

## ACL Syslog Correlation

---

The Access Control List (ACL) Syslog Correlation feature appends a tag (either a user-defined cookie or a device-generated MD5 hash value) to access control entry (ACE) syslog entries. This tag uniquely identifies the ACE , within the ACL, that generated the syslog entry.

### Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to <http://tools.cisco.com/ITDIT/CFN/>. An account on <http://www.cisco.com/> is not required.

## Hardware Compatibility Matrix for Cisco cBR Series Routers

### Note

---

The hardware components introduced in a given Cisco IOS-XE Release are supported in all subsequent releases unless otherwise specified.

---

**Table 1: Hardware Compatibility Matrix for the Cisco cBR Series Routers**

Cisco CMTS Platform	Processor Engine	Interface Cards
Cisco cBR-8 Converged Broadband Router	<p><b>Cisco IOS-XE Release 3.15.0S and Later Releases</b></p> <p>Cisco cBR-8 Supervisor:</p> <ul style="list-style-type: none"> <li>• PID—CBR-CCAP-SUP-160G</li> <li>• PID—CBR-CCAP-SUP-60G<sup>1</sup></li> <li>• PID—CBR-SUP-8X10G-PIC</li> </ul>	<p><b>Cisco IOS-XE Release 3.15.0S and Later Releases</b></p> <p>Cisco cBR-8 CCAP Line Cards:</p> <ul style="list-style-type: none"> <li>• PID—CBR-LC-8D30-16U30</li> <li>• PID—CBR-LC-8D31-16U30</li> <li>• PID—CBR-RF-PIC</li> <li>• PID—CBR-RF-PROT-PIC</li> </ul> <p>Cisco cBR-8 Downstream PHY Modules:</p> <ul style="list-style-type: none"> <li>• PID—CBR-D30-DS-MOD</li> <li>• PID—CBR-D31-DS-MOD</li> </ul> <p>Cisco cBR-8 Upstream PHY Modules:</p> <ul style="list-style-type: none"> <li>• PID—CBR-D30-US-MOD</li> </ul>

<sup>1</sup> Effective with Cisco IOS-XE Release 3.17.0S, CBR-CCAP-SUP-60G supports 8 cable line cards. The total traffic rate is limited to 60Gbps, the total number of downstream service flow is limited to 72268, and downstream unicast low-latency flow does not count against the limits.

## Prerequisites for ACL Syslog Correlation

Before you configure the ACL Syslog Correlation feature, you must understand the concepts in the "IP Access List Overview" module.

The ACL Syslog Correlation feature appends a user-defined cookie or a device-generated hash value to ACE messages in the syslog. These values are only appended to ACE messages when the log option is enabled for the ACE.

## Information About ACL Syslog Correlation

### ACL Syslog Correlation Tags

The ACL Syslog Correlation feature appends a tag (either a user-defined cookie or a device-generated MD5 hash value) to access control entry (ACE) syslog entries. This tag uniquely identifies an ACE that generated the syslog entry.

Network management software can use the tag to identify which ACE generated a specific syslog event. For example, network administrators can select an ACE rule in the network management application and can then view the corresponding syslog events for that ACE rule.

To append a tag to the syslog message, the ACE that generates the syslog event must have the log option enabled. The system appends only one type of tag (either a user-defined cookie or a device-generated MD5 hash value) to each message.

To specify a user-defined cookie tag, the user must enter the cookie value when configuring the ACE log option. The cookie must be in alpha-numeric form, it cannot be greater than 64 characters, and it cannot start with hex-decimal notation (such as 0x).

To specify a device-generated MD5 hash value tag, the hash-generation mechanism must be enabled on the device and the user must not enter a cookie value while configuring the ACE log option.

## ACE Syslog Messages

When a packet is matched against an access control entry (ACE) in an ACL, the system checks whether the log option is enabled for that event. If the log option is enabled and the ACL Syslog Correlation feature is configured on the device, the system attaches the tag to the syslog message. The tag is displayed at the end of the syslog message, in addition to the standard information.

The following is a sample syslog message showing a user-defined cookie tag:

```
Jun 5 12:55:44.359: %SEC-6-IPACCESSLOGP: list logacl permitted tcp 192.168.16.1(38402) ->
192.168.16.2(23), 1 packet [User_permitted_ACE]
```

The following is a sample syslog message showing a hash value tag:

```
Jun 5 12:55:44.359: %SEC-6-IPACCESSLOGP: list logacl permitted tcp 192.168.16.1(38402) ->
192.168.16.2(23), 1 packet [0x723E6E12]
```

## How to Configure ACL Syslog Correlation

### Enabling Hash Value Generation on a Device

Perform this task to configure the device to generate an MD5 hash value for each log-enabled access control entry (ACE) in the system that is not configured with a user-defined cookie.

When the hash value generation setting is enabled, the system checks all existing ACEs and generates a hash value for each ACE that requires one. When the hash value generation setting is disabled, all previously generated hash values are removed from the system.

#### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>

	Command or Action	Purpose
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip access-list logging hash-generation</b>  <b>Example:</b> Device(config)# ip access-list logging hash-generation	Enables hash value generation on the device. <ul style="list-style-type: none"> <li>• If an ACE exists that is log enabled, and requires a hash value, the device automatically generates the value and displays the value on the console.</li> </ul>
<b>Step 4</b>	<b>end</b>  <b>Example:</b> Device(config)# end	(Optional) Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 5</b>	Do one of the following: <ul style="list-style-type: none"> <li>• <b>show ip access-list</b> <i>access-list-number</i></li> <li>• <b>show ip access-list</b> <i>access-list-name</i></li> </ul> <b>Example:</b> Device# show ip access-list 101  <b>Example:</b> Device# show ip access-list acl	(Optional) Displays the contents of the numbered or named IP access list. <ul style="list-style-type: none"> <li>• Review the output to confirm that the access list for a log-enabled ACE includes the generated hash value.</li> </ul>

## Disabling Hash Value Generation on a Device

Perform this task to disable hash value generation on the device. When the hash value generation setting is disabled, all previously generated hash values are removed from the system.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>	Enables privileged EXEC mode.

	Command or Action	Purpose
	<b>Example:</b> Device> enable	<ul style="list-style-type: none"> <li>Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>no ip access-list logging hash-generation</b>  <b>Example:</b> Device(config)# no ip access-list logging hash-generation	Disables hash value generation on the device. <ul style="list-style-type: none"> <li>The system removes any previously created hash values from the system.</li> </ul>
<b>Step 4</b>	<b>end</b>  <b>Example:</b> Device(config)# end	(Optional) Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 5</b>	Do one of the following: <ul style="list-style-type: none"> <li><b>show ip access-list</b> <i>access-list-number</i></li> <li><b>show ip access-list</b> <i>access-list-name</i></li> </ul> <b>Example:</b> Device# show ip access-list 101  <b>Example:</b> Device# show ip access-list acl	(Optional) Displays the contents of the IP access list. <ul style="list-style-type: none"> <li>Review the output to confirm that the access list for a log-enabled ACE does not have a generated hash value.</li> </ul>

## Configuring ACL Syslog Correlation Using a User-Defined Cookie

Perform this task to configure the ACL Syslog Correlation feature on a device for a specific access list, using a user-defined cookie as the syslog message tag.

The example in this section shows how to configure the ACL Syslog Correlation feature using a user-defined cookie for a numbered access list. However, you can configure the ACL Syslog Correlation feature using a user-defined cookie for both numbered and named access lists, and for both standard and extended access lists.

**Note**

The following restrictions apply when choosing the user-defined cookie value:

- The maximum number of characters is 64.
- The cookie cannot start with hexadecimal notation (such as 0x).
- The cookie cannot be the same as, or a subset of, the following keywords: **reflect**, **fragment**, **time-range**. For example, reflect and ref are not valid values. However, the cookie can start with the keywords. For example, reflectedACE and fragment\_33 are valid values
- The cookie must contain only alphanumeric characters.

>

**Procedure**

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>access-list <i>access-list-number</i> permit <i>protocol source destination log word</i></b>  <b>Example:</b> Device(config)# access-list 101 permit tcp host 10.1.1.1 host 10.1.1.2 log UserDefinedValue	Defines an extended IP access list and a user-defined cookie value. <ul style="list-style-type: none"> <li>• Enter the cookie value as the <i>word</i> argument.</li> </ul>
<b>Step 4</b>	<b>end</b>  <b>Example:</b> Device(config)# end	(Optional) Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 5</b>	<b>show ip access-list <i>access-list-number</i></b>  <b>Example:</b> Device# show ip access-list 101	(Optional) Displays the contents of the IP access list. <ul style="list-style-type: none"> <li>• Review the output to confirm that the access list includes the user-defined cookie value.</li> </ul>

## Examples

The following is sample output from the **show ip access-list** command for an access list with a user-defined cookie value.

```
Device# show ip access-list
101
Extended IP access list 101
30 permit tcp host 10.1.1.1 host 10.1.1.2 log (tag = UserDefinedValue)
```

## Configuring ACL Syslog Correlation Using a Hash Value

Perform this task to configure the ACL Syslog Correlation feature on a device for a specific access list, using a device-generated hash value as the syslog message tag.

The steps in this section shows how to configure the ACL Syslog Correlation feature using a device-generated hash value for a numbered access list. However, you can configure the ACL Syslog Correlation feature using a device-generated hash value for both numbered and named access lists, and for both standard and extended access lists.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>ip access-list logging hash-generation</b>  <b>Example:</b> Device(config)# ip access-list logging hash-generation	Enables hash value generation on the device. <ul style="list-style-type: none"> <li>• If an ACE exists that is log enabled, and requires a hash value, the device automatically generates the value and displays the value on the console.</li> </ul>
<b>Step 4</b>	<b>access-list <i>access-list-number</i> permit <i>protocol source destination</i> log</b>  <b>Example:</b> Device(config)# access-list 102 permit tcp host 10.1.1.1 host 10.1.1.2 log	Defines an extended IP access list. <ul style="list-style-type: none"> <li>• Enable the log option for the access list, but do not specify a cookie value.</li> <li>• The device automatically generates a hash value for the newly defined access list.</li> </ul>

	Command or Action	Purpose
<b>Step 5</b>	<b>end</b>  <b>Example:</b> Device(config)# end	(Optional) Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 6</b>	<b>show ip access-list</b> <i>access-list-number</i>  <b>Example:</b> Device# show ip access-list 102	(Optional) Displays the contents of the IP access list. <ul style="list-style-type: none"> <li>Review the output to confirm that the access list includes the router-generated hash value.</li> </ul>

### Examples

The following is sample output from the **show ip access-list** command for an access list with a device-generated hash value.

```
Device# show ip access-list
102
Extended IP access list 102
10 permit tcp host 10.1.1.1 host 10.1.1.2 log (hash = 0x7F9CF6B9)
```

## Changing the ACL Syslog Correlation Tag Value

Perform this task to change the value of the user-defined cookie or replace a device-generated hash value with a user-defined cookie.

The steps in this section shows how to change the ACL Syslog Correlation tag value on a numbered access list. However, you can change the ACL Syslog Correlation tag value for both numbered and named access lists, and for both standard and extended access lists.

### Procedure

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>show access-list</b>  <b>Example:</b> Device(config)# show access-list	(Optional) Displays the contents of the access list.

	Command or Action	Purpose
<b>Step 3</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 4</b>	<b>access-list <i>access-list-number</i> permit <i>protocol</i> <i>source destination</i> log <i>word</i></b>  <b>Example:</b> Device(config)# access-list 101 permit tcp host 10.1.1.1 host 10.1.1.2 log NewUDV  <b>Example:</b> OR  <b>Example:</b> Device(config)# access-list 101 permit tcp any any log replacehash	Modifies the cookie or changes the hash value to a cookie. <ul style="list-style-type: none"> <li>You must enter the entire access list configuration command, replacing the previous tag value with the new tag value.</li> </ul>
<b>Step 5</b>	<b>end</b>  <b>Example:</b> Device(config)# end	(Optional) Exits global configuration mode and returns to privileged EXEC mode.
<b>Step 6</b>	<b>show ip access-list <i>access-list-number</i></b>  <b>Example:</b> Device# show ip access-list 101	(Optional) Displays the contents of the IP access list. <ul style="list-style-type: none"> <li>Review the output to confirm the changes.</li> </ul>

## Troubleshooting Tips

Use the **debug ip access-list hash-generation** command to display access list debug information. The following is an example of the **debug** command output:

```
Device# debug ip access-list hash-generation
Syslog hash code generation debugging is on
Device# show debug
IP ACL:
Syslog hash code generation debugging is on
Device# no debug ip access-list hash-generation
```

```

Syslog hash code generation debugging is off
Device# show debug
Device#

```

## Configuration Examples for ACL Syslog Correlation

### Example: Configuring ACL Syslog Correlation Using a User-Defined Cookie

The following example shows how to configure the ACL Syslog Correlation feature on a device using a user-defined cookie.

```

Device#
Device# debug ip access-list hash-generation
Syslog MD5 hash code generation debugging is on
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# access-list 33 permit 10.10.10.6 log cook_33_std
Device(config)# do show ip access 33
Standard IP access list 33
10 permit 10.10.10.6 log (tag = cook_33_std)
Device(config)# end

```

### Example: Configuring ACL Syslog Correlation using a Hash Value

The following examples shows how to configure the ACL Syslog Correlation feature on a device using a device-generated hash value.

```

Device# debug ip access-list hash-generation
Syslog MD5 hash code generation debugging is on
Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# access-list 33 permit 10.10.10.7 log
Device(config)#
*Nov 7 13:51:23.615: %IPACL-HASHGEN: Hash Input: 33 standard permit 10.10.10.7
Hash Output: 0xCE87F535
Device(config)#
do show ip access 33

Standard IP access list 33
 10 permit 10.10.10.6 log (tag = cook_33_std)
 20 permit 10.10.10.7 log (hash = 0xCE87F535)

```

### Example: Changing the ACL Syslog Correlation Tag Value

The following example shows how to replace an existing access list user-defined cookie with a new cookie value, and how to replace a device-generated hash value with a user-defined cookie value.

```

Device# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Device(config)# do show ip access-list 101
Extended IP access list 101
 10 permit tcp host 10.1.1.1 host 10.1.1.2 log (tag = MyCookie)
 20 permit tcp any any log (hash = 0x75F078B9)
Device(config)# access-list 101 permit tcp host 10.1.1.1 host 10.1.1.2 log NewUDV
Device(config)# do show access-list

```

```

Extended IP access list 101
 10 permit tcp host 10.1.1.1 host 10.1.1.2 log (tag = NewUDV)
 20 permit tcp any any log (hash = 0x75F078B9)
Device(config)# access-list 101 permit tcp any any log replacehash
Device(config)# do show access-list
Extended IP access list 101
 10 permit tcp host 10.1.1.1 host 10.1.1.2 log (tag = NewUDV)
 20 permit tcp any any log (tag = replacehash)

```

## Feature Information for ACL Syslog Correlation

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://tools.cisco.com/ITDIT/CFN/>. An account on <http://www.cisco.com/> is not required.

**Note**

The below table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

**Table 2: Feature Information for ACL Syslog Correlation**

Feature Name	Releases	Feature Information
IP Access Lists	Cisco IOS-XE Release 3.15.0S	This feature was introduced on the Cisco cBR Series Converged Broadband Routers.
