Value for the Global Setting as defined by the referenced TypeGlobalSetting foreign key in this record	
	Rule (RI-789):	Type:	Validation (Update)
		Rule Name:	GlobalSetting Update Restriction
		Description:	GlobalSetting.SettingValue can either be NULL or must reference a DTMF Mobility pattern
		Test Condition:	ON UPDATE GlobalSetting IF (tkGlobalSetting = 1) THEN ((SettingValue = NULL) OR (SettingValue = NumPlan.pkid WHERE Numplan.tkpatternusage = 17))
		Error Message:	The Global Setting "Default Enterprise Feature Access DN" must reference a pattern that is an EFA DN (numplan.tkpatternusage = 17)
	2.3.192.3 tkglobalsetting (FI-6124)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	Foreign key indentifying the associated type definition which describes the purpose, use, and rules associated with this setting	
Rule (RI-789):	Type:	Validation (Update)	

		Rule Name:	GlobalSetting Update Restriction
		Description:	GlobalSetting.SettingValue can either be NULL or must reference a DTMF Mobility pattern
		Test Condition:	ON UPDATE GlobalSetting IF (tkGlobalSetting = 1) THEN ((SettingValue = NULL) OR (SettingValue = NumPlan.pkid WHERE Numplan.tkpatternusage = 17))
		Error Message:	The Global Setting "Default Enterprise Feature Access DN" must reference a pattern that is an EFA DN (numplan.tkpatternusage = 17)
Uniqueness:	No multicolumn uniqueness constraints		

2.3.193 grtreport (TI-484)

Description:	A report		
Fields:	2.3.193.1 description (FI-3600)		
	Type:	string [1000]	
	Default Value:	EMPTY	
	Validation:	^[a-zA-Z0-9 !#\$'()*+.,/:;=?@[^_`{ }~]{0,1000}\$

Type:	string [50] (Unique, Not Modifiable)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
2.3.195.7 pkid (FI-3593)	
Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.
2.3.195.8 remedy (FI-3609)	
Type:	string [1000]
Default Value:	EMPTY
Remarks:	possilbe remedy to resolve data under test
2.3.195.9 symptom (FI-3610)	
Type:	string [1000]
Default Value:	EMPTY
Remarks:	possible symptoms if errors exist in data under test
Uniqueness:	No multicolumn uniqueness constraints

2.3.196 h323device (TI-18)

Description:	H.323 information not in Device table
Fields:	2.3.196.1 acceptinboundrdnis (FI-1086)
Type:	bool

Default Value:	TRUE
----------------	------

2.3.196.2 activecap (FI-1233)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

2.3.196.3 allowh235passthrough (FI-3795)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Pass through of the H.235 ClearToken encryption key through an Cisco Unified CM H.323 ICT, H.323 Trunk or H.323 Gateway is Allowed
----------	--

2.3.196.4 calleriddn (FI-98)

Type:	dn (Null OK)
-------	--------------

DN Type:	DN_TYPE_MASK
----------	--------------

Default Value:	NULL
----------------	------

Validation:	^[0-9*#+X]{0,32}\$
-------------	--------------------

Migration Source:	CallerId
-------------------	----------

2.3.196.5 displayie (FI-772)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

2.3.196.6 e164 (FI-2172)

Type:	dn (Null OK)
-------	--------------

DN Type:	DN_TYPE_ALL_DIGITS
----------	--------------------

Default Value:	NULL
----------------	------

Validation:	^[0-9*#+X]{0,32}\$
-------------	--------------------

Rule (RI-322):	
----------------	--

Type:	Validation (Insert/Update)
-------	----------------------------

Rule Name:	Gatekeeper Controlled H323Device.E164 is unique
------------	---

Description:	The E.164 address associated with a gatekeeper controlled H.323 Client must be unique.
--------------	--

Test Condition:	ON INSERT/UPDATE IF (SELECT COUNT(*) FROM H323Device WHERE E164 = @H323Device.E164) > 1 THEN throw exception
-----------------	--

Error Message:	Cannot insert duplicate E.164 address for H.323 Client
----------------	--

Remedy:	Make sure the E.164 address is unique and try again.
---------	--

2.3.196.7 enableinboundfaststart (FI-1613)

Type:	bool
Default Value:	FALSE

2.3.196.8 enableoutboundfaststart (FI-1612)

Type:	bool
Default Value:	FALSE

Rule (RI-297):	Type:	Validation (Insert/Update)
	Rule Name:	SRTP and Outbound Faststart Conflict
	Description:	The SRTPAllowed and EnableOutboundFastStart settings (for H.323 devices) are mutually exclusive - only one may be true at any given time.
	Test Condition:	IF (Device.SRTPAllowed = 't') AND (H323Device.EnableOutboundFastStart = 't') THEN throw exception
	Error Message:	SRTP and Outbound FastStart cannot be enabled at the same time.
	Remedy:	Disable either SRTP or Outbound FastStart and try again.
Rule (RI-404):	Type:	Validation (Insert/Update)
	Rule Name:	EnableOutboundFastStart on H.323 Gateway requires MTP and MRL
	Description:	When EnableOutboundFastStart is true for a H.323 Gateway device, the MTPRequired field must also be true, and a Media Resource Group List must be selected. The Media Resource Group List should contain at least one hardware MTP/Transcoder so that all necessary codecs are available for preallocation, which is necessary for FastStart. The validation in this rule does not guarantee that the correct resources are available because it does not check the content of Media Resource Groups.
	Test Condition:	ON INSERT/UPDATE in H323Device for H.323 Gateway (only when values change to protect migrated settings before this restriction was applied): IF (new_EnableOutboundFaststart = 'T') THEN SELECT mtpRequired, fkMediaResourceList INTO mtp, mrl FROM Device where pkid = new_fkDevice); IF (mtp = 'F') OR (mrl IS NULL) THEN throw exception;
	Error Message:	EnableOutboundFaststart cannot be True because the device does not have MTPRequired or is missing a Media Resource Group List
	Remedy:	Enable MTPRequired, and select a Media Resource Group List that contains hardware MTP/Transcoder resources before enabling outbound faststart.

2.3.196.9 fkcallingsearchspace_cntdpntransform (FI-21078)

Type:	guid (Null OK)
Default Value:	NULL

Remarks: Calling Search Space for Connected Party Name Transformation Pattern

2.3.196.10 [fkdevice \(FI-95\)](#)

Type: guid (Unique, Indexed, Cascade Delete)

Migration Source: convert from Device

Rule (RI-297):

Type: Validation (Insert/Update)

Rule Name: SRTP and Outbound Faststart Conflict

Description: The SRTPAllowed and EnableOutboundFastStart settings (for H.323 devices) are mutually exclusive - only one may be true at any given time.

Test Condition: IF (Device.SRTPAllowed = 't') AND (H323Device.EnableOutboundFastStart = 't') THEN throw exception

Error Message: SRTP and Outbound FastStart cannot be enabled at the same time.

Remedy: Disable either SRTP or Outbound FastStart and try again.

Rule (RI-307):

Type: Validation (Insert/Update)

Rule Name: H323 Device

Description: The records in H323Device table must reference a device using H323 or Intercluster Trunk device protocol

Test Condition: H323Device.fkDevice IN (SELECT pkid FROM Device where tkDeviceProtocol IN (2, 8))

Error Message: H323Device table may only reference devices with matching Device Protocol (H225 or Intercluster Trunk).

Remedy: Correct the fkDevice value to refer to an H323 or Intercluster Trunk device.

Rule (RI-308):

Type: Active (Insert/Update)

Rule Name: Set QSIG on Device when Tunneled Protocol changes

Description: When the H323Device.tkTunneledProtocol value changes, update the Device.tkQsig setting on the referenced device

Test Condition: IF H323.tkTunneledProtocol = QSIG THEN set device qsig = all pri qsig ELSE set to H323 for H323 or MIXED NON-QSIG for Intercluster Trunk

Rule (RI-351):

Type: Validation (Insert/Update)

Rule Name: PassingPrecedenceLevelThroughUUIE on non gatekeeper ICT only

Description: The ICTPassingPrecedenceLevelThroughUUIE setting can be TRUE only for non-Gatekeeper Controlled Intercluser Trunk Devices

Test Condition: ON INSERT/UPDATE in H323Device: IF (new_IctPassingPrecedenceLevelThroughUUIE = 't')

		THEN SELECT tkProduct INTO product FROM Device WHERE pkid = new_fkDevice; IF (product <> PRODUCT_ICT_TRUNK) THEN throw exception; END IF;
	Error Message:	This device does not support Passing Precedence Level Through UUIE
Rule (RI-404):	Type:	Validation (Insert/Update)
	Rule Name:	EnableOutboundFastStart on H.323 Gateway requires MTP and MRL
	Description:	When EnableOutboundFastStart is true for a H.323 Gateway device, the MTPRequired field must also be true, and a Media Resource Group List must be selected. The Media Resource Group List should contain at least one hardware MTP/Transcoder so that all necessary codecs are avialable for preallocation, which is necessary for FastStart. The validation in this rule does not guarantee that the correct resources are available because it does not check the content of Media Resource Groups.
	Test Condition:	ON INSERT/UPDATE in H323Device for H.323 Gateway (only when values change to protect migrated settings before this restriction was applied): IF (new_EnableOutboundFaststart = 'T') THEN SELECT mtpRequired, fkMediaResourceList INTO mtp, mrl FROM Device where pkid = new_fkDevice); IF (mtp = 'F') OR (mrl IS NULL) THEN throw exception;
	Error Message:	EnableOutboundFaststart cannot be True because the device does not have MTPRequired or is missing a Media Resource Group List
	Remedy:	Enable MTPRequired, and select a Media Resource Group List that contains hardware MTP/Transcoder resources before enabling outbound faststart.
Rule (RI-602):	Type:	Validation (Insert/Update)
	Rule Name:	Invalid SIP Trunk Service Type
	Description:	Invalid SIP Trunk Service Type
	Test Condition:	Can not change SIP Trunk Service type if it is used by Route Pattern or Route Group or CCD or EMCC or ViPR Service
	Error Message:	Remove the SIP Trunk from Route Pattern or Route Group or CCD or EMCC or ViPR Service before changing its SIP Trunk Service Type

Rule (RI-584):	Type:	Validation (Insert/Update)
	Rule Name:	H323Device.tkASN1RoseOidEncoding and H323Device.tkQSIGVariant Change Restriction
	Description:	If tkTunneledProtocol is not enabled for qsig then tkASN1RoseOidEncoding or tkQSIGVariant in the H323Device table should not be allowed to change from DEFAULT to NON DEFAULT
	Test Condition:	ON INSERT or UPDATE in H323Device: SELECT count(enum) INTO nRows FROM TunneledProtocol where enum = new_tkTunneledProtocol and name = 'QSIG'; IF (nrows=0) throw exception END IF;
	Error Message:	Cannot modify the value since QSIG is not enabled for this device
	Remedy:	Enable the QSIG and change the value

2.3.196.35 useclientconfiguration (FI-1232)

Type:	bool
Default Value:	FALSE

2.3.196.36 usedpconnectedpartytransformationcss (FI-21077)

Type:	bool
Default Value:	TRUE
Remarks:	If set to true fkCallingSearchSpace_CntdPNTransform setting from Device Pool will be used and if false use setting on H323Device including NULL to mean no Calling Search Space. The Default value is TRUE

2.3.196.37 zone (FI-1099)

Type:	string [50]
Default Value:	EMPTY
Validation:	^[a-zA-Z 0-9._-]{0,50}\$

Uniqueness: No multicolumn uniqueness constraints

2.3.197 h323trunkdestination (TI-572)

Description: To store the details of H323 Trunk destination

Fields:

2.3.197.1 address (FI-5884)

Type:	string [255] (Indexed)
Migration Source:	H323Device.EndPointAddress
Remarks:	IP address or host name for this EndPoint instance of the corresponding H323 Device
Rule (RI-487):	

	Type:	Validation (Insert/Update)
	Rule Name:	ICT non-gatekeep trunk needs to have unique endpoint address
	Description:	ICT non-gatekeep trunk needs to have unique endpoint address
	Test Condition:	On Insert or Update H323Device
	Error Message:	ICT non-gatekeep trunk needs to have unique endpoint address
Rule (RI-783):	Type:	Active (Insert/Update)
	Rule Name:	Validation of H323 Trunk Destination Details
	Description:	Number of Destination Addresses that can be configured for a particular H323 Device and the uniqueness of host name or ip address.
	Test Condition:	On insert/update to H323TrunkDestination
	Error Message:	Maximum number of Destination Addresses that can be configured for a particular H323 device is 16. The IP address or host name has to be unique for a particular H323 Device. IP address or host name can be configured for Non-Gatekeeper Controlled Intercluster Trunk device only.

2.3.197.2 [fkh323device \(FI-5883\)](#)

Type:	guid (Cascade Delete, Not Modifiable)	
Remarks:	Points to the corresponding H323 Device record to which the EndPoint Address relates.	
Rule (RI-487):	Type:	Validation (Insert/Update)
	Rule Name:	ICT non-gatekeep trunk needs to have unique endpoint address
	Description:	ICT non-gatekeep trunk needs to have unique endpoint address
	Test Condition:	On Insert or Update H323Device
	Error Message:	ICT non-gatekeep trunk needs to have unique endpoint address
Rule (RI-783):	Type:	Active (Insert/Update)
	Rule Name:	Validation of H323 Trunk Destination Details
	Description:	Number of Destination Addresses that can be configured for a particular H323 Device and the uniqueness of host name or ip address.
	Test Condition:	On insert/update to H323TrunkDestination
	Error Message:	Maximum number of Destination Addresses that can be configured for a particular H323 device is 16. The IP address or host name has to be unique for a particular H323 Device. IP address or host name can be configured for Non-Gatekeeper Controlled Intercluster Trunk device only.

2.3.197.3 [pkid \(FI-5882\)](#)

Type:	guid (Unique, Not Modifiable)
-------	-------------------------------

	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a H323 Trunk Destination record.
	2.3.197.4 sortorder (FI-5885)	
	Type:	long
	Check Constraint:	(SortOrder > 0)
	Remarks:	Numeric value used to control selection logic associated with choosing the next H323TrunkEndPoint address for a given logical H323 Trunk Endpoint. This value should be unique among the set of all endpoint addresses associated with a given H323 Trunk record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.198 hostedroutepattern (TI-2148)

Description:	Numeric route patterns that should be replicated to other clusters	
Fields:	2.3.198.1 description (FI-21243)	
	Type:	string [50]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%\\&<>\\[\]]{0,50}\$
	2.3.198.2 pattern (FI-21231)	
	Type:	string [50] (Unique, Indexed)
	Default Value:	EMPTY
	Remarks:	Numeric route pattern
	Rule (RI-954):	Type: Validation (Insert/Update)
		Rule Name: Validation rules on table HostedRoutePattern
		Description: Verify column values are consistent.
		Test Condition: On INSERT/UPDATE on HostedRoutePattern, verify format of Pattern and values of the PSTN strip and prepend digits settings.
		Error Message: Various
	Rule (RI-955):	Type: Active (Insert/Update/Delete records)
		Rule Name: Generate USNs for HostedRoutePattern

	Description:	Generate update sequence numbers for table HostedRoutePattern.
	Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.
Rule (RI-957):	Type:	Active (Insert/Update)
	Rule Name:	Capitalize pattern on HostedRoutePattern.
	Description:	null
Rule (RI-957):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Capitalize pattern on HostedRoutePattern.
	Description:	null

2.3.198.3 pkid (FI-21230)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-955):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	Generate USNs for HostedRoutePattern
	Description:	Generate update sequence numbers for table HostedRoutePattern.
	Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.

2.3.198.4 pstnfailoverprependdigits (FI-21233)

Type:	string [16]	
Default Value:	EMPTY	
Remarks:	Digits to prepend to called party number when re-routing to the PSTN.	
Rule (RI-954):	Type:	Validation (Insert/Update)
	Rule Name:	Validation rules on table HostedRoutePattern
	Description:	Verify column values are consistent.
	Test Condition:	On INSERT/UPDATE on HostedRoutePattern, verify format of Pattern and values of the PSTN strip and prepend digits settings.
	Error Message:	Various
Rule (RI-955):	Type:	Active (Insert/Update/Delete records)

	<table> <tr> <td>Rule Name:</td><td>Generate USNs for HostedRoutePattern</td></tr> <tr> <td>Description:</td><td>Generate update sequence numbers for table HostedRoutePattern.</td></tr> <tr> <td>Test Condition:</td><td>On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.</td></tr> </table>	Rule Name:	Generate USNs for HostedRoutePattern	Description:	Generate update sequence numbers for table HostedRoutePattern.	Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.				
Rule Name:	Generate USNs for HostedRoutePattern										
Description:	Generate update sequence numbers for table HostedRoutePattern.										
Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.										
2.3.198.5 pstnfailoverstripdigits (FI-21232)											
Type:	long										
Default Value:	0										
Remarks:	Number of leading digits to remove from the called party number when re-routing to the PSTN.										
Rule (RI-954):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Validation rules on table HostedRoutePattern</td></tr> <tr> <td>Description:</td><td>Verify column values are consistent.</td></tr> <tr> <td>Test Condition:</td><td>On INSERT/UPDATE on HostedRoutePattern, verify format of Pattern and values of the PSTN strip and prepend digits settings.</td></tr> <tr> <td>Error Message:</td><td>Various</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Validation rules on table HostedRoutePattern	Description:	Verify column values are consistent.	Test Condition:	On INSERT/UPDATE on HostedRoutePattern, verify format of Pattern and values of the PSTN strip and prepend digits settings.	Error Message:	Various
Type:	Validation (Insert/Update)										
Rule Name:	Validation rules on table HostedRoutePattern										
Description:	Verify column values are consistent.										
Test Condition:	On INSERT/UPDATE on HostedRoutePattern, verify format of Pattern and values of the PSTN strip and prepend digits settings.										
Error Message:	Various										
Rule (RI-955):	<table> <tr> <td>Type:</td><td>Active (Insert/Update/Delete records)</td></tr> <tr> <td>Rule Name:</td><td>Generate USNs for HostedRoutePattern</td></tr> <tr> <td>Description:</td><td>Generate update sequence numbers for table HostedRoutePattern.</td></tr> <tr> <td>Test Condition:</td><td>On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.</td></tr> </table>	Type:	Active (Insert/Update/Delete records)	Rule Name:	Generate USNs for HostedRoutePattern	Description:	Generate update sequence numbers for table HostedRoutePattern.	Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.		
Type:	Active (Insert/Update/Delete records)										
Rule Name:	Generate USNs for HostedRoutePattern										
Description:	Generate update sequence numbers for table HostedRoutePattern.										
Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.										
2.3.198.6 <u>tkglobalnumber</u> (FI-21242)											
Type:	enum										
Default Value:	100										
Remarks:	Categorizes the pattern as specific type of global number.										
Rule (RI-955):	<table> <tr> <td>Type:</td><td>Active (Insert/Update/Delete records)</td></tr> <tr> <td>Rule Name:</td><td>Generate USNs for HostedRoutePattern</td></tr> <tr> <td>Description:</td><td>Generate update sequence numbers for table HostedRoutePattern.</td></tr> <tr> <td>Test Condition:</td><td>On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.</td></tr> </table>	Type:	Active (Insert/Update/Delete records)	Rule Name:	Generate USNs for HostedRoutePattern	Description:	Generate update sequence numbers for table HostedRoutePattern.	Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.		
Type:	Active (Insert/Update/Delete records)										
Rule Name:	Generate USNs for HostedRoutePattern										
Description:	Generate update sequence numbers for table HostedRoutePattern.										
Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.										
2.3.198.7 <u>tkhostedroutepatternpstnrule</u> (FI-25598)											
Type:	enum										
Default Value:	2										
Remarks:	Specifies the method for deriving the PSTN Failover Number.										

	Rule (RI-955):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Generate USNs for HostedRoutePattern
		Description:	Generate update sequence numbers for table HostedRoutePattern.
		Test Condition:	On INSERT/UPDATE/DELETE on HostedRoutePattern, generate USN as necessary.
Uniqueness:	pattern + pstnfailoverstripdigits + pstnfailoverprependdigits + tkglobalnumber is unique. (MFI-786)		

2.3.199 hosteduri (TI-1087)

Description:	URI member of HostedURICatalog		
Fields:	2.3.199.1 hosteduricatalogkey_id (FI-25759)		
	Type:	long (Not Modifiable)	
	Remarks:	Hosted Catalog Key ID	
	Rule (RI-877):	Type:	Active (Insert)
		Rule Name:	HostedURI USN assignment
		Description:	Assign unique HostedURI.usn
		Test Condition:	On INSERT and usn IS NULL
	2.3.199.2 pattern (FI-25760)		
	Type:	string [255] (Indexed, Not Modifiable)	
	Default Value:	EMPTY	
	Remarks:	ILS Learned Pattern for Hosted URI.	
	Rule (RI-891):	Type:	Active (Insert/Update)
		Rule Name:	Encode URIs to minimum percent encoded format.
		Description:	null
	Rule (RI-891):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Encode URIs to minimum percent encoded format.
		Description:	null
	2.3.199.3 pkid (FI-10170)		
	Type:	guid (Unique, Indexed)	

	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
	2.3.199.4 pstnfailover (FI-25762)		
	Type:	string [50]	
	Default Value:	EMPTY	
	2.3.199.5 tkpatternusage (FI-25761)		
	Type:	enum	
	Default Value:	22	
	Remarks:	Pattern usage for ILS Learned Pattern Hosted URI	
	2.3.199.6 usn (FI-10173)		
	Type:	long (Indexed)	
	Remarks:	Update sequence number for intercluster replication.	
	Rule (RI-877):	Type:	Active (Insert)
		Rule Name:	HostedURI USN assignment
		Description:	Assign unique HostedURI.usn
		Test Condition:	On INSERT and usn IS NULL
Rule (RI-877):	Type:	Active (Insert) This field is modified by this rule.	
	Rule Name:	HostedURI USN assignment	
	Description:	Assign unique HostedURI.usn	
	Test Condition:	On INSERT and usn IS NULL	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.200 hosteduricatalog (TI-1079)

Description:	Set of URIs homed on external systems for which this cluster acts as a publisher to other clusters in the ILS network.		
Fields:	2.3.200.1 description (FI-10163)		
	Type:	string [80] (Null OK)	
	Default Value:	EMPTY	

Remarks: Description of the catalog.

2.3.200.2 loadedfilename (FI-10159)

Type: string [255] (Null OK)

Default Value: EMPTY

Remarks: Name of the administrator-specified URI file most recently loaded.

Rule (RI-876):

Type: Active (Insert/Update)

Rule Name: HostedURICatalog timestamp

Description: Update TimestampLoadedUTC when LoadedFilename changes

Test Condition: On INSERT/UPDATE, if LoadedFilename has changed, set timestamp to current UTC time

2.3.200.3 name (FI-10162)

Type: string [50] (Unique)

Validation: ^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{|}~-]{1,50}\$

Remarks: Unique name for this catalog.

2.3.200.4 peerid (FI-10165)

Type: guid (Not Modifiable)

Remarks: Unique identifier on the ILS network. This value cannot be modified after the collection has been created.

Rule (RI-879):

Type: Active (Insert)

Rule Name: HostedURICatalog peerid

Description: Initialize peerid to unique UUID

Test Condition: On INSERT and peerid IS NULL

Rule (RI-879):

Type: Active (Insert)
This field is modified by this rule.

Rule Name: HostedURICatalog peerid

Description: Initialize peerid to unique UUID

Test Condition: On INSERT and peerid IS NULL

2.3.200.5 pkid (FI-10161)

Type: guid (Unique, Indexed)

Default Value: newid()

Migration Source: Generated

Remarks:	Unique ID to identify a record.	
Rule (RI-2134):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	HostedURICatalog Event Handler
	Description:	Active Rule to Drive applicable HostedURICatalog changes through to the HostedURICatalogKey table.

2.3.200.6 replicationset (FI-10227)

Type:	long	
Default Value:	0	
Remarks:	Catalog's replication set	
Rule (RI-881):	Type:	Active (Insert/Update)
	Rule Name:	HostedURICatalog replicationset
	Description:	Assign new ReplicationSet if ResultFileName changes
	Test Condition:	On INSERT or UPDATE assign new ReplicationSet if ResultFileName changes
Rule (RI-881):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	HostedURICatalog replicationset
	Description:	Assign new ReplicationSet if ResultFileName changes
	Test Condition:	On INSERT or UPDATE assign new ReplicationSet if ResultFileName changes

2.3.200.7 resultfilename (FI-10166)

Type:	string [80] (Null OK)	
Default Value:	EMPTY	
Remarks:	Name of file generated for ILS.	
Rule (RI-881):	Type:	Active (Insert/Update)
	Rule Name:	HostedURICatalog replicationset
	Description:	Assign new ReplicationSet if ResultFileName changes
	Test Condition:	On INSERT or UPDATE assign new ReplicationSet if ResultFileName changes

2.3.200.8 routestring (FI-10164)

Type:	string [255]
Validation:	^[0-9a-zA-Z.--]{0,255}\$

	Remarks:	Administrator-defined character string to which SIP Route Pattern is compared.		
	2.3.200.9 timestamploadedutc (FI-10160)			
	Type:	long (Null OK)		
	Default Value:	0		
	Remarks:	Date/time the catalog was loaded.		
	Rule (RI-876):	Type:	Active (Insert/Update)	
		Rule Name:	HostedURICatalog timestamp	
		Description:	Update TimestampLoadedUTC when LoadedFilename changes	
		Test Condition:	On INSERT/UPDATE, if LoadedFilename has changed, set timestamp to current UTC time	
	Rule (RI-876):	Type:	Active (Insert/Update) This field is modified by this rule.	
		Rule Name:	HostedURICatalog timestamp	
		Description:	Update TimestampLoadedUTC when LoadedFilename changes	
		Test Condition:	On INSERT/UPDATE, if LoadedFilename has changed, set timestamp to current UTC time	
	Uniqueness:	No multicolumn uniqueness constraints		

2.3.201 hosteduricatalogkey (TI-2612)

Description:	Non Reference Index constrained map between HostedURI and HostedURICatalog		
Fields:	2.3.201.1 fkhosteduricatalog (FI-25764)		
	Type:	guid (Indexed, Null OK)	
	Default Value:	NULL	
	Remarks:	Pkid reference from HostedURICatalog.	
	2.3.201.2 hosteduricatalogkey_id (FI-25765)		
	Type:	long (Unique, Indexed, Not Modifiable)	
	Remarks:	A reasonable sized key. Generated for use from HostedURI to reference associated Hosted URI Catalog.	
	Rule (RI-2133):	Type:	Active (Insert) This field is modified by this rule.
		Rule Name:	HostedURICatalogKey_ID Generator
Description:		Active Insert Rule to Generate Unique HostedURICatalogKey_ID Surrogate Key based on pkid.	

	2.3.201.3 isdeleted (FI-25766)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	When true, the associated Hosted URI Catalog has been deleted but all dependent Hosted URIs are not yet scrubbed.	
	2.3.201.4 pkid (FI-25763)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
	Rule (RI-2133):	Type:	Active (Insert)
		Rule Name:	HostedURICatalogKey_ID Generator
Description:		Active Insert Rule to Generate Unique HostedURICatalogKey_ID Surrogate Key based on pkid.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.202 httpinterfaceaddress (TI-2158)		
Description:	Contain HTTP Interface info which is used for TelePresence conference bridge management	
Fields:	2.3.202.1 address (FI-21279)	
	Type:	string [255]
	Default Value:	EMPTY
	Remarks:	IPV4/IPV6address/hostname for HTTP desitination address for TelePresence Conference Bridge
	2.3.202.2 fkdevicemanagementinfo (FI-21278)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	Reference to a specific DeviceManagementInfo
	2.3.202.3 pkid (FI-21277)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.203 httpprofile (TI-2164)

Description: Http Profile Information, stores URI information relating to various Http services such as Video Quality of Service

Fields:

2.3.203.1 password (FI-21319)

Type: string [255]

Remarks: HTTP Service login password

2.3.203.2 pkid (FI-21314)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique ID to identify a record.

2.3.203.3 profilename (FI-21315)

Type: string [50] (Unique, Indexed)

Validation: ^[a-zA-Z 0-9._-]{1,50}\$

Remarks: Unique identification of the HTTPProfile.

2.3.203.4 routingrequesttimer (FI-21320)

Type: long

Default Value: 1500

Check Constraint: (RoutingRequestTimer >= 0) AND (RoutingRequestTimer <=60000)

Remarks: This timer specifies the maximum time, in milliseconds, that Cisco Unified Communications Manager will wait for the response from the web service.

2.3.203.5 tkhttpprofile (FI-21316)

Type: enum (Unique)

Remarks: Specifies the HTTP Profile Usage

2.3.203.6 username (FI-21318)

Type: string [255]

Remarks: HTTP Service login user name

2.3.203.7 webservicerooturi (FI-21317)

Type: string [255]

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,255}\$

Remarks: Base URI which is joined with the associated connection type and extension to form a full URI.

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.204 httpprofileuriextension (TI-2165)

Description:	Http Profile URI Extension Information which specifies the URI extensions and profile type for a Http Profile.		
Fields:	2.3.204.1 fkhttpprofile (FI-21322)		
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)	
	Remarks:	Reference to the Http Profile	
	2.3.204.2 pkid (FI-21321)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.204.3 tkhttpprofileuri (FI-21323)		
	Type:	enum	
	Remarks:	Specifies the type of HTTP Profile URI	
	2.3.204.4 uriextension (FI-21324)		
	Type:	string [512]	
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,512}\$	
	Remarks:	Specifies the URI extension which is appended to the associated profile's webServiceRootURI.	
Uniqueness:	fkhttpprofile + tkhttpprofileuri is unique. (MFI-785)		

2.3.205 httpproxyexception (TI-2600)

Description:	Stores Exception details for Wireless LAN HTTP Proxy.		
Fields:	2.3.205.1 fknetworkaccessprofile (FI-25702)		
	Type:	guid (Cascade Delete)	
	Remarks:	Reference to Wireless LAN Network Access Setting.	
	Rule (RI-2144):	Type:	Active (Insert/Update)
		Rule Name:	On Active Insert/Update of HttpProxyException,update WirelessLANProfileGroup versionstamp
		Description:	On Insert/Update of HttpProxyException,the versionstamp of corresponding

			WirelessLANProfileGroup should be updated to current time.
		Test Condition:	For INSERT/UPDATE of HttpProxyException,UPDATE WirelessLANProfileGroup SET versionstamp = versionStampGenerator()
	Rule (RI-2146):	Type:	Active (Delete)
		Rule Name:	On Active Delete of HttpProxyException,update WirelessLANProfileGroup versionstamp
		Description:	On Delete of HttpProxyException,the versionstamp of corresponding WirelessLANProfileGroup should be updated to current time.
		Test Condition:	For DELETE of HttpProxyException,UPDATE WirelessLANProfileGroup SET versionstamp = versionStampGenerator()
	2.3.205.2 pkid (FI-25701)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
	2.3.205.3 uri (FI-25703)		
	Type:	string [255]	
	Remarks:	HTTP Proxy Exception URI	
Uniqueness:	fknetworkaccessprofile + uri is unique. (MFI-792)		

2.3.206 huntpilotqueue (TI-543)		
Description:	To store settings used by Queue calls in hunt pilot	
Fields:	2.3.206.1 fkcallingsearchspace_maxwaittime (FI-6263)	
	Type:	guid (Indexed, Null OK)
	Default Value:	NULL
	Remarks:	Wait Time Reached Route Call to CSS
	2.3.206.2 fkcallingsearchspace_noagent (FI-6265)	
	Type:	guid (Indexed, Null OK)
	Default Value:	NULL
	Remarks:	Route Call to CSS if no agent logged in or registered
	2.3.206.3 fkcallingsearchspace_pilotqueuefull (FI-6260)	

Type:	guid (Indexed, Null OK)
Default Value:	NULL
Remarks:	Queue Full Route Call to CSS

2.3.206.4 **fknumplan_pilot (FI-6257)**

Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)	
Remarks:	Hunt Pilot using the Queue	
Rule (RI-867):	Type:	Active (Insert/Update)
	Rule Name:	Associate a pattern with Native Call Queue
	Description:	The NumPlan record associated with a Native Call Queue must be a HuntPilot (tkpatternusage = 7)
	Test Condition:	ON INSERT/UPDATE IN HuntPilotQueue IF ((SELECT tkPatternUsage FROM NumPlan WHERE pkid = @HuntPilotQueue.fkNumPlan_Pilot) <> 7) THEN throw exception
	Error Message:	Cannot associate a Pattern that is not a Hunt Pilot with a Native Call Queue (tkpatternusage = 7).
	Remedy:	Make sure the usage of the Pattern is Hunt Pilot (tkpatternusage = 7)

2.3.206.5 **maxcallersinqueue (FI-6258)**

Type:	long
Default Value:	32
Check Constraint:	(MaxCallersInQueue >= 1) AND (MaxCallersInQueue <= 100)
Remarks:	Max Number of Callers Allowed in Queue

2.3.206.6 **maxwaittimedestination (FI-6262)**

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	NULL
Validation:	^[0-9*#+X]{0,50}\$
Remarks:	Wait Time Reached Route Call to DN

2.3.206.7 **maxwaittimeinqueue (FI-6261)**

Type:	long
Default Value:	900
Check Constraint:	(MaxWaitTimeInQueue >= 10) AND (MaxWaitTimeInQueue <=3600)
Remarks:	Max Queue Wait Time

2.3.206.8 **networkholdmohaudiosourceid (FI-6266)**

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(NetworkHoldMOHAudioSourceID >= 0) AND (NetworkHoldMOHAudioSourceID <= 51)
Remarks:	Network Hold Audio Source ID

2.3.206.9 noagentdestination (FI-6264)

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	NULL
Validation:	^[0-9*#+X]{0,50}\$
Remarks:	Route Call to DN if no agent logged in or registered

2.3.206.10 pkid (FI-6256)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique identifier for native queue call record

2.3.206.11 queuefulldestination (FI-6259)

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	NULL
Validation:	^[0-9*#+X]{0,50}\$
Remarks:	Queue Full Route Call to DN

Uniqueness: No multicolumn uniqueness constraints

2.3.207 imsintegratedmobile (TI-547)

Description: Settings specific to IMS Integrated Mobile devices (IMS Clients)

2.3.207.1 blockincomingcallswhenroaming (FI-10135)

Type:	bool
Default Value:	FALSE
Remarks:	Block incoming calls on the IMS Client when it is outside its home network

2.3.207.2 [fkdevice \(FI-10133\)](#)

Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)
Remarks:	Reference to an IMS Integrated Mobile Device

2.3.207.3 [homenetworkid \(FI-10136\)](#)

Type:	string [1024]								
Default Value:	EMPTY								
Validation:	^[^\x00-\x1F""\{\}]{0,254}\$								
Remarks:	Network name or identifier of the IMS Client home network. Required for blocking incoming calls when roaming								
Rule (RFI-302):	<table><tr><td>Type:</td><td>Inter-field Condition and Constraint</td></tr><tr><td>Test Condition:</td><td>BlockIncomingCallsWhenRoaming = 't'</td></tr><tr><td>Constraint:</td><td>HomeNetworkID <> "</td></tr><tr><td>Remarks:</td><td>Home Network ID is required if Block Incoming Calls When Roaming is True</td></tr></table>	Type:	Inter-field Condition and Constraint	Test Condition:	BlockIncomingCallsWhenRoaming = 't'	Constraint:	HomeNetworkID <> "	Remarks:	Home Network ID is required if Block Incoming Calls When Roaming is True
Type:	Inter-field Condition and Constraint								
Test Condition:	BlockIncomingCallsWhenRoaming = 't'								
Constraint:	HomeNetworkID <> "								
Remarks:	Home Network ID is required if Block Incoming Calls When Roaming is True								

2.3.207.4 [pkid \(FI-10132\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)
Remarks:	Unique identifier for the record

2.3.207.5 [requirethirdpartyregistration \(FI-10134\)](#)

Type:	bool
Default Value:	FALSE
Remarks:	Require client registration (with an application server) prior to allowing any incoming or outgoing calls

Uniqueness: No multicolumn uniqueness constraints

2.3.208 [incomingtransformationprofile \(TI-645\)](#)

Description: Incoming Transformation Profile

Fields:

2.3.208.1 [description \(FI-5279\)](#)

Type:	string [512]
Default Value:	EMPTY
Validation:	^[^%&<>\\'"]{0,128}\$
Remarks:	Description is up to 128 characters including Unicode

2.3.208.2 [fkcallingsearchspace_intl \(FI-5320\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	International Number

2.3.208.3 [fkcallingsearchspace_national \(FI-5319\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	National Number

2.3.208.4 [fkcallingsearchspace_subscriber \(FI-5322\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Subscriber Number

2.3.208.5 [fkcallingsearchspace_unknown \(FI-5321\)](#)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Unknown Number

2.3.208.6 internationalprefix (FI-5316)

Type:	string [16]
Default Value:	Default
Validation:	^([0-9*#+]{0,16} [Dd]efault)\$
Remarks:	International Prefix

2.3.208.7 internationalstripdigits (FI-5312)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(InternationalStripDigits >= 0) AND (InternationalStripDigits <= 24)
Remarks:	International Strip Digits

2.3.208.8 name (FI-5278)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Remarks:	Name of the IncomingTransformationProfile

2.3.208.9 nationalprefix (FI-5315)

Type:	string [16]
Default Value:	Default
Validation:	^([0-9*#+]{0,16} [Dd]efault)\$
Remarks:	National Prefix

2.3.208.10 nationalstripdigits (FI-5311)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(NationalStripDigits >= 0) AND (NationalStripDigits <= 24)
Remarks:	National Strip Digits

2.3.208.11 pkid (FI-5277)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record

2.3.208.12 subscriberprefix (FI-5318)

Type:	string [16]
Default Value:	Default
Validation:	^([0-9*#+]{0,16} [Dd]efault)\$
Remarks:	Subscriber Prefix

2.3.208.13 subscriberstripdigits (FI-5314)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(SubscriberStripDigits >= 0) AND (SubscriberStripDigits <= 24)
Remarks:	Subscriber Strip Digits

2.3.208.14 unknownprefix (FI-5317)

Type:	string [16]
Default Value:	Default
Validation:	^([0-9*#+]{0,16} [Dd]efault)\$
Remarks:	Unknown Prefix

2.3.208.15 unknownstripdigits (FI-5313)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(UnknownStripDigits >= 0) AND (UnknownStripDigits <= 24)
Remarks:	Unknown Strip Digits

Uniqueness: No multicolumn uniqueness constraints

2.3.209 installmonitor (TI-212)

Description: Used to send change notification of subscriber install

Fields: 2.3.209.1 datetimestamp (FI-1409)

Type:	long
Default Value:	0
Remarks:	Time stamp

2.3.209.2 id (FI-1407)

Type:	identity (Unique)
Remarks:	Unique orderable id.

2.3.209.3 nodename (FI-1408)

Type:	string [255] (Unique)
Default Value:	EMPTY
Remarks:	Name of Subscriber pulling subscription

2.3.209.4 pkid (FI-1406)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Used only to trigger MakeDB to generate Change Notification triggers

Uniqueness: No multicolumn uniqueness constraints

2.3.210 interclusterserviceprofile (TI-523)

Description: Locally configured intercluster services information

Fields: 2.3.210.1 fkdevice_sip (FI-3984)

	Type:	guid (Null OK)	
	Default Value:	NULL	
	Remarks:	Pkid that points to dynamic SIP trunk device.	
	Rule (RFI-231):	Type:	Inter-field Condition and Constraint
		Test Condition:	tkInterClusterService =2 OR tkInterClusterService =3
		Constraint:	fkDevice_Sip IS NOT NULL OR IsActivated='f'
		Remarks:	SIP Device can not be empty for PSTNAccess and RSVPagent service if activated
	Rule (RI-610):	Type:	Validation (Insert/Update)
		Rule Name:	Only EMCC SIP Trunk can be assigned to Intercluster Service Profile
		Description:	Only EMCC SIP Trunk can be assigned to Intercluster Service Profile
		Test Condition:	Only EMCC SIP Trunk can be assigned to Intercluster Service Profile
		Error Message:	Change SIP Trunk Service Type to EMCC before associated the trunk to Intercluster Service Profile
	2.3.210.2 isactivated (FI-3985)		
	Type:	bool	
	Default Value:	F	
	2.3.210.3 pkid (FI-3982)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
2.3.210.4 tkinterclusterservice (FI-3983)			
Type:	enum (Unique)		
Default Value:	1		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.211 intercomdynamic (TI-490)		
Description:	Reserved for future use; Current device association for Intercom line when used with EM. Insert/Delete is not allowed.	
Fields:	2.3.211.1 datetimestamp (FI-3646)	

	Type:	long (Not Modifiable)
	Default Value:	0
	Remarks:	Time value for last change (for replication conflict resolution)
	2.3.211.2 fkdevice (FI-3645)	
	Type:	guid (Null OK)
	Default Value:	NULL
	Remarks:	Reserved for future use; References the current active device associated with an intercom for EM
	2.3.211.3 fknumplan (FI-3644)	
	Type:	guid (Unique, Cascade Delete, Not Modifiable)
	Remarks:	References Intercom pattern in NumPlan table
	2.3.211.4 pkid (FI-3643)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.211.5 versionstamp (FI-3647)	
	Type:	string [47] (Null OK)
	Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
	Remarks:	New guid plus seconds past midnight 1970 are concatenated
	Uniqueness:	No multicolumn uniqueness constraints

2.3.212 ipmalineinfo (TI-244)

Description:	IPMA relationship between two lines for two users	
Fields:	2.3.212.1 fkenduser (FI-1764)	
	Type:	guid (Cascade Delete)
	Remarks:	Asst?
	2.3.212.2 fknumplan (FI-1765)	
	Type:	guid (Cascade Delete)
	2.3.212.3 ikipmalineinfo (FI-1767)	
	Type:	guid (Null OK)

	Remarks:	Manager's line
	2.3.212.4 isprimary (FI-1766)	
	Type:	bool
	Default Value:	FALSE
	2.3.212.5 lineindex (FI-1768)	
	Type:	long
	Remarks:	Ordering of lines.
	2.3.212.6 pkid (FI-1763)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.213 ipmamanagerassistant (TI-242)

Description:	Relationship for IPMA between a manager and an assistant	
Fields:	2.3.213.1 <u>fkenduser_assistant</u> (FI-1744)	
	Type:	guid (Cascade Delete)
	2.3.213.2 <u>fkenduser_manager</u> (FI-1743)	
	Type:	guid (Cascade Delete)
	2.3.213.3 pkid (FI-1742)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.214 ipmastaticdata (TI-243)

Description:	IPMA data that used to be in a BLOB	
Fields:	2.3.214.1 diverttargetnumber (FI-1756)	

Type:	dn
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	EMPTY

2.3.214.2 filterexclusive (FI-1759)

Type:	string [1024]
Default Value:	EMPTY
Validation:	^(?!.{1025,})[0-9*+X]+(~&^[0-9*+X]+)*\$
Remarks:	digit strings (0-9*+X) separated by delimiter "~&^"

2.3.214.3 filterinclusive (FI-1758)

Type:	string [1024]
Default Value:	EMPTY
Validation:	^(?!.{1025,})[0-9*+X]+(~&^[0-9*+X]+)*\$
Remarks:	digit strings (0-9*+X) separated by delimiter "~&^"

2.3.214.4 fkdevice (FI-1747)

Type:	guid (Cascade Delete)
-------	-----------------------

2.3.214.5 fkenduser (FI-1746)

Type:	guid (Cascade Delete)
-------	-----------------------

2.3.214.6 fkenduser_defaultsst (FI-1757)

Type:	guid (Null OK)
-------	----------------

2.3.214.7 fknumpplan_intercomdn (FI-1748)

Type:	guid (Null OK)
-------	----------------

2.3.214.8 fknumpplan_primarydn (FI-1761)

Type:	guid (Null OK)
-------	----------------

2.3.214.9 mobilemanager (FI-1760)

Type:	bool
Default Value:	FALSE

2.3.214.10 pkid (FI-1745)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

	2.3.214.11 settingsdata (FI-1762)	
	Type:	string [25000]
	Default Value:	EMPTY
	2.3.214.12 shortcutkeys (FI-1749)	
	Type:	string [1024]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_`{ }~\\-]{0,1024}\$
	2.3.214.13 tkipmalinemode (FI-1750)	
	Type:	enum
	Default Value:	1
	2.3.214.14 tkipmatarget_divert (FI-1754)	
	Type:	enum
	Default Value:	2
Uniqueness:	No multicolumn uniqueness constraints	

2.3.215 ipmauser (TI-193)

Description: Additional IPMA information not in EndUser

Fields:	2.3.215.1 alerttone (FI-3281)	
	Type:	bool
	Default Value:	TRUE
	2.3.215.2 assistantwatch (FI-1191)	
	Type:	bool
	Default Value:	FALSE
	2.3.215.3 available (FI-1190)	
	Type:	bool
	Default Value:	FALSE
	2.3.215.4 callplaneoverwriteenabled (FI-3154)	
	Type:	bool
	Default Value:	TRUE

Remarks:	True to allow screen refresh while on call, false to prevent screen refresh while attending a call
----------	--

2.3.215.5 desktopauthenticated (FI-1189)

Type:	bool
Default Value:	FALSE

2.3.215.6 dnd (FI-1192)

Type:	bool
Default Value:	FALSE

2.3.215.7 filter (FI-1194)

Type:	bool
Default Value:	FALSE

2.3.215.8 filtertype (FI-1195)

Type:	long (Null OK)
Default Value:	NULL

2.3.215.9 [fkenduser](#) (FI-1186)

Type:	guid (Unique, Cascade Delete, Null OK)
Default Value:	NULL
Migration Source:	EndUser.pkid for userId

2.3.215.10 phoneauthenticated (FI-1188)

Type:	bool
Default Value:	FALSE

2.3.215.11 pkid (FI-1185)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.215.12 pool (FI-3282)

Type:	long
Default Value:	1
Check Constraint:	(pool >= 1) AND (pool <= 10)
Remarks:	IPMA Pool from Service Parameters (ID 1 to 10)

2.3.215.13 sac (FI-1193)

	Type:	bool
	Default Value:	FALSE
	2.3.215.14 secretkey (FI-1196)	
	Type:	string [64]
	Default Value:	EMPTY
	2.3.215.15 selecteduserid (FI-1197)	
	Type:	string [64]
	Default Value:	EMPTY
	2.3.215.16 smartsortenabled (FI-3155)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	True to sort display by call state, false to sort in defined order
	2.3.215.17 usertype (FI-1187)	
	Type:	long
	Default Value:	0
	Uniqueness: No multicolumn uniqueness constraints	

2.3.216 ivruserlocale (TI-455)

Description:	Order of prompts for IVR menus	
Fields:	2.3.216.1 orderindex (FI-3418)	
	Type:	long
	Check Constraint:	(orderIndex >= 1) AND (orderIndex <= 9)
	Remarks:	Sort order for locales offered for IVR prompts
	2.3.216.2 pkid (FI-3416)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.216.3 tkuserlocale (FI-3417)	
	Type:	enum (Unique)

	Remarks:	Locale used for IVR prompts (Mobility features)
--	----------	---

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.217 lbmgroup (TI-534)

Description:	Location Bandwidth Manager Group refers to the group of nodes that have LBM service activated
--------------	---

Fields:	
---------	--

2.3.217.1 description (FI-9964)

Type:	string [512]
-------	--------------

Default Value:	EMPTY
----------------	-------

Validation:	^[^%&<>\\\"'"]{0,128}\$
-------------	-------------------------

Remarks:	Description is up to 128 characters including Unicode
----------	---

2.3.217.2 fkprocessnode_active (FI-9965)

Type:	guid (Indexed, Null OK)
-------	-------------------------

Remarks:	Active node/server that has LBM service activated
----------	---

2.3.217.3 fkprocessnode_standby (FI-9966)

Type:	guid (Indexed, Null OK)
-------	-------------------------

Remarks:	Standby node/server that has LBM service activated
----------	--

2.3.217.4 name (FI-9963)

Type:	string [50] (Unique)
-------	----------------------

Validation:	^[a-zA-Z 0-9._-]{1,50}\$
-------------	--------------------------

Remarks:	Name of the Location Bandwidth Manager Group
----------	--

2.3.217.5 pkid (FI-9962)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Migration Source:	Generated
-------------------	-----------

Remarks:	Unique ID to identify a Location Bandwidth Manager Group
----------	--

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

Constraints:	
--------------	--

Rule (RFI-320):	
-----------------	--

Type:	Inter-field Condition and Constraint
-------	--------------------------------------

Constraint:	(fkProcessnode_Active IS NULL) OR (EXISTS (SELECT 1 FROM Processnode P, TypeProcessNodeRole TPR WHERE P.pkid = fkProcessnode_Active AND P.tkprocessnoderole =
-------------	--

			TPR.enum and TPR.moniker = 'PROCESS_NODE_ROLE_VOICE'))
		Remarks:	Only VOICE node can be an active member of LBM Group.
	Rule (RFI-321):	Type:	Inter-field Condition and Constraint
		Constraint:	(fkProcessnode_Standby IS NULL) OR (EXISTS (SELECT 1 FROM Processnode P, TypeProcessNodeRole TPR WHERE P.pkid = fkProcessnode_Standby AND P.tkprocessnoderole = TPR.enum and TPR.moniker = 'PROCESS_NODE_ROLE_VOICE'))
		Remarks:	Only VOICE node can be a standby member of LBM Group.

2.3.218 lbmhubgroup (TI-548)

Description: Defines a group of LBM nodes that serve as the hub contact list for the associated spoke LBM nodes. The hub group member could be a local or remote LBM hub node

Fields:

2.3.218.1 description (FI-6281)		
Type:	string [400]	
Default Value:	EMPTY	
Validation:	^[^\x00-\x1F""%&<>]{0,100}\$	
Remarks:	Description is up to 100 characters in any language	
2.3.218.2 hostorip_primary (FI-6282)		
Type:	string [255]	
Validation:	^[a-zA-Z0-9][a-zA-Z0-9.-]{0,253}[a-zA-Z0-9]\$	
Remarks:	Primary member of LBM Hub Group. If your network uses DNS services, you can enter the host name of the Cisco CallManager server. Otherwise, you must enter the full IP address of the server.	
Rule (RI-859):	Type:	Active (Insert/Update)
	Rule Name:	LBM Hub Group Members Restriction
	Description:	For every Insert/Update of LBMHubGroup members, all Host Names are resolved to an IP Address, and all IP addresses are compared to ensure there are no duplicates. This prevents a user from entering both the IP Address and Host Name for the same server.
	Test Condition:	ON INSERT, UPDATE
	Error Message:	LBMHubGroup member already exists. Only one entry for a server is allowed, using either host name or IP Address.
	Remedy:	Check to see if a server with this name or IP address already exists.

2.3.218.3 hostorip_secondary (FI-6283)

Type:	string [255]												
Default Value:	EMPTY												
Validation:	^[a-zA-Z0-9][a-zA-Z0-9.-]{0,253}[a-zA-Z0-9]\$												
Remarks:	Secondary member of LBM Hub Group. If your network uses DNS services, you can enter the host name of the Cisco CallManager server. Otherwise, you must enter the full IP address of the server.

2.3.218.5 name (FI-6280)

Type:	string [50] (Unique, Indexed)
-------	-------------------------------

	Validation:	^[a-zA-Z 0-9._-]{1,50}\$	
	Remarks:	Name of the Location Bandwidth Manager Hub Group	
	2.3.218.6 pkid (FI-6279)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify LBM Hub Group configured	
	Rule (RI-889):	Type:	Active (Delete)
		Rule Name:	Delete of LBMHubGroup
		Description:	When LBMHubGroup is deleted, set the fkLBMHubGroup reference in ProcessNode to NULL
		Test Condition:	ON DELETE FROM LBMHubGroup:FOREACH SELECT pkid from ProcessNode WHERE fkLBMHubGroup = old_pkid UPDATE ProcessNode SET fkLBMHubGroup = 'NULL';END FOREACH;
Uniqueness:	No multicolumn uniqueness constraints		

2.3.219 ldapauthentication (TI-251)

Description:	Used for authentication with Corp. Dir. Insert/Delete is not allowed.		
Fields:	2.3.219.1 authenticatewithcorpdn (FI-1778)		
	Type:	bool	
	Default Value:	FALSE	
	2.3.219.2 ldapdn (FI-1729)		
	Type:	string [256]	
	Default Value:	EMPTY	
	2.3.219.3 ldappassword (FI-1730)		
	Type:	string [129]	
	Default Value:	EMPTY	
	Rule (RI-764):	Type:	Validation (Insert/Update)
		Rule Name:	LDAPPassword length restriction for LDAPAuthentication Table

		Description:	on insert/update to check the lenght of the ldappassword field and throw an error accordingly
		Test Condition:	On Insert to LDAPAuthentication
		Error Message:	The encrypted form of the password is too large to be stored. Use a shorter or less complex password.
	2.3.219.4 pkid (FI-1726)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.219.5 userbase (FI-1731)		
	Type:	string [256]	
	Default Value:	EMPTY	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.220 ldapauthenticationhost (TI-262)

Description:	LDAP Server host name for authentication		
Fields:	2.3.220.1 hostname (FI-1847)		
	Type:	string [128]	
	Default Value:	Host Name	
	2.3.220.2 pkid (FI-1845)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.220.3 portnumber (FI-1939)		
	Type:	long	
	2.3.220.4 priority (FI-1848)		
	Type:	long	
	2.3.220.5 sslenabled (FI-1905)		
	Type:	bool	
2.3.220.6 tkldapprotocol (FI-1846)			

	Type: enum (Not Modifiable)
Uniqueness:	tkldapprotocol + hostname is unique. (MFI-46)

2.3.221 ldapfilter (TI-283)

Description:	LDAP Filter
Fields:	<div>2.3.221.1 filter (FI-1995)</div> <div>Type: string [8192]</div> <div>Default Value: EMPTY</div> <div>Validation: <code>^[^\x00-\x1F\x7F"]{0,2048}\$</code></div> <div>Remarks: The Filter string to be passed to the LDAP Host in a sync request used to restrict results to a subset of the possible result records.</div> <div>2.3.221.2 name (FI-1997)</div> <div>Type: string [256] (Unique)</div> <div>Default Value: EMPTY</div> <div>Validation: <code>^[^\x00-\x1F\x7F"]{0,64}\$</code></div> <div>Remarks: The filter name should help the administrator identify and select the appropriate customized filter for reference by a sync agreement.</div> <div>2.3.221.3 pkid (FI-1993)</div> <div>Type: guid (Unique, Not Modifiable)</div> <div>Default Value: newid()</div> <div>Remarks: Unique ID to identify a record.</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.222 ldapserverattribute (TI-267)

Description:	Prepopulated ldap attribute names for each server type
Fields:	<div>2.3.222.1 diobjectname (FI-1898)</div> <div>Type: string [128] (Null OK)</div> <div>2.3.222.2 pkid (FI-1961)</div> <div>Type: guid (Not Modifiable)</div>

	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.222.3 tkldapserver (FI-1896)	
	Type:	enum
	2.3.222.4 tkldapserverattr (FI-1897)	
	Type:	enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.223 ldapsystemconfig (TI-274)

Description:	LDAP System Config Insert/Delete is not allowed.	
Fields:	2.3.223.1 pkid (FI-1963)	
	Type:	guid (Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.223.2 syncenabled (FI-1944)	
	Type:	bool
	Default Value:	0
	Remarks:	Indicates whether plugin is enabled
	2.3.223.3 tkldapserver (FI-1943)	
	Type:	enum (Null OK)
	Default Value:	1
	2.3.223.4 useridattributename (FI-1941)	
	Type:	string [64] (Null OK)
	Default Value:	None
	Remarks:	Attribute name to be used for Userid
Uniqueness:	No multicolumn uniqueness constraints	

2.3.224 licensedistributionused (TI-362)

Description:	Contains information about license units distributed and license units checked out to each license server for each feature Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.224.1 distributedlicenseunits (FI-2683)		
	Type:	long	
	Default Value:	0	
	Remarks:	Number of license units available on each license server for each feature.	
	2.3.224.2 fklicenseserver (FI-2681)		
	Type:	guid (Cascade Delete)	
	2.3.224.3 isavailable (FI-6162)		
	Type:	bool (Null OK)	
	Default Value:	FALSE	
	Remarks:	Indicates License Unit availability including substitution via borrowing from Parent license(s).	
	2.3.224.4 pendinglicenseunits (FI-3591)		
	Type:	long (Not Modifiable)	
	Default Value:	0	
	Remarks:	Number of DLUs required to convert BAT dummy phones (or other inactive device) to a real licenses phone	
	2.3.224.5 pkid (FI-2680)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.224.6 tklicensefeature (FI-2682)		
	Type:	enum	
	2.3.224.7 usedlicenseunits (FI-2694)		
	Type:	long	
	Default Value:	0	
	Remarks:	Cumulative license units checked out from each license server.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.225 licenseinfo (TI-394)

Description: Licenseing accounting for a server for a particular feature
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.225.1 fklicenseserver (FI-2939)	
	Type:	guid
	2.3.225.2 isdemo (FI-3414)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	License is for demonstration (trial) only
	2.3.225.3 isvalid (FI-5451)	
	Type:	bool (Not Modifiable)
	Default Value:	TRUE
	2.3.225.4 licenselineid (FI-5078)	
	Type:	long (Not Modifiable)
	Default Value:	1
	Check Constraint:	(LicenseLineID >= 0) AND (LicenseLineID <= 5000)
	Remarks:	LicenseLineID
	2.3.225.5 licenseunits (FI-2941)	
	Type:	long
	Default Value:	0
	Remarks:	Number of license units available on each license server for each feature.
	2.3.225.6 licfileid (FI-3051)	
	Type:	string [50]
	Default Value:	EMPTY
	Remarks:	identifier of license file. example 20050826140539162
	2.3.225.7 licfileversion (FI-3052)	
	Type:	string [10]
	Default Value:	EMPTY
	Remarks:	version of license file. example 1.0
	2.3.225.8 macaddress (FI-2943)	
	Type:	string [50]

	Default Value:	EMPTY
	Remarks:	This is the media access control (MAC) address of the network interface card (NIC) of server where initial license was issued
	2.3.225.9 origmacid (FI-3050)	
	Type:	string [50]
	Default Value:	EMPTY
	Remarks:	This is a second media access control (MAC) address of the network interface card (NIC) of server where initial license was issued. example 000BCD4EE59D
	2.3.225.10 overdraftunits (FI-2942)	
	Type:	long
	Default Value:	0
	2.3.225.11 pkid (FI-2938)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.225.12 tklicensefeature (FI-2940)	
	Type:	enum (Not Modifiable)
	2.3.225.13 upgradefromwindows (FI-5079)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	The default for UpgradeFromWindows is false
	2.3.225.14 version (FI-2944)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.226 licenseserver (TI-359)		
Description:	The prioritized list of license servers is specified in this table Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.226.1 description (FI-2983)	

Type:	string [128]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~]{0,128}\$

2.3.226.2 elmlastcontactts (FI-10057)

Type:	long (Not Modifiable)
Default Value:	0
Remarks:	This is the time of last contact of the product with the ELM that it is registered to

2.3.226.3 elmname (FI-25586)

Type:	string [255] (Unique, Indexed, Null OK)
Remarks:	Could be hostname or ip address

2.3.226.4 fkprocessnode (FI-2982)

Type:	guid (Indexed, Cascade Delete)
Remarks:	associated processnode to license server

2.3.226.5 graceleftdays (FI-5453)

Type:	long (Not Modifiable)
Default Value:	0

2.3.226.6 gracestarttime (FI-5452)

Type:	long (Not Modifiable)
Default Value:	0

2.3.226.7 lastresourceusagecalculations (FI-10277)

Type:	string [50] (Not Modifiable)
Default Value:	0
Remarks:	This is the time stamp for the latest calculation of Licensed Resource Utilization on the product.

2.3.226.8 name (FI-2669)

Type:	string [255] (Unique, Indexed)
Remarks:	Could be hostname or ip address

2.3.226.9 pkid (FI-2668)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Rule (RI-259):	Type:	Active (Insert)
	Rule Name:	Insert of LicenseServer inserts default 0 records to LicenseDistributionUsed table
	Description:	Active rule to ensure that admin stored procedure works fine with default values in LicenseDistributionUsed table
	Test Condition:	If cannot insert into LicenseDistributionUsed table throw error
	Error Message:	Could not insert into LicenseDistributionUsed on insert of LicenseServer

2.3.226.10 priority (FI-2670)

Type:	long (Unique)
Default Value:	0
Remarks:	Specifies which license server has greater priority for the cluster.

2.3.226.11 [tklicensingmode \(FI-10060\)](#)

Type:	enum (Not Modifiable, Null OK)
Remarks:	This is the Licensing Mode on the product.

2.3.226.12 [tklicensingstate \(FI-10059\)](#)

Type:	enum (Not Modifiable)
Default Value:	1
Remarks:	This is the State on the product with reference to Licensing.

Uniqueness: No multicolumn uniqueness constraints

2.3.227 licensingresourceusage (TI-1074)

Description: Contains the resource device tier usage count per user
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:

2.3.227.1 bronze (FI-10092)

Type:	long
Check Constraint:	bronze >= 0

2.3.227.2 copper (FI-10091)

Type:	long
Check Constraint:	copper >= 0

2.3.227.3 em (FI-10087)

Type:	bool
Default Value:	FALSE
Remarks:	True if EM is configured for user.

2.3.227.4 fkenduser (FI-10086)

Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable, Null OK)
Remarks:	Unique ID of enduser whose device usage is counted, null for devices not associated with a user.

2.3.227.5 gold (FI-10094)

Type:	long
Check Constraint:	gold>= 0

2.3.227.6 pkid (FI-10085)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for the record

2.3.227.7 presence (FI-10096)

Type:	bool
Default Value:	FALSE
Remarks:	TRUE if user has IM And Presence.

2.3.227.8 silver (FI-10093)

Type:	long
Check Constraint:	silver>= 0

2.3.227.9 snr (FI-10088)

Type:	bool
Default Value:	FALSE
Remarks:	True if SNR is configured for user.

2.3.227.10 telepresence (FI-10095)

Type:	long
Check Constraint:	telepresence>= 0

2.3.227.11 tin (FI-10090)

Type:	long
Check Constraint:	tin>= 0

2.3.227.12 unknowndevice (FI-10434)

Type:	long
Check Constraint:	unknowndevice >= 0

Uniqueness: No multicolumn uniqueness constraints

2.3.228 linegroup (TI-203)

Description: Used by Route/Hunt Lists

Fields:	2.3.228.1 autologoffhuntmembers (FI-25594)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This field indicates that the Hunt members associated to the Line Group will be logged off automatically from the Hunt List when a member does not answer the call. The member will be auto logged off when the value is set to true.
	2.3.228.2 name (FI-1354)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Remarks:	Unique name
	2.3.228.3 pkid (FI-1352)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.228.4 rnareversiontimeout (FI-1353)	
	Type:	long
	Default Value:	10
	Check Constraint:	(rnaReversionTimeout >= 1) AND (rnaReversionTimeout <= 180)
	Remarks:	Time, in seconds, after which call distribution will distribute a call to the next available or idle member of this line group if the call is not answered.
	2.3.228.5 tkdistributealgorithm (FI-1355)	
	Type:	enum
	Default Value:	3
	Remarks:	Distribution algorithm. It could be Top Down, Circular, Longest Idle Time (default) or Broadcast.

	Rule (RI-177):	Type:	Validation (Insert/Update)
		Rule Name:	Distribution Algorithms for Line Groups
		Description:	Valid Distribution Algorithms for Line Groups (TypeGroup = 2) are defined by the mask value for each item in the TypeDistributeAlgorithm table. Only items where the mask value includes the group type (2) are allowed.
		Test Condition:	IF (@LineGroup.tkDistributeAlgorithm NOT IN (SELECT Enum FROM TypeDistributeAlgorithm WHERE (MaskOR2 = TRUE))) THEN throw exception.
		Error Message:	The specified Distribution Algorithm is not valid for Line Groups.
		Remedy:	Use a Distribution Algorithm that is compatible with Line Groups and try again.
	2.3.228.6 tkhuntalgorithm_busy (FI-1628)		
	Type:	enum	
	Default Value:	1	
	2.3.228.7 tkhuntalgorithm_down (FI-1629)		
	Type:	enum	
	Default Value:	1	
	2.3.228.8 tkhuntalgorithm_rna (FI-1627)		
	Type:	enum	
	Default Value:	1	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.229 linegroupnumplanmap (TI-202)			
Description:	Maps Line Groups to NumPlans to be used by Route/Hunt Lists		
Fields:	2.3.229.1 fklinegroup (FI-1357)		
	Type:	guid (Cascade Delete)	
	2.3.229.2 fknumplan (FI-1358)		
	Type:	guid (Cascade Delete)	
	Rule (RI-200):	Type:	Validation (Insert/Update)
		Rule Name:	LineGroup member restriction
		Description:	Line Groups can contain (reference) Device and VM Port DNs (NumPlan.tkPatternUsage = 2 or 8).

		Test Condition:	ON INSERT/UPDATE IN LineGroupNumPlanMap IF (SELECT tkPatternUsage FROM NumPlan WHERE pkid = @LineGroupNumPlanMap.fkNumPlan) NOT IN (2, 8) THEN throw exception
		Error Message:	Line Groups can contain directory numbers and Voice Mail Port numbers only.
		Remedy:	Check the pattern usage for the number being added to the Line Group to make sure it is one of the allowed types and try again.
	Rule (RI-253):	Type:	Validation (Insert/Update)
		Rule Name:	NumPlan associated with LineGroup
		Description:	If a cti port is already in a DeviceNumPlanMap, its LineGroup association is not allowed
		Test Condition:	?
	2.3.229.3 lineselectionorder (FI-1359)		
	Type:	long	
	Remarks:	There is no requirment for this index to be sequential per LineGroup nor to begin with a particular value per Line Group.	
	2.3.229.4 pkid (FI-1356)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	fklinegroup + lineselectionorder is unique. (MFI-48) fklinegroup + fknumplan is unique. (MFI-90)		

2.3.230 localestringformatrulemap (TI-2153)

Description:	Mapping of string formats to user locales. Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.230.1 pkid (FI-21252)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.230.2 fkstringformatrule (FI-21255)		
	Type:	enum (Indexed, Not Modifiable)	
	Remarks:	Rule that the locale is associated with.	

2.3.230.3 [tkuserlocale \(FI-21254\)](#)

Type:	enum (Indexed, Not Modifiable)
Remarks:	Locale that the rule is associated with.

Uniqueness: No multicolumn uniqueness constraints

2.3.231 location (TI-111)

Description: Location to specify the number/combined size of calls within a zone

Fields:

2.3.231.1 [fkmatrix \(FI-2576\)](#)

Type:	guid (Null OK)	
Default Value:	NULL	
Remarks:	Pkid of Matrix record for RSVP Policy	
Rule (RI-114):	Type:	Validation (Update/Delete)
	Rule Name:	Standard Location Update or Delete
	Description:	Can not update or delete a standard location.
	Test Condition:	On Update or Delete Location
Rule (RI-248):	Type:	Active (Insert) This field is modified by this rule.
	Rule Name:	BeforeInsLocation
	Description:	Before inserting into location table add a new record to Matrix and MatrixMember and set it to fkMatrix for Location record
	Test Condition:	?
	Error Message:	?
	Remedy:	?
Rule (RI-248):	Type:	Active (Insert)
	Rule Name:	BeforeInsLocation
	Description:	Before inserting into location table add a new record to Matrix and MatrixMember and set it to fkMatrix for Location record
	Test Condition:	?
	Error Message:	?

	Remedy:	?
Rule (RI-249):	Type:	Active (Delete)
	Rule Name:	BeforeDelLocation
	Description:	Before deleting from Location delete the corresponding fkMatrix from Matrix table
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.231.2 hiresversionstamp (FI-10270)

Type:	string [128] (Null OK)	
Remarks:	Hi Rez VersionStamp combination of DateTimeStamp and counter	
Rule (RI-932):	Type:	Active (Insert/Update)
	Rule Name:	Update the HiResVersionStamp for Location,LocationMatrix
	Description:	When a record in a Location/LocationMatrix table is updated, set the HiResVersionStamp to the current value
	Test Condition:	ON INSERT/UPDATE INTO Location/LocationMatrix: LET currentstamp = dbinfo('utc_current') ':' 'NEXTVAL.sequence'; return currentstamp (INTO HiResVersionStamp);
Rule (RI-932):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Update the HiResVersionStamp for Location,LocationMatrix
	Description:	When a record in a Location/LocationMatrix table is updated, set the HiResVersionStamp to the current value
	Test Condition:	ON INSERT/UPDATE INTO Location/LocationMatrix: LET currentstamp = dbinfo('utc_current') ':' 'NEXTVAL.sequence'; return currentstamp (INTO HiResVersionStamp);
Rule (RI-933):	Type:	Active (Delete)
	Rule Name:	Update the SecureConfig table for deletion of record from Location/LocationMatrix
	Description:	When a record in a Location/LocationMatrix is deleted, Update the SecureConfig table with latest HiResVersionStamp
	Test Condition:	ON DELETE INTO Location/LocationMatrix: SET SecureConfig LET Value = dbinfo('utc_current') ':' 'NEXTVAL.sequence' ;

2.3.231.3 id (FI-760)

Type:	long (Unique, Not Modifiable)								
Rule (RI-114):	<table> <tr> <td>Type:</td><td>Validation (Update/Delete)</td></tr> <tr> <td>Rule Name:</td><td>Standard Location Update or Delete</td></tr> <tr> <td>Description:</td><td>Can not update or delete a standard location.</td></tr> <tr> <td>Test Condition:</td><td>On Update or Delete Location</td></tr> </table>	Type:	Validation (Update/Delete)	Rule Name:	Standard Location Update or Delete	Description:	Can not update or delete a standard location.	Test Condition:	On Update or Delete Location
Type:	Validation (Update/Delete)								
Rule Name:	Standard Location Update or Delete								
Description:	Can not update or delete a standard location.								
Test Condition:	On Update or Delete Location								
Rule (RI-303):	<table> <tr> <td>Type:</td><td>Active (Insert)</td></tr> <tr> <td>Rule Name:</td><td>Generate Location ID on Insert</td></tr> <tr> <td>Description:</td><td>When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.</td></tr> <tr> <td>Test Condition:</td><td>@Location.ID = (SELECT MAX(ID) FROM Location) + 1</td></tr> </table>	Type:	Active (Insert)	Rule Name:	Generate Location ID on Insert	Description:	When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.	Test Condition:	@Location.ID = (SELECT MAX(ID) FROM Location) + 1
Type:	Active (Insert)								
Rule Name:	Generate Location ID on Insert								
Description:	When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.								
Test Condition:	@Location.ID = (SELECT MAX(ID) FROM Location) + 1								
Rule (RI-303):	<table> <tr> <td>Type:</td><td>Active (Insert) This field is modified by this rule.</td></tr> <tr> <td>Rule Name:</td><td>Generate Location ID on Insert</td></tr> <tr> <td>Description:</td><td>When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.</td></tr> <tr> <td>Test Condition:</td><td>@Location.ID = (SELECT MAX(ID) FROM Location) + 1</td></tr> </table>	Type:	Active (Insert) This field is modified by this rule.	Rule Name:	Generate Location ID on Insert	Description:	When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.	Test Condition:	@Location.ID = (SELECT MAX(ID) FROM Location) + 1
Type:	Active (Insert) This field is modified by this rule.								
Rule Name:	Generate Location ID on Insert								
Description:	When a record is inserted in the Location table, a unique numeric identifier is created (by incrementing highest existing ID value) and stored in the ID column.								
Test Condition:	@Location.ID = (SELECT MAX(ID) FROM Location) + 1								

2.3.231.4 isstandard (FI-2887)

Type:	bool (Not Modifiable)								
Default Value:	FALSE								
Remarks:	Whether it is standard								
Rule (RI-114):	<table> <tr> <td>Type:</td><td>Validation (Update/Delete)</td></tr> <tr> <td>Rule Name:</td><td>Standard Location Update or Delete</td></tr> <tr> <td>Description:</td><td>Can not update or delete a standard location.</td></tr> <tr> <td>Test Condition:</td><td>On Update or Delete Location</td></tr> </table>	Type:	Validation (Update/Delete)	Rule Name:	Standard Location Update or Delete	Description:	Can not update or delete a standard location.	Test Condition:	On Update or Delete Location
Type:	Validation (Update/Delete)								
Rule Name:	Standard Location Update or Delete								
Description:	Can not update or delete a standard location.								
Test Condition:	On Update or Delete Location								

2.3.231.5 name (FI-595)

Type:	string [50] (Unique)		
Validation:	^[a-zA-Z 0-9._-]{1,50}\$		
Remarks:	Unique name.		
Rule (RI-114):	<table> <tr> <td>Type:</td><td>Validation (Update/Delete)</td></tr> </table>	Type:	Validation (Update/Delete)
Type:	Validation (Update/Delete)		

	Rule Name:	Standard Location Update or Delete
	Description:	Can not update or delete a standard location.
	Test Condition:	On Update or Delete Location
Rule (RI-248):	Type:	Active (Insert)
	Rule Name:	BeforeInsLocation
	Description:	Before inserting into location table add a new record to Matrix and MatrixMember and set it to fkMatrix for Location record
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.231.6 pkid (FI-593)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Rule (RI-114):	Type:	Validation (Update/Delete)
	Rule Name:	Standard Location Update or Delete
	Description:	Can not update or delete a standard location.
	Test Condition:	On Update or Delete Location

2.3.231.7 resynctoggle (FI-3152)

Type:	bool
Default Value:	FALSE
Remarks:	Should this location be resyced

2.3.231.8 withinlocation_immersivekbits (FI-6269)

Type:	long
Default Value:	0
Check Constraint:	(WithinLocation_immersiveKBits >= -1) AND (WithinLocation_immersiveKBits <= 2147483647)
Remarks:	Maximum amount of video bandwidth (in kbps) that is available for all video calls on the link between specified locations A and B. For Immersive video calls, the video bandwidth does not include overhead.
Rule (RI-114):	

Type:	Validation (Update/Delete)
Rule Name:	Standard Location Update or Delete
Description:	Can not update or delete a standard location.
Test Condition:	On Update or Delete Location

2.3.231.9 withinlocation_kbits (FI-6267)

Type:	long								
Default Value:	0								
Check Constraint:	(WithinLocation_Kbits >= 0) AND (WithinLocation_Kbits <= 2147483647)								
Remarks:	Maximum amount of audio bandwidth (in kbps) that is available for all audio calls on the link between this location and other locations. For audio calls, the audio bandwidth includes overhead.								
Rule (RI-114):	<table> <tr> <td>Type:</td><td>Validation (Update/Delete)</td></tr> <tr> <td>Rule Name:</td><td>Standard Location Update or Delete</td></tr> <tr> <td>Description:</td><td>Can not update or delete a standard location.</td></tr> <tr> <td>Test Condition:</td><td>On Update or Delete Location</td></tr> </table>	Type:	Validation (Update/Delete)	Rule Name:	Standard Location Update or Delete	Description:	Can not update or delete a standard location.	Test Condition:	On Update or Delete Location
Type:	Validation (Update/Delete)								
Rule Name:	Standard Location Update or Delete								
Description:	Can not update or delete a standard location.								
Test Condition:	On Update or Delete Location								

2.3.231.10 withinlocation_videokbits (FI-6268)

Type:	long								
Default Value:	0								
Check Constraint:	(WithinLocation_videoKBits >= -1) AND (WithinLocation_videoKBits <= 2147483647)								
Remarks:	Maximum amount of video bandwidth (in kbps) that is available for all video calls on the link between this location and other locations. For video calls, the video bandwidth does not include overhead.

Test Condition: On Update or Delete Location

2.3.232 locationmatrix (TI-533)

Description: Edge bandwidth available between locations

Fields:

2.3.232.1 [fklocation_a \(FI-9956\)](#)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: Side A of edge, that forms the link between locations A and B. Edges are non directional, so A->B is same as B->A

Rule (RI-845):

Type: Validation (Insert/Update)

Rule Name: Validation on Location Edge Matrix

Description: LocationMatrix.fkLocation_a and LocationMatrix.fkLocation_b are non-directional on a given edge

Test Condition: ON INSERT/UPDATE to LocationMatrix,SELECT COUNT(*) FROM LocationMatrix where fkLocation_a IN(@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b) AND fkLocation_b IN (@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b)

Error Message: Location Matrix edge is non directional, so link A-B is same as B-A

2.3.232.2 [fklocation_b \(FI-9957\)](#)

Type: guid (Cascade Delete, Not Modifiable)

Remarks: Side B of edge, that forms the link between locations A and B. Edges are non directional, so A->B is same as B->A

Rule (RI-845):

Type: Validation (Insert/Update)

Rule Name: Validation on Location Edge Matrix

Description: LocationMatrix.fkLocation_a and LocationMatrix.fkLocation_b are non-directional on a given edge

Test Condition: ON INSERT/UPDATE to LocationMatrix,SELECT COUNT(*) FROM LocationMatrix where fkLocation_a IN(@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b) AND fkLocation_b IN (@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b)

Error Message: Location Matrix edge is non directional, so link A-B is same as B-A

2.3.232.3 [hiresversionstamp \(FI-10271\)](#)

Type: string [128] (Null OK)

Remarks: Hi Rez VersionStamp combination of DateTimeStamp and counter

Rule (RI-932):

Type: Active (Insert/Update)

		Rule Name:	Update the HiResVersionStamp for Location,LocationMatrix
		Description:	When a record in a Location/LocationMatrix table is updated, set the HiResVersionStamp to the current value
		Test Condition:	ON INSERT/UPDATE INTO Location/LocationMatrix: LET currentstamp = dbinfo('utc_current') ':' 'NEXTVAL.sequence'; return currentstamp (INTO HiResVersionStamp);
	Rule (RI-932):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Update the HiResVersionStamp for Location,LocationMatrix
		Description:	When a record in a Location/LocationMatrix table is updated, set the HiResVersionStamp to the current value
		Test Condition:	ON INSERT/UPDATE INTO Location/LocationMatrix: LET currentstamp = dbinfo('utc_current') ':' 'NEXTVAL.sequence'; return currentstamp (INTO HiResVersionStamp);
	Rule (RI-933):	Type:	Active (Delete)
		Rule Name:	Update the SecureConfig table for deletion of record from Location/LocationMatrix
		Description:	When a record in a Location/LocationMatrix is deleted, Update the SecureConfig table with latest HiResVersionStamp
		Test Condition:	ON DELETE INTO Location/LocationMatrix: SET SecureConfig LET Value = dbinfo('utc_current') ':' 'NEXTVAL.sequence' ;

2.3.232.4 immersivekbits (FI-9961)

Type:	long
Default Value:	384
Check Constraint:	(immersiveKBits >= -1) AND (immersiveKBits <= 2147483647)
Remarks:	Maximum amount of video bandwidth (in kbps) that is available for all video calls on the link between specified locations A and B. For Immersive video calls, the video bandwidth does not include overhead.

2.3.232.5 kbits (FI-9959)

Type:	long
Check Constraint:	(Kbits >= 0) AND (Kbits <= 2147483647)
Remarks:	Maximum amount of audio bandwidth (in kbps) that is available for all audio calls on the link between specified locations A and B. For audio calls, the audio bandwidth includes overhead.

2.3.232.6 pkid (FI-9955)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()

	Migration Source:	Generated
	Remarks:	Unique ID to identify Location Edge
	Rule (RI-845):	Type: Validation (Insert/Update)
		Rule Name: Validation on Location Edge Matrix
		Description: LocationMatrix.fkLocation_a and LocationMatrix.fkLocation_b are non-directional on a given edge
		Test Condition: ON INSERT/UPDATE to LocationMatrix,SELECT COUNT(*) FROM LocationMatrix where fkLocation_a IN(@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b) AND fkLocation_b IN (@LocationMatrix.fkLocation_a,@LocationMatrix.fkLocation_b)
		Error Message: Location Matrix edge is non directional, so link A-B is same as B-A
	2.3.232.7 videokbits (FI-9960)	
	Type:	long
	Default Value:	384
	Check Constraint:	(videoKBits >= -1) AND (videoKBits <= 2147483647)
	Remarks:	Maximum amount of video bandwidth (in kbps) that is available for all video calls on the link between specified locations A and B. For video calls, the video bandwidth does not include overhead.
	2.3.232.8 weight (FI-9958)	
	Type:	long
	Default Value:	50
	Check Constraint:	(Weight >= 0) AND (Weight <= 100)
	Remarks:	Weight of a location edge refers to the cost incurred in using the edge for routing. Shortest call path consumes least weight. Weight defaults to 50
Uniqueness:	fklocation_a + fklocation_b is unique. (MFI-201)	

2.3.233 matrix (TI-318)		
Description:	Generic Matrix Table	
Fields:	2.3.233.1 description (FI-2374)	
	Type:	string [400] (Null OK)
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%\\&<>]{0,100}\$

	Remarks:	Description of the matrix record
	2.3.233.2 ikmatrix (FI-2577)	
	Type:	guid (Null OK)
	Default Value:	NULL
	Remarks:	Pkid of Matrix record for chaining.
	2.3.233.3 isstandard (FI-2750)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Whether it is a standard security policy
	2.3.233.4 name (FI-2373)	
	Type:	string [50]
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Remarks:	A name to identify the record
	2.3.233.5 pkid (FI-2372)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.233.6 tkmatrix (FI-2375)	
	Type:	enum (Indexed, Not Modifiable)
	Remarks:	Type of Matrix record
Uniqueness:	name + tkmatrix is unique. (MFI-86)	

2.3.234 matrixmember (TI-320)		
Description:	Member records for Matrix	
Fields:	2.3.234.1 fkmatrix_1 (FI-2380)	
	Type:	guid (Cascade Delete)
	Remarks:	Pkid of Matrix record
	2.3.234.2 fkmatrix_2 (FI-2381)	
	Type:	guid (Cascade Delete)

	Remarks:	Pkid of Matrix related record	
	2.3.234.3 pkid (FI-2379)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.234.4 tkmatrixvalue (FI-2382)		
	Type:	enum	
	Remarks:	Refers to the various types but for a particular Matrix type	
Uniqueness:	fkmatrix_1 + fkmatrix_2 is unique. (MFI-88)		
Rules:	Rule (RI-209):	Type:	Validation (Insert/Update) Rule applied when record is inserted or updated.
		Rule Name:	Cannot mix Matrix types in MatrixMember
		Description:	The two Matrix records referenced by a record in MatrixMember must be of the same type (Matrix.tkMatrix must match).
		Test Condition:	ON INSERT/UPDATE IN MatrixMember IF (SELECT tkMatrix FROM Matrix WHERE pkid = @MatrixMember.fkMatrix_1) <> (SELECT tkMatrix FROM Matrix WHERE pkid = @MatrixMember.fkMatrix_2) THEN throw exception
		Error Message:	Cannot mix Matrix types in Matrix Members.
		Remedy:	Make sure both Matrix records are of the same type and try to insert the MatrixMember record again.
	Rule (RI-211):	Type:	Validation (Insert/Update) Rule applied when record is inserted or updated. This table is modified by this rule.
		Rule Name:	MatrixMember Default Value Restriction
		Description:	The tkMatrixValue of a MatrixMember should not be the same as the MatrixMemberDefault for the referenced Matrix records.
		Test Condition:	?
		Error Message:	?
		Remedy:	?

2.3.235 mediamixer (TI-22)

Description:	Software conference bridge device settings		
Fields:	2.3.235.1 basemulticastaddress (FI-223)		
	Type:	string [15]	
	Default Value:	EMPTY	
	Migration Source:	BaseMulticastAddress	
	2.3.235.2 basemulticastport (FI-224)		
	Type:	long (Null OK)	
	Default Value:	NULL	
	Migration Source:	BaseMulticastPort	
	2.3.235.3 fkdevice (FI-221)		
	Type:	guid (Unique, Indexed, Cascade Delete)	
	Migration Source:	convert from DeviceName	
	Rule (RI-115):	Type:	Validation (Insert/Update)
		Rule Name:	Media Mixer Device
		Description:	The records in MediaMixer table must reference a media resource device
		Test Condition:	SELECT count(*) into nRows FROM ProductSupportsFeature WHERE (tkProduct IN (SELECT tkProduct FROM ProductSupportsFeature WHERE tkSupportsFeature = 14)) AND tkDeviceProtocol IN ((SELECT tkDeviceProtocol FROM Device where pkid = @mediamixer.fkDevice),99)
		Error Message:	MediaMixer table may only reference Media Resource devices.
		Remedy:	Correct the fkDevice value to refer to a Media Resource device.
	2.3.235.4 maxstreams (FI-222)		
	Type:	long	
	Check Constraint:	MaxStreams >= 0	
	Migration Source:	MaxStreams	
	Remarks:	Number of ports supported.	
	Rule (RI-116):	Type:	Validation (Insert/Update)
		Rule Name:	Max Streams for SUMMIT Device
		Description:	Sum of max streams for all media resources configured on a Summit device (CFB, MTP, XCODE, ANN) cannot exceed 128.

		Test Condition:	IF (SELECT SUM(MaxStreams) FROM MediaMixer WHERE fkDevice = @Device.pkid) > 128 THEN throw exception
		Error Message:	The sum of the streams configured for all media resources (CFB, MTP, XCODE, ANN) associated with this gateway cannot exceed 128.
		Remedy:	Reduce the MaxStreams for this device and try again. It may be necessary to reduce the streams used by another device associated with this gateway to allow enough streams to be allocated for the current device.
	2.3.235.5 pkid (FI-220)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-116):	Type:	Validation (Insert/Update) Rule applied when record is inserted or updated.
		Rule Name:	Max Streams for SUMMIT Device
		Description:	Sum of max streams for all media resources configured on a Summit device (CFB, MTP, XCODE, ANN) cannot exceed 128.
		Test Condition:	IF (SELECT SUM(MaxStreams) FROM MediaMixer WHERE fkDevice = @Device.pkid) > 128 THEN throw exception
		Error Message:	The sum of the streams configured for all media resources (CFB, MTP, XCODE, ANN) associated with this gateway cannot exceed 128.
		Remedy:	Reduce the MaxStreams for this device and try again. It may be necessary to reduce the streams used by another device associated with this gateway to allow enough streams to be allocated for the current device.
	Rule (RI-188):	Type:	Active (Insert) Rule applied when record is inserted. This table is modified by this rule.
		Rule Name:	Insert Media Streaming Devices
		Description:	When a ProcessNodeService record for a Media Streaming service is inserted, database automatically inserts the four media streaming Device records for the service: Annunciator, Software Conference Bridge, Music On Hold, and Software MTP. In addition, a MOHServer record is inserted for the MOH device, and a MediaMixer record is inserted for the MTP device.

Test Condition: On Insert to ProcessNodeService WHERE tkService=3

2.3.236 mediaresourcegroup (TI-151)

Description: A group of media resources to be used by a device

Fields:

2.3.236.1 description (FI-858)

Type:	string [200]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%&<>]{0,50}\$
Remarks:	Description for the Media Resource Group.

2.3.236.2 multicast (FI-956)

Type:	bool
Remarks:	Whether to use multicast for Music On Hold Audio.

2.3.236.3 name (FI-857)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Remarks:	Unique name to identify the Media Resource Group.

Rule (RI-233):

Type:	Active (Insert/Update/Delete records)
Rule Name:	buildMRLClause
Description:	Updates the MediaResourceList Clause field with MediaResourceGroup.name values.
Test Condition:	?
Error Message:	FAILURE
Remedy:	?

2.3.236.4 pkid (FI-856)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Rule (RI-233):

Type:	Active (Insert/Update/Delete records)
-------	---------------------------------------

		Rule Name:	buildMRLClause
		Description:	Updates the MediaResourceList Clause field with MediaResourceGroup.name values.
		Test Condition:	?
		Error Message:	FAILURE
		Remedy:	?
	2.3.236.5 resettoggle (FI-3094)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Should this device or group be reset	
	2.3.236.6 tkreset (FI-3095)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Set by DeviceReset stored procedure.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.237 mediaresourcegroupmember (TI-152)			
Description:	Ties devices to Media Resource Groups		
Fields:	2.3.237.1 fkdevice (FI-862)		
	Type:	guid (Cascade Delete)	
	Remarks:	1-20 per group	
	Rule (RI-117):	Type:	Validation (Insert/Update)
		Rule Name:	Media Resource Group Member Devices
		Description:	Valid member device types for Media Resource Groups are products for which a record exists in ProductSupportsFeature where tkSupportsFeature = SUPPORTS_FEATURE_MEDIA_RESOURCE_MANAGED (14).
		Test Condition:	SELECT count(*) into nRows FROM ProductSupportsFeature WHERE (tkProduct IN (SELECT tkProduct FROM ProductSupportsFeature WHERE tkSupportsFeature = 14)) AND tkDeviceProtocol IN ((SELECT tkDeviceProtocol FROM Device where pkid = @MediaResourceGroupMember.fkDevice),99)
		Error Message:	Only Media Resource devices can be members of Media Resource Groups.

		Remedy:	Correct the fkDevice value to refer to a Media Resource device.
	2.3.237.2 fkmediaresourcegroup (FI-861)		
	Type:	guid (Cascade Delete)	
	2.3.237.3 pkid (FI-860)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	fkmediaresourcegroup + fkdevice is unique. (MFI-61)		

2.3.238 mediaresourcelist (TI-153)

Description:	A list of MediaResourceGroups to be used by a device		
Fields:	2.3.238.1 clause (FI-869)		
	Type:	memo (Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	Trigger updated. Colon separated list.	
	2.3.238.2 name (FI-864)		
	Type:	string [50] (Unique)	
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$	
	Remarks:	Unique name to identify the Media Resource Group List.	
	2.3.238.3 pkid (FI-863)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
	2.3.238.4 resettoggle (FI-3092)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Should this device or group be reset	
2.3.238.5 tkreset (FI-3093)			

	Type:	enum
	Default Value:	2
	Remarks:	Set by DeviceReset stored procedure.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.239 mediaresourcelistmember (TI-154)

Description:	Ties Media Resource Groups to Media Resource Lists	
Fields:	2.3.239.1 fkmediaresourcegroup (FI-867)	
	Type:	guid (Cascade Delete)
	Remarks:	Media resource group that belongs to this Media Resource Group List.
	2.3.239.2 fkmediaresourcelist (FI-866)	
	Type:	guid (Cascade Delete)
	Rule (RI-233):	Type: Active (Insert/Update/Delete records)
		Rule Name: buildMRLClause
		Description: Updates the MediaResourceList Clause field with MediaResourceGroup.name values.
		Test Condition: ?
		Error Message: FAILURE
		Remedy: ?
	2.3.239.3 pkid (FI-865)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.239.4 sortorder (FI-868)	
	Type:	long
	Remarks:	There is no requirement for this index to be sequential nor to start with any particular value for a Media Resource Group.
Uniqueness:	fkmediaresourcelist + fkmediaresourcegroup is unique. (MFI-49) fkmediaresourcelist + sortorder is unique. (MFI-62)	

2.3.240 mgcp (TI-102)

Description: MGCP device information sometimes referred to as box level information

Fields:

2.3.240.1 description (FI-480)

Type: string [100]

Default Value: EMPTY

Migration Source: new

Remarks: Description of the MGCP gateway that clarifies the purpose of the device.

2.3.240.2 domainname (FI-479)

Type: string [64] (Unique)

Default Value: EMPTY

Migration Source: new

Remarks: Name that identifies the Cisco MGCP gateway.

Rule (RI-174):

Type: Active (Update)

Rule Name: Update MGCP table with a device name change

Description: When MGCP table is updated and there is a device name change, then all devices need a change in the device name. To get all devices, link to MGCPDeviceMember with MGCPDeviceMember.fkmgcp = MGCP.pkid and then link to Device table using MGCPDeviceMember.fkdevice = Device.pkid. For example - old domain name = 364xxgateway, old device names = S1/DS1-2@364xxgateway, S1/DS1-3@364xxgateway.. Etc. New domain name 26xxgateway, new device names should change to = S1/DS1-2@26xxgateway, S1/DS1-3@26xxgateway.. Etc. There is an exception to this rule, which is VGC Gateway. For VGC Gateway, the domainname will be like "VGCGW" + < 10 characters of Mac address> .(for example VGCGW345FFA3456). Device name will be "VGC" + < 10 characters of Mac address> + < 2 characters for port > . (for example a device name will be VGC345FFA345608). When there is a domain name change, what changes here is the 10 characters of Mac address, which need to be properly updated in the device name also.

Test Condition: On update of MGCP. Here is the sql string currently used in Admin. Once it is active in DBL, we can remove this. "UPDATE device SET name = Replace(name, "" + oldName + "", "" + newName + "") WHERE pkid in " + "(SELECT fkdevice FROM mgcpdevicemember where fkmgcp = "" + mgcpId + "")"

2.3.240.3 fkcallmanagergroup (FI-924)

Type: guid (Null OK)

Default Value:	NULL
Remarks:	Cisco CallManager redundancy group.

2.3.240.4 pkid (FI-478)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Rule (RI-174):	Type:	Active (Update)
	Rule Name:	Update MGCP table with a device name change
	Description:	When MGCP table is updated and there is a device name change, then all devices need a change in the device name. To get all devices, link to MGCPDeviceMember with MGCPDeviceMember.fkmgcp = MGCP.pkid and then link to Device table using MGCPDeviceMember.fkdevice = Device.pkid. For example - old domain name = 364xxgateway, old device names = S1/DS1-2@364xxgateway, S1/DS1-3@364xxgateway.. Etc. New domain name 26xxgateway, new device names should change to = S1/DS1-2@26xxgateway, S1/DS1-3@26xxgateway.. Etc. There is an exception to this rule, which is VGC Gateway. For VGC Gateway, the domainname will be like "VGCGW" + < 10 characters of Mac address> .(for example VGCGW345FFA3456). Device name will be "VGC" + < 10 characters of Mac address> + < 2 characters for port > . (for example a device name will be VGC345FFA345608). When there is a domain name change, what changes here is the 10 characters of Mac address, which need to be properly updated in the device name also.
	Test Condition:	On update of MGCP. Here is the sql string currently used in Admin. Once it is active in DBL, we can remove this. "UPDATE device SET name = Replace(name, "" + oldName + "", "" + newName + "") WHERE pkid in " + "(SELECT fkdevice FROM mgcpdevicemember where fkmgcp = "" + mgcpId + "")"

2.3.240.5 resettoggle (FI-3108)

Type:	bool	
Default Value:	FALSE	
Remarks:	Should this device or group be reset	
Rule (RI-218):	Type:	Active (Insert/Update)
	Rule Name:	Gateway versionstamp
	Description:	on change to anything in Gateway xml file, update versionstamp
	Test Condition:	update device

2.3.240.6 scratch (FI-689)

Type:	string [50]
Default Value:	EMPTY
Remarks:	Used to store temporary info for GUI

2.3.240.7 specialloadinformation (FI-1184)

Type:	string [32] (Null OK)
Default Value:	NULL

2.3.240.8 tkclass (FI-2648)

Type:	enum (Not Modifiable)
Default Value:	2

2.3.240.9 tkdeviceprotocol (FI-2175)

Type:	enum
Default Value:	12

2.3.240.10 tkproduct (FI-798)

Type:	enum (Null OK)
Default Value:	43

2.3.240.11 tkreset (FI-3109)

Type:	enum
Default Value:	2
Remarks:	Set by DeviceReset stored procedure.

2.3.240.12 versionstamp (FI-977)

Type:	string [47] (Null OK)	
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963	
Remarks:	New guid is generated every time this gateway is updated	
Rule (RI-218):	Type:	Active (Insert/Update)
	Rule Name:	Gateway versionstamp
	Description:	on change to anything in Gateway xml file, update versionstamp
	Test Condition:	update device
Rule (RI-218):	Type:	Active (Insert/Update)
	This field is modified by this rule.	

		Rule Name:	Gateway versionstamp
		Description:	on change to anything in Gateway xml file, update versionstamp
		Test Condition:	update device
	Rule (RI-220):	Type:	Active (Insert/Update/Delete records) This field is modified by this rule.
		Rule Name:	sip dialrules versionstamp
		Description:	on change to anything in sip dialrules xml file, update versionstamp
		Test Condition:	update sip dialrules
	2.3.240.13 xml (FI-934)		
	Type:	string [24000] (Null OK)	
	Default Value:	NULL	
	Remarks:	Product configuration XML not used by CCM	
	Rule (RI-195):	Type:	Validation (Insert/Update) This field is modified by this rule.
		Rule Name:	MGCP.xml validation
		Description:	Product specific information for each MGCP Gateway needs to be validated before storing in xml column. Validation is now performed using client side script at Admin pages. This involves reading the display instance xml (from scratch table) for the specific product, then for each parameter , read the corresponding rule xml record (scratch table) and validate the parameter value as defined in the rule.
		Test Condition:	On Insert/Update to MGCP table (MGCP Gateway)
	Uniqueness: No multicolumn uniqueness constraints		
Rules:	Rule (RI-118):	Type:	Active (Insert/Update) Rule applied when record is inserted.
		Rule Name:	MGCP Port copy to Device Subunit
		Description:	MGCPDeviceMember table's Port field value is copied to Device table's Subunit field.
		Test Condition:	UPDATE Device SET Subunit = MGCPDeviceMember.Port WHERE Device.pkid = MGCP.fkDevice
	Rule (RI-119):	Type:	Active (Insert/Update/Delete records) Rule applied when record is inserted.
		Rule Name:	MGCP Slot copy to Device Unit

Description:	MGCPDeviceMember table's Slot field value is copied to Device table's Unit field.
Test Condition:	UPDATE Device SET Unit = MGCPDeviceMember.Slot WHERE Device.pkid = MGCP.fkDevice

2.3.241 mgcpdevicemember (TI-103)

Description: Relationships between MGCP and Devices.

Fields:

2.3.241.1 [fkdevice \(FI-482\)](#)

Type: guid (Indexed)

Migration Source: new

Rule (RI-118):

Type: Active (Insert/Update)

Rule Name: MGCP Port copy to Device Subunit

Description: MGCPDeviceMember table's Port field value is copied to Device table's Subunit field.

Test Condition: UPDATE Device SET Subunit = MGCPDeviceMember.Port WHERE Device.pkid = MGCP.fkDevice

Rule (RI-173):

Type: Active (Insert/Update)

Rule Name: Update MGCPdevicemember.port to device name

Description: When an MGCPDevicemember record is updated, if the port value is changed, that should reflect in the device name also. Device name for a gateway is built from endpointformat which is available in the gatewaylayout table. Check this value and re-build the device name with the new port value. [Example. Name format= "S[slot]/DS1-[port]" . Old device name in device table= "S1/DS1-3@3745gateway". New value for port = 5. New device name = "S1/DS1-5@3745gateway".] . To get the endpointformat, we need to link between mgcpdevicemember and mgcpslotconfig (using fkmgcp, slot and subunit) and then with gatewaylayout (with slot position, tkproduct, tkmgcpslotmodule and tkmgcpvic).

Test Condition: On update of MGCPDeviceMember

Rule (RI-358):

Type: Active (Delete)

Rule Name: Remove MGCP Member Devices when MGCP is Deleted

Description: When the MGCP is deleted from database (MGCP table) the delete cascades to the MGCPDeviceMember table. When a member is deleted from that table, the corresponding device should be removed from the database automatically.

Test Condition: ON DELETE in MGCPDeviceMember: DELETE FROM Device WHERE pkid = @fkDevice;

		Description:	When a new record is inserted or a current record is updated in MGCPSlotConfig table MGCPVic should be one of the allowed VIC for that product, slot position and MGCPSlotModule.
		Test Condition:	On Insert or Update of MGCP Gateway. Validation is required when updated through AXL.
		Error Message:	This VIC card is not allowed for this gateway,under specified slot position and SlotModule.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.243 mlapparameter (TI-221)

Description:	Configuration parameters for MultiLevelAdmin		
Fields:	2.3.243.1 name (FI-1439)		
	Type:	string [50] (Unique)	
	2.3.243.2 pkid (FI-1438)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.243.3 value (FI-1440)		
	Type:	string [128]	
	Default Value:	EMPTY	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.244 mlppdomain (TI-277)

Description:	Domains for Mlpp		
Fields:	2.3.244.1 id (FI-1953)		
	Type:	string [6] (Unique)	
	Default Value:	EMPTY	
	Validation:	^[0-9a-fA-F]{6}\$	
	Remarks:	hex identity of domain	
	2.3.244.2 name (FI-1952)		
	Type:	string [50] (Unique)	

Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Remarks:	name of domain

2.3.244.3 pkid (FI-1951)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-272):	Type:	Active (Insert/Update)
	Rule Name:	mlppdomain versionstamp
	Description:	on change to anything in mlppdomain table, update device versionstamp
	Test Condition:	update device

2.3.244.4 usermodifiable (FI-1965)

Type:	bool (Not Modifiable)	
Default Value:	TRUE	
Rule (RI-204):	Type:	Validation (Update/Delete)
	Rule Name:	Default MLPP Domain Restriction
	Description:	The Default MLPP Domain is marked as not userModifiable, and cannot be modified in any way, nor deleted from the database.
	Test Condition:	ON UPDATE/DELETE IN MLPPDomain IF (userModifiable = FALSE) THEN throw exception
	Error Message:	The default MLPP Domain cannot be modified or deleted.
Rule (RI-205):	Type:	Validation (Insert)
	Rule Name:	One Default MLPP Domain per Cluster
	Description:	Only one MLPP Domain can be the default non-modifiable record (inserted at install time).
	Test Condition:	ON INSERT/UPDATE IN MLPPDomain IF (SELECT COUNT(*) FROM MLPPDomain WHERE userModifiable = FALSE) > 1 THEN throw exception
	Error Message:	Cannot have more than one default (non-modifiable) MLPP Domain in the cluster.
	Remedy:	The value of userModifiable must be True for all user-added MLPP Domains.

2.3.244.5 versionstamp (FI-3118)

Type:	string [47] (Null OK)
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963

	Remarks:	New guid plus seconds past midnight 1970 are concatenated	
	Rule (RI-272):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	mlppdomain versionstamp
		Description:	on change to anything in mlppdomain table, update device versionstamp
		Test Condition:	update device
	Rule (RI-272):	Type:	Active (Insert/Update)
		Rule Name:	mlppdomain versionstamp
		Description:	on change to anything in mlppdomain table, update device versionstamp
		Test Condition:	update device
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-204):	Type:	Validation (Update/Delete) Rule applied when record is updated or deleted.
		Rule Name:	Default MLPP Domain Restriction
		Description:	The Default MLPP Domain is marked as not userModifiable, and cannot be modified in any way, nor deleted from the database.
		Test Condition:	ON UPDATE/DELETE IN MLPPDomain IF (userModifiable = FALSE) THEN throw exception
		Error Message:	The default MLPP Domain cannot be modified or deleted.
	Rule (RI-205):	Type:	Validation (Insert) Rule applied when record is inserted or updated.
		Rule Name:	One Default MLPP Domain per Cluster
		Description:	Only one MLPP Domain can be the default non-modifiable record (inserted at install time).
		Test Condition:	ON INSERT/UPDATE IN MLPPDomain IF (SELECT COUNT(*) FROM MLPPDomain WHERE userModifiable = FALSE) > 1 THEN throw exception
		Error Message:	Cannot have more than one default (non-modifiable) MLPP Domain in the cluster.
		Remedy:	The value of userModifiable must be True for all user-added MLPP Domains.

2.3.245 mobilesmaclientprofile (TI-493)

Description: Settings for Smart Client devices used with Mobility

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.245.1 enablecfauri (FI-3691)	
	Type:	string [255]
	Default Value:	x-cisco-serviceuri-cfwdall
	Remarks:	URI to enable call forward all
	2.3.245.2 enablesnruri (FI-3690)	
	Type:	string [255]
	Default Value:	x-cisco-serviceuri-mobileconnect
	Remarks:	URI to enable mobile connect
	2.3.245.3 handoffuri (FI-3692)	
	Type:	string [255]
	Default Value:	x-cisco-serviceuri-handoff
	Remarks:	URI for handoff
	2.3.245.4 isstandard (FI-3693)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Standard entry created by install that cannot be modified or removed
	2.3.245.5 name (FI-3688)	
	Type:	string [200] (Unique)
	Remarks:	Name of this profile
	2.3.245.6 pkid (FI-3687)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Remarks:	Unique ID to identify a record.
	2.3.245.7 tkmobilesmartclient (FI-3689)	
	Type:	enum
	Default Value:	0
	Remarks:	Smart client application model
Uniqueness:	No multicolumn uniqueness constraints	

2.3.246 mobilityprofile (TI-586)

Description: To store details of Mobility Profile for Least Cost Routing

Fields:

2.3.246.1 description (FI-6073)

Type:	string [400]
Default Value:	EMPTY
Validation:	^[^'"&<>%]{0,100}\$
Remarks:	Localizable description of Mobility Profile

2.3.246.2 dvofserviceaccessnumber (FI-6076)

Type:	string [50]
Default Value:	EMPTY
Validation:	^(\\ + [0-9A-D#*]){1,24}\$
Remarks:	parameter specifies an alternative service access number for smart phone users to dial when invoking the Dial-via-Office Forward feature

2.3.246.3 dvorcallerid (FI-6078)

Type:	string [50] (Null OK)
Validation:	^[0-9]{0,50}\$
Remarks:	Mobility will use this as callerid for the callback to mobile in case of DVO-Reverse

2.3.246.4 fknumpplan (FI-6077)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	points to the numplan entry that specifies a number for smart phone users to dial when invoking the Dial-via-Office Forward feature.

2.3.246.5 name (FI-6072)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Migration Source:	N/A
Remarks:	Unique name

2.3.246.6 pkid (FI-6071)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()

	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.246.7 tkdialviaoffice (FI-6086)	
	Type:	enum
	Default Value:	0
	Remarks:	Reference to the DialViaOffice type setting associated with this MobilityProfile. Indicates how external calls made through the UCM, (by Remote Destinations associated with this profile), should be connected with the originator.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.247 modelfeaturemap (TI-84)

Description:	All feature types allowed for a particular model Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.247.1 enum (FI-648)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Used for primary key so can be replicated by SQL
	2.3.247.2 tkdeviceprotocol (FI-2616)	
	Type:	enum
	Default Value:	99
	2.3.247.3 tkfeature (FI-284)	
	Type:	enum (Not Modifiable)
	Migration Source:	prepopulated
	2.3.247.4 tkmodel (FI-285)	
	Type:	enum (Not Modifiable)
	Migration Source:	prepopulated
Uniqueness:	No multicolumn uniqueness constraints	

2.3.248 mohaudiosource (TI-149)

Description:	information on sources for music for Music on Hold	
Fields:	2.3.248.1 alwaysplayinitialannouncement (FI-6276)	

Type:	bool
Default Value:	TRUE
Remarks:	AlwaysPlayInitialAnnouncement gives the user an option to choose whether to play the initial announcement to hunt pilot callers. when it is set to False, caller will not hear initial announcement when an agent is available.

2.3.248.2 [fkcustomannouncement_initial \(FI-6272\)](#)

Type:	guid (Indexed, Null OK)
Default Value:	NULL
Remarks:	Initial custom announcement

2.3.248.3 [fkcustomannouncement_repeat \(FI-6273\)](#)

Type:	guid (Indexed, Null OK)
Default Value:	NULL
Remarks:	Repeat Custom Announcement

2.3.248.4 [highsourcefiledatetime \(FI-888\)](#)

2.3.248.8 pkid (FI-844)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.248.9 repeat (FI-873)

Type:	bool
Default Value:	0

2.3.248.10 repeatinterval (FI-6274)

Type:	long
Default Value:	30
Check Constraint:	(RepeatInterval >= 10) AND (RepeatInterval <= 300)

Remarks: Repeat interval for custom announcement

2.3.248.11 sourcefile (FI-847)

Type: string [255]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{|}~\\-]{1,255}\$

Rule (RFI-139):

Type: Inter-field Condition and Constraint

Test Condition: SourceID = 51

Constraint: (SourceFile = ") OR (SourceFile = '/dev/dsp')

Remarks: MOH Fixed Audio Source stream (51) uses empty source file for disabled, /dev/dsp for enabled. Other values are invalid.

Rule (RI-53):

Type: Active (Insert/Update/Delete records)

Rule Name: MOH Audio Source File Copy

Description: When the source file for a MOH Audio Source is updated, the corresponding file must be copied from the staging location to the location where the MOH Server expects to find it. It must also be distributed to all MOH Servers. Exact locations may depend on OS and configuration.

Test Condition: SET MOHAudioSource.SourceFile = (Non-blank name)

2.3.248.12 sourceid (FI-845)

Type: long (Unique, Not Modifiable)

Check Constraint: (SourceID >= 1) AND (SourceID <= 51)

Rule (RI-234):

Type: Active (Insert/Update/Delete records)

Rule Name: MOH Audio Source Rules

Description: Combines rules 47 and 49 along with delete BR on MOHAudioSource

Test Condition: ?

Error Message: ?

Remedy: ?

Rule (RI-943):

Type: Active (Update)

Rule Name: Update MOH Audio Source to NULL

Description: The source id in huntqueue should be set back to its default value (NULL) when the MOH audio source is deleted from GUI.

Test Condition: ON DELETE FROM MOHAudioSource (UPDATE HuntPilotQueue SET

			NetworkHoldMOHAudioSourceID = NULL WHERE MOHAudioSource.Name = ")
	2.3.248.13 tkuserlocale announcements (FI-6275)		
	Type:	enum (Indexed)	
	Default Value:	1	
	Remarks:	Reference to TypeUserLocale	
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-47):	Type:	Active (Insert/Update/Delete records) Rule applied when record is inserted or updated.
		Rule Name:	MOH Audio Source Multicast Enabled
		Description:	When MOH Audio Source Multicast is set to true, the MOHServerMulticastInfo table is automatically updated. For the MOH Audio Source that is marked as Multicast, one record is inserted for each combination of MOH Server that has multicast enabled and MOH Codec. The total number of records is always Multicast MOHAudioSources X Multicast MOHServers X MOHCodecs. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for each MOH Server: For each MOH Server that has a Multicast Base IP Address (non-blank), start with the Multicast Base IP Address and Port and find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs.
		Test Condition:	SET MOHAudioSource.Multicast = TRUE
	Rule (RI-49):	Type:	Active (Insert/Update/Delete records) Rule applied when record is inserted or updated.
		Rule Name:	MOH Audio Source Multicast Disabled
		Description:	When MOH Audio Source Multicast is set to false, any existing MOHServerMulticastInfo records that reference the MOH Audio Source (by MOHAudioSourceID) must be deleted.
		Test Condition:	SET MOHAudioSource.Multicast = FALSE
	Rule (RI-50):	Type:	Active (Insert/Update) Rule applied when record is inserted or updated.
		Rule Name:	MOH Server Multicast Disabled
		Description:	When MOH Server Multicast settings are cleared, any existing MOHServerMulticastInfo records that reference the MOH Server (by fkDevice) must be deleted.
		Test Condition:	SET MOHServer.MulticastBaseIPAddress = " AND MOHServer.MulticastBasePort = 0

2.3.249 mohserver (TI-148)

Description: Music on Hold server information

Fields:

2.3.249.1 fixedaudiosourceid (FI-843)

Type: string [255]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_`{|}~\\-]{0,255}\$

Remarks: 1-1000

2.3.249.2 fkdevice (FI-842)

Type: guid (Unique, Cascade Delete, Not Modifiable)

Rule (RI-48):

Type: Active (Insert/Update)

Rule Name: MOH Server Multicast Enabled

Description: When MOH Server Multicast settings change the MOHServerMulticastInfo table is automatically updated. For the MOH Server for which Multicast is changed, one record is inserted for each combination of MOH Audio Source that has multicast enabled and MOH Codec. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs. On insert of MOH Server, all the MOHServerMulticastInfo records are inserted. On any subsequent change to the Multicast settings, all MOHServerMulticastInfo records for the current MOH Server are deleted, and a new set of records is inserted.

Test Condition: SET MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0

Rule (RI-50):

Type: Active (Insert/Update)

Rule Name: MOH Server Multicast Disabled

Description: When MOH Server Multicast settings are cleared, any existing MOHServerMulticastInfo records that reference the MOH Server (by fkDevice) must be deleted.

Test Condition: SET MOHServer.MulticastBaseIPAddress = " AND MOHServer.MulticastBasePort = 0

Rule (RI-51):

Type: Validation (Insert/Update)

Rule Name: MOH Server Device

Description: The records in MOHServer table must reference a MOHServer device

Test Condition: MOHServer.fkDevice IN (SELECT pkid FROM Device where tkClass = 12)

Rule (RI-55):	Error Message:	MOHServer table may only reference MOH Server devices.
	Remedy:	Correct the fkDevice value to refer to a MOH Server device.
	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Settings Change
	Description:	If the Increment On IP setting, Base IP Address or Base Port is changed for a MOH Server that has Multicast enabled (defined Multicast Base IP Address and Port), the MOHServerMulticastInfo records for that server must be deleted and re-inserted. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. If IncrementOnIP is true, the next available IP address is used, and the Port remains constant. If IncrementOnIP is false, the IP Address remains constant and the Port is incremented to the next available even numbered port. Records are inserted for each combination of Multicast Audio Source and MOH Codec.
	Test Condition:	MOHServer.BaseMulticastIPAddress != " AND MOHServer.BaseMulticastPort != 0 AND MOHServer.IncrementOnIP != (previous setting) AND MOHServer.BaseMulticastIPAddress != (previous setting) AND MOHServer.BaseMulticastPort != (previous setting)

2.3.249.3 maxmulticaststreams (FI-931)

Type:	long
Default Value:	250000
Check Constraint:	(MaxMulticastStreams >= 1) AND (MaxMulticastStreams <= 999999)

2.3.249.4 maxunicaststreams (FI-841)

Type:	long
Default Value:	250
Check Constraint:	(MaxUnicastStreams >= 0) AND (MaxUnicastStreams <= 1000)

2.3.249.5 multicastbaseipaddress (FI-989)

Type:	string [15]	
Default Value:	0.0.0.0	
Rule (RFI-16):	Type:	Inter-field Condition and Constraint
	Test Condition:	MulticastBasePort = 0
	Constraint:	MulticastBaseIPAddress = '0.0.0.0'
	Remarks:	Multicast base IP Address and Port must be set in tandem

Rule (RI-43):	Type:	Warning (Message for UI only)
	Rule Name:	MOH Multicast X.0.0.Y Address Warning
	Description:	If the Multicast Base IP Address for an MOH Server is in the form #.0.0.#, show a warning that the address does not conform to the recommendations of the Multicast standard.
	Test Condition:	MOHServer.MulticastBaseIPAddress LIKE "%.0.0.%"
Rule (RI-44):	Error Message:	The Multicast IP Address you specified does not conform to the standards for IP Multicast. Address should not have a form of A.0.0.D.
	Type:	Warning (Message for UI only)
	Rule Name:	MOH Multicast Address Range Warning
	Description:	If Multicast Base IP Address is not in the range 239.0.1.0 - 239.255.255.255 warn user that address is outside of recommended range for Administratively controlled multicast applications on private networks
Rule (RI-45):	Test Condition:	Base Multicast IP Address below 239.0.1.0
	Error Message:	The Multicast Base IP Address is not in the recommended range for Administratively controlled multicast applications on private networks (239.0.1.0 - 239.255.255.255).
	Type:	Validation (Insert/Update)
	Rule Name:	MOH Multicast Base Address Out Of Range
Rule (RI-48):	Description:	MulticastBaseIPAddress is stored in dotted decimal format, and must be in the range of IP addresses from 224.0.1.0 to 239.255.255.255. Addresses outside this range are not valid.
	Test Condition:	(MOHServer.MulticastBaseIPAddress < 224.0.1.0) OR (MOHServer.MulticastBaseIPAddress > 239.255.255.255)
	Error Message:	All Multicast IP Addresses must be in the range 224.0.1.0 to 239.255.255.255. When incrementing on IP Address MOH multicast requires one address for each combination of Multicast MOH Audio Source and MOH Codec (# of Multicast MOH Audio Sources X 4 codecs)
	Remedy:	Adjust the Multicast Base IP Address and try again. When adding or updating multicast MOH Audio Sources, it may be necessary to change the Multicast settings for one or more MOH Servers.
Rule (RI-48):	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Enabled
	Description:	When MOH Server Multicast settings change the MOHServerMulticastInfo table is automatically updated. For the MOH Server for which Multicast is changed, one record is inserted for each combination of MOH Audio Source that has multicast enabled and MOH Codec. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP

			Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs. On insert of MOH Server, all the MOHServerMulticastInfo records are inserted. On any subsequent change to the Multicast settings, all MOHServerMulticastInfo records for the current MOH Server are deleted, and a new set of records is inserted.
		Test Condition:	SET MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0
	Rule (RI-50):	Type:	Active (Insert/Update)
		Rule Name:	MOH Server Multicast Disabled
		Description:	When MOH Server Multicast settings are cleared, any existing MOHServerMulticastInfo records that reference the MOH Server (by fkDevice) must be deleted.
		Test Condition:	SET MOHServer.MulticastBaseIPAddress = " AND MOHServer.MulticastBasePort = 0
	Rule (RI-52):	Type:	Validation (Insert/Update)
		Rule Name:	MOH Server Multicast Settings
		Description:	If the MOHServer.MulticastBaseIPAddress is not blank and MOHServer.MulticastBasePort is not 0, the combination of these two fields must be unique
		Test Condition:	IF (MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0) THEN MOHServer.BaseMulticastIPAddress + MOHServer.BaseMulticastPort must be unique.
		Error Message:	Two MOH Servers cannot use the same Multicast Base IP Address and Port Number.
		Remedy:	Change the Multicast Base IP Address or Port and try again.
	Rule (RI-55):	Type:	Active (Insert/Update)
		Rule Name:	MOH Server Multicast Settings Change
		Description:	If the Increment On IP setting, Base IP Address or Base Port is changed for a MOH Server that has Multicast enabled (defined Multicast Base IP Address and Port), the MOHServerMulticastInfo records for that server must be deleted and re-inserted. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. If IncrementOnIP is true, the next available IP address is used, and the Port remains constant. If IncrementOnIP is false, the IP Address remains constant and the Port is incremented to the next available even numbered port. Records are inserted for each combination of Multicast Audio Source and MOH Codec.
		Test Condition:	MOHServer.BaseMulticastIPAddress != " AND MOHServer.BaseMulticastPort != 0 AND MOHServer.IncrementOnIP != (previous setting) AND MOHServer.BaseMulticastIPAddress != (previous setting) AND MOHServer.BaseMulticastPort != (previous setting)

2.3.249.6 multicastbaseport (FI-990)

Type:	long	
Default Value:	0	
Rule (RFI-15):	Type:	Inter-field Condition and Constraint
	Test Condition:	MulticastBaseIPAddress = '0.0.0.0'
	Constraint:	MulticastBasePort = 0
	Remarks:	Multicast base IP Address and Port must be set in tandem
Rule (RI-46):	Type:	Validation (Insert/Update)
	Rule Name:	MOH Multicast Base Port Number
	Description:	The port numbers used for Multicast must be even numbers in the range 16384 to 32766, or 0 when Multicast is disabled (Multicast Base IP Address is empty).
	Test Condition:	IF (MOHServer.MulticastBasePort != 0) AND ((MOHServer.MulticastBasePort < 16384) OR (MOHServer.MulticastBasePort > 32766) OR ((MOHServer.MulticastBasePort MOD 2) != 0)) THEN throw exception
	Error Message:	Multicast Base Port number must be an even number in the range 16384 to 32766.
	Remedy:	Specify an even number in the valid range and try again.
Rule (RI-48):	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Enabled
	Description:	When MOH Server Multicast settings change the MOHServerMulticastInfo table is automatically updated. For the MOH Server for which Multicast is changed, one record is inserted for each combination of MOH Audio Source that has multicast enabled and MOH Codec. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs. On insert of MOH Server, all the MOHServerMulticastInfo records are inserted. On any subsequent change to the Multicast settings, all MOHServerMulticastInfo records for the current MOH Server are deleted, and a new set of records is inserted.
	Test Condition:	SET MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0
Rule (RI-50):	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Disabled
	Description:	When MOH Server Multicast settings are cleared, any existing MOHServerMulticastInfo records that reference the MOH Server (by fkDevice) must be deleted.

	Test Condition:	SET MOHServer.MulticastBaseIPAddress = " AND MOHServer.MulticastBasePort = 0
Rule (RI-52):	Type:	Validation (Insert/Update)
	Rule Name:	MOH Server Multicast Settings
	Description:	If the MOHServer.MulticastBaseIPAddress is not blank and MOHServer.MulticastBasePort is not 0, the combination of these two fields must be unique
	Test Condition:	IF (MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0) THEN MOHServer.BaseMulticastIPAddress + MOHServer.BaseMulticastPort must be unique.
	Error Message:	Two MOH Servers cannot use the same Multicast Base IP Address and Port Number.
	Remedy:	Change the Multicast Base IP Address or Port and try again.
Rule (RI-55):	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Settings Change
	Description:	If the Increment On IP setting, Base IP Address or Base Port is changed for a MOH Server that has Multicast enabled (defined Multicast Base IP Address and Port), the MOHServerMulticastInfo records for that server must be deleted and re-inserted. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. If IncrementOnIP is true, the next available IP address is used, and the Port remains constant. If IncrementOnIP is false, the IP Address remains constant and the Port is incremented to the next available even numbered port. Records are inserted for each combination of Multicast Audio Source and MOH Codec.
	Test Condition:	MOHServer.BaseMulticastIPAddress != " AND MOHServer.BaseMulticastPort != 0 AND MOHServer.IncrementOnIP != (previous setting) AND MOHServer.BaseMulticastIPAddress != (previous setting) AND MOHServer.BaseMulticastPort != (previous setting)

2.3.249.7 multicastincrementonip (FI-991)

Type:	bool	
Default Value:	FALSE	
Rule (RI-48):	Type:	Active (Insert/Update)
	Rule Name:	MOH Server Multicast Enabled
	Description:	When MOH Server Multicast settings change the MOHServerMulticastInfo table is automatically updated. For the MOH Server for which Multicast is changed, one record is inserted for each combination of MOH Audio Source that has multicast enabled and MOH Codec. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP

			Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs. On insert of MOH Server, all the MOHServerMulticastInfo records are inserted. On any subsequent change to the Multicast settings, all MOHServerMulticastInfo records for the current MOH Server are deleted, and a new set of records is inserted.
		Test Condition:	SET MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0
	Rule (RI-55):	Type:	Active (Insert/Update)
		Rule Name:	MOH Server Multicast Settings Change
		Description:	If the Increment On IP setting, Base IP Address or Base Port is changed for a MOH Server that has Multicast enabled (defined Multicast Base IP Address and Port), the MOHServerMulticastInfo records for that server must be deleted and re-inserted. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. If IncrementOnIP is true, the next available IP address is used, and the Port remains constant. Remedy:	Adjust the Multicast Base IP Address and try again. When adding or updating multicast MOH Audio Sources, it may be necessary to change the Multicast settings for one or more MOH Servers.												

2.3.250.5 multicastport (FI-854)

Type: long (Not Modifiable)

Default Value: 0

2.3.250.6 pkid (FI-850)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

2.3.250.7 [tkmohcodec](#) (FI-878)

Type: enum (Not Modifiable)

Default Value: 1

Uniqueness: multicastaddress + multicastport is unique. (MFI-29)

Rules:	Rule (RI-47):	Type:	Active (Insert/Update/Delete records) This table is modified by this rule.
		Rule Name:	MOH Audio Source Multicast Enabled
		Description:	When MOH Audio Source Multicast is set to true, the MOHServerMulticastInfo table is automatically updated. For the MOH Audio Source that is marked as Multicast, one record is inserted for each combination of MOH Server that has multicast enabled and MOH Codec. The total number of records is always Multicast MOHAudioSources X Multicast MOHServers X MOHCodecs. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for each MOH Server: For each MOH Server that has a Multicast Base IP Address (non-blank), start with the Multicast Base IP Address and Port and find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs.
		Test Condition:	SET MOHAudioSource.Multicast = TRUE
	Rule (RI-48):	Type:	Active (Insert/Update) This table is modified by this rule.
		Rule Name:	MOH Server Multicast Enabled
		Description:	When MOH Server Multicast settings change the MOHServerMulticastInfo table is automatically updated. For the MOH Server for which Multicast is changed, one record is inserted for each combination of MOH Audio Source that has multicast enabled and MOH Codec. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base

			Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. Insert a record for the first MOH Codec, then repeat for each of the other MOH Codecs. On insert of MOH Server, all the MOHServerMulticastInfo records are inserted. On any subsequent change to the Multicast settings, all MOHServerMulticastInfo records for the current MOH Server are deleted, and a new set of records is inserted.
		Test Condition:	SET MOHServer.BaseMulticastIPAddress != " and MOHServer.BaseMulticastPort != 0
	Rule (RI-49):	Type:	Active (Insert/Update/Delete records) This table is modified by this rule.
		Rule Name:	MOH Audio Source Multicast Disabled
		Description:	When MOH Audio Source Multicast is set to false, any existing MOHServerMulticastInfo records that reference the MOH Audio Source (by MOHAudioSourceID) must be deleted.
		Test Condition:	SET MOHAudioSource.Multicast = FALSE
	Rule (RI-50):	Type:	Active (Insert/Update) This table is modified by this rule.
		Rule Name:	MOH Server Multicast Disabled
		Description:	When MOH Server Multicast settings are cleared, any existing MOHServerMulticastInfo records that reference the MOH Server (by fkDevice) must be deleted.
		Test Condition:	SET MOHServer.MulticastBaseIPAddress = " AND MOHServer.MulticastBasePort = 0
	Rule (RI-55):	Type:	Active (Insert/Update) This table is modified by this rule.
		Rule Name:	MOH Server Multicast Settings Change
		Description:	If the Increment On IP setting, Base IP Address or Base Port is changed for a MOH Server that has Multicast enabled (defined Multicast Base IP Address and Port), the MOHServerMulticastInfo records for that server must be deleted and re-inserted. The IP Address and Port Number for each entry are determined by the Multicast Base IP Address, Multicast Base Port, and Increment On IP setting for the MOH Server: Starting with the Multicast Base IP Address and Port, find the first available IP address and Port by incrementing as specified by MOHServer.IncrementOnIP. If IncrementOnIP is true, the next available IP address is used, and the Port remains constant. If IncrementOnIP is false, the IP Address remains constant and the Port is incremented to the next available even numbered port. Records are inserted for each combination of Multicast Audio Source and MOH Codec.
		Test Condition:	MOHServer.BaseMulticastIPAddress != " AND MOHServer.BaseMulticastPort != 0 AND MOHServer.IncrementOnIP != (previous setting) AND MOHServer.BaseMulticastIPAddress != (previous setting) AND MOHServer.BaseMulticastPort != (previous setting)

2.3.251 mrgmediaaccesspermission (TI-583)

Description:	Cisco BE: To store the permission information between media access (checkbox in UI which take input on access to MOH, MTP, CFB) and MRGL Is not replicated.		
Fields:	2.3.251.1 allowann (FI-6053)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	check for annonciater	
	2.3.251.2 allowcfb (FI-6054)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	check for conference bridge	
	2.3.251.3 allowmoh (FI-6091)

	Default Value:	FALSE	
	Remarks:	check for Musich on hold	
	2.3.251.4 allowmtp (FI-6092)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	check for MTP	
	2.3.251.5 fkmediaresourcegroup (FI-6093)		
	Type:	guid	
	Remarks:	Reference to MRG	
	2.3.251.6 pkid (FI-6052)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique identifier for the record	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.252 networkaccessprofile (TI-2599)

Description: Stores Network Access details for a Wireless LAN Profile.

Fields:

2.3.252.1 description (FI-25693)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[^'"%&\\<>:]{0,63}\$
Remarks:	Description of the Wireless LAN HTTP Proxy.

2.3.252.2 name (FI-25692)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z0-9._-]{1,50}\$
Remarks:	Name of the Wireless LAN HTTP Proxy.

2.3.252.3 namecredentialforauthentication (FI-25699)

Type:	string [64] (Indexed)
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9"'!<>#\$\$%&'()*+.,/\:;?@[^_`{ }~-]{0,64}\$
Remarks:	User identification name for network authentication.

2.3.252.4 passwordreverse (FI-25700)

Type:	string [196] (Null OK)
Validation:	^[a-zA-F0-9]{0,192}\$
Remarks:	Used for digest authentication

2.3.252.5 pkid (FI-25691)

Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Migration Source:	Generated		
Remarks:	Unique ID to identify a record.		
Rule (RI-2143):	Type:	Active (Insert/Update)	
	Rule Name:	On Active Insert/Update of NetworkAccessProfile,update WirelessLANProfileGroup versionstamp	
	Description:	On Insert/Update of NetworkAccessProfile,the versionstamp of corresponding WirelessLANProfileGroup should be updated to current time.	

		Test Condition:	For INSERT/UPDATE of NetworkAccessProfile,UPDATE WirelessLANProfileGroup SET versionstamp = versionStampGenerator()
	2.3.252.6 port (FI-25697)		
	Type:	long	
	Default Value:	8080

	Remarks:	Port on which it makes the connection.	
	2.3.252.7 proxyuri (FI-25696)		
	Type:	string [255]	
	Remarks:	ProxyURI	
	2.3.252.8 requireauthentication (FI-25698)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Indicates whether it requires authentication to make the connection.	
	2.3.252.9 tkhttpproxy (FI-25695)		
	Type:	enum	
	Default Value:	0	
	Remarks:	Type of HTTP Proxy used.	
	2.3.252.10 tkstatus_vpnrequired (FI-25755)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Specifies the status on VPN requirement.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.253 nsfinformationelement (TI-192)			
Description:	For ISDN Network Specific Facilities information elements		
Fields:	2.3.253.1 carrieridentificationcode (FI-1174)		
	Type:	string [10]	
	Default Value:	EMPTY	

Rule (RI-124):	Type:	Validation (Insert/Update)
	Rule Name:	NSF Information Element Service and Protocol
	Description:	NSF Services are dependent on the PRI Protocol for the Information Element. Valid combinations are defined in the NSFProtocolServiceMap.
	Test Condition:	@NSFInformationElement.tkNSFService IN (SELECT tkNSFService FROM NSFProtocolServiceMap WHERE tkPriProtocol = @NSFInformationElement.tkPriProtocol)
	Error Message:	The specified NSF Service is not valid for the selected protocol.
	Remedy:	Select a Service that is supported by the current Protocol, or change the protocol.

2.3.253.2 [fknumplan \(FI-1173\)](#)

Type:	guid (Cascade Delete)	
Rule (RI-123):	Type:	Validation (Insert/Update)
	Rule Name:	NSF Information
	Description:	The records in NSFInformationElement table must reference a Route Pattern in the NumPlan table (tkPatternUsage = 5).
	Test Condition:	NSFInformationElement.fkNumPlan IN (SELECT pkid FROM NumPlan WHERE tkPatternUsage = 5)
	Error Message:	NSFInformationElements must be associated with a Route Pattern.
	Remedy:	Correct the fkNumPlan value to refer to a Route Patter in the NumPlan table.
Rule (RI-245):	Type:	Active (Insert/Update)
	Rule Name:	updTagAndClause
	Description:	After insert or update of NSFInfoElement, update Numplan withTag and withValue fields.
	Test Condition:	?
	Error Message:	?
	Remedy:	?
Rule (RI-246):	Type:	Active (Delete)
	Rule Name:	removeTagAndClause
	Description:	if the record is removed, set the withTag and withValueClause to the empty string
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.253.3 paramvalue (FI-1177)

2.3.253.6 tkpriprotocol (FI-1175)

Type:	enum						
Rule (RI-124):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>NSF Information Element Service and Protocol</td></tr><tr><td>Description:</td><td>NSF Services are dependent on the PRI Protocol for the Information Element. Valid combinations</td></tr></table>	Type:	Validation (Insert/Update)	Rule Name:	NSF Information Element Service and Protocol	Description:	NSF Services are dependent on the PRI Protocol for the Information Element. Valid combinations
Type:	Validation (Insert/Update)						
Rule Name:	NSF Information Element Service and Protocol						
Description:	NSF Services are dependent on the PRI Protocol for the Information Element. Valid combinations						

			are defined in the NSFProtocolServiceMap.
		Test Condition:	@NSFInformationElement.tkNSFService IN (SELECT tkNSFService FROM NSFProtocolServiceMap WHERE tkPriProtocol = @NSFInformationElement.tkPriProtocol)
		Error Message:	The specified NSF Service is not valid for the selected protocol.
		Remedy:	Select a Service that is supported by the current Protocol, or change the protocol.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.254 nsfprotocalservicemap (TI-191)

Description:	Map NSF services to NSF supported Pri Protocols Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.254.1 cicvalidation (FI-3048)		
	Type:	string [255] (Not Modifiable)	
	2.3.254.2 enum (FI-1169)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	
	2.3.254.3 paramvaluevalidation (FI-3049)		
	Type:	string [255] (Not Modifiable)	
	2.3.254.4 tknsfservice (FI-1171)		
	Type:	enum (Not Modifiable)	
	2.3.254.5 tkpriprotocol (FI-1170)		
Type:	enum (Not Modifiable)		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.255 ntpserver (TI-315)

Description:	Servers to get time value from		
Fields:	2.3.255.1 description (FI-2354)		
	Type:	string [100]	
	Default Value:	EMPTY	
	Remarks:	Description of NTP Server	

2.3.255.2 name (FI-2353)

Type:	string [15] (Unique)										
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$										
Remarks:	IP Address for NTP Server										
Rule (RI-295):	<table><tr><td>Type:</td><td>Active (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>NTP Name</td></tr><tr><td>Description:</td><td>Verify name as IP or host</td></tr><tr><td>Test Condition:</td><td>I/U of NTPServer</td></tr><tr><td>Error Message:</td><td>IP address or hostname does not conform to accepted standard</td></tr></table>	Type:	Active (Insert/Update)	Rule Name:	NTP Name	Description:	Verify name as IP or host	Test Condition:	I/U of NTPServer	Error Message:	IP address or hostname does not conform to accepted standard
Type:	Active (Insert/Update)										
Rule Name:	NTP Name										
Description:	Verify name as IP or host										
Test Condition:	I/U of NTPServer										
Error Message:	IP address or hostname does not conform to accepted standard										

2.3.255.3 pkid (FI-2352)

Type:	guid (Unique, Indexed, Not Modifiable)								
Default Value:	newid()								
Remarks:	Unique ID to identify a record.								
Rule (RI-328):	<table><tr><td>Type:</td><td>Active (Update)</td></tr><tr><td>Rule Name:</td><td>ntpserver versionstamp</td></tr><tr><td>Description:</td><td>on change to anything in ntpserver, update versionstamp in devicepool table</td></tr><tr><td>Test Condition:</td><td>update ntpserver</td></tr></table>	Type:	Active (Update)	Rule Name:	ntpserver versionstamp	Description:	on change to anything in ntpserver, update versionstamp in devicepool table	Test Condition:	update ntpserver
Type:	Active (Update)								
Rule Name:	ntpserver versionstamp								
Description:	on change to anything in ntpserver, update versionstamp in devicepool table								
Test Condition:	update ntpserver								

2.3.255.4 tkzzntpmode (FI-3063)

Type:	enum
Default Value:	3
Remarks:	NTP Mode

Uniqueness: No multicolumn uniqueness constraints

2.3.256 ntpserverdatetimesettingmap (TI-316)

Description: Mapping between NTP Server and DateTimeSetting

Fields: 2.3.256.1 fkdatetimesetting (FI-2357)

Type:	guid (Cascade Delete)
Remarks:	pkid of DateTimeSetting

	Rule (RI-329):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	ntpserverdatetimesettingmap versionstamp
		Description:	on change to anything in ntpserverdatetimesettingmap, update versionstamp in devicepool table
		Test Condition:	update ntpserverdatetimesettingmap
	Rule (RI-455):	Type:	Validation (Insert/Update)
		Rule Name:	Limit NTP Reference to 8
		Description:	Rule to limit NTP Reference in a Date Time Group to maximum of 8. Rules fires on insert/update and checks that there are no more than 8 records with the same fkDateTimeSetting in the NTPServerDateTimeSettingMap table
		Test Condition:	IF(Mode='I') OR (old_fkdatetimesetting <> new_fkdatetimesetting) THEN SELECT COUNT(*) INTO nRows FROM ntpserverdatetimesettingmap WHERE fkdatetimesetting = new_fkdatetimesetting; IF (nRows>8) THEN throw exception; END IF; END IF;
		Error Message:	There are more than 8 NTP entries for the same Date Time Group
		Remedy:	Please delete one or more records with the same fkDateTimeSetting in the NTPServerDateTimeSettingMap table to limit NTP Reference in a Date Time Group to maximum of 8
	2.3.256.2 fkntpserver (FI-2356)		
	Type:	guid (Cascade Delete)	
	Remarks:	pkid of NTP Server record	
	2.3.256.3 pkid (FI-2355)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.256.4 selectionorder (FI-2358)		
	Type:	long (Null OK)	
	Default Value:	0	
	Remarks:	Identifies the order in which the NTP Server should be selected	
Uniqueness:	fkdatetimesetting + selectionorder is unique. (MFI-77) fkdatetimesetting + fkntpserver is unique. (MFI-78)		

2.3.257 numplan (TI-24)

Description: List of all directory numbers and patterns

Fields:	2.3.257.1 aardestinationmask (FI-3191)	
	Type:	dn (Null OK)
	DN Type:	DN_TYPE_MASK
	Default Value:	NULL
	Validation:	^[0-9*#+X]{0,24}\$
	2.3.257.2 aarkeepcallhistory (FI-3192)	
	Type:	bool
	Default Value:	TRUE
	2.3.257.3 aarvoicemailenabled (FI-3193)	
	Type:	bool
	Default Value:	FALSE
	2.3.257.4 alertingname (FI-2176)	
	Type:	string [204]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F]{0,50}\$
	2.3.257.5 alertingnameascii (FI-2932)	
	Type:	string [30]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~\-\-]{0,30}\$
	Migration Source:	Alerting Name.label if all chars are less than 127
	Remarks:	This is same as Alerting Name if all characters are ASCII.
	2.3.257.6 allowcticontrolflag (FI-2619)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	If true, this line allows CTI Control.
	Rule (RI-215):	Type: Validation (Insert/Update)
		Rule Name: CTI Device lines must allow CTI Control
		Description: The lines (NumPlan records) associated with a CTI Route Point or CTI Port must allow CTI Control. CTI Control can be restricted only for other non-CTI types of devices.

	Test Condition:	ON INSERT/UPDATE IN NumPlan, DeviceNumPlanMap IF (SELECT COUNT(*) FROM NumPlan n INNER JOIN DeviceNumPlanMap map ON n.pkid = map.fkNumPlan INNER JOIN Device d ON d.pkid = map.fkDevice WHERE n.pkid = @NumPlan.pkid AND n.AllowCTIControlFlag = FALSE AND d.tkModel IN (72,73)) > 0 THEN throw exception
	Error Message:	Cannot disable CTI Control on a line that is associated with a CTI Port or CTI Route Point.
	Remedy:	Allow CTI Control for the line (NumPlan record), or remove any association with CTI Port or CTI Route Point devices.

2.3.257.7 authorizationcoderequired (FI-2177)

Type:	bool								
Default Value:	FALSE								
Rule (RFI-137):	<table> <tr> <td>Type:</td><td>Inter-field Condition and Constraint</td></tr> <tr> <td>Test Condition:</td><td>SupportOverlapSending = 't'</td></tr> <tr> <td>Constraint:</td><td>AuthorizationCodeRequired = 'f'</td></tr> <tr> <td>Remarks:</td><td>Authorization Code (FAC) cannot be used when Overlap Sending is allowed</td></tr> </table>	Type:	Inter-field Condition and Constraint	Test Condition:	SupportOverlapSending = 't'	Constraint:	AuthorizationCodeRequired = 'f'	Remarks:	Authorization Code (FAC) cannot be used when Overlap Sending is allowed
Type:	Inter-field Condition and Constraint								
Test Condition:	SupportOverlapSending = 't'								
Constraint:	AuthorizationCodeRequired = 'f'								
Remarks:	Authorization Code (FAC) cannot be used when Overlap Sending is allowed								

2.3.257.8 authorizationlevelrequired (FI-2319)

Type:	long
Default Value:	0
Check Constraint:	(AuthorizationLevelRequired >=0) AND (AuthorizationLevelRequired <=255)
Remarks:	Configurable with AuthorizationRequired checked

2.3.257.9 blockenable (FI-191)

Type:	bool								
Default Value:	FALSE								
Migration Source:	BlockEnable								
Remarks:	Block CallerID on outbound calls?								
Rule (RFI-17):	<table> <tr> <td>Type:</td><td>Inter-field Condition and Constraint</td></tr> <tr> <td>Test Condition:</td><td>tkPatternUsage NOT IN (3,5,7,9,10,14,15,20)</td></tr> <tr> <td>Constraint:</td><td>BlockEnable = 'f'</td></tr> <tr> <td>Remarks:</td><td>Block enable is allowed only for Route and Translation</td></tr> </table>	Type:	Inter-field Condition and Constraint	Test Condition:	tkPatternUsage NOT IN (3,5,7,9,10,14,15,20)	Constraint:	BlockEnable = 'f'	Remarks:	Block enable is allowed only for Route and Translation
Type:	Inter-field Condition and Constraint								
Test Condition:	tkPatternUsage NOT IN (3,5,7,9,10,14,15,20)								
Constraint:	BlockEnable = 'f'								
Remarks:	Block enable is allowed only for Route and Translation								

2.3.257.10 calledpartytransformationmask (FI-193)

Type:	dn (Null OK)
-------	--------------

DN Type:	DN_TYPE_MASK										
Default Value:	NULL										
Validation:	^[0-9*#+X]{0,50}\$

	Rule (RI-97):	Type:	Validation (Insert/Update)
		Rule Name:	NumPlan Uniqueness
		Description:	DN by itself is not unique. Uniqueness for records in the NumPlan table is determined by a combination of the DNOrPattern and Partition, with the exception of Route Patterns and

			Translation Patterns, which may be further defined by Dial Plan and Route Filter. A Route Pattern or Translation Pattern cannot have the same DNOrPattern and Partition as any other type of pattern even if the Dial Plan, Route Filter or both are different.
		Test Condition:	?
	Rule (RI-120):	Type:	Validation (Insert/Update)
		Rule Name:	DNOrPattern Characters and Digits
		Description:	While the maximum number of digits for any destination (called number) in Cisco CallManager is 24 digits, the length of an entry in the NumPlan DNOrPattern field may contain up to 50 characters. This is necessary to allow for patterns that contain expressions where several characters are used to define a set or range of acceptable values for a particular digit. DNs and Patterns cannot contain more than 24 dialed digits once expressions are taken into account and reduced to a single digit.
		Test Condition:	NumPlan.dNOrPattern with wildcards and expressions collapsed to single character may not contain more than 24 digits
	Rule (RI-238):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	doBeforeNumPlanInsOrUpd
		Description:	Before Insert/Update logic from NumPlan table
		Test Condition:	?
		Error Message:	?
		Remedy:	?
	Rule (RI-238):	Type:	Active (Insert/Update)
		Rule Name:	doBeforeNumPlanInsOrUpd
		Description:	Before Insert/Update logic from NumPlan table
		Test Condition:	?
		Error Message:	?
		Remedy:	?
	Rule (RI-279):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	numplan versionstamp
		Description:	on change to anything in numplan table, update devicerelatedversionstamp versionstamp
		Test Condition:	update devicerelatedversionstamp

Rule (RI-353):	Type:	Validation (Insert/Update)
	Rule Name:	Directed Call Park Reversion Number must be available
	Description:	The number created by combining the Park Code and Reversion Prefix must not already exist in the same partition as the Park Code. For example if the Park Code is 222 in PartitionX and the Reversion Prefix is 8, there cannot already be a pattern of any type in PartitionX with a pattern of 8222. On Update if neither the Park Code nor the prefix has been changed, skip this check.
	Test Condition:	ON INSERT/UPDATE in NumPlan: IF (new_tkPatternUsage = PATTERN_USAGE_DIRECTED_CALL_PARK) AND (new_ikNumPlan_ParkCode IS NULL) THEN SELECT count(*) INTO nRows FROM NumPlan WHERE fkRoutePartition = new_fkRoutePartition AND dnOrPattern = (new_PrefixDigitsOut new_dnOrPattern); IF (nRows > 0) THEN throw exception; END IF; END IF
Rule (RI-355):	Error Message:	The retrieval code (Prefix + Park Code) already exists.
	Remedy:	Change the Park Code or the Retrieval Prefix
	Type:	Validation (Insert/Update)
	Rule Name:	Directed Call Park Retrieval Code record not user modifiable
Rule (RI-357):	Description:	If a NumPlan record is the Retrieval Code for a Directed Call Park, it is not user modifiable. DBMon manages those records
	Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = PATTERN_USAGE_DIRECTED_CALL_PARK) AND (USER = 'dbuser') THEN throw exception; END IF; -- need to skip on UPDATE if there are no changes
	Error Message:	The retrieval code record for Directed Call Park cannot be edited directly
	Remedy:	Make changes to the Park Code
Rule (RI-371):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	Insert NumPlanDCPSyn for sync of DirectedCallPark Code and Retrieval Code
	Description:	If a record is inserted, updated or deleted in NumPlan table with a pattern usage of 12 (Directed Call Park) and empty ikNumPlan_ParkCode, insert a record into NumPlanDCPSyn table. DBMon checks for records in NumPlanDCPSyn table and takes necessary action to insert, update or delete the corresponding retrieval code record for the Directed Call Park.
	Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = 12) AND (ikNumPlan_ParkCode IS NULL) THEN Insert INTO NumPlanDCPSyn

			code can therefore be up to 48 digits
		Test Condition:	ON INSERT/UPDATE IN NumPlan: IF (new_tkPatternUsage = 12) AND ((LENGTH(new_DnOrPattern) > 24) OR (LENGTH(new_PrefixDigitsOut) > 24)) THEN throw exception
		Error Message:	Park Code and Retrieval Prefix are each limited to 24 digits.
		Remedy:	Reduce the length of the Park Code and/or Retrieval Prefix and try again.
	Rule (RI-768):	Type:	Validation (Update)
		Rule Name:	BLF Directed CallPark number must be a Directed Call Park destination
		Description:	The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.
		Test Condition:	ON INSERT/UPDATE in BLFDirectedCallPark: DnOrPattern should contain ^[0-9*#+]
		Error Message:	The BLF Directed Call Park number must be a dialable Directed Call Park Destination
		Remedy:	Make sure the Destination is a dialable Directed Call Park number and try again.
	Rule (RI-952):	Type:	Active (Insert/Update)
		Rule Name:	Derive alternate number(s) from directory number
		Description:	If dnorpattern changes, recalculate any rows in NumPlanURI configured be derived from this directory number
		Test Condition:	On Insert/Update NumPlan, IF dnOrPattern changed, UPDATE rows in NumPlanURI where fkNumPlan = NumPlan.pkid as necessary

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(HRInterval >= 0) AND (HRInterval <= 1200)
Remarks:	time (in seconds) between notifications for held call; -1 defaults to Service Parameter, 0 disables feature

2.3.257.79 iknumplan_parkcode (FI-3209)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Directed Call Park record for which this record specifies the Retrieval Code.

Rule (RI-120):	Type:	Validation (Insert/Update)
	Rule Name:	DNOrPattern Characters and Digits
	Description:	While the maximum number of digits for any destination (called number) in Cisco CallManager is 24 digits, the length of an entry in the NumPlan DNOrPattern field may contain up to 50 characters. This is necessary to allow for patterns that contain expressions where several characters are used to define a set or range of acceptable values for a particular digit. DNs and Patterns cannot contain more than 24 dialed digits once expressions are taken into account and reduced to a single digit.
	Test Condition:	NumPlan.dNOrPattern with wildcards and expressions collapsed to single character may not contain more than 24 digits

Rule (RI-353):	Type:	Validation (Insert/Update)
	Rule Name:	Directed Call Park Reversion Number must be available
	Description:	The number created by combining the Park Code and Reversion Prefix must not already exist in the same partition as the Park Code. For example if the Park Code is 222 in PartitionX and the Reversion Prefix is 8, there cannot already be a pattern of any type in PartitionX with a pattern of 8222. On Update if neither the Park Code nor the prefix has been changed, skip this check.

		Test Condition:	ON INSERT/UPDATE in NumPlan: IF (new_tkPatternUsage = PATTERN_USAGE_DIRECTED_CALL_PARK) AND (new_ikNumPlan_ParkCode IS NULL) THEN SELECT count(*) INTO nRows FROM NumPlan WHERE fkRoutePartition = new_fkRoutePartition AND dnOrPattern = (new_PrefixDigitsOut new_dnOrPattern); IF (nRows > 0) THEN throw exception; END IF; END IF
		Error Message:	The retrieval code (Prefix + Park Code) already exists.
		Remedy:	Change the Park Code or the Retrieval Prefix
	Rule (RI-355):	Type:	Validation (Insert/Update)
		Rule Name:	Directed Call Park Retrieval Code record not user modifiable
		Description:	If a NumPlan record is the Retrieval Code for a Directed Call Park, it is not user modifiable. DBMon manages those records
		Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = PATTERN_USAGE_DIRECTED_CALL_PARK) AND (USER = 'dbuser') THEN throw exception; END IF; -- need to skip on UPDATE if there are no changes
		Error Message:	The retrieval code record for Directed Call Park cannot be edited directly
		Remedy:	Make changes to the Park Code
	Rule (RI-357):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Insert NumPlanDCPSyn for sync of DirectedCallPark Code and Retrieval Code
		Description:	If a record is inserted, updated or deleted in NumPlan table with a pattern usage of 12 (Directed Call Park) and empty ikNumPlan_ParkCode, insert a record into NumPlanDCPSyn table. DBMon checks for records in NumPlanDCPSyn table and takes necessary action to insert, update or delete the corresponding retrieval code record for the Directed Call Park.
		Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = 12) AND (ikNumPlan_ParkCode IS NULL) THEN Insert INTO NumPlanDCPSyn
	Rule (RI-371):	Type:	Validation (Insert/Update)
		Rule Name:	Directed Call Park Code and Prefix max length 24 digits each
		Description:	The max length for both the Park Code and Retrieval Prefix is 24 digits. The resulting retrieval code can therefore be up to 48 digits
		Test Condition:	ON INSERT/UPDATE IN NumPlan: IF (new_tkPatternUsage = 12) AND ((LENGTH(new_DnOrPattern) > 24) OR (LENGTH(new_PrefixDigitsOut) > 24)) THEN throw exception
		Error Message:	Park Code and Retrieval Prefix are each limited to 24 digits.
		Remedy:	Reduce the length of the Park Code and/or Retrieval Prefix and try again.

2.3.257.80 iscallable (FI-1616)

Type:	bool	
Default Value:	TRUE	
Remarks:	If this numplan is mapped in DeviceNumPlanMap, this is true. Otherwise, this is user settable if it tkPatternUsage is device.	
Rule (RI-170):	Type:	Active (Insert/Update/Delete records) This field is modified by this rule.
	Rule Name:	DN Not Callable when removed from last Device
	Description:	If a DN is no longer used by any device, it is automatically marked not callable in the database. The Administrator may then manually mark the DN callable again so that forwarding is enabled for that DN.
	Test Condition:	ON DELETE FROM DeviceNumPlanMap IF ((SELECT COUNT(*) FROM DeviceNumPlanMap WHERE DeviceNumPlanMap.fkNumPlan = @fkNumPlan) = 0) THEN UPDATE NumPlan SET IsCallable = 0 WHERE pkid = @fkNumPlan

2.3.257.97 pffintvoicemailenabled (FI-2333)

Type:	bool
Default Value:	FALSE

2.3.257.98 pffvoicemailenabled (FI-2334)

Type:	bool
Default Value:	FALSE

2.3.257.99 pkid (FI-175)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

Rule (RI-96):	Type:	Validation (Insert/Update)
	Rule Name:	AutoAnswer Device Support
	Description:	The AutoAnswer setting for a DN can only be on when the DN is associated with a Device (or Device Profile) type that supports the Auto Answer feature.
	Test Condition:	IF (NumPlan.tkAutoAnswer != 0) AND (SELECT COUNT (*) FROM ProductSupportsFeature WHERE (tkSupportsFeature = 7) AND (tkProduct = @Device.tkProduct) = 0) THEN throw exception
	Error Message:	AutoAnswer is not valid for this Directory Number because it is not associated with a device that supports the AutoAnswer feature.
	Remedy:	Set AutoAnswer to Off or associated the DN with a device that supports AutoAnswer and try again.

Rule (RI-97):	Type:	Validation (Insert/Update)
	Rule Name:	NumPlan Uniqueness
	Description:	DN by itself is not unique. Uniqueness for records in the NumPlan table is determined by a combination of the DNOrPattern and Partition, with the exception of Route Patterns and Translation Patterns, which may be further defined by Dial Plan and Route Filter. A Route Pattern or Translation Pattern cannot have the same DNOrPattern and Partition as any other type of pattern even if the Dial Plan, Route Filter or both are different.
	Test Condition:	?

Rule (RI-262):	Type:	Active (Delete)
	Rule Name:	BeforeDelNumPlan

		Description:	Before deleting from NumPlan delete the corresponding record from PickupGroup table
		Test Condition:	?
		Error Message:	?
		Remedy:	?
	Rule (RI-265):	Type:	Active (Insert/Update)
		Rule Name:	Set IsCallable for pattern_device
		Description:	When (tkPatternUsage == PATTERN_DEVICE_TEMPLATE) then isCallable column in NumPlan should be set to false
		Test Condition:	?
		Error Message:	Set IsCallable for pattern_device_template failed
		Remedy:	?
	Rule (RI-279):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	numplan versionstamp
		Description:	on change to anything in numplan table, update devicerelatedversionstamp versionstamp
		Test Condition:	update devicerelatedversionstamp
	Rule (RI-286):	Type:	Active (Insert)
		Rule Name:	numplan dynamic
		Description:	on insert of numplan, insert the numplandynamic record
		Test Condition:	insert numplan
	Rule (RI-355):	Type:	Validation (Insert/Update)
		Rule Name:	Directed Call Park Retrieval Code record not user modifiable
		Description:	If a NumPlan record is the Retrieval Code for a Directed Call Park, it is not user modifiable. DBMon manages those records
		Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = PATTERN_USAGE_DIRECTED_CALL_PARK) AND (USER = 'dbuser') THEN throw exception; END IF; -- need to skip on UPDATE if there are no changes
		Error Message:	The retrieval code record for Directed Call Park cannot be edited directly
		Remedy:	Make changes to the Park Code
	Rule (RI-357):	Type:	Active (Insert/Update/Delete records)

		Rule Name:	Insert NumPlanDCPSyn for sync of DirectedCallPark Code and Retrieval Code
		Description:	If a record is inserted, updated or deleted in NumPlan table with a pattern usage of 12 (Directed Call Park) and empty ikNumPlan_ParkCode, insert a record into NumPlanDCPSyn table. DBMon checks for records in NumPlanDCPSyn table and takes necessary action to insert, update or delete the corresponding retrieval code record for the Directed Call Park.
		Test Condition:	ON INSERT/UPDATE/DELETE in NumPlan: IF (tkPatternUsage = 12) AND (ikNumPlan_ParkCode IS NULL) THEN Insert INTO NumPlanDCPSyn
	Rule (RI-375):	Type:	Active (Insert)
		Rule Name:	Insert Dynamic Records for CallForward
		Description:	When a NumPlan record for a DN or Line Template is inserted, insert a corresponding record for dynamic Call Forward settings
		Test Condition:	ON INSERT INTO NumPlan: IF (new_tkPatternUsage IN (2,11)) THEN INSERT INTO CallForwardDynamic (fkNumplan) values (new_pkid) END IF;
	Rule (RI-705):	Type:	Validation (Insert/Update)
		Rule Name:	IPv6 Pattern Uniqueness
		Description:	IPv6 Pattern should be unique in the same partition
		Test Condition:	Test condition is to check if there is already a same IPV6 pattern in the same partition
		Error Message:	Cannot have duplicate IPv6 patterns
	Rule (RI-768):	Type:	Validation (Update)
		Rule Name:	BLF Directed CallPark number must be a Directed Call Park destination
		Description:	The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.
		Test Condition:	ON INSERT/UPDATE in BLFDirectedCallPark: DNOrPattern should contain ^[0-9*#+]
		Error Message:	The BLF Directed Call Park number must be a dialable Directed Call Park Destination
		Remedy:	Make sure the Destination is a dialable Directed Call Park number and try again.

		Rule Name:	Insert Dynamic Records for CallForward
		Description:	When a NumPlan record for a DN or Line Template is inserted, insert a corresponding record for dynamic Call Forward settings

		Test Condition:	ON INSERT INTO NumPlan: IF (new_tkPatternUsage IN (2,11)) THEN INSERT INTO CallForwardDynamic (fkNumplan) values (new_pkid) END IF;
	Rule (RI-393):	Type:	Validation (Insert/Update)
		Rule Name:	Only one instance of Mobility Patterns for Handoff, DTMF, IVR
		Description:	There can be no more than one NumPlan record for each of the Mobility Pattern Types (Handoff, DTMF and IVR).
		Test Condition:	ON INSERT/UPDATE INTO NumPlan: IF (new_tkPatternUsage IN (16,17,18)) THEN IF (SELECT COUNT(*) FROM NumPlan WHERE tkPatternUsage = new_tkPatternUsage) > 1 THEN throw exception; END IF; END IF;
		Error Message:	Only one Mobility number each for Handoff, DTMF and IVR is allowed.
		Remedy:	Update the previous defined Mobility number for the specified feature.
	Rule (RI-414):	Type:	Validation (Insert/Update)
		Rule Name:	Intercom DN with intercom compatible autoanswer type
		Description:	on insert/update intercom DN autoanswer type needs to be intercom compatible
		Test Condition:	ON INSERT/Update of DN: IF (tkPatternUsage = 13) THEN IF (tkAutoAnswer NOT IN (SELECT Enum from TypeAutoAnswer WHERE isIntercomCompatible = 1) THEN throw exception
	Rule (RI-705):	Type:	Validation (Insert/Update)
		Rule Name:	IPv6 Pattern Uniqueness
		Description:	IPv6 Pattern should be unique in the same partition
		Test Condition:	Test condition is to check if there is already a same IPV6 pattern in the same partition
		Error Message:	Cannot have duplicate IPv6 patterns
	Rule (RI-768):	Type:	Validation (Update)
		Rule Name:	BLF Directed CallPark number must be a Directed Call Park destination
		Description:	The NumPlan item referenced in BLFDirectedCallPark table must be a dialable Directed Call Park pattern. The pattern must contain only dialable digits (0-9, * and #) and may not contain wildcards (X) or expressions with brackets.
		Test Condition:	ON INSERT/UPDATE in BLFDirectedCallPark: DNOrPattern should contain ^[0-9*#+]
		Error Message:	The BLF Directed Call Park number must be a dialable Directed Call Park Destination
		Remedy:	Make sure the Destination is a dialable Directed Call Park number and try again.
	Rule (RI-788):	Type:	Validation (Delete)

		Rule Name:	NumPlan Delete Restriction
		Description:	Cannot delete DTMF Mobility pattern if it has default EFA DN specified in GlobalSetting
		Test Condition:	ON DELETE From NumPlan IF (tkPatternUsage = 17 and GlobalSetting.SettingValue = pkid and GlobalSetting.tkGlobalSetting = 1) THEN throw exception
		Error Message:	Cannot delete DTMF Mobility pattern if it has default setting specified in GlobalSetting

Uniqueness:	No multicolumn uniqueness constraints	

2.3.261 numplansubpatternusagemap (TI-1076)

Description: Cisco BE: Mapping between NumPlan and NumPlan creator
Is not replicated.

Fields:	2.3.261.1 fknumplan (FI-10106)	
	Type:	guid (Unique, Cascade Delete)
	Remarks:	Reference to NumPlan entry
	2.3.261.2 pkid (FI-10105)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
	2.3.261.3 tksubpatternusage (FI-10107)	
	Type:	enum

	Default Value:	0
	Remarks:	Reference to typesubpatternusage for NumPlan
Uniqueness:	No multicolumn uniqueness constraints	

2.3.262 numplanuri (TI-539)

Description: Stores URIs associated with a directory number

Fields:

2.3.262.1 doroutebyroutestring (FI-21064)

Type:	bool	
Default Value:	TRUE	
Remarks:	Indicates whether other clusters may route to this URI or number using route string.	
Rule (RI-869):	Type:	Active (Insert)
	Rule Name:	USN from URI creation
	Description:	Create USN for new value of URI
	Test Condition:	INSERT into USN
Rule (RI-870):	Type:	Active (Update)
	Rule Name:	USN from URI modification
	Description:	If the URI changes, create a USN for new value and create a tombstone for the old value
	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value
Rule (RI-868):	Type:	Active (Delete)
	Rule Name:	USN from URI deletion
	Description:	Create a USN tombstone for the old URI
	Test Condition:	INSERT USN tombstone for the old value
Rule (RI-951):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for each type of URI
	Description:	Validate consistency of columns based upon value of tkNumPlanURIType
	Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
	Error Message:	Various

2.3.262.2 **fkendusernumplanmap (FI-10268)**

Type: guid (Indexed, Cascade Delete, Null OK)

Default Value: NULL

Remarks: When a URI is a Directory URI this points to the primary extension that it is associated with.

Rule (RI-848):

Type: Validation (Insert)

Rule Name: Set First URI to Primary

Description: When insert the first URI for a row in NumPlanURI, the URI needs to be set to the primary.

Test Condition: ON INSERT, Set IsPrimary=1 if it's the first row for the parent row in NumPlan

Rule (RI-850):

Type: Validation (Delete)

Rule Name: NumPlan must always have one primary URI

Description: A primary URI should not get deleted if there are still other URIs for the same DN

Test Condition: ON DELETE, check if IsPrimary=1 and count(uri) > 1 for the same DN.

Error Message: A primary cannot be deleted if there are still other URIs for the same DN.

Remedy: Make sure no other URI associated with the same DN.

Rule (RI-855):

Type: Active (Insert/Update)

Rule Name: Encode URIs to minimum percent encoded format.

Description: null

Rule (RI-912):

Type: Validation (Insert/Update)

Rule Name: Maximum of one row in NumPlanURI can point to a primary ext.

Description: Only one Directory URI is permitted per primary ext.

Test Condition: On INSERT/UPDATE to NumPlanURI if count of fkEndUserNumPlanMap > 1 throw exception

Rule (RI-914):

Type: Validation (Insert/Update)

Rule Name: Make sure that only Directory URIs end up in the Directory URI partition.

Description: Change not insert/update a URI into a the Directory URI partition if fkEndUserNumPlanMap is NULL

Rule (RI-915):

Type: Active (Update)

Rule Name: Can not change the value of fkEndUserNumPlanMap.

Description: Value of fkEndUserNumPlanMap is not modifiable.

	Test Condition:	On UPDATE if fkEndUserNumPlanMap value changes throw exception.
Rule (RI-951):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for each type of URI
	Description:	Validate consistency of columns based upon value of tkNumPlanURIType
	Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
	Error Message:	Various

2.3.262.3 [fknumplan \(FI-9949\)](#)

Type:	guid (Cascade Delete)	
Remarks:	The directory number to which the URI belongs.	
Rule (RI-847):	Type:	Validation (Insert/Update)
	Rule Name:	Check DN device
	Description:	DNs that are patterns shall not have a URI. Rule is enforced during Insert and Update.
	Test Condition:	ON INSERT/UPDATE in NumPlanURI, make sure the DN associated with the URI has numplan.tkPatternUsage equals 2.
	Error Message:	A URI shall be limited to a DN that is for a device. DNs that are patterns shall not have a URI.
	Remedy:	Make sure the DN that is associated with the URI is a device.
Rule (RI-848):	Type:	Validation (Insert)
	Rule Name:	Set First URI to Primary
	Description:	When insert the first URI for a row in NumPlanURI, the URI needs to be set to the primary.
	Test Condition:	ON INSERT, Set IsPrimary=1 if it's the first row for the parent row in NumPlan
Rule (RI-849):	Type:	Validation (Insert/Update)
	Rule Name:	Make Sure There Is Only One Primary
	Description:	There should be only one on primary URI for the parent row in NumPlan.
	Test Condition:	ON INSERT/UPDATE in NumPlanURI, check if there also exists a row that also has IsPrimary=1
	Error Message:	There can only be one URI be the primary per DN.
	Remedy:	Make sure there is only one primary per DN.
Rule (RI-850):	Type:	Validation (Delete)
	Rule Name:	NumPlan must always have one primary URI

		Description:	A primary URI should not get deleted if there are still other URIs for the same DN
		Test Condition:	ON DELETE, check if IsPrimary=1 and count(uri) > 1 for the same DN.
		Error Message:	A primary cannot be deleted if there are still other URIs for the same DN.
		Remedy:	Make sure no other URI associated with the same DN.
	Rule (RI-853):	Type:	Validation (Insert)
		Rule Name:	Maximum of 5 URIs Per DN Allowed
		Description:	The database shall enforce a maximum of 5 URIs per DN.
		Test Condition:	ON INSERT, check if count(uri) < 5
		Error Message:	The maximum number of URI associated with the same DN is 5.
		Remedy:	Make sure the number of URIs for the same DN is 5 or less.
	Rule (RI-854):	Type:	Validation (Update)
		Rule Name:	fkNumPlan not updatable
		Description:	fkNumPlan should have the same value for the same DN.
		Test Condition:	ON UPDATE, the old_fkNumPlan should be equal to new_fkNumPlan.
		Error Message:	fkNumPlan cannot get updated with a different value for the same DN.
		Remedy:	Make sure the value of fkNumPlan is the same for the same DN.
	Rule (RI-855):	Type:	Active (Insert/Update)
		Rule Name:	Encode URIs to minimum percent encoded format.
		Description:	null
	Rule (RI-856):	Type:	Validation (Insert/Update)
		Rule Name:	NumPlanURI URI uniqueness
		Description:	URI must be unique within the Partition
		Test Condition:	The value of URI must be unique within the Partition.
	Rule (RI-869):	Type:	Active (Insert)
		Rule Name:	USN from URI creation
		Description:	Create USN for new value of URI
		Test Condition:	INSERT into USN
	Rule (RI-870):	Type:	Active (Update)

	Rule Name:	USN from URI modification
	Description:	If the URI changes, create a USN for new value and create a tombstone for the old value
	Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value
Rule (RI-868):	Type:	Active (Delete)
	Rule Name:	USN from URI deletion
	Description:	Create a USN tombstone for the old URI
	Test Condition:	INSERT USN tombstone for the old value
Rule (RI-951):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for each type of URI
	Description:	Validate consistency of columns based upon value of tkNumPlanURIType
	Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
	Error Message:	Various

2.3.262.4 **fkroupartition (FI-9948)**

Type:	guid (Null OK)	
Default Value:	NULL	
Remarks:	The partition to which the URI belongs.	
Rule (RI-856):	Type:	Validation (Insert/Update)
	Rule Name:	NumPlanURI URI uniqueness
	Description:	URI must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.
Rule (RI-914):	Type:	Validation (Insert/Update)
	Rule Name:	Make sure that only Directory URIs end up in the Directory URI partition.
	Description:	Change not insert/update a URI into a the Directory URI partition if fkEndUserNumPlanMap is NULL
Rule (RI-951):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for each type of URI
	Description:	Validate consistency of columns based upon value of tkNumPlanURIType

Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
Error Message:	Various

2.3.262.5 isprimary (FI-9950)

Type: bool (Not Modifiable)

Default Value: FALSE

Remarks: Indicates whether the URI is the primary URI for the directory number.

Rule (RI-848):

Type:	Validation (Insert) This field is modified by this rule.
Rule Name:	Set First URI to Primary
Description:	When insert the first URI for a row in NumPlanURI, the URI needs to be set to the primary.
Test Condition:	ON INSERT, Set IsPrimary=1 if it's the first row for the parent row in NumPlan

Rule (RI-848):

Type:	Validation (Insert)
Rule Name:	Set First URI to Primary
Description:	When insert the first URI for a row in NumPlanURI, the URI needs to be set to the primary.
Test Condition:	ON INSERT, Set IsPrimary=1 if it's the first row for the parent row in NumPlan

Rule (RI-849):

Type:	Validation (Insert/Update)
Rule Name:	Make Sure There Is Only One Primary
Description:	There should be only one on primary URI for the parent row in NumPlan.
Test Condition:	ON INSERT/UPDATE in NumPlanURI, check if there also exists a row that also has IsPrimary=1
Error Message:	There can only be one URI be the primary per DN.
Remedy:	Make sure there is only one primary per DN.

Rule (RI-850):

Type:	Validation (Delete)
Rule Name:	NumPlan must always have one primary URI
Description:	A primary URI should not get deleted if there are still other URIs for the same DN
Test Condition:	ON DELETE, check if IsPrimary=1 and count(uri) > 1 for the same DN.
Error Message:	A primary cannot be deleted if there are still other URIs for the same DN.
Remedy:	Make sure no other URI associated with the same DN.

Rule (RI-951):

Type:	Validation (Insert/Update)
-------	----------------------------

Rule Name:	Validate consistency of columns for each type of URI
Description:	Validate consistency of columns based upon value of tkNumPlanURIType
Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
Error Message:	Various

2.3.262.6 pkid (FI-9947)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

Rule (RI-850):

Type:	Validation (Delete)
Rule Name:	NumPlan must always have one primary URI
Description:	A primary URI should not get deleted if there are still other URIs for the same DN
Test Condition:	ON DELETE, check if IsPrimary=1 and count(uri) > 1 for the same DN.
Error Message:	A primary cannot be deleted if there are still other URIs for the same DN.
Remedy:	Make sure no other URI associated with the same DN.

Rule (RI-856):

Type:	Validation (Insert/Update)
Rule Name:	NumPlanURI URI uniqueness
Description:	URI must be unique within the Partition
Test Condition:	The value of URI must be unique within the Partition.

Rule (RI-869):

Type:	Active (Insert)
Rule Name:	USN from URI creation
Description:	Create USN for new value of URI
Test Condition:	INSERT into USN

Rule (RI-870):

Type:	Active (Update)
Rule Name:	USN from URI modification
Description:	If the URI changes, create a USN for new value and create a tombstone for the old value
Test Condition:	UPDATE USN to reflect new value and INSERT USN tombstone for the old value

Rule (RI-868):	Type:	Active (Delete)
	Rule Name:	USN from URI deletion
	Description:	Create a USN tombstone for the old URI
	Test Condition:	INSERT USN tombstone for the old value
Rule (RI-951):	Type:	Validation (Insert/Update)
	Rule Name:	Validate consistency of columns for each type of URI
	Description:	Validate consistency of columns based upon value of tkNumPlanURIType
	Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
	Error Message:	Various

2.3.262.7 uri (FI-9951)

Type:	string [255] (Indexed, Null OK)	
Default Value:	NULL	
Remarks:	SIP URI or number. If number, may be a mask.	
Rule (RI-855):	Type:	Active (Insert/Update)
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null
Rule (RI-855):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null
Rule (RI-856):	Type:	Validation (Insert/Update)
	Rule Name:	NumPlanURI URI uniqueness
	Description:	URI must be unique within the Partition
	Test Condition:	The value of URI must be unique within the Partition.
Rule (RI-870):	Type:	Active (Update)
	Rule Name:	USN from URI modification
	Description:	If the URI changes, create a USN for new value and c
	Test Condition:	UPDATE USN to reflect new value and INSERT USN

	Rule (RI-868):	Type:	Active (Delete)
		Rule Name:	USN from URI deletion
		Description:	Create a USN tombstone for the old URI
		Test Condition:	INSERT USN tombstone for the old value
	Rule (RI-951):	Type:	Validation (Insert/Update)
		Rule Name:	Validate consistency of columns for each type of URI
		Description:	Validate consistency of columns based upon value of tkNumPlanURIType
		Test Condition:	On INSERT/UPDATE on NumPlanURI validate values of columns based upon value of tkNumPlanURIType
		Error Message:	Various
	Uniqueness: No multicolumn uniqueness constraints		

2.3.263 outboundappservercn (TI-390)

Description:	Custom CN for Apps that are not CN clients Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.263.1 pkid (FI-2960)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.264 pagetemplate (TI-653)

Description:	Contains template names		
Fields:	2.3.264.1 pkid (FI-5361)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify PageTemplate record	

	2.3.264.2 templatename (FI-5362)	
	Type:	string [128] (Unique)
	Validation:	^[a-zA-Z 0-9._-]{1,128}\$
	Remarks:	Name of a UI page template
Uniqueness:	No multicolumn uniqueness constraints	

2.3.265 pagetemplatedetail (TI-654)

Description:	Contains details assigned to a template	
Fields:	2.3.265.1 attributename (FI-5367)	
	Type:	string [128]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9._-]{1,128}\$
	Remarks:	Name of a UI page attribute
	2.3.265.2 attributevalue (FI-5368)	
	Type:	string [128]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z 0-9._-]{1,128}\$
	Remarks:	Value of a UI page attribute
	2.3.265.3 fkpagetemplate (FI-5369)	
	Type:	guid (Cascade Delete, Null OK)
	Default Value:	NULL
	2.3.265.4 isdefault (FI-5364)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Indicates a default field for this web page attribute
	2.3.265.5 ishidden (FI-5365)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Indicates a hidden field for this web page attribute

2.3.265.6 isreadonly (FI-5366)

Type:	bool
Default Value:	FALSE
Remarks:	Indicates a readonly field for this web page attribute

2.3.265.7 pkid (FI-5363)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify PageTemplateDetail record

Uniqueness: No multicolumn uniqueness constraints

2.3.266 patternparametermap (TI-322)

Description: Pattern Parameter Map

Fields:

2.3.266.1 fkdiarulespatternmap (FI-2403)

Type:	guid (Cascade Delete)
Remarks:	Pkid of DialRulesPatternMap record

Rule (RI-323):	Type:	Validation (Insert/Update)
	Rule Name:	SIP Dial Rule Pattern Validation
	Description:	The allowed parameters and parameter values (characters) for patterns are dependent on the dial rule type. 7905/12 dial rules can only have patterns with characters including "a-zA-Z0-9*#,. >^_-" (without quotes). 7960/40/Other dial rules can have patterns with characters including "a-zA-Z 0-9! ";/^*.\~\$&%+<()@_=>#^-", as well as Button, Timeout, and User parameters.
	Test Condition:	ON INSERT/UPDATE IN PatternParameterMap
	Error Message:	Dial Rule Parameter is not valid or value contains illegal characters for this type of dial rule.
	Remedy:	Check the Parameter to make sure it is compatible with the dial rule type and try again.

2.3.266.2 pkid (FI-2402)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-260):	Type:	Active (Insert/Update/Delete records)

Rule Name:	dialrules versionstamp
Description:	on change to anything in dialrulespatternmap, patternparametermap, update versionstamp in dialrules table
Test Condition:	update dialrules

2.3.266.3 selectionorder (FI-2405)

Type:	long (Null OK)
Default Value:	0

2.3.266.4 tkdialparameter (FI-2404)

Type:	enum												
Rule (RI-323):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>SIP Dial Rule Pattern Validation</td></tr> <tr> <td>Description:</td><td>The allowed parameters and parameter values (characters) for patterns are dependent on the dial rule type. 7905/12 dial rules can only have patterns with characters including "a-zA-Z0-9*#,. >^_-" (without quotes). 7960/40/Other dial rules can have patterns with characters including "a-zA-Z 0-9! Type: guid (Cascade Delete)

2.3.267.4 [fkenduser_contact \(FI-9939\)](#)

Type: guid (Indexed, Null OK)
Remarks: Contact userid that an user would like to add to his PAB

2.3.267.5 lastname (FI-1698)

Type: string [50]
Default Value: EMPTY

2.3.267.6 nickname (FI-1701)

Type: string [50]
Rule (RI-701):
 Type: Validation (Insert/Update)
 Rule Name: NickName in PersonalAddressBook cannot be NULL or an empty string
 Description: NickName in PersonalAddressBook cannot be NULL or an empty string
 Test Condition: On Insert or Update NickName
 Error Message: NickName in PersonalAddressBook cannot be NULL or an empty string

2.3.267.7 pkid (FI-1695)

Type: guid (Unique, Indexed, Not Modifiable)
Default Value: newid()
Remarks: Unique ID to identify a record.

Uniqueness:	fkenduser + nickname is unique. (MFI-41)		
Rules:	Rule (RI-203):	Type:	Validation (Insert/Update) Rule applied when record is inserted or updated.
		Rule Name:	Personal Phone Book Number Type Restriction
		Description:	A Personal Address Book entry can be associated with up to 3 Personal Phone Book entries - 1 each for Home, Work, and Mobile. However, the number of Raw Phone Book entries (number not associated with Address Book), is limited only by the number of available Fast Dial indices.
		Test Condition:	IF (@PersonalPhoneBook.tkPersonalPhoneNumber <> 31) THEN (SELECT INTO numRec COUNT(*) FROM PersonalPhoneBook WHERE (tkPersonalPhoneNumber = @PersonalPhoneBook.tkPersonalPhoneNumber) AND (fkPersonalAddressBook = @PersonalPhoneBook.fkPersonalAddressBook) IF (numRec > 1) THEN throw exception)
		Error Message:	Cannot have more than one number of each type (Home, Work, Mobile) associated with a Personal Address Book entry.
		Remedy:	Check the type of number and address book entry and try again. It may be necessary to create a second Address Book Entry with a different nickname to store multiple numbers (such as multiple work numbers) for a contact.

2.3.268 personalphonebook (TI-246)

Description:	Users keep their DN's here for Personal Address Book/TabSync		
Fields:	2.3.268.1 fkenduser (FI-1703)		
	Type:	guid (Cascade Delete)	
	Rule (RI-126):	Type:	Validation (Insert/Update)
		Rule Name:	Personal Phone Number End User
		Description:	The Personal Phone Book entries for a user must be either raw numbers or associated with an entry from that user's Personal Address Book. A phone book entry cannot reference another user's address book entry.
		Test Condition:	IF (@PersonalPhoneBook.fkPersonalAddressBook IS NOT NULL) AND (@PersonalPhoneBook.fkPersonalAddressBook NOT IN (SELECT pkid FROM PersonalAddressBook WHERE fkEndUser = @fkPersonalPhoneBook.fkEndUser) THEN throw exception
		Error Message:	The specified Address Book entry is not available in the user's Personal Address Book.
		Remedy:	Select an entry from the current user's Personal Address Book to associated with this phone number.

Rule (RI-236):	Type:	Active (Insert)
	Rule Name:	doBeforeInsPersonalPhoneBookRules
	Description:	Before Insert logic from PersonalPhoneBookRules
	Test Condition:	?
	Error Message:	?
	Remedy:	?
Rule (RI-237):	Type:	Validation (Insert/Update)
	Rule Name:	Personal Fast Dials Index
	Description:	Personal Fast Dials index associated with a User's Personal Phone Book entry must be a unique number. If there is no Fast Dial associated with the Phone Book entry, the Fast Dial Index must be 0.
	Test Condition:	IF (PersonalPhoneBook.PersonalFastDialIndex != 0) AND (PersonalPhoneBook.PersonalFastDialIndex IN (SELECT PersonalFastDialIndex FROM PersonalPhoneBook WHERE (fkEndUser = @PersonalPhoneBook.fkEndUser) AND pkid != @PersonalPhoneBook.pkid) THEN throw exception
	Error Message:	The Fast Dial Index for this Phone Book entry is not unique
	Remedy:	Select a Fast Dial Index that is not already being used and try again.

2.3.268.2 [fkpersonaladdressbook \(FI-1704\)](#)

Type:	guid (Cascade Delete, Null OK)

		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value	
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);	
	Rule (RI-400):	Type:	Active (Insert/Update)	

			This field is modified by this rule.
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	2.3.276.3 fkpickupgroup (FI-5103)		
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)	
	Remarks:	Unique in combination with fkprocessgroup	
	2.3.276.4 fkprocessnode (FI-5102)		
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)	
	Remarks:	Unique in combination with callpickup group	
	2.3.276.5 pkid (FI-5101)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	fkprocessnode + fkpickupgroup is unique. (MFI-110)		

2.3.277 plugin (TI-122)

Description:	List of menu items to plug into/show on the Web Admin. Insert/Delete is not allowed.		
Fields:	2.3.277.1 customurl (FI-2053)		
	Type:	memo	
	Default Value:	EMPTY	
	2.3.277.2 description (FI-701)		
	Type:	memo (Null OK)	
	Default Value:	NULL	
	2.3.277.3 name (FI-700)		
	Type:	string [100] (Unique)	
	Validation:	^[a-zA-Z 0-9_-]{1,100}\$	

	Remarks:	Plugin name
	2.3.277.4 pkid (FI-698)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.277.5 showonuseroption (FI-2054)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This field is not editable.
	2.3.277.6 tkpluginusage (FI-699)	
	Type:	enum
	2.3.277.7 url (FI-702)	
	Type:	memo
	Uniqueness: No multicolumn uniqueness constraints	

2.3.278 pnpselectedlanguage (TI-2606)

Description:	Self Provisioning IVR Plug and Play Selected Language	
Fields:	2.3.278.1 pkid (FI-25724)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.278.2 priority (FI-25726)	
	Type:	long
	Remarks:	Priority of the selected language.
	2.3.278.3 tkuserlocale (FI-25725)	
	Type:	enum (Unique)
	Default Value:	1

	Remarks:	Enum of the typeuserlocale table for the language selected.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.279 preferences (TI-286)

Description:	UI Preferences	
Fields:	2.3.279.1 fkenduser (FI-1999)	
	Type:	guid (Cascade Delete)
	2.3.279.2 name (FI-2000)	
	Type:	string [64] (Not Modifiable)
	Validation:	^[a-zA-Z0-9._-]{1,64}\$
	2.3.279.3 pkid (FI-1998)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.279.4 value (FI-2001)	
	Type:	string [64]
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9]{0,50}\$
Uniqueness:	fkenduser + name is unique. (MFI-57)	

2.3.280 processconfig (TI-88)

Description:	All service configuration. Attributes of a process on a node.	
Fields:	2.3.280.1 fkprocessnode (FI-296)	
	Type:	guid (Indexed, Cascade Delete, Not Modifiable)
	2.3.280.2 paramname (FI-297)	
	Type:	string [50] (Indexed, Not Modifiable)
	Default Value:	EMPTY
	Rule (RI-306):	Type: Active (Insert/Update/Delete records)

Rule Name:	device versionstamp on processconfig
Description:	on update of enterprise processconfig record, update device deviceversionstamp record
Test Condition:	update processconfig

2.3.280.3 paramvalue (FI-299)

Type: string [255] (Null OK)

Default Value: NULL

Remarks: if tParam is boolean, use "T" or "F"

Rule (RI-306):

Type:	Active (Insert/Update/Delete records)
Rule Name:	device versionstamp on processconfig
Description:	on update of enterprise processconfig record, update device deviceversionstamp record
Test Condition:	update processconfig

2.3.280.4 pkid (FI-294)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

2.3.280.5 primarydata (FI-484)

Type: bool

Default Value: FALSE

Remarks: Flag to show if should be on main part of setup screen (true) or advanced section of screen (false)

2.3.280.6 resettoggle (FI-3112)

Type: bool

Default Value: FALSE

Remarks: Should this device or group be reset

Rule (RI-306):

Type:	Active (Insert/Update/Delete records)
Rule Name:	device versionstamp on processconfig
Description:	on update of enterprise processconfig record, update device deviceversionstamp record
Test Condition:	update processconfig

2.3.280.7 tkparam (FI-298)

	Type:	enum (Not Modifiable)	
	2.3.280.8 tkreset (FI-3113)		
	Type:	enum	
	Default Value:	2	
	Remarks:	Set by DeviceReset stored procedure.	
	2.3.280.9 tkservice (FI-324)		
	Type:	enum (Indexed, Not Modifiable)	
	Rule (RI-306):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	device versionstamp on processconfig
		Description:	on update of enterprise processconfig record, update device deviceversionstamp record
Test Condition:		update processconfig	
2.3.280.10 versionstamp (FI-3120)			
Type:	string [47] (Null OK)		
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963		
Remarks:	New guid plus seconds past midnight 1970 are concatenated		
Uniqueness:	fkprocessnode + tkservice + paramname is unique. (MFI-10)		
Rules:	Rule (RI-198):	Type:	Validation (Insert/Update) Rule applied when record is inserted or updated. This table is modified by this rule.
		Rule Name:	Service Parameter validation
		Description:	Service parameter value need validation before insert/update into ProcessConfig table. Validation is now performed using client side script at Admin pages. This involves reading the display instance xml (from scratch table) for the specific product, then for each parameter , read the corresponding rule xml record (scratch table) and validate the parameter value as defined in the rule.
		Test Condition:	On Insert/Update of service parameter in processconfig table.

2.3.281 processconfigdefaults (TI-101)

Description: Default service configuration parameters for each service type.
Records may be modified only by installation and/or DB triggers.

Fields: **2.3.281.1 enum (FI-647)**

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	Used for primary key so can be replicated by SQL
2.3.281.2 maxlongvalue (FI-475)	
Type:	long (Not Modifiable, Null OK)
Default Value:	NULL
2.3.281.3 minlongvalue (FI-474)	
Type:	long (Not Modifiable, Null OK)
Default Value:	NULL
2.3.281.4 paramname (FI-471)	
Type:	string [50] (Not Modifiable)
Default Value:	EMPTY
2.3.281.5 paramvalue (FI-473)	
Type:	string [255] (Not Modifiable)
Default Value:	EMPTY
2.3.281.6 primarydata (FI-483)	
Type:	bool (Not Modifiable)
Remarks:	Flag to show if should be on main part of setup screen (true) or advanced section of screen (false)
2.3.281.7 servicewide (FI-646)	
Type:	bool (Not Modifiable)
Remarks:	is this parameter service wide?
2.3.281.8 tkparam (FI-605)	
Type:	enum (Not Modifiable)
2.3.281.9 tkservice (FI-477)	
Type:	enum (Indexed, Not Modifiable)
2.3.281.10 typetablelink (FI-476)	
Type:	string [50] (Not Modifiable)
Default Value:	EMPTY
Remarks:	Name of related type table
Uniqueness:	tkservice + paramname is unique. (MFI-73)

2.3.282 processnode (TI-86)

Description: All machines running Cisco process in the cluster. The "Enterprise Node" is identified by the pkid of '00000000-1111-0000-0000-000000000000'. This is a special record used to record enterprise parameters in ProcessConfig.

Fields:

2.3.282.1 description (FI-1204)

Type:	string [200]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,50}\$
Remarks:	Description of the server.

2.3.282.2 fklbmhubgroup (FI-6285)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Unique ID of the Location Bandwidth Manager Hub Group.LBM Hub Node should not have Hub Group association

Rule (RFI-322):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkProcessNodeRole <> 1
	Constraint:	fkLBMHubGroup IS NULL
	Remarks:	Only Voice Server may be a LBM Hub Node.

Rule (RI-934):	Type:	Active (Insert/Update/Delete records)
	Rule Name:	Update the SecureConfig table for updatation of isLBMHub
	Description:	When isLBMHub changes to true or any deletion of record takes place with is LBMHub as true update the HiResVersionStamp in SecureConfig
	Test Condition:	ON INSERT/UPDATE/DELETE INTO ProcessNode: SET SecureConfig LET Value = dbinfo('utc_current') ':' 'NEXTVAL.sequence' ;

2.3.282.3 ipv6name (FI-3661)

Type:	string [255]	
Default Value:	EMPTY	
Validation:	^[0-9a-zA-Z.:_-]{0,255}\$	
Remarks:	Allow IPv6 address or hostname. Should be IPv6 format or name.	
Rule (RI-704):	Type:	Validation (Insert/Update)
	Rule Name:	Insert Update ProcessNode.IPv6Name

Description:	On insert or update value must be valid ip address and must not be SiteLocal LinkLocal IPv4 Mapped IPv4 Combined or Unspecified
Test Condition:	On insert or update of IPv6Name
Error Message:	IPv6 address value must be valid IPv6 address and must not be SiteLocal LinkLocal IPv4 Mapped IPv4 Combined or Unspecified
Remedy:	Correct to valid IPv6 address

2.3.282.4 isactive (FI-1857)

Type:	bool
Default Value:	TRUE
Remarks:	When this record is installed by an installation, this is set to true. When it is preconfigured by the admin, it can be set to false so warnings are not sent about failed replication.

2.3.282.5 mac (FI-419)

Type:	string [50]
Default Value:	EMPTY
Validation:	^[a-fA-F0-9]{12}\$
Remarks:	This is the media access control (MAC) address of the network interface card (NIC) in the Cisco CallManager server. The MAC address specifies the permanent hardware address of the NIC.

2.3.282.6 name (FI-290)

Type:	string [255] (Unique)												
Validation:	^[a-zA-Z0-9][a-zA-Z0-9-]{0,61}[a-zA-Z0-9]\$												
Remarks:	Primary host name of a machine. If your network uses DNS services, you can enter the host name of the Cisco CallManager server. Otherwise, you must enter the full IP address of the server.												
Rule (RI-132):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Process Node Name and IP Address</td></tr> <tr> <td>Description:</td><td>For every Insert/Update, all Host Names are resolved to an IP Address, and all IP addresses are compared to ensure there are no duplicates. This prevents a user from entering both the IP Address and Host Name for the same server.</td></tr> <tr> <td>Test Condition:</td><td>ON INSERT, UPDATE</td></tr> <tr> <td>Error Message:</td><td>ProcessNode record for this server already exists. Only one entry for a server is allowed, using either host name or IP Address.</td></tr> <tr> <td>Remedy:</td><td>Check to see if a server with this name or IP address already exists.</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Process Node Name and IP Address	Description:	For every Insert/Update, all Host Names are resolved to an IP Address, and all IP addresses are compared to ensure there are no duplicates. This prevents a user from entering both the IP Address and Host Name for the same server.	Test Condition:	ON INSERT, UPDATE	Error Message:	ProcessNode record for this server already exists. Only one entry for a server is allowed, using either host name or IP Address.	Remedy:	Check to see if a server with this name or IP address already exists.
Type:	Validation (Insert/Update)												
Rule Name:	Process Node Name and IP Address												
Description:	For every Insert/Update, all Host Names are resolved to an IP Address, and all IP addresses are compared to ensure there are no duplicates. This prevents a user from entering both the IP Address and Host Name for the same server.												
Test Condition:	ON INSERT, UPDATE												
Error Message:	ProcessNode record for this server already exists. Only one entry for a server is allowed, using either host name or IP Address.												
Remedy:	Check to see if a server with this name or IP address already exists.												
Rule (RI-206):	<table> <tr> <td>Type:</td><td>Active (Insert)</td></tr> </table>	Type:	Active (Insert)										
Type:	Active (Insert)												

		Rule Name:	CallManager Record Insert
		Description:	On insert of a callmanager processnodeservice record, insert a callmanager record and processnodeAudit record
		Test Condition:	?
	Rule (RI-226):	Type:	Validation (Insert/Update)
		Rule Name:	ProcessNode name is not a valid format
		Description:	Make sure node name is ip, name or domain name
		Test Condition:	?
		Error Message:	?
		Remedy:	?
	Rule (RI-251):	Type:	Active (Insert)
		Rule Name:	Insert processnodeservice records on processnode insert
		Description:	?
		Test Condition:	?
		Error Message:	?
		Remedy:	?
	Rule (RI-333):	Type:	Validation (Delete)
		Rule Name:	Publisher Deletion from processnode table should not be allowed
		Description:	on D of ProcessNode
		Test Condition:	prevent deletion of publisher
	Rule (RI-401):	Type:	Active (Update)
		Rule Name:	Sync ProcessNodeService.ServerName with ProcessNode.Name
		Description:	When the name changes in ProcessNode table, update the ServiceName in ProcessNodeService table for services on that node.
		Test Condition:	ON UPDATE IN ProcessNode: IF (old_Name <> new_Name) THEN UPDATE ProcessNodeService SET ServerName = new_Name WHERE fkProcessNode = new_pkid); END IF
	Rule (RI-963):	Type:	Active (Insert)
		Rule Name:	Publisher node usage and enterprisenode insert

	Description:	For each role type, make the first node inserted as publisher and only one publisher inserted for each role. After checks pass, insert into enterprisenode
	Test Condition:	ON INSERT in ProcessNode IF (new_tkNodeUsage = 0) THEN IF EXISTS (SELECT 1 FROM ProcessNode WHERE tkProcessNodeRole = new_tkProcessNodeRole AND systemnode = f AND pkid <> new_pkid) THEN throw exception; ELSE IF NOT EXISTS (SELECT 1 FROM ProcessNode WHERE tkProcessNodeRole = new_tkProcessNodeRole AND systemnode = f AND pkid <> new_pkid) THEN LET m_tkNodeUsage = 0
Rule (RI-2124):	Type:	Active (Update)
	Rule Name:	Update of EnterpriseNode.JSMID on ProcessNode.Name update
	Description:	On update of processnode.name, enterprisenode.JSMID needs to be updated based upon change.
	Test Condition:	On Update

2.3.282.7 nodeid (FI-1992)

Type:	identity (Unique, Indexed, Not Modifiable)		
Remarks:	Integer vaeue for node		
Rule (RI-333):	Type:	Validation (Delete)	
	Rule Name:	Publisher Deletion from processnode table should not be allowed	
	Description:	on D of ProcessNode	
	Test Condition:	prevent deletion of publisher	

2.3.282.8 pkid (FI-289)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-132):	Type:	Validation (Insert/Update)
	Rule Name:	Process Node Name and IP Address
	Description:	For every Insert/Update, all Host Names are resolved to an IP Address, and all IP addresses are compared to ensure there are no duplicates. This prevents a user from entering both the IP Address and Host Name for the same server.
	Test Condition:	ON INSERT, UPDATE
	Error Message:	ProcessNode record for this server already exists. Only one entry for a server is allowed, using either host name or IP Address.

		Remedy:	Check to see if a server with this name or IP address already exists.
	Rule (RI-206):	Type:	Active (Insert)
		Rule Name:	CallManager Record Insert
		Description:	On insert of a callmanager processnodeservice record, insert a callmanager record and processnodeAudit record

		Description:	On delete of a processnode and node is CUPS, if the node is a part of a subcluster block the delete otherwise also remove enterprise node entry
		Test Condition:	On Delete
	Rule (RI-2124):	Type:	Active (Update)
		Rule Name:	Update of EnterpriseNode.JSMID on ProcessNode.Name update
		Description:	On update of processnode.name, enterprisenode.JSMID needs to be updated based upon change.
		Test Condition:	On Update
	2.3.282.12 tkssomode (FI-25824)		
	Type:	enum	
	Default Value:	0	
	Remarks:	Field used in the ProcessNode table to indicate current Single Sign On mode.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.283 processnodeaudit (TI-498)

Description:	Defines the Audit settings for each node Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.283.1 auditfiletraceflag (FI-3791)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	

Remarks: Audit File Trace is Enabled

2.3.283.2 auditmaxfilesize (FI-3792)

Type: long (Not Modifiable)

Default Value: 2

Check Constraint: (AuditMaxFileSize >= 1) and (AuditMaxFileSize <= 10)

Remarks: Maximum Audit Log File Size

2.3.283.3 auditnumfiles (FI-3788)

Type: long (Not Modifiable)

Default Value: 250

Check Constraint: (AuditNumFiles >= 1) AND (AuditNumFiles <= 5000)

Remarks: Number of Audit Log Files

2.3.283.4 auditnumlines (FI-3789)

Type: long (Not Modifiable)

Default Value: 10000

Check Constraint: (AuditNumLines >= 1) AND (AuditNumLines <= 20000)

Remarks: Number of Lines per Audit Log

2.3.283.5 auditnumminutes (FI-3790)

Type: long (Not Modifiable)

Default Value: 1440

Check Constraint: (AuditNumMinutes >= 1) and (AuditNumMinutes <= 20000)

Remarks: Number of Minutes per Audit Log

2.3.283.6 audittracelevel (FI-3787)

Type: long (Not Modifiable)

Default Value: 1

Check Constraint: (AuditTraceLevel >= 1) AND (AuditTraceLevel <= 20000)

Remarks: Audit Trace Level

2.3.283.7 enableauditlog (FI-3784)

Type: bool (Not Modifiable)

Default Value: TRUE

Remarks: Audit Log is Enabled

2.3.283.8 enableidsaudit (FI-3793)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	Informix Dynamic Server (IDS) Audit is Enabled

2.3.283.9 enablelogrotation (FI-3786)

Type:	bool (Not Modifiable)
Default Value:	TRUE
Remarks:	Audit Log Rotation is Enabled

2.3.283.10 enablepurging (FI-3785)

Type:	bool (Not Modifiable)
Default Value:	TRUE
Remarks:	Audit Log Purging is Enabled

2.3.283.11 fkprocessnode (FI-3797)

Type:	guid (Unique, Cascade Delete, Not Modifiable)
Check Constraint:	fkProcessNode != '00000000-1111-0000-0000-000000000000'
Remarks:	Refer to the Server to which the Audit settings are applied.

2.3.283.12 idsauditlogrotateenabled (FI-5728)

Type:	bool (Not Modifiable)
Default Value:	TRUE
Remarks:	If set to true , enable log rotation of IDS Audit logs, provided IDS logs are enabled

2.3.283.13 idsdeletenumauditfiles (FI-5727)

Type:	long (Not Modifiable)						
Default Value:	20						
Check Constraint:	(IDSDeleteNumAuditFiles >=1)						
Remarks:	Number of IDS Audit Log Files To Be Deleted						
Rule (RFI-278):	<table><tr><td>Type:</td><td>Inter-field Condition and Constraint</td></tr><tr><td>Constraint:</td><td>IDSDeleteNumAuditFiles <= (IDSMaxNumAuditFiles-2)</td></tr><tr><td>Remarks:</td><td>IDSDeleteNumAuditFiles can never exceed (IDSMaxNumAuditFiles-2)</td></tr></table>	Type:	Inter-field Condition and Constraint	Constraint:	IDSDeleteNumAuditFiles <= (IDSMaxNumAuditFiles-2)	Remarks:	IDSDeleteNumAuditFiles can never exceed (IDSMaxNumAuditFiles-2)
Type:	Inter-field Condition and Constraint						
Constraint:	IDSDeleteNumAuditFiles <= (IDSMaxNumAuditFiles-2)						
Remarks:	IDSDeleteNumAuditFiles can never exceed (IDSMaxNumAuditFiles-2)						

2.3.283.14 idsmaxnumauditfiles (FI-5726)

Type:	long (Not Modifiable)
-------	-----------------------

	Default Value:	40
	Check Constraint:	(IDSMaXNumAuditFiles >= 4) AND (IDSMaXNumAuditFiles <= 40)
	Remarks:	Maximum Number of IDS Audit Log Files
	2.3.283.15 pkid (FI-3796)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record
	2.3.283.16 remotesyslogservername (FI-5345)	
	Type:	string [255]
	Default Value:	EMPTY
	Remarks:	The remote sysLog server name used for sending out Audit Events.
	2.3.283.17 tkalarmseverity_remotesyslog (FI-5346)	
	Type:	enum
	Default Value:	3
	Remarks:	The audit event severity for remote syslog.
	2.3.283.18 tkidsauditlevel (FI-3794)	
	Type:	enum (Not Modifiable)
	Default Value:	0
	Remarks:	Indicates the Informix Dynamic Server (IDS) Audit Level - Schema, Admin, Updates and Reads
Uniqueness:	No multicolumn uniqueness constraints	

2.3.284 processnoderoleservicemap (TI-1142)

Description:	Maps Services to the different server roles (voice, presence) in a cluster. A Service (from TypeService) may run on one or more types of servers. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.284.1 enum (FI-10425)	
	Type:	enum (Unique, Not Modifiable)
	Remarks:	A number to identify the map record
	2.3.284.2 tkprocessnoderole (FI-10426)	
	Type:	enum (Not Modifiable)

	Remarks:	Reference to the Role of the ProcessNode
	2.3.284.3 tkservice (FI-10427)	
	Type:	enum (Not Modifiable)
	Remarks:	Reference to the Service type
Uniqueness:	tkprocessnoderole + tkservice is unique. (MFI-780)	

2.3.285 processnodesec (TI-398)

Description:	security information for processnode	
Fields:	2.3.285.1 cert (FI-2979)	
	Type:	string [16000]
	Remarks:	certificate of the server.
	2.3.285.2 fkprocessnode (FI-2975)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	associated processnode for security
	2.3.285.3 hostname (FI-2977)	
	Type:	string [255] (Unique)
	Remarks:	Primary host name of a machine. If your network uses DNS services, you can enter the host name of the Cisco CallManager server.
	2.3.285.4 ip (FI-2978)	
	Type:	string [255] (Unique)
	Remarks:	IP address of the server.
	2.3.285.5 pkid (FI-2973)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.285.6 sftpkey (FI-2981)	
	Type:	string [16000]
	Default Value:	EMPTY

	Remarks:	certificate of the server.
--	----------	----------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.286 processnodesecack (TI-399)

Description:	node acknowledgement security information for processnode
--------------	---

Fields:	2.3.286.1 fkprocessnode (FI-2976)
---------	--

Type:	guid (Indexed, Cascade Delete)
-------	--------------------------------

Remarks:	associated processnode to receive acknowledgement
----------	---

2.3.286.2 fkprocessnodesec (FI-2980)

Type:	guid (Indexed, Cascade Delete)
-------	--------------------------------

Remarks:	associated processnode with new certificate
----------	---

2.3.286.3 pkid (FI-2974)

Type:	guid (Unique, Indexed, Not Modifiable)
-------	--

Default Value:	newid()
----------------	---------

Migration Source:	Generated
-------------------	-----------

Remarks:	Unique ID to identify a record.
----------	---------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.287 processnodeservice (TI-113)

Description:	Used to identify which services are installed on a particular node and various trace configurations. Trigger will insert all services when ProcessNode record is inserted. Insert/Delete is not allowed.
--------------	---

Fields:	2.3.287.1 devicenamemonitorflag (FI-883)
---------	---

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Trace configuration option
----------	----------------------------

2.3.287.2 devicetypemonitorflag (FI-882)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Trace configuartion option
----------	----------------------------

2.3.287.3 enable (FI-816)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Trace configuartion option
----------	----------------------------

2.3.287.4 filetraceflag (FI-884)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Trace configuartion option. This enables sending the output of the trace to a log file. Each Cisco CallManager service includes a default log file.
----------	---

2.3.287.5 [fkprocessnode \(FI-607\)](#)

Type:	guid (Indexed, Cascade Delete)
-------	--------------------------------

Rule (RI-188):	
----------------	--

Type:	Active (Insert)
-------	-----------------

Rule Name:	Insert Media Streaming Devices
------------	--------------------------------

Description:	When a ProcessNodeService record for a Media Streaming service is inserted, database automatically inserts the four media streaming Device records for the service: Annunciator, Software Conference Bridge, Music On Hold, and Software MTP. In addition, a MOHServer record is inserted for the MOH device, and a MediaMixer record is inserted for the MTP device.
--------------	---

Test Condition:	On Insert to ProcessNodeService WHERE tkService=3
-----------------	---

Rule (RI-227):	
----------------	--

Type:	Active (Insert)
-------	-----------------

Rule Name:	Insert AlarmConfig Records
------------	----------------------------

Description:	Insert AlarmConfig records on ProcessNodeService insert based on records in the AlarmMonitorCapabilities table
--------------	--

Test Condition:	?
-----------------	---

Error Message:	?
----------------	---

Remedy:	?
---------	---

2.3.287.6 includenondevicetraces (FI-820)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Trace configuartion option
----------	----------------------------

2.3.287.7 isactive (FI-1858)

Type:	bool								
Default Value:	FALSE								
Migration Source:	TRUE for all existing records. Migration also adds some more records and the value is False for these new records.								
Remarks:	Set by Serviceability to show if a service is activate or not.								
Rule (RI-139):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Service Active only on Active Node</td></tr> <tr> <td>Description:</td><td>A Service can only be marked as Active if it is associated with a service (node) that is also Active.</td></tr> <tr> <td>Test Condition:</td><td>xx</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Service Active only on Active Node	Description:	A Service can only be marked as Active if it is associated with a service (node) that is also Active.	Test Condition:	xx
Type:	Validation (Insert/Update)								
Rule Name:	Service Active only on Active Node								
Description:	A Service can only be marked as Active if it is associated with a service (node) that is also Active.								
Test Condition:	xx								
Rule (RI-140):	<table> <tr> <td>Type:</td><td>Active (Insert/Update/Delete records)</td></tr> <tr> <td>Rule Name:</td><td>Set Services Inactive on Server Inactive</td></tr> <tr> <td>Description:</td><td>If a server (ProcessNode) is marked Inactive, then all services on that server are automatically marked as Inactive as well.</td></tr> <tr> <td>Test Condition:</td><td>IF (@ProcessNode.IsActive = FALSE) THEN (UPDATE ProcessNodeService SET IsActive = FALSE WHERE fkProcessNode = @ProcessNode.pkid)</td></tr> </table>	Type:	Active (Insert/Update/Delete records)	Rule Name:	Set Services Inactive on Server Inactive	Description:	If a server (ProcessNode) is marked Inactive, then all services on that server are automatically marked as Inactive as well.	Test Condition:	IF (@ProcessNode.IsActive = FALSE) THEN (UPDATE ProcessNodeService SET IsActive = FALSE WHERE fkProcessNode = @ProcessNode.pkid)
Type:	Active (Insert/Update/Delete records)								
Rule Name:	Set Services Inactive on Server Inactive								
Description:	If a server (ProcessNode) is marked Inactive, then all services on that server are automatically marked as Inactive as well.								
Test Condition:	IF (@ProcessNode.IsActive = FALSE) THEN (UPDATE ProcessNodeService SET IsActive = FALSE WHERE fkProcessNode = @ProcessNode.pkid)								

2.3.287.8 maxfilesize (FI-2051)

Type:	long
Default Value:	1
Remarks:	Created during installation.

2.3.287.9 numfiles (FI-817)

Type:	long
Default Value:	250
Remarks:	Trace configuration option. Total number of trace files for a given service. Cisco CallManager automatically appends a sequence number to the file name to indicate which file it is; for example, ccm299.txt. When the last file in the sequence is full, the trace data begins writing over the first file.

2.3.287.10 numlines (FI-818)

Type:	long
Default Value:	10000
Remarks:	Trace configuration option. Maximum number of lines of data stored in each trace file.

2.3.287.11 numminutes (FI-819)

Type:	long
-------	------

Default Value:	1440
Remarks:	Trace configuartion option

2.3.287.12 outputdebugstringflag (FI-885)

Type:	bool
Default Value:	FALSE
Remarks:	Trace configuartion option

2.3.287.13 pkid (FI-606)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-227):	Type:	Active (Insert)
	Rule Name:	Insert AlarmConfig Records
	Description:	Insert AlarmConfig records on ProcessNodeService insert based on records in the AlarmMonitorCapabilities table
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.287.14 priority (FI-2004)

Type:	long
Default Value:	0
Check Constraint:	Priority >= 0
Migration Source:	when no restriction not important, other wise 0 or 1 (primary or secondary)
Remarks:	if servcie is of restricted type, priority oder of box (primary secundary)

2.3.287.15 restrictserver (FI-2870)

Type:	bool
Default Value:	FALSE
Remarks:	When set, service can not be de-activated

2.3.287.16 servername (FI-823)

Type:	string [255]
-------	--------------

Default Value:	EMPTY
Remarks:	Trace configuration option

2.3.287.17 [tkservice \(FI-608\)](#)

Type:	enum (Indexed)	
Rule (RI-188):	Type:	Active (Insert)
	Rule Name:	Insert Media Streaming Devices
	Description:	When a ProcessNodeService record for a Media Streaming service is inserted, database automatically inserts the four media streaming Device records for the service: Annunciator, Software Conference Bridge, Music On Hold, and Software MTP. In addition, a MOHServer record is inserted for the MOH device, and a MediaMixer record is inserted for the MTP device.
	Test Condition:	On Insert to ProcessNodeService WHERE tkService=3
Rule (RI-227):	Type:	Active (Insert)
	Rule Name:	Insert AlarmConfig Records
	Description:	Insert AlarmConfig records on ProcessNodeService insert based on records in the AlarmMonitorCapabilities table
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.287.18 [tracedrive \(FI-3700\)](#)

Type:	string [1] (Not Modifiable)
Default Value:	C
Remarks:	For Windows only, the drive letter for trace file location.

2.3.287.19 [tracelevel \(FI-814\)](#)

Type:	long
Default Value:	0
Remarks:	Trace configuration option. This specifies the level of information to be traced. Levels range from error to detailed.

2.3.287.20 [usercategories \(FI-815\)](#)

Type:	long
Default Value:	0
Remarks:	Trace configuration option

	2.3.287.21 usexml (FI-821)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Trace configuartion option. This specifies whether to format the output of the trace in XML format. Trace Analysis requires XML format. Cisco CallManager, CTIManager, and Cisco TFTP services support this setting.	
Uniqueness:	fkprocessnode + tkservice is unique. (MFI-32)		
Rules:	Rule (RI-188):	Type:	Active (Insert) Rule applied when record is inserted.
		Rule Name:	Insert Media Streaming Devices
		Description:	When a ProcessNodeService record for a Media Streaming service is inserted, database automatically inserts the four media streaming Device records for the service: Annunciator, Software Conference Bridge, Music On Hold, and Software MTP. In addition, a MOHServer record is inserted for the MOH device, and a MediaMixer record is inserted for the MTP device.
		Test Condition:	On Insert to ProcessNodeService WHERE tkService=3

2.3.288 productcapabilities (TI-119)		
Description:	List of allowed values for various attributes (defined in TypeProductConfig) for a product. This is a subset of allowed values for the attribute. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.288.1 enum (FI-658)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Used for primary key so can be replicated by SQL
	2.3.288.2 enumvalue (FI-661)	
	Type:	long (Not Modifiable)
	Remarks:	A number to identify the record
	2.3.288.3 moniker (FI-664)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.288.4 tkproduct (FI-659)	
	Type:	enum (Indexed, Not Modifiable)

	2.3.288.5 tkproductconfig (FI-660)
Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.289 productsupportsfeature (TI-180)

Description:	the product/feature, model/feature map Records may be modified only by installation and/or DB triggers.
Fields:	2.3.289.1 enum (FI-1107) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.289.2 param (FI-1111) Type: string [255] (Not Modifiable) Default Value: EMPTY 2.3.289.3 tkdeviceprotocol (FI-2407) Type: enum (Null OK) Default Value: 99 Remarks: Pkid of Device Protocol record 2.3.289.4 tkmodel (FI-1109) Type: enum (Not Modifiable) 2.3.289.5 tkproduct (FI-1108) Type: enum (Not Modifiable) 2.3.289.6 tksupportsfeature (FI-1110) Type: enum (Not Modifiable)
Uniqueness:	tkproduct + tkmodel + tksupportsfeature + tkdeviceprotocol is unique. (MFI-34)

2.3.290 provider (TI-974)

Description:	Cisco BE: This table will use to store all the information related to Provider, provider is the concept to render the UI pages dynamically Is not replicated.
Fields:	2.3.290.1 displayname (FI-6189)

Type:	string [100]
Remarks:	Display Name for provider
2.3.290.2 ikprovider_base (FI-6192)	
Type:	guid (Null OK)
Remarks:	will store the information about the base provider of the given provider
2.3.290.3 jsontdata (FI-6190)	
Type:	string [32001]
Check Constraint:	LENGTH(jsonData) <= 32000
Remarks:	store json data for provider
2.3.290.4 name (FI-6188)	
Type:	string [50] (Indexed, Not Modifiable)
Remarks:	Name for the Provider
2.3.290.5 pkid (FI-6187)	
Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for provider record
2.3.290.6 tkconnection (FI-6193)	
Type:	enum
Remarks:	information about the type of connection
2.3.290.7 tkprovider (FI-6191)	
Type:	enum
Remarks:	Store the type of provider
2.3.290.8 versionnumber (FI-6194)	
Type:	long
Remarks:	This will store the version number of the provider
Uniqueness:	name + tkconnection is unique. (MFI-167) displayname + tkconnection is unique. (MFI-168)

2.3.291 recordingdynamic (TI-432)

Description: Frequently updated settings for the Recording Feature

Fields:	2.3.291.1 datetimestamp (FI-3265)			
	Type:	long		
	Default Value:	0		
	Rule (RI-400):	Type:	Active (Insert/Update)	
		Rule Name:	Update the DateTimeStamp for Dynamic records	
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value	
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);	
	Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.	
		Rule Name:	Update the DateTimeStamp for Dynamic records	
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value	
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);	
	2.3.291.2 fkdevicenumplanmap (FI-3263)			
	Type:	guid (Unique, Cascade Delete)		
	2.3.291.3 pkid (FI-3262)			
	Type:	guid (Unique, Indexed, Not Modifiable)		
	Default Value:	newid()		
	Remarks:	Unique ID to identify a record.		
	2.3.291.4 tkrecordingflag (FI-3264)			
	Type:	enum		
	Default Value:	0		
Uniqueness:	No multicolumn uniqueness constraints			

2.3.292 recordingprofile (TI-433)

Description: Frequently updated settings for Monitor and Record

Fields:	2.3.292.1 fkcallingsearchspace_callrecording (FI-3271)		
	Type:	guid (Null OK)	

	Default Value:	NULL
	2.3.292.2 name (FI-3270)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Remarks:	Unique name to identify a profile
	2.3.292.3 pkid (FI-3269)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.292.4 recorderdestination (FI-3272)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9!#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{1,255}\$
	Remarks:	Recorder URL or DN
Uniqueness:	No multicolumn uniqueness constraints	

2.3.293 region (TI-31)

Description:	Region endpoint for IP network spans	
Fields:	2.3.293.1 name (FI-157)	
	Type:	string [50] (Unique)
	Validation:	^[a-zA-Z 0-9._-]{1,30}\$
	Migration Source:	RegionList.Region
	Remarks:	A Unique name for the region.
	2.3.293.2 pkid (FI-156)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.293.3 resettoggle (FI-3084)	
	Type:	bool

	Default Value:	FALSE
	Remarks:	Should this device or group be reset
	2.3.293.4 tkreset (FI-3085)	
	Type:	enum
	Default Value:	2
	Remarks:	Set by DeviceReset stored procedure.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.294 regionmatrix (TI-32)

Description:	Directional bandwidth available between regions	
Fields:	2.3.294.1 audiobandwidth (FI-25659)	
	Type:	long
	Default Value:	64
	Check Constraint:	(audioBandwidth = 0) OR ((audioBandwidth >= 7) AND (audioBandwidth <= 768))
	Remarks:	Value determined by Region.audioBandwidth
	Rule (RI-99):	Type: Validation (Insert/Update)
		Rule Name: Region Using Only Defaults Restriction
		Description: If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).
		Test Condition: IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception
		Error Message: Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.
		Remedy: To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.
	2.3.294.2 fkcodeclist (FI-10218)	
	Type:	guid (Null OK)
	Default Value:	NULL
	Remarks:	Unique ID of the Codec List. Identifies the Codec to be a Lossy or Low-Loss Codec.

2.3.294.3 **fkregion_a (FI-159)**

Type:	guid (Cascade Delete, Not Modifiable)
Migration Source:	indirect from RegionA
Remarks:	Trigger inserts records and sets field when Region record instered.

2.3.294.4 **fkregion_b (FI-160)**

Type:	guid (Cascade Delete, Not Modifiable)
Migration Source:	indirect from RegionB
Remarks:	Trigger inserts records and sets field when Region record instered.

2.3.294.5 **immersivebandwidth (FI-21288)**

Type:	long												
Default Value:	2147483647												
Check Constraint:	(ImmersiveBandwidth >= -2) AND (ImmersiveBandwidth <= 2147483647)												
Remarks:	Specifies the maximum total bit rate (in kbps) for each immersive video call between a particular region and another region (Interregion). 0 indicates no immersive video call allowed, -1 indicates no immersive video call allowed, -2 indicates use system default, like the Default Intraregion Max Immersive Video Call Bit Rate (Includes Audio), or Default Interregion Max Immersive Video Call Bit Rate (Includes Audio)												
Rule (RI-99):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>Region Using Only Defaults Restriction</td></tr><tr><td>Description:</td><td>If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).</td></tr><tr><td>Test Condition:</td><td>IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception</td></tr><tr><td>Error Message:</td><td>Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.</td></tr><tr><td>Remedy:</td><td>To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.</td></tr></table>	Type:	Validation (Insert/Update)	Rule Name:	Region Using Only Defaults Restriction	Description:	If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).	Test Condition:	IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception	Error Message:	Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.	Remedy:	To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.
Type:	Validation (Insert/Update)												
Rule Name:	Region Using Only Defaults Restriction												
Description:	If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).												
Test Condition:	IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception												
Error Message:	Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.												
Remedy:	To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.												

2.3.294.6 **pkid (FI-158)**

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.294.7 videobandwidth (FI-1229)

Type:	long												
Default Value:	384												
Check Constraint:	(videoBandwidth >= -2) AND (videoBandwidth <= 32256)												
Remarks:	Value determined by Region.videoBandwidth												
Rule (RI-99):	<table><tr><td>Type:</td><td>Validation (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>Region Using Only Defaults Restriction</td></tr><tr><td>Description:</td><td>If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).</td></tr><tr><td>Test Condition:</td><td>IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception</td></tr><tr><td>Error Message:</td><td>Missing Bandwidth settings between two regions. Type:	Validation (Insert/Update)												
Rule Name:	Region Using Only Defaults Restriction												
Description:	If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).												
Test Condition:	IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception												
Error Message:	Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.												
Remedy:	To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.												

Uniqueness: fkregion_a + fkregion_b is unique. (MFI-11)

Rules:	Rule (RI-99):	Type:	Validation (Insert/Update) Rule applied when record is inserted.
		Rule Name:	Region Using Only Defaults Restriction
		Description:	If the Bandwidth and Video Bandwidth settings for a Region are both set to use the system default, the record is cannot be inserted, or if already exists, it must be deleted by the application (no active business rule).
		Test Condition:	IF (RegionMatrix.tkBandwidth = 0) AND (RegionMatrix.VideoBandwidth = -1) THEN throw exception
		Error Message:	Missing Bandwidth settings between two regions. No settings were specified to override the default Bandwidth and VideoBandwidth settings within a Region or between two regions.
		Remedy:	To override the Bandwidth setting, Video Bandwidth setting, or both, provide the desired settings within or between the regions. To use the default settings, remove the RegionMatrix record.

2.3.295 registrationdynamic (TI-1080)

Description: Table for tracking last known IP and last known Unified Communications Manager phone registered with.

Insert/Delete is not allowed.

Fields:

2.3.295.1 **datetimestamp (FI-10199)**

Type:	long (Not Modifiable)	
Default Value:	0	
Remarks:	Time value for last change (for replication conflict resolution).	
Rule (RI-400):	Type:	Active (Insert/Update)
	Rule Name:	Update the DateTimeStamp for Dynamic records
	Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
	Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Update the DateTimeStamp for Dynamic records
	Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
	Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);

2.3.295.2 **fkdevice (FI-10124)**

Type:	guid (Unique, Cascade Delete)
Remarks:	Foreign key to Device table.

2.3.295.3 **lastknownipaddress (FI-10122)**

Type:	string [15]
Default Value:	EMPTY
Remarks:	Last known ip address of phone

2.3.295.4 **lastknownucm (FI-10123)**

Type:	string [50]
Default Value:	EMPTY
Remarks:	Last known Unified Communications Manager this phone registered to.

2.3.295.5 **pkid (FI-10121)**

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()

	Remarks:	Unique ID to identify a record
--	----------	--------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.296 remotecatalogkey (TI-2604)

Description:	Non-RI-Constrained Map between RemoteRoutingPattern and RemoteClusterURICatalog. Delete flag used when RemoteClusterURICatalog with referenced PeerID is removed.
--------------	---

Fields:	2.3.296.1 isdeleted (FI-25719)
---------	---------------------------------------

Type:	bool
Default Value:	FALSE
Remarks:	When true, the associated Pattern Catalog has been deleted but all dependent RemoteRoutingPatterns are not yet scrubbed.

2.3.296.2 pkid (FI-25716)

Type:	guid (Unique, Indexed, Not Modifiable)						
Default Value:	newid()						
Remarks:	Bloated, wasteful surrogate PK as big as the real key which follows.						
Rule (RI-2116):	<table><tr><td>Type:</td><td>Active (Insert)</td></tr><tr><td>Rule Name:</td><td>RemoteCatalogKey_ID Generator</td></tr><tr><td>Description:</td><td>Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.</td></tr></table>	Type:	Active (Insert)	Rule Name:	RemoteCatalogKey_ID Generator	Description:	Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.
Type:	Active (Insert)						
Rule Name:	RemoteCatalogKey_ID Generator						
Description:	Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.						

2.3.296.3 remotecatalogkey_id (FI-25718)

Type:	long (Unique, Indexed, Not Modifiable)								
Migration Source:	New Code In GetColumnInfo sets default to CHECKSUM(pkid,0).								
Remarks:	Finally, a reasonable sized key. Generated for use from RemoteRoutingPattern to reference associated Pattern Catalog of a Remote Cluster.								
Rule (RI-2116):	<table><tr><td>Type:</td><td>Active (Insert)</td></tr><tr><td></td><td>This field is modified by this rule.</td></tr><tr><td>Rule Name:</td><td>RemoteCatalogKey_ID Generator</td></tr><tr><td>Description:</td><td>Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.</td></tr></table>	Type:	Active (Insert)		This field is modified by this rule.	Rule Name:	RemoteCatalogKey_ID Generator	Description:	Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.
Type:	Active (Insert)								
	This field is modified by this rule.								
Rule Name:	RemoteCatalogKey_ID Generator								
Description:	Active Insert Rule to Generate Unique RemoteCatalogKey_ID Surrogate Key based on pkid.								

2.3.296.4 remoteclusteruricatalog_peerid (FI-25717)
--

Type:	string [36] (Indexed)
Remarks:	The real PK related 1 to 1 with PeerID column from RemoteClusterURICatalog.

Uniqueness:	No multicolumn uniqueness constraints		
Constraints:	Rule (RFI-663):	Type:	Inter-field Condition and Constraint
		Constraint:	(IsDeleted OR NOT EXISTS (SELECT 1 FROM RemoteCatalogKey RCK WHERE RCK.pkid <>pkid AND RCK.RemoteClusterURICatalog_PeerID = RemoteClusterURICatalog_PeerID AND NOT RCK.IsDeleted))
		Remarks:	The Peer ID String for an Active ILS Remote Cluster Catalog must be unique to allow proper reverse lookup of the associated Routing String.

2.3.297 remoteclass (TI-524)

Description:	Define remote clusters under the enterprise		
Fields:	2.3.297.1 clusterid (FI-3987)		
	Type:	string [255] (Unique)	
	Validation:	^[0-9a-zA-Z.-]{0,255}\$	
	Remarks:	Cluster ID	
	2.3.297.2 description (FI-3988)		
	Type:	string [512]	
	Default Value:	EMPTY	
	Validation:	^[^%&<>\\'"]{0,128}\$	
	Remarks:	Description of the Time Period, up to 128 characters including Unicode	
	2.3.297.3 fullyqualifiedname (FI-3978)		
	Type:	string [50]	
	Validation:	^[a-zA-Z 0-9.*-]{1,50}\$	
	Remarks:	FQ hostname or IP address of the remote cluster	
	Rule (RI-2154):	Type:	Active (Insert/Update)
		Rule Name:	Duplicate FQDN entries not allowed for RemoteCluster table during insert/update
	Description:	The FQDN entries used by a cluster id in RemoteCluster table must be unique	
	Test Condition:	ON INSERT/UPDATE INTO RemoteCluster:SELECT count(*) INTO num_count FROM RemoteCluster WHERE fullyqualifiedname = new_fullyqualifiedname;	
	Error Message:	Cannot insert this Fully Qualified Domain Name - This is already assigned to a cluster	

		Remedy:	Try with a different Fully Qualified Domain Name
2.3.297.4 pkid (FI-3986)			
Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
Rule (RI-612):	Type:	Active (Insert)	
	Rule Name:	RemoteClusterServiceMapDynamic	
	Description:	On insert of a Remote Cluster record, insert the RemoteClusterServiceMapDynamic records	
	Test Condition:	?	
Rule (RI-875):	Type:	Active (Delete)	
	Rule Name:	Clear RemoteCluster FKs	
	Description:	Clear foreign key from RemoteClusterILSStatus	
	Test Condition:	DELETE	
2.3.297.5 version (FI-5195)			
Type:	string [100]		
Default Value:	EMPTY		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.298 remotecusterilshostinfo (TI-1106)

Description:	Remote cluster hosts discovered by ILS		
Fields:	2.3.298.1 fkremotecusterilsstatus (FI-10224)		
	Type:	guid (Indexed, Cascade Delete)	
	Remarks:	Foreign key to RemoteClusterILSStatus table.	
	2.3.298.2 hostname (FI-10226)		
	Type:	string [255] (Null OK)	
	Default Value:	NULL	
	2.3.298.3 ipaddress (FI-10225)		
	Type:	string [50] (Null OK)	

	Default Value:	NULL
	Remarks:	IP address of the host
	2.3.298.4 pkid (FI-10223)	
	Type:	guid (Unique, Indexed)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.299 remoteclusterilsstatus (TI-1078)

Description:	Tracks information about clusters discovered by ILS		
Fields:	2.3.299.1 fkremotecluster (FI-10117)		
	Type:	guid (Indexed, Null OK)	
	Default Value:	NULL	
	Remarks:	Foreign key to RemoteCluster table.	
	Rule (RI-880):	Type:	Validation (Insert/Update)
		Rule Name:	RemoteClusterILSStatus unique for RemoteCluster
		Description:	RemoteClusterILSStatus.fkRemoteCluster must be unique if not NULL
		Test Condition:	On INSERT or UPDATE to RemoteClusterILSstatus, verify no other row has same non-NULL fkRemoteCluster.
	2.3.299.2 hubpeerid (FI-10119)		
	Type:	string [36] (Null OK)	
	Default Value:	EMPTY	
	Remarks:	Identifier of the hub for this cluster on the ILS network	
	2.3.299.3 lastcontacttime (FI-10309)		
	Type:	long (Null OK)	
	Default Value:	NULL	
	Remarks:	Time of last successful contact to replication peer.	
2.3.299.4 peerid (FI-10118)			

	Type:	string [36] (Null OK)
	Default Value:	EMPTY
	Remarks:	Identifier of this cluster on the ILS network
	2.3.299.5 pkid (FI-10116)	
	Type:	guid (Unique, Indexed)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.299.6 replicationset (FI-10222)	
	Type:	long (Null OK)
	Default Value:	NULL
	Remarks:	Identifier for the remote cluster's current replication set
Uniqueness:	No multicolumn uniqueness constraints	

2.3.300 remotecusterservicemapdynamic (TI-525)

Description:	remote cluster is added to the Cluster table . Insert/Delete is not allowed.		
Fields:	2.3.300.1 datetimestamp (FI-5751)		
	Type:	long	
	Default Value:	0	
	Remarks:	Time stamp	
	Rule (RI-400):	Type:	Active (Insert/Update)
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value
		Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
	Rule (RI-400):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Update the DateTimeStamp for Dynamic records
		Description:	When a record in a Dynamic table is updated, set the DateTimeStamp to the current time value

Test Condition:	ON INSERT/UPDATE INTO *Dynamic: LET currentTime = dbinfo('utc_current'); return currentTime (INTO DateTimeStamp);
-----------------	---

2.3.300.2 enabled (FI-3992)

Type:	bool
Default Value:	T
Remarks:	Controlled by local Admin EApp must check to allow/deny EMLogin

2.3.300.3 [fkremotecluster](#) (FI-3990)

Type:	guid (Cascade Delete, Not Modifiable)
Remarks:	Link to RemoteCluster table

2.3.300.4 isclustersecure (FI-21204)

Type:	bool
Default Value:	FALSE
Remarks:	This field is used to indicate whether offcluster is secure or not

2.3.300.5 isremoteactivated (FI-5196)

Type:	bool
Default Value:	FALSE
Remarks:	Indicates if the service is activated in the remote cluster

2.3.300.6 overrideserviceaddress (FI-9870)

Type:	bool
Default Value:	FALSE
Remarks:	This will determine if the address configuration obtained from the remote cluster can be manually overridden

2.3.300.7 pkid (FI-3989)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.300.8 remoteipaddr1 (FI-3994)

Type:	string [17]
Default Value:	EMPTY
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\$
Remarks:	IP Address for remote cluster service

2.3.300.9 remoteipaddr2 (FI-3995)

Type:	string [17]
Default Value:	EMPTY
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\$
Remarks:	IP Address for remote cluster service

2.3.300.10 remoteipaddr3 (FI-3996)

Type:	string [17]
Default Value:	EMPTY
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9][0-9] [0-9])\$
Remarks:	IP Address for remote cluster service

2.3.300.11 remoteport (FI-3977)

Type:	long
Default Value:	5060
Check Constraint:	RemotePort >= 1024
Remarks:	Remote Port number

2.3.300.12 remotetrunkpkid (FI-3993)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	SIP Trunk PKID in visiting cluster.

2.3.300.13 [tkinterclusterservice](#) (FI-3991)

Type:	enum
Default Value:	1
Remarks:	Inter Cluster Service Type

Uniqueness: fkremotecluster + tkinterclusterservice is unique. (MFI-124)

2.3.301 remoteclusteruricatalog (TI-1088)

Description: URI catalogs published by other clusters

Fields: 2.3.301.1 catalogsyncsetinstance (FI-25813)

Type:	long (Null OK)
-------	----------------

Default Value:	NULL
Remarks:	ensure that the source and destination agree that the set of syncd patterns associated with a catalog are complete and consistent with the current view of the source

2.3.301.2 **fkremotecluster (FI-10175)**

Type:	guid (Indexed, Cascade Delete)
Remarks:	Foreign key to RemoteCluster table.

2.3.301.3 **lastdatareceivedtime (FI-10311)**

Type:	long (Null OK)
Default Value:	NULL
Remarks:	Time of new data received.

2.3.301.4 **name (FI-10177)**

Type:	string [50] (Null OK)
Default Value:	EMPTY
Remarks:	Catalog name.

2.3.301.5 **peerid (FI-10176)**

Type:	string [36] (Unique, Indexed, Null OK)						
Default Value:	EMPTY						
Remarks:	UNIQUE Identifier of the corresponding cluster or URI catalog on the ILS network						
Rule (RI-2127):	<table> <tr> <td>Type:</td><td>Active (Insert/Update/Delete records)</td></tr> <tr> <td>Rule Name:</td><td>RemoteClusterURICatalog Event Handler</td></tr> <tr> <td>Description:</td><td>Active Rule to Drive applicable RemoteClusterURICatalog changes through to the RemoteCatalogKey table.</td></tr> </table>	Type:	Active (Insert/Update/Delete records)	Rule Name:	RemoteClusterURICatalog Event Handler	Description:	Active Rule to Drive applicable RemoteClusterURICatalog changes through to the RemoteCatalogKey table.
Type:	Active (Insert/Update/Delete records)						
Rule Name:	RemoteClusterURICatalog Event Handler						
Description:	Active Rule to Drive applicable RemoteClusterURICatalog changes through to the RemoteCatalogKey table.						

2.3.301.6 **pkid (FI-10174)**

Type:	guid (Unique, Indexed)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.301.7 **routestring (FI-10178)**

Type:	string [255] (Null OK)
Default Value:	EMPTY

	Remarks:	Route string.
	2.3.301.8 <u>tkilssyncstatus (FI-10308)</u>	
	Type:	enum
	Default Value:	2
	Remarks:	Specifies the status of the last contact to the replication peer.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.302 remotecommoninfo (TI-2137)

Description:	Stores Remote Common Info. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.302.1 pkid (FI-21184)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.302.2 remotekey (FI-21185)	
	Type:	string [255]
	Remarks:	Remote Numplan Key
	2.3.302.3 remotepeerid (FI-21186)	
	Type:	string [36]
	Migration Source:	Set to NULL
	Remarks:	Remote Numplan Key
	2.3.302.4 usn (FI-21187)	
	Type:	long
	Remarks:	Update sequence number for the object referenced by pkid.
Uniqueness:	remotekey + remotepeerid is unique. (MFI-783)	

2.3.303 remotestation (TI-452)

Description: Mobility settings for Dual-Mode and Single Number Reach devices

Fields:

2.3.303.1 fkdevice_ctird (FI-10001)

Type:	guid (Cascade Delete, Null OK)												
Default Value:	NULL												
Remarks:	CTI RD device associated with the Remote Destination. This field can only refer to the pkid of a CTI RD type device												
Rule (RI-406):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Remote Destinations Device validation</td></tr> <tr> <td>Description:</td><td>RemoteDestination can be associated with a Remote Destination Profile, or a Dual-mode Phone, or a MobileSmartClient, or a SIP line device or a Dual-mode with Smart Client in which case the fkdevices are referencing the same device. Except for the last case, only one device reference is allowed. EndUser associated with these devices or remote destination template should be Mobility Enabled.</td></tr> <tr> <td>Test Condition:</td><td>Check description for complete rule. 		Error Message:	There is already a Preferred Destination existing for this CTI Remote Device.
		Remedy:	To Make another Remote Destination as Preferred, remove the already existing Preferred Destination from being the Preferred one.
	2.3.304.11 transactionid (FI-10269)		
	Type:	long	
	Default Value:	0	
	Remarks:	TransactionID added specifically for CTI applications, to track the notifications for RD. This field will have a value only when an RD is set as active.	
	Uniqueness:	No multicolumn uniqueness constraints	

2.3.305 remotestinationhistorydynamic (TI-596)

Description:	Holds last 5 distinct number selections for the Reach Me Anywhere Insert/Delete is not allowed.		
Fields:	2.3.305.1 datetimestamp (FI-6168)		
	Type:	long	
	Default Value:	0	
	Remarks:	Time value for last change	
	2.3.305.2 destination (FI-6132)		
	Type:	string [127] (Not Modifiable)	
	Remarks:	Raw Cellular Number	
	2.3.305.3 <u>fkenduser_mobility (FI-6131)</u>		
	Type:	guid (Indexed, Not Modifiable)	
	Remarks:	End User that owns Dual-Mode, SNR Device, or deskphone with Mobility button (for Cell Pickup).Cascade delete is omitted intentionally due to CUBA table rules to avoid autogenerated cascade delete rule addition to enterprise end user rules.	
	2.3.305.4 pkid (FI-6130)		

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	unique id to identify record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.306 remotestinationusagemodelmap (TI-2616)

Description:	Association of TypeModel records with a TypeRemoteDestinationUsage Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.306.1 enum (FI-25790)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.306.2 fkmodel (FI-25792)	
	Type:	enum (Not Modifiable)
	Remarks:	Foreign key reference to TypeModel for this association.
	2.3.306.3 fkremotestinationusage (FI-25791)	
	Type:	enum (Not Modifiable)
	Remarks:	Foreign key reference to TypeRemoteDestinationUsage for this association.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.307 remotenumplan (TI-2139)

Description:	Stores Remote Numplan Info. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.307.1 fkremotecommoninfo (FI-21194)	
	Type:	guid (Cascade Delete)
	Remarks:	Reference
	2.3.307.2 number (FI-21193)	
	Type:	string [50] (Indexed)
	Default Value:	EMPTY
	2.3.307.3 pkid (FI-21191)	

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.307.4 tag (FI-21192)	
	Type:	long
	Remarks:	Tag
Uniqueness:	No multicolumn uniqueness constraints	

2.3.308 remoteobjectblockrule (TI-2150)

Description:	Specifies attributes of objects replicated into the cluster that should be blocked	
Fields:	2.3.308.1 clusterid (FI-21239)	
	Type:	string [50]
	Default Value:	EMPTY
	Remarks:	Cluster ID to which the rule applies
	Rule (RI-956):	Type: Validation (Insert/Update)
		Rule Name: Validation rules on table RemoteObjectBlockRule
		Description: Validation.
		Test Condition: On INSERT/UPDATE on RemoteObjectBlockRule, verify that at least one of the criterion columns are non-NULL. If Pattern is not NULL, validate format.
		Error Message: Various
	2.3.308.2 description (FI-25592)	
	Type:	string [50]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%\\&<>\\[\]]{0,50}\$
	2.3.308.3 pattern (FI-21240)	
	Type:	string [50]
	Default Value:	EMPTY
	Remarks:	Numeric pattern to which the rule applies

Rule (RI-956):	Type:	Validation (Insert/Update)
	Rule Name:	Validation rules on table RemoteObjectBlockRule
	Description:	Validation.
	Test Condition:	On INSERT/UPDATE on RemoteObjectBlockRule, verify that at least one of the criterion columns are non-NULL. If Pattern is not NULL, validate format.
	Error Message:	Various
Rule (RI-958):	Type:	Active (Insert/Update)
	Rule Name:	Capitalize pattern and prefix on RemoteObjectBlockRule.
	Description:	null
Rule (RI-958):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Capitalize pattern and prefix on RemoteObjectBlockRule.
	Description:	null

2.3.308.4 pkid (FI-21237)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-956):	Type:	Validation (Insert/Update)
	Rule Name:	Validation rules on table RemoteObjectBlockRule
	Description:	Validation.
	Test Condition:	On INSERT/UPDATE on RemoteObjectBlockRule, verify that at least one of the criterion columns are non-NULL. If Pattern is not NULL, validate format.
	Error Message:	Various

2.3.308.5 prefix (FI-21241)

Type:	string [50]	
Default Value:	EMPTY	
Remarks:	Prefix of learned number to which the rule applies	
Rule (RI-956):	Type:	Validation (Insert/Update)

		Rule Name:	Validation rules on table RemoteObjectBlockRule
		Description:	Validation.
		Test Condition:	On INSERT/UPDATE on RemoteObjectBlockRule, verify that at least one of the criterion columns are non-NULL. If Pattern is not NULL, validate format.
		Error Message:	Various
	Rule (RI-958):	Type:	Active (Insert/Update)
		Rule Name:	Capitalize pattern and prefix on RemoteObjectBlockRule.
		Description:	null
	Rule (RI-958):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Capitalize pattern and prefix on RemoteObjectBlockRule.
		Description:	null
	2.3.308.6 tkglobalnumber (FI-21238)		
	Type:	enum (Null OK)	
	Default Value:	NULL	
	Remarks:	Type of global number to which the rule applies.	
	Rule (RI-956):	Type:	Validation (Insert/Update)
		Rule Name:	Validation rules on table RemoteObjectBlockRule
		Description:	Validation.
		Test Condition:	On INSERT/UPDATE on RemoteObjectBlockRule, verify that at least one of the criterion columns are non-NULL. If Pattern is not NULL, validate format.
		Error Message:	Various
Uniqueness:	tkglobalnumber + clusterid + pattern + prefix is unique. (MFI-782)		
Constraints:	Rule (RFI-661):	Type:	Inter-field Condition and Constraint
		Constraint:	(NVL(Pattern,"")=" OR NVL(Prefix,"")=)
		Remarks:	Specify either Pattern or Prefix

2.3.309 remoteobjectpartitionrule (TI-2145)

Description:	Specifies criteria used to match to objects replicated into the cluster from remote clusters and action to take when a match is found.		
Fields:	2.3.309.1 fkroutepartition (FI-21221)		
	Type:	guid	
	Remarks:	The partition into which the remote object should be placed if this rule matches.	
	Rule (RI-953):	Type:	Validation (Insert/Update)
		Rule Name:	Validation rules on table RemoteObjectPartitionRule
		Description:	Verify row criteria are unique
		Test Condition:	On INSERT/UPDATE on RemoteObjectPartitionRule, verify the combination of tkRemoteObject and tkGlobalNumber is unique
		Error Message:	Another row already specifies the same combination of global number type and remote object type.
	2.3.309.2 isurgentfixedlen (FI-21218)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Treat fixed-length patterns matching this rule as urgent.	
	2.3.309.3 isurgentvariablelen (FI-21229)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Treat variable-length patterns matching this rule as urgent.	
	Rule (RI-953):	Type:	Validation (Insert/Update)
		Rule Name:	Validation rules on table RemoteObjectPartitionRule
		Description:	Verify row criteria are unique
		Test Condition:	On INSERT/UPDATE on RemoteObjectPartitionRule, verify the combination of tkRemoteObject and tkGlobalNumber is unique
		Error Message:	Another row already specifies the same combination of global number type and remote object type.
	2.3.309.4 pkid (FI-21217)		
Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Migration Source:	Generated		
Remarks:	Unique ID to identify a record.		
Rule (RI-953):			

Type:	Validation (Insert/Update)
Rule Name:	Validation rules on table RemoteObjectPartitionRule
Description:	Verify row criteria are unique
Test Condition:	On INSERT/UPDATE on RemoteObjectPartitionRule, verify the combination of tkRemoteObject and tkGlobalNumber is unique
Error Message:	Another row already specifies the same combination of global number type and remote object type.

2.3.309.5 [tkglobalnumber \(FI-21220\)](#)

Type:	enum (Not Modifiable)
Default Value:	100
Remarks:	Type of global number to which the rule applies.

Rule (RI-953):	Type:	Validation (Insert/Update)
	Rule Name:	Validation rules on table RemoteObjectPartitionRule
	Description:	Verify row criteria are unique
	Test Condition:	On INSERT/UPDATE on RemoteObjectPartitionRule, verify the combination of tkRemoteObject and tkGlobalNumber is unique
	Error Message:	Another row already specifies the same combination of global number type and remote object type.

2.3.309.6 [tkpatternusage \(FI-25593\)](#)

Type:	enum (Not Modifiable)
Default Value:	2
Remarks:	Pattern usage matching tkGlobalNumber and tkRemoteObject

2.3.309.7 [tkremoteobject \(FI-21219\)](#)

Type:	enum (Not Modifiable)
Default Value:	200
Remarks:	Type of remote object to which the rule applies.

Rule (RI-953):	Type:	Validation (Insert/Update)
	Rule Name:	Validation rules on table RemoteObjectPartitionRule
	Description:	Verify row criteria are unique
	Test Condition:	On INSERT/UPDATE on RemoteObjectPartitionRule, verify the combination of tkRemoteObject and tkGlobalNumber is unique
	Error Message:	Another row already specifies the same combination of global number type and remote object type.

Uniqueness: No multicolumn uniqueness constraints

2.3.310 remoteroutingpattern (TI-2592)

Description: Stores Reported Patterns, (URIs and Numbers), from Remote Clusters to support Local ILS Feature.

Fields:

2.3.310.1 pattern (FI-25654)

Type: string [255] (Indexed, Not Modifiable)

Default Value: EMPTY

Remarks: Number or URI pattern shared from Remote Cluster Peer.

2.3.310.2 pkid (FI-25650)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

2.3.310.3 remotecatalogkey_id (FI-25652)

Type: long (Not Modifiable)

Remarks: Integer fk ref to RemoteCatalogKey record associated with this pattern. The RemoteCatalogKey record contains a PeerID key to the RemoteClusterURICatalog record defining the Catalog and associated Routing Info.

2.3.310.4 remotekey (FI-25651)

Type: guid (Indexed, Not Modifiable, Null OK)

Remarks: GUID provided by Remote Host Cluster for use as pattern, (remote numplan), reference key. (9.x does not use so NULL and Pattern is used as identity.)

2.3.310.5 tkpatternhandlingflaginfo (FI-25656)

Type: enum

Default Value: 0

Remarks: Indicates how DA / CP / Routing should use the pattern in this record.

2.3.310.6 tkpatternusage (FI-25655)

Type: enum

Default Value: 28

Remarks: Indicates what kind of pattern / number / uri the record contains. (Default of 28 = ILS Learned URI)

2.3.310.7 usn (FI-25653)

	Type:	long
	Remarks:	Sequence Number for use in tracking object version when synchronizing updates.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.311 remotesyslog (TI-624)

Description: Remote Syslog Table

Fields:	2.3.311.1 enable (FI-5188)	
	Type:	bool
	Default Value:	TRUE
	Remarks:	Apply to All Services Per Server when Enabled for Application Messages
	2.3.311.2 fkprocessnode (FI-5185)	
	Type:	guid (Cascade Delete)
	Remarks:	Specifies ProcessNode
	Rule (RI-692):	Type: Validation (Insert/Update)
		Rule Name: In the RemoteSyslog table, the combination of fkProcessNode and tkSyslogMessage must be unique
		Description: In the RemoteSyslog table, the combination of fkProcessNode and tkSyslogMessage must be unique (e.g., cannot define the Security message type twice for the same CM Server).
		Test Condition: Cannot define the Security message type twice for the same CM Server
		Remedy: 1
	2.3.311.3 pkid (FI-5184)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.311.4 tkalarmseverity (FI-5187)	
	Type:	enum
	Default Value:	0
	Remarks:	Indicates the AlarmSeverity Level - ALARM_SEVERITY_*; Emergency, Alert, Critical, Error, Warning, Notice, Informational and Debug

2.3.311.5 [tksyslogmessage \(FI-5186\)](#)

Type: enum

Default Value: 0

Remarks: Indicates the Syslog Message Level - SYSLOG_MESSAGE_* ; Security, System and Application

Rule (RI-692):

Type: Validation (Insert/Update)

Rule Name: In the RemoteSyslog table, the combination of fkProcessNode and tkSyslogMessage must be unique

Description: In the RemoteSyslog table, the combination of fkProcessNode and tkSyslogMessage must be unique (e.g., cannot define the Security message type twice for the same CM Server).

Test Condition: Cannot define the Security message type twice for the same CM Server

Remedy: 1

Uniqueness: No multicolumn uniqueness constraints

2.3.312 remotesyslogappservermap (TI-625)

Description: A mapping table to map AppServer and RemoteSyslog

Fields:

2.3.312.1 [fkappserver \(FI-5191\)](#)

Type: guid (Cascade Delete)

Rule (RI-691):

Type: Validation (Insert/Update)

Rule Name: Only 5 AppServer is allowed for any RemoteSyslog Record

Description: For any given entry in RemoteSyslog table, there can be up to 5 servers associated in the RemoteSyslogAppServerMap table.

Test Condition: Only 5 AppServer is allowed for any RemoteSyslog Record

Remedy: 1

Rule (RI-693):

Type: Validation (Insert/Update)

Rule Name: In the RemoteSyslogAppServerMap table, the combination of fkRemoteSyslog and fkAppServer must be unique.

Description: In the RemoteSyslogAppServerMap table, the combination of fkRemoteSyslog and fkAppServer must be unique (e.g., cannot associate the same RemoteSyslog entry with the same RemoteSyslogServer (AppServer entry) twice.

Test Condition: Cannot associate the same RemoteSyslog entry with the same RemoteSyslogServer (AppServer

			entry) twice.
		Remedy:	1
	2.3.312.2 fkremotesyslog (FI-5190)		
	Type:	guid (Cascade Delete)	
	Rule (RI-691):	Type:	Validation (Insert/Update)
		Rule Name:	Only 5 AppServer is allowed for any RemoteSyslog Record
		Description:	For any given entry in RemoteSyslog table, there can be up to 5 servers associated in the RemoteSyslogAppServerMap table.
		Test Condition:	Only 5 AppServer is allowed for any RemoteSyslog Record
		Remedy:	1
	Rule (RI-693):	Type:	Validation (Insert/Update)
		Rule Name:	In the RemoteSyslogAppServerMap table, the combination of fkRemoteSyslog and fkAppServer must be unique.
		Description:	In the RemoteSyslogAppServerMap table, the combination of fkRemoteSyslog and fkAppServer must be unique (e.g., cannot associate the same RemoteSyslog entry with the same RemoteSyslogServer (AppServer entry) twice.
		Test Condition:	Cannot associate the same RemoteSyslog entry with the same RemoteSyslogServer (AppServer entry) twice.
		Remedy:	1
	2.3.312.3 pkid (FI-5189)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.313 remoteuri (TI-2138)

Description: Stores Remote URI Info.
Records may be modified only by installation and/or DB triggers.

Fields: **2.3.313.1 [fkremotecommoninfo \(FI-21190\)](#)**

Type: guid (Cascade Delete)

	Remarks:	Reference
	2.3.313.2 pkid (FI-21188)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.313.3 uri (FI-21189)	
	Type:	string [255] (Indexed)
	Default Value:	EMPTY
	Uniqueness:	No multicolumn uniqueness constraints

2.3.314 replicationdynamic (TI-482)

Description:	Realtime replication counter	
Fields:	2.3.314.1 datetimestamp (FI-3588)	
	Type:	long
	Default Value:	0
	2.3.314.2 fkprocessnode (FI-3587)	
	Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)
	2.3.314.3 pkid (FI-3586)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.314.4 replicationsetuptime (FI-10433)	
	Type:	long
	Default Value:	0
	Remarks:	Time value indicating last change in replication status
	2.3.314.5 tkreplicationstatus (FI-10432)	
	Type:	enum
	Default Value:	0

	Remarks:	Status of replication setup (or repair) on the referenced node
--	----------	--

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.315 resourceprioritydefaultnamespace (TI-472)

Description:	The Default Resource Priority Namespace for the system. One record only and must contain a Namespace if any are defined
--------------	---

Fields:	2.3.315.1 fkresourceprioritynamespace (FI-3503)		
	Type:	guid (Null OK)	
	Default Value:	NULL	
	Remarks:	The Default Namespace for the system. If Namespaces are defined, then the default cannot be null	
	Rule (RI-216):	Type:	Active (Insert/Update)
		Rule Name:	device versionstamp
		Description:	on change to anything in device xml file, update versionstamp
		Test Condition:	update device
	Rule (RI-438):	Type:	Validation (Update)
		Rule Name:	ResourcePriorityDefaultNamespace.fkResourcePriorityNamespace not null
		Description:	The value of ResourcePriorityDefaultNamespace.fkResourcePriorityNamespace cannot be NULL if there are ResourcePriorityNamespaces defined.
		Test Condition:	ON UPDATE ResourcePriorityDefaultNamespace: IF (new_fkResourcePriorityNamespace IS NULL) AND (SELECT COUNT(*) FROM ResourcePriorityNameSpace > 1) THEN throw exception; END IF
		Error Message:	Cannot remove ResourcePriorityDefaultNamespace (fkResourcePriorityNamespace = NULL) if there are namespaces defined
		Remedy:	The default will be removed if all namespaces are deleted from the system.
	2.3.315.2 pkid (FI-3502)		
Type:	guid (Unique, Indexed, Not Modifiable)		
Default Value:	newid()		
Remarks:	Unique ID to identify a record.		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.316 resourceprioritynamespace (TI-469)

Description: Defines a Resource Priority Namespace

Fields:

2.3.316.1 description (FI-3565)

Type:	string [400]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%&<>]{0,100}\$
Migration Source:	N/A
Remarks:	Description for Resource Priority Namespace.

2.3.316.2 name (FI-3495)

Type:	string [10] (Unique, Indexed)
Validation:	^[0-9a-zA-Z!*+_`~]{1,10}\$
Remarks:	Unique (case sensitive) identifier for a namespace

Rule (RI-216):	Type:	Active (Insert/Update)
	Rule Name:	device versionstamp
	Description:	on change to anything in device xml file, update versionstamp
	Test Condition:	update device

Rule (RI-436):	Type:	Validation (Insert/Update)
	Rule Name:	ResourcePriortyNamespace Name cannot be RFC4412 reserved name
	Description:	Use of the following names reserved in RFC4412 is not allowed for Resource Priority Namespaces: WPS, ETS
	Test Condition:	ON INSERT/UPDATE INTO ResourcePriorityNameSpace: IF (UPPER(new_Name) IN ('WPS', 'ETS')) THEN throw exception; END IF
	Error Message:	Cannot use RFC4412 reserved names WPS and ETS for namespaces.
	Remedy:	Use a different name and try again.

2.3.316.3 pkid (FI-3494)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-216):	Type:	Active (Insert/Update)

		Rule Name:	device versionstamp
		Description:	on change to anything in device xml file, update versionstamp
		Test Condition:	update device
	Rule (RI-435):	Type:	Active (Insert)
		Rule Name:	ResourcePriorityNamespace limited to 100 records
		Description:	No more than 100 records can be added to the ResourcePriorityNamespace table (limit of 100 ResourcePriorityNamespaces).
		Test Condition:	ON INSERT INTO ResourcePriorityNameSpace: IF (SELECT COUNT(*) FROM ResourcePriorityNameSpace) > 100 THEN throw exception; END IF
		Error Message:	Cannot have more than 100 Resource Priority Namespaces
		Remedy:	Remove any unused namespaces and try again
	Rule (RI-437):	Type:	Active (Insert)
		Rule Name:	ResourcePriorityDefaultNamespace set to first inserted namespace
		Description:	When the first ResourcePriorityNamespace is inserted, it automatically becomes the ResourcePriorityDefaultNamespace
		Test Condition:	ON INSERT INTO ResourcePriorityNameSpace: IF (SELECT COUNT(*) FROM ResourcePriorityNameSpace) = 1 THEN UPDATE ResourcePriorityDefaultNamespace SET fkResourcePriorityNamespace = new_pkid); END IF
	Rule (RI-439):	Type:	Active (Delete)
		Rule Name:	Remove ResourcePriorityDefaultNamespace with last namespace
		Description:	If the last ResourcePriorityNamespace is deleted from the system, set the default to NULL
		Test Condition:	ON DELETE FROM ResourcePriorityNameSpace: IF (SELECT COUNT(*) FROM ResourcePriorityNameSpace) = 0 THEN UPDATE ResourcePriorityDefaultNamespace SET fkResourcePriorityNamespace = NULL); END IF

2.3.316.4 resettoggle (FI-10168)

Type:	bool	
Default Value:	FALSE	
Remarks:	Should this device or group be reset	
Rule (RI-216):	Type:	Active (Insert/Update)
	Rule Name:	device versionstamp
	Description:	on change to anything in device xml file, update versionstamp

		Test Condition: update device
	2.3.316.5 tkreset (FI-10169)	
	Type:	enum
	Default Value:	2
	Remarks:	Set by DeviceReset stored procedure.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.317 resourceprioritynamespacelist (TI-470)

Description:	Defines a List of Resource Priority Namespaces	
Fields:	2.3.317.1 description (FI-3566)	
	Type:	string [400]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""'%"&<>]{0,100}\$
	2.3.317.2 name (FI-3497)	
	Type:	string [50] (Unique, Indexed)
	Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~-]{1,50}\$
	Remarks:	Unique (case sensitive) identifier for a namespace list
	2.3.317.3 pkid (FI-3496)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.317.4 resettoggle (FI-10228)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Should this device or group be reset
	2.3.317.5 tkreset (FI-10229)	
	Type:	enum
	Default Value:	2
	Remarks:	Set by DeviceReset stored procedure.

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.318 resourceprioritynamespacemap (TI-471)

Description:	Maps Resource Priority Namespaces to Resource Priority Namespace Lists (many-to-many)
Fields:	<div>2.3.318.1 fkresourceprioritynamespace (FI-3500)</div> <div>Type: guid (Cascade Delete)</div> <div>2.3.318.2 fkresourceprioritynamespacelist (FI-3499)</div> <div>Type: guid (Cascade Delete)</div> <div>2.3.318.3 index (FI-3501)</div> <div>Type: long</div> <div>Check Constraint: Index >= 0</div> <div>Remarks: Indicates relative priority of a namespace in the list. DO NOT use as an index as the values may not be sequential</div> <div>2.3.318.4 pkid (FI-3498)</div> <div>Type: guid (Unique, Indexed, Not Modifiable)</div> <div>Default Value: newid()</div> <div>Remarks: Unique ID to identify a record.</div>
Uniqueness:	index + fkresourceprioritynamespacelist is unique. (MFI-104) fkresourceprioritynamespacelist + fkresourceprioritynamespace is unique. (MFI-105)

2.3.319 routefilter (TI-106)

Description:	Route filter clauses for NumPlan records used by digit analysis
Fields:	<div>2.3.319.1 clause (FI-696)</div> <div>Type: memo (Not Modifiable, Null OK)</div> <div>Default Value: NULL</div> <div>Migration Source: WhereClause:Statement</div> <div>Remarks: Trigger updated. Colon separated list.</div> <div>2.3.319.2 dialplanwizardgenid (FI-681)</div> <div>Type: long (Indexed, Null OK)</div> <div>Default Value: NULL</div>

Remarks: This record created by DialPlanWizard

2.3.319.3 [fkdialplan \(FI-546\)](#)

Type: guid

Migration Source: id for NADP

Remarks: Dial plan; for example, North American Numbering Plan.

2.3.319.4 name (FI-545)

Type: string [50]

Validation: ^[a-zA-Z 0-9._-]{1,50}\$

Migration Source: WhereClause:Description

Remarks: Unique name for Route Filter

2.3.319.5 pkid (FI-543)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: WhereClause:WhereID

Remarks: Unique ID to identify a record.

2.3.319.6 resettoggle (FI-3086)

Type: bool

Default Value: FALSE

Remarks: Should this device or group be reset

2.3.319.7 [tkreset \(FI-3087\)](#)

Type: enum

Default Value: 2

Remarks: Set by DeviceReset stored procedure.

Uniqueness: fkdialplan + name is unique. (MFI-25)

2.3.320 routefiltercosroutingmap (TI-593)

Description: Cisco BE: Table to store the mapping between routefilter and COSRouting
Is not replicated.

Fields: [2.3.320.1 fkroutefilter \(FI-6176\)](#)

	Type:	guid (Unique, Indexed)
	Remarks:	Reference to the routefilter.
	2.3.320.2 pkid (FI-6175)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique identifier for the record
	2.3.320.3 tkcosrouting (FI-6177)	
	Type:	enum (Indexed)
	Remarks:	reference to cosrouting
Uniqueness:	No multicolumn uniqueness constraints	

2.3.321 routefiltermember (TI-71)

Description:	Used to create RouteFilter for NumPlan records used by digit analysis		
Fields:	2.3.321.1 digits (FI-207)		
	Type:	string [50]	
	Default Value:	EMPTY	
	Validation:	^[0-9*#X[^+?-{0,50}\$	
	Migration Source:	WhereClauseDetail.Digits	
	2.3.321.2 fk dialplantag (FI-205)		
	Type:	guid	
	Migration Source:	WhereClauseDetail.Tag	
	2.3.321.3 fk routefilter (FI-204)		
	Type:	guid (Indexed, Cascade Delete)	
	Migration Source:	Generated (was WhereClause.WhereID)	
	Rule (RI-319):	Type:	Active (Insert/Update/Delete records)
		Rule Name:	Build RouteFilter Clause when members change
		Description:	When records in RouteFilterMember change, rewrite the Clause field in the reference RouteFilter record.
		Test Condition:	ON INSERT/UPDATE/DELETE IN RouteFilterMember

	2.3.321.4 pkid (FI-555)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.321.5 precedence (FI-208)	
	Type:	long
	Migration Source:	WhereClauseDetail.Precedence
	Remarks:	There is no requirement for this index to be sequential nor to begin with a particular value in a Route Filter.
	2.3.321.6 tkoperator (FI-206)	
	Type:	enum
	Migration Source:	WhereClauseDetail.Operator
Uniqueness:	fkroutefilter + fkdialplantag + precedence is unique. (MFI-21)	

2.3.322 routegroup (TI-33)		
Description:	Dial Plan Route Groups	
Fields:	2.3.322.1 description (FI-21153)	
	Type:	string [400]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%&<>]{0,100}\$
	Remarks:	Description for Route Group.
	2.3.322.2 dialplanwizardgenid (FI-682)	
	Type:	long (Indexed, Null OK)
	Default Value:	NULL
	Remarks:	This record created by DialPlanWizard
	Rule (RI-446):	Type: Active (Update/Delete)
		Rule Name: Update/Delete restriction for Standard Local Route Group of RouteGroup table
		Description: The Standard Local Route Group cannot be updated or deleted
		Test Condition: On UPDATE/DELETE of RouteGroup table

Error Message: Cannot Delete/Modify the Standard Local Route Group

2.3.322.3 islocalroutegroup (FI-21152)

Type: bool (Not Modifiable)
Default Value: FALSE
Remarks: If this is a Local Route Group

2.3.322.4 name (FI-195)

Type: string [50] (Unique)
Validation: ^[a-zA-Z 0-9._-]{1,50}\$
Migration Source: RouteGroupName
Remarks: Unique name for Route Group

2.3.322.5 pkid (FI-194)

Type: guid (Unique, Indexed, Not Modifiable)
Default Value: newid()
Migration Source: Generated
Remarks: Unique ID to identify a record.

Rule (RI-446):	Type:	Active (Update/Delete)
	Rule Name:	Update/Delete restriction for Standard Local Route Group of RouteGroup table
	Description:	The Standard Local Route Group cannot be updated or deleted
	Test Condition:	On UPDATE/DELETE of RouteGroup table
	Error Message:	Cannot Delete/Modify the Standard Local Route Group

2.3.322.6 tkdistributealgorithm (FI-1266)

Type: enum
Default Value: 2
Remarks: Distribution algorithm for a route group. It could be Top Down, Circular (default) or Longest Idle Time.

Rule (RI-178):	Type:	Validation (Insert/Update)
	Rule Name:	Distribution Algorithms for Route Groups
	Description:	Valid Distribution Algorithms for Route Groups (TypeGroup = 1) are defined by the mask value for each item in the TypeDistributeAlgorithm table. Only items where the mask value includes the group type (1) are allowed.
	Test Condition:	IF (@RouteGroup.tkDistributeAlgorithm NOT IN (SELECT Enum FROM

		TypeDistributeAlgorithm WHERE (MaskOR1 = TRUE))) THEN throw exception.
		Error Message: The specified Distribution Algorithm is not valid for Route Groups.
		Remedy: Use a Distribution Algorithm that is compatible with Route Groups and try again.
	Rule (RI-446):	Type: Active (Update/Delete)
		Rule Name: Update/Delete restriction for Standard Local Route Group of RouteGroup table
		Description: The Standard Local Route Group cannot be updated or deleted
		Test Condition: On UPDATE/DELETE of RouteGroup table
		Error Message: Cannot Delete/Modify the Standard Local Route Group
	2.3.322.7 tkqsig (FI-1906)	
	Type:	enum (Not Modifiable)
	Default Value:	0
	Migration Source:	Calculate this value from Device.tkQSIG
	Remarks:	default is invalid until updated.
	Rule (RI-446):	Type: Active (Update/Delete)
		Rule Name: Update/Delete restriction for Standard Local Route Group of RouteGroup table
		Description: The Standard Local Route Group cannot be updated or deleted
		Test Condition: On UPDATE/DELETE of RouteGroup table
		Error Message: Cannot Delete/Modify the Standard Local Route Group
Uniqueness:	No multicolumn uniqueness constraints	

2.3.323 routegroupdevicemap (TI-108)

Description:	Maps multiple Devices to be in a Route Group.	
Fields:	2.3.323.1 deviceselectionorder (FI-198)	
	Type:	long
	Migration Source:	DeviceSelectionOrder
	Remarks:	This ordering within the route group does not have to be sequential. There can be gaps.
	2.3.323.2 dialplanwizardgenid (FI-683)	
	Type:	long (Indexed, Null OK)

Default Value:	NULL
Remarks:	This record created by DialPlanWizard

	Error Message:	SAF CCD or EMCC Trunk or ViPR can not be added to Route Group or assigned to Route Pattern

2.3.323.4 **fkroutegroup (FI-558)**

Type:	guid (Indexed, Cascade Delete)		
Check Constraint:	fkRouteGroup != '00000000-1111-0000-0000-000000000000'		
Migration Source:	RouteGroup:Name is now unique. New table for mapping devices.		
Rule (RI-38):	Type:	Active (Insert/Update/Delete records)	
	Rule Name:	Set QSIG on Route Group	
	Description:	The QSIG setting for a Route Group is determined by the composition of the Group. QSIG and H.323 devices cannot be added to the same Route Group. Devices that are neither QSIG nor H.323 can be mixed with either type in a Route Group. The QSIG setting for a group is determined as follows: A group containing only QSIG devices is ALL_PRI_QSIG, a group containing only H.323 devices is H323. A group containing neither H.323 devices nor PRI QSIG devices is MIXED_NONQSIG. If a MIXED_NONQSIG device is combined with a QSIG device, the result is a MISCIBLE_MIX Route Group. If a MIXED_NONQSIG device is combined with a H323 device, the result is a H323 Route Group.	
	Test Condition:	On Insert into or Delete from RouteGroupDeviceMap table	

2.3.323.5 **pkid (FI-588)**

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.323.6 **port (FI-197)**

Type:	long	
Migration Source:	Port	
Remarks:	Port 0 means all ports of the fkDevice.	
Rule (RI-135):	Type:	Validation (Insert/Update)

		Rule Name:	All Ports of Gateway in Route Group
		Description:	A gateway may be assigned to a Route Group as a whole or as individual ports, but not both. If the whole gateway is assigned to a Route Group, individual ports may not be assigned to Route Groups. If individual ports are assigned to Route Groups, the whole gateway cannot also be assigned to a Route Group. Individual ports may be assigned to different Route Groups.
		Test Condition:	IF (SELECT COUNT(*) FROM RouteGroupDeviceMap WHERE fkDevice = @Device.pkid AND Port = 0) AND (SELECT COUNT(*) FROM RouteGroupDeviceMap WHERE fkDevice = @Device.pkid AND Port > 0) THEN throw exception
		Error Message:	Cannot assign a gateway (all ports) and individual ports from the same gateway to Route Groups.
		Remedy:	Assign only the entire gateway (all ports) or individual ports to Route Groups.
Uniqueness:	fkdevice + port + fkroute group is unique. (MFI-12) fkroute group + device selection order is unique. (MFI-47)		
Rules:	Rule (RI-38):	Type:	Active (Insert/Update/Delete records) Rule applied when record is inserted or updated or deleted.
		Rule Name:	Set QSIG on Route Group
		Description:	The QSIG setting for a Route Group is determined by the composition of the Group. QSIG and H.323 devices cannot be added to the same Route Group. Devices that are neither QSIG nor H.323 can be mixed with either type in a Route Group. The QSIG setting for a group is determined as follows: A group containing only QSIG devices is ALL_PRI_QSIG, a group containing only H.323 devices is H323. A group containing neither H.323 devices nor PRI QSIG devices is MIXED_NONQSIG. If a MIXED_NONQSIG device is combined with a QSIG device, the result is a MISCIBLE_MIX Route Group. If a MIXED_NONQSIG device is combined with a H323 device, the result is a H323 Route Group.
		Test Condition:	On Insert into or Delete from RouteGroupDeviceMap table

2.3.324 routelist (TI-34)

Description:	Dial Plan Route Lists used by Route Groups and Line Groups. A better name for this table would be DeviceRouteLineGroupMap, since these records are a many-to-many relationship between device records that are of model Route List and Route/Line groups.

Test Condition:	fkRouteGroup IS NULL										
Constraint:	tkStatus_useFullyQualCallingPartyNum = 2										
Null Allowed:	null										
Remarks:	Status_useFullyQualCallingPartyNum is Default 2 only for Route Group										

Uniqueness:	fkdevice + selectionorder is unique. (MFI-13) fkdevice + fkrouteGroup + fklineGroup is unique. (MFI-18)
-------------	--

Constraints:	Rule (RFI-122): <table><tr><td>Type:</td><td>Inter-field Condition and Constraint</td></tr><tr><td>Constraint:</td><td>((fkRouteGroup is not null) OR (fkLineGroup is not null)) AND ((fkRouteGroup is null) OR (fkLineGroup is null))</td></tr></table>	Type:	Inter-field Condition and Constraint	Constraint:	((fkRouteGroup is not null) OR (fkLineGroup is not null)) AND ((fkRouteGroup is null) OR (fkLineGroup is null))
Type:	Inter-field Condition and Constraint				
Constraint:	((fkRouteGroup is not null) OR (fkLineGroup is not null)) AND ((fkRouteGroup is null) OR (fkLineGroup is null))				

		Remarks:	RouteList must have a RouteGroup or a LineGroup, but not both.
Rules:	Rule (RI-39):	Type:	Active (Insert/Update/Delete records) Rule applied when record is inserted or updated or deleted.
		Rule Name:	Set QSIG on Route List
		Description:	A Route List is a special class of device that contains Route Groups. The QSIG setting for a Route List is determined by the composition of the Route Groups it contains (which is determined by the devices the Route Group contains). ALL_PRI_QSIG Route Groups cannot be combined with H323 Route Groups. A Route List containing only ALL_PRI_QSIG Route Groups is ALL_PRI_QSIG. A Route List containing a mix of ALL_PRI_QSIG and other types of Route Groups (except H323) is a MISCIBLE_MIX. Any Route List containing at least one H323 Route Group is a H323 Route List. (To be continued)
		Test Condition:	On Insert into, Update, or Delete from RouteList table (add, modify, or remove Route List member records).

		Constraint:	(LearnedPattern!=) OR (LearnedPatternPrefix!=) OR (CallControlIdentity!=)OR (IpAddress!=)

		Remarks:	LearnedPattern or LearnedPatternPrefix or CallControlIdentity or IpAddress has to be set
--	--	----------	--

2.3.329 safclientcmnodemap (TI-508)

Description: Map for SAFClientSettings and ProcessNode

Fields:

2.3.329.1 fkcallmanager (FI-3851)

Type: guid (Cascade Delete)

Rule (RI-607):

Type: Validation (Insert/Update)

Rule Name: Only 2 or less SAF Client Settings allowed per node

Description: Only 2 or less SAF Client Settings allowed per node

Test Condition: Only 2 or less SAF Client Settings allowed per node

Error Message: Only 2 or less SAF Client Settings allowed per node

2.3.329.2 fksafclientsettings (FI-3852)

Type: guid (Cascade Delete)

2.3.329.3 pkid (FI-3850)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

Rule (RI-607):

Type: Validation (Insert/Update)

Rule Name: Only 2 or less SAF Client Settings allowed per node

Description: Only 2 or less SAF Client Settings allowed per node

Test Condition: Only 2 or less SAF Client Settings allowed per node

Error Message: Only 2 or less SAF Client Settings allowed per node

Uniqueness: fkcallmanager + fksafclientsettings is unique. (MFI-122)

2.3.330 safclientsettings (TI-504)

Description: SAF Forwarder Settings

Fields:

2.3.330.1 clientlabel (FI-3818)

Type:	string [50]
Validation:	^[a-zA-Z0-9_-]{3,49}[a-zA-Z0-9@_-]?\$
Remarks:	Protocol specific Client label

2.3.330.2 description (FI-3816)

Type:	string [512]
Default Value:	EMPTY
Validation:	^[^%&<>\\'"]{0,128}\$
Remarks:	Description is up to 128 characters including Unicode

2.3.330.3 enabletplayermonitor (FI-5347)

Type:	bool
Default Value:	TRUE

2.3.330.4 fksafsecurityprofile (FI-3819)

Type:	guid
Remarks:	pkid of SAF Security Profile

2.3.330.5 ipaddress (FI-3820)

Type:	string [15] (Unique)
Validation:	^((25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\.){3}(25[0-5] 2[0-4][0-9] 1[0-9]{2} [1-9]?[0-9])\$
Remarks:	IP Address for the SAF Forwarder

2.3.330.6 name (FI-3817)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$
Remarks:	name of the SAf Client Settings

2.3.330.7 pkid (FI-3815)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.330.8 port (FI-3821)

Type:	long
-------	------

	Default Value:	5050
	Check Constraint:	(Port >= 1024) AND (Port <= 65535)
	Remarks:	Port number to connect to the SAF forwarder
	2.3.330.9 safnotificationswindow size (FI-3823)	
	Type:	long
	Default Value:	7
	Check Constraint:	(SAFNotificationSWindow Size >= 0) AND (SAFNotificationSWindow Size <= 255)
	Remarks:	SAF notifications flow-control window size

	Test Condition:	Only one or less CCD Requesting Service Profile allowed in system
	Error Message:	Only one or less CCD Requesting Service Profile allowed in system

2.3.332.5 tksafservice (FI-3825)

Type:	enum	
Default Value:	1	
Rule (RI-608):	Type:	Validation (Insert/Update)
	Rule Name:	Only one or less CCD Requesting Service Profile allowed in system
	Description:	Only one or less CCD Requesting Service Profile allowed in system
	Test Condition:	Only one or less CCD Requesting Service Profile allowed in system
	Error Message:	Only one or less CCD Requesting Service Profile allowed in system

Uniqueness: No multicolumn uniqueness constraints

2.3.333 safservicetrunkmap (TI-509)

Description: Map for SAF Service and Trunk device

Fields: 2.3.333.1 fkdevice (FI-3839)

Type:	guid	
Rule (RI-600):	Type:	Validation (Insert/Update)

		Rule Name:	Only SAF trunk can be assigned to CCD Service Profile
		Description:	Only SAF trunk can be assigned to CCD Service Profile
		Test Condition:	Only SAF Enabled ICT Trunk and CCD SIP Trunk can be added to CCD Service Profile
		Error Message:	Change ICT Trunk to be SAF Enable or change SIP Trunk Type to CCD before associated the trunk to CCD Service Profile
	2.3.333.2 fksafservices (FI-3836)		
	Type:	guid (Cascade Delete)	
	2.3.333.3 pkid (FI-3834)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Migration Source:	Generated	
Remarks:	Unique ID to identify a record.		
Uniqueness:	fksafservices + fkdevice is unique. (MFI-123)		

2.3.334 schapplication (TI-977)

Description:	Contains a single record which consolidates all of the Smart Call Home feature's general application configuration information for the associated Cluster. Insert/Delete is not allowed.		
Fields:	2.3.334.1 enableanonymouscallhome (FI-21294)		
	Type:	bool	
	Default Value:	FALSE	
	Migration Source:	BlockEnable	
	Remarks:	Enable Anonymous call home	
	2.3.334.2 enablereminder (FI-25587)		
	Type:	bool (Null OK)	
	2.3.334.3 enablesmartcallhome (FI-9881)		
	Type:	bool	
	Default Value:	FALSE	
	Migration Source:	BlockEnable	
	Remarks:	EnableSmartCallHome Application	

Rule (RI-826):	Type:	Validation (Update)
	Rule Name:	SCHUserClusterInfo.ContactEmail Restriction
	Description:	Rule to make sure SCHUserClusterInfo.ContactEmail != 'Null' and SCHUserClusterInfo.ContactEmail != " if SCHApplication.EnableSmartCallHome='t'
	Test Condition:	SELECT EnableSmartCallHome INTO eflag FROM SCHApplication; IF ((CEmail = 'NULL' OR CEmail = ") AND (eflag = 't')) THEN throw exception; END IF;
	Error Message:	No Contact Email setup to the Cluster
	Remedy:	Please enter the Contact Email for the cluster before Enabling Smart Call Home Application

2.3.334.4 [fkschuserclusterinfo \(FI-9880\)](#)

Type:	guid (Indexed, Cascade Delete)
Remarks:	Refers to the Cluster user information for the SCH Application

2.3.334.5 httpghost (FI-21266)

Type:	string [0] (Null OK)
-------	----------------------

2.3.334.6 httpport (FI-21265)

Uniqueness:	No multicolumn uniqueness constraints	

2.3.335 schscript (TI-978)

Description: Each record describes a script used by the Smart Call Home feature.

Fields:	2.3.335.1 description (FI-9888)	
	Type:	string [255]
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	2.3.335.2 maxexecutionseconds (FI-9893)	
	Type:	long (Null OK)
	Default Value:	NULL
	2.3.335.3 name (FI-9887)	
	Type:	string [128]
	Validation:	^[a-zA-Z 0-9._-]{1,128}\$
	2.3.335.4 outputfilebasename (FI-9892)	
	Type:	string [64] (Unique)
	Default Value:	EMPTY
	Validation:	^[0-9A-Za-z.-]{0,64}\$
	Remarks:	Unique OutputFileName

2.3.335.5 outputpath (FI-9891)

Type:	string [255]
Default Value:	EMPTY
Remarks:	Path to SmartCallHome script output.

2.3.335.6 pkid (FI-9886)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.335.7 scriptfilename (FI-9890)

Type:	string [64] (Unique)
Default Value:	EMPTY
Validation:	^[0-9A-Za-z.-]{1,64}\$
Remarks:	Unique Script Name

2.3.335.8 scriptpath (FI-9889)

Type:	string [255]
Default Value:	EMPTY
Remarks:	Path to SmartCallHome script when installed on CUCM.

Uniqueness: No multicolumn uniqueness constraints

2.3.336 schscriptexecution (TI-979)

Description: This table is used to store schedule of the execution of scripts used by Smart Call Home feature.

Fields:

2.3.336.1 enableexecution (FI-9896)

Type:	bool
Default Value:	TRUE
Migration Source:	BlockEnable of Script Execution
Remarks:	Enable of Execution of SCH Scripts

2.3.336.2 fkschscript (FI-9895)

Type:	guid (Unique, Indexed, Cascade Delete)
-------	--

Remarks: Refers to information about SCH Scripts.

2.3.336.3 pkid (FI-9894)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

2.3.336.4 starttime (FI-9899)

Type: long

Default Value: 0

Remarks: Time in secs

2.3.336.5 tkdayofmonth (FI-9898)

Type: enum

Default Value: 0

Rule (RI-827):

Type:	Validation (Insert/Update)
Rule Name:	SCHScriptExecution scheduling restriction
Description:	Rule to make sure EITHER tkDayOfWeek <> 7 OR tkDayOfMonth <> 0 for a given script execution schedule
Test Condition:	SELECT tkDayOfWeek,tkDayOfMonth FROM SCHScriptExecution; IF(tkDayOfWeek <> 7 AND tkDayOfMonth <> 0) THEN throw exception;END IF;
Error Message:	The Smart Call Home script execution schedule may not specify both Day Of Week and Day Of Month execution.
Remedy:	Please specify one of these for Smart Call Home script execution - Day Of Week or Day Of Month.

2.3.336.6 tkdayofweek (FI-9897)

Type: enum

Default Value: 7

Rule (RI-827):

Type:	Validation (Insert/Update)
Rule Name:	SCHScriptExecution scheduling restriction
Description:	Rule to make sure EITHER tkDayOfWeek <> 7 OR tkDayOfMonth <> 0 for a given script execution schedule
Test Condition:	SELECT tkDayOfWeek,tkDayOfMonth FROM SCHScriptExecution; IF(tkDayOfWeek <> 7 AND

			tkDayOfMonth <> 0) THEN throw exception;END IF;
		Error Message:	The Smart Call Home script execution schedule may not specify both Day Of Week and Day of Month execution.
		Remedy:	Please specify one of these for Smart Call Home script execution - Day Of Week or Day Of Month.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.337 schuserclusterinfo (TI-976)

Description:	This table consolidates into a single record cluster specific information including a globally unique cluster identifier and demographic data such as primary cluster administrative contact info and the company name. The data in this record is primarily used by the Smart Call Home application. Insert/Delete is not allowed.		
Fields:	2.3.337.1 clusteruniqueid (FI-9877)		
	Type:	string [128] (Unique)	
	Default Value:	newid()	
	Remarks:	Unique Cluster ID	
	2.3.337.2 companyaddress (FI-9874)		
	Type:	string [1024]	
	Default Value:	EMPTY	
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\\-]{0,1024}\$	
	2.3.337.3 companyname (FI-9872)		
	Type:	string [255]	
	Default Value:	EMPTY	
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\\-]{0,255}\$	
	Migration Source:	N/A	
	Remarks:	Company name	
	2.3.337.4 contactemail (FI-9876)		
	Type:	string [255]	
	Default Value:	EMPTY	
	Validation:	^[0-9A-Za-z@_.-]{0,255}\$	
	Remarks:	Contact Email	

2.3.337.5 contactname (FI-9873)

Type:	string [128]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,128}\$

2.3.337.6 contactphone (FI-9875)

Type:	string [64]
Default Value:	EMPTY
Remarks:	This is the telephone number as synchronized from a corporate directory. It typically is the outbound directory number. It is used for reporting purposes and if blank, applications should rely on the directory numbers assigned to phones associated with this user.

2.3.337.7 pkid (FI-9871)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.337.8 priorclusteruniqueid (FI-9878)

Type:	guid
Default Value:	EMPTY
Remarks:	PriorClusterUniqueID

Uniqueness: No multicolumn uniqueness constraints

2.3.338 scratch (TI-116)

Description: blob used for anything including device specific information, service parameter specification, dependancy results, etc. Some records are temporary, some need to persist.

Fields:

2.3.338.1 content (FI-645)

Type:	text (Null OK)
Default Value:	NULL

2.3.338.2 name (FI-643)

Type:	string [255] (Indexed)
-------	------------------------

2.3.338.3 pkid (FI-642)

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
	2.3.338.4 readonly (FI-908)	
	Type:	bool
	Default Value:	FALSE
Uniqueness:	No multicolumn uniqueness constraints	

2.3.339 sdppattribute (TI-2110)

Description:	SDP attribute	
Fields:	2.3.339.1 attributenamestring (FI-21037)	
	Type:	string [64] (Indexed)
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\-\]{1,64}\$
	Remarks:	SDP Attribute name
	Rule (RI-2107):	Type: Active (Insert/Update)
		Rule Name: Insert/Update on SDPAttribute
		Description: On INSERT/UPDATE on SDPAttribute the pair of SDPAttributeNameString and fkSDPAttributeList must be unique.
		Test Condition: ON INSERT/UPDATE on SDPAttribute SELECT COUNT FROM SDPAttribte WHERE SDPAttributeNameString = new_SDPAttributeNameString AND fkSDPAttributeList = new_fkSDPAttributeList, IF count > 1, it is an error.
	2.3.339.2 fksdpattributelist (FI-21036)	
	Type:	guid (Cascade Delete)
	Remarks:	Reference to a specific SDP Attribute List
	Rule (RI-2107):	Type: Active (Insert/Update)
		Rule Name: Insert/Update on SDPAttribute
		Description: On INSERT/UPDATE on SDPAttribute the pair of SDPAttributeNameString and fkSDPAttributeList must be unique.
		Test Condition: ON INSERT/UPDATE on SDPAttribute SELECT COUNT FROM SDPAttribte WHERE

		SDPAttributeNameString = new_SDPAttributeNameString AND fkSDPAttributeList = new_fkSDPAttributeList, IF count > 1, it is an error.
	2.3.339.3 pkid (FI-21035)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.339.4 fksdpattributehandling (FI-21038)	
	Type:	enum
	Default Value:	0
	Remarks:	Type of SDP attribute handling, 0 - Property, 1 - Any Value, 2 - Any Value From List
Uniqueness:	No multicolumn uniqueness constraints	

2.3.340 sdpattributeallowedvalues (TI-2111)

Description:	SDP attribute allowed values		
Fields:	2.3.340.1 allowedvalue (FI-21041)		
	Type:	string [255] (Indexed)	
	Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\-\-]{1,255}\$	
	Remarks:	SDP Attribute name	
	Rule (RI-2108):	Type:	Active (Insert/Update)
		Rule Name:	Insert/Update on SDPAttributeAllowedValues
		Description:	On INSERT/UPDATE on SDPAttributeAllowedValues the pair of AllowedValue and fkSDPAttribute must be unique.
		Test Condition:	ON INSERT/UPDATE on SDPAttribute SELECT COUNT FROM SDPAttributeAllowedValuesWHERE AllowedValue = new_AllowedValue AND fkSDPAttribute = new_fkSDPAttribute,IF count > 1, it is an error.
	2.3.340.2 fksdpattribute (FI-21040)		
	Type:	guid (Cascade Delete)	
	Remarks:	Reference to a specific SDP Attribute	
	Rule (RI-2108):	Type:	Active (Insert/Update)
Rule Name:		Insert/Update on SDPAttributeAllowedValues	

		Description:	On INSERT/UPDATE on SDPAttributeAllowedValues the pair of AllowedValue and fkSDPAttribute must be unique.
		Test Condition:	ON INSERT/UPDATE on SDPAttribute SELECT COUNT FROM SDPAttributeAllowedValues WHERE AllowedValue = new_AllowedValue AND fkSDPAttribute = new_fkSDPAttribute, IF count > 1, it is an error.
	2.3.340.3 pkid (FI-21039)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.341 sdpattributelist (TI-2109)

Description:	SDP attribute list profile		
Fields:	2.3.341.1 description (FI-21034)		
	Type:	string [400]	
	Default Value:	EMPTY	
	Validation:	^[^\x00-\x1F""%\\&<>]{0,100}\$	
	Remarks:	Description of SDP Attribute List	
	2.3.341.2 isstandard (FI-25727)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	
	Remarks:	Indicates installed standard SDP transparency profile - cannot be modified or deleted	
	Rule (RI-2128):	Type:	Validation (Update/Delete)
		Rule Name:	Cannot modify or delete Standard SDP Attribute Profile
		Description:	The installed standard SDP Attribute Profile cannot be modified or deleted. The installed profile is the only profile where IsStandard is true.
		Test Condition:	ON UPDATE/DELETE IN SDPAttributeList: IF (old_IsStandard = 'T') THEN throw exception;
		Error Message:	Cannot modify or delete the installed standard SDP Profile.
		Remedy:	Create and assign Standard SDP Profile which will pass through all unknown attributes.
	2.3.341.3 name (FI-21033)		

	Type:	string [50] (Unique, Indexed)
	Validation:	^[a-zA-Z 0-9._-]{1,50}\$
	Remarks:	SDP Attribute List name
	2.3.341.4 pkid (FI-21032)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.342 secureconfig (TI-474)

Description:	Read-only System Level configuration Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.342.1 name (FI-3533)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Unique name to identify the configuration property
	2.3.342.2 pkid (FI-3532)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
	2.3.342.3 value (FI-3534)	
	Type:	string [255] (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	The value for the configuration property, stored as a string
Uniqueness:	No multicolumn uniqueness constraints	

2.3.343 securityprofile (TI-314)

Description:	Different Security profiles in Call Manager	
Fields:	2.3.343.1 aclallowreplace (FI-2589)	

Type:	bool
Default Value:	FALSE
Remarks:	Whether SIP header replacement allowed

2.3.343.2 acloobsubscription (FI-2420)

Type:	bool
Default Value:	FALSE
Remarks:	Whether OOB Subscription Allowed (Obsolete)

2.3.343.3 acloodrefer (FI-2419)

Type:	bool
Default Value:	FALSE
Remarks:	Whether out of dialog refer allowed

2.3.343.4 aclpresencesubscription (FI-2418)

Type:	bool
Default Value:	FALSE
Remarks:	Whether presence subscription allowed

2.3.343.5 aclunsolicitednotification (FI-2421)

Type:	bool
Default Value:	FALSE
Remarks:	Whether unsolicited subscription allowed

2.3.343.6 allowchargingheader (FI-6237)

Type:	bool
Default Value:	FALSE
Remarks:	Allow transmissions of P-Charging header in SIP Messages

2.3.343.7 applelevelauth (FI-2423)

Type:	bool
Default Value:	FALSE

2.3.343.8 description (FI-2343)

Type:	string [400] (Null OK)
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,100}\$

Remarks: Description of the Security Profile

2.3.343.9 digestauthall (FI-2416)

Type: bool

Default Value: FALSE

Remarks: Whether to authenticate ALL messages

Rule (RI-341):

Type: Validation (Insert/Update)

Rule Name: Prevent mismatch values in boolean fields

Description: on I/U of SecurityProfile

Test Condition: validate correct boolean values

2.3.343.10 excludedigestcredflag (FI-3151)

Type: bool

Default Value: FALSE

Remarks: Exclude Digest Credentials Flag

Rule (RI-341):

Type: Validation (Insert/Update)

Rule Name: Prevent mismatch values in boolean fields

Description: on I/U of SecurityProfile

Test Condition: validate correct boolean values

2.3.343.11 incomingport (FI-1313)

Type: long

Default Value: 5060

Check Constraint: (incomingPort >= 0) AND (incomingPort <= 65535)

Remarks: Used for receiving UDP/TCP messages

Rule (RI-318):

Type: Active (Insert/Update)

Rule Name: Prevent port sharing between TLS and UDP/TCP

Description: on I/U of SecurityProfile

Test Condition: Port values must differ

Rule (RI-332):

Type: Active (Insert/Update)

Rule Name: Prevent port conflict between CCMs and SIP Tunk Security Profiles

Description: on I/U of SecurityProfile and CCM

	Test Condition:	prevent bad port combinations
--	-----------------	-------------------------------

2.3.343.12 isstandard (FI-2409)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	Whether it is a standard security policy

2.3.343.13 name (FI-2342)

Type:	string [75] (Unique, Indexed)
Validation:	^[a-zA-Z 0-9._-]{1,75}\$
Remarks:	Name of the Security Profile

2.3.343.14 noncepolicytime (FI-2417)

Type:	long
Default Value:	600
Remarks:	Time in secs

2.3.343.15 pkid (FI-2341)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Rule (RI-275):

Type:	Active (Insert/Update)
Rule Name:	securityprofile versionstamp
Description:	on change to anything in securityprofile table, update device versionstamp
Test Condition:	update device

Rule (RI-317):

Type:	Active (Insert/Update)
Rule Name:	Prevent change of profile where phone does not support it.
Description:	on I/U of SecurityProfile.
Test Condition:	The security mode of a Security Profile may not be changed unless all endpoints using the Security Profile support the security mode change and all endpoints on all gateways on which the profile is used are using the same profile

Rule (RI-472):

Type:	Validation (Insert/Update)
Rule Name:	Security Profile must be secure for Protected device (secure tone)

	Description:	Security Profile used with Protected device must be secure (encrypted)
	Test Condition:	ON INSERT/UPDATE IN Device, SecurityProfile:
	Error Message:	Security Profiles used with Protected phones (Device.IsProtected = True) must use encryption
	Remedy:	Make sure the Security Profile uses Encryption, or disable Secure Tone on the phone
Rule (RI-604):	Type:	Validation (Update)
	Rule Name:	SAF Enabled trunk only supports non secure profile
	Description:	SAF Enabled trunk only supports non secure profile
	Test Condition:	SAF Enabled trunk only supports non secure profile
	Error Message:	SAF Enabled trunk only supports non secure profile

2.3.343.16 resettoggle (FI-3100)

Type:	bool	
Default Value:	FALSE	
Remarks:	Should this device or group be reset	
Rule (RI-275):	Type:	Active (Insert/Update)
	Rule Name:	securityprofile versionstamp
	Description:	on change to anything in securityprofile table, update device versionstamp
	Test Condition:	update device

2.3.343.17 serveriphostname (FI-5109)

Type:	string [255]	
Default Value:	EMPTY	
Remarks:	Specifies ServerIPHostName in either IP address or HostName format	
Rule (RFI-260):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkSecurityPolicy <> 7
	Constraint:	ServerIPHostname = "
	Null Allowed:	null
	Remarks:	ServerIPHostName to be used only with if tkSecurityPolicy equals to SECURITY_POLICY_CUMA_SERVER (otherwise must be empty)
Rule (RI-481):	Type:	Validation (Insert/Update)
	Rule Name:	Only 40 CUMA Server SecurityProfile allowed

Rule (RI-689):	Description:	Only 40 CUMA Server SecurityProfile allowed
	Test Condition:	the total number of records can not be greater than 40 for SecurityProfile.tkSecurityPolicy = SECURITY_POLICY_CUMA_SERVER(7)
	Error Message:	Only 40 CUMA Server SecurityProfile allowed
	Type:	Validation (Insert/Update)
	Rule Name:	SecurityProfile ServerIPHostname is not a valid format
	Description:	Make sure node name is ip, name or domain name
	Test Condition:	?
	Error Message:	?
	Remedy:	?

2.3.343.18 tftpencryptedflag (FI-3150)

Type:	bool
Default Value:	FALSE
Remarks:	TFTP Encrypted Flag

Rule (RI-341):	Type:	Validation (Insert/Update)
	Rule Name:	Prevent mismatch values in boolean fields
	Description:	on I/U of SecurityProfile
	Test Condition:	validate correct boolean values

2.3.343.19 tkauthenticationmode (FI-2585)

Type:	enum
Default Value:	2

2.3.343.20 tkdeviceprotocol (FI-3149)

Type:	enum (Null OK)
Migration Source:	DeviceList.Protocol

Rule (RI-317):	Type:	Active (Insert/Update)
	Rule Name:	Prevent change of profile where phone does not support it.
	Description:	on I/U of SecurityProfile.
	Test Condition:	The security mode of a Security Profile may not be changed unless all endpoints using the Security Profile support the security mode change and all endpoints on all gateways on which the profile is used are using the same profile

Rule (RI-330):	Type:	Active (Insert/Update)
	Rule Name:	Prevent mismatch tktransport and tksecuritymode
	Description:	on I/U of SecurityProfile
	Test Condition:	prevent bad value combinations

Rule (RI-341):	Type:	Validation (Insert/Update)
	Rule Name:	Prevent mismatch values in boolean fields
	Description:	on I/U of SecurityProfile
	Test Condition:	validate correct boolean values

2.3.343.21 [tkdevicesecuritymode \(FI-2425\)](#)

Type: enum (Null OK)

Rule (RI-317):	Type:	Active (Insert/Update)
	Rule Name:	Prevent change of profile where phone does not support it.
	Description:	on I/U of SecurityProfile.
	Test Condition:	The security mode of a Security Profile may not be changed unless all endpoints using the Security Profile support the security mode change and all endpoints on all gateways on which the profile is used are using the same profile

Rule (RI-330):	Type:	Active (Insert/Update)

	Rule Name:	Prevent port conflict between CCMs and SIP Tunk Security Profiles
	Description:	on I/U of SecurityProfile and CCM
	Test Condition:	prevent bad port combinations
Rule (RI-482):	Type:	Validation (Insert/Update)
	Rule Name:	CUMA Security Profile type and transport must match
	Description:	When tkSecurityPolicy=SECURITY_POLICY_CUMA_SERVER, it must be TCP_OR_UDP when tkDeviceSecurityMode = DEVICE_SECURITY_MODE_NONSECURE, and TRANSPORT_LAYER_SECURITY when tkDeviceSecurityMode != DEVICE_SECURITY_MODE_NONSECURE. When tkSecurityPolicy = SECURITY_POLICY_CUMA_SERVER, it must be TRANSMISSION_CONTROL_PROTOCOL or USER_DATAGRAM_PROTOCOL when tkDeviceSecurityMode = DEVICE_SECURITY_MODE_NONSECURE, and TRANSPORT_LAYER_SECURITY when tkDeviceSecurityMode != DEVICE_SECURITY_MODE_NONSECURE
	Test Condition:	On Insert/Update CUMA security profile

2.3.343.27 [tktransport_out \(FI-2411\)](#)

Type:	enum (Null OK)	
Default Value:	NULL	
Rule (RFI-195):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkSecurityPolicy= 7
	Constraint:	tkTransPort_Out IS NULL
	Null Allowed:	null
	Remarks:	CUMA security profile outgoing transport type can not be set.
Rule (RI-330):	Type:	Active (Insert/Update)
	Rule Name:	Prevent mismatch tktransport and tksecuritymode
	Description:	on I/U of SecurityProfile
	Test Condition:	prevent bad value combinations

2.3.343.28 [tkv150sdpfilter \(FI-5110\)](#)

Type:	enum
-------	------

Default Value:	3
Remarks:	SDP Outbound Offer Filter selection for V.150 capability handling.

2.3.343.29 transmitsecuritystatus (FI-3482)

Type:	bool
Default Value:	FALSE

2.3.343.30 versionstamp (FI-3121)

Type:	string [47] (Null OK)
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
Remarks:	New guid plus seconds past midnight 1970 are concatenated

Rule (RI-275):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	securityprofile versionstamp
	Description:	on change to anything in securityprofile table, update device versionstamp
	Test Condition:	update device

Rule (RI-275):	Type:	Active (Insert/Update)
	Rule Name:	securityprofile versionstamp
	Description:	on change to anything in securityprofile table, update device versionstamp
	Test Condition:	update device

2.3.343.31 x509subjectname (FI-2588)

Type:	string [4096]
Default Value:	EMPTY
Remarks:	X509 Subject Name List

Rule (RI-482):	Type:	Validation (Insert/Update)
	Rule Name:	CUMA Security Profile type and transport must match
	Description:	When tkSecurityPolicy=SECURITY_POLICY_CUMA_SERVER, it must be TCP_OR_UDP when tkDeviceSecurityMode = DEVICE_SECURITY_MODE_NONSECURE, and TRANSPORT_LAYER_SECURITY when tkDeviceSecurityMode != DEVICE_SECURITY_MODE_NONSECURE. When tkSecurityPolicy = SECURITY_POLICY_CUMA_SERVER, it must be TRANSMISSION_CONTROL_PROTOCOL or USER_DATAGRAM_PROTOCOL when tkDeviceSecurityMode = DEVICE_SECURITY_MODE_NONSECURE, and TRANSPORT_LAYER_SECURITY when tkDeviceSecurityMode != DEVICE_SECURITY_MODE_NONSECURE

		Test Condition:	On Insert/Update CUMA security profile
Uniqueness:	No multicolumn uniqueness constraints		

2.3.344 sipdevice (TI-206)

Description:	Contains data for SIP Trunk implementation		
Fields:	2.3.344.1 acceptinboundrdnis (FI-1317)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Redirecting number delivery (inbound) flag.	
	2.3.344.2 acceptoutboundrdnis (FI-1322)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	Same as NumberIE field in H323Device.	
	2.3.344.3 calleriddn (FI-1321)		
	Type:	dn (Null OK)	
	DN Type:	DN_TYPE_MASK	
	Default Value:	NULL	
	Validation:	^[0-9*#+X]{0,32}\$	
	Remarks:	Override callers phone number.	
	2.3.344.4 callername (FI-1319)		
	Type:	string [150]	
	Default Value:	EMPTY	
	Validation:	^[a-zA-Z0-9 !#\$'()*+.,/:;=?@\\^_`~-]{0,30}\$	
	Remarks:	Same as displayIE field in H323Device table	
	2.3.344.5 enableqsigutf8 (FI-5891)		
Type:	bool		
Default Value:	FALSE		
Rule (RI-787):	Type:	Validation (Insert/Update)	

Rule Name:	SIPDevice.tkASN1RoseOidEncoding and SIPDevice.tkQSIGVariant Change Restriction
Description:	If tkTunneledProtocol is not enabled for qsig then tkASN1RoseOidEncoding or tkQSIGVariant in the SIPDevice table should not be allowed to change from DEFAULT to NON DEFAULT
Test Condition:	ON INSERT or UPDATE in SIPDevice: SELECT count(enum) INTO nRows FROM TunneledProtocol where enum = new_tkTunneledProtocol and name = 'QSIG'; IF (nrows=0) throw exception END IF;
Error Message:	Cannot modify the value since QSIG is not enabled for this device
Remedy:	Enable the QSIG and change the value

2.3.344.6 [fkcallingsearchspace cntdpntransform \(FI-5753\)](#)

Type:	guid (Null OK)

Rule (RI-786):	Type:	Active (Insert/Update)
		Rule Name: Set QSIG on Device when Tunneled Protocol changes
		Description: When the SIPDevice.tkTunneledProtocol value changes, update the Device.tkQsig setting on the referenced device
		Test Condition: IF SipDevice.tkTunneledProtocol = QSIG THEN set device qsig = all pri qsig ELSE set to SIp for sip or MIXED NON-QSIG for Intercluster Trunk

2.3.344.8 fksipnormalizationscript (FI-5870)

Type:	guid (Null OK)
Default Value:	NULL
Remarks:	Reference to a specific SIP Normalization script

2.3.344.9 isscriptraceenabled (FI-5864)

Type:	bool
Default Value:	FALSE
Remarks:	SIP Device script trace

2.3.344.10 numdigits (FI-1318)

Type:	long (Null OK)
Default Value:	99
Check Constraint:	((NumDigits >= 0) AND (NumDigits <= 32)) OR (NumDigits = 99)

2.3.344.11 originatingparametervalue (FI-6253)

Type:	string [16]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9._-]{0,16}\$
Remarks:	For ISC Trunk: Specifies the route header parameter value that is specified to indicate that the call is originating

2.3.344.12 outbounduriroutinginstructions (FI-6255)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,254}\$
Remarks:	For ISC Trunk: URI for routing outbound IMS call...

2.3.344.13 parameterlabel (FI-6252)

Type:	string [16]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9._-]{0,16}\$
Remarks:	For ISC Trunk: Specifies the route header parameter label that is used to identify the originating or termination calls

2.3.344.14 pathreplacementsupport (FI-5890)

Type:	bool
Default Value:	FALSE

2.3.344.15 pkid (FI-1309)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

2.3.344.16 preferrouteheaderdestination (FI-6236)

Type:	bool
Default Value:	FALSE
Remarks:	SIP Trunk will use the destination specified in route header of an outgoing request when one is present, instead of using the destination(s) configured on the trunk itself.

2.3.344.17 prefixdn (FI-1316)

Type:	dn (Null OK)
DN Type:	DN_TYPE_ALL_DIGITS
Default Value:	NULL

Validation:	^[0-9*#+]{0,50}\$
Remarks:	Used for Inbound Call Routing Information.

2.3.344.18 requesturidomainname (FI-10137)

Type:	string [1024]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""\{\0,254}\$
Remarks:	For an ISC trunk specifies the domain part of the URI for Request URIs

2.3.344.19 scriptparameters (FI-5863)

Type:	string [1000]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F\x7F]{1,1000}\$
Remarks:	SIP Device script parameters

2.3.344.20 service (FI-6251)

Type:	string [64]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9._-]{0,64}\$
Remarks:	For ISC Trunk: Service name that is in the user part of the top route header of the incoming SIP request message. If left blank cucmas is used.

Rule (RI-843):	Type:	Active (Insert/Update)
	Rule Name:	For ISC Trunk Service defaults to cucmas if left blank
	Description:	For insert or update of SIPDevice, if the trunk type is IMS Service Control and the service name is left empty, the default value cucmas is used for the service.
	Test Condition:	ON INSERT/UPDATE IN SIPDevice IF (tkTrunkService = TRUNK_SERVICE_ISC) AND Service = " THEN RETURN cucmas INTO Service

Rule (RI-843):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	For ISC Trunk Service defaults to cucmas if left blank
	Description:	For insert or update of SIPDevice, if the trunk type is IMS Service Control and the service name is left empty, the default value cucmas is used for the service.
	Test Condition:	ON INSERT/UPDATE IN SIPDevice IF (tkTrunkService = TRUNK_SERVICE_ISC) AND Service = " THEN RETURN cucmas INTO Service

2.3.344.21 sigdigits (FI-1315)

Type:	bool
Default Value:	FALSE
Remarks:	Must be 1 if (NumDigits >= 0) AND (NumDigits <= 32), or 0 if (NumDigits = 99)

2.3.344.22 terminatingparametervalue (FI-6254)

Type:	string [16]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9._-]{0,16}\$
Remarks:	For ISC Trunk: Specifies the route header parameter value that is specified to indicate that the call is terminating

	Type:	enum
	Default Value:	1
	Remarks:	Enum value defined in TypeSIPScriptErrorHandler table. Options can be Disable Script, Reset Script and Reset Trunk
	2.3.345.10 tksipscripterrorhandling_runtime (FI-6061)	
	Type:	enum
	Default Value:	0
	Remarks:	Enum value defined in TypeSIPScriptErrorHandler table. Options can be Rollback Only, Disable Script, Reset Script and Reset Trunk
Uniqueness:	No multicolumn uniqueness constraints	

2.3.346 sipnormalizationscriptchunk (TI-536)

Description:	Holds chunks pertaining to all the SIP Normalization scripts Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.346.1 chunk (FI-5867)	
	Type:	string [3950] (Not Modifiable)
	Remarks:	A SIP Normalization script chunk
	2.3.346.2 fksipnormalizationscript (FI-5868)	
	Type:	guid (Cascade Delete, Not Modifiable)
	Remarks:	Reference to a specific SIP Normalization script
	2.3.346.3 pkid (FI-5866)	
	Type:	guid (Unique, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a SIP Normalization script chunk record.
	2.3.346.4 sequence (FI-5869)	
	Type:	long

	Remarks:	Sequence of the chunk in a SIP Normalization script
Uniqueness:	No multicolumn uniqueness constraints	

2.3.347 sipprofile (TI-317)

Description: SIP Profile Information

Fields:	2.3.347.1 allowixchannel (FI-6277)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This configuration allows or rejects iX Channel
	2.3.347.2 allowmultiplecodecsinanswersdp (FI-21326)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This configuration allows the endpoint behind trunk to handle multiple codec
	2.3.347.3 allowpresentationsharingusingbfcf (FI-9868)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	This configuration allow or reject Presentation Sharing using BFCF
	2.3.347.4 allowrrandrsbandwidthmodifier (FI-25818)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Indicates whether CUCM can signal RR (RTCP bandwidth for Receivers) and RS (RTCP bandwidth for Senders) bandwidth modifiers.
	2.3.347.5 calleriddn (FI-10186)	
	Type:	dn (Null OK)
	DN Type:	DN_TYPE_MASK
	Default Value:	NULL
	Validation:	^[0-9*#+X]{0,32}\$
	Remarks:	Override callers phone number.
	2.3.347.6 callername (FI-10185)	

Type:	string [30]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@\\^_`~-]{1,30}\$
Remarks:	Similar to CallerName in SIPDevice, displays the caller name on the device using this SIPProfile

2.3.347.7 defaulttelephonyeventpayloadtype (FI-2587)

Type:	long
Default Value:	101
Remarks:	The Telephony Event Payload Type

2.3.347.8 delivercnfbridgeid (FI-6087)

Type:	bool
Default Value:	FALSE
Remarks:	True -Enables support of conference bridge identifier for inter-cluster conference; False - Disables it

2.3.347.9 description (FI-2362)

Type:	string [400] (Null OK)
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%\\&<>]{0,100}\$
Remarks:	Description of SIP Profile

2.3.347.10 destroutestring (FI-25573)

Type:	bool
Default Value:	FALSE
Remarks:	If true, SIP message flow on the SIP trunk will insert destination route string in SIP messages

2.3.347.11 earlyofferforgclearenable (FI-5100)

Type:	bool
Default Value:	FALSE
Remarks:	To enable early offer for G.clear, with default value of False

2.3.347.12 earlyoffersupportforvoicecall (FI-5851)

Type:	bool
Default Value:	FALSE
Remarks:	If true, Early Offer support is provided for voice calls. It cannot be enabled if either Anat is enabled for early offer calls or RSVP over SIP setting is E2E

Rule (RFI-281):	Type:	Inter-field Condition and Constraint
	Test Condition:	enableAnatForEarlyOfferCalls = 't'
	Default:	FALSE
	Constraint:	EarlyOfferSupportForVoiceCall = 'f'
	Remarks:	If Anat for early offer calls is enabled (enableAnatForEarlyOfferCalls = true), Early Offer support for voice call cannot be enabled (EarlyOfferSupportForVoiceCall = false)
Rule (RFI-282):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkRSVPOverSIP = 1
	Default:	FALSE
	Constraint:	EarlyOfferSupportForVoiceCall = 'f'
	Remarks:	If RSVP over SIP setting is E2E (tkRSVPOverSIP = 1), Early Offer support for voice call cannot be enabled (EarlyOfferSupportForVoiceCall = false)

2.3.347.13 enableanatforearlyoffercalls (FI-3659)

Type:	bool
Default Value:	FALSE
Remarks:	Indicates whether UCM should send out early Offer with MTP with ANAT semantics having both IPv4 and IPv6 address in SDP

Rule (RFI-264):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkRSVPOverSIP=1
	Constraint:	enableAnatForEarlyOfferCalls='f'
	Remarks:	E2E RSVP over SIP can not support enable Anat For Early Offer Calls

2.3.347.14 enableoutboundoptionsping (FI-5876)

Type:	bool
Default Value:	FALSE
Remarks:	If true, SIP profile configuration to have Send OPTIONS ping enabled for default trunk service type

2.3.347.15 enableurioutdialsupport (FI-9866)

Type:	bool
Default Value:	0
Remarks:	This configuration enable or disable the use of FQDN in outgoing call

2.3.347.16 fallbacktolocalrsvp (FI-3641)

Type:	bool
-------	------

Default Value:	TRUE
----------------	------

2.3.347.17 [fkresourceprioritynamespace \(FI-10066\)](#)

Type:	guid (Indexed, Null OK)
-------	-------------------------

Default Value:	NULL
----------------	------

Remarks:	Foreign key reference to ResourcePriorityNamespace
----------	--

2.3.347.18 [fkresourceprioritynamespacelist \(FI-3505\)](#)

Type:	guid (Null OK)
-------	----------------

Default Value:	NULL
----------------	------

Remarks:	Prioritized List of Resource Priority Namespaces assigned to a SIP Trunk
----------	--

2.3.347.19 [fkspdattributelist \(FI-21031\)](#)

Type:	guid (Null OK)
-------	----------------

Default Value:	ebcc7581-456d-48f3-ab67-00bcc3245213
----------------	--------------------------------------

Remarks:	Reference to a specific SDP Attribute list
----------	--

2.3.347.20 [fksipnormalizationscript \(FI-9979\)](#)

Type:	guid (Null OK)
-------	----------------

Default Value:	NULL
----------------	------

Remarks:	Reference to a specific SIP Normalization script
----------	--

2.3.347.21 [inactivesdprequired \(FI-2800\)](#)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	Require Inactive SDP for mid-call media change
----------	--

2.3.347.22 [isassuredsipserviceenabled \(FI-10037\)](#)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	True - Enables support of Assured SIP service; False - Disables it.
----------	---

2.3.347.23 [isscripttraceenabled \(FI-9978\)](#)

Type:	bool
-------	------

Default Value:	FALSE
----------------	-------

Remarks:	SIP Line script trace
----------	-----------------------

2.3.347.24 isstandard (FI-2363)

Type:	bool (Not Modifiable)
Default Value:	FALSE
Remarks:	If this is a standard SIP profile

2.3.347.25 mlppuserauthorization (FI-10101)

Type:	bool
Default Value:	FALSE
Remarks:	This field will be used by SIP Phone to determine whether to challenge the endpoint when an RP header with a non-routine priority is received in an INVITE. The default value is False.

2.3.347.26 name (FI-2361)

Type:	string [50] (Unique, Indexed)
Remarks:	SIP Profile name

2.3.347.27 optionspingintervalwhenstatusnotok (FI-5878)

Type:	long
Default Value:	120
Check Constraint:	(OptionsPingIntervalWhenStatusNotOK >=5) AND (OptionsPingIntervalWhenStatusNotOK <= 600)
Remarks:	Retry interval (in seconds) for SIP trunk out of service

2.3.347.28 optionspingintervalwhenstatusok (FI-5877)

Type:	long
Default Value:	60
Check Constraint:	(OptionsPingIntervalWhenStatusOK >=5) AND (OptionsPingIntervalWhenStatusOK <= 600)
Remarks:	Retry interval (in seconds) for SIP trunk in-service or partially-in-service

2.3.347.29 pkid (FI-2360)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique ID to identify a record.	
Rule (RI-273):	Type:	Active (Insert/Update)
	Rule Name:	sipprofile versionstamp
	Description:	on change to anything in sipprofile table, update device versionstamp
	Test Condition:	update device

2.3.347.30 rejectanonymousincomingcall (FI-10188)

Type:	bool
Default Value:	FALSE
Remarks:	When RejectAnonymousIncomingCall is enabled, all anonymous incoming calls will be rejected

2.3.347.31 rejectanonymousoutgoingcall (FI-10237)

Type:	bool
Default Value:	FALSE
Remarks:	When RejectAnonymousOutgoingCall is enabled, all anonymous outgoing calls will be rejected

2.3.347.32 resettoggle (FI-3102)

Type:	bool								
Default Value:	FALSE								
Remarks:	Should this device or group be reset								
Rule (RI-273):	<table><tr><td>Type:</td><td>Active (Insert/Update)</td></tr><tr><td>Rule Name:</td><td>sipprofile versionstamp</td></tr><tr><td>Description:</td><td>on change to anything in sipprofile table, update device versionstamp</td></tr><tr><td>Test Condition:</td><td>update device</td></tr></table>	Type:	Active (Insert/Update)	Rule Name:	sipprofile versionstamp	Description:	on change to anything in sipprofile table, update device versionstamp	Test Condition:	update device
Type:	Active (Insert/Update)								
Rule Name:	sipprofile versionstamp								
Description:	on change to anything in sipprofile table, update device versionstamp								
Test Condition:	update device								

2.3.347.33 ringing180 (FI-2463)

Type:	bool
Default Value:	FALSE

2.3.347.34 scriptparameters (FI-9977)

Type:	string [1000]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F\x7F]{1,1000}\$
Remarks:	SIP Profile script parameters for SIP Lines

2.3.347.35 sendrecvsdpinmidcallinvite (FI-5852)

Type:	bool		
Default Value:	FALSE		
Remarks:	If true, Mid call message flow on the SIP trunk will change allowing SDP packets to be sent or received. It can be enabled if Early Offer support for voice call is also enabled		
Rule (RFI-283):	<table><tr><td>Type:</td><td>Inter-field Condition and Constraint</td></tr></table>	Type:	Inter-field Condition and Constraint
Type:	Inter-field Condition and Constraint		

Test Condition:	EarlyOfferSupportForVoiceCall = 'f'
Default:	FALSE
Constraint:	SendRecvSDPInMidCallInvite = 'f'
Remarks:	send-recv SDP in mid call Invite (SendRecvSDPInMidCallInvite) can be enabled if Early Offer support for voice call (EarlyOfferSupportForVoiceCall) is enabled

2.3.347.36 sipoptionspingretrycount (FI-6134)

Type:	long
Default Value:	6
Check Constraint:	(SIPOptionsPingRetryCount >= 1) AND (SIPOptionsPingRetryCount <= 10)
Remarks:	This parameter specifies the number of times that Cisco CallManager will re-send the OPTIONS message. Default should be 6.

2.3.347.37 sipoptionspingtimer (FI-6135)

Type:	long
Default Value:	500
Check Constraint:	(SIPOptionsPingTimer >= 100) AND (SIPOptionsPingTimer <= 1000)
Remarks:	This parameter specifies the maximum time, in milliseconds, that Cisco CallManager will wait to resend a OPTIONS request. If a response is not received before the time specified in this timer expires, Cisco CallManager resends the request when this timer expires. Default 500 msec

2.3.347.38 sipretryinvite (FI-2431)

Type:	long
Default Value:	6
Remarks:	Max number of times an INVITE request is retransmitted

2.3.347.39 sipretrynoninvite (FI-2432)

Type:	long
Default Value:	10
Remarks:	Max number of times a SIP message other than INVITE is retransmitted

2.3.347.40 sipstartmediaport (FI-2433)

Type:	long
Default Value:	16384
Check Constraint:	(SIPStartMediaPort >= 2048) AND (SIPStartMediaPort <= 65535)
Remarks:	Start RTP range for media

2.3.347.41 siptimerinviteexp (FI-2426)

Type:	long
Default Value:	180
Check Constraint:	(SIPTimerInviteExp >= 0) AND (SIPTimerInviteExp <= 32767)
Remarks:	in secs after which a SIP INVITE expires

2.3.347.42 siptimerregdelta (FI-2427)

Type:	long
Default Value:	5
Check Constraint:	(SIPTimerRegDelta >= 0) AND (SIPTimerRegDelta <= 32767)
Remarks:	Time in secs at which registration will occur. Used in conjunction with SIPTimerRegExpires parameter. Phone will register SIPTimerRegDelta secs before reg period ends as governed by SIPTimerRegExpires.

2.3.347.43 siptimerregexpires (FI-2428)

Type:	long
Default Value:	3600
Remarks:	Time in secs after which reg expires

2.3.347.44 siptimert1 (FI-2429)

Type:	long
Default Value:	500
Remarks:	Lowest value, in millisecs, of the retransmission for SIP messages

2.3.347.45 siptimert2 (FI-2430)

Type:	long
Default Value:	4000
Remarks:	Highest value, in millisecs, of the retransmission for SIP messages

2.3.347.46 t38invite (FI-3573)

Type:	bool
Default Value:	FALSE
Remarks:	Determines whether to use T.38 Invite over SIP for interoperability with T.38 fax transmission

2.3.347.47 [tkcalheaders](#) (FI-25591)

Type:	enum
Default Value:	0

Remarks: Used to specify the behavior of CAL Header

2.3.347.48 [tkcallinglineidentification \(FI-10184\)](#)

Type: enum

Default Value: 0

Remarks: CallingLineIdentification lists available Identification presentations, 0 - Default, 1 - URI Only, 2 - P-Asserted Only

2.3.347.49 [tkcucmversioninsipheader \(FI-21074\)](#)

Type: enum

Default Value: 0

Remarks: Set CUCM Version info in UA and server header for SIP trunk

2.3.347.50 [tkgclear \(FI-5403\)](#)

Type: enum

Default Value: 0

Remarks: Indicates the G.Clear types - Disabled,Clearmode,CCD,G.nX64 and X-CCD

2.3.347.51 [tkreset \(FI-3103\)](#)

Type: enum

Default Value: 2

Remarks: Set by DeviceReset stored procedure.

2.3.347.52 [tkrsvpoversip \(FI-3640\)](#)

Type: enum

Default Value: 0

2.3.347.53 [tksipbandwidthmodifier \(FI-9854\)](#)

Type: enum

Default Value: 0

Remarks: Reference to TypeSIPBandwidthModifier for SIPProfile

2.3.347.54 [tksiprel1xxoptions \(FI-3642\)](#)

Type: enum

Default Value: 0

Rule (RFI-200):	Type:	Inter-field Condition and Constraint
	Test Condition:	tkRSVPOverSIP=1
	Constraint:	tkSIPRel1XXOptions<>0

Remarks: SIP Rel1XX Options can not be disabled if RSVP over SIP policy is E2E

2.3.347.55 [tksipreroute \(FI-3577\)](#)

Type: enum

Default Value: 0

Remarks: Where to get information (device id) for rerouting SIP trunk calls

2.3.347.56 [tksipsessionrefreshmethod \(FI-21005\)](#)

Type: enum

Default Value: 0

Remarks: Sets the configuration option for SIP method to be used for session refresh, 0 - INVITE, 1 - UPDATE

2.3.347.57 [tkstatus_handlingofreceivedoffercodecpreferences \(FI-10219\)](#)

Type: enum

Default Value: 2

Remarks: Controls the CUCM response to the passing of an explicit preferred Codec List in the SDP Offer message. Possible values include - Ignore(0), Honor(1), Use System Default(2)

2.3.347.58 [tktelnetlevel \(FI-2972\)](#)

Type: enum

Default Value: 0

2.3.347.59 [tkuridisambiguationpolicy \(FI-9952\)](#)

Type: enum

Default Value: 4

Remarks: Configuration option for how to disambiguate dial strings that could be interpreted as either DTMF or URI.

2.3.347.60 [tkuseragentserverheaderinfo \(FI-9914\)](#)

Type: enum

Default Value: 0

Remarks: sets the config option for Standard SIP Profile to Send Unified CM Version Information as User-Agent Header and for Standard SIP Conference Bridge Profile to Pass Through Received Information as User-Agent and Server Header

2.3.347.61 [tkvideocalltrafficclass \(FI-6343\)](#)

Type: enum (Indexed)

Default Value: 3

Remarks: Defines the type of video call traffic class configured for a SIP trunk device. Valid traffic class type includes, 1- Immersive, 2-Desktop and 3-Mixed video.

2.3.347.62 [tkzzdndcontrol \(FI-3064\)](#)

Type:	enum
Default Value:	0
Remarks:	DND control

2.3.347.63 [tkzzdtmfdblevel \(FI-2825\)](#)

Type:	enum
Default Value:	3
Remarks:	dtmf Db Level

2.3.347.64 [tkzzpreff_zzanonymouscallblock \(FI-2830\)](#)

Type:	long
Default Value:	2

2.3.347.65 [tkzzpreff_zzcalleridblocking \(FI-2831\)](#)

Type:	long
Default Value:	2

2.3.347.66 [tkzzpreff_zzcallholdingback \(FI-2829\)](#)

Type:	long
Default Value:	2

2.3.347.67 [tkzzpreff_zzdndcontrol \(FI-2832\)](#)

Type:	long
Default Value:	2

2.3.347.68 [tkzzuserinfo \(FI-2824\)](#)

Type:	enum
Default Value:	0
Remarks:	user Info

2.3.347.69 [usecalleridcallernameinurioutgoingrequest \(FI-10187\)](#)

Type:	bool		
Default Value:	FALSE		
Remarks:	Set to true when either CallerID or CallerName has a value for a device using this SIPProfile, either CallerId or CallerName or both will be included in the FROM URI of outgoing requests		
Rule (RFI-305):	<table><tr><td>Type:</td><td>Inter-field Condition and Constraint</td></tr></table>	Type:	Inter-field Condition and Constraint
Type:	Inter-field Condition and Constraint		

Test Condition:	CallerName = " AND CallerIdDN IS NULL
Constraint:	(UseCallerIDCallerNameinURIOutgoingRequest = 'f')
Remarks:	UseCallerIDCallerNameinURIOutgoingRequest can be true if CallerIdDN and / or CallerName are non-empty

2.3.347.70 versionstamp (FI-3122)

Type:	string [47] (Null OK)								
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963								
Remarks:	New guid plus seconds past midnight 1970 are concatenated								
Rule (RI-273):	<table> <tr> <td>Type:</td><td>Active (Insert/Update) This field is modified by this rule.</td></tr> <tr> <td>Rule Name:</td><td>sipprofile versionstamp</td></tr> <tr> <td>Description:</td><td>on change to anything in sipprofile table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Insert/Update) This field is modified by this rule.	Rule Name:	sipprofile versionstamp	Description:	on change to anything in sipprofile table, update device versionstamp	Test Condition:	update device
Type:	Active (Insert/Update) This field is modified by this rule.								
Rule Name:	sipprofile versionstamp								
Description:	on change to anything in sipprofile table, update device versionstamp								
Test Condition:	update device								
Rule (RI-273):	<table> <tr> <td>Type:</td><td>Active (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>sipprofile versionstamp</td></tr> <tr> <td>Description:</td><td>on change to anything in sipprofile table, update device versionstamp</td></tr> <tr> <td>Test Condition:</td><td>update device</td></tr> </table>	Type:	Active (Insert/Update)	Rule Name:	sipprofile versionstamp	Description:	on change to anything in sipprofile table, update device versionstamp	Test Condition:	update device
Type:	Active (Insert/Update)								
Rule Name:	sipprofile versionstamp								
Description:	on change to anything in sipprofile table, update device versionstamp								
Test Condition:	update device								

2.3.347.71 zzabbreviateddialuri (FI-2935)

Type:	string [127]
Default Value:	x-cisco-serviceuri-abbrdial
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\-\-]{0,127}\$
Remarks:	call Pickup URI

2.3.347.72 zzcallforwarduri (FI-2934)

Type:	string [127]
Default Value:	x-cisco-serviceuri-cfwdall
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\-\-]{0,127}\$
Remarks:	call Pickup URI

2.3.347.73 zzcallpickupgroupuri (FI-2811)

Type:	string [127]
Default Value:	x-cisco-serviceuri-gpickup

Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,127}\$
Remarks:	call Pickup Group URI

2.3.347.74 zcallpickuplisturi (FI-2810)

Type:	string [127]
Default Value:	x-cisco-serviceuri-opickup
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,127}\$
Remarks:	callPickup List URI

2.3.347.75 zcallpickupuri (FI-2809)

Type:	string [127]
Default Value:	x-cisco-serviceuri-pickup
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,127}\$
Remarks:	call Pickup URI

2.3.347.76 zcallstats (FI-2808)

Type:	bool
Default Value:	FALSE
Remarks:	is callStats Enabled

2.3.347.77 zcnfjoinenabled (FI-2792)

Type:	bool
Default Value:	TRUE
Remarks:	is conference Join Enabled

2.3.347.78 zzenablevad (FI-2799)

Type:	bool
Default Value:	FALSE
Remarks:	is VAD Enabled

2.3.347.79 zzmaxredirects (FI-2836)

Type:	long
Default Value:	70
Check Constraint:	((zzmaxRedirects >= 0) AND (zzmaxRedirects <= 255))

2.3.347.80 zzmeetmeserviceuri (FI-2812)

Type:	string [127]
-------	--------------

Default Value:	x-cisco-serviceuri-meetme
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{ }~\-\-]{0,127}\$
Remarks:	meet Me Service URI

2.3.347.81 zzoffhooktofirstdigittmr (FI-2843)

Type:	long
Default Value:	15000
Check Constraint:	((zzoffhookToFirstDigitTmr >= 0) AND (zzoffhookToFirstDigitTmr <= 150000))

2.3.347.82 zzredirectbyapp (FI-2933)

Type:	bool
Default Value:	FALSE
Remarks:	is redirectable by application

2.3.347.83 zzrfc2543hold (FI-2794)

Type:	bool
Default Value:	FALSE
Remarks:	is rfc2543 Hold Enabled

2.3.347.84 zzsemiattendedtransfer (FI-2796)

Type:	bool
Default Value:	TRUE
Remarks:	is semiAttended Transfer Enabled

2.3.347.85 zzstopmediaport (FI-2846)

Type:	long
Default Value:	32766
Check Constraint:	((zzstopMediaPort >= 2048) AND (zzstopMediaPort <= 65535))

2.3.347.86 zzstuttermsgwaiting (FI-2807)

Type:	bool
Default Value:	FALSE
Remarks:	is stutter message Waiting Enabled

2.3.347.87 zztimerkeepaliveexpires (FI-2833)

Type:	long
Default Value:	120

2.3.347.88 zztimersubscribedelta (FI-2835)

Type:	long
Default Value:	5
Check Constraint:	((zztimerSubscribeDelta >= 3) AND (zztimerSubscribeDelta <= 15))

2.3.347.89 zztimersubscribeexpires (FI-2834)

Type:	long
Default Value:	120

Uniqueness: No multicolumn uniqueness constraints

2.3.348 siprealm (TI-393)

Description: SIP Realm (security domain) authentication information for out going calls

Fields:

2.3.348.1 passwordreverse (FI-2895)

Type:	string [128]
Default Value:	69c4f936f9cdf45f6bbca2570c31215629bb5d6fb97493478b8ff3db6fffb55
Validation:	^[a-zA-F0-9]{32,128}\$
Remarks:	Generated hash value, should not be empty

2.3.348.2 pkid (FI-2946)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique ID to identify a record.

Rule (RI-360):

Type:	Validation (Insert/Update)
Rule Name:	Name (Realm) unique in SIP Realm
Description:	The name of a SIP Realm must be unique. Because SIP Realm is a large text field, it cannot be indexed by IDS.
Test Condition:	ON INSERT/UPDATE in SIPRealm: IF (SELECT COUNT(*) FROM SIPRealm WHERE Realm = @Realm AND pkid <> @pkid) > 0 THEN throw exception END IF;
Error Message:	The specified SIP Realm already exists
Remedy:	Change the name of the realm and try again

2.3.348.3 realm (FI-2389)

	Type:	string [512]	
	Validation:	^[a-zA-Z 0-9!#\$%&'()*+,:;<=>?@[^.\`_-]{1,512}\$	
	Rule (RI-360):	Type:	Validation (Insert/Update)
		Rule Name:	Name (Realm) unique in SIP Realm
		Description:	The name of a SIP Realm must be unique. Because SIP Realm is a large text field, it cannot be indexed by IDS.
		Test Condition:	ON INSERT/UPDATE in SIPRealm: IF (SELECT COUNT(*) FROM SIPRealm WHERE Realm = @Realm AND pkid <> @pkid) > 0 THEN throw exception END IF;
		Error Message:	The specified SIP Realm already exists
		Remedy:	Change the name of the realm and try again
	2.3.348.4 userid (FI-2894)		
	Type:	string [128] (Indexed)	
	Validation:	^[a-zA-Z 0-9!#\$%&'()*+,:;<=>?@[^.\`_-]{1,128}\$	
	Remarks:	Same as Name in ApplicationUser.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.349 siptrunkdestination (TI-571)

Description:	To store the destination details of a SIP trunk		
Fields:	2.3.349.1 address (FI-5856)		
	Type:	string [255]	
	Default Value:	EMPTY	
	Migration Source:	SIPDevice.DestinationAddress	
	Remarks:	IPv4 address or host name for this Destination instance of the corresponding SIP Device	
	Rule (RI-302):	Type:	Active (Insert/Update)
		Rule Name:	SIP Trunk destination address
		Description:	Verify IP address
		Test Condition:	I/U
	Rule (RI-782):	Type:	Active (Insert/Update)
		Rule Name:	Validation of SIP Trunk Destination Details

Description:	Number of Destination Addresses that can be configured for a particular SIP Device depending on the Port number.
Test Condition:	On insert/update to SIPTrunkDestination
Error Message:	Maximum number of Destination Addresses that can be configured for a particular SIP device is 16, provided none of the configured destination ports are equal to 0. There should be only one Destination Address configured for a particular SIP device if the corresponding port number is 0.

2.3.349.2 addressipv6 (FI-5857)

Type: string [255]

Default Value: EMPTY

Migration Source: SIPDevice.DestinationAddressIPv6

Remarks: IPV6 address or host name for this Destination instance of the corresponding SIP Device.

Rule (RFI-285):

Type:	Inter-field Condition and Constraint
Test Condition:	Address = "
Constraint:	AddressIPv6 <> "
Remarks:	There must be at least one Destination Address (Destination Address or Destination AddressIPv6) configured.

Rule (RI-702):

Type:	Validation (Insert/Update)
Rule Name:	Insert Update SIPTrunkDestination.AddressIPv6
Description:	On insert or update value must be valid ip address and must not be SiteLocal LinkLocal IPv4 Mapped IPv4 Combined or Unspecified
Test Condition:	On insert or update of AddressIPv6
Error Message:	IPv6 address value must be valid IPv6 address and must not be SiteLocal LinkLocal IPv4 Mapped IPv4 Combined or Unspecified
Remedy:	Correct to valid IPv6 address

Rule (RI-782):

Type:	Active (Insert/Update)
Rule Name:	Validation of SIP Trunk Destination Details
Description:	Number of Destination Addresses that can be configured for a particular SIP Device depending on the Port number.
Test Condition:	On insert/update to SIPTrunkDestination
Error Message:	Maximum number of Destination Addresses that can be configured for a particular SIP device is 16, provided none of the configured destination ports are equal to 0. There should be only one Destination Address configured for a particular SIP device if the corresponding port number is 0.

Rule Name:	Validation of SIP Trunk Destination Details								

		Description:	Number of Destination Addresses that can be configured for a particular SIP Device depending on the Port number.
		Test Condition:	On insert/update to SIPTrunkDestination
		Error Message:	Maximum number of Destination Addresses that can be configured for a particular SIP device is 16, provided none of the configured destination ports are equal to 0. There should be only one Destination Address configured for a particular SIP device if the corresponding port number is 0.
	2.3.349.6 sortorder (FI-5859)		
	Type:	long	
	Check Constraint:	(SortOrder > 0)	
	Remarks:	Numeric value used to control selection logic associated with choosing the next SIPTrunkDestination address for a given logical SIP Trunk Destination. This value should be unique among the set of all destination addresses associated with a given SIP Trunk record.	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.350 site (TI-578)

Description:	Cisco BE: To store the information related to every site in an enterprise. The information to be stored includes the site type (Central, Teleworkers or Branch), area code, if the site has access to gateway etc Is not replicated.		
Fields:	2.3.350.1 allowemercos (FI-6032)		
	Type:	bool	
	Default Value:	TRUE	
	Remarks:	Identify emergency calls are allowed from this site	
	2.3.350.2 allowremotegwconnection (FI-6030)		
	Type:	bool	
	Default Value:	TRUE	
	Remarks:	Identify whether this location is access to gw	
	2.3.350.3 areacodes (FI-6033)		
	Type:	string [50] (Null OK)	
	Validation:	^[0-9,]{1,50}\$	
	Remarks:	area code for physical location	
	2.3.350.4 centralsiteaudioallocation (FI-6151)		

Type:	long
Default Value:	100
Remarks:	Percent of Audio allocation for site

2.3.350.5 emergency servicenumbers (FI-6178)

Type:	string [109]
Default Value:	EMPTY
Remarks:	comma delimited list of emergency service numbers

2.3.350.6 enableintersitevideo (FI-9946)

Type:	bool
Default Value:	TRUE
Remarks:	Boolean flag to control whether or not video is enabled between this site and others. (Except for Teleworkers, Video is always enabled between phones within the same site.)

2.3.350.7 [fkcallingsearchspace \(FI-6042\)](#)

Type:	guid (Null OK)
Remarks:	reference to callingsearchspace

Rule Name:	On delete if the pkid of softkeytemplate is referenced in softkeytemplate it cannot be deleted

	Description:	Default Softkey Template cannot be deleted
	Test Condition:	ON DELETE OF SoftkeyTemplate: SELECT count(*) into nRows FROM SoftKeyTemplateDefault where fksoftkeytemplate = old_pkid;IF (nRows > 0) THEN LET theMoniker = 'SK_DEFAULT_DELETE';END IF;

2.3.353.5 resettoggle (FI-3104)

Type:	bool	
Default Value:	FALSE	
Remarks:	Should this device or group be reset	
Rule (RI-219):	Type:	Active (Insert/Update)
	Rule Name:	softkeytemplate versionstamp
	Description:	on change to anything in softkeytemplate xml file, update versionstamp
	Test Condition:	update softkeytemplate

2.3.353.6 softkeyclause (FI-1153)

Type:	memo (Not Modifiable, Null OK)	
Default Value:	NULL	
Remarks:	This clause contains all the softkeys used by the softkey template, and the softkey is separated by ":" and sorted by eventID.	
Rule (RI-144):	Type:	Validation (Update/Delete)
	Rule Name:	Standard Softkey Template
	Description:	Standard Softkey Templates can be created only by installation inserting all required SoftkeySet records and setting the base template ID (ikSoftkeyTemplate_Base) to the template's ID (pkid). A standard template is based on itself and cannot be modified, while all other templates are based on one of the standard templates and can be modified.
	Test Condition:	IF (@SoftkeyTemplate.pkid = @SoftkeyTemplate.ikSoftkeyTemplate_Base) THEN throw exception
	Error Message:	Cannot insert a new template that is not based on an existing standard (or other) template.
	Remedy:	Insert the new template based on one of the existing templates.

2.3.353.7 softkeysetclause (FI-1154)

Type:	memo (Not Modifiable, Null OK)
Default Value:	NULL
Remarks:	This clause contains the information for softkey sets used by the softkey template

Rule (RI-144):	Type:	Validation (Update/Delete)
	Rule Name:	Standard Softkey Template
	Description:	Standard Softkey Templates can be created only by installation inserting all required SoftkeySet records and setting the base template ID (ikSoftkeyTemplate_Base) to the template's ID (pkid). A standard template is based on itself and cannot be modified, while all other templates are based on one of the standard templates and can be modified.
	Test Condition:	IF (@SoftkeyTemplate.pkid = @SoftkeyTemplate.ikSoftkeyTemplate_Base) THEN throw exception
	Error Message:	Cannot insert a new template that is not based on an existing standard (or other) template.
	Remedy:	Insert the new template based on one of the existing templates.

2.3.353.8 [tkreset \(FI-3105\)](#)

Type:	enum
Default Value:	2
Remarks:	Set by DeviceReset stored procedure.

2.3.353.9 versionstamp (FI-2936)

Type:	string [47] (Null OK)
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
Remarks:	New guid is generated every time this softkeytemplate is updated

Rule (RI-144):	Type:	Validation (Update/Delete)
	Rule Name:	Standard Softkey Template
	Description:	Standard Softkey Templates can be created only by installation inserting all required SoftkeySet records and setting the base template ID (ikSoftkeyTemplate_Base) to the template's ID (pkid). A standard template is based on itself and cannot be modified, while all other templates are based on one of the standard templates and can be modified.
	Test Condition:	IF (@SoftkeyTemplate.pkid = @SoftkeyTemplate.ikSoftkeyTemplate_Base) THEN throw exception
	Error Message:	Cannot insert a new template that is not based on an existing standard (or other) template.
	Remedy:	Insert the new template based on one of the existing templates.

Rule (RI-219):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	softkeytemplate versionstamp
	Description:	on change to anything in softkeytemplate xml file, update versionstamp

	Rule (RI-219):	Test Condition:	update softkeytemplate
		Type:	Active (Insert/Update)
		Rule Name:	softkeytemplate versionstamp
		Description:	on change to anything in softkeytemplate xml file, update versionstamp
		Test Condition:	update softkeytemplate
Uniqueness:	No multicolumn uniqueness constraints		
Rules:	Rule (RI-144):	Type:	Validation (Update/Delete) Rule applied when record is inserted.
		Rule Name:	Standard Softkey Template
		Description:	Standard Softkey Templates can be created only by installation inserting all required SoftkeySet records and setting the base template ID (ikSoftkeyTemplate_Base) to the template's ID (pkid). A standard template is based on itself and cannot be modified, while all other templates are based on one of the standard templates and can be modified.
		Test Condition:	IF (@SoftkeyTemplate.pkid = @SoftkeyTemplate.ikSoftkeyTemplate_Base) THEN throw exception
		Error Message:	Cannot insert a new template that is not based on an existing standard (or other) template.
		Remedy:	Insert the new template based on one of the existing templates.
	Rule (RI-147):	Type:	Active (Insert) Rule applied when record is inserted.
		Rule Name:	Insert Softkey Template
		Description:	A new SoftkeyTemplate can only be inserted by copying an existing template (standard or user-defined). When a new template is inserted, a copy of the template specified in the ikSoftkeyTemplate_Base field is created by copying the SoftkeyTemplateServiceMap and SoftkeySet records using the new templates ID (pkid). The ikSoftkeyTemplate_Base field is also copied from the base templateso that all templates point back to a standard SoftkeyTemplate.
		Test Condition:	ON INSERT INTO SoftkeyTemplate

2.3.354 softkeytemplatedefault (TI-424)

Description:	Used to define a Default SoftkeyTemplate as the entry removed from DevicePool table Insert/Delete is not allowed.
Fields:	2.3.354.1 fksoftkeytemplate (FI-3218)

	Type:	guid (Unique)
	2.3.354.2 pkid (FI-3219)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.355 softkeytemplateservicemap (TI-278)

Description:	Many to many relationship between services with softkeys and softkey templates Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.355.1 fksoftkeytemplate (FI-1957)		
	Type:	guid (Cascade Delete, Not Modifiable)	
	Migration Source:	SoftKeyTemplate.pkid	
	Rule (RI-172):	Type:	Active (Insert)
		Rule Name:	Insert Mandatory SoftkeySet records for Service
		Description:	When a new Service is added to a Softkey Template in the SoftkeyTemplateServiceMap, the mandatory Softkeys for that Service are automatically added to each Call State for that Softkey Template.
		Test Condition:	ON INSERT INTO SoftkeyTemplateServiceMap
	2.3.355.2 pkid (FI-1956)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique ID to identify a record.	
	2.3.355.3 tkservice (FI-1958)		
	Type:	enum (Not Modifiable)	
	Migration Source:	TypeSoftKey.tkService	
	Rule (RI-145):	Type:	Validation (Insert/Update)
		Rule Name:	Valid Services for SoftkeyTemplates

		Description:	A service (application) can be assigned to a Softkey Template only if there are Softkeys defined for the service.
		Test Condition:	IF (@SoftkeyTemplateServiceMap.tkService NOT IN (SELECT DISTINCT tkService FROM TypeSoftkey)) THEN throw exception
		Error Message:	Cannot map this Service to a Softkey Template because the Service has no Softkeys defined.
		Remedy:	Use the correct service or make sure the Service has softkeys defined before applying it to a template.
	Rule (RI-172):	Type:	Active (Insert)
		Rule Name:	Insert Mandatory SoftkeySet records for Service
		Description:	When a new Service is added to a Softkey Template in the SoftkeyTemplateServiceMap, the mandatory Softkeys for that Service are automatically added to each Call State for that Softkey Template.
		Test Condition:	ON INSERT INTO SoftkeyTemplateServiceMap
	Uniqueness: fksoftkeytemplate + tkService is unique. (MFI-66)		
	Rules:	Rule (RI-146):	
		Rule (RI-147):	
		Rule (RI-172):	

			Rule applied when record is inserted.
		Rule Name:	Insert Mandatory SoftkeySet records for Service
		Description:	When a new Service is added to a Softkey Template in the SoftkeyTemplateServiceMap, the mandatory Softkeys for that Service are automatically added to each Call State for that Softkey Template.
		Test Condition:	ON INSERT INTO SoftkeyTemplateServiceMap

2.3.356 speeddial (TI-35)

Description: Speed dial entries for phone Devices

Fields:

2.3.356.1 [fkdevice \(FI-102\)](#)

Type: guid (Indexed, Cascade Delete)

Migration Source: pkid from Device

Rule (RI-148):

Type: Validation (Insert/Update)

Rule Name: Speed Dial or Abbr. Dial Support

Description: Speed Dial records associated with a device are used by both Speed Dial and Abbreviated Dial features. A device must support at least one of these features to have Speed Dial information. Abbreviated Dial is a feature of the phone. Speed Dials are available on Phone Templates, and require a device using phone button templates.

Test Condition: SELECT count(*) into nrows FROM ProductSupportsFeature WHERE (tkProduct IN (SELECT tkProduct FROM ProductSupportsFeature WHERE tkSupportsFeature IN (13,31))) AND tkDeviceProtocol IN ((SELECT tkDeviceProtocol FROM Device where pkid = @speeddial.fkDevice),99)

Error Message: Cannot associate Speed Dials with a device that does not support phone templates or abbreviated dial features.

Remedy: Check the device type and capabilities and try again.

Rule (RI-278):

Type: Active (Insert/Update/Delete records)

Rule Name: speeddial versionstamp

Description: on change to anything in speeddial table, update devicerelatedversionstamp versionstamp

Test Condition: update devicerelatedversionstamp

2.3.356.2 [fkpersonalphonebook \(FI-9944\)](#)

Type: guid (Indexed, Cascade Delete, Null OK)

Remarks: Associates a contact phone number from the personal address book of an end user to a speed dial button

2.3.356.3 label (FI-287)

Type: string [120]

Default Value: EMPTY

Validation: ^["'"]{0,30}\$

Migration Source: NULL

Remarks: The text that appears for the speed-dial button (allows Unicode).

2.3.356.4 labelascii (FI-1790)

Type: string [30]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_`{|}~\|-]{0,30}\$

Migration Source: SpeedDial.label if all chars are less than 127

Remarks: A safe version of the Speed Dial Button Label using only English letters (a to Z) and punctuation.

2.3.356.5 pkid (FI-101)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

Rule (RI-842):

Type: Active (Delete)

Rule Name: (Not Implemented) Remove PersonalPhoneBook record with Speed Dial

Description: If the Speed Dial record is deleted from the system, set the fkSpeedDial reference in PersonalPhoneBook to NULL

Test Condition: ON DELETE FROM SpeedDial: FOREACH SELECT pkid FROM PersonalPhoneBook WHERE fkSpeedDial = old_pkid UPDATE PersonalPhoneBook SET fkSpeedDial = NULL); END FOREACH;

2.3.356.6 speeddialindex (FI-103)

Type: long

Migration Source: Index_

Remarks: This field identifies the speed-dial button on the phone (for example, 1, 2, 3, or 4).

2.3.356.7 speeddialnumber (FI-104)

Type: string [255]

	Migration Source:	Value_	
	Remarks:	This is the number that the system dials when the user presses the speed-dial button.	
	Rule (RI-895):	Type:	Active (Insert/Update)
		Rule Name:	Encode URIs to minimum percent encoded format.
		Description:	null
	Rule (RI-895):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Encode URIs to minimum percent encoded format.
		Description:	null
Uniqueness:	fkdevice + speeddialindex is unique. (MFI-14)		
Rules:	Rule (RI-101):	Type:	Active (Insert/Update/Delete records) Rule applied when record is updated. This table is modified by this rule.
		Rule Name:	Sync Device Profile on Device Changes
		Description:	If the information related to a device with an autogenerated device profile changes, and the enterprise parameter for autosync profiles is true, then the autogenerated device profile must be re-generated. This includes changes to the DeviceAddonModuleMap, Telecaster, Telecaster SubscribedServices, SpeedDial, and DeviceNumPlanMap tables.
		Test Condition:	(SELECT COUNT(*) FROM ProcessConfig WHERE (ParamName = 'AutosyncDeviceProfile') AND (ParamValue = 'T') > 0) AND (SELECT tkDeviceProfile FROM Device WHERE (pkid = @Device.ikDevice_DefaultDeviceProfile) = 2) AND (SELECT LoginTime FROM Device WHERE (pkid = @Device.pkid) != 0)

2.3.357 spokenname (TI-403)

Description:	Spoken name data as in CRSApplication		
Fields:	2.3.357.1 creationdatetime (FI-3035)		
	Type:	string [36]	
	Default Value:	0	
	Remarks:	Timestamp to mark spoken name sequence members	
	2.3.357.2 encodeddata (FI-3004)		

Type:	string [32000]
Default Value:	EMPTY
Remarks:	for table spokenname

2.3.357.3 [fkenduser \(FI-3003\)](#)

Type:	guid (Indexed, Cascade Delete)
Remarks:	associated enduser for spokenname

2.3.357.4 [numberofsegments \(FI-3034\)](#)

Type:	long
Default Value:	0
Remarks:	Number of segments in the spoken name sequence

2.3.357.5 [pkid \(FI-3002\)](#)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.357.6 [seqno \(FI-3005\)](#)

Type:	long
Remarks:	spoken name sequence number

2.3.357.7 [tkmediapayload \(FI-3025\)](#)

Type:	enum (Null OK)
Default Value:	4

	Remarks:	The indicator for being overwritten during EM log in/out procedure	
	2.3.359.2 fieldname (FI-1400)		
	Type:	string [64]	
	Default Value:	EMPTY	
	Remarks:	The name of the field that associated with the support feature. The field name is null implies that whole table is related with the support feature	
	2.3.359.3 isbooleanfield (FI-3056)		
	Type:	bool	
	Default Value:	FALSE	
	Remarks:	If true, then the field is a boolean column.	
	2.3.359.4 pkid (FI-1396)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	

	Remarks:	Unique ID to identify a record.
	2.3.359.5 tablename (FI-1398)	
	Type:	string [0] (Indexed)
	Default Value:	EMPTY
	Remarks:	The name of the table the associated with supported features
	2.3.359.6 tksupportsfeature (FI-1397)	
	Type:	enum (Null OK)
	Default Value:	NULL
	Remarks:	The reference to product support features
	2.3.359.7 usedefault (FI-1402)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	The indicator for using the default model profile configuration during mismatch type login.
	2.3.359.8 useenduser (FI-3055)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	if set to true, then use the setting configured for enduser during EM login
Uniqueness:	tksupportsfeature + tablename + fieldname is unique. (MFI-37)	

2.3.360 tapssecurenumplan (TI-358)		
Description:	Table containing the list of Secure DNS	
Fields:	2.3.360.1 fknumplan (FI-2658)	
	Type:	guid (Unique, Indexed, Cascade Delete)
	Remarks:	Unique ID to identify the secure DN
	2.3.360.2 pkid (FI-2657)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.

Uniqueness: No multicolumn uniqueness constraints

2.3.361 tapsuserlocale (TI-357)

Description: Table containing the list of supported user locales for TAPS application

Fields:

2.3.361.1 pkid (FI-2659)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Migration Source: Generated

Remarks: Unique ID to identify a record.

2.3.361.2 tkuserlocale (FI-2665)

Type: enum

Remarks: supported user Locales

Uniqueness: No multicolumn uniqueness constraints

2.3.362 telecaster (TI-91)

Description: Telecaster information not in Device Table

Fields:

2.3.362.1 authenticationurl (FI-1003)

Type: string [255]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,255}\$

2.3.362.2 directoryservicesurl1 (FI-311)

Type: string [255]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,255}\$

2.3.362.3 directoryservicesurl2 (FI-312)

Type: string [255]

Default Value: EMPTY

Validation: ^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\\-]{0,255}\$

2.3.362.4 fkdevice (FI-309)

Type:	guid (Unique, Indexed, Cascade Delete)	
Rule (RI-152):	Type:	Validation (Insert/Update)
	Rule Name:	Telecaster Device
	Description:	Telecaster records must reference a device that supports IP Phone Services.
	Test Condition:	SELECT count(*) into nRows FROM ProductSupportsFeature WHERE (tkProduct IN (SELECT tkProduct FROM ProductSupportsFeature WHERE tkSupportsFeature = 1) AND tkDeviceProtocol IN ((SELECT tkDeviceProtocol FROM Device where pkid = @Telecaster.fkDevice),99)
	Error Message:	Telecaster table may only reference devices that support IP Phone Services..
	Remedy:	Make sure device referenced by the fkDevice value supports IP Phone Services.

2.3.362.5 idletimeout (FI-938)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(IdleTimeout >= 0) AND (IdleTimeout <= 99999)

2.3.362.6 idleurl (FI-937)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$

2.3.362.7 pkid (FI-308)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-285):	Type:	Active (Insert/Update)
	Rule Name:	telecaster versionstamp
	Description:	on change to anything in telecaster table, update device versionstamp
	Test Condition:	update device

2.3.362.8 proxyurl (FI-1002)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$

2.3.362.9 secureauthenticationurl (FI-5177)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[a-zA-Z0-9 !#\$%&'()*+,./:;<=>?@[^_{}~\ -]{0,255}\$

		Description:	When a subscription to an IP Phone Service is created or updated, the subscribed parameters for the service are added to the TelecasterSubscribedParameter table if they do not exist.
		Test Condition:	INSERT OR UPDATE TelecasterSubscribedService
	Rule (RI-166):	Type:	Default (Defines a default value) Rule applied when record is inserted.
		Rule Name:	Set Subscribed Service Parameter Default
		Description:	When a subscribed service parameter record is inserted, if no value is specified for the parameter, the default value is set by retrieving the Value from the TelecasterServiceParameter record for that parameter. The Default is set prior to inserting the value in the database (i.e., as a pre-trigger).
		Test Condition:	IF (@TelecasterSubscribedParameter.Value IS NULL) THEN @TelecasterSubscribedParameter = (SELECT DefaultValue FROM TelecasterServiceParameter WHERE pkid = @TelecasterSubscribedParameter.fkTelecasterServiceParameter)

2.3.366 telecastersubscribedservice (TI-133)

Description: Releates a device to a TelecasterService

Fields:

2.3.366.1 fkdevice (FI-740)

Type:	guid (Indexed, Cascade Delete)	
Rule (RI-167):	Type:	Active (Insert/Update)
	Rule Name:	Update Subscribed Service URL
	Description:	When a subscribed service parameter value changes, the ServiceURL for the subscribed service must be updated (triggered by update of subscribed service record in DB).
	Test Condition:	IF (@TelecasterSubscribedParameter.Value != TelecasterSubscribedParameter.Value) THEN (UPDATE TelecasterSubscribedService WHERE pkid = @TelecasterSubscribedParameter.fkSubscribedService)
Rule (RI-189):	Type:	Validation (Insert/Update)
	Rule Name:	Max 100 Subscribed Services per device

Description:	Current IP Phone firmware supports up to 100 subscribed services. The database enforces 100 as a maximum number of subscribed services for a device or device profile (that supports IP Phone Services).
Test Condition:	On Insert into TelecasterSubscribedService IF (SELECT COUNT(*) FROM TelecasterSubscribedService WHERE fkDevice = @TelecasterSubscribedService.fkDevice) > 100 Then throw exception
Error Message:	Cannot have more than 100 IP Phone Service subscriptions on a device.
Remedy:	Remove one or more existing IP Phone Service subscriptions from the device and try again.

Rule (RI-422):

Type:	Active (Insert/Update/Delete records)
Rule Name:	TelecasterSubscribedService versionstamp for ServiceURL Button
Description:	TelecasterSubscribedService can be assigned to a Service URL button. In that case does it effect phone configuration, whereas normally the subscribed services are accessed from a Services menu. Because there is a case where the service is assigned to a phone button, version stamp update of the devicerelatedversionstamp is needed. Changes to TelecasterSubscribedService table update the devicerelatedversionstamp.versionstamp when a service is inserted, updated, or deleted AND the subscribed service has a URL button index <> 0. Changes to parameters are covered because the ServiceURL must be rewritten when parameters are changed, which will trigger the new versionstamp rule on TelecasterSubscribedService.
Test Condition:	ON INSERT/UPDATE/DELETE IN TelecasterSubscribedService: IF (old_URLButtonIndex <> 0) OR (new_URLButtonIndex <> 0) AND NOT (cascade delete from device) THEN update devicerelatedversionstamp set versionstamp = vs where fkdevice = new_fkdevice;

2.3.366.2 [fktelecasterservice \(FI-752\)](#)

Type: guid (Cascade Delete)

Rule (RI-167):

Type:	Active (Insert/Update)
Rule Name:	Update Subscribed Service URL
Description:	When a subscribed service parameter value changes, the ServiceURL for the subscribed service must be updated (triggered by update of subscribed service record in DB).
Test Condition:	IF (@TelecasterSubscribedParameter.Value != TelecasterSubscribedParameter.Value) THEN (UPDATE TelecasterSubscribedService WHERE pkid = @TelecasterSubscribedParameter.fkSubscribedService)

Rule (RI-476):

Type:	Validation (Insert/Update)
Rule Name:	Cannot subscribe to service where EnterpriseSubscription = True
Description:	If an IP Phone Service is defined as an EnterpriseSubscription service then individual devices cannot subscribe to the service. All devices get the service if it is active.

		Test Condition:	ON INSERT/UPDATE IN TelecasterSubscribedService: IF (SELECT IsEnterpriseSubscription FROM TelecasterService WHERE pkid = new_fkTelecasterService) = 't' THEN throw exception; END IF;
		Error Message:	Cannot Subscribe to an Enterprise Service.
		Remedy:	Service will appear on all phones if it is active.
	Rule (RI-708):	Type:	Active (Insert/Update)
		Rule Name:	Build the TelecasterSubscribedService.secureservice if secureservice is null
		Description:	On insert or update on telecastersubscribedservice if secureserviceurl is NULL then build the secureserviceurl
		Test Condition:	On insert or update on TelecasterSubscribedService
	Rule (RI-948):	Type:	Validation (Insert/Update)
		Rule Name:	TelecasterSubscribedService Name Validation based on Phone Service Category
		Description:	All Phone Service Categories support names up to 32 characters except Android APK which supports up to 128 characters. Any character except double quote is allowed, in any language (or ACSII only for ASCII fields).
		Test Condition:	ON INSERT/UPDATE in TelecasterSubscribedService IF (SELECT tkPhoneServiceCategory FROM TelecasterService where pkid = fkTelecasterService) = 4 THEN validate 128 characters ELSE validate 32 characters END IF;
		Error Message:	The Subscribed Service Name format is not valid. Service Names can contain up to 32 characters, or 128 for an Android package name.
		Remedy:	Check the name of the service and try again.

2.3.366.3 pkid (FI-739)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-167):	Type:	Active (Insert/Update)
	Rule Name:	Update Subscribed Service URL
	Description:	When a subscribed service parameter value changes, the ServiceURL for the subscribed service must be updated (triggered by update of subscribed service record in DB).
	Test Condition:	IF (@TelecasterSubscribedParameter.Value != TelecasterSubscribedParameter.Value) THEN (UPDATE TelecasterSubscribedService WHERE pkid =

		@TelecasterSubscribedParameter.fkSubscribedService)
Rule (RI-708):	Type:	Active (Insert/Update)
	Rule Name:	Build the TelecasterSubscribedService.secureservice if secureservice is null
	Description:	On insert or update on telecastersubscribedservice if secureserviceurl is NULL then build the secureserviceurl
	Test Condition:	On insert or update on TelecasterSubscribedService

2.3.366.4 priority (FI-5360)

Type:	long (Null OK)
Default Value:	NULL
Check Constraint:	(Priority >= 1) AND (Priority <= 100)
Remarks:	Priority from low to high defines where in a list a Service should appear: 1 = top of list, 50 (default) = middle, 100 = bottom

2.3.366.5 secureserviceurl (FI-5172)

Type:	memo (Null OK)
Remarks:	Trigger updated. Build the complete URL/SecureURL with parameters based on TelecasterSubscribedParameter.

Rule (RI-708):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Build the TelecasterSubscribedService.secureservice if secureservice is null
	Description:	On insert or update on telecastersubscribedservice if secureserviceurl is NULL then build the secureserviceurl
	Test Condition:	On insert or update on TelecasterSubscribedService

Rule (RI-708):	Type:	Active (Insert/Update)
	Rule Name:	Build the TelecasterSubscribedService.secureservice if secureservice is null
	Description:	On insert or update on telecastersubscribedservice if secureserviceurl is NULL then build the secureserviceurl
	Test Condition:	On insert or update on TelecasterSubscribedService

2.3.366.6 servicename (FI-742)

Type:	Active (Insert/Update/Delete records)						
Rule Name:	Genereate Subscribed Service URL						
Description:	When a subscription to an IP Phone Service is created or updated, the full SubscribedServiceURL must be generated. The URL is built for each subscription by taking the URLTemplate of the						

service, and adding the TelecasterSubscribedParameters for the service. Appropriate URL syntax and escaping is applied: A question mark is added to the end of the URL to indicate the start of the parameter list (unless the URLTemplate already contains parameters). The subscribed parameters are then added to the URL as a list of key-value pairs (key=value) separated by an ampersand (&). Special characters (spaces, dots, percent signs, etc.) in parameter values are escaped as necessary using %nn notation where nn is the hexadecimal value of the escaped character.

Test Condition: INSERT OR UPDATE TelecasterSubscribedService

Rule (RI-167):

Type: Active (Insert/Update)
This field is modified by this rule.

Rule Name: Update Subscribed Service URL

Description: When a subscribed service parameter value changes, the ServiceURL for the subscribed service must be updated (triggered by update of subscribed service record in DB).

Test Condition: IF (@TelecasterSubscribedParameter.Value != TelecasterSubscribedParameter.Value) THEN (UPDATE TelecasterSubscribedService WHERE pkid = @TelecasterSubscribedParameter.fkSubscribedService)

Rule (RI-167):

Type: Active (Insert/Update)

Rule Name: Update Subscribed Service URL

Description: When a subscribed service parameter value changes, the ServiceURL for the subscribed service must be updated (triggered by update of subscribed service record in DB).

Test Condition: IF (@TelecasterSubscribedParameter.Value != TelecasterSubscribedParameter.Value) THEN (UPDATE TelecasterSubscribedService WHERE pkid = @TelecasterSubscribedParameter.fkSubscribedService)

2.3.366.9 urlbuttonindex (FI-1330)

Type: long

Default Value: 0

Remarks: The index for feature URL. Index 0 is for normal subscribed services. Not-0 index should be unique on device based.

2.3.366.10 urllabel (FI-1362)

Type: string [200]

Default Value: EMPTY

Validation: ^[^\s""'%&<>]{0,50}\$

Remarks: The display label for URL.

2.3.374.19 sdlxmlflag (FI-2743)

Type:	bool
Default Value:	FALSE

2.3.374.20 [tkservice](#) (FI-2726)

Type:	enum
-------	------

2.3.374.21 tracelevel (FI-2727)

Type:	long
Default Value:	0

	2.3.374.22 usercategories (FI-2728)	
	Type:	long
	Default Value:	0
	2.3.374.23 usexml (FI-2734)	
	Type:	bool
	Default Value:	FALSE
Uniqueness:	No multicolumn uniqueness constraints	

2.3.375 typeadminboolean (TI-302)

Description:	Tri-state boolean values Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.375.1 enum (FI-2119)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.375.2 moniker (FI-2121)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.375.3 name (FI-2120)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.376 typeadminerror (TI-287)

Description:	null Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.376.1 enum (FI-2005)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.376.2 moniker (FI-2007)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.376.3 name (FI-2006)	
	Type:	string [512] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.377 typeadminfieldinfo (TI-301)

Description:	Overrides field info entries for validation Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.377.1 checkconstraint (FI-2115)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	2.3.377.2 enum (FI-2111)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.377.3 overunique (FI-2118)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	2.3.377.4 propnotnull (FI-2117)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.377.5 propnull (FI-2116)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.377.6 <u>tkadminboolean_isunique</u> (FI-2113)	
	Type:	enum (Not Modifiable)
	Default Value:	2
	2.3.377.7 <u>tkadminboolean_nullallowed</u> (FI-2112)	

	Type:	enum (Not Modifiable)
	Default Value:	2
	2.3.377.8 validation (FI-2114)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.378 typeadminfieldinfomap (TI-300)

Description:	Maps Admin fields for validation Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.378.1 enum (FI-2105)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.378.2 label (FI-6103)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.378.3 maxlength (FI-2776)	
	Type:	long (Not Modifiable, Null OK)
	Remarks:	Maxlength for Textbox
	2.3.378.4 property (FI-2107)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.378.5 tkadminfieldinfo (FI-2108)	
	Type:	enum (Not Modifiable, Null OK)
	2.3.378.6 tkfieldinfo (FI-2109)	
	Type:	enum (Not Modifiable)
	2.3.378.7 tkrelatedfieldinfo (FI-2110)	
	Type:	enum (Not Modifiable, Null OK)
	2.3.378.8 tkwebpageinfo (FI-2106)	

	Type: enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.379 typealarmseverity (TI-160)

Description:	Used for AlarmConfiguration severities Records may be modified only by installation and/or DB triggers.
Fields:	2.3.379.1 enum (FI-893) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.379.2 moniker (FI-895) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.379.3 name (FI-894) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.380 typeannouncementfile (TI-616)

Description:	Loaded from TypeAnnouncements Records may be modified only by installation and/or DB triggers.
Fields:	2.3.380.1 description (FI-5136) Type: string [255] (Not Modifiable) 2.3.380.2 enum (FI-5131) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.380.3 filename (FI-5134) Type: string [128] (Not Modifiable) 2.3.380.4 ishidden (FI-5132) Type: bool (Not Modifiable)

	Default Value:	FALSE
	2.3.380.5 isuserlocale (FI-5135)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.380.6 moniker (FI-25832)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.380.7 name (FI-5133)	
	Type:	string [128] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.381 typeannouncements (TI-256)

Description:	IPVMSA apps announcements Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.381.1 allowcustom (FI-1812)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.381.2 description (FI-1813)	
	Type:	string [255] (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.381.3 enum (FI-1807)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.381.4 intervalvalue (FI-1809)	
	Type:	long (Not Modifiable)
	2.3.381.5 moniker (FI-25831)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.381.6 name (FI-1808)	

	Type:	string [128] (Unique, Not Modifiable)
	2.3.381.7 tkannouncementfile 1 (FI-1810)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	A number to identify the typeAnnouncementFile record which is for verbal announcement followed by a repeating tone announcement.
	2.3.381.8 tkannouncementfile 2 (FI-1811)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	A number to identify the typeAnnouncementFile record which is for repeating tone announcement
Uniqueness:	No multicolumn uniqueness constraints	

2.3.382 typeapplication (TI-214)

Description:	List of applications that support MLA Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.382.1 enum (FI-1414)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.382.2 moniker (FI-1615)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.382.3 name (FI-1415)	
	Type:	string [50] (Unique, Not Modifiable)
	2.3.382.4 vroot (FI-1416)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.383 typeapplicationdialrule (TI-391)

Description: Various Dial Rules
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.383.1 enum (FI-2882)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.383.2 moniker (FI-2884)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.383.3 name (FI-2883)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.384 typeappserver (TI-374)

Description: Various types of App servers
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.384.1 administrationurltemplate (FI-3562)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9!#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	Remarks:	Used to create a link to the Administrative application for the AppServer; [IPAddr] replaced by AppServer.IPAddr, [HostName] replaced by AppServer.Name
	2.3.384.2 enduserurltemplate (FI-3563)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	Validation:	^[a-zA-Z0-9!#\$%&'()*+,-./:;<=>?@[^_{}~\ -]{0,255}\$
	Remarks:	Used to create a link to the EndUser application for the AppServer; [IPAddr] replaced by AppServer.IPAddr, [HostName] replaced by AppServer.Name
	2.3.384.3 enum (FI-2764)	

	Type:	enum (Unique, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.384.4 moniker (FI-2767)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.384.5 name (FI-2766)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.385 typeappservercontent (TI-375)

Description:	Differentiates the contents per App server Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.385.1 enum (FI-2768)	
	Type:	enum (Unique, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.385.2 moniker (FI-2770)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.385.3 name (FI-2769)	
	Type:	string [100] (Not Modifiable)
	2.3.385.4 tkappserver (FI-2771)	
	Type:	enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.386 typeasn1roseoidencoding (TI-496)

Description:	For Qsig Variant Records may be modified only by installation and/or DB triggers.	
--------------	--	--

Fields:	2.3.386.1 enum (FI-3763)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.386.2 moniker (FI-3765)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.386.3 name (FI-3764)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.387 typeassignmentmode (TI-2594)

Description:	Specifies the method by which users are dispersed among available nodes for UCM IM & Presence Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.387.1 enum (FI-25667)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.387.2 moniker (FI-25669)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.387.3 name (FI-25668)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the dispersal type for IM & Presence node assignment
Uniqueness:	No multicolumn uniqueness constraints	

2.3.388 typeauthenticationmode (TI-270)

Description:	Defines the different authentication means a phone can use while authenticating itself to CAPF (Certificate Authority Proxy Function). Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.388.1 enum (FI-1924)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.388.2 moniker (FI-1926)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.388.3 name (FI-1925)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.389 typeautoanswer (TI-174)

Description:	types of auto answer Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.389.1 enum (FI-1062)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.389.2 isintercomcompatible (FI-3452)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Whether this enum can be used for Intercom Feature
	2.3.389.3 moniker (FI-1064)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.389.4 name (FI-1063)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.390 typebandwidth (TI-37)

Description:	network bandwidth between regions Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.390.1 bandwidth (FI-1199)		
	Type:	long (Not Modifiable, Null OK)	
	Default Value:	NULL	
	Remarks:	This fields is added per CallProcessing request since the enum and the actual bandwidth used may not be the same.	
	2.3.390.2 enum (FI-327)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	
	2.3.390.3 moniker (FI-426)		
	Type:	string [50] (Not Modifiable)	
	Default Value:	EMPTY	
	Remarks:	A sort name to identify the record	
	2.3.390.4 name (FI-328)		
	Type:	string [100] (Not Modifiable)	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.391 typebarga (TI-464)	
Description:	Types of Barge (and cBarge) Records may be modified only by installation and/or DB triggers.
Fields:	2.3.391.1 enum (FI-3462)
	Type: enum (Unique, Indexed, Not Modifiable)
	Remarks: A number to identify the record
	2.3.391.2 moniker (FI-3464)
	Type: string [50] (Unique, Not Modifiable)
	Default Value: EMPTY
	2.3.391.3 name (FI-3463)
	Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.392 typebatfile (TI-400)

Description: Used to differentiate the various types of files used by BAT
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.392.1 enum (FI-2987)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.392.2 moniker (FI-2989)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.392.3 name (FI-2988)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.393 typebatfilesubclause (TI-401)

Description: Used to differentiate the various types of functions used by BAT
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.393.1 enum (FI-2990)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.393.2 moniker (FI-2992)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.393.3 name (FI-2991)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.394 typebatfrequency (TI-339)

Description: Duration frequency types
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.394.1 enum (FI-2521)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.394.2 moniker (FI-2523)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.394.3 name (FI-2522)	
	Type:	string [100] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.395 typebatfunction (TI-338)

Description: Different Functions of BAT Jobs
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.395.1 allowsuploading (FI-2661)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Is the BAT CSV file uploaded for this function
	2.3.395.2 enum (FI-2518)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.395.3 filelocation (FI-2662)	
	Type:	string [100] (Null OK)
	Remarks:	Location of BAT CSV Files based on location
	2.3.395.4 moniker (FI-2520)	
	Type:	string [50] (Unique, Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.395.5 name (FI-2519)	
	Type:	string [100] (Not Modifiable)
	2.3.395.6 tkbatfile (FI-2993)	
	Type:	enum (Indexed, Not Modifiable)
	Default Value:	0
	2.3.395.7 tkbatfilesubclause (FI-2994)	
	Type:	enum (Indexed, Not Modifiable)
	Default Value:	0
	2.3.395.8 tkbattarget (FI-2599)	
	Type:	enum (Indexed, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.396 typebatfunctionfieldinfomap (TI-352)

Description:	Mapping of BAT function with Fields Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.396.1 displayname (FI-2615)	
	Type:	string [100]
	Remarks:	Display Name of the field in the BAT Pages
	2.3.396.2 enum (FI-2610)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.396.3 ismandatory (FI-2614)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Is the Field Mandatory
	2.3.396.4 tkbatfunction (FI-2611)	
	Type:	enum

	Remarks:	Type of Input Data
	2.3.396.5 tkbatusage (FI-2612)	
	Type:	enum
	Remarks:	Type of Input Data
	2.3.396.6 tkconfiginputdata (FI-3446)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.396.7 tkfieldinfo (FI-2613)	
	Type:	enum
	Remarks:	Holds the field enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.397 typebatjobstatus (TI-343)

Description:	State of BAT Job Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.397.1 enum (FI-2542)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.397.2 moniker (FI-2544)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.397.3 name (FI-2543)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.398 typebatresultstatus (TI-351)

Description:	Status of BAT job results Records may be modified only by installation and/or DB triggers.	
--------------	---	--

Fields:	2.3.398.1 enum (FI-2604)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.398.2 moniker (FI-2602)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.398.3 name (FI-2603)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.399 typebattarget (TI-340)

Description:	Target for which BAT is performed Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.399.1 enum (FI-2524)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.399.2 moniker (FI-2526)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.399.3 name (FI-2525)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.400 typebatusage (TI-342)

Description:	Data usage submitted from UI Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.400.1 enum (FI-2539)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.400.2 moniker (FI-2541)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.400.3 name (FI-2540)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.401 typebillingserverprotocol (TI-382)

Description:	billingserverprotocol (0 - SFTP,1 - FTP) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.401.1 enum (FI-2849)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.401.2 moniker (FI-2850)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.401.3 name (FI-2851)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.402 typebitpos (TI-239)

Description:	Enumerates the bit positions Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.402.1 enum (FI-1733)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.402.2 moniker (FI-1734)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.402.3 name (FI-1908)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.403 typeblfsdoption (TI-473)

Description:	Defines additional behaviors available with Busy Lamp Field (BLF) Speed Dial feature Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.403.1 enum (FI-3526)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.403.2 moniker (FI-3528)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.403.3 name (FI-3527)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.404 typeboolean (TI-38)

Description:	used by Web Admin for text conversion of boolean values. Not actually related to any other table. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.404.1 enum (FI-329)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record

	2.3.404.2 moniker (FI-429)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.404.3 name (FI-330)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.405 typebriprotocol (TI-222)		
Description:	supported BRI protocols Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.405.1 enum (FI-1571)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.405.2 moniker (FI-1573)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.405.3 name (FI-1572)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.406 typecalheaders (TI-2585)		
Description:	Specifies whether the CAL Header is disabled or present in the Supported header or Require header Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.406.1 enum (FI-25588)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.406.2 moniker (FI-25590)	

	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.406.3 name (FI-25589)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of CAL Header
Uniqueness:	No multicolumn uniqueness constraints	

2.3.407 typecallerfiltermask (TI-449)

Description:	Type of mask used as filter for Caller Lists Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.407.1 enum (FI-3392)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.407.2 moniker (FI-3394)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.407.3 name (FI-3393)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.408 typecallerid (TI-131)

Description:	ANI vs DNIS Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.408.1 enum (FI-721)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.408.2 moniker (FI-723)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.408.3 name (FI-722)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.409 typecallinglineidentification (TI-1100)

Description:	Lists different available Identification presentation for SIP trunks. Each presentation represent a pattern in the SIP messages header. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.409.1 enum (FI-10180)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.409.2 moniker (FI-10182)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort naming pattern to identify different presentation record
	2.3.409.3 name (FI-10181)	
	Type:	string [100] (Unique, Not Modifiable)
	Remarks:	A sort name to identify different presentation record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.410 typecallingpartyselection (TI-43)

Description:	Calling Party selection Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.410.1 enum (FI-331)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.410.2 moniker (FI-427)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.410.3 name (FI-332)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.411 typecallstate (TI-185)

Description:	List of Call States defined by CallManager Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.411.1 enum (FI-1138)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.411.2 moniker (FI-1140)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.411.3 name (FI-1139)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.412 typecalltreatmentonfailure (TI-622)

Description:	For CallInterceptProfile Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.412.1 enum (FI-5162)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for the record
	2.3.412.2 moniker (FI-5164)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record

	2.3.412.3 name (FI-5163)
	Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.413 typecalmode (TI-2115)

Description:	List of CAL Modes Records may be modified only by installation and/or DB triggers.
Fields:	2.3.413.1 enum (FI-21051) Type: enum (Unique, Indexed, Not Modifiable) Remarks: unique identifier for TypeMode 2.3.413.2 moniker (FI-21053) Type: string [50] (Not Modifiable) Remarks: Moniker for mode of Confidentialaccesslevel 2.3.413.3 name (FI-21052) Type: string [50] (Not Modifiable) Remarks: Text display of mode of the Confidentialaccesslevel
Uniqueness:	No multicolumn uniqueness constraints

2.3.414 typecarrierselectcode (TI-1083)

Description:	Cisco BE: Carrier Select Code details Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.414.1 enum (FI-10138) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.414.2 moniker (FI-10140) Type: string [100] (Not Modifiable) Remarks: A sort name to identify the record 2.3.414.3 name (FI-10139) Type: string [50] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.415 typecertificate (TI-313)

Description:	Defines the status of the certificate Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.415.1 enum (FI-2160)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record</div> <div>2.3.415.2 moniker (FI-2161)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A sort name to identify the record</div> <div>2.3.415.3 name (FI-2159)</div> <div>Type: string [100] (Unique, Indexed, Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.416 typecertificateoperation (TI-272)

Description:	Defines the different operations that are done on a certificate. Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.416.1 enum (FI-1930)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record</div> <div>2.3.416.2 moniker (FI-1932)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A sort name to identify the record</div> <div>2.3.416.3 name (FI-1931)</div> <div>Type: string [100] (Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.417 typecertificateservice (TI-981)

Description: Types of certificate services
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.417.1 enum (FI-5732)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.417.2 moniker (FI-5734)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.417.3 name (FI-5733)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A name to identify the record
	2.3.417.4 usestruststore (FI-5735)	
	Type:	bool (Not Modifiable)
	Remarks:	To check the usage of Trust Store
Uniqueness:	No multicolumn uniqueness constraints	

2.3.418 typecertificatestatus (TI-273)

Description: Defines the different status for certification operation.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.418.1 enum (FI-1933)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.418.2 moniker (FI-1935)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.418.3 name (FI-1934)	

	Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.419 typecertificateverificationlevel (TI-1089)

Description:	Determines the type of security certificate accepted for identity verification: Any Certificate, Self-signed or Keystore, Keystore Only Records may be modified only by installation and/or DB triggers.
Fields:	2.3.419.1 enum (FI-6287) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.419.2 moniker (FI-6289) Type: string [50] (Not Modifiable) Remarks: A sort name to identify the record 2.3.419.3 name (FI-6288) Type: string [50] (Not Modifiable) Remarks: Name of the Certificate Verification Level
Uniqueness:	No multicolumn uniqueness constraints

2.3.420 typecfacssactivationpolicy (TI-463)

Description:	Types of Call Forward All Calling Search Space Activation Policy Records may be modified only by installation and/or DB triggers.
Fields:	2.3.420.1 enum (FI-3458) Type: enum (Not Modifiable) Remarks: A number to identify the record 2.3.420.2 moniker (FI-3460) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.420.3 name (FI-3459) Type: string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.421 typechangenotifysubscribe (TI-1027)

Description:	Type of AXL handlers supported Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.421.1 enum (FI-9990)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record.</div> <div>2.3.421.2 moniker (FI-9986)</div> <div>Type: string [50] (Unique, Not Modifiable)</div> <div>Remarks: A sort name to identify the change notification subscription type.</div> <div>2.3.421.3 name (FI-9985)</div> <div>Type: string [50] (Unique, Not Modifiable)</div> <div>Remarks: Name of the change notification subscription type.</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.422 typeclass (TI-8)

Description:	generic device type labels Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.422.1 enum (FI-300)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record</div> <div>2.3.422.2 moniker (FI-431)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A sort name to identify the record</div> <div>2.3.422.3 name (FI-301)</div> <div>Type: string [100] (Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.423 typeclockreference (TI-41)

Description: Internal vs. external clock reference
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.423.1 enum (FI-335)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.423.2 moniker (FI-432)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.423.3 name (FI-336)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.424 typecodec (TI-1103)

Description: This table lists the codecs supported by the system. Each record represents a different Media ID to the system. The value is equal to the Media ID used internally by the system.
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.424.1 defaultorder (FI-10217)

Type: long (Unique, Not Modifiable)

Remarks: Determines the default preference of Codec within a single Codec List. The Codec List will have the default preference order and would need special handling if the order needs to be changed.

2.3.424.2 enum (FI-10203)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.424.3 minimumbandwidth (FI-10207)

Type: long (Not Modifiable)

Remarks: This is the minimum bandwidth in K Bits Per Second at which the associated Codec will operate

2.3.424.4 moniker (FI-10205)

	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.424.5 name (FI-10204)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort name to identify different presentation record
	2.3.424.6 tkmedia (FI-10206)	
	Type:	enum (Not Modifiable)
	Remarks:	Determines the type of Media.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.425 typeconfiginputdata (TI-461)

Description:	Configuration Tool Meta-data Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.425.1 enum (FI-3441)	
	Type:	enum (Not Modifiable)
	Remarks:	A number to identify the record
	2.3.425.2 filename (FI-3443)	
	Type:	string [100] (Not Modifiable)
	2.3.425.3 moniker (FI-3445)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.425.4 name (FI-3442)	
	Type:	string [100] (Not Modifiable)
	2.3.425.5 priorityindex (FI-3444)	
	Type:	long (Not Modifiable)
	2.3.425.6 tkconfiginputdatagrouping (FI-3568)	
	Type:	enum
	Default Value:	0

	Remarks:	Values based on TypeConfigInputData
Uniqueness:	No multicolumn uniqueness constraints	

2.3.426 typeconfiginputdatagrouping (TI-479)

Description:	Groupings for Configuration Tool Meta-data Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.426.1 enum (FI-3569)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.426.2 index (FI-3571)	
	Type:	long (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the order of the groupings
	2.3.426.3 moniker (FI-3572)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.426.4 name (FI-3570)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.427 typeconnectedpbx (TI-196)

Description:	Type of PBX models connected to CallManager over QSIG trunk Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.427.1 enum (FI-1267)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.427.2 moniker (FI-1268)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.427.3 name (FI-1269)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.428 typeconnection (TI-1048)

Description:	Cisco BE: This table will contains the information about the different kind of connection supported by provider/pajaro Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.428.1 enum (FI-6198)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for typeConnection
	2.3.428.2 moniker (FI-6200)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Moniker for typeConnection
	2.3.428.3 name (FI-6199)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Name for the typeConnection
	2.3.428.4 tkclass (FI-6203)	
	Type:	enum (Not Modifiable)
	Remarks:	Class type for typeConnection
	2.3.428.5 tkdeviceprotocol (FI-6202)	
	Type:	enum (Not Modifiable)
	Remarks:	DeviceProtocol type for typeConnection
	2.3.428.6 tkproduct (FI-6201)	
	Type:	enum (Not Modifiable)
	Remarks:	Product type for typeConnection
Uniqueness:	No multicolumn uniqueness constraints	

2.3.429 typeconnectiondevice (TI-1050)

Description: Cisco BE: This table will contains the mapping between TypeConnection and TypeCubaDevice
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:	2.3.429.1 enum (FI-6207)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for typeConnectionDevice
	2.3.429.2 tkconnection (FI-6208)	
	Type:	enum (Not Modifiable)
	Remarks:	Connection type for typeConnectionDevice
	2.3.429.3 tkcubadevice (FI-6209)	
	Type:	enum (Not Modifiable)
	Remarks:	CubaDevice type for typeConnectionDevice
Uniqueness:	No multicolumn uniqueness constraints	

2.3.430 typeconnectionusage (TI-1055)

Description: Cisco BE: This table contains the information about the usage type of the PSTN connection
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:	2.3.430.1 enum (FI-6227)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for TypeConnectionUsage
	2.3.430.2 moniker (FI-6229)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Moniker for TypeConnectionUsage
	2.3.430.3 name (FI-6228)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Name for the TypeConnectionUsage
Uniqueness:	No multicolumn uniqueness constraints	

2.3.431 typeconnectprotocol (TI-1090)

Description: Determines the protocol used for communication between UCM and other Unified Communications (UC) products

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.431.1 enum (FI-6290)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.431.2 moniker (FI-6292)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.431.3 name (FI-6291)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the Connection Protocol
Uniqueness:	No multicolumn uniqueness constraints	

2.3.432 typecosrouting (TI-577)

Description:	Cisco BE: To store the different types of Classes Of Service. Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.432.1 enum (FI-6024)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.432.2 moniker (FI-6026)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.432.3 name (FI-6025)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the type of cosrouting
Uniqueness:	No multicolumn uniqueness constraints	

2.3.433 typecosroutingclassification (TI-1054)

Description:	Cisco BE: This table will contains the further classification for the COSRouting	
--------------	--	--

	Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.433.1 enum (FI-6215) Type: enum (Unique, Indexed, Not Modifiable) Remarks: unique identifier for typeCOSroutingclassification 2.3.433.2 moniker (FI-6217) Type: string [50] (Unique, Indexed, Not Modifiable) Remarks: Moniker for typeCOSroutingclassification 2.3.433.3 name (FI-6216) Type: string [50] (Unique, Indexed, Not Modifiable) Remarks: Name for the typeCOSroutingclassification 2.3.433.4 tkcosrouting (FI-6218) Type: enum Remarks: enum for tupeCOSrouting
Uniqueness:	No multicolumn uniqueness constraints

2.3.434 typecountry (TI-42)

Description:	Countries for which CallManager can generate proper network tones Records may be modified only by installation and/or DB triggers.
Fields:	2.3.434.1 enum (FI-338) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.434.2 moniker (FI-433) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.434.3 name (FI-339) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.435 typecredential (TI-445)

Description: Type of Password/PIN
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.435.1 enum (FI-3342)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: From CUC: 1 = Windows (not used), 2 = Domino (not used), 3 = Password, 4 = PIN

2.3.435.2 moniker (FI-3344)

Type: string [50] (Unique, Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.435.3 name (FI-3343)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.436 typecredentialuser (TI-460)

Description: Types of users that have Credentials (Password/Pin) stored in database for IMS
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.436.1 enum (FI-3433)

Type: enum (Not Modifiable)

Remarks: A number to identify the record

2.3.436.2 moniker (FI-3435)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.436.3 name (FI-3434)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.437 typecsuparam (TI-44)

Description:	CSU parameter for PRI interface Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.437.1 enum (FI-342)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.437.2 moniker (FI-434)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.437.3 name (FI-343)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.438 typecubadevice (TI-1049)

Description:	Cisco BE: This table will contains the information of the different type of device provides PSTN connection in Pajaro Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.438.1 enum (FI-6204)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for typeCubaDevice
	2.3.438.2 moniker (FI-6206)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Moniker for typeCubaDevice
	2.3.438.3 name (FI-6205)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Name for the typeCubaDevice
Uniqueness:	No multicolumn uniqueness constraints	

2.3.439 typecubaproductdisplaygroup (TI-1056)

Description:	Cisco BE: Table to store display groups for endpoints on Cuba platform
--------------	--

	Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.439.1 enum (FI-9920) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.439.2 moniker (FI-9922) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.439.3 name (FI-9921) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.440 typecubasupportedcountry (TI-592)

Description:	Cisco BE: The TypeCubaSupportedCountry table stores certain country specific information and defaults for CUBA. Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.440.1 accesscode (FI-9915) Type: string [10] (Null OK) Remarks: Long distance prefix that is dialed out 2.3.440.2 carrierselectcodelength (FI-10152) Type: long (Null OK) Remarks: To store length of Carrier Select Codes for the country 2.3.440.3 countrycode (FI-6164) Type: string [2] (Not Modifiable) Remarks: Two character country code to identify country. 2.3.440.4 countryexitcode (FI-9916) Type: string [10] (Null OK) Remarks: Standard international dial code of the country using which international calls can exit. 2.3.440.5 datetemplate (FI-6169) Type: string [6] (Not Modifiable, Null OK)

Validation:	^(M-D-Y M/D/Y M.D.Y D-M-Y D/M/Y D.M.Y Y-M-D Y/M/D Y.M.D)A?\$
Remarks:	Template to be used to display default date template for a country. If the last character is 'A' then it is 24 hour time. If the last character is 'a', it is 12 hour time.

2.3.440.6 defaulttimezone (FI-6166)

Type:	long (Not Modifiable, Null OK)
Default Value:	21
Remarks:	Default timezone for country.

2.3.440.7 enum (FI-6163)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record

2.3.440.8 isdcode (FI-6173)

Type:	long (Not Modifiable)
Remarks:	To store ISD codes for the country

2.3.440.9 ise1r2enabled (FI-10002)

Type:	bool
Default Value:	FALSE
Migration Source:	BlockEnableE1R2
Remarks:	Flag to show if it should allow E1 CAS R2 (true) or not (false)

2.3.440.10 islogicalpartitioningenabled (FI-9860)

Type:	bool
Default Value:	FALSE

2.3.440.11 numplanname (FI-6174)

Type:	string [5] (Not Modifiable, Null OK)
-------	--------------------------------------

2.3.440.12 supportcarrierselectcode (FI-10151)

Type:	bool
Default Value:	FALSE
Remarks:	Flag to show if particular country supports Carrier Select Code or not

2.3.440.13 [tkcountry](#) (FI-6165)

Type:	enum (Not Modifiable)
Remarks:	Country id from typecountry table.

	2.3.440.14 <u>tklanguage_default</u> (FI-6167)
Type:	enum (Not Modifiable, Null OK)
Remarks:	Default language for country.
Uniqueness:	tkcountry + tklanguage_default is unique. (MFI-166)

2.3.441 typecucmversioninsipheader (TI-2117)

Description:	Configuration type of CUCM version information to be send in SIP User-agent and Server header. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.441.1 enum (FI-21068) Type: enum (Unique, Indexed, Not Modifiable) Remarks: Unique identifier for TypeCUCMVersionInSipHeader. 2.3.441.2 moniker (FI-21070) Type: string [50] (Not Modifiable) Remarks: Moniker for TypeCUCMVersionInSipHeader. 2.3.441.3 name (FI-21069) Type: string [55] (Unique, Indexed, Not Modifiable) Remarks: Name of Handling TypeCUCMVersionInSipHeader.
Uniqueness:	No multicolumn uniqueness constraints

2.3.442 typecustomuserattribute (TI-546)

Description:	Table to support 5 new attributes in addition to already existing attributes in TypeLdapServerAttr Records may be modified only by installation and/or DB triggers.
Fields:	2.3.442.1 enum (FI-10014) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.442.2 moniker (FI-10016) Type: string [64] (Not Modifiable) Remarks: A sort name to identify the record 2.3.442.3 name (FI-10015)

	Type:	string [32] (Unique, Not Modifiable)
	Remarks:	This field is the place holder for the CustomFieldAttributes in TypeCustomUserAttribute
Uniqueness:	No multicolumn uniqueness constraints	

2.3.443 typedayofmonth (TI-532)

Description:	Used for Time Period Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.443.1 description (FI-9908)	
	Type:	string [255] (Null OK)
	Default Value:	EMPTY
	2.3.443.2 enum (FI-9905)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.443.3 moniker (FI-9907)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.443.4 name (FI-9906)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.444 typedayofweek (TI-309)

Description:	Used for Time Period Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.444.1 displayname (FI-25777)	
	Type:	string [100] (Unique, Indexed, Not Modifiable)
	2.3.444.2 enum (FI-2148)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record

	2.3.444.3 moniker (FI-2146)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.444.4 name (FI-2147)	
	Type:	string [100] (Unique, Indexed, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.445 typedberrors (TI-257)		
Description:	Database error definitions Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.445.1 enum (FI-1815)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.445.2 moniker (FI-1817)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.445.3 name (FI-1816)	
	Type:	string [512] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.446 typedevicefeature (TI-208)		
Description:	List of feature for a device. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.446.1 enum (FI-1366)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.446.2 isusermodifiable (FI-1368)	

	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.446.3 moniker (FI-1369)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.446.4 name (FI-1367)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.447 typedeviceprofile (TI-146)

Description:	Defines types of device records - device profile, real device, etc. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.447.1 enum (FI-826)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.447.2 moniker (FI-827)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.447.3 name (FI-828)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.448 typedeviceprotocol (TI-46)

Description:	protocol used by device Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.448.1 enum (FI-344)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.448.2 moniker (FI-435)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.448.3 name (FI-345)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.449 typedevicessecuritymode (TI-213)

Description:	Used for specifying Device Security Mode Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.449.1 enum (FI-1411)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.449.2 moniker (FI-1412)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.449.3 name (FI-1413)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.450 typedevicetrustmode (TI-1041)

Description:	Types of Device Trust Modes Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.450.1 enum (FI-9821)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record

	2.3.450.2 moniker (FI-9823)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.450.3 name (FI-9822)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A name to identify the record
	Uniqueness:	No multicolumn uniqueness constraints

2.3.451 typedialparameter (TI-325)		
Description:	Dial Parameter types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.451.1 enum (FI-2440)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.451.2 moniker (FI-2441)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.451.3 name (FI-2442)	
	Type:	string [100] (Not Modifiable)
	Uniqueness:	No multicolumn uniqueness constraints

2.3.452 typedialpattern (TI-323)		
Description:	Dial Pattern types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.452.1 enum (FI-2436)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.452.2 moniker (FI-2435)	

	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.452.3 name (FI-2434)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.453 typedialviaoffice (TI-587)

Description:	Dial Via Office modes Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.453.1 enum (FI-6082)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.453.2 moniker (FI-6084)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.453.3 name (FI-6083)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.454 typedigitsending (TI-109)

Description:	DTMF, MF, PULSE Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.454.1 enum (FI-565)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.454.2 moniker (FI-567)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.454.3 name (FI-566)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.455 typedistributealgorithm (TI-201)

Description:	The types of distribution algorithms used by different types of Groups Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.455.1 enum (FI-1272)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.455.2 mask (FI-1270)	
	Type:	long (Not Modifiable)
	2.3.455.3 moniker (FI-1273)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.455.4 name (FI-1271)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.456 typedndoption (TI-439)

Description:	type of call handling while DND is enabled (0=Ringer Off, 1=Call Reject) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.456.1 enum (FI-3278)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.456.2 moniker (FI-3280)	

	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.456.3 name (FI-3279)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.457 typednusage (TI-241)

Description:	Enumerates the type of extensions for users. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.457.1 enum (FI-1739)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.457.2 moniker (FI-1740)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.457.3 name (FI-1741)	
	Type:	string [128] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.458 typedpdeviceprotocol (TI-674)

Description:	Diagnostic Portal Protocols Types :Telnet(0) SSH(1) HTTPS(2) and so on . Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.458.1 enum (FI-5465)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.458.2 moniker (FI-5467)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A short name to identify the record
	2.3.458.3 name (FI-5466)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.459 typedpjobfeature (TI-1030)

Description:	Diagnostic Portal Job Feature Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.459.1 enum (FI-5800)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.459.2 moniker (FI-5802)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify the record
	2.3.459.3 name (FI-5801)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.460 typedpjobstatus (TI-677)

Description:	Diagnostic Portal Job Status:Scheduled(0),Running(1),Completed(2) and so on. Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.460.1 enum (FI-5474)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.460.2 moniker (FI-5476)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A short name to identify the record
	2.3.460.3 name (FI-5475)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.461 typedppproduct (TI-673)

Description:	Diagnostic Portal Product Types :Cisco Unified Communications Manager(0) Cisco Unified Customer Voice Portal(2) and so on . Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.461.1 enum (FI-5462)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.461.2 moniker (FI-5464)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify the record
	2.3.461.3 name (FI-5463)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.462 typedptracelevel (TI-675)

Description:	Diagnostic Portal Generic Trace Levels:Level0 (0) Level1 (1) Level2 (2) and so on . Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.462.1 enum (FI-5468)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.462.2 moniker (FI-5470)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify the record

	2.3.462.3 name (FI-5469)
Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.463 typedpverificationstatus (TI-676)

Description:	Diagnostic Portal Verification Status:NotDone(0),Failed(1),Success(2). Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.463.1 enum (FI-5471) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.463.2 moniker (FI-5473) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A short name to identify the record 2.3.463.3 name (FI-5472) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.464 typedpwebprotocol (TI-697)

Description:	Diagnostic Portal Web Protocols Types: REST(0) SOAP(1) and NotApplicable(2). Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.464.1 enum (FI-5599) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.464.2 moniker (FI-5601) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A short name to identify the record 2.3.464.3 name (FI-5600)

	Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.465 typedrfregistered (TI-291)

Description:	Disater recovery framework status of framewrok Records may be modified only by installation and/or DB triggers.
Fields:	2.3.465.1 enum (FI-2023) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.465.2 moniker (FI-2025) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.465.3 name (FI-2024) Type: string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.466 typedrfscript (TI-290)

Description:	Disater recovery framework type of script Records may be modified only by installation and/or DB triggers.
Fields:	2.3.466.1 enum (FI-2020) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.466.2 moniker (FI-2022) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.466.3 name (FI-2021) Type: string [50] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.467 typedscpssetting (TI-2157)

Description:	Associates the DSCP marking service parameter name with the Traffic Class Label (TCL) attribute defined in SIP SDP protocol Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.467.1 dscpsettingxmltag (FI-21287)		
	Type:	string [50] (Unique, Not Modifiable)	
	Remarks:	Identifes the XML Tag of the DSCP marking service parameters	
	2.3.467.2 enum (FI-21283)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	Unique identifier	
	2.3.467.3 moniker (FI-21285)		
	Type:	string [50] (Unique, Not Modifiable)	
	Remarks:	Moniker	
	2.3.467.4 name (FI-21284)		
	Type:	string [50] (Not Modifiable)	
	Remarks:	Associates the DSCP marking UCM service parameter name with the Traffic Class Label (TCL) attribute defined in SIP SDP protocol	
	2.3.467.5 tclstring (FI-21286)		
	Type:	string [128] (Unique, Not Modifiable)	
	Remarks:	Traffic Class Label (TCL) helps to identify/classify various traffic flows in the network	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.468 typedtmfsignaling (TI-324)

Description:	DTMF Signaling Types Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.468.1 enum (FI-2439)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	

2.3.468.2 moniker (FI-2438)	
Type:	string [100] (Not Modifiable)
Default Value:	EMPTY
Remarks:	A sort name to identify the record
2.3.468.3 name (FI-2437)	
Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.469 typee911locationstate (TI-1109)	
Description:	Lists different states for e911 locations. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.469.1 enum (FI-10273)
	Type: enum (Unique, Indexed, Not Modifiable)
	Remarks: A number to identify the record.
	2.3.469.2 moniker (FI-10275)
	Type: string [50] (Not Modifiable)
	Remarks: A sort name to identify the record.
	2.3.469.3 name (FI-10274)
	Type: string [50] (Not Modifiable)
	Remarks: Name of the location state.
Uniqueness:	No multicolumn uniqueness constraints

2.3.470 typee911message (TI-1082)	
Description:	This table stores the different types of messages for e911. Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.470.1 enum (FI-10129)
	Type: enum (Unique, Indexed, Not Modifiable)
	Remarks: A number to identify the record.
	2.3.470.2 moniker (FI-10131)

	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record.
	2.3.470.3 name (FI-10130)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the message type.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.471 typeencode (TI-47)

Description:	a-law vs. u-law Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.471.1 enum (FI-346)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.471.2 moniker (FI-436)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.471.3 name (FI-347)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.472 typefallbackcssselection (TI-641)

Description:	Used for specifying Fallback CSS selection type for IME Enrolled DID group Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.472.1 enum (FI-5302)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.472.2 moniker (FI-5304)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.472.3 name (FI-5303)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.473 typefallbacksensitvitylevel (TI-649)

Description:	Used for specifying Fallback QoS Sensitivity Level Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.473.1 enum (FI-5323)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.473.2 moniker (FI-5325)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.473.3 name (FI-5324)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.474 typefdlchannel (TI-126)

Description:	used for T1 and PRI Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.474.1 enum (FI-724)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.474.2 moniker (FI-726)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.474.3 name (FI-725)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.475 typefeature (TI-39)

Description:	defines every feature that might be assigned on a button template Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.475.1 allowmultiple (FI-3450)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	If true then multiple instances of the feature can appear on a phone button template. If false, only one instance of the feature is allowed. There is no hard rule to enforce this - applications should observe the setting but are allowed to temporarily have more than one instance of any feature while updating button templates
	2.3.475.2 englishlabel (FI-1274)	
	Type:	string [16] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	The English label for a feature key, such as "Privacy".
	2.3.475.3 enum (FI-348)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.475.4 isemcompatible (FI-3475)	
	Type:	bool (Not Modifiable)
	Default Value:	TRUE
	Remarks:	Can the feature be configured on a Device Profile for use with Extension Mobility
	2.3.475.5 moniker (FI-437)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.475.6 name (FI-349)	

	Type:	string [100] (Not Modifiable)
	2.3.475.7 tag (FI-1275)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	This tag is used for localization application to look up the display text for phone
	2.3.475.8 tksoftkey (FI-3283)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
	Remarks:	Corresponding entry in TypeSoftkey for same function
Uniqueness:	No multicolumn uniqueness constraints	

2.3.476 typefeatureconfig (TI-528)

Description:	Define Feature Configuration Types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.476.1 configfileprefix (FI-3897)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.476.2 enum (FI-3894)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.476.3 moniker (FI-3896)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.476.4 name (FI-3895)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.477 typefeaturecontrol (TI-563)

Description: Feature Control Types
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.477.1 description (FI-5707)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Description to be used by program
	2.3.477.2 enum (FI-5705)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.477.3 isenabledbydefault (FI-5708)	
	Type:	bool (Not Modifiable)
	Remarks:	Default policy setting for this feature (true = enabled; false = disabled)
	2.3.477.4 moniker (FI-5709)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Unique string for programmatic use
	2.3.477.5 name (FI-5706)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A name to identify the record
	2.3.477.6 versionstamp (FI-5718)	
	Type:	string [47] (Null OK)
	Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
	Remarks:	New guid plus seconds past midnight 1970 are concatenated
	Rule (RI-735):	Type: Active (Insert/Update) This field is modified by this rule.
		Rule Name: TypeFeatureControl VersionStamp Update
		Description: When the TypeFeatureControl record changes, the versionstamp needs to be re-generated
		Test Condition: ON UPDATE IN TypeFeatureControl : versionstamp = versionStampGenerator()
	Rule (RI-735):	Type: Active (Insert/Update)
		Rule Name: TypeFeatureControl VersionStamp Update
		Description: When the TypeFeatureControl record changes, the versionstamp needs to be re-generated

		Test Condition: ON UPDATE IN TypeFeatureControl : versionstamp = versionStampGenerator()
Uniqueness:	No multicolumn uniqueness constraints	

2.3.478 typefieldinfo (TI-266)

Description:	Field information (datadictionary in database) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.478.1 checkconstraint (FI-1888) Type: string [255] (Not Modifiable) Default Value: EMPTY Remarks: Text that will be used to specifiy the rules for multiple columns in a table.(must follow check SQL syntax)	
	2.3.478.2 defaultvalue (FI-1881) Type: string [255] (Not Modifiable) Default Value: EMPTY Remarks: Value that will be inserted for this column if no value is specified.	
	2.3.478.3 dntype (FI-1937) Type: long (Not Modifiable, Null OK) Remarks: If the FieldType is DN, then this is the type of DN.	
	2.3.478.4 enum (FI-1873) Type: enum (Unique, Indexed, Not Modifiable) Remarks: Integer that enumerates column	
	2.3.478.5 errmsg (FI-2963) Type: string [4096] (Not Modifiable, Null OK)	
	2.3.478.6 fieldname (FI-1875) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: Name of column	
	2.3.478.7 fieldtype (FI-1876) Type: string [50] (Not Modifiable) Default Value: EMPTY	

Remarks:	Type of column
2.3.478.8 iscascadedelete (FI-1886)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if wthe the table pointed to by the column the SQL enginge will attempt to automatically delete the record in this table
2.3.478.9 isclustered (FI-1885)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if this column should be optiminal optiomize for searching (data is found at end of search)
2.3.478.10 isindexed (FI-1883)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if this column should be optiomize for searching
2.3.478.11 isunique (FI-1882)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if the value in this column unique for this table.
2.3.478.12 length (FI-1877)	
Type:	long (Not Modifiable, Null OK)
Remarks:	Maximum number of charters in a string
2.3.478.13 migrationsource (FI-1884)	
Type:	string [255] (Not Modifiable, Null OK)
Default Value:	EMPTY
Remarks:	Textual description of where this value is created from(table and column) in previous schema.
2.3.478.14 notmodifiable (FI-1887)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if can not be modified by user (only modified by install or trigger)
2.3.478.15 nullallowed (FI-1880)	
Type:	bool (Not Modifiable, Null OK)
Remarks:	True if this column can be NULL
2.3.478.16 remarks (FI-2962)	
Type:	string [4096] (Not Modifiable, Null OK)
2.3.478.17 tktableinfo (FI-1874)	

	Type:	enum (Not Modifiable, Null OK)
	Remarks:	ID of table associated with column
	2.3.478.18 validation (FI-1878)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Text that describes validation rules
Uniqueness:	No multicolumn uniqueness constraints	

2.3.479 typeforward (TI-48)

Description:	all, busy, no answer Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.479.1 enum (FI-350)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.479.2 moniker (FI-438)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.479.3 name (FI-351)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.480 typeframing (TI-125)

Description:	used for T1 and PRI Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.480.1 enum (FI-730)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.480.2 moniker (FI-732)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.480.3 name (FI-731)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.481 typegatewayusage (TI-1046)

Description:	Cisco BE: Table to store the different types of gateway usage for PSTN access Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.481.1 description (FI-9857)	
	Type:	string [128] (Not Modifiable)
	Remarks:	Description of the type of Gateway Usage
	2.3.481.2 enum (FI-9855)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.481.3 moniker (FI-9858)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.481.4 name (FI-9856)	
	Type:	string [100] (Unique, Not Modifiable)
	Remarks:	Name of the Gateway Usage Mode
Uniqueness:	No multicolumn uniqueness constraints	

2.3.482 typegclear (TI-561)

Description:	G.Clear Types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.482.1 enum (FI-5404)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.482.2 moniker (FI-5406)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Name to be used by program
	2.3.482.3 name (FI-5405)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
Uniqueness:	Remarks:	A name to identify the record
	No multicolumn uniqueness constraints	

2.3.483 typegeolocationdevice (TI-553)		
Description:	Used to store Logical Partition device types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.483.1 enum (FI-5026)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.483.2 moniker (FI-5028)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Name to be used by program
	2.3.483.3 name (FI-5027)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
Uniqueness:	Remarks:	A name to identify the record
	No multicolumn uniqueness constraints	

2.3.484 typegkoption (TI-49)		
Description:	type of H.323 gate keeper Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.484.1 enum (FI-352)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.484.2 moniker (FI-439)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.484.3 name (FI-353)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.485 typeglobalnumber (TI-2118)

Description:	Classification applied to global numbers Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.485.1 enum (FI-21071)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.485.2 moniker (FI-21073)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker
	2.3.485.3 name (FI-21072)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Text display
Uniqueness:	No multicolumn uniqueness constraints	

2.3.486 typeglobalsetting (TI-588)

Description:	A non-modifiable set of definitions for GlobalSetting table records. Each type record here defines a setting record there along with providing a data driven initialization method and other operational and descriptive information. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.486.1 defaultvalue (FI-6120)	

Type:	string [255] (Not Modifiable, Null OK)
Remarks:	Free form field for storage of the default value for use in the initialization of the associated GlobalSetting record's Value field. Used in the event that the InitializationSQL is absent

2.3.486.2 description (FI-6119)

Type:	string [255] (Not Modifiable)
Remarks:	ASCII description of a TypeGlobalSetting type definition record and its purpose and usage. For use by developers typically in understanding how the setting is maintained and used. Example: This global setting is used by the xxx application. Its value is set by It is used to It must be

2.3.486.3 enum (FI-6116)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	Unique, numeric, surrogate primary key for unique application reference to the TypeGlobalSetting type definition record

2.3.486.4 initializationsql (FI-6121)

Type:	string [2048] (Not Modifiable, Null OK)
Remarks:	SQL statement used to produce, from the Target DB, a custom initialization value for the associated GlobalSetting record. If specified, it will be used during install or upgrade to initialize the SettingValue of a new GlobalSetting record. This allows initialization values to be based on other data in the DB rather than only hardcoded defaults. The SQL query is assumed to produce a single initialization value result. (Only the first field of the first result row will be used. If no row is present, the initialization will be to NULL.)

2.3.486.5 moniker (FI-6117)

Type:	string [50] (Unique, Indexed, Not Modifiable)
Remarks:	Unique, alpha-numeric, application label key for unique reference to the TypeGlobalSetting type definition record and for autogeneration of defined enumerated name value pairs for program inclusion and record access

2.3.486.6 name (FI-6118)

Type:	string [50] (Unique, Indexed, Not Modifiable)
Remarks:	Unique, alpha-numeric, user friendly label key for unique identification of a TypeGlobalSetting type definition record and, if so desired, also for use in reporting output and self documenting query joins

2.3.486.7 rules (FI-6122)

Type:	string [1024] (Not Modifiable, Null OK)
Remarks:	Stores a user oriented message describing the rules which will be applied to this setting and perhaps the restrictions related to it. It would aid the programmer in ensuring that implemented rules are correct and the user in understanding why something they did resulted in an error. So for example: You may not remove the Global Mobility Default Enterprise Feature Access DN without clearing its Default marking or choosing a different Default EFA DN. The Global Mobility Default Enterprise Feature Access DN selection may either be unspecified or may designate an existing DN marked for use as a Mobility Enterprise Feature Access DN.

	(NumPlan.tkPatternUsage==PATTERN_MOBILITY_DTMF)
--	---

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.487 typegroupversionstamp (TI-414)

Description:	Used to update groups of devices based on common configuration settings
--------------	---

Fields:	
---------	--

2.3.487.1 enum (FI-3131)

Type:	enum (Unique, Indexed, Not Modifiable)
-------	--

Remarks:	A number to identify the record
----------	---------------------------------

2.3.487.2 moniker (FI-3133)

Type:	string [50] (Unique, Not Modifiable)
-------	--------------------------------------

Default Value:	EMPTY
----------------	-------

Remarks:	A sort name to identify the record
----------	------------------------------------

2.3.487.3 name (FI-3132)

Type:	string [100] (Not Modifiable)
-------	-------------------------------

2.3.487.4 versionstamp (FI-3134)

Type:	string [47] (Null OK)
-------	-----------------------

Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963
----------------	---

Remarks:	New guid plus seconds past midnight 1970 are concatenated
----------	---

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.488 typehash (TI-671)

Description:	Hash info Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	
---------	--

2.3.488.1 enum (FI-5454)

Type:	enum (Unique, Indexed, Not Modifiable)
-------	--

Remarks:	A number to identify the record
----------	---------------------------------

2.3.488.2 moniker (FI-5456)

Type:	string [50] (Not Modifiable)
-------	------------------------------

Default Value:	EMPTY
----------------	-------

	Remarks:	A short name to identify the record
	2.3.488.3 name (FI-5455)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.489 typehostedroutepatternpstnrule (TI-2149)

Description:	Rule for deriving PSTN failover number for HostedRoutePattern Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.489.1 enum (FI-21234)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.489.2 moniker (FI-21236)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker
	2.3.489.3 name (FI-21235)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the remote object pattern block
Uniqueness:	No multicolumn uniqueness constraints	

2.3.490 typehotspotauthenticationmethod (TI-2617)

Description:	Type of Authentication methods that can be used by Hotspot Profile Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.490.1 displayorder (FI-25796)	
	Type:	long (Not Modifiable)
	Remarks:	Order of display sections with in a web page
	2.3.490.2 enum (FI-25793)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.490.3 moniker (FI-25795)	

	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.490.4 name (FI-25794)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of Authentication Method
Uniqueness:	No multicolumn uniqueness constraints	

2.3.491 typehttpprofile (TI-2163)

Description:	Specifies the classification of a HTTP Profile Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.491.1 enum (FI-21311)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for TypeHttpProfile
	2.3.491.2 moniker (FI-21313)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.491.3 name (FI-21312)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the HTTP Profile Type
Uniqueness:	No multicolumn uniqueness constraints	

2.3.492 typehttpprofileuri (TI-2584)

Description:	Specifies the URI Type for a HTTP Profile Extension Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.492.1 enum (FI-25583)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for TypeHttpProfileURIType
	2.3.492.2 moniker (FI-25585)	
	Type:	string [50] (Not Modifiable)

	Remarks:	A sort name to identifier the record
	2.3.492.3 name (FI-25584)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the HTTP Profile URI Type, used in connection string
Uniqueness:	No multicolumn uniqueness constraints	

2.3.493 typehttpproxy (TI-2601)

Description:	Type of HTTP Proxies that can be defined for a Wireless LAN Profile. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.493.1 enum (FI-25704)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.493.2 moniker (FI-25706)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.493.3 name (FI-25705)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of HTTP Proxy
Uniqueness:	No multicolumn uniqueness constraints	

2.3.494 typehuntalgorithm (TI-226)

Description:	Defines type of hunt algorithm supported Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.494.1 enum (FI-1624)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.494.2 moniker (FI-1626)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.494.3 name (FI-1625)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.495 typeidsauditlevel (TI-497)

Description:	Informix Dynamic Server (IDS) Audit Levels Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.495.1 enum (FI-3781)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.495.2 moniker (FI-3783)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify the record
	2.3.495.3 name (FI-3782)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.496 typeilssyncstatus (TI-1119)

Description:	Enums that display the current status of the sync. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.496.1 enum (FI-10312)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for TypeILSSyncStatus
	2.3.496.2 moniker (FI-10314)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker for TypeILSSyncStatus
	2.3.496.3 name (FI-10313)	

	Type:	string [80] (Not Modifiable)
	Remarks:	Text display of status
Uniqueness:	No multicolumn uniqueness constraints	

2.3.497 typeinterclusterservice (TI-522)

Description:	Types of Inter Cluster Services Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.497.1 allowoverrideserviceaddress (FI-9869)	
	Type:	bool (Not Modifiable)
	Remarks:	This will determine if the service itself will allow manually overriding the address configuration
	2.3.497.2 enum (FI-3979)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record.
	2.3.497.3 moniker (FI-3981)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.497.4 name (FI-3980)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.498 typeipaddressingmode (TI-491)

Description:	Type of IP Addressing Mode Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.498.1 enum (FI-3650)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.498.2 moniker (FI-3652)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.498.3 name (FI-3651)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.499 typeipaddressingmodeprefcontrol (TI-492)

Description:	Preferred IP Addressing Mode Control Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.499.1 enum (FI-3653)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.499.2 moniker (FI-3655)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.499.3 name (FI-3654)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.500 typeipmalinemode (TI-387)

Description:	Distinguishes between proxy and shared Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.500.1 enum (FI-2872)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.500.2 moniker (FI-2873)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.500.3 name (FI-2874)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.501 typeipmatarget (TI-388)

Description:	Mgr/Asst(1) vs. Anyconfigured no.(2) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.501.1 enum (FI-2875)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.501.2 moniker (FI-2876)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.501.3 name (FI-2877)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.502 typekeepaliveinterval (TI-2133)

Description:	This table holds the possible values for the keep alive time interval duration in minutes for DN Alias Sync and Lookup LDAP servers Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.502.1 enum (FI-21167)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.502.2 moniker (FI-21169)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.502.3 name (FI-21168)	

	Type:	string [30] (Not Modifiable)
	Remarks:	Name used to identify an ordered list of LDAP keep alive Intervals
Uniqueness:	No multicolumn uniqueness constraints	

2.3.503 typekeyauthority (TI-404)

Description:	Defines different key types for Devices Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.503.1 enum (FI-3006)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.503.2 moniker (FI-3008)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.503.3 name (FI-3007)	
	Type:	string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints	
-------------	---------------------------------------	--

2.3.504 typekeysize (TI-271)

Description:	Defines the different Key Sizes that are used for private and public generation for a phone. Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.504.1 enum (FI-1927)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.504.2 moniker (FI-1929)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.504.3 name (FI-1928)	

	Type:	string [100] (Not Modifiable)
--	-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.505 typelampblinkrate (TI-132)

Description:	Allowed values for lamp blink rates. Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.505.1 enum (FI-736)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.505.2 moniker (FI-738)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.505.3 name (FI-737)	
	Type:	string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.506 typelanguage (TI-171)

Description:	list of languages Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.506.1 code (FI-1043)	
	Type:	string [10] (Not Modifiable)
	Default Value:	EMPTY
	2.3.506.2 enum (FI-1041)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.506.3 isinuse (FI-1044)	
	Type:	bool (Not Modifiable)
	2.3.506.4 moniker (FI-1045)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.506.5 name (FI-1042)	
	Type:	string [50] (Not Modifiable)
	2.3.506.6 nativename (FI-1049)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Localized name of language (e.g., Deutsch for German)
	2.3.506.7 tklanguagegroup (FI-1797)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
Uniqueness:	No multicolumn uniqueness constraints	

2.3.507 typelanguagegroup (TI-255)

Description:	Grouping of languages based on character sets they support. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.507.1 enum (FI-1794)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.507.2 moniker (FI-1795)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.507.3 name (FI-1796)	
	Type:	string [128] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.508 typeldapdirectoryfunction (TI-2134)

Description:	This table holds the possible purposed for which the LDAP server is being used where it could be either used for Dirsyn or for DN Alias Sync/Lookup purposes Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.508.1 enum (FI-21170)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.508.2 moniker (FI-21172)	
	Type:	string [100] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.508.3 name (FI-21171)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name used to identify an ordered list of LDAP Database
Uniqueness:	No multicolumn uniqueness constraints	

2.3.509 typeldapprotocol (TI-276)

Description:	Defines different LDAP Protocols Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.509.1 enum (FI-1947)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.509.2 moniker (FI-1949)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.509.3 name (FI-1948)	
	Type:	string [128] (Not Modifiable)
	2.3.509.4 tkldapserver (FI-1950)	
	Type:	enum
Uniqueness:	No multicolumn uniqueness constraints	

2.3.510 typeldapserver (TI-263)

Description: Used for LDAP Directory Plugin Server type
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.510.1 displayname (FI-1852)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	2.3.510.2 enum (FI-1849)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.510.3 moniker (FI-1850)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.510.4 name (FI-1851)	
	Type:	string [128] (Not Modifiable)
	2.3.510.5 standardissuefilterstring (FI-1859)	
	Type:	string [4096] (Not Modifiable)
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F\x7F"""]{0,1024}\$
	Remarks:	The Cisco Standard Issue Filter string for this LDAP Server Type to be passed by default to the LDAP Host in a sync request used to restrict results to a subset of the possible result records.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.511 typeldapserverattr (TI-264)

Description: Used for LDAP Directory Plugin attribute types
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.511.1 displayed (FI-1891)	
	Type:	bool
	Default Value:	FALSE

	2.3.511.2 displayname (FI-1856)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	2.3.511.3 displayorder (FI-25758)	
	Type:	long (Unique, Indexed, Not Modifiable)
	Remarks:	Display order for the ldap server attribute field on the web page
	2.3.511.4 enum (FI-1853)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.511.5 moniker (FI-1854)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.511.6 name (FI-1855)	
	Type:	string [128] (Unique, Not Modifiable)
	2.3.511.7 tkcustomuserattribute (FI-10017)	
	Type:	enum (Not Modifiable, Null OK)
	Remarks:	This field is to map one of the 5 available custom field to the entry in TypeLdapServerAttr table
Uniqueness:	No multicolumn uniqueness constraints	

2.3.512 typelicensedresource (TI-1072)		
Description:	Contains the different devices tiers Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.512.1 description (FI-10076)	
	Type:	string [255] (Not Modifiable)
	Remarks:	Description of the device license tier.
	2.3.512.2 enum (FI-10073)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record

2.3.512.3 moniker (FI-10074)

Type:	string [50] (Not Modifiable)
Default Value:	EMPTY
Remarks:	A sort name to identify the record

2.3.512.4 name (FI-10075)

Type:	string [50] (Not Modifiable)
Remarks:	Name of the device tier

Uniqueness: No multicolumn uniqueness constraints

2.3.513 typelicensedresourceproductmap (TI-1073)

Description: Maps phones to device tier
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.513.1 enum (FI-10077)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record

2.3.513.2 [tklicensedresource \(FI-10078\)](#)

Type:	enum (Not Modifiable)
Remarks:	Licensing Device Tier.

2.3.513.3 [tkproduct \(FI-10079\)](#)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	Product id.

Uniqueness: No multicolumn uniqueness constraints

2.3.514 typelicensefeature (TI-360)

Description: Type table containing information on features licensed
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.514.1 enum (FI-2671)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record

	2.3.514.2 featuredescription (FI-2674)	
	Type:	string [255] (Not Modifiable, Null OK)
	2.3.514.3 iktypelicensefeature_myparent (FI-6161)	
	Type:	enum (Indexed, Not Modifiable, Null OK)
	Remarks:	Enum value reference to another related record within TypeLicenseFeature. That other record defines a Next-Level-Up License from which borrowing may occur if no license units of this license are available.
	2.3.514.4 moniker (FI-2673)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.514.5 name (FI-2672)	
	Type:	string [100] (Not Modifiable)
	2.3.514.6 tklicensingmode (FI-6160)	
	Type:	enum (Indexed, Not Modifiable)
	Remarks:	Enum value defined in the TypeLicensingMode table.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.515 typelicenseunit (TI-361)		
Description:	Type table containing number of license units required for each subtype of license feature Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.515.1 adjunctunits (FI-3525)	
	Type:	long (Not Modifiable)
	Default Value:	-1
	Remarks:	The adjusted license units charged for a phone used as a secondary phone. The default value -1 means a device type cannot be used as a secondary phone.
	2.3.515.2 enum (FI-2675)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.515.3 moniker (FI-2677)	
	Type:	string [50] (Unique, Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.515.4 name (FI-2676)	
	Type:	string [100] (Not Modifiable)
	2.3.515.5 tklicensefeature (FI-2678)	
	Type:	enum (Not Modifiable)
	2.3.515.6 units (FI-2679)	
	Type:	long (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.516 typelicensingmode (TI-599)

Description:	The TypeLicensingMode table defines a license family and groupings within them enabling license related data (TypeLicenseFeature records) to exist for multiple licensing schemes concurrently. Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.516.1 description (FI-6159)	
	Type:	string [255] (Not Modifiable)
	Remarks:	Description of the Licensing Mode and its associated purpose and usage.
	2.3.516.2 enum (FI-6156)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.516.3 moniker (FI-6157)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.516.4 name (FI-6158)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Name of the Licensing Mode type.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.517 typelicensingstate (TI-1071)

Description:	Contains the states of a license Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.517.1 allowprovisioning (FI-10071)		
	Type:	bool (Not Modifiable)	
	Default Value:	FALSE	
	Remarks:	Boolean flag to control whether or not provisioning is allowed.	
	2.3.517.2 description (FI-10070)		
	Type:	string [255] (Not Modifiable)	
	Remarks:	Description of the State of the License.	
	2.3.517.3 enum (FI-10067)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	
	2.3.517.4 moniker (FI-10068)		
	Type:	string [50] (Not Modifiable)	
	Default Value:	EMPTY	
	Remarks:	A sort name to identify the record	
	2.3.517.5 name (FI-10069)		
	Type:	string [50] (Not Modifiable)	
	Remarks:	Name of state the license is in	
Uniqueness:	No multicolumn uniqueness constraints		

2.3.518 typelogicalpartitionpolicy (TI-554)

Description:	Used to store Logical Partition Policy Types Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.518.1 enum (FI-5029)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	
	2.3.518.2 moniker (FI-5031)		
	Type:	string [50] (Not Modifiable)	
	Default Value:	EMPTY	

	Remarks:	Name to be used by program
	2.3.518.3 name (FI-5030)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A name to identify the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.519 typelossynetwork (TI-429)

Description:	For Region Matrix relationships to indicate level of packet loss across link Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.519.1 enum (FI-3245)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.519.2 moniker (FI-3247)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.519.3 name (FI-3246)	
	Type:	string [100] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.520 typematrix (TI-319)

Description:	Matrix Type Table Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.520.1 enum (FI-2376)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.520.2 moniker (FI-2378)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	Name to be used by program
	2.3.520.3 name (FI-2377)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A name to identify the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.521 typematrixvalue (TI-349)

Description:	Keeps allowable values for each of the Matrix types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.521.1 enum (FI-2578)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.521.2 moniker (FI-2580)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.521.3 name (FI-2579)	
	Type:	string [100] (Not Modifiable)
	2.3.521.4 tkmatrix (FI-2581)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.522 typemedia (TI-1102)

Description:	Type of Media supported - Invalid(0),Audio(1),Video(2),Data App(3),Data App BFCP(4) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.522.1 enum (FI-10200)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.522.2 moniker (FI-10202)	

	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort name to identify different presentation record
	2.3.522.3 name (FI-10201)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A sort name to identify different presentation record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.523 typemediapayload (TI-224)

Description:	Used for H323 FastStart Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.523.1 enum (FI-1609)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.523.2 moniker (FI-1611)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.523.3 name (FI-1610)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.524 typemgcpslotmodule (TI-140)

Description:	Known types of slot modules for MGCP Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.524.1 configurableportnumbers (FI-1201)	
	Type:	bool (Not Modifiable)
	Default Value:	0
	2.3.524.2 enum (FI-782)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.524.3 maxsubunits (FI-1121)	
	Type:	long (Not Modifiable)
	Default Value:	1
	2.3.524.4 moniker (FI-784)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.524.5 name (FI-783)	
	Type:	string [50] (Not Modifiable)
	2.3.524.6 tkproduct_slotmodule (FI-803)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.525 typemgcpvic (TI-141)

Description:	Known types of Vics for MGCP Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.525.1 beginningportnumber (FI-1022)	
	Type:	long (Not Modifiable)
	2.3.525.2 beginportnum_second (FI-1123)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.525.3 enum (FI-785)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.525.4 maxnumports (FI-797)	
	Type:	long (Not Modifiable)
	2.3.525.5 moniker (FI-787)	
	Type:	string [100] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.525.6 name (FI-786)	
	Type:	string [50] (Not Modifiable)
	2.3.525.7 tkproduct_second (FI-1122)	
	Type:	enum (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.525.8 tkproduct_vic (FI-806)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.526 typemixer (TI-51)

Description:	mixer for conferece bridge Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.526.1 enum (FI-354)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.526.2 moniker (FI-440)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.526.3 name (FI-355)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.527 typemobilesmartclient (TI-494)

Description:	Mobility Smart Client Application Models Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.527.1 enum (FI-3694)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.527.2 moniker (FI-3696)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.527.3 name (FI-3695)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.528 typemodel (TI-79)

Description:	all device types (was typeDevice) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.528.1 defaultdtmfcapability (FI-591)	
	Type:	long (Not Modifiable)
	2.3.528.2 enum (FI-302)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.528.3 moniker (FI-441)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.528.4 name (FI-303)	
	Type:	string [100] (Not Modifiable)
	2.3.528.5 showindevicedefaults (FI-568)	
	Type:	bool (Not Modifiable)
	Migration Source:	new
	2.3.528.6 tkclass (FI-305)	
	Type:	enum (Not Modifiable)

2.3.528.7 **tkphonecategory** (FI-10260)

Type:	enum (Indexed)
Default Value:	0
Remarks:	Specifies type of phone for association. Valid values are - Desk Phone(0), Mobile Device(1), Profile(2)

2.3.528.8 **tkrisclass** (FI-1051)

Type:	enum (Not Modifiable, Null OK)
Default Value:	NULL

2.3.528.9 **tksubclass** (FI-2893)

Type:	enum (Null OK)
Remarks:	The sub class of the model

Uniqueness: No multicolumn uniqueness constraints

2.3.529 **typemohcodec** (TI-156)

Description: used for MOH
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.529.1 **enum** (FI-879)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record

2.3.529.2 **moniker** (FI-881)

Type:	string [50] (Not Modifiable)
Default Value:	EMPTY
Remarks:	A sort name to identify the record

2.3.529.3 **name** (FI-880)

Type:	string [100] (Not Modifiable)
-------	-------------------------------

Uniqueness: No multicolumn uniqueness constraints

2.3.530 **typemonitor** (TI-159)

Description: Used for AlarmConfiguration monitors
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.530.1 display (FI-899)	
	Type:	bool (Not Modifiable)
	2.3.530.2 displayservername (FI-900)	
	Type:	bool (Not Modifiable)
	2.3.530.3 enum (FI-890)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.530.4 moniker (FI-892)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.530.5 monitorstatus (FI-923)	
	Type:	bool (Not Modifiable)
Uniqueness:	2.3.530.6 name (FI-891)	
	Type:	string [100] (Not Modifiable)
	2.3.530.7 tkalarmseverity (FI-927)	
	Type:	enum (Not Modifiable)
No multicolumn uniqueness constraints		

2.3.531 typemonthofyear (TI-310)

Description: Used for Time Period
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.531.1 enum (FI-2151)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.531.2 moniker (FI-2150)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record

	2.3.531.3 name (FI-2149)
Type:	string [100] (Unique, Indexed, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.532 typemwlpolicy (TI-175)

Description:	Policies for Message Waiting Light Records may be modified only by installation and/or DB triggers.
Fields:	2.3.532.1 enum (FI-1059) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.532.2 moniker (FI-1061) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.532.3 name (FI-1060) Type: string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.533 typenamedisplayformat (TI-598)

Description:	Cisco BE: Table to store the different types of Name display formats (e.g., First Name Last Name) Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.533.1 description (FI-6154) Type: string [128] (Not Modifiable) Remarks: Description of the Display Format 2.3.533.2 enum (FI-6152) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.533.3 moniker (FI-6155) Type: string [50] (Unique, Not Modifiable)

	Remarks:	A sort name to identify the record
	2.3.533.4 name (FI-6153)	
	Type:	string [100] (Unique, Not Modifiable)
	Remarks:	Name of the Display Format
Uniqueness:	No multicolumn uniqueness constraints	

2.3.534 typenetworklocation (TI-54)

Description:	On/Off Network Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.534.1 enum (FI-359)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.534.2 moniker (FI-443)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.534.3 name (FI-360)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.535 typenodeusage (TI-441)

Description:	Identifies node as a Publisher (0) or Subscriber (1) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.535.1 enum (FI-3315)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.535.2 moniker (FI-3317)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.535.3 name (FI-3316)	
	Type:	string [100] (Not Modifiable)
	Remarks:	0=Publisher, 1=Subscriber
Uniqueness:	No multicolumn uniqueness constraints	

2.3.536 typensfservice (TI-190)

Description:	List of configurable network services provided by carrier used with NSFProtocolServiceMap Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.536.1 enum (FI-1164)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.536.2 moniker (FI-1166)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.536.3 name (FI-1165)	
	Type:	string [50] (Not Modifiable)
	2.3.536.4 nsfservicecode (FI-1168)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.536.5 parametername (FI-1167)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.537 typenullrestriction (TI-336)

Description:	Matt will fill this in Records may be modified only by installation and/or DB triggers.	
--------------	--	--

Fields:	2.3.537.1 enum (FI-2506)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.537.2 name (FI-2507)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.538 typenumberingplan (TI-121)

Description:	Numbering Plan for PRI Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.538.1 enum (FI-670)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.538.2 moniker (FI-672)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.538.3 name (FI-684)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.539 typenumplanuritype (TI-2116)

Description:	Types of URIs Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.539.1 enum (FI-21057)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for URI type
	2.3.539.2 moniker (FI-21059)	
	Type:	string [50] (Not Modifiable)

	Remarks:	Moniker
	2.3.539.3 name (FI-21058)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Text display
Uniqueness:	No multicolumn uniqueness constraints	

2.3.540 typeoperator (TI-55)

Description:	operators used by GUI with Route Filter Details Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.540.1 enum (FI-361)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.540.2 moniker (FI-444)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.540.3 name (FI-362)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.541 typeoutboundcallrollover (TI-456)

Description:	Identifies behavior for features when MaxCalls is exceeded on a line and other lines are available Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.541.1 enum (FI-3419)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.541.2 moniker (FI-3421)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.541.3 name (FI-3420)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.542 typepacketcapturemode (TI-269)

Description:	Used to store the per-device basis setting to capture the signaling messages. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.542.1 enum (FI-1921)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.542.2 moniker (FI-1923)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.542.3 name (FI-1922)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.543 typeparam (TI-89)

Description:	parameter types for service configuration Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.543.1 enum (FI-363)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.543.2 moniker (FI-445)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record

	2.3.543.3 name (FI-364)
	Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.544 typepartitionusage (TI-430)

Description:	Identifies Intercom vs. other types of partitions and calling search spaces Records may be modified only by installation and/or DB triggers.
Fields:	2.3.544.1 enum (FI-3248) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.544.2 moniker (FI-3250) Type: string [50] (Unique, Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.544.3 name (FI-3249) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.545 typepattern (TI-326)

Description:	Pattern Types Records may be modified only by installation and/or DB triggers.
Fields:	2.3.545.1 enum (FI-2445) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.545.2 moniker (FI-2444) Type: string [100] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.545.3 name (FI-2443)

	Type:	string [100] (Not Modifiable)
--	-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.546 typepatternhandlingflaginfo (TI-2605)

Description:	Defines allowed setting combinations of bitmapped flags based on integer lookup values. Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.546.1 description (FI-25723)	
	Type:	string [254] (Not Modifiable, Null OK)
	Remarks:	For each record with an enum value resulting from zero or 1 bit-flag set, this describes the flag purpose. Other records have NULL here.
	2.3.546.2 enum (FI-25720)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Default Value:	0
	Remarks:	Unique numeric surrogate primary key used as record identifier in this table.
	2.3.546.3 moniker (FI-25721)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Unique, strictly formatted, string key for program / programmer record reference use.
	2.3.546.4 name (FI-25722)	
	Type:	string [50] (Unique, Not Modifiable)
Remarks:	Unique User-Facing Name	

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.547 typepatternprecedence (TI-198)

Description:	MLPP Precedence level Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.547.1 enum (FI-1282)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.547.2 moniker (FI-1283)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.547.3 name (FI-1284)	
	Type:	string [100] (Not Modifiable)
	2.3.547.4 precedencelevel (FI-2338)	
	Type:	long (Null OK)
	Default Value:	NULL
Uniqueness:	No multicolumn uniqueness constraints	

2.3.548 typepatternroute (TI-606)

Description:	Route Class Setting Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.548.1 enum (FI-3931)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.548.2 moniker (FI-3933)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.548.3 name (FI-3932)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A name to identify the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.549 typepatternusage (TI-93)

Description:	type of pattern in NumPlan Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.549.1 allowlocaladministration (FI-25658)	

	Type:	bool
	Default Value:	FALSE
	Remarks:	Indicates that patterns with this marking may be provisioned by the administrator. (As contrasted with LEARNED patterns imported to the dial plan via some mechanism.
	2.3.549.2 enum (FI-367)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.549.3 isusedbydigitanalysis (FI-25657)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Indicates that patterns with this marking are included in those considered by Call Processing Digit Analysis and should be included in route reporting.
	2.3.549.4 moniker (FI-446)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.549.5 name (FI-368)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.550 typepersonalphonenumber (TI-247)		
Description:	categorizes as fax, mobile etc. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.550.1 enum (FI-1707)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.550.2 moniker (FI-1709)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record

	2.3.550.3 name (FI-1708)
Type:	string [50] (Unique, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.551 typephonecategory (TI-1110)

Description:	List of telephone catagories Records may be modified only by installation and/or DB triggers.
Fields:	2.3.551.1 enum (FI-10244) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.551.2 moniker (FI-10246) Type: string [100] (Not Modifiable) Remarks: A moniker to identify the record 2.3.551.3 name (FI-10245) Type: string [50] (Not Modifiable) Remarks: A short name to identify the record
Uniqueness:	No multicolumn uniqueness constraints

2.3.552 typephonefeature (TI-1064)

Description:	Cisco BE: This table will store the information about the fields for the usage profile phone feature page Is not replicated. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.552.1 cubadefaultval (FI-5899) Type: string [50] (Not Modifiable, Null OK) Default Value: EMPTY Remarks: Default value for the XML tag 2.3.552.2 enum (FI-5896) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.552.3 moniker (FI-5898)

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.552.4 name (FI-5897)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.553 typephonefeaturecubaproductmap (TI-1065)

Description:	Cisco BE: This table will store the mapping between default values and productspecific default values for usage profile Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.553.1 enum (FI-5892)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for the record
	2.3.553.2 fkubaproductsupport (FI-5893)	
	Type:	enum (Indexed, Not Modifiable)
	Remarks:	reference to cubaproductsupport
	2.3.553.3 productxmltag (FI-5895)	
	Type:	string [200] (Not Modifiable)
	Remarks:	Keep the XML tag specific to product
	2.3.553.4 tkphonefeature (FI-5894)	
	Type:	enum (Indexed, Not Modifiable)
	Remarks:	Reference to phone feature
Uniqueness:	No multicolumn uniqueness constraints	

2.3.554 typephonepersonalization (TI-462)

Description:	Phone Personalization Settings Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.554.1 enum (FI-3453)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.554.2 moniker (FI-3455)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	2.3.554.3 name (FI-3454)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.555 typephoneservice (TI-487)

Description:	IP Phone Service types: Standard IP Phone Service, Directories, Messages Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.555.1 enum (FI-3615)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.555.2 moniker (FI-3616)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.555.3 name (FI-3617)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.556 typephoneservicecategory (TI-489)

Description:	Type of Service:XML Service=0,Java MIDlet=1 Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.556.1 enum (FI-3633)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.556.2 moniker (FI-3634)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.556.3 name (FI-3635)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.557 typephoneservicedisplay (TI-488)

Description:	Display setting for IP Phone Services: Internal, External URL, Both, Default Records may be modified only by installation and/or DB triggers.		
Fields:	2.3.557.1 enum (FI-3618)		
	Type:	enum (Unique, Indexed, Not Modifiable)	
	Remarks:	A number to identify the record	
	2.3.557.2 moniker (FI-3619)		
	Type:	string [50] (Not Modifiable)	
	Default Value:	EMPTY	
	Remarks:	A sort name to identify the record	
	Rule (RFI-189):	Type:	Inter-field Condition and Constraint
		Test Condition:	tkPhoneServiceCategory=1
		Constraint:	(Vendor <> ")
		Remarks:	Vendor is required for Java MIDlet service.
	2.3.557.3 name (FI-3620)		
Type:	string [100] (Not Modifiable)		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.558 typephonetemplateusage (TI-168)

Description:	define what PhoneTemplate is used for - traditional phone or a type of addon module Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.558.1 enum (FI-982)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.558.2 moniker (FI-984)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.558.3 name (FI-983)	
	Type:	string [100] (Not Modifiable)
	2.3.558.4 tkmodel (FI-994)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.559 typepickupnotification (TI-419)

Description:	Defines the different Notification options available with Pickup Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.559.1 enum (FI-3220)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.559.2 moniker (FI-3221)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.559.3 name (FI-3222)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.560 typepipesize (TI-591)

Description:	Cisco BE: To store the different kind of pipe sizes. Is not replicated. Records may be modified only by installation and/or DB triggers.	
--------------	---	--

Fields:	2.3.560.1 enum (FI-6146)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.560.2 moniker (FI-6148)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.560.3 name (FI-6147)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the typePipeSize
	2.3.560.4 valueinkbits (FI-6149)	
	Type:	long (Not Modifiable)
	Remarks:	Kbits value for the pipesize
Uniqueness:	No multicolumn uniqueness constraints	

2.3.561 typeplaceholder tag (TI-1120)

Description:	List of the place holder for Tags Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.561.1 description (FI-6354)	
	Type:	string [512]
	Default Value:	EMPTY
	Remarks:	Description of the tag usage for each defined tag
	2.3.561.2 enum (FI-6351)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the TypePlaceholderTag record
	2.3.561.3 iconfile (FI-6356)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Icon File Name of the Place Holder Tag.
	2.3.561.4 moniker (FI-6353)	

	Type:	string [50] (Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.561.5 name (FI-6352)	
	Type:	string [25] (Not Modifiable)
	Remarks:	Name of the Place Holder Tag
	2.3.561.6 tag (FI-6355)	
	Type:	string [25] (Not Modifiable)
	Remarks:	Tag of the Place Holder Tag. It starts and ends with a #
Uniqueness:	No multicolumn uniqueness constraints	

2.3.562 typeplaceholderfieldinfo (TI-1121)

Description:	List of mapping between a Place Holder Tag and field number of its applicable table.column Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.562.1 enum (FI-6357)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the TypePlaceholderTagFieldInfoMap record
	2.3.562.2 tkfieldinfo_applicable (FI-6358)	
	Type:	enum (Not Modifiable)
	Remarks:	Field number of a table.column whose value can be generated using place holder tags
	2.3.562.3 tkplaceholdertag (FI-6359)	
	Type:	enum (Not Modifiable)
	Remarks:	Reference to TypePlaceholderTag
Uniqueness:	No multicolumn uniqueness constraints	

2.3.563 typepluginusage (TI-123)

Description:	Whether a plugin record is for the menu or is an application. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.563.1 enum (FI-703)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.563.2 moniker (FI-704)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.563.3 name (FI-705)	
	Type:	string [100] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.564 typeportaluri (TI-2614)

Description:	Relative URI paths to Self-Care Portal. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.564.1 enum (FI-25778)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.564.2 istoplevel (FI-25782)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	When true, the URI is the entry point for the self-care portal
	2.3.564.3 moniker (FI-25780)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Moniker
	2.3.564.4 name (FI-25779)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the self-care portal page.
	2.3.564.5 uri (FI-25781)	
	Type:	string [255] (Not Modifiable)
	Remarks:	Relative URI for self-care portal.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.565 typepreemption (TI-199)

Description: Type of preemption behavior or tone (for MLPP)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.565.1 enum (FI-1285)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.565.2 moniker (FI-1287)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.565.3 name (FI-1286)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.566 typepreferredmediasource (TI-2108)

Description: List of media sources for recording.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.566.1 enum (FI-21028)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record.
	2.3.566.2 moniker (FI-21030)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record.
	2.3.566.3 name (FI-21029)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the location state.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.567 typepresentationbit (TI-56)

Description: Presentaton bit for access ports
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.567.1 enum (FI-371)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.567.2 moniker (FI-447)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.567.3 name (FI-372)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.568 typeprichanie (TI-57)

Description: Digital Access Pri channel IE values
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.568.1 enum (FI-373)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.568.2 moniker (FI-448)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.568.3 name (FI-374)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.569 typepriofofnumber (TI-95)

Description: null
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.569.1 enum (FI-376)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.569.2 moniker (FI-449)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.569.3 name (FI-377)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.570 typepriprotocol (TI-58)

Description: supported Primary Rate protocols
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.570.1 enum (FI-378)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.570.2 isqsig (FI-1907)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.570.3 moniker (FI-450)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.570.4 name (FI-379)	
	Type:	string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.571 typeprocessnoderole (TI-1141)

Description:	Types of server roles within a cluster: 1 = Voice (default) and 2 = IM and Presence Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.571.1 enum (FI-10422)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the TypeProcessNodeRole record
	2.3.571.2 moniker (FI-10424)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.571.3 name (FI-10423)	
	Type:	string [30] (Unique, Not Modifiable)
	Remarks:	Name of the ProcessNode Role

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.572 typeproduct (TI-117)

Description:	complete list of products for combo boxes Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.572.1 devicenameformat (FI-1016)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Use regular expression (up to 255 characters) to define format
	2.3.572.2 devicenamestring (FI-1025)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.572.3 enum (FI-650)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record

	2.3.572.4 isinstalleddefault (FI-1019)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Is this product included in a default installation
	2.3.572.5 maxports (FI-654)	
	Type:	long (Not Modifiable)
	2.3.572.6 moniker (FI-652)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.572.7 name (FI-651)	
	Type:	string [100] (Not Modifiable)
	2.3.572.8 showindropdown (FI-663)	
	Type:	bool (Not Modifiable)
	2.3.572.9 tkmodel (FI-653)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.573 typeproductconfig (TI-118)		
Description:	list of configurable attributes used with ProductCapabilities Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.573.1 enum (FI-655)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.573.2 moniker (FI-657)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.573.3 name (FI-656)	

	Type:	string [100] (Not Modifiable)
--	-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.574 typeprotocolside (TI-59)

Description:	user/network values Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	
---------	--

2.3.574.1 enum (FI-380)

Type:	enum (Unique, Indexed, Not Modifiable)
-------	--

Remarks:	A number to identify the record
----------	---------------------------------

2.3.574.2 moniker (FI-451)

Type:	string [50] (Not Modifiable)
-------	------------------------------

Default Value:	EMPTY
----------------	-------

Remarks:	A sort name to identify the record
----------	------------------------------------

2.3.574.3 name (FI-381)

Type:	string [100] (Not Modifiable)
-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.575 typeprovider (TI-1047)

Description:	Cisco BE: This table will contains the information about the different type of providers Is not replicated. Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	
---------	--

2.3.575.1 enum (FI-6195)

Type:	enum (Unique, Indexed, Not Modifiable)
-------	--

Remarks:	unique identifier for typeprovider
----------	------------------------------------

2.3.575.2 moniker (FI-6197)

Type:	string [50] (Unique, Indexed, Not Modifiable)
-------	---

Remarks:	Moniker for typeprovider
----------	--------------------------

2.3.575.3 name (FI-6196)

Type:	string [50] (Unique, Indexed, Not Modifiable)
-------	---

Remarks:	Name for the typeprovider
----------	---------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.576 typeqsig (TI-211)

Description:	Describes what type of devices are in a particular route list or route group. Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.576.1 enum (FI-1403)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record</div> <div>2.3.576.2 moniker (FI-1405)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A sort name to identify the record</div> <div>2.3.576.3 name (FI-1404)</div> <div>Type: string [100] (Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.577 typeqsigvariant (TI-495)

Description:	For Qsig Variant Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.577.1 enum (FI-3760)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record.</div> <div>2.3.577.2 moniker (FI-3762)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A sort name to identify the record</div> <div>2.3.577.3 name (FI-3761)</div> <div>Type: string [100] (Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.578 typerecordingflag (TI-431)

Description: Automatic Call Recording Enabled, Application Invoked Call Recording Enabled, Call Recording Disabled
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.578.1 enum (FI-3266)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.578.2 moniker (FI-3268)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.578.3 name (FI-3267)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.579 typerelatedfieldinfo (TI-335)

Description: Charlie will fill this in
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.579.1 checkconstraint (FI-2502)	
	Type:	string [255]
	Default Value:	EMPTY
	2.3.579.2 conditionalvalue (FI-2495)	
	Type:	string [100] (Null OK)
	2.3.579.3 defaultvalue (FI-2498)	
	Type:	string [50] (Null OK)
	Default Value:	EMPTY
	2.3.579.4 dntype (FI-2503)	
	Type:	long (Null OK)
	2.3.579.5 enum (FI-2491)	

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record
2.3.579.6 involvedfields (FI-2493)	
Type:	string [255]
Default Value:	EMPTY
2.3.579.7 length (FI-2497)	
Type:	long (Null OK)
2.3.579.8 notmodifiable (FI-2500)	
Type:	bool
2.3.579.9 optype (FI-2505)	
Type:	long (Null OK)
2.3.579.10 remarks (FI-2504)	
Type:	memo
Default Value:	EMPTY
2.3.579.11 tkfieldinfo_conditional (FI-2494)	
Type:	enum (Null OK)
2.3.579.12 tkfieldinfo_enforcedon (FI-2496)	
Type:	enum (Null OK)
2.3.579.13 tknullrestriction (FI-2499)	
Type:	enum (Null OK)
2.3.579.14 tktableinfo (FI-2492)	
Type:	enum
2.3.579.15 validation (FI-2501)	
Type:	string [255]
Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints

2.3.580 typereleasecausevalue (TI-197)

Description:	List of allowable cause value for when a pattern is blocked. Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.580.1 enum (FI-1288)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.580.2 moniker (FI-1290)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.580.3 name (FI-1289)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.581 typeremotedestinationusage (TI-2615)

Description:	This table holds the possible RemoteDestination usages and the field on the RemoteDestination table which stores the association for that usage type. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.581.1 enum (FI-25786)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.581.2 moniker (FI-25788)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Moniker
	2.3.581.3 name (FI-25787)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Display name of the Remote Destination Usage type.
	2.3.581.4 tkfieldinfo (FI-25789)	
	Type:	enum (Not Modifiable)
	Remarks:	Field used in the Remote Destination table for this usage type.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.582 typeremoteobject (TI-2144)

Description: Types of objects replicated into the cluster from other clusters
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.582.1 enum (FI-21214)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.582.2 moniker (FI-21216)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker
	2.3.582.3 name (FI-21215)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name for the Remote Object type
Uniqueness:	No multicolumn uniqueness constraints	

2.3.583 typereplicationstatus (TI-1143)

Description: List of states that replication setup (and repair) goes through
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.583.1 enum (FI-10429)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the TypeReplicationStatus record
	2.3.583.2 moniker (FI-10431)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.583.3 name (FI-10430)	
	Type:	string [30] (Unique, Not Modifiable)
	Remarks:	Name of the Replication Status
Uniqueness:	No multicolumn uniqueness constraints	

2.3.584 typereset (TI-254)

Description: Having soft and hard reset types
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.584.1 enum (FI-1785)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.584.2 moniker (FI-1786)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.584.3 name (FI-1806)	
	Type:	string [128] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.585 typeresethandshake (TI-406)

Description: Defines different types of handshake between tftp and ccm for devicereset
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.585.1 enum (FI-3022)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.585.2 moniker (FI-3024)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.585.3 name (FI-3023)	
	Type:	string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.586 typeresource (TI-235)

Description: Resource is an entity that have action performed on them.

	Records may be modified only by installation and/or DB triggers.
Fields:	2.3.586.1 description (FI-3740) Type: string [500] (Not Modifiable) Default Value: EMPTY Remarks: Description of resource types used for access privileges (user groups and permissions) 2.3.586.2 enum (FI-1672) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.586.3 moniker (FI-1674) Type: string [128] (Unique, Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.586.4 name (FI-1673) Type: string [128] (Not Modifiable) 2.3.586.5 prefix (FI-2003) Type: string [50] Default Value: EMPTY Remarks: Strut action prefixes for a resource. 2.3.586.6 tkapplication (FI-1814) Type: enum (Not Modifiable, Null OK) Default Value: NULL
Uniqueness:	No multicolumn uniqueness constraints

2.3.587 typeresourceaction (TI-236)	
Description:	Actions and references to resources. Records may be modified only by installation and/or DB triggers.
Fields:	2.3.587.1 enum (FI-1675) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record

	2.3.587.2 moniker (FI-1677)	
	Type:	string [128] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.587.3 name (FI-1676)	
	Type:	string [128] (Not Modifiable)
	2.3.587.4 tkbitpos (FI-1679)	
	Type:	enum (Not Modifiable)
	2.3.587.5 tkresource (FI-1678)	
	Type:	enum (Not Modifiable)
Uniqueness:	moniker + tkresource is unique. (MFI-39) tkbitpos + tkresource is unique. (MFI-40)	

2.3.588 typerevertpriority (TI-425)		
Description:	Use for the priority for incoming call and hold reversion call Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.588.1 enum (FI-3223)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.588.2 moniker (FI-3224)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.588.3 name (FI-3225)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.589 typeringsetting (TI-186)		
Description:	Type of different ring setting for normal ringer, flash and consecutive call ringer	

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.589.1 enum (FI-1131)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.589.2 islinecompatible (FI-1134)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	Remarks:	Whether this enum can be used as line setting for device or not
	2.3.589.3 moniker (FI-1133)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.589.4 name (FI-1132)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.590 typerisclass (TI-173)

Description:	Table of risc mananaged class of device Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.590.1 enum (FI-1052)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.590.2 moniker (FI-1054)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.590.3 name (FI-1053)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.591 typerisstatus (TI-282)

Description: Lists Ris Status
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.591.1 enum (FI-1988)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.591.2 moniker (FI-1990)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.591.3 name (FI-1989)

Type: string [50] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.592 typeroutingdatabasecachetimer (TI-2135)

Description: This table holds the value for the time duration in hours to retain the information fetched from the DN Alias Lookup server in the cache
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.592.1 enum (FI-21178)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.592.2 moniker (FI-21180)

Type: string [100] (Not Modifiable)

Remarks: A sort name to identify the record

2.3.592.3 name (FI-21179)

Type: string [30] (Not Modifiable)

Remarks: Name used to identify an cache timer

Uniqueness: No multicolumn uniqueness constraints

2.3.593 typersvpoversip (TI-486)

Description: Define RSVP over SIP policy
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.593.1 enum (FI-3637)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.593.2 moniker (FI-3639)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.593.3 name (FI-3638)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.594 typertmtreportingservice (TI-510)

Description: The types of RTMT Reporting Services
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.594.1 enum (FI-3853)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.594.2 moniker (FI-3855)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.594.3 name (FI-3854)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.595 typerule (TI-395)

Description: Types of database Rules implemented in triggers (triggering event in parentheses)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.595.1 description (FI-2951)	
	Type:	string [256] (Not Modifiable)
	2.3.595.2 enum (FI-2949)	
	Type:	enum (Not Modifiable)
	Remarks:	A number to identify the record
	2.3.595.3 name (FI-2950)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.596 typeruleinfo (TI-396)

Description: The database rules for this database, usually implemented in triggers on one or more tables.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.596.1 description (FI-2955)	
	Type:	string [4096] (Not Modifiable, Null OK)
	2.3.596.2 enum (FI-2952)	
	Type:	enum (Not Modifiable)
	Remarks:	A number to identify the record
	2.3.596.3 errormessage (FI-2957)	
	Type:	string [4096] (Not Modifiable, Null OK)
	2.3.596.4 implemented (FI-2959)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE
	2.3.596.5 remedy (FI-2958)	
	Type:	string [4096] (Not Modifiable, Null OK)
	2.3.596.6 rulename (FI-2954)	
	Type:	string [100] (Not Modifiable)
	2.3.596.7 testcondition (FI-2956)	

	Type:	string [4096] (Not Modifiable, Null OK)
	2.3.596.8 tkrule (FI-2953)	
	Type:	long (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.597 typesafservice (TI-503)

Description:	The types of SAF services that can be run on the system Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.597.1 enum (FI-3800)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.597.2 moniker (FI-3802)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.597.3 name (FI-3801)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.598 typeschciscotacdestination (TI-531)

Description:	Used by Smart Call Home application to choose Cisco TAC Destination by HTTPS or EMAIL. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.598.1 description (FI-9903)	
	Type:	string [255] (Null OK)
	Default Value:	EMPTY
	2.3.598.2 destination (FI-9904)	
	Type:	string [255] (Null OK)
	Default Value:	EMPTY
	2.3.598.3 enum (FI-9900)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.598.4 moniker (FI-9902)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.598.5 name (FI-9901)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.599 typescheduleunit (TI-296)

Description:	Used to determine a scheduling unit of time Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.599.1 displayname (FI-2075)	
	Type:	string [128] (Not Modifiable)
	2.3.599.2 enum (FI-2072)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.599.3 moniker (FI-2073)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.599.4 name (FI-2074)	
	Type:	string [128] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.600 typesdpattributehandling (TI-2112)

Description:	Handling Type of a SDP attribute Records may be modified only by installation and/or DB triggers.	
--------------	--	--

Fields:	2.3.600.1 enum (FI-21042)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier for TypeSDPAttributeHandling.
	2.3.600.2 moniker (FI-21044)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Moniker for TypeSDPAttributeHandling record.
	2.3.600.3 name (FI-21043)	
	Type:	string [25] (Unique, Indexed, Not Modifiable)
	Remarks:	Name of Handling Type of a SDP attribute.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.601 typesecuritypolicy (TI-327)

Description:	Security Policy Types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.601.1 enum (FI-2446)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.601.2 moniker (FI-2447)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.601.3 name (FI-2448)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.602 typeserversecuritymode (TI-643)

Description:	Used for specifying Server Security Mode Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.602.1 enum (FI-5224)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.602.2 moniker (FI-5269)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.602.3 name (FI-5270)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.603 typeservice (TI-90)

Description:	types of Cisco voice processes Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.603.1 canbedisabled (FI-1200)	
	Type:	bool (Not Modifiable)
	Default Value:	TRUE
	2.3.603.2 dbuser (FI-3293)	
	Type:	string [30] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Database user for process.
	2.3.603.3 devicenamemonitorflag (FI-916)	
	Type:	bool (Not Modifiable)
	2.3.603.4 devicetypemonitorflag (FI-917)	
	Type:	bool (Not Modifiable)
	2.3.603.5 enable (FI-922)	
	Type:	bool (Not Modifiable)
	2.3.603.6 enabledbydefault (FI-1183)	
	Type:	bool (Not Modifiable)
	Default Value:	FALSE

2.3.603.7 enum (FI-382)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	A number to identify the record

2.3.603.8 filename (FI-910)

Type:	string [100] (Not Modifiable)
Default Value:	EMPTY

2.3.603.9 filetraceflag (FI-920)

Type:	bool (Not Modifiable)
-------	-----------------------

2.3.603.10 includenondevicetraces (FI-921)

Type:	bool (Not Modifiable)
-------	-----------------------

2.3.603.11 log4jpackage (FI-2081)

Type:	string [100] (Not Modifiable)
Default Value:	EMPTY

2.3.603.12 maxfilesize (FI-2049)

Type:	long (Not Modifiable)
Default Value:	1
Remarks:	Created during installation.

2.3.603.13 maxnumservers (FI-1975)

Type:	long (Not Modifiable)
Default Value:	2

2.3.603.14 moniker (FI-428)

Type:	string [50] (Indexed, Not Modifiable)
Default Value:	EMPTY
Remarks:	A sort name to identify the record

2.3.603.15 name (FI-383)

Type:	string [100] (Not Modifiable)
-------	-------------------------------

2.3.603.16 nameforcontrol (FI-697)

Type:	string [50] (Not Modifiable)
Default Value:	EMPTY

2.3.603.17 numfiles (FI-911)

Type: long (Not Modifiable)

2.3.603.18 numlines (FI-912)

Type: long (Not Modifiable)

2.3.603.19 numminutes (FI-913)

Type: long (Not Modifiable)

Remarks: Trace configuration option. Maximum minutes of data stored in each trace file.

2.3.603.20 outputdebugstringflag (FI-918)

Type: bool (Not Modifiable)

Remarks: Trace configuration option. Cisco engineers use this setting

2.3.603.21 processname (FI-3294)

Type: string [30] (Not Modifiable)

Default Value: EMPTY

Remarks: Process name that uses Database.

2.3.603.22 productmask (FI-3295)

Type: long (Not Modifiable)

Default Value: 1

Remarks: Bitmask of products to which this service applies (CCM, Unity, etc.)

2.3.603.23 servername (FI-909)

Type: string [100] (Not Modifiable)

Default Value: EMPTY

2.3.603.24 supportalarm (FI-1127)

Type: bool (Not Modifiable)

Default Value: FALSE

2.3.603.25 supportsditrace (FI-1125)

Type: bool (Not Modifiable)

Default Value: FALSE

Remarks: indicator for whether the service support SDI trace

2.3.603.26 supportsdltrace (FI-1126)

Type: bool (Not Modifiable)

Default Value: FALSE

Remarks: indicator for whether the service support SDL trace

2.3.603.27 supportserviceparams (FI-1182)

Type: bool (Not Modifiable)

Default Value: TRUE

2.3.603.28 supportslog4jtrace (FI-2050)

Type: bool (Not Modifiable)

Default Value: FALSE

Remarks: Created during installation.

2.3.603.29 tkservicecategory (FI-1124)

Type: enum (Not Modifiable)

Default Value: 0

2.3.603.30 tkservicegrouping (FI-1973)

Type: enum (Not Modifiable)

Default Value: 0

Remarks: controls grouping of display

2.3.603.31 tkserverrestriction (FI-1974)

Type: enum (Not Modifiable)

Default Value: 0

Remarks: controls if number of servers can be activated

2.3.603.32 tktracelevelgroups (FI-2059)

Type: enum (Not Modifiable)

Default Value: 0

2.3.603.33 tracelevel (FI-915)

Type: long (Not Modifiable)

2.3.603.34 tracelevelcategory (FI-2048)

Type: long (Not Modifiable)

Default Value: 0

Remarks: if standard set true during installation.

2.3.603.35 tracename (FI-1219)

Type: string [10] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	short service name used for trace log
	2.3.603.36 usercategories (FI-914)	
	Type:	long (Not Modifiable)
	2.3.603.37 usexml (FI-919)	
	Type:	bool (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.604 typeservicecategory (TI-187)

Description:	list of servcie category Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.604.1 enum (FI-1135)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.604.2 moniker (FI-1137)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.604.3 name (FI-1136)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.605 typeservicegrouping (TI-280)

Description:	list of groups of services Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.605.1 enum (FI-1978)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.605.2 moniker (FI-1977)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.605.3 name (FI-1976)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.606 typeservicerestriction (TI-281)

Description:	Is number of servers servcie can be activated restricted Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.606.1 enum (FI-1982)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.606.2 moniker (FI-1981)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.606.3 name (FI-1980)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.607 typesilencesuppressionthreshold (TI-60)

Description:	allowed silence suppression thresholds in dB Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.607.1 enum (FI-384)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.607.2 moniker (FI-452)	
	Type:	string [50] (Not Modifiable)

	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.607.3 name (FI-385)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.608 typesipassertedtype (TI-467)

Description:	Options: Default=0, PAI=1, PPI=2 Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.608.1 enum (FI-3490)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.608.2 moniker (FI-3492)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.608.3 name (FI-3491)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.609 typesipbandwidthmodifier (TI-1045)

Description:	The TypeSIPBandwidthModifiers table adds support to SIP session level bandwidth modifiers Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.609.1 enum (FI-9851)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.609.2 moniker (FI-9853)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A sort name to identify the record

	2.3.609.3 name (FI-9852)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Name of the Bandwidth MOfifier type.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.610 typesipcodec (TI-205)

Description:	used for SIP Trunk codecs Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.610.1 enum (FI-1293)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.610.2 moniker (FI-1292)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.610.3 name (FI-1291)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.611 typesipidentityblend (TI-1062)

Description:	Options for what information to include in SIP connected party identity headers. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.611.1 enum (FI-9971)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for TypeSIPIdentityBlend
	2.3.611.2 moniker (FI-9973)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker for TypeSIPIdentityBlend
	2.3.611.3 name (FI-9972)	

	Type:	string [80] (Not Modifiable)
	Remarks:	Name of the SIP identity blend option
Uniqueness:	No multicolumn uniqueness constraints	

2.3.612 typesipprivacy (TI-466)

Description:	Options: Default=0, None=1, ID=2, ID Critical=6 Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.612.1 enum (FI-3486)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.612.2 moniker (FI-3488)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.612.3 name (FI-3487)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.613 typesiprel1xxoptions (TI-530)

Description:	Define Rel1XX Options for SIP profile Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.613.1 enum (FI-3898)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.613.2 moniker (FI-3900)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.613.3 name (FI-3899)	

	Type:	string [100] (Not Modifiable)
--	-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.614 typesipreroute (TI-480)

Description:	Type of rerouting information used for calls over SIP trunks Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.614.1 enum (FI-3574)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.614.2 moniker (FI-3576)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.614.3 name (FI-3575)	
	Type:	string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.615 typesipscripterrorhandling (TI-537)

Description:	Type values for SIP Normalization script error handling Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.615.1 enum (FI-6055)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the TypeSIPScriptErrorHandler record
	2.3.615.2 isavailableselectionforresourceerror (FI-6059)	
	Type:	bool (Not Modifiable)
	Remarks:	To check if this particular TypeSIPScriptErrorHandler entry is available to select for Resource Error Action
	2.3.615.3 isdefaultforresourceerror (FI-6060)	
	Type:	bool (Not Modifiable)
	Remarks:	To check if this particular TypeSIPScriptErrorHandler entry is the default for Resource Error Action

2.3.615.4 isdefaultforruntimeerror (FI-6058)	
Type:	bool (Not Modifiable)
Remarks:	To check if this particular TypeSIPScriptErrorHandler entry is the default for Run Time Error Action
2.3.615.5 moniker (FI-6057)	
Type:	string [50] (Not Modifiable)
Remarks:	A moniker to identify the TypeSIPScriptErrorHandler record
2.3.615.6 name (FI-6056)	
Type:	string [50] (Not Modifiable)
Remarks:	A name to identify the TypeSIPScriptErrorHandler record
Uniqueness:	No multicolumn uniqueness constraints

2.3.616 typesipsessionrefreshmethod (TI-2105)

Description:	Options for SIP method for session refresh Records may be modified only by installation and/or DB triggers.
Fields:	2.3.616.1 enum (FI-21006) Type: enum (Unique, Indexed, Not Modifiable) Remarks: Unique identifier for TypeSipSessionRefreshMethod. 2.3.616.2 moniker (FI-21008) Type: string [50] (Not Modifiable) Remarks: Moniker for TypeSipSessionRefreshMethod record. 2.3.616.3 name (FI-21007) Type: string [25] (Unique, Indexed, Not Modifiable) Remarks: Name of SIP method for session refresh.
Uniqueness:	No multicolumn uniqueness constraints

2.3.617 typesiptrunkcallegsecurity (TI-1042)

Description:	Options for Call Leg Security on a SIP Trunk when using sRTP Records may be modified only by installation and/or DB triggers.
Fields:	2.3.617.1 enum (FI-9825)

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.617.2 moniker (FI-9827)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.617.3 name (FI-9826)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A name to identify the record
Uniqueness:	No multicolumn uniqueness constraints	

2.3.618 typesite (TI-576)

Description:	Cisco BE: Different type of sites like hub,internet,remote Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.618.1 enum (FI-6021)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.618.2 moniker (FI-6023)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.618.3 name (FI-6022)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the type of site
Uniqueness:	No multicolumn uniqueness constraints	

2.3.619 typesoftkey (TI-188)

Description:	Softkey event for Sculpin Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.619.1 englishlabel (FI-1144)	

Type:	string [16] (Unique, Not Modifiable)
Default Value:	EMPTY
Remarks:	The English label for softkey, such as "Redial".

2.3.619.2 enum (FI-1141)

Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	range of 1-255. This enum is actually a event ID, which is associated with application. 1-64 for Call Processing, 65-255 for other application

2.3.619.3 helpid (FI-1160)

Type:	long (Not Modifiable, Null OK)
Default Value:	NULL
Remarks:	help id for telecatser help text

2.3.619.4 mandatorymask (FI-1145)

Type:	long (Not Modifiable)
Default Value:	0
Remarks:	Indicator for whether the softkey is required in certain call state

2.3.619.5 moniker (FI-1148)

Type:	string [50] (Not Modifiable)
Default Value:	EMPTY
Remarks:	A sort name to identify the record

2.3.619.6 name (FI-1147)

Type:	string [50] (Not Modifiable)
-------	------------------------------

2.3.619.7 tag (FI-1143)

Type:	string [0] (Not Modifiable)
Default Value:	EMPTY
Remarks:	This tag is used for localization application to look up the display text for phone

2.3.619.8 [tkservice](#) (FI-1142)

Type:	enum (Not Modifiable)
Default Value:	0

2.3.619.9 validationmask (FI-1146)

Type:	long (Not Modifiable)
-------	-----------------------

	Default Value:	0
	Remarks:	Indicator for whether the softkey is valid in certain state
Uniqueness:	No multicolumn uniqueness constraints	

2.3.620 typespa8800port (TI-1052)

Description:	Cisco BE: This table contains the information about ports in SPA8800 gateway Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.620.1 enum (FI-6221)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for typeSPA8800Port
	2.3.620.2 ispstnconnection (FI-6226)	
	Type:	bool (Null OK)
	Default Value:	FALSE
	Remarks:	Indicates FXO port (True) or FXS port (False) of the typeSPA8800Port
	2.3.620.3 mgcpport (FI-6224)	
	Type:	long
	Remarks:	This will store the MGCP port number of the typeSPA8800Port
	2.3.620.4 moniker (FI-6223)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	Moniker for typeSPA8800Port
	2.3.620.5 name (FI-6222)	
	Type:	string [10] (Unique, Indexed, Not Modifiable)
	Remarks:	Name for the typeSPA8800Port
	2.3.620.6 tcpport (FI-6225)	
	Type:	long
	Remarks:	This will store the TCP port number of the typeSPA8800Port
Uniqueness:	No multicolumn uniqueness constraints	

2.3.621 typesrstoption (TI-195)

Description: List of SRST option supported by Cisco Phone and DB
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.621.1 enum (FI-1205)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.621.2 moniker (FI-1207)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.621.3 name (FI-1206)	
	Type:	string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.622 typessomode (TI-2619)

Description: The possible single sign-on modes
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.622.1 enum (FI-25821)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.622.2 moniker (FI-25823)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.622.3 name (FI-25822)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the Single Sign On mode
Uniqueness:	No multicolumn uniqueness constraints	

2.3.623 typestartdialprotocol (TI-114)

Description: Immediate vs wink, etc.

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.623.1 enum (FI-626)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.623.2 moniker (FI-628)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.623.3 name (FI-627)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.624 tpestatus (TI-61)

Description:	tri-state values (on, off, default) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.624.1 enum (FI-386)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.624.2 moniker (FI-453)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.624.3 name (FI-387)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.625 tpestringformat (TI-2151)

Description:	Localized string format type. Records may be modified only by installation and/or DB triggers.	
--------------	---	--

Fields:	2.3.625.1 enum (FI-21244)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.625.2 moniker (FI-21246)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Moniker
	2.3.625.3 name (FI-21245)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the string format type
Uniqueness:	No multicolumn uniqueness constraints	

2.3.626 typestringformatrule (TI-2152)

Description: Localized string format rule.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.626.1 enum (FI-21247)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.626.2 moniker (FI-21249)	
	Type:	string [50] (Unique, Not Modifiable)
	Remarks:	Moniker
	2.3.626.3 name (FI-21248)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the string format rule
	2.3.626.4 ruleexpression (FI-21251)	
	Type:	string [255] (Not Modifiable)
	Remarks:	String format rule expression with replacement tokens.
	2.3.626.5 tkstringformat (FI-21250)	
	Type:	enum (Indexed, Not Modifiable)
	Remarks:	String format type with which this rule is associated.

Uniqueness: No multicolumn uniqueness constraints

2.3.627 typesubclass (TI-392)

Description: CIA-309 to facilitate Servicability
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.627.1 enum (FI-2900)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.627.2 moniker (FI-2902)	
	Type:	string [100] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.627.3 name (FI-2901)	
	Type:	string [100] (Not Modifiable)
	2.3.627.4 tkclass (FI-2947)	
	Type:	enum (Not Modifiable)
	2.3.627.5 value (FI-2948)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.628 typesubpatternusage (TI-1075)

Description: Cisco BE: Creator of pattern in NumPlan
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:	2.3.628.1 enum (FI-10102)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.628.2 moniker (FI-10104)	
	Type:	string [100] (Not Modifiable)
	Remarks:	A sort name to identify the record

	2.3.628.3 name (FI-10103)
	Type: string [50] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.629 typesupportsfeature (TI-179)

Description: The various features support by CM
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.629.1 description (FI-1198)
	Type: string [1024] (Not Modifiable)
	Default Value: EMPTY
	Remarks: Describes the feature and any extra values it might require.
	2.3.629.2 enum (FI-1104)
	Type: enum (Unique, Indexed, Not Modifiable)
	Remarks: A number to identify the record
	2.3.629.3 hasparameter (FI-1363)
	Type: bool (Not Modifiable)
	Default Value: 0
	Remarks: Does this feature have a parameter that the user might enter?
	2.3.629.4 isgatewayfeature (FI-1365)
	Type: bool (Not Modifiable)
	Default Value: 0
	Remarks: Is this a gateway feature?
	2.3.629.5 isphonefeature (FI-1364)
	Type: bool (Not Modifiable)
	Default Value: 0
	Remarks: Is this a phone feature?
	2.3.629.6 moniker (FI-1106)
	Type: string [50] (Not Modifiable)
	Default Value: EMPTY

	Remarks:	A sort name to identify the record
	2.3.629.7 name (FI-1105)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.630 typesyslogmessage (TI-623)

Description:	Syslog Message Levels Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.630.1 enum (FI-5181)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.630.2 moniker (FI-5183)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify the record
	2.3.630.3 name (FI-5182)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.631 typesystemfeature (TI-96)

Description:	null Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.631.1 enum (FI-375)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.631.2 moniker (FI-454)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record

	2.3.631.3 name (FI-390)
Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.632 typetableinfo (TI-265)

Description: Table information (datadictionary in database)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.632.1 checkconstraint (FI-1872)
Type:	string [255] (Not Modifiable, Null OK)
Default Value:	EMPTY
Remarks:	Text that will be used to specify the rules for a column.(must follow check SQL syntax)
	2.3.632.2 convertcopy (FI-1984)
Type:	bool (Not Modifiable)
Remarks:	true is table is to be copied during db conversion
	2.3.632.3 description (FI-1862)
Type:	string [255] (Not Modifiable, Null OK)
Default Value:	EMPTY
Remarks:	Best development description of table
	2.3.632.4 enum (FI-1860)
Type:	enum (Unique, Indexed, Not Modifiable)
Remarks:	Integer that enumerates tables
	2.3.632.5 excludechangenotifycheck (FI-1869)
Type:	bool (Not Modifiable)
Remarks:	True if change notify is not used with this table
	2.3.632.6 hasdefaultrecords (FI-1866)
Type:	bool (Not Modifiable)
Remarks:	True if records for this table are found in datadictionary
	2.3.632.7 isreplicated (FI-1863)
Type:	bool (Not Modifiable)

Remarks:	Shall this table be incorporated in to replication configuration.
2.3.632.8 migrationnote (FI-1867)	
Type:	string [255] (Not Modifiable, Null OK)
Remarks:	Textual description of where this value is created from(table and column) in previous schema.
2.3.632.9 notmodifiable (FI-1871)	
Type:	bool (Not Modifiable)
Remarks:	True if can not be modified by user (only modified by install or trigger)
2.3.632.10 nouserinsert (FI-1870)	
Type:	bool (Not Modifiable)
Remarks:	True if can not be inserted by user (only inserted by install or trigger)
2.3.632.11 processconfigrelation (FI-2008)	
Type:	bool (Not Modifiable)
2.3.632.12 schemaowner (FI-4411)	
Type:	long
Default Value:	1
Migration Source:	Schema Owner
Remarks:	UCM 1 CDS 2 BOTH 3
2.3.632.13 tableguid (FI-2961)	
Type:	guid (Not Modifiable)
Default Value:	newid()
2.3.632.14 tablename (FI-1861)	
Type:	string [32] (Unique, Indexed, Not Modifiable)
Default Value:	EMPTY
Remarks:	Name of table
Uniqueness:	No multicolumn uniqueness constraints

2.3.633 typetaskstatus (TI-518)

Description:	Task Status Records may be modified only by installation and/or DB triggers.
Fields:	

	2.3.633.1 enum (FI-5165)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.633.2 moniker (FI-5167)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.633.3 name (FI-5166)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.634 typetelnetlevel (TI-397)

Description:	telnet enable level for 7960 and 7940 phones Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.634.1 enum (FI-2969)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.634.2 moniker (FI-2971)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.634.3 name (FI-2970)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.635 typeterminal (TI-139)

Description:	used for gatekeeper Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.635.1 enum (FI-779)	

	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.635.2 moniker (FI-781)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.635.3 name (FI-780)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.636 typetimeofday (TI-311)

Description:	Used for Time Period Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.636.1 enum (FI-2153)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.636.2 moniker (FI-2154)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.636.3 name (FI-2152)	
	Type:	string [100] (Unique, Indexed, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.637 typetimeschedulecategory (TI-477)

Description:	Type of Time Schedule Categories, regular or holiday/vacation schedule Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.637.1 enum (FI-3535)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.637.2 moniker (FI-3537)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.637.3 name (FI-3536)	
	Type:	string [100] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.638 timezone (TI-62)

Description:	24 time zones Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.638.1 abbreviation (FI-3065)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.638.2 bias (FI-1223)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.638.3 description (FI-396)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	2.3.638.4 dstbias (FI-1227)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.638.5 dstdate (FI-1226)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.638.6 enum (FI-394)	
	Type:	enum (Unique, Indexed, Not Modifiable)

	Remarks:	A number to identify the record
	2.3.638.7 legacyname (FI-3226)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	the old timezone name before Olson
	2.3.638.8 moniker (FI-461)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.638.9 name (FI-395)	
	Type:	string [100] (Not Modifiable)
	2.3.638.10 stdbias (FI-1225)	
	Type:	long (Not Modifiable, Null OK)
	Default Value:	NULL
	2.3.638.11 stddate (FI-1224)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.639 typetracelevelgrouping (TI-295)

Description:	Used to map which trace level to trace level groups Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.639.1 description (FI-2069)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	2.3.639.2 enum (FI-2064)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.639.3 moniker (FI-2065)	

	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.639.4 name (FI-2066)	
	Type:	string [100] (Not Modifiable)
	2.3.639.5 tktracelevelgroups (FI-2068)	
	Type:	enum (Not Modifiable)
	Default Value:	0
	2.3.639.6 value (FI-2067)	
	Type:	long (Not Modifiable)
	Default Value:	0
Uniqueness:	No multicolumn uniqueness constraints	

2.3.640 typetracelevelgroups (TI-294)

Description:	Used to specify which trace level group will be used by service Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.640.1 enum (FI-2061)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.640.2 moniker (FI-2062)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.640.3 name (FI-2063)	
	Type:	string [100] (Not Modifiable)
	Uniqueness: No multicolumn uniqueness constraints	

2.3.641 typetransport (TI-204)

Description:	used for SIP Trunk, has 2 values TCP or UDP
--------------	---

	Records may be modified only by installation and/or DB triggers.
Fields:	2.3.641.1 enum (FI-1294) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.641.2 moniker (FI-1295) Type: string [100] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.641.3 name (FI-1296) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.642 typetrunk (TI-63)	
Description:	trunk types for access devices Records may be modified only by installation and/or DB triggers.
Fields:	2.3.642.1 enum (FI-412) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.642.2 moniker (FI-456) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.642.3 name (FI-413) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.643 typetrunkdirection (TI-64)	
Description:	direction for access ports Records may be modified only by installation and/or DB triggers.

Fields:	2.3.643.1 enum (FI-397)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.643.2 moniker (FI-457)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.643.3 name (FI-398)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.644 typetrunklevel (TI-65)

Description:	trunk application types Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.644.1 enum (FI-399)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.644.2 moniker (FI-458)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.644.3 name (FI-400)	
	Type:	string [100] (Not Modifiable)
	2.3.644.4 trunkapplicationdescription (FI-401)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.645 typetrunkpad (TI-66)

Description:	pad values for trunks in dB Records may be modified only by installation and/or DB triggers.
Fields:	2.3.645.1 enum (FI-402) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.645.2 moniker (FI-459) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.645.3 name (FI-403) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.646 typetrunkselectionorder (TI-67)

Description:	bottom-up, or top-down selection order Records may be modified only by installation and/or DB triggers.
Fields:	2.3.646.1 enum (FI-404) Type: enum (Unique, Indexed, Not Modifiable) Remarks: A number to identify the record 2.3.646.2 moniker (FI-460) Type: string [50] (Not Modifiable) Default Value: EMPTY Remarks: A sort name to identify the record 2.3.646.3 name (FI-405) Type: string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints

2.3.647 typetrunkservice (TI-526)

Description: Types of Trunk Service

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.647.1 enum (FI-3875)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.647.2 moniker (FI-3877)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.647.3 name (FI-3876)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.648 typetrustrole (TI-659)

Description:	Trust Verification Service Roles Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.648.1 enum (FI-5387)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.648.2 moniker (FI-5389)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A short name to identify record
	2.3.648.3 name (FI-5388)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name
Uniqueness:	No multicolumn uniqueness constraints	

2.3.649 typetunneledprotocol (TI-312)

Description:	Defines Tunneled Protocol for Intercluster trunks	
--------------	---	--

	Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.649.1 enum (FI-2158)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.649.2 moniker (FI-2156)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.649.3 name (FI-2157)	
	Type:	string [100] (Unique, Indexed, Not Modifiable)
	2.3.649.4 tunneledprotocol (FI-2155)	
	Type:	long
Uniqueness:	No multicolumn uniqueness constraints	

2.3.650 typeucproduct (TI-1092)		
Description:	Specific Unified Communications (UC) products that interact with UCM (e.g., Unity, Unity Connection, WebEx, MeetingPlace, Exchange) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.650.1 advancedproductsettingsfile (FI-6303)	
	Type:	string [255] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	Path to file containing XML used to render additional settings for the UC Service
	2.3.650.2 enum (FI-6297)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.650.3 moniker (FI-6299)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.650.4 name (FI-6298)	
	Type:	string [50] (Not Modifiable)

	Remarks:	Name of the Unified Communications Product
	2.3.650.5 showhostnameorip (FI-6301)	
	Type:	bool (Not Modifiable)
	Remarks:	Indicates whether or not a Host Name or IP Address is used to integrate with the UC Product management interface
	2.3.650.6 showport (FI-6302)	
	Type:	bool (Not Modifiable)
	Remarks:	Indicates whether or not a Port number is used to integrate with the UC Product management interface
	2.3.650.7 tkucservice (FI-6300)	
	Type:	enum (Not Modifiable)
	Remarks:	Reference to Unified Communications Service for which this Product is used
Uniqueness:	No multicolumn uniqueness constraints	

2.3.651 typeucproductappservermap (TI-1093)		
Description:	Maps the existing UCM Application Server types to the UC Product types. For example, maps existing Unity AppServer type to the Unity UC Product. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.651.1 enum (FI-6304)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.651.2 moniker (FI-6306)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.651.3 name (FI-6305)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the Unified Communications Product to Application Server Mapping
	2.3.651.4 tkappserver (FI-6308)	
	Type:	enum (Not Modifiable)
	Remarks:	Reference to UCM Application Server type that matches the UC Product
	2.3.651.5 tkucproduct (FI-6307)	
	Type:	enum (Not Modifiable)

	Remarks:	Reference to Unified Communications Product
Uniqueness:	No multicolumn uniqueness constraints	

2.3.652 typeucproductconnectprotocolmap (TI-1094)

Description: Defines the allowed connection protocols for communication between UCM and other UC products.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.652.1 defaultport (FI-10192)	
	Type:	long (Not Modifiable, Null OK)
	Remarks:	Default Port for Unified Communications Product Type
	2.3.652.2 enum (FI-6309)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.652.3 isdefault (FI-6314)	
	Type:	bool (Not Modifiable)
	Remarks:	Indicates whether or not a Connection Protocol is the default for a UC Product
	2.3.652.4 moniker (FI-6311)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.652.5 name (FI-6310)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the Unified Communications Product to Application Server Mapping
	2.3.652.6 sortorder (FI-6315)	
	Type:	long (Not Modifiable)
	Remarks:	Used to order the display of Connection Protocols for a UC Product
	2.3.652.7 tkconnectprotocol (FI-6313)	
	Type:	enum (Not Modifiable, Null OK)
	Remarks:	Reference to a Connection Protocol that is used to manage the UC Product
	2.3.652.8 tkucproduct (FI-6312)	
	Type:	enum (Not Modifiable)

	Remarks: Reference to Unified Communications Product
Uniqueness:	No multicolumn uniqueness constraints

2.3.653 typeucservice (TI-1091)

Description: General classifications for Unified Communications services that interact around UCM (e.g., Voicemail, Conferencing, Directory, Presence)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.653.1 advancedprofilesettingsfile (FI-6296)
	Type: string [255] (Not Modifiable)
	Default Value: EMPTY
	Remarks: Path to file containing XML used to render additional Service Profile settings for the UC Service
	2.3.653.2 enum (FI-6293)
	Type: enum (Unique, Indexed, Not Modifiable)
	Remarks: A number to identify the record
	2.3.653.3 moniker (FI-6295)
	Type: string [50] (Not Modifiable)
	Remarks: A sort name to identify the record
	2.3.653.4 name (FI-6294)
	Type: string [50] (Not Modifiable)
	Remarks: Name of the Unified Communications Service
	2.3.653.5 requireconsistentproduct (FI-6346)
	Type: bool
	Remarks: Indicates whether or not a Service Profile can contain a mix of different products or product versions for this type of UC Service. If true, all products for the UC Service (e.g., for Conferencing) must be identical in the Service Profile.
	2.3.653.6 showcertificateverificationlevel (FI-6345)
	Type: bool
	Remarks: Indicates whether or not Certificate Verification Level is used with this UC Service type. If true, a level must be indicated in the UC Service Profile Detail. If false, no level is specified (null).
	2.3.653.7 tagname (FI-25776)
	Type: string [50] (Not Modifiable)
	Remarks: TagName to provide separation between the display name and XML element name for the UCService

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.654 typeuridisambiguationpolicy (TI-1061)

Description:	Options for interpreting an ambiguous called party identifier. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.654.1 enum (FI-9968)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	unique identifier for TypeURIDisambiguationPolicy
	2.3.654.2 moniker (FI-9970)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Moniker for TypeURIDisambiguationPolicy
	2.3.654.3 name (FI-9969)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the URI disambiguation policy
Uniqueness:	No multicolumn uniqueness constraints	

2.3.655 typeusageprofilefeature (TI-579)

Description:	Cisco BE: To store a list of available features for usageprofile Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.655.1 enum (FI-6034)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.655.2 featurecontrolclause (FI-6114)	
	Type:	string [50] (Null OK)
	Default Value:	NULL
	Remarks:	Indicates a colon separated list of feature control type associated with the usage profile
	2.3.655.3 moniker (FI-6036)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY

	Remarks:	A sort name to identify the record
	2.3.655.4 name (FI-6035)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the type of usageprofile feature
	2.3.655.5 softkeyclause (FI-6113)	
	Type:	string [50] (Null OK)
	Default Value:	NULL
	Remarks:	Indicates the colon separated list of softkey associated with the usage profile
	2.3.655.6 tkfeature (FI-6037)	
	Type:	enum (Null OK)
	Remarks:	reference to feature
Uniqueness:	No multicolumn uniqueness constraints	

2.3.656 typeuseentity (TI-585)

Description:	Cisco BE: To store different type of entity like enduser,department Is not replicated. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.656.1 enum (FI-6098)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.656.2 moniker (FI-6100)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.656.3 name (FI-6099)	
	Type:	string [100] (Not Modifiable)
	Remarks:	Name of the typeUse
Uniqueness:	No multicolumn uniqueness constraints	

2.3.657 typeuseragentserverheaderinfo (TI-1051)

Description:	The TypeUserAgentServerHeaderInfo table specifies User-agent and server header pass through config options on SIP Profile Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.657.1 enum (FI-9911)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.657.2 moniker (FI-9913)	
	Type:	string [60] (Unique, Indexed, Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.657.3 name (FI-9912)	
	Type:	string [60] (Unique, Indexed, Not Modifiable)
	Remarks:	Name of the User-agent and server header pass through config options type.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.658 typeuserassociation (TI-328)

Description:	User association types (CTI Control IN, CTI control out, Digest In, Digest Out, Profile Available) Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.658.1 enum (FI-2449)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.658.2 moniker (FI-2451)	
	Type:	string [100] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.658.3 name (FI-2450)	
	Type:	string [100] (Unique, Indexed, Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.659 typeuserlocale (TI-169)

Description:	list of user locales
--------------	----------------------

Records may be modified only by installation and/or DB triggers.

Fields:

2.3.659.1 alternatescript (FI-2097)

Type: string [20] (Not Modifiable)

Default Value: EMPTY

2.3.659.2 cmversion (FI-1029)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

2.3.659.3 componentversion (FI-1030)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

2.3.659.4 enum (FI-1084)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.659.5 languagelocalecode (FI-2071)

Type: string [10] (Not Modifiable)

Default Value: EMPTY

Remarks: ISO two character ISO language code and two character ISO country code concatenated with an underscore (mixed case): example fr_FR, en_US, it_IT, zh_HK

2.3.659.6 localecode (FI-2070)

Type: string [10] (Not Modifiable)

Default Value: EMPTY

Remarks: ISO three character locale code (uppercase): example FRA, ENU, ITA, PTB, ZHH

2.3.659.7 moniker (FI-1034)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.659.8 name (FI-1027)

Type: string [50] (Not Modifiable)

2.3.659.9 nativename (FI-1055)

Type: string [100] (Not Modifiable)

	Default Value:	EMPTY
	2.3.659.10 tklanguage_spoken (FI-1032)	
	Type:	enum (Not Modifiable)
	2.3.659.11 tklanguage_written (FI-1031)	
	Type:	enum (Not Modifiable)
	2.3.659.12 tkwincharset (FI-1033)	
	Type:	enum (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.660 typeusernotificationmessage (TI-1057)

Description:	The TypeNotificationMessage table adds support to store the standard User Notification messages. Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.660.1 description (FI-9934)	
	Type:	string [255] (Not Modifiable)
	Remarks:	Description of the Notification Message displayed to ensuser
	2.3.660.2 enum (FI-9931)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.660.3 moniker (FI-9932)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.660.4 name (FI-9933)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the notification message
	2.3.660.5 tkusernotificationsection (FI-9943)	
	Type:	enum
	Remarks:	Determines the class of user notification message: Info=1 Setup=2 Feature=3
Uniqueness:	No multicolumn uniqueness constraints	

2.3.661 typeusertnotificationsection (TI-1059)

Description: This table is used to identify the section of notification message displayed to user:Info,Setup and Feature specific notificaiton messages
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.661.1 enum (FI-9940)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.661.2 moniker (FI-9942)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the notification message section

2.3.661.3 name (FI-9941)

Type: string [50] (Not Modifiable)

Remarks: Name of the notification message section

Uniqueness: No multicolumn uniqueness constraints

2.3.662 typeuserprofile (TI-356)

Description: Types of users - Real or Template
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.662.1 enum (FI-2654)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.662.2 moniker (FI-2653)

Type: string [50] (Unique, Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.662.3 name (FI-2652)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.663 typeusntype (TI-2106)

Description: Update sequence number payload types.
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.663.1 enum (FI-21009)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: unique identifier for TypeUsnType

2.3.663.2 moniker (FI-21011)

Type: string [50] (Not Modifiable)

Remarks: Moniker for TypeUsntype

2.3.663.3 name (FI-21010)

Type: string [50] (Not Modifiable)

Remarks: Text display

2.3.663.4 tag (FI-21012)

Type: string [20] (Not Modifiable)

Remarks: Tag used in replication protocol

Uniqueness: No multicolumn uniqueness constraints

2.3.664 typev150sdpfilter (TI-1044)

Description: SDP Filter setting options for V150 Capabilities. Applicable to SIP Trunks in Security Profiles.
Is not replicated. Records may be modified only by installation and/or DB triggers.

Fields:

2.3.664.1 enum (FI-9841)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.664.2 moniker (FI-9842)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.664.3 name (FI-9843)

	Type:	string [100] (Not Modifiable)
--	-------	-------------------------------

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.665 typevideocalltrafficclass (TI-549)

Description:	Type of Video Call Traffic Class configured on a SIP Profile for a Trunk Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.665.1 enum (FI-6340)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the type of video call traffic
	2.3.665.2 moniker (FI-6342)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A moniker to identify the record
	2.3.665.3 name (FI-6341)	
	Type:	string [50] (Unique, Indexed, Not Modifiable)
	Remarks:	A name to identify the record

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.666 typeviprfilterelement (TI-638)

Description:	Used for specifying filter element type for VIPR filter elements Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.666.1 enum (FI-5294)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.666.2 moniker (FI-5296)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.666.3 name (FI-5295)	
	Type:	string [100] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.667 typevmavoidancepolicy (TI-1028)

Description:	Type of VoiceMail Avoidance Policy to determine whether a real mobile user or mobile voice mail answers a call Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.667.1 enum (FI-6347)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the type of voice mail avoidance policy chosen</div> <div>2.3.667.2 moniker (FI-6348)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Remarks: A moniker to identify the record</div> <div>2.3.667.3 name (FI-6349)</div> <div>Type: string [50] (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A name to identify the record</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.668 typevpncientauthentication (TI-662)

Description:	VPN Client Authentication Types:User And Password (0), Password Only (1), Certificate (2). Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.668.1 enum (FI-5415)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record</div> <div>2.3.668.2 moniker (FI-5417)</div> <div>Type: string [50] (Not Modifiable)</div> <div>Default Value: EMPTY</div> <div>Remarks: A short name to identify the record</div> <div>2.3.668.3 name (FI-5416)</div> <div>Type: string [100] (Not Modifiable)</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.669 typewebpage (TI-1114)

Description: Stores administration web page information. The content of this table is maintained by CMUI team
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.669.1 enum (FI-10288)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record.
	2.3.669.2 moniker (FI-10290)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record.
	2.3.669.3 name (FI-10289)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the location state.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.670 typewebpagedisplay (TI-1115)

Description: Stores administration web page display control options
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.670.1 enum (FI-10326)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record.
	2.3.670.2 moniker (FI-10292)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record.
	2.3.670.3 name (FI-10291)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Name of the location state.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.671 typewebpageinfo (TI-299)

Description: List of web pages in CCMAAdmin
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.671.1 bundle (FI-2103)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.2 description (FI-2102)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.3 enum (FI-2099)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.671.4 findlisttopicmarker (FI-2513)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.5 formname (FI-2100)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.6 pagename (FI-2104)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.7 title (FI-2101)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.8 topicmarker (FI-2514)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	2.3.671.9 webapp (FI-6102)	
	Type:	string [50] (Not Modifiable)

	Default Value: EMPTY
Uniqueness:	No multicolumn uniqueness constraints
2.3.672 typewebpagesection (TI-1116)	
Description:	Stores administration web page section information. The content of this table is maintained by CMUI team Records may be modified only by installation and/or DB triggers.
Fields:	<div>2.3.672.1 displayorder_default (FI-10298)</div> <div>Type: long</div> <div>Remarks: Default order of display sections with in a web page</div> <div>2.3.672.2 enum (FI-10293)</div> <div>Type: enum (Unique, Indexed, Not Modifiable)</div> <div>Remarks: A number to identify the record.</div> <div>2.3.672.3 isrequired (FI-10297)</div> <div>Type: bool (Indexed)</div> <div>Remarks: When IsRequired is enabled, tkWebPage display cannot be hidden</div> <div>2.3.672.4 moniker (FI-10295)</div> <div>Type: string [75] (Not Modifiable)</div> <div>Remarks: A sort name to identify the record.</div> <div>2.3.672.5 name (FI-10294)</div> <div>Type: string [75] (Not Modifiable)</div> <div>Remarks: Name of the location state.</div> <div>2.3.672.6 tkwebpage (FI-10296)</div> <div>Type: enum</div> <div>Remarks: Reference to web page</div> <div>2.3.672.7 tkwebpagedisplay_default (FI-10299)</div> <div>Type: enum</div> <div>Remarks: Default reference to Web page Display</div>
Uniqueness:	No multicolumn uniqueness constraints

2.3.673 typewifiauthenticationmethod (TI-2602)

Description: Type of Authentication methods that can be used by Wireless LAN Profile
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.673.1 displayorder (FI-25785)	
	Type:	long (Not Modifiable)
	Remarks:	Order of display sections with in a web page
	2.3.673.2 enum (FI-25707)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.673.3 moniker (FI-25709)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.673.4 name (FI-25708)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of Authentication Method
Uniqueness:	No multicolumn uniqueness constraints	

2.3.674 typewififrequency (TI-2603)

Description: Type of WiFi frequencies that can be used by Wireless LAN Profile.
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.674.1 enum (FI-25710)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier
	2.3.674.2 moniker (FI-25712)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record
	2.3.674.3 name (FI-25711)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of WiFi Frequency

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.675 typewincharset (TI-172)

Description:	List of Windows character set Records may be modified only by installation and/or DB triggers.
--------------	---

Fields:	2.3.675.1 enum (FI-1046)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.675.2 moniker (FI-1048)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.675.3 name (FI-1047)	
	Type:	string [50] (Not Modifiable)

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.676 typewlanprofilechanges (TI-2609)

Description:	Indicates what level of changes can be done to Wireless LAN Profile. Records may be modified only by installation and/or DB triggers.
--------------	--

Fields:	2.3.676.1 enum (FI-25747)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	Unique identifier.
	2.3.676.2 moniker (FI-25749)	
	Type:	string [50] (Not Modifiable)
	Remarks:	A sort name to identify the record.
	2.3.676.3 name (FI-25748)	
	Type:	string [50] (Not Modifiable)
	Remarks:	Specifies the behavior of Wireless LAN Profile changes.

Uniqueness:	No multicolumn uniqueness constraints
-------------	---------------------------------------

2.3.677 typeyellowalarm (TI-127)

Description: used for T1 and PRI
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.677.1 enum (FI-727)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.677.2 moniker (FI-729)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.677.3 name (FI-728)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.678 typezerosuppression (TI-124)

Description: used for T1 and PRI
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.678.1 enum (FI-733)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.678.2 moniker (FI-735)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.678.3 name (FI-734)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.679 typezzconfbridge (TI-377)

Description: use local or phone conference bridge (0 - Local,1 - CCM Conf)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.679.1 enum (FI-2777)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.679.2 moniker (FI-2778)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.679.3 name (FI-2779)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.680 typezzdndcontrol (TI-412)

Description: Types of Do Not Disturb (DND) control for SIP Phones
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.680.1 enum (FI-3060)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.680.2 moniker (FI-3062)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.680.3 name (FI-3061)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.681 typezzdtmfdblevel (TI-379)

Description: dtmf transmit level (1 - 6 dB below nominal, 2 - 3 dB below nominal, 3-nominal, 4-3 dB above nominal, 5-6 dB above nominal)
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.681.1 enum (FI-2783)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.681.2 moniker (FI-2784)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.681.3 name (FI-2785)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.682 typezznetworkmediatype (TI-381)

Description: network Media (0 - Auto, 1 - Full100, 2 - Half100, 3 - Full10, 3 - Half10)
Records may be modified only by installation and/or DB triggers.

Fields:

2.3.682.1 enum (FI-2789)

Type: enum (Unique, Indexed, Not Modifiable)

Remarks: A number to identify the record

2.3.682.2 moniker (FI-2790)

Type: string [50] (Not Modifiable)

Default Value: EMPTY

Remarks: A sort name to identify the record

2.3.682.3 name (FI-2791)

Type: string [100] (Not Modifiable)

Uniqueness: No multicolumn uniqueness constraints

2.3.683 typezzntpmode (TI-411)

Description:	Types of NTP for SIP Phones Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.683.1 enum (FI-3057)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.683.2 moniker (FI-3059)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.683.3 name (FI-3058)	
	Type:	string [100] (Not Modifiable)
Fields:	2.3.683.4 phone (FI-3070)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
Uniqueness:	No multicolumn uniqueness constraints	

2.3.684 typezzpreff (TI-402)

Description:	Used to differentiate phone control levels for SIP phones Records may be modified only by installation and/or DB triggers.	
Fields:	2.3.684.1 enum (FI-2995)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.684.2 moniker (FI-2997)	
	Type:	string [50] (Unique, Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.684.3 name (FI-2996)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.685 typezzuserinfo (TI-378)

Description: type of user (0 - none,1 - phone,2- ip)
Records may be modified only by installation and/or DB triggers.

Fields:	2.3.685.1 enum (FI-2780)	
	Type:	enum (Unique, Indexed, Not Modifiable)
	Remarks:	A number to identify the record
	2.3.685.2 moniker (FI-2781)	
	Type:	string [50] (Not Modifiable)
	Default Value:	EMPTY
	Remarks:	A sort name to identify the record
	2.3.685.3 name (FI-2782)	
	Type:	string [100] (Not Modifiable)
Uniqueness:	No multicolumn uniqueness constraints	

2.3.686 ucservice (TI-1095)

Description: Stores the provisioning data needed to integrate Unified Communications (UC) products with UCM. A UC Service is a specific instance of a product running on a host

Fields:	2.3.686.1 description (FI-6318)	
	Type:	string [516]
	Default Value:	EMPTY
	Validation:	^[^\x00-\x1F""%&<>]{0,128}\$
	Remarks:	A localizable administrative description of the UC Service
	2.3.686.2 fkappserver (FI-6322)	
	Type:	guid (Indexed, Null OK)
	Remarks:	When there is an Application Server configured that maps to this UC Service type and Host Name or IP Address, a reference to that AppServer is recorded here (by rule).
	Rule (RI-944):	Type: Active (Insert/Update)
		Rule Name: Insert/Update on UCService to sync it up with AppServer
		Description: Whenever an Insert is made on UCService table, create a link between the entries of UCService

			and AppServer table by setting UCTestService.fkAppServer to the pkid of matching AppServer entry. On an Update on UCTestService with hostnameorip getting changed, check if UCTestService.fkAppServer is not null then update the corresponding hostname in AppServer table.
		Test Condition:	ON INSERT IN UCTestService, IF (TypeUCProductAppServerMap.tkUCProduct=UCService.tkUCProduct) THEN Fetch tkAppServer from AppServer table; IF ((AppServer.tkAppServer = UCTestService.tkAppServer) AND (UCService.hostnameorip = AppServer.name)) THEN Fetch pkid from AppServer table; UPDATE UCTestService SET fkAppServer = AppServer.pkid WHERE pkid = UCTestService.pkid; ON UPDATE ON UCTestService with hostnameorip getting changed, IF(UCService.fkAppServer IS NOT NULL) THEN UPDATE AppServer SET name = UCTestService.hostnameorip WHERE pkid = (SELECT fkAppServer FROM UCTestService WHERE pkid = UCTestService.pkid);
	Rule (RI-944):	Type:	Active (Insert/Update) This field is modified by this rule.
		Rule Name:	Insert/Update on UCTestService to sync it up with AppServer
		Description:	Whenever an Insert is made on UCTestService table, create a link between the entries of UCTestService and AppServer table by setting UCTestService.fkAppServer to the pkid of matching AppServer entry. On an Update on UCTestService with hostnameorip getting changed, check if UCTestService.fkAppServer is not null then update the corresponding hostname in AppServer table.
		Test Condition:	ON INSERT IN UCTestService, IF (TypeUCProductAppServerMap.tkUCProduct=UCService.tkUCProduct) THEN Fetch tkAppServer from AppServer table; IF ((AppServer.tkAppServer = UCTestService.tkAppServer) AND (UCService.hostnameorip = AppServer.name)) THEN Fetch pkid from AppServer table; UPDATE UCTestService SET fkAppServer = AppServer.pkid WHERE pkid = UCTestService.pkid; ON UPDATE ON UCTestService with hostnameorip getting changed, IF(UCService.fkAppServer IS NOT NULL) THEN UPDATE AppServer SET name = UCTestService.hostnameorip WHERE pkid = (SELECT fkAppServer FROM UCTestService WHERE pkid = UCTestService.pkid);
	2.3.686.3 hostnameorip (FI-6320)		
	Type:	string [255]	
	Validation:	^[a-zA-Z0-9][a-zA-Z0-9.-]{0,253}[a-zA-Z0-9]\$	
	Remarks:	When required for the UC Service type, the host name or IP address of the server where the UC Service resides	
	Rule (RI-944):	Type:	Active (Insert/Update)
		Rule Name:	Insert/Update on UCTestService to sync it up with AppServer
		Description:	Whenever an Insert is made on UCTestService table, create a link between the entries of UCTestService and AppServer table by setting UCTestService.fkAppServer to the pkid of matching AppServer entry. On an Update on UCTestService with hostnameorip getting changed, check if UCTestService.fkAppServer is not null then update the corresponding hostname in AppServer table.

Test Condition:	ON INSERT IN UCService, IF (TypeUCProductAppServerMap.tkUCProduct=UCService.tkUCProduct) THEN Fetch tkAppServer from AppServer table; IF ((AppServer.tkAppServer = UCService.tkAppServer) AND (UCService.hostnameorip = AppServer.name)) THEN Fetch pkid from AppServer table; UPDATE UCService SET fkAppServer = AppServer.pkid WHERE pkid = UCService.pkid; ON UPDATE ON UCService with hostnameorip getting changed, IF(UCService.fkAppServer IS NOT NULL) THEN UPDATE AppServer SET name = UCService.hostnameorip WHERE pkid = (SELECT fkAppServer FROM UCService WHERE pkid = UCService.pkid);
-----------------	--

2.3.686.4 name (FI-6317)

Type:	string [128] (Unique)
Validation:	^[a-zA-Z0-9 !#\$'()*+,-./:;=?@[^_`{ }~-]{0,128}\$
Remarks:	Unique name to Identify the Unified Communications Service

2.3.686.5 pkid (FI-6316)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique identifier for the record	
Rule (RI-925):	Type:	Active (Update)
	Rule Name:	On Update of UCService,update UCServiceProfile versionstamp
	Description:	On Update of UCService,the versionstamp of corresponding UCServiceProfile should be updated to current time.
	Test Condition:	For UPDATE of UCService,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()
Rule (RI-944):	Type:	Active (Insert/Update)
	Rule Name:	Insert/Update on UCService to sync it up with AppServer
	Description:	Whenever an Insert is made on UCService table, create a link between the entries of UCService and AppServer table by setting UCService.fkAppServer to the pkid of matching AppServer entry. On an Update on UCService with hostnameorip getting changed, check if UCService.fkAppServer is not null then update the corresponding hostname in AppServer table.
	Test Condition:	ON INSERT IN UCService, IF (TypeUCProductAppServerMap.tkUCProduct=UCService.tkUCProduct) THEN Fetch tkAppServer from AppServer table; IF ((AppServer.tkAppServer = UCService.tkAppServer) AND (UCService.hostnameorip = AppServer.name)) THEN Fetch pkid from AppServer table; UPDATE UCService SET fkAppServer = AppServer.pkid WHERE pkid = UCService.pkid; ON UPDATE ON UCService with hostnameorip getting changed, IF(UCService.fkAppServer IS NOT NULL) THEN UPDATE AppServer SET name = UCService.hostnameorip WHERE pkid = (SELECT

fkAppServer FROM UCService WHERE pkid = UCService.pkid);

2.3.686.6 port (FI-6321)

Type: long (Null OK)

Remarks: When required for the UC Service type, the port used to communicate with the UC Service (management interface)

2.3.686.7 resettoggle (FI-10233)

Type: bool

Default Value: FALSE

Remarks: Should this device or group be reset

2.3.686.8 tkconnectprotocol (FI-10191)

Type: enum (Null OK)

Remarks: Reference to a Connection Protocol that is used to interact with the Unified Communications Product

Rule (RI-887):	Type:	Validation (Insert/Update)
	Rule Name:	Validation for UCProduct and ConnectProtocol Combination
	Description:	Checks whether the combination for UCProduct and ConnectProtocol which is added to UCService is present in TypeUCProductConnectProtocolMap
	Test Condition:	IF EXISTS (SELECT 1 FROM TypeUCProductConnectProtocolMap WHERE tkUCProduct=new_tkUCProduct AND tkConnectProtocol=new_tkConnectProtocol)
	Error Message:	Invalid combination of UCProduct and ConnectProtocol

2.3.686.9 tkreset (FI-10232)

Type: enum

Default Value: 2

Remarks: Set by DeviceReset stored procedure. Possible values can be - Hard Reset(1), Soft Reset(2), Apply Configuration(3)

2.3.686.10 tkucproduct (FI-10190)

Type: enum (Null OK)

Remarks: Reference to Unified Communications Product defined for this service

Rule (RI-887):	Type:	Validation (Insert/Update)
	Rule Name:	Validation for UCProduct and ConnectProtocol Combination
	Description:	Checks whether the combination for UCProduct and ConnectProtocol which is added to UCService is present in TypeUCProductConnectProtocolMap
	Test Condition:	IF EXISTS (SELECT 1 FROM TypeUCProductConnectProtocolMap WHERE

	Rule (RI-944):		tkUCProduct=new_tkUCProduct AND tkConnectProtocol=new_tkConnectProtocol)
		Error Message:	Invalid combination of UCProduct and ConnectProtocol
		Type:	Active (Insert/Update)
		Rule Name:	Insert/Update on UCService to sync it up with AppServer
		Description:	Whenever an Insert is made on UCService table, create a link between the entries of UCService and AppServer table by setting UCService.fkAppServer to the pkid of matching AppServer entry. On an Update on UCService with hostnameorip getting changed, check if UCService.fkAppServer is not null then update the corresponding hostname in AppServer table.
		Test Condition:	ON INSERT IN UCService, IF (TypeUCProductAppServerMap.tkUCProduct=UCService.tkUCProduct) THEN Fetch tkAppServer from AppServer table; IF ((AppServer.tkAppServer = UCService.tkAppServer) AND (UCService.hostnameorip = AppServer.name)) THEN Fetch pkid from AppServer table; UPDATE UCService SET fkAppServer = AppServer.pkid WHERE pkid = UCService.pkid; ON UPDATE ON UCService with hostnameorip getting changed, IF(UCService.fkAppServer IS NOT NULL) THEN UPDATE AppServer SET name = UCService.hostnameorip WHERE pkid = (SELECT fkAppServer FROM UCService WHERE pkid = UCService.pkid);
Uniqueness:	No multicolumn uniqueness constraints		

2.3.687 ucserviceprofile (TI-1097)

Description: Stores data defining a profile that groups together multiple UC Services of various types

Fields:

2.3.687.1 description (FI-6328)	
Type:	string [400]
Default Value:	EMPTY
Validation:	^[^\x00-\x1F""%&<>]{0,100}\$
Remarks:	A localizable administrative description of the UC Service Profile
2.3.687.2 isdefault (FI-6329)	
Type:	bool (Indexed)
Default Value:	FALSE
Remarks:	Indicates whether or not this is the default UC Service Profile for the cluster
2.3.687.3 name (FI-6327)	
Type:	string [50] (Unique, Indexed)
Validation:	^[a-zA-Z 0-9._-]{1,50}\$

Remarks: A unique name to identify the UC Service Profile (a collection of UC Services of different types)

2.3.687.4 pkid (FI-6326)

Type: guid (Unique, Indexed, Not Modifiable)

Default Value: newid()

Remarks: Unique identifier for the record

Rule (RI-927):

Type: Active (Update)

Rule Name: On Update of UCServiceProfile,update UCServiceProfile versionstamp

Description: On Update of UCServiceProfile,the versionstamp of corresponding UCServiceProfile should be updated to current time.

Test Condition: For UPDATE of UCServiceProfile,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()

2.3.687.5 resettoggle (FI-10235)

Type: bool

Default Value: FALSE

Remarks: Should this device or group be reset

2.3.687.6 tkreset (FI-10234)

Type: enum

Default Value: 2

Remarks: Set by DeviceReset stored procedure. Possible values can be - Hard Reset(1), Soft Reset(2), Apply Configuration(3)

2.3.687.7 versionstamp (FI-10236)

Type: string [47] (Null OK)

Default Value: 0000000000-c7a6c673-7479-46b0-839e-014d3d123963

Remarks: New guid is generated every time this UCServiceProfile is updated

Rule (RI-927):

Type: Active (Update)

Rule Name: On Update of UCServiceProfile,update UCServiceProfile versionstamp

Description: On Update of UCServiceProfile,the versionstamp of corresponding UCServiceProfile should be updated to current time.

Test Condition: For UPDATE of UCServiceProfile,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()

Rule (RI-927):

Type: Active (Update)

			This field is modified by this rule.
		Rule Name:	On Update of UCServiceProfile,update UCServiceProfile versionstamp
		Description:	On Update of UCServiceProfile,the versionstamp of corresponding UCServiceProfile should be updated to current time.
		Test Condition:	For UPDATE of UCServiceProfile,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()
Uniqueness:	No multicolumn uniqueness constraints		

2.3.688 ucserviceprofiledetail (TI-1098)

Description:	Stores the specific hosts and settings to used when provisioning new users. Each detail record may include up to 3 UC Services of the specified type (e.g., 3 Conferencing services). The services must be of the same type but may be different products (e.g., both Unity and Unity Connection for voicemail).		
Fields:	2.3.688.1 fkucservice_1 (FI-6333)		
	Type:	guid (Indexed, Null OK)	
	Remarks:	A reference to a configured UC Service of the specific type for the UC Service Profile Details. This is the Primary instance of this UC Service in the Profile	
	Rule (RI-901):	Type:	Validation (Insert/Update)
		Rule Name:	Insert/Update UCServiceProfileDetail record
		Description:	On Insert/Update of UCServiceProfileDetail record,all the UCServices in that record should be of same UCProduct type if RequireConsistentProduct is true or of same UCService type otherwise (if RequireConsistentProduct is false)
		Test Condition:	FOR INSERT/UPDATE On UCServiceProfileDetail,IF RequireConsistentProduct = 't' THEN FOR UCService IN (fkUCService_1,fkUCService_2,fkUCService_3) tkProduct IS Same ELSE FOR UCService IN (fkUCService_1,fkUCService_2,fkUCService_3) tkService IS Same END IF;
		Error Message:	Inconsistent UCProduct/UCService Type
		Remedy:	Please provide UCService entry of same UCProduct/UCService type
	2.3.688.2 fkucservice_2 (FI-6334)		
	Type:	guid (Indexed, Null OK)	
	Remarks:	A reference to a configured UC Service of the specific type for the UC Service Profile Details. This is the Secondary instance of this UC Service in the Profile	
	Rule (RI-901):	Type:	Validation (Insert/Update)

Rule Name:	Insert/Update UCServiceProfileDetail record
Description:	On Insert/Update of UCServiceProfileDetail record,all the UCServices in that record should be of same UCProduct type if RequireConsistentProduct is true or of same UCService type otherwise (if RequireConsistentProduct is false)
Test Condition:	FOR INSERT/UPDATE On UCServiceProfileDetail,IF RequireConsistentProduct = 't' THEN FOR UCService IN (fkUCService_1,fkUCService_2,fkUCService_3) tkProduct IS Same ELSE FOR UCService IN (fkUCService_1,fkUCService_2,fkUCService_3) tkService IS Same END IF;
Error Message:	Inconsistent UCProduct/UCService Type

Uniqueness: fkucserviceprofile + tkucservice is unique. (MFI-204)

2.3.689 ucserviceprofiledetailxml (TI-1099)

Description: Stores additional provisioning data in XML format for the referenced UCService in the profile, as specified in the Advanced Profile Settings file for the referenced UC Service

Fields:

2.3.689.1 fkucserviceprofiledetail (FI-6338)

Type: guid (Unique, Indexed, Cascade Delete, Not Modifiable)

Remarks: A reference to the UC Service Profile Detail to which this XML applies

Rule (RI-929):

Type: Active (Update)

Rule Name: On Update of UCServiceProfileDetailXML, update UCServiceProfile versionstamp

		Description:	On Update of UCServiceProfileDetailXML,the versionstamp of corresponding UCServiceProfile should be updated to current time.
		Test Condition:	For UPDATE of UCServiceProfileDetailXML,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()
	2.3.689.2 pkid (FI-6337)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Remarks:	Unique identifier for the record	
	2.3.689.3 xml (FI-6339)		
	Type:	string [1024]	
	Default Value:	EMPTY	
	Remarks:	XML as defined in the Advanced Settings file for the UC Service type	
	Uniqueness:	No multicolumn uniqueness constraints	

2.3.690 ucservicexml (TI-1096)

Description: Stores additional provisioning data in XML format for the referenced UCService, as specified in the Advanced Product Settings file for the referenced UC Product

Fields:

2.3.690.1 fkucservice (FI-6324)		
Type:	guid (Unique, Indexed, Cascade Delete, Not Modifiable)	
Remarks:	A reference to the UC Service to which this XML applies	
Rule (RI-926):	Type:	Active (Update)
	Rule Name:	On Update of UCServiceXML,update UCServiceProfile versionstamp
	Description:	On Update of UCServiceXML,the versionstamp of corresponding UCServiceProfile should be updated to current time.
	Test Condition:	For UPDATE of UCServiceXML,UPDATE UCServiceProfile SET versionstamp = versionStampGenerator()
2.3.690.2 pkid (FI-6323)		
Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Remarks:	Unique identifier for the record	
2.3.690.3 xml (FI-6325)		

	Type:	string [1024]
	Default Value:	EMPTY
	Remarks:	XML as defined in the Advanced Settings file for the UC Product type
Uniqueness:	No multicolumn uniqueness constraints	

2.3.691 ucuserprofile (TI-2607)

Description: Named Groupings of shared User Characteristics and Settings used to reduce manual input when defining user related information. The admin selects a Profile rather than each individual setting.

Fields:

2.3.691.1 allowusertoselfprovisionuptodevlimit (FI-25732)

Type:	bool
Default Value:	FALSE
Remarks:	User permission flag to allow Self-Provisioning.

2.3.691.2 description (FI-25730)

Type:	string [253]
Default Value:	EMPTY
Validation:	^[^"'""]{0,63}\$
Remarks:	Permits admin entry of locale-adjusted descriptive text to aid in UC User Profile selection.

2.3.691.3 name (FI-25729)

Type:	string [50] (Unique)
Remarks:	Name used to identify and select the UC User Profile

2.3.691.4 pkid (FI-25728)

Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Migration Source:	Generated
Remarks:	Unique ID to identify a record.

2.3.691.5 userdeviceLimitWhenSelfProvisioning (FI-25731)

Type:	long
Default Value:	10
Check Constraint:	(UserDeviceLimitWhenSelfProvisioning>=0) AND (UserDeviceLimitWhenSelfProvisioning<=20)

	Remarks:	Even Users permitted to self-provision may not do so if it will cause them to have more than this many devices. Used to limit license consumption impact of inadvertent or excess user-initiated device configurations.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.692 ucuserprofiledevicemap (TI-1111)

Description:	Associates a UC User Profile with Universal Device Template(s) used in Quick Phone Provisioning of different category phones models		
Fields:	2.3.692.1 fkdevice (FI-10265)		
	Type:	guid (Indexed, Cascade Delete)	
	Remarks:	Reference to Common device template	
	Rule (RFI-309):	Type:	Inter-field Condition and Constraint
		Constraint:	(EXISTS (SELECT 1 FROM Device D WHERE D.pkid = fkDevice AND tkModel = (SELECT enum FROM TypeModel WHERE Moniker = 'MODEL_UNIVERSAL_DEVICE_TEMPLATE')))
		Null Allowed:	null
		Remarks:	All device categories related to Feature Group Templates must be of type Universal Device Template.
	2.3.692.2 fkucuserprofile (FI-10266)		
	Type:	guid (Indexed, Cascade Delete)	
	Remarks:	Reference to the UC User Profile to which the associated Universal Device Template applies.	
	2.3.692.3 pkid (FI-10259)		
	Type:	guid (Unique, Indexed, Not Modifiable)	
	Default Value:	newid()	
	Remarks:	Unique identifier for the record	
2.3.692.4 tkphonecategory (FI-10267)			
Type:	enum (Indexed)		
Remarks:	Specified type of phone for assoication.		
Uniqueness:	No multicolumn uniqueness constraints		

2.3.693 ucuserprofilenumplanmap (TI-2146)

Description:	Associates a UC User Profile with the Universal Line Template used in Quick Phone Provisioning line setup.
--------------	--

Fields:	2.3.693.1 fknumplan (FI-21225)	
	Type:	guid (Indexed, Cascade Delete)
	Remarks:	Reference to numplan records
	2.3.693.2 fkuserprofile (FI-21224)	
	Type:	guid (Unique, Indexed, Cascade Delete)
	Remarks:	Reference to UC User Profile to which the associated Universal Line Template applies.
	2.3.693.3 pkid (FI-21223)	
	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Migration Source:	Generated
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

2.3.694 [usageprofile \(TI-574\)](#)

Description: Cisco BE: Usage Profile is a collection of different CUCM configurations that can be assigned to a group of users
Is not replicated.

Fields:	2.3.694.1 allowedfeaturelist (FI-6014)	
	Type:	string [50]
	Remarks:	CSV string of feature numbers
	2.3.694.2 allowemergencycalls (FI-6013)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	check for Emergency calls
	2.3.694.3 allowemfordevices (FI-6137)	
	Type:	bool
	Default Value:	FALSE
	Remarks:	Extension Mobility Allowed For Devices
	2.3.694.4 allowemforusers (FI-6136)	
	Type:	bool

Default Value:	FALSE
Remarks:	Extension Mobility Allowed For Users

2.3.694.5 allowsinglenumberreach (FI-6138)

Type:	bool
Default Value:	FALSE
Remarks:	Single Number Reach Allowed

2.3.694.6 allowvoicemail (FI-6170)

Type:	bool
Default Value:	FALSE
Remarks:	Voice Mail Allowed for the users belongs to this usageProfile

2.3.694.7 cfbdestination (FI-6141)

Type:	dn (Null OK)
DN Type:	DN_TYPE_MASK
Default Value:	EMPTY
Remarks:	Destination for Forward Busy in a Usage Profile

Rule (RI-893):	Type:	Active (Insert/Update)
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null

Rule (RI-893):	Type:	Active (Insert/Update) This field is modified by this rule.
	Rule Name:	Encode URIs to minimum percent encoded format.
	Description:	null

2.3.694.8 cfbvoicemailenabled (FI-6172)

Type:	bool
Default Value:	FALSE

	Default Value:	30
	Check Constraint:	(FailToConnect >= 0) AND (FailToConnect <= 600)
	Remarks:	The FailToConnect time specifies the maximum time to wait for TCP connect, SSL setup, and login/connect request/response. The value range is 0 to 600 seconds (10 minutes). The 0 value disables FailToConnect timeout. The default value is 30 seconds.

2.3.723.5 mtu (FI-5437)

Type:	long
Default Value:	1290
Check Constraint:	(MTU >= 256) AND (MTU <= 1406)
Remarks:	MTU value allows the system administrator to set the maximum limit of MTU for the tunnel. The actual MTU used can be less than this value. The supported configurable MTU value range is 256 bytes to 1406 bytes. The default MTU on CNU operating system and the maximum supported MTU is 1290 bytes. If the phone is configured with the value larger than 1290 bytes, the maximum MTU allowed will still be 1290 bytes.

2.3.723.6 name (FI-5433)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z0-9._-]{1,50}\$

2.3.723.7 passwordpersistent (FI-5436)

Type:	bool
Default Value:	FALSE
Remarks:	The default is password persistent is disabled

2.3.723.8 pkid (FI-5432)

Type:	guid (Unique, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify VPNProfile record	
Rule (RI-698):	Type:	Active (Update)
	Rule Name:	Update versionstamp for vpnprofile table
	Description:	When the vpnprofile record changes, the versionstamp needs to be re-generated
	Test Condition:	ON UPDATE IN vpnprofile: versionstamp = versionStampGenerator()

2.3.723.9 [tkvpncclientauthentication](#) (FI-5440)

Type:	enum
Default Value:	0
Remarks:	Reference to TypeVPNClientAuthentication Table:User And Password (0), Password Only (1), Certificate (2). Non-null.

2.3.723.10 versionstamp (FI-5445)

Type:	string [47] (Not Modifiable)
-------	------------------------------

	Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d093963	
	Remarks:	New guid plus seconds past midnight 1970 are concatenated	
	Rule (RI-698):	Type:	Active (Update) This field is modified by this rule.
		Rule Name:	Update versionstamp for vpnprofile table
		Description:	When the vpnprofile record changes, the versionstamp needs to be re-generated
		Test Condition:	ON UPDATE IN vpnprofile: versionstamp = versionStampGenerator()
	Rule (RI-698):	Type:	Active (Update)
		Rule Name:	Update versionstamp for vpnprofile table
		Description:	When the vpnprofile record changes, the versionstamp needs to be re-generated
		Test Condition:	ON UPDATE IN vpnprofile: versionstamp = versionStampGenerator()
	Uniqueness:	No multicolumn uniqueness constraints	

2.3.724 webpagesection (TI-1117)

Description: Stores provisioning administration web page section control information. The content of this table is maintained by CMUI team

Fields:

2.3.724.1 displayorder (FI-10327)	
Type:	long
Remarks:	Order of display sections with in a web page
2.3.724.2 pkid (FI-10300)	
Type:	guid (Unique, Indexed, Not Modifiable)
Default Value:	newid()
Remarks:	Unique identifier for the record
2.3.724.3 tkwebpagedisplay (FI-10302)	
Type:	enum
Remarks:	Reference to Web page Display
2.3.724.4 tkwebpagesection (FI-10301)	
Type:	enum (Unique, Indexed)
Remarks:	Reference to web page section
Rule (RFI-313):	

		Type:	Inter-field Condition and Constraint
		Constraint:	(NOT (SELECT TWPS.IsRequired FROM TypeWebPageSection TWPS WHERE TWPS.enum = tkWebPageSection) OR 'WEB_PAGE_SECTION_DISPLAY_HIDDEN' <> (SELECT TWPD.Moniker FROM TypeWebPageDisplay TWPD WHERE TWPD.enum = tkWebPageDisplay))
		Null Allowed:	null
		Remarks:	When related typeWebPageSection is IsRequired then tkWebPageDisplay must not be hidden.
Uniqueness:	No multicolumn uniqueness constraints		

2.3.725 wifihotspotprofile (TI-2618)

Description: Hotspot Profile is used to send Wireless Hotspot configuration to phones that support the feature.

Fields:

2.3.725.1 authserver (FI-25806)		
Type:	string [64]	
Default Value:	EMPTY	
Remarks:	Specifies Authentication Server in either IP address or HostName format	
Rule (RI-2149):	Type:	Validation (Insert/Update)
	Rule Name:	Authentication Server is not a valid format
	Description:	Make sure the IP address or host name is formatted correctly.
	Test Condition:	?
	Error Message:	?
	Remedy:	?
2.3.725.2 authserverport (FI-25807)		
Type:	long	
Default Value:	1812	
Remarks:	Port on which it makes the connection.	
2.3.725.3 description (FI-25799)		
Type:	string [255]	
Default Value:	EMPTY	
Validation:	^[^'"%&\\<>:]{0,63}\$	
Remarks:	Description of the Hotspot Profile.	

2.3.725.4 name (FI-25798)

Type:	string [50] (Unique)
Validation:	^[a-zA-Z0-9._-]{1,50}\$
Remarks:	Name of the Hotspot Profile.

2.3.725.5 passdescription (FI-25805)

Type:	string [255]
Default Value:	EMPTY
Validation:	^[^'"%&\\<>:]{0,63}\$
Remarks:	Used to recall forgotten password.

2.3.725.6 passwordreverse (FI-25804)

Type:	string [193] (Null OK)
Validation:	^[a-zA-F0-9]{0,192}\$
Remarks:	Used for digest authentication

2.3.725.7 pkid (FI-25797)

Type:	guid (Unique, Indexed, Not Modifiable)	
Default Value:	newid()	
Migration Source:	Generated	
Remarks:	Unique ID to identify a record.	
Rule (RI-2147):	Type:	Active (Insert/Update)
	Rule Name:	On Active Insert/Update of HotspotProfile,update HotspotProfile versionstamp
	Description:	On Insert/Update of HotspotProfile,the versionstamp of corresponding HotspotProfile should be updated to current time.
	Test Condition:	For INSERT/UPDATE of HotspotProfile,UPDATE HotspotProfile SET versionstamp = versionStampGenerator()

2.3.725.8 ssidprefix (FI-25800)

Type:	string [20]
Validation:	^[a-zA-Z0-9"!<>#\$\$%&'()*+,.\/\ :;?@[^_`{ }~-]{0,20}\$
Remarks:	SSID

2.3.725.9 tkhotspotauthenticationmethod (FI-25803)

Type:	enum
-------	------

Default Value:	0												
Remarks:	Type of Authentication used by Hotspot.												
Rule (RI-2149):	<table> <tr> <td>Type:</td><td>Validation (Insert/Update)</td></tr> <tr> <td>Rule Name:</td><td>Authentication Server is not a valid format</td></tr> <tr> <td>Description:</td><td>Make sure the IP address or host name is formatted correctly.</td></tr> <tr> <td>Test Condition:</td><td>?</td></tr> <tr> <td>Error Message:</td><td>?</td></tr> <tr> <td>Remedy:</td><td>?</td></tr> </table>	Type:	Validation (Insert/Update)	Rule Name:	Authentication Server is not a valid format	Description:	Make sure the IP address or host name is formatted correctly.	Test Condition:	?	Error Message:	?	Remedy:	?
Type:	Validation (Insert/Update)												
Rule Name:	Authentication Server is not a valid format												
Description:	Make sure the IP address or host name is formatted correctly.												
Test Condition:	?												
Error Message:	?												
Remedy:	?												

2.3.725.10 [tkwififrequency \(FI-25801\)](#)

Type:	enum
Default Value:	0
Remarks:	Type of WiFi frequency used.

2.3.725.11 [tkwlanprofilechanges \(FI-25802\)](#)

Type:	enum
Default Value:	0
Remarks:	Type of changes allowed to this Hotspot profile.

2.3.725.12 [versionstamp \(FI-25808\)](#)

Type:	string [47] (Null OK)								
Default Value:	0000000000-c7a6c673-7479-46b0-839e-014d3d123963

	Type:	guid (Unique, Indexed, Not Modifiable)
	Default Value:	newid()
	Remarks:	Unique ID to identify a record.
Uniqueness:	No multicolumn uniqueness constraints	

3.0 Common Table Relationships

3.1 Servers and Services

Here are the common relationships with Servers, Services and service parameters.

Service Parameters

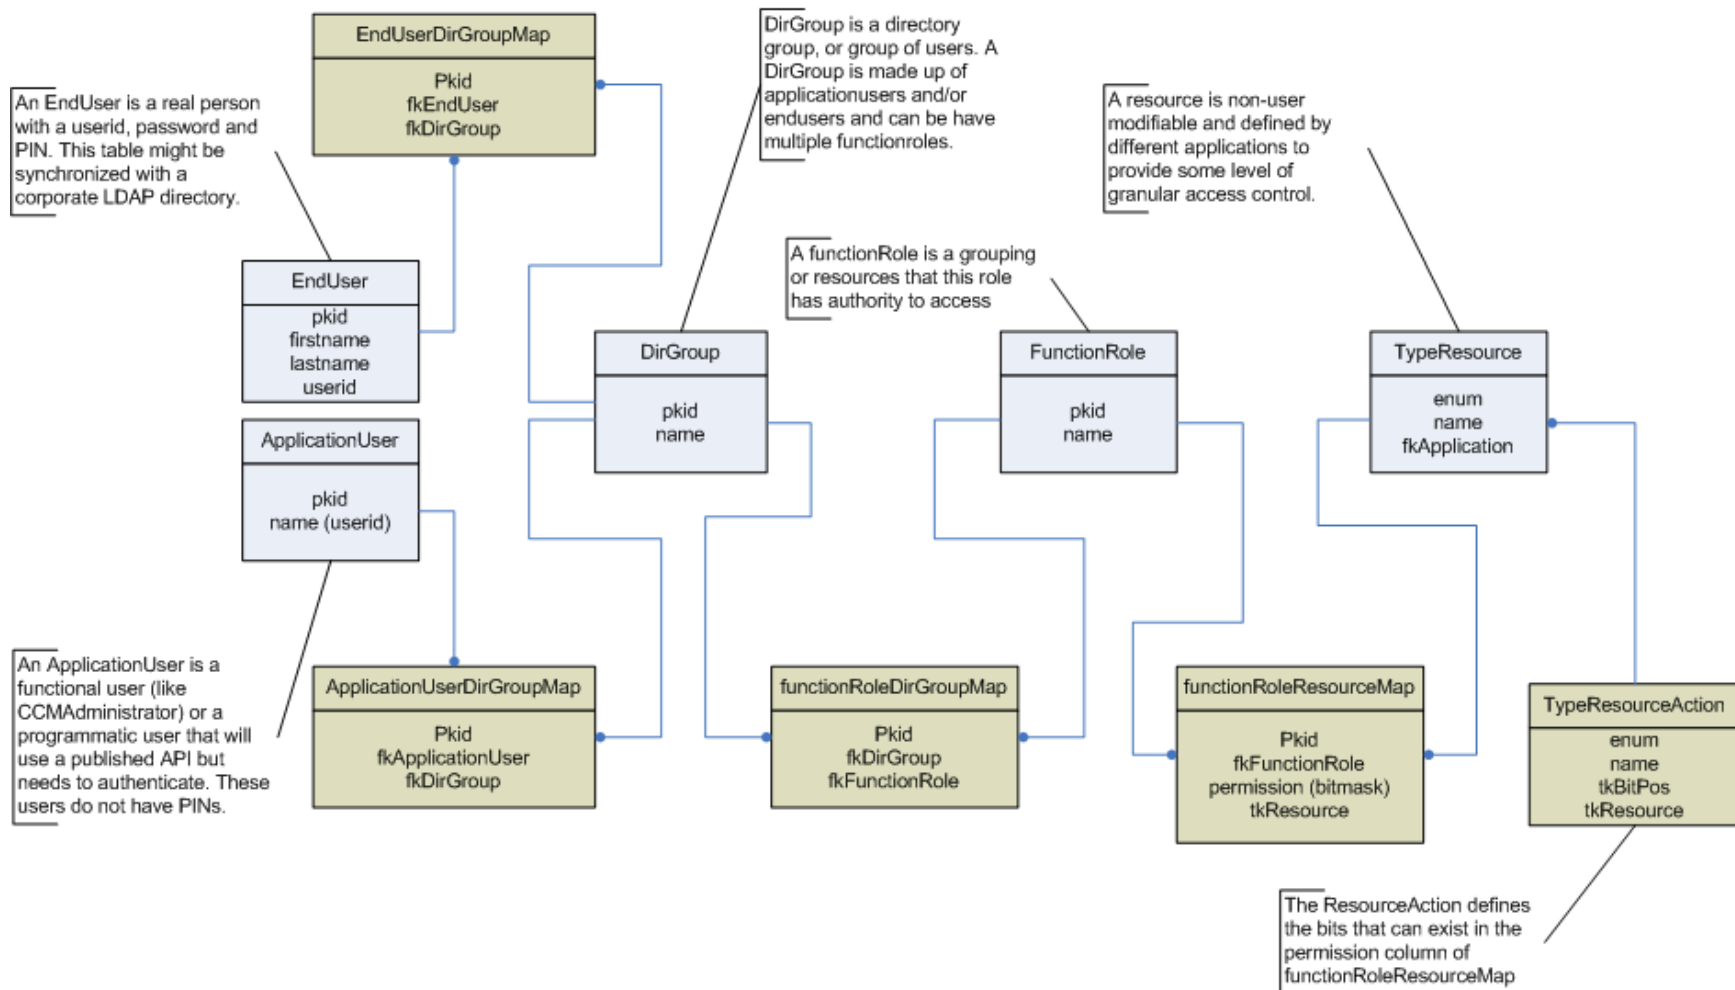

3.2 Roles and Responsibilities

Here are the relationships between users and their roles and responsibilities.

User Authorization

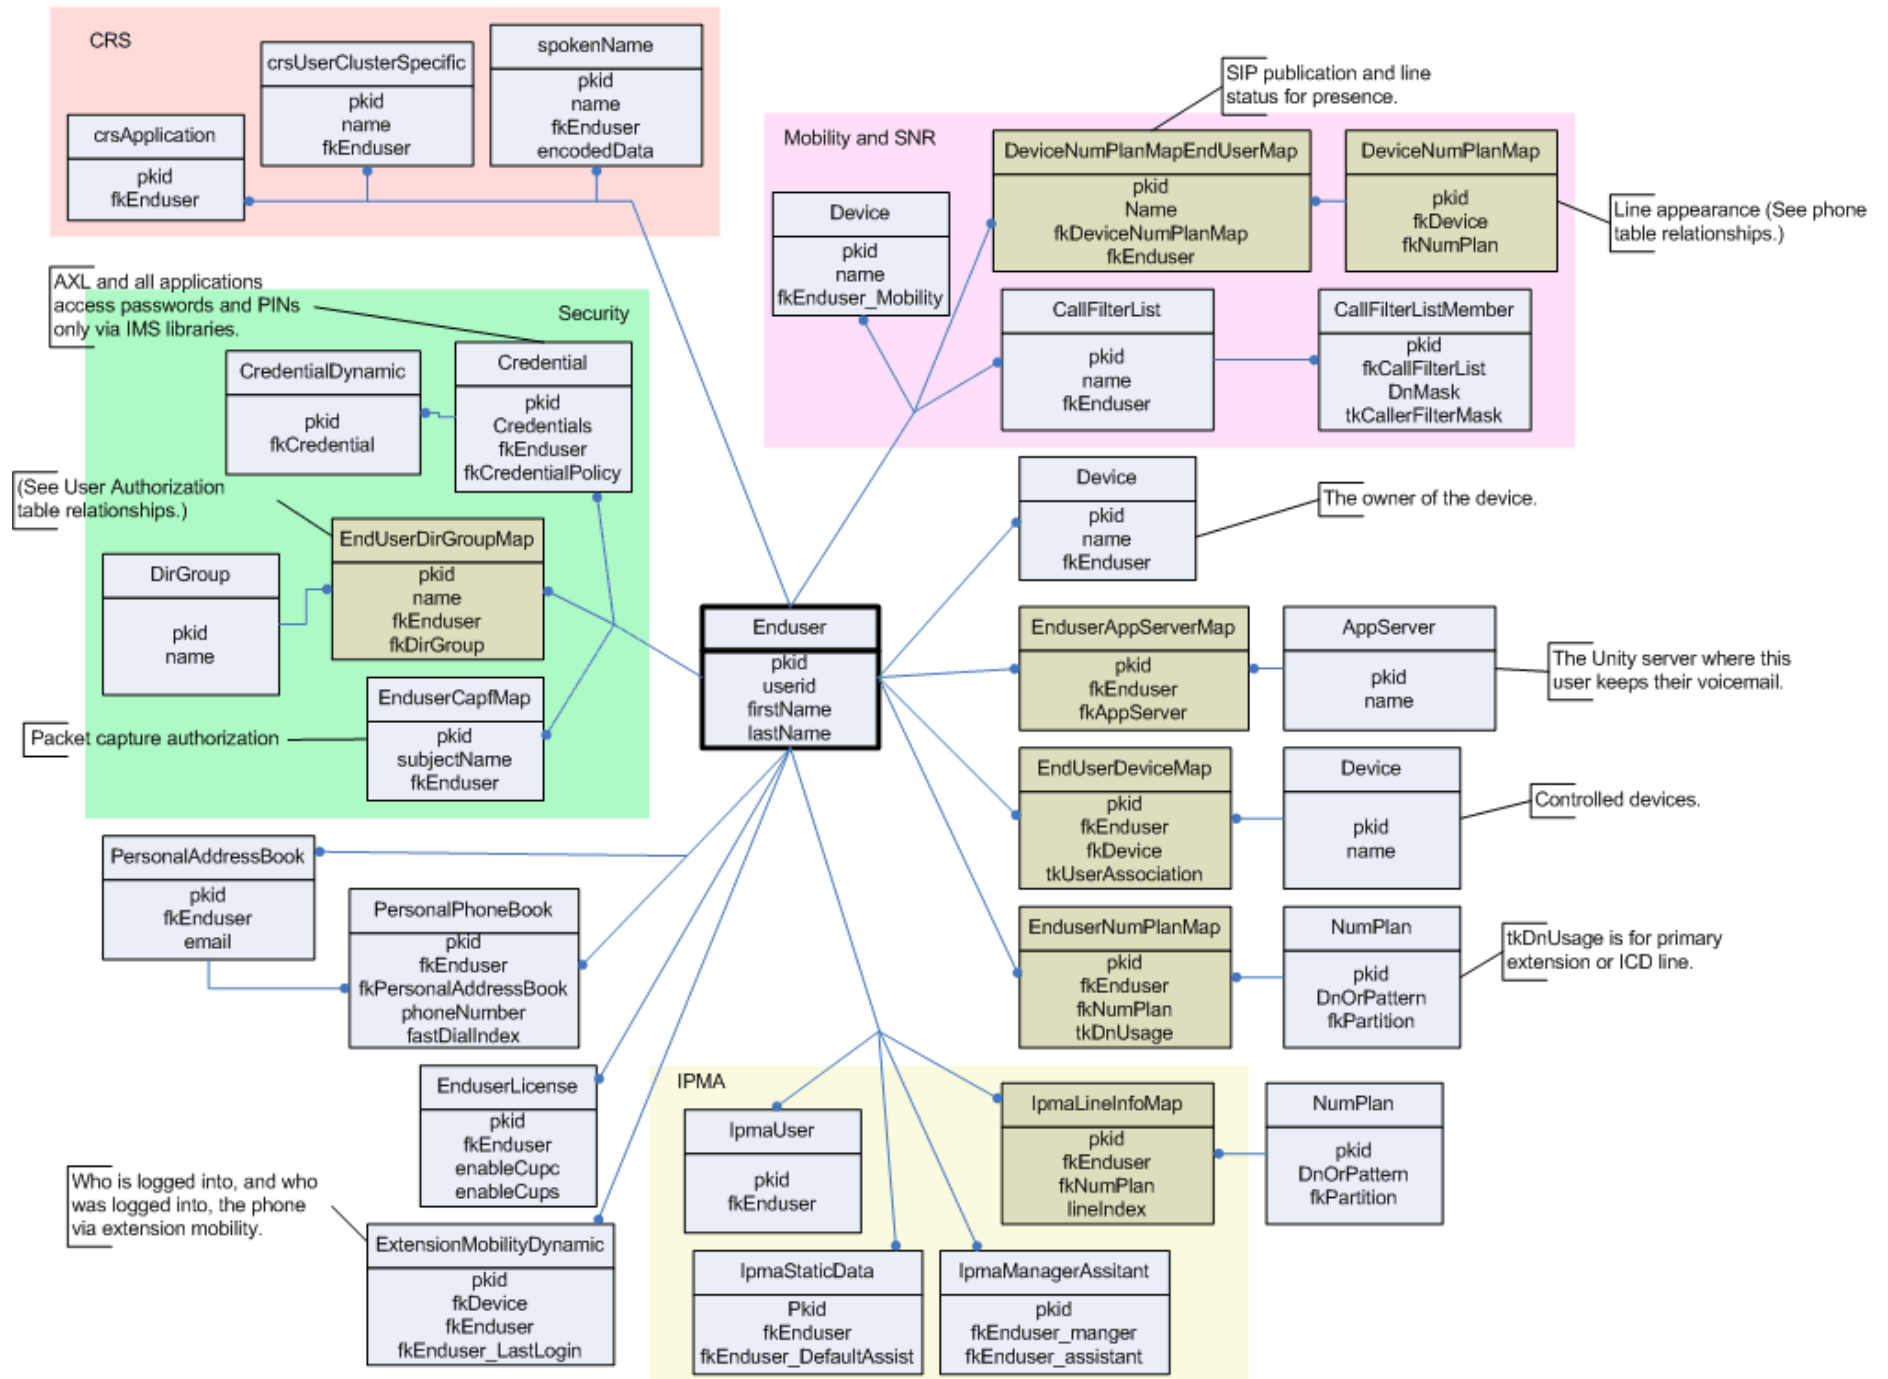

(granting a user permission to access a resource)

3.3 End User

Here are the relationships for an Enduser.

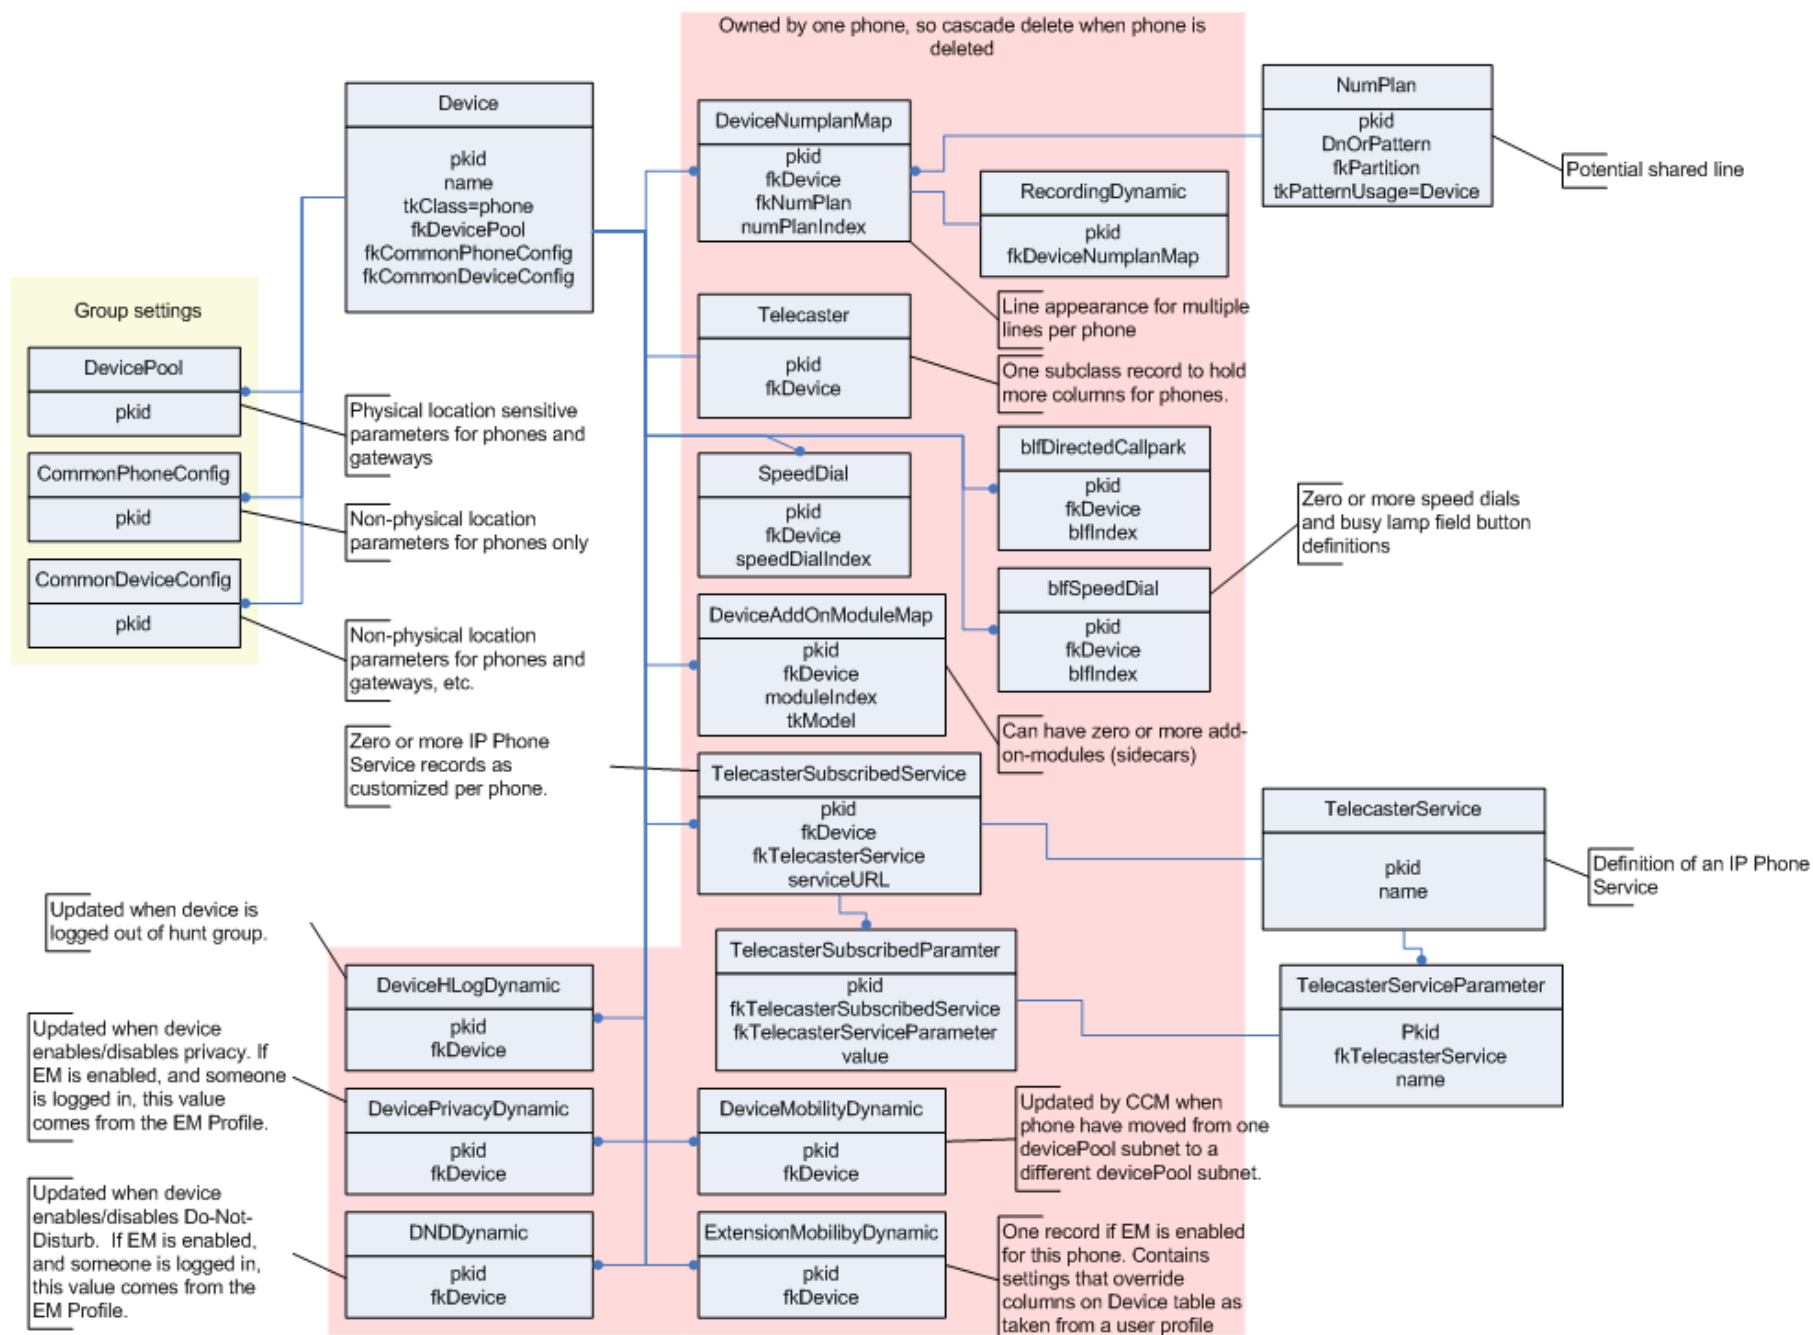

User

3.4 Phone

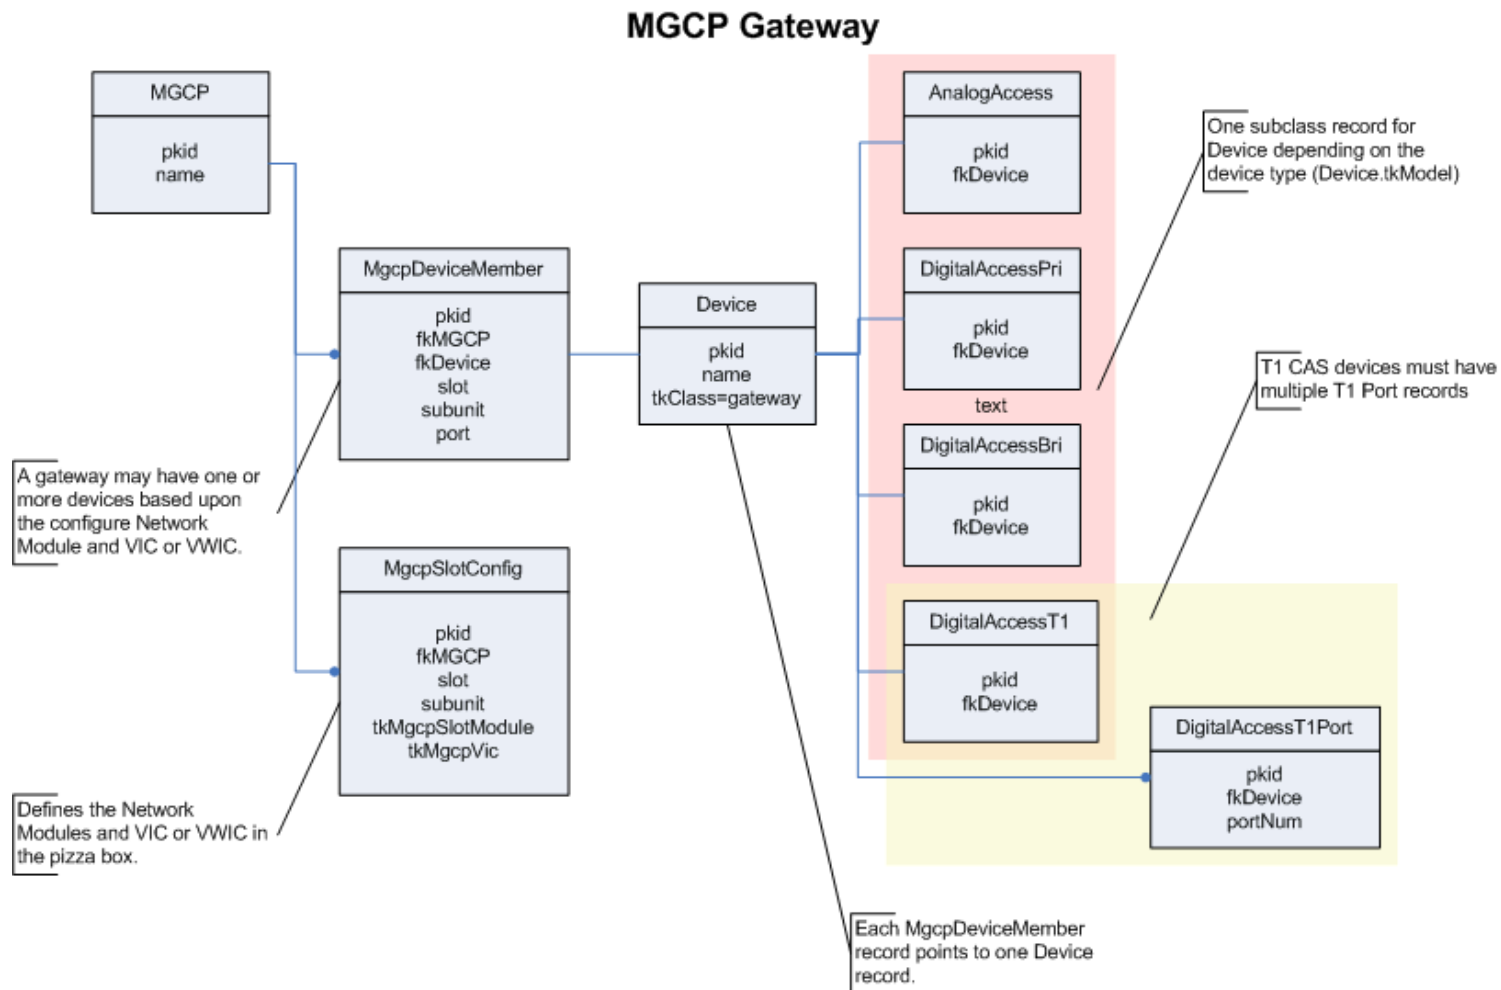

Here are the common tables that define a phone.

Phone

3.5 MGCP Gateway

Here are the common tables that define a gateway.

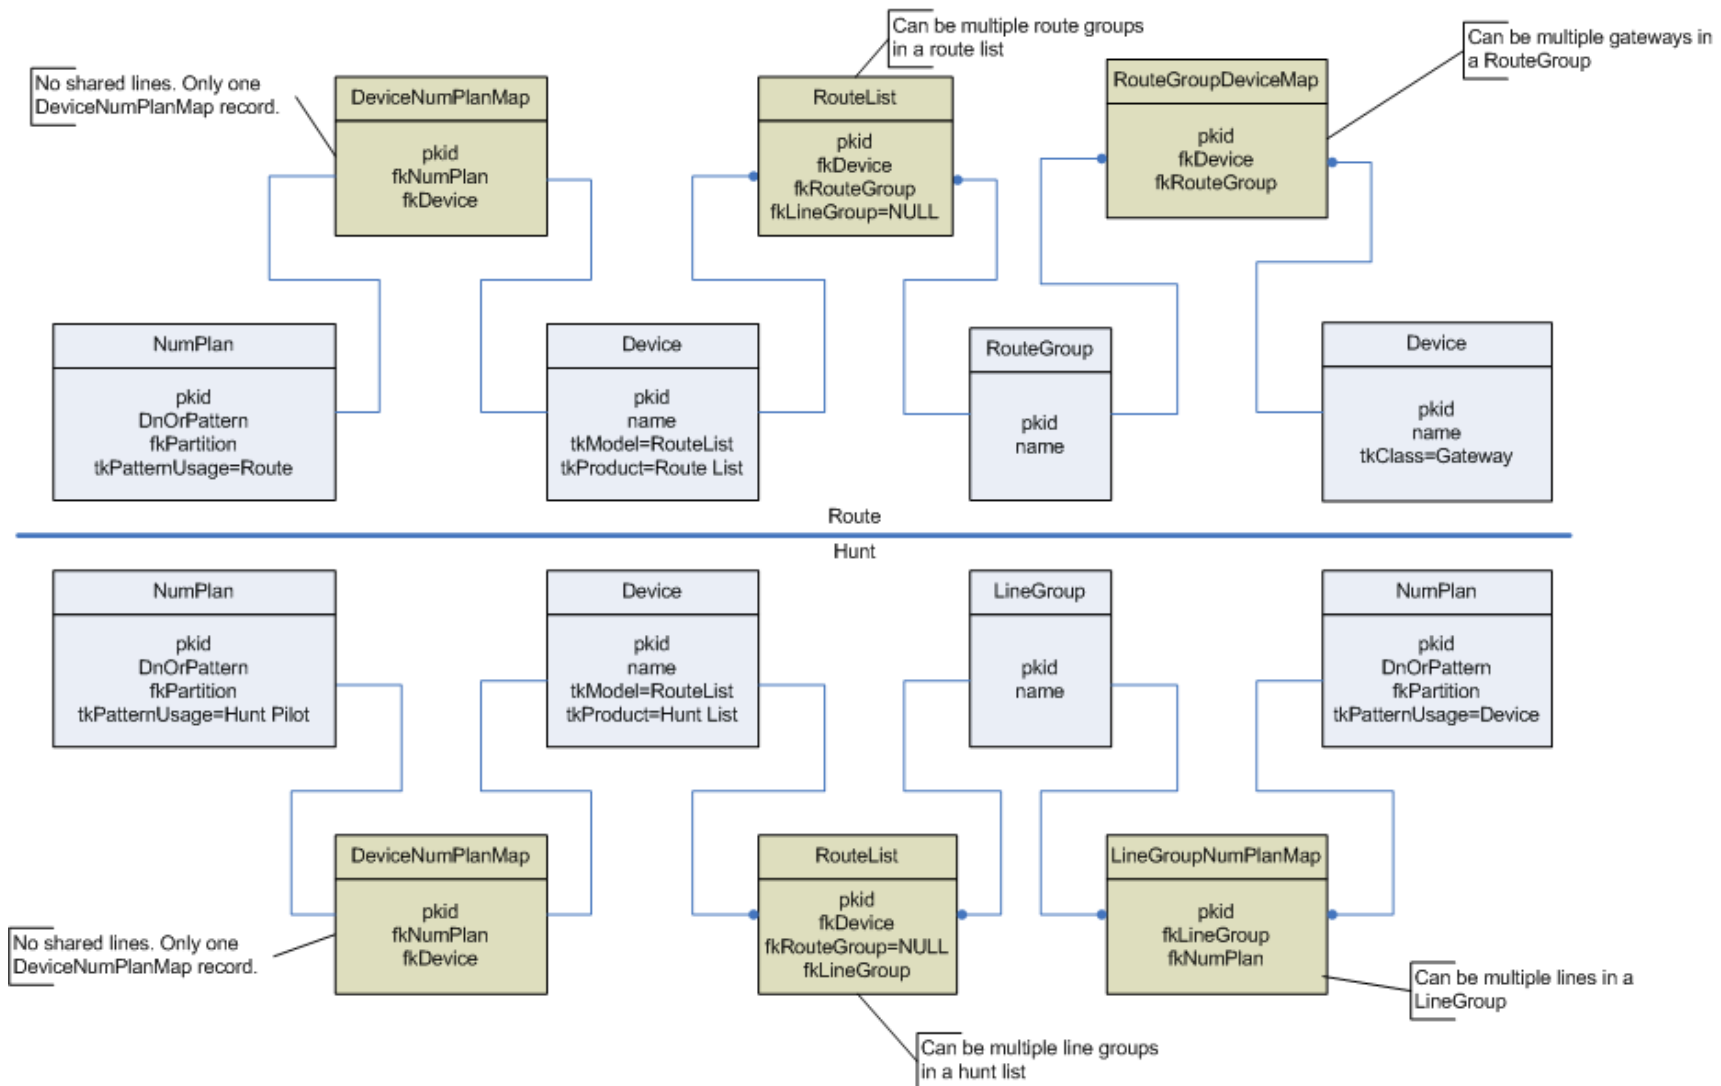

3.6 Route/Hunt Lists

Here are the relationships between Route/Hunt lists and Route/Line Groups.

Route/Hunt Lists

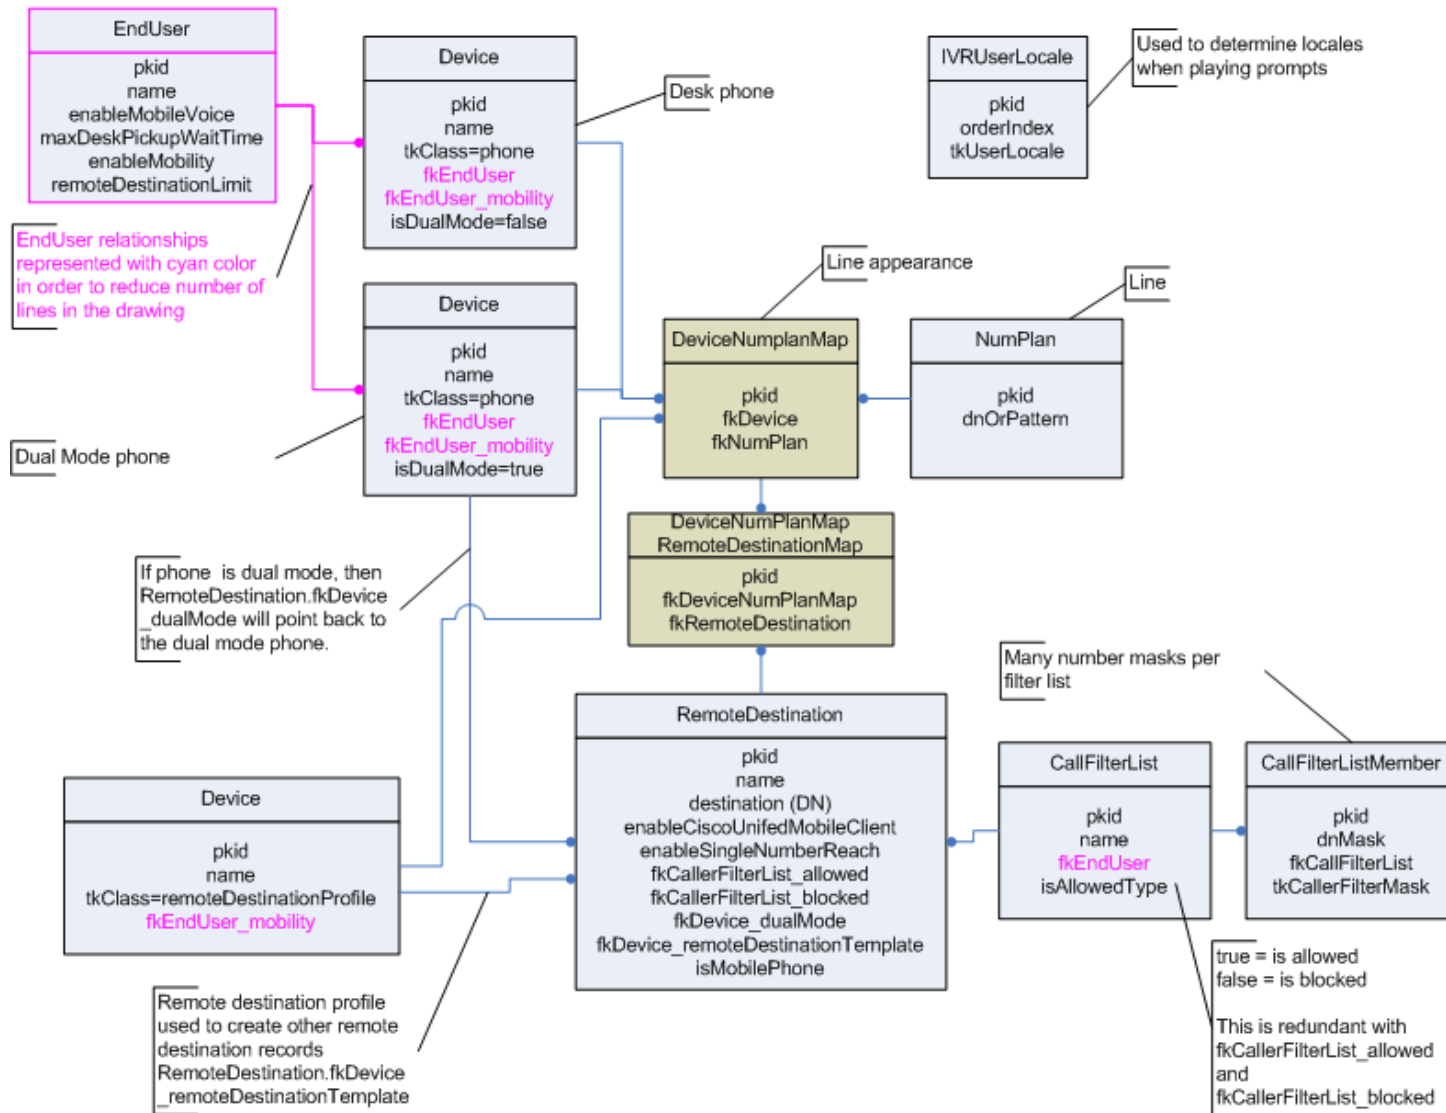

(setting up RouteGroups and LineGroups)

3.7 Mobility/Single Number Reach

Here are the relationships for Mobility and Single Number Reach.

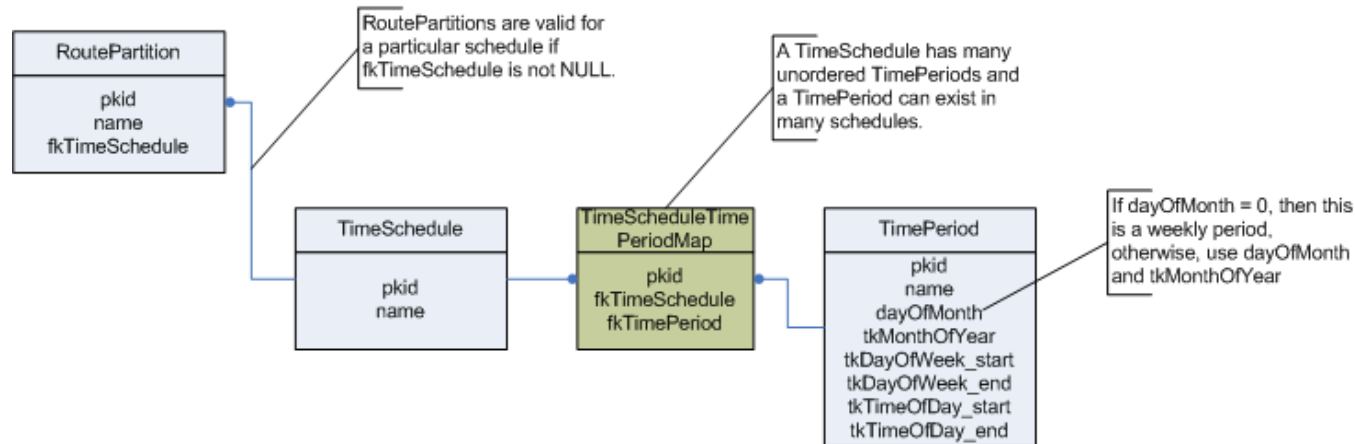

Mobility / Single Number Reach (6.0)

3.8 Time Of Day Routing

Here are the relationships for Time of Day Routing.

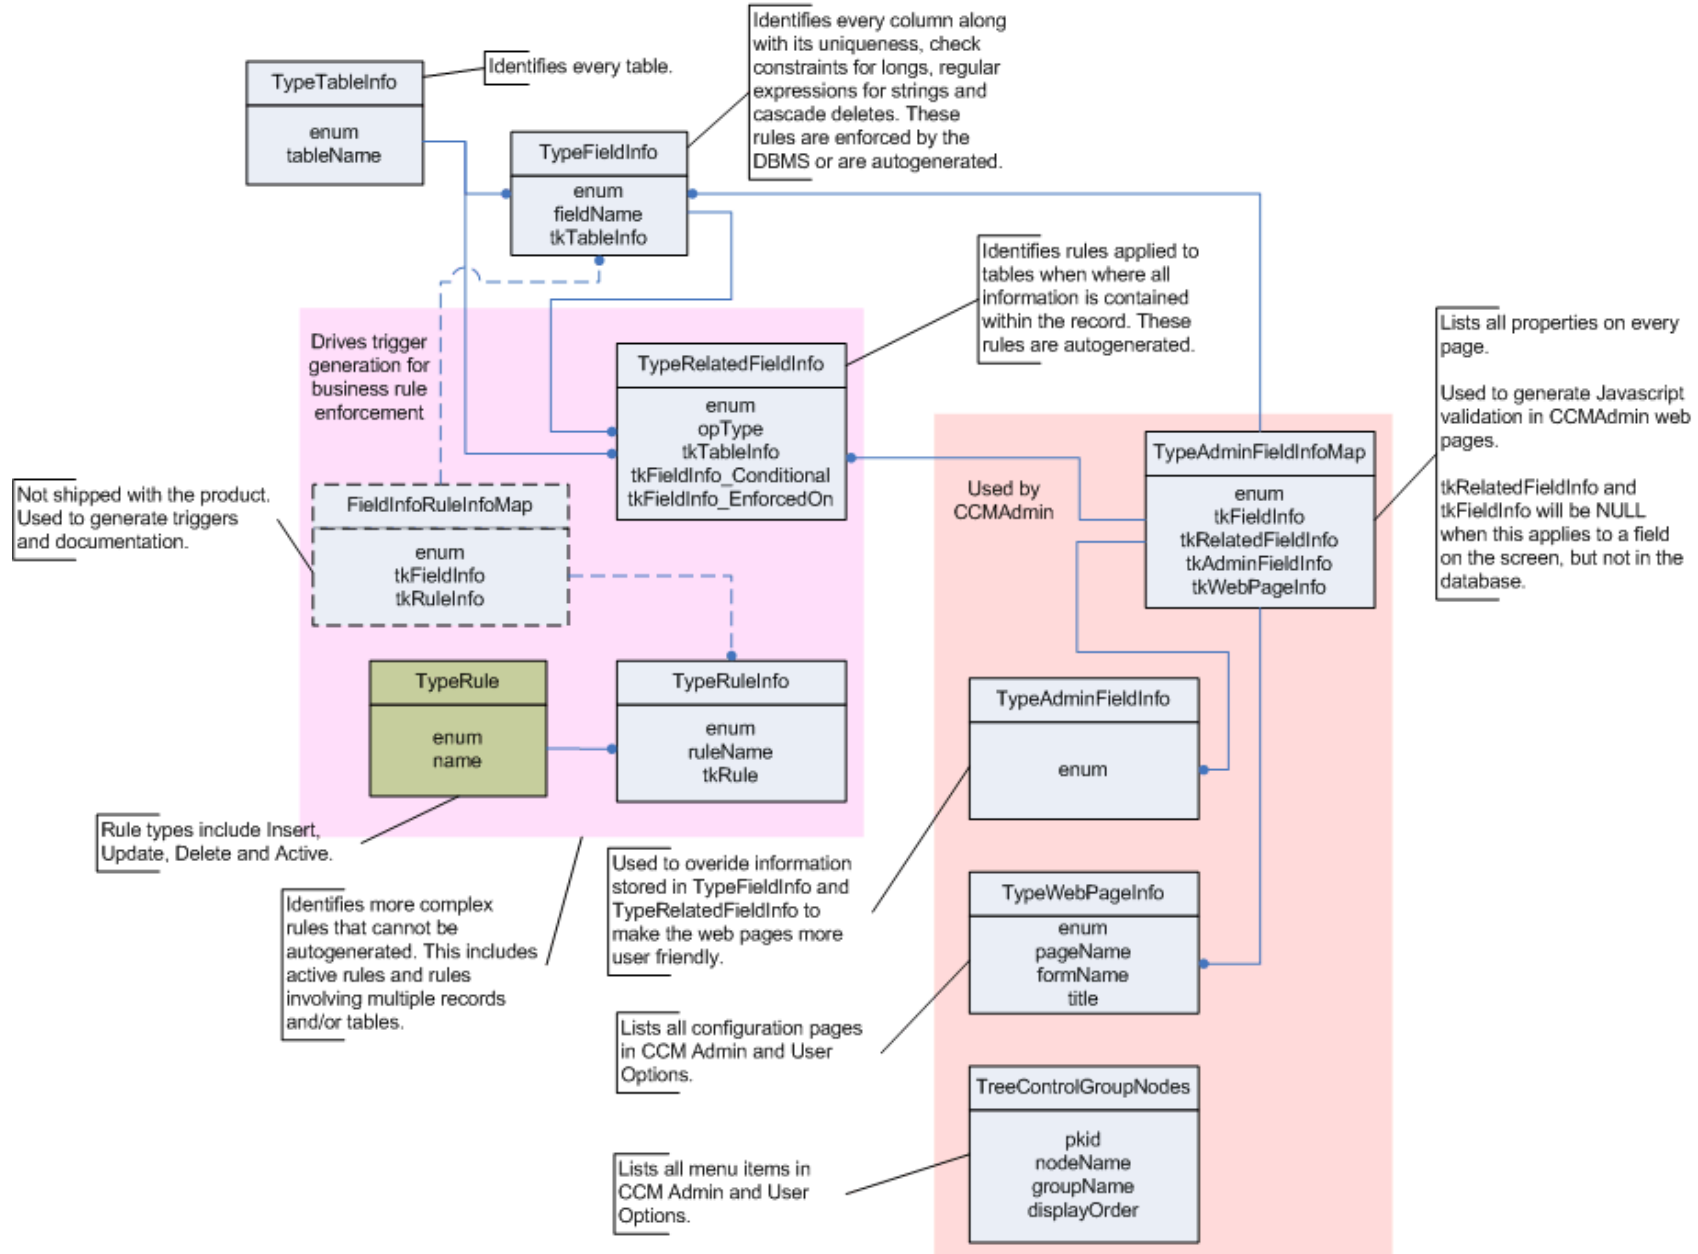

Time of Day Routing

3.9 Data Dictionary Definition

Here are the relationships used to generate the database schema, triggers and this document.

Data Dictionary

4.0 Schema Changes

This section shows the high level differences in schema between this release and previous versions.

4.1 Differences between Cisco Unified Communications Manager 10.0(1) and Cisco Unified Communications Manager 9.1(2)

4.1.1 Tables in Cisco Unified Communications Manager 9.1(2) and not in Cisco Unified Communications Manager 10.0(1)
