

# Configuring Transform Sets for IKEv1 and IKEv2 Proposals

---

Perform this task to define a transform set that is to be used by the IPsec peers during IPsec security association negotiations with IKEv1 and IKEv2 proposals.

- [Configuring Transform Sets for IKEv1, on page 1](#)
- [Configuring Transform Sets for IKEv2, on page 2](#)
- [Verifying Transform Sets for IKEv1, on page 3](#)
- [Verifying Transform Sets for IKEv2, on page 3](#)

## Configuring Transform Sets for IKEv1

---

**Note** Only tunnel mode is supported.

---

```
enable
configure terminal
crypto ipsec
transform-set aesset esp-aes 256 esp-sha-hmac
mode tunnel
end
```

- Optional Configurations

Use the **clear crypto sa** command to clear existing IPsec associations in a transform set.

```
Router # clear crypto sa ?
  counters  Reset the SA counters
  map       Clear all SAs for a given crypto map
  peer      Clear all SAs for a given crypto peer
  spi       Clear SA by SPI
  vrf       VRF (Routing/Forwarding) instance
```

There are complex rules defining the entries that you can use for transform arguments. These rules are explained in the **crypto ipsec transform-set** command. For more information, see [About Transform Sets](#).

# Configuring Transform Sets for IKEv2

```
enable
configure terminal
crypto ipsec transform-set aasset esp-aes 256 esp-sha-hmac
mode tunnel
crypto ikev2 proposal proposal-1
encryption aes-cbc-128
integrity sha1
group 14
end
```

## Transform Sets for IKEv2 Examples

The following examples show how to configure a proposal:

### IKEv2 Proposal with One Transform for Each Transform Type

```
Device(config)# crypto ikev2 proposal proposal-1
Device(config-ikev2-proposal)# encryption aes-cbc-128
Device(config-ikev2-proposal)# integrity sha1
Device(config-ikev2-proposal)# group 14
```

### IKEv2 Proposal with Multiple Transforms for Each Transform Type

```
crypto ikev2 proposal proposal-2
encryption aes-cbc-128 aes-cbc-192
integrity sha1 sha256
group 14 15
```

For a list of transform combinations, see [Configuring Security for VPNs with IPsec](#).

### IKEv2 Proposals on the Initiator and Responder

The proposal of the initiator is as follows:

```
Device(config)# crypto ikev2 proposal proposal-1
Device(config-ikev2-proposal)# encryption aes-cbc-128 aes-cbc-196
Device(config-ikev2-proposal)# integrity sha1 sha256
Device(config-ikev2-proposal)# group 14 16
```

The proposal of the responder is as follows:

```
Device(config)# crypto ikev2 proposal proposal-2
Device(config-ikev2-proposal)# encryption aes-cbc-196 aes-cbc-128
Device(config-ikev2-proposal)# integrity sha256 sha1
Device(config-ikev2-proposal)# group 16 14
```

In the scenario, the initiator's choice of algorithms is preferred and the selected algorithms are as follows:

```
encryption aes-cbc-128
integrity sha1
group 14
```

## Verifying Transform Sets for IKEv1

```
Router# show crypto ipsec transform-set

Transform set default: { esp-aes esp-sha-hmac }
    will negotiate = { Transport, },

Transform set ESP-AES256-SHA1: { esp-256-aes esp-sha-hmac }
    will negotiate = { Tunnel, },

Transform set ESP-SHA384-HMAC_504: { esp-des esp-sha384-hmac }
    will negotiate = { Tunnel, },

Transform set ESP-SHA384-HMAC_30: { esp-des esp-sha384-hmac }
    will negotiate = { Tunnel, },

Transform set AES-SHA1: { esp-aes esp-sha-hmac }
    will negotiate = { Tunnel, },

Transform set ab: { esp-aes esp-sha512-hmac }
    will negotiate = { Tunnel, },
```

## Verifying Transform Sets for IKEv2

```
Router# show crypto ikev2 proposal
IKEv2 proposal: 30
    Encryption : 3DES
    Integrity  : SHA96
    PRF        : SHA1
    DH Group   : DH_GROUP_2048_MODP/Group 14
IKEv2 proposal: default
    Encryption : AES-CBC-256 AES-CBC-192 AES-CBC-128
    Integrity  : SHA512 SHA384 SHA256 SHA96 MD596
    PRF        : SHA512 SHA384 SHA256 SHA1 MD5
    DH Group   : DH_GROUP_1536_MODP/Group 5 DH_GROUP_1024_MODP/Group 2
IKEv2 proposal: prop1
    Encryption : AES-CBC-128
    Integrity  : MD596
    PRF        : MD5
    DH Group   : DH_GROUP_2048_MODP/Group 14
```
