- [Cisco Collaboration Systems Release Test for Japan, on page 2](#)
- [Acronym, on page 2](#)

Cisco Collaboration Systems Release Test

Cisco Collaboration Systems Release test is an integral part of the Enterprise Voice Solution Management which includes key components such as Cisco Unified Communications Manager, Cisco Unified CM & IM Presence, Cisco Webex Cloud Connected UC, Cisco TelePresence Video Communication Server, Cisco TelePresence Video Communication Server Expressway, Cisco Expressway, Cisco IP Phones(88xx,78xx), Cisco Webex, Cisco Webex for Windows VDI, Cisco Webex Room OS, Cisco Webex Meetings and Cisco Meeting Server. It is a program that validates and tests specified system-level solution for the various products and platforms in the Cisco Collaboration System.

Cisco Collaboration Systems Release, the systems integration layer, ensures that the Collaboration Systems Release components are delivered across the various engineering teams, when combined, improves the software quality. This is achieved by testing the different components.

The requirements for Cisco Collaboration Systems Release is derived based on the following:

- Popular customer scenarios
- Customer demands for upgrade
- Inputs from various Business Units, fields and Cisco Services

The test bed architecture is built based on the Solution Reference Network Design (SRND), cross-section of product deployment models etc. The different types of testing carried out as a part of Cisco Collaboration Systems Release are:

- Interoperability/Compatibility
- Functionality
- Availability/Reliability/Stability
- Performance/Scalability/Capacity
- Usability/Serviceability
- Special focus area - CAP (Customer Assurance Program)/Technical Assistance Center (TAC)

- Security

Cisco Collaboration Systems Release Test for Japan

Cisco Collaboration Systems Release test for Japan includes key components such as Cisco Unified Communications Manager, Cisco Unified CM & IM Presense, Cisco Webex Cloud Connected UC, Cisco TelePresence Video Communication Server, Cisco TelePresence Video Communication Server Expressway, Cisco Webex, Cisco Webex Room OS, Cisco Webex Meetings, Cisco Meeting Server and Cisco Meeting Management, which is in turn an add-on testing at the solution level, where the requirements gathered are specific to Japanese usage and market. The requirements are derived based on the following:

- High priority cases that are covered by the Cisco Collaboration Systems Release test team
- Inputs from SE's and TAC team of Cisco Japan

The test execution is carried out on selected Collaboration products, which affects the Japanese segment and that are prioritized by SE's of the Cisco Japan team. Japanese specific equivalents such as Japanese locale and JPNP for Numbering Plan are implemented.

The objective of Cisco Collaboration Systems Release for Japan is to run a sub-set of system testing that is not covered by Cisco Collaboration Systems Release Test and implement equivalents with Japanese environment such as Japanese OS, localized application, selected Cisco Compatible Products and third party equipment.

In this Cisco Collaboration Systems Release for Japan, the following components are tested.

- Cisco Unified Communications Manager
- Cisco Unified CM & IM Presense
- Cisco Webex Cloud Connected UC
- Cisco TelePresence Video Communication Server
- Cisco TelePresence Video Communication Server Expressway
- Cisco Meeting Server
- Cisco Meeting Server web app
- Cisco Meeting Management
- Cisco Webex (Windows/Mac/iOS/Android/Web/Windows-VDI)
- Cisco Webex Room OS
- Cisco Webex Meetings (Windows/Mac/iOS/Android/Web/Windows-VDI/Slack)
- Cisco TelePresence Endpoints
- Cisco IP Phones(88xx,78xx)
- Cisco Expressway
