SSL Management Service Configuration Mode Commands

SSL management services lets you configure SSL parameters used for secure communications between the Central Manager and the WAE devices. To configure secure socket layer (SSL) encryption management service parameters on a WAAS device, use the **crypto ssl management-service** global configuration command. To delete a parameter use the **no** form of the command.

crypto ssl management-service

no crypto ssl management-service

| Syntax Description | This command has no arguments or keywords. | |
|---------------------------|--|--|
| | | |
| Defaults | No default behavior or values. | |

Command Modes global configuration

| Device Modes | application-accelerator |
|---------------------|-------------------------|
| | central-manager |

Usage Guidelines

Use the **crypto ssl management-service** command to configure management services. The **crypto ssl management-service** command initiates SSL management service configuration mode, as indicated by the following prompt:

```
WAE(config-ssl-mgmt)#
```

Within SSL management service configuration mode, you can use the SSL management service configuration commands. To return to global configuration mode, enter **exit** at the SSL management service configuration mode prompt.

Examples

The following example shows how to enter SSL management service configuration mode:

```
WAE(config)# crypto ssl management-service
WAE(config-ssl-mgmt)# exit
WAE(config)#
```

Related Commands

(config-ssl-mgmt) cipher-list

(config-ssl-mgmt) peer-cert-verify

(config-ssl-mgmt) version

(config-ssl-mgmt) cipher-list

To configure secure socket layer (SSL) encryption cipher lists on a WAAS device, use the **cipher-list** command. To delete a cipher list use the **no** form of the command.

cipher-list cipher-list-name

no cipher-list cipher-list-name

| Syntax Description | cipher-list-name | Name of the cipher list you want to create or edit. The cipher list name may contain up to 64 characters. | |
|----------------------|---|--|--|
| Defaults | No default behavior or values. | | |
| Command Modes | SSL management service configuration | | |
| Device Modes | application-accelerator central-manager | | |
| Usage Guidelines | - | cipher suites that you assign to an SSL connection. (See the SSL Cipher nands chapter for more information.) | |
| Examples | create or edit a cipher list called | | |
| Related Commands | (config) crypto ssl | | |

(config-ssl-mgmt) peer-cert-verify

To enable verification of peer certificates, use the **peer-cert-verify** command.

peer-cert-verify [revocation-check none]

| Syntax Description | revocation-check none | (Optional) Specifies a revocation check null method that returns revocation success. |
|-------------------------|---|---|
| Defaults | No default behavior or values. | |
| Command Modes | SSL management service config | uration |
| Device Modes | application-accelerator central-manager | |
| Usage Guidelines | SSL peering service configuration parameters control secure communications established by the SSL accelerator between WAE devices while optimizing SSL connections. | |
| | <u>*</u> | enabled, WAAS devices that use self-signed certificates will not be able to each other and not be able to accelerate SSL traffic. |
| | | ocation checking, set the revocation check value to none. |
| Examples | The following example shows he the revocation check method to | ow to enter SSL management service configuration mode, and then set none: |
| | WAE(config)# crypto ssl mana WAE(config-ssl-mgmt)# peer-c | gement-service ert-verify revocation-check none |
| Related Commands | (config) crypto ssl | |

(config-ssl-mgmt) version

To specify the type of SSL protocol to use for management services, use the version command.

 $version~\{all~|~ssl3~|~tls1\}$

| Syntax Description | version tls1 | Specifies TLS1 for the SSL version 3 protocol. |
|--------------------|--------------|---|
| | version ssl3 | Specifies SSL3 for the Transport Layer Security version 1 protocol. |
| | version all | Specifies ALL to use both SSL3 and TLS1 SSL protocols. |
| | | |

Defaults No default behavior or values.

Command Modes SSL management service configuration

Device Modes application-accelerator

central-manager

ExamplesThe following example shows how to enter SSL management service configuration mode, and then set

the protocol to SSL version 3:

WAE(config)# crypto ssl management-service WAE(config-ssl-mgmt)# version SSL3

Related Commands (config) crypto ssl

(config-ssl-mgmt) version
