The bridge to possible

Cisco Spaces for Manufacturing

The bridge between the data available in your physical space and the insights that data provides.

Product overview

The pace of transitions in manufacturing has accelerated. With the right network infrastructure in place, you can unleash new value from asset data down to the machine level. You can empower your workforce with connectivity and collaboration tools to make your business more resilient. And you can improve operational efficiency with real-time asset visibility.

Cisco Spaces provides a vital link between the data available about the people and things connected to your network and the insights that data provides. Its open and flexible platform can connect IoT end devices from many different vendors, so you can form a consolidated picture across different systems and arrive at truly deep insights to improve your business success.

Benefits

Safe

Enable a safe workplace with indoor location services that provide meaningful, real-time data about who is in your workplace and where they go.

Smart

IoT services for smart buildings let your switches and access points act as a unifying layer between different wired and wireless IoT solutions, helping you deliver on a multitude of use cases to optimize your services and operations.

Seamless

Offer seamless wireless access with Wi-Fi and Bluetooth Low Energy (BLE) device onboarding that simplifies connections and opens new opportunities for engagement and revenue.

The bridge to possible

Be ready for scale with an open platform

Most location-based solutions in the market today require proprietary, vendor-specific hardware and software. This limits the variety of use cases they can serve and creates management complexity.

By contrast, Cisco Spaces is an open platform that sits at the nexus of a broad ecosystem of device and software partners, channel partners, and industry associations.

Our ability to unify management in a multivendor, multitechnology environment using the existing wireless and switching infrastructure is the reason our platform can address more use cases, scale more easily, and deliver better business outcomes for our customers.

Manufacturing use cases

Workforce continuity

Support a safe workplace with social density automation and intelligent touchless experiences.

- Right Now app on Cisco Spaces and Webex® devices
- Ability to create density thresholds and monitor capacity
- Automated real-time notifications

Worker mobility

Seamless and secure wireless onboarding enables worker mobility and streamlines IoT device deployment.

- OpenRoaming
- Contextual notifications
- Room availability

Asset visibility and control

Leverage IoT and wireless connections to track critical assets and monitor environmental conditions in real time.

- Environmental monitoring
- Asset tracking
- IoT services
