

Configuring Embedded Resource Manager-MIB

Last Updated: October 11, 2011

The Embedded Resource Manager (ERM)-MIB feature introduces MIB support for the ERM feature. The ERM feature tracks resource usage information for every registered resource owner and resource user. The ERM-MIB feature allows you to monitor the usage of resources by gathering resource usage information using MIB objects. The network manager can use the information collected by the ERM-MIB objects to ensure the optimal use of the resources.

- [Finding Feature Information, page 1](#)
- [Prerequisites for ERM-MIB, page 1](#)
- [Information About ERM-MIB, page 2](#)
- [How to Configure ERM-MIB, page 11](#)
- [Configuration Examples for ERM-MIB, page 13](#)

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for ERM-MIB

Simple Network Management Protocol (SNMP) must be enabled on the router before notifications (traps) can be configured or before SNMP GET operations can be performed.

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

Information About ERM-MIB

The ERM-MIB feature introduces network management support for ERM through the use of ERM-MIB table entries, MIB objects, and MIB trap notification objects that are defined in CISCO-ERM-MIB.my.

To use the ERM-MIB feature, you should understand the following concepts:

- [ERM Show MIB Objects, page 2](#)
- [ERM Configuration MIB Objects, page 7](#)
- [ERM Notification MIB Objects, page 9](#)

ERM Show MIB Objects

The ERM Show MIB objects are read-only objects. You can use these MIB objects to obtain information about resource owners, resource user type, resource users or groups, resource owner and resource user relationships, and resource monitors in the system.

The table below describes the ERM Show MIB objects.

Table 1 *ERM Show MIB objects*

ERM Show MIB Objects	Purpose
cermResOwnerTable	Obtains the details of all resource owners in the system.
cermResOwnerSubTypeTable	Obtains the details of the resource owner sub-types in the system.
cermResOwnerSubTypeThresholdTable	Obtains the details of the threshold value defined for each resource owner sub-type in the system.
cermResUserTypeTable	Obtains the details of the resource user types in the system.
cermResUserTable	Obtains the details of each resource user in the system.
cermResGroupTable	Obtains the details of each resource group in the system.
cermResGroupResUserTable	Obtains the details of resource users available in a specific resource group.
cermResOwnerResUserOrGroupTable	Obtains the details of all the resource owners, resource users, and group relationships defined in the system.
cermResOwnerResUserOrGroupThresholdTable	Obtains the details of the threshold value defined for each resource owner sub-type, resource user or resource group relationship in the system.

ERM Show MIB Objects	Purpose
cermResUserTypeResOwnerTable	Obtains the details of resource owners present in a specific resource user type.
cermResMonitorTable	Obtains the details of resource monitors in the system.
cermResMonitorResOwnerResUserTable	Obtains the details of resource owners, resource users, and resource owner and resource user relationships that are monitored by a resource monitor.
cermResMonitorPolicyTable	Obtains the details of resource policies that are monitored by a resource monitor.

- [Obtaining Information About Resource Policies that are Monitored by a Resource Monitor, page 7](#)

Obtaining Information About Resource Owners

You can use `cermResOwnerTable` to obtain information about all resource owners in the system. The index entries for `cermResOwnerTable` are `entPhysicalIndex`, `cermResOwnerSubEntityId`, and `cermResOwnerId`.

The `cermResOwnerTable` defines the following MIB objects:

- `cermResOwnerSubEntityId`
- `cermResOwnerId`
- `cermResOwnerName`
- `cermResOwnerMeasurementUnit`
- `cermResOwnerThresholdIsConfigurable`
- `cermResOwnerResUserCount`
- `cermResOwnerResGroupCount`

Obtaining Sub-type Specific Information

You can use `cermResOwnerSubTypeTable` to obtain sub-type specific information. The `cermResOwnerSubTypeTable` is an extension of the `cermResOwnerTable`. The index entries for

cermResOwnerSubTypeTable are entPhysicalIndex, cermResOwnerSubEntityId, cermResOwnerId, and cermResOwnerSubTypeId.

Each resource owner will have one or more entries in this table. For example, the CPU resource owner has three sub-types: process, interrupt, and total.

Some resource owners may not have any sub-types, such as the IPC resource owner. In such cases this table will contain a single entry with cermResOwnerSubTypeId as 0 and cermResOwnerSubTypeName as an empty string.

You can obtain all sub-type related information specified in this table by querying the corresponding resource owner.

The cermResOwnerSubTypeTable defines the following objects:

- cermResOwnerSubTypeId
- cermResOwnerSubTypeName
- cermResOwnerSubTypeUsagePct
- cermResOwnerSubTypeUsage
- cermResOwnerSubTypeMaxUsage
- cermResOwnerSubTypeGlobNotifSeverity

Obtaining Applied System Global Threshold Details

You can use cermResOwnerSubTypeThresholdTable to obtain applied threshold details for each resource owner sub-type. This object is an extension of the cermResOwnerSubTypeTable.

The index entries for cermResOwnerSubTypeThresholdTable are entPhysicalIndex, cermResOwnerSubEntityId, cermResOwnerId, cermResOwnerSubTypeId, and cermResOwnerSubTypeThreshSeverity. You can obtain all threshold details corresponding to a resource owner sub-type by querying the corresponding resource owner.

The cermResOwnerSubTypeThresholdTable defines the following objects:

- cermResOwnerSubTypeThreshSeverity
- cermResOwnerSubTypeRisingThresh
- cermResOwnerSubTypeRisingInterval
- cermResOwnerSubTypeFallingThresh
- cermResOwnerSubTypeFallingInterval

Obtaining Information About a Resource User Type

You can use cermResUserTypeTable to obtain information about a resource user type. Each resource user type in the system has an entry in cermResUserTypeTable. The index entries for this object are entPhysicalIndex, cermResUserTypeSubEntityId, and cermResUserTypeId.

The cermResUserTypeTable defines the following objects:

- cermResUserTypeSubEntityId
- cermResUserTypeId
- cermResUserTypeName
- cermResUserTypeResOwnerCount
- cermResUserTypeResUserCount
- cermResUserTypeResGroupCount

Obtaining Resource User-Specific Information

You can use `cermResUserTable` to obtain information about each resource user in the system. This object is an extension of `cermResUserTypeTable`. The index entries for `cermResUserTable` are `entPhysicalIndex`, `cermResUserTypeSubEntityId`, `cermResUserTypeId`, and `ermResUserId`.

The `cermResUserTable` defines the following objects:

- `cermResUserId`
- `cermResUserName`
- `cermResUserPriority`
- `cermResUserResGroupId`

Obtaining Information About Resource Groups

You can use `cermResGroupTable` to obtain information about every resource group available in the system. This object is an extension of `cermResUserTypeTable`. The index entries for `cermResGroupTable` are `entPhysicalIndex`, `cermResUserTypeSubEntityId`, `cermResUserTypeId`, and `cermResGroupId`.

The `cermResGroupTable` defines the following objects:

- `cermResGroupId`
- `cermResGroupName`
- `cermResGroupUserInstanceCount`

Obtaining Information About Resource Users in a Particular Resource Group

You can use `cermResGroupResUserTable` to obtain the list of resource users available in a particular resource group. This object is an extension of `cermResGroupTable`. The index entries for `cermResGroupResUserTable` are `entPhysicalIndex`, `cermResUserTypeSubEntityId`, `cermResUserTypeId`, `cermResGroupId`, and `cermResGroupResUserId`.

The `cermResGroupResUserTable` defines the following object:

- `cermResGroupResUserId`

Obtaining Information About Resource Owner and User Relationships

You can use `cermResOwnerResUserOrGroupTable` to obtain information about each resource owner- user relationship or resource owner-group relationship in the system. This object is an extension of `cermResOwnerSubTypeTable`.

The index entries for `cermResOwnerResUserOrGroupTable` are `entPhysicalIndex`, `cermResOwnerSubEntityId`, `cermResOwnerId`, `cermResOwnerSubTypeId`, `cermResOwnerResUserTypeId`, and `cermResOwnerResUserOrGroupId`.

This table can be used for the following tasks:

- To obtain the list of resource users registered for a specific resource owner.
- To obtain usage, max-usage, user local and per user global current notification levels for a given resource owner sub-type and resource user relation.

The `cermResOwnerResUserOrGroupTable` defines the following objects:

- `cermResOwnerResUserTypeId`

- cermResOwnerResUserOrGroupId
- cermResUserOrGroupFlag
- cermResUserOrGroupUsagePct
- cermResUserOrGroupUsage
- cermResUserOrGroupMaxUsage
- cermResUserOrGroupNotifSeverity
- cermResUserOrGroupGlobNotifSeverity

Obtaining Threshold Information About Each Resource Owner Sub-type and Resource User Relationship

You can use `cermResOwnerResUserOrGroupThresholdTable` to obtain threshold information about each resource owner sub-type and resource user relationship. This object is an extension of the `cermResOwnerResUserOrGroupTable`.

The index entries for `cermResOwnerResUserOrGroupThresholdTable` are `entPhysicalIndex`, `cermResOwnerSubEntityId`, `cermResOwnerId`, `cermResOwnerSubTypeId`, `cermResOwnerResUserId`, `cermResOwnerResUserOrGroupId`, `cermResUserOrGroupThreshIsUserGlob`, and `cermResUserOrGroupThreshSeverity`.

The `cermResOwnerResUserOrGroupThresholdTable` defines the following objects:

- `cermResUserOrGroupThreshIsUserGlob`
- `cermResUserOrGroupThreshSeverity`
- `cermResUserOrGroupThreshFlag`
- `cermResUserOrGroupRisingThresh`
- `cermResUserOrGroupRisingInterval`
- `cermResUserOrGroupFallingThresh`
- `cermResUserOrGroupFallingInterval`

Obtaining Information About Resource Owners Present in a Resource User Type

You can use `cermResUserTypeResOwnerTable` to obtain the list of resource owners present in a resource user type. This object is an extension of the `cermResUserTypeTable`.

The index entries for `cermResUserTypeResOwnerTable` are `entPhysicalIndex`, `cermResUserTypeSubEntityId`, `cermResUserId`, and `cermResUserTypeResOwnerId`.

The `cermResUserTypeResOwnerTable` defines the following objects:

- `cermResUserTypeResOwnerId`

Obtaining Information About Resource Monitors

You can use `cermResMonitorTable` to obtain the list of resource monitors in the system. The index entries for this object are `entPhysicalIndex`, `cermResMonitorSubEntityId`, and `cermResMonitorId`.

The `cermResMonitorTable` defines the following objects:

- `cermResMonitorSubEntityId`
- `cermResMonitorId`
- `cermResMonitorName`

Obtaining Resource Information About Resource Owner and User Relationships that are Monitored

You can use `cermResMonitorResOwnerResUserTable` to obtain resource-related information that is tracked by a resource monitor. This object is an extension of `cermResMonitorTable`.

The index entries for `cermResMonitorResOwnerResUserTable` are `entPhysicalIndex`, `cermResMonitorSubEntityId`, `cermResMonitorId`, `cermResMonitorResOwnerId`, `cermResMonitorResUserId`, and `cermResMonitorResPolicyName`.

The `cermResMonitorResOwnerResUserTable` defines the following objects:

- `cermResMonitorResOwnerId`
- `cermResMonitorResUserId`
- `cermResMonitorResPolicyName`

Obtaining Information About Resource Policies that are Monitored by a Resource Monitor

You can use `cermResMonitorPolicyTable` to obtain the list of resource policies that are tracked by a resource monitor. This object is an extension of the `cermResMonitorTable`. The index entries for `cermResMonitorPolicyTable` are `entPhysicalIndex`, `cermResMonitorSubEntityId`, `cermResMonitorId`, and `cermResMonitorPolicyName`.

The `cermResMonitorPolicyTable` defines the following object:

- `cermResMonitorPolicyName`

ERM Configuration MIB Objects

You can use the ERM Configuration MIB objects to perform the following tasks:

The table below describes the ERM Configuration MIB objects.

Table 2 **ERM Configuration MIB Objects**

ERM Configuration MIB Objects	Purpose
<code>cermScalarsGlobalPolicyName</code> (scalar object)	Identifies and indicates the global resource policy applied in the system.
<code>cermConfigPolicyTable</code>	Creates, modifies, or deletes a resource policy.
<code>cermConfigPolicyResOwnerThreshTable</code>	Configures threshold values and intervals for resource owner sub-types.
<code>cermConfigResGroupTable</code>	Creates or deletes a resource group.
<code>cermConfigResGroupUserTable</code>	Creates or deletes a user instance in a resource group.
<code>cermConfigPolicyApplyTable</code>	Applies an existing resource policy to a resource user or group.

- [Verifying Whether a Global Resource Policy Is Applied in the System, page 8](#)

- [Creating Modifying or Deleting a Resource Policy, page 8](#)
- [Configuring Threshold Values and Intervals for Resource Owner Sub-types in a Resource Policy, page 8](#)
- [Creating or Deleting a Resource Group, page 9](#)
- [Creating or Deleting a User Instance in a Resource Group, page 9](#)
- [Applying an Existing Resource Policy to a Resource User or Group, page 9](#)

Verifying Whether a Global Resource Policy Is Applied in the System

You can use the scalar object `cermScalarsGlobalPolicyName` to identify and indicate if a global resource policy is applied in the system. If no global resource policy is applied in the system, this object will contain an empty string. This object has read-write access permission. Setting this scalar object to an existing global resource policy name will result in applying the global resource policy to the system.

Creating Modifying or Deleting a Resource Policy

You can use `cermConfigPolicyTable` to create, modify, or delete a resource policy. The index entry for this object is `cermPolicyName`.

The `cermConfigPolicyTable` defines the following objects:

- `cermPolicyName`
- `cermPolicyIsGlobal`
- `cermPolicyUserName`
- `cermPolicyLoggingEnabled`
- `cermPolicySnmfNotifEnabled`
- `cermPolicyStorageType`
- `cermPolicyRowStatus`

Configuring Threshold Values and Intervals for Resource Owner Sub-types in a Resource Policy

You can use `cermConfigPolicyResOwnerThreshTable` to configure rising or falling threshold values and rising or falling intervals for resource owner sub-types in a resource policy. This object is an extension of the `cermConfigPolicyTable`.

The index entries for `cermConfigPolicyResOwnerThreshTable` are `cermPolicyName`, `cermPolicyPhysicalIndex`, `cermConfigPolicyResOwnerSubEntityId`, `cermConfigPolicyResOwnerId`, `cermConfigPolicyResOwnerSubTypeId`, `ermConfigPolicyIsUserGlobal`, and `cermConfigPolicyThresholdLevel`.

The `cermConfigPolicyResOwnerThreshTable` defines the following objects:

- `cermPolicyPhysicalIndex`
- `cermConfigPolicyResOwnerSubEntityId`
- `cermPolicyResOwnerId`
- `cermPolicyResOwnerSubTypeId`
- `cermPolicyIsUserGlobal`
- `cermPolicyThresholdLevel`
- `cermPolicyRisingThreshold`
- `cermPolicyRisingInterval`

- cermPolicyFallingThreshold
- cermPolicyFallingInterval
- cermPolicyResOwnerThreshStorageType
- cermPolicyResOwnerRowStatus

Creating or Deleting a Resource Group

You can use cermConfigResGroupTable to create or delete a resource group in the system. The index entry for this object is cermConfigResGroupName.

The cermConfigResGroupTable defines the following objects:

- cermConfigResGroupName
- cermConfigResGroupUserTypeName
- cermConfigResGroupStorageType
- cermConfigResGroupRowStatus

Creating or Deleting a User Instance in a Resource Group

You can use cermConfigResGroupUserTable to create or delete a user instance in a given resource group. This object is an extension of the cermConfigResGroupTable.

The index entries for cermConfigResGroupUserTable are cermConfigResGroupName and cermConfigResGroupName.

The cermConfigResGroupUserTable defines the following objects:

- cermConfigResGroupName
- cermConfigResGroupUserStorageType
- cermConfigResGroupUserRowStatus

Applying an Existing Resource Policy to a Resource User or Group

You can use cermConfigPolicyApplyTable to apply an existing resource policy to a resource user or resource group. The index entries for this object are cermPolicyApplyUserOrGroupName and cermPolicyApplyUserOrGroupFlag.

The cermConfigPolicyApplyTable defines the following objects:

- cermPolicyApplyUserOrGroupName
- cermPolicyApplyUserOrGroupFlag
- cermPolicyApplyPolicyName
- cermPolicyApplyStorageType
- cermPolicyApplyRowStatus

ERM Notification MIB Objects

You can configure ERM Notification MIB objects to receive global or user-specific notification on policy violation. There are three types of ERM Notification MIB objects.

The table below describes the ERM Notification MIB objects.

Table 3 **ERM Notification MIB Objects**

ERM Notification MIB Objects	Purpose
cermNotifsEnabled	Enables ERM notifications.
ciscoErmGlobalPolicyViolation	Specifies the type of notification received on global policy violation.
ciscoErmLocalPolicyViolation	Specifies the type of user-specific notification received on local policy violation.

- [Controlling the Generation of Traps for ERM Policy Violation Notifications, page 10](#)
- [Receiving a Global Notification on Policy Violation, page 10](#)
- [Receiving a User-Specific Notification on Policy Violation, page 10](#)

Controlling the Generation of Traps for ERM Policy Violation Notifications

You can use `cermNotifsEnabled` to determine if the generation of traps for ERM policy violation notifications is allowed.

When this object is set to true, it allows generation of traps for the ERM policy violation related notifications `ciscoErmGlobalPolicyViolation` and `ciscoErmLocalPolicyViolation`.

Receiving a Global Notification on Policy Violation

You can use `ciscoErmGlobPolicyViolation` to receive global notification on policy violation.

The notification object `ciscoErmGlobPolicyViolation` defines the following objects:

- `cermResOwnerName`
- `cermResOwnerSubTypeName`
- `cermNotifsThresholdSeverity`
- `cermNotifsThresholdValue`
- `cermNotifsDirection`
- `cermNotifsPolicyName`

Receiving a User-Specific Notification on Policy Violation

You can use `ciscoErmUserPolicyViolation` to receive a user-specific notification on policy violation.

The notification object `ciscoErmUserPolicyViolation` contains the following objects:

- `cermResOwnerName`
- `cermResOwnerSubTypeName`
- `cermResUserName`
- `cermResUserOrGroupThreshFlag`
- `cermNotifsThresholdIsUserGlob`
- `cermNotifsThresholdSeverity`
- `cermNotifsThresholdValue`
- `cermNotifsDirection`

- `cermNotifsPolicyName`

How to Configure ERM-MIB

- [Enabling ERM-MIB Notification Traps, page 11](#)
- [Configuring the Router to Send SNMP Notification Traps for ERM to a Host, page 12](#)

Enabling ERM-MIB Notification Traps

You can enable ERM-MIB notification traps, which are generated when resource usage exceeds the threshold value. The ERM-MIB notification traps will be sent to the host that is configured to receive traps.

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `snmp-server enable traps resource-policy`
4. `end`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p><code>enable</code></p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	<p><code>configure terminal</code></p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
Step 3	<p><code>snmp-server enable traps resource-policy</code></p> <p>Example:</p> <pre>Router(config)# snmp-server enable traps resource-policy</pre>	<p>Enables CISCO-ERM-MIB notifications.</p>
Step 4	<p><code>end</code></p> <p>Example:</p> <pre>Router(config)# end</pre>	<p>Returns the router to privileged EXEC mode.</p>

Configuring the Router to Send SNMP Notification Traps for ERM to a Host

Perform this task to enable the router to send SNMP notifications traps defined in ERM-MIB to a host.

- SNMP must be enabled on your network.
- Create an SNMP server community to receive information on MIB objects and traps using the **snmp-server community** command.

SUMMARY STEPS

1. **enable**
2. **show running-config** [*options*]
3. **configure terminal**
4. **snmp-server host** {*hostname* | *ip-address*} [**vrf** *vrf-name*] [**traps** | **informs**] [**version** {**1** | **2c** | **3** [**auth** | **noauth** | **priv**]}] *community-string* [**udp-port** *port*] [*notification-type*]
5. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: <pre>Router> enable</pre>	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	show running-config [<i>options</i>] Example: <pre>Router# show running-config</pre>	Displays the running configuration to determine if an SNMP agent is already running. <ul style="list-style-type: none"> • If no SNMP information is displayed, continue with the next step. If any SNMP information is displayed, you can modify the information or change it as needed.
Step 3	configure terminal Example: <pre>Router# configure terminal</pre>	Enters global configuration mode.
Step 4	snmp-server host { <i>hostname</i> <i>ip-address</i> } [vrf <i>vrf-name</i>] [traps informs] [version { 1 2c 3 [auth noauth priv]}] <i>community-string</i> [udp-port <i>port</i>] [<i>notification-type</i>] Example: <pre>Router(config)# snmp-server host 209.165.201.30 traps version 2c priv mycommunitystring isis</pre>	Specifies the recipient (target host) for ERM SNMP notification operations.

Command or Action	Purpose
Step 5 end Example: Router(config)# end	Returns the router to privileged EXEC mode.

Configuration Examples for ERM-MIB

- [Configuring the Router to Send SNMP Notifications for ERM to a Host Example, page 13](#)

Configuring the Router to Send SNMP Notifications for ERM to a Host Example

The following example shows how to configure the router to send SNMP notifications for ERM to a host:

```
Router# configure terminal
Router(config)# snmp-server community public rw
Router(config)# snmp-server enable traps resource-policy
Router(config)# snmp-server host 209.165.201.30 version 2c public
Router(config)# end
```

Feature Information for ERM-MIB

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 4 **Feature Information for ERM-MIB**

Feature Name	Releases	Feature Information
Embedded Resource Manager (ERM)-MIB	12.2(33)SB 12.2(33)SRB 12.4(15)T	<p>The ERM-MIB feature introduces MIB support for the Embedded Resource Manager (ERM) feature. The ERM-MIB feature allows you to monitor the usage of resources by gathering resource usage information using MIB objects. The network manager can use the information collected by the ERM-MIB objects to ensure the optimal use of the resources.</p> <p>The following commands were introduced or modified by this feature: snmp-server enable traps resource-policy</p>
