This is not an org chart of your company: It’s a diagram of your security risks.

55% of corporate directors understand and manage cybersecurity as a risk.

Boardrooms

Operations

Users

From the boardroom to the breakroom, each user, with their access and devices, has become an unwitting access point for cybercriminals.

Defenders

Defending the borders of your organization now encompasses ever-widening networks and IoT, creating the potential for misalignment within your security staff.

BYOD

Each employee in your organization carries more than three devices and wearables, creating an ever-widening surface area to defend.

Networks

An extended network that supports the “Internet of Things” has created an ever-increasing surface area that needs to be defended against attacks.

Attackers

They are highly organized, have put their expertise for sale on the black market, and are actively probing your company’s vulnerabilities.
