

Configuring IP SLAs DHCP Operations

Last Updated: July 18, 2011

This module describes how to configure an IP Service Level Agreements (SLAs) Dynamic Host Control Protocol (DHCP) operation to measure the response time between a Cisco device and a DHCP server to obtain an IP address.

- [Finding Feature Information, page 1](#)
- [Information About IP SLAs DHCP Operations, page 1](#)
- [How to Configure IP SLAs DHCP Operations, page 2](#)

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About IP SLAs DHCP Operations

- [DHCP Operation, page 2](#)
- [IP SLAs DHCP Relay Agent Options, page 2](#)

DHCP Operation

DHCP provides a mechanism for allocating IP addresses dynamically so that addresses can be reused when hosts no longer need them. The DHCP operation measures the round-trip time (RTT) taken to discover a DHCP server and obtain a leased IP address from it. IP SLAs releases the leased IP address after the operation.

You can use the RTT information to determine DHCP performance levels.

There are two modes for the DHCP operation. By default, the DHCP operation sends discovery packets on every available IP interface on the router. If a specific server is configured on the router, discovery packets are sent only to the specified DHCP server.

IP SLAs DHCP Relay Agent Options

A DHCP relay agent is any host that forwards DHCP packets between clients and servers. Relay agents are used to forward requests and replies between clients and servers when they are not on the same physical subnet. Relay agent forwarding is distinct from the normal forwarding of an IP router, where IP packets are switched between networks somewhat transparently. Relay agents receive DHCP messages and then generate a new DHCP message to send out on another interface.

The IP SLAs DHCP operation contains a relay agent information option--Option 82--which is inserted by the DHCP relay agent when forwarding client-originated DHCP packets to a DHCP server. Servers recognizing the relay agent information option may use the information to implement IP address or other parameter assignment policies. The DHCP server echoes the option back verbatim to the relay agent in server-to-client replies, and the relay agent strips the option before forwarding the reply to the client.

Option 82 includes three suboptions that convey information known by the relay agent:

- **circuit-id** --identifies the incoming circuit.
- **remote-id** --provides a trusted identifier for a remote high-speed modem.
- **subnet-mask** --identifies the mask of the logical IP subnet from which the relay agent received the client DHCP packet.

How to Configure IP SLAs DHCP Operations

**Note**

There is no need to configure an IP SLAs responder on the destination device.

- [Configuring a DHCP Operation on the Source Device, page 2](#)
- [Scheduling IP SLAs Operations, page 7](#)

Configuring a DHCP Operation on the Source Device

Perform one of the following tasks:

- [Configuring a Basic DHCP Operation, page 3](#)
- [Configuring a DHCP Operation with Optional Parameters, page 4](#)

Configuring a Basic DHCP Operation

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **ip sla operation-number**
4. **dhcp** {*destination-ip-address* | *destination-hostname*} [**source-ip** {*ip-address* | *hostname*}] [**option-82** [**circuit-id** *circuit-id*] [**remote-id** *remote-id*] [**subnet-mask** *subnet-mask*]]
5. **frequency seconds**
6. **end**

DETAILED STEPS

Command or Action	Purpose
<p>Step 1 enable</p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> • Enter your password if prompted.
<p>Step 2 configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
<p>Step 3 ip sla operation-number</p> <p>Example:</p> <pre>Router(config)# ip sla 10</pre>	<p>Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.</p>
<p>Step 4 dhcp {<i>destination-ip-address</i> <i>destination-hostname</i>} [source-ip {<i>ip-address</i> <i>hostname</i>}] [option-82 [circuit-id <i>circuit-id</i>] [remote-id <i>remote-id</i>] [subnet-mask <i>subnet-mask</i>]]</p> <p>Example:</p> <pre>Router(config-ip-sla)# dhcp 10.10.10.3</pre>	<p>Defines a DHCP operation and enters IP SLA DHCP configuration mode.</p>
<p>Step 5 frequency seconds</p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# frequency 30</pre>	<p>(Optional) Sets the rate at which a specified IP SLAs operation repeats.</p>

Command or Action	Purpose
Step 6 <code>end</code> Example: <code>Router(config-ip-sla-dhcp)# end</code>	Exits to privileged EXEC mode.

Configuring a DHCP Operation with Optional Parameters

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `ip sla operation-number`
4. `dhcp {destination-ip-address | destination-hostname} [source-ip {ip-address | hostname}] [option-82 [circuit-id circuit-id] [remote-id remote-id] [subnet-mask subnet-mask]]`
5. `history buckets-kept size`
6. `history distributions-of-statistics-kept size`
7. `history enhanced [interval seconds] [buckets number-of-buckets]`
8. `history filter {none | all | overThreshold | failures}`
9. `frequency seconds`
10. `history hours-of-statistics-kept hours`
11. `history lives-kept lives`
12. `owner owner-id`
13. `history statistics-distribution-interval milliseconds`
14. `tag text`
15. `threshold milliseconds`
16. `timeout milliseconds`
17. `end`

DETAILED STEPS

Command or Action	Purpose
Step 1 <code>enable</code> Example: <code>Router> enable</code>	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.

	Command or Action	Purpose
Step 2	<p>configure terminal</p> <p>Example:</p> <pre>Router# configure terminal</pre>	Enters global configuration mode.
Step 3	<p>ip sla operation-number</p> <p>Example:</p> <pre>Router(config)# ip sla 10</pre>	Begins configuration for an IP SLAs operation and enters IP SLA configuration mode.
Step 4	<p>dhcp {destination-ip-address destination-hostname} [source-ip {ip-address hostname}] [option-82 [circuit-id circuit-id] [remote-id remote-id] [subnet-mask subnet-mask]]</p> <p>Example:</p> <pre>Router(config-ip-sla)# dhcp 10.10.10.3 option-82 circuit-id 10005A6F1234</pre>	Defines a DHCP operation and enters IP SLA DHCP configuration mode.
Step 5	<p>history buckets-kept size</p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history buckets-kept 25</pre>	(Optional) Sets the number of history buckets that are kept during the lifetime of an IP SLAs operation.
Step 6	<p>history distributions-of-statistics-kept size</p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history distributions-of- statistics-kept 5</pre>	(Optional) Sets the number of statistics distributions kept per hop during an IP SLAs operation.
Step 7	<p>history enhanced [interval seconds] [buckets number-of-buckets]</p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history enhanced interval 900 buckets 100</pre>	(Optional) Enables enhanced history gathering for an IP SLAs operation.

Command or Action	Purpose
<p>Step 8 history filter { none all overThreshold failures }</p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history filter failures</pre>	(Optional) Defines the type of information kept in the history table for an IP SLAs operation.
<p>Step 9 frequency <i>seconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# frequency 30</pre>	(Optional) Sets the rate at which a specified IP SLAs operation repeats.
<p>Step 10 history hours-of-statistics-kept <i>hours</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history hours-of-statistics-kept 4</pre>	(Optional) Sets the number of hours for which statistics are maintained for an IP SLAs operation.
<p>Step 11 history lives-kept <i>lives</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history lives-kept 5</pre>	(Optional) Sets the number of lives maintained in the history table for an IP SLAs operation.
<p>Step 12 owner <i>owner-id</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# owner admin</pre>	(Optional) Configures the Simple Network Management Protocol (SNMP) owner of an IP SLAs operation.
<p>Step 13 history statistics-distribution-interval <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# history statistics-distribution-interval 10</pre>	(Optional) Sets the time interval for each statistics distribution kept for an IP SLAs operation.
<p>Step 14 tag <i>text</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# tag TelnetPollServer1</pre>	(Optional) Creates a user-specified identifier for an IP SLAs operation.

Command or Action	Purpose
<p>Step 15 <code>threshold</code> <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# threshold 10000</pre>	<p>(Optional) Sets the upper threshold value for calculating network monitoring statistics created by an IP SLAs operation.</p>
<p>Step 16 <code>timeout</code> <i>milliseconds</i></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# timeout 10000</pre>	<p>(Optional) Sets the amount of time an IP SLAs operation waits for a response from its request packet.</p>
<p>Step 17 <code>end</code></p> <p>Example:</p> <pre>Router(config-ip-sla-dhcp)# end</pre>	<p>Exits to privileged EXEC mode.</p>

Scheduling IP SLAs Operations

Note

- All IP SLAs operations to be scheduled must be already configured.
- The frequency of all operations scheduled in a multioperation group must be the same.
- List of one or more operation ID numbers to be added to a multioperation group is limited to a maximum of 125 characters, including commas (,).

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. Do one of the following:
 - `ip sla schedule` *operation-number* [**life** {**forever** | *seconds*}] [**start-time** {*hh : mm[: ss]* [*month day* | *day month*]} | **pending** | **now** | **after** *hh : mm : ss*] [**ageout** *seconds*] [**recurring**]
 - `ip sla group schedule` *group-operation-number* *operation-id-numbers* **schedule-period** *schedule-period-range* [**ageout** *seconds*] [**frequency** *group-operation-frequency*] [**life**{**forever** | *seconds*}] [**start-time**{*hh:mm[:ss]* [*month day* | *day month*]} | **pending** | **now** | **after** *hh:mm:ss*}]
4. `exit`
5. `show ip sla group schedule`
6. `show ip sla configuration`

DETAILED STEPS

Command or Action	Purpose
<p>Step 1 <code>enable</code></p> <p>Example:</p> <pre>Router> enable</pre>	<p>Enables privileged EXEC mode.</p> <ul style="list-style-type: none"> Enter your password if prompted.
<p>Step 2 <code>configure terminal</code></p> <p>Example:</p> <pre>Router# configure terminal</pre>	<p>Enters global configuration mode.</p>
<p>Step 3 Do one of the following:</p> <ul style="list-style-type: none"> ip sla schedule <i>operation-number</i> [life {forever <i>seconds</i>}] [start-time {<i>hh : mm[: ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh : mm : ss</i>}] [ageout <i>seconds</i>] [recurring] ip sla group schedule <i>group-operation-number operation-id-numbers schedule-period schedule-period-range</i> [ageout <i>seconds</i>] [frequency <i>group-operation-frequency</i>] [life{forever <i>seconds</i>}] [start-time{<i>hh:mm[:ss]</i> [<i>month day</i> <i>day month</i>] pending now after <i>hh:mm:ss</i>}] <p>Example:</p> <pre>Router(config)# ip sla schedule 10 start-time now life forever</pre> <p>Example:</p> <pre>Router(config)# ip sla group schedule 1 3,4,6-9</pre>	<p>For individual IP SLAs operations only:</p> <p>Configures the scheduling parameters for an individual IP SLAs operation.</p> <p>or</p> <p>For multioperation scheduler only:</p> <p>Specifies an IP SLAs operation group number and the range of operation numbers to be scheduled in global configuration mode.</p>
<p>Step 4 <code>exit</code></p> <p>Example:</p> <pre>Router(config)# exit</pre>	<p>Exits to privileged EXEC mode.</p>
<p>Step 5 <code>show ip sla group schedule</code></p> <p>Example:</p> <pre>Router# show ip sla group schedule</pre>	<p>(Optional) Displays the IP SLAs group schedule details.</p>

Command or Action	Purpose
Step 6 <code>show ip sla configuration</code> Example: Router# <code>show ip sla configuration</code>	(Optional) Displays the IP SLAs configuration details.

- [Troubleshooting Tips, page 9](#)
- [What to Do Next, page 9](#)

Troubleshooting Tips

- If the IP SLAs operation is not running and generating statistics, add the **verify-data** command to the configuration of the operation (while configuring in IP SLA configuration mode) to enable data verification. When enabled, each operation response is checked for corruption. Use the **verify-data** command with caution during normal operations because it generates unnecessary overhead.
- Use the **debugipsla trace** and **debug ip sla error** commands to help troubleshoot issues with an IP SLAs operation.

What to Do Next

To add proactive threshold conditions and reactive triggering for generating traps, or for starting another operation, to an IP SLAs operation, see the "Configuring Proactive Threshold Monitoring" section.

To view and interpret the results of an IP SLAs operation use the **show ip sla statistics** command. Checking the output for fields that correspond to criteria in your service level agreement will help you determine whether the service metrics are acceptable.

Configuration Examples for IP SLAs DHCP Operations

- [Example Configuration for an IP SLAs DHCP Operation, page 9](#)

Example Configuration for an IP SLAs DHCP Operation

In the following example, IP SLAs operation number 12 is configured as a DHCP operation enabled for DHCP server 172.16.20.3. Note that DHCP option 82 is used to specify the circuit ID.

Router B Configuration

```
ip dhcp-server 172.16.20.3
!
ip sla 12
  dhcp 10.10.10.3 option-82 circuit-id 10005A6F1234
  frequency 30
  timeout 5000
  tag DHCP_Test
!
ip sla schedule 12 start-time now
```
