Cisco Migration Services

Accelerate new deployments, control costs, improve efficiency, and mitigate risk while refreshing your network through a systematic, holistic approach.

Controlling Costs and Mitigating Risk in Migration

Integrating devices and new capabilities without compromising network availability or performance is critical to success. When you are deploying a new system and need to migrate network services, the challenge is to migrate efficiently while controlling costs and mitigating risk that could affect your business or your production infrastructure.

Migration is best undertaken in a holistic way with a long-term view, rather than taking a project-by-project refresh approach that leaves the network architecture complex and uneven.

Migration Services help you by taking a systematic, priorities-based approach to refreshing the network infrastructure now and keeping it refreshed into the future. They help you identify business and technical requirements and document the current state of your business and network infrastructure. They guide you through creating a strategy and phased migration plan, and provide support for migration and implementation, and knowledge transfer throughout the engagement.

Services from Cisco and our partners help you succeed at every phase of your network and IT lifecycle

Service capabilities include:

- Infrastructure migration
- Device and application migration
- Operations management migration
- Service management migration
- Business management migration

Benefits

Through a robust portfolio of services, we help you to:

- Speed migration deployment and cutover time and increase accuracy through guidance and support from experienced engineers with proven methods of procedures
- More effectively budget for network operations costs with a phased migration plan

- Reduce system outages and support issues with a proactive plan for replacing aging network components
- Introduce new capabilities with potentially lower total cost of ownership through an architecture-focused network refresh approach and longer term (1–3 year) planning horizon
- More effectively manage product lifecycles through Cisco's installed base visibility

Smart Service Capabilities – Our Difference, Your Advantage

More effectively manage the migration of new devices, solutions, and applications by gaining continuous insight into the overall state of your network with Cisco® smart service capabilities. These capabilities provide visibility into your infrastructure by automating the analysis of diagnostic network data and correlating it with Cisco's deep knowledge base. You get the benefit of our 28 years of industry experience with more than 50 million installed devices and 6 million annual customer interactions.

Why Cisco Services

Realize the full value of your network, IT, and communications investments faster and successfully harness the intelligent network as a powerful business platform with professional and technical services from Cisco together with our partners. Whether you are looking to evolve your network to support business continuity and growth, increase operational efficiency, reduce costs, enable a more reliable customer experience, or mitigate risk, we have a service that can help you. Cisco Services uniquely deliver innovative solutions, unmatched expertise, and smart service capabilities using a collaborative partner approach.

Cisco and Partner Expertise: Better Together

Cisco engineers and Cisco Certified Partners are among the industry's elite in providing integrated, collaborative, adaptive solutions. Jointly with our partners, we form the largest collection of industry-certified experts in the world supporting the most complex networks to meet and exceed the needs of our customers. Cisco teams can collaborate with partners to foster consistency and alignment with Cisco methodologies, tools, and leading practices.

Availability and Ordering

Migration Services are available globally and can be purchased from Cisco and Cisco Certified Partners. Service delivery details might vary by region and depending on which service options you choose.
