

SNMP Inform Request

The Simple Network Management Protocol (SNMP) Inform Requests feature allows devices to send inform requests to SNMP managers.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About SNMP Inform Requests

SNMP Inform Request

The SNMP Inform Request feature supports sending inform requests. SNMP asynchronous notifications are usually sent as SNMP traps.

Traps are less reliable than informs because an acknowledgment is not sent from the receiving end when a trap is received; however, an SNMP manager that receives an inform acknowledges the message with an SNMP response PDU. If the sender does not receive a response for an inform, the inform can be sent again.

How to Configure SNMP Inform Requests

Configuring Devices to Send Traps

Perform the following task to configure the device to send traps to a host in global configuration mode:

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `snmp-server host host[version {1|2c}]community-string[udp-port port][notification-type]`
4. `snmp-server enable traps[notification-type] [notification-option]`
5. `end`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>enable</code> Example: Device> <code>enable</code>	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	<code>configure terminal</code> Example: Device# <code>configure terminal</code>	Enters global configuration mode.
Step 3	<code>snmp-server host host[version {1 2c}]community-string[udp-port port][notification-type]</code> Example: Device(config)# <code>snmp-server host 10.10.10.10 version 1 public udp-port 2012</code>	Specifies the recipient of the trap message.
Step 4	<code>snmp-server enable traps[notification-type] [notification-option]</code> Example: Device(config)# <code>snmp-server enable traps alarms 3</code>	Globally enables the trap production mechanism for the specified traps. Note Some traps are not controlled by the <code>snmp-server enable traps</code> command. These traps are either enabled by default or controlled through other commands. For example, by default, SNMP link traps are sent when an interface goes up or down. For interfaces expected to go up and down during normal usage, such as ISDN interfaces, the output generated by

	Command or Action	Purpose
		these traps may not be useful. Use the nosnmptraplink-status interface configuration command to disable these traps. In order for a host to receive a trap, an snmp-serverhost command must be configured for that host, and the trap must be enabled globally through the snmp-serverenabletraps command, through a different command, such as snmptraplink-status , or by default.
Step 5	end Example: Device(config)# end	Exits global configuration mode.

Changing Inform Operation Values

Perform the following optional task in global configuration mode to change inform operation values:

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **snmp-server informs** [*retries retries*] [*timeout seconds*] [**pending pending**]
4. **snmp-server trap-source** *interface*
5. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Device# configure terminal	Enters global configuration mode.
Step 3	snmp-server informs [<i>retries retries</i>] [<i>timeout seconds</i>] [pending pending]	Configures inform-specific operation values. <ul style="list-style-type: none"> • This example sets the maximum number of times to resend an inform, the number of seconds to wait for an

	Command or Action	Purpose
	Example: Device(config)# snmp-server informs retries 10 timeout 30 pending 100	acknowledgment before resending, and the maximum number of informs waiting for acknowledgments at any one time.
Step 4	snmp-server trap-source <i>interface</i> Example: Device(config)# snmp-server trap-source GigabitEthernet 1/2/1	This example sets the IP address for the Fast Ethernet interface in slot2, port 1 as the source for all SNMP notifications.
Step 5	end Example: Device(config)# end	Exits global configuration mode.

Configuration Examples for SNMP Inform Request

Example: Configuring SNMP Inform Request

The following configuration example shows how to configure the SNMP Inform Request feature for SNMPv1 or SNMPv2:

The following example sends the SNMP and Cisco environmental monitor enterprise-specific traps to address 172.30.2.160:

```
Device(config)# snmp-server enable traps
Device(config)# snmp-server host 172.30.2.160 public snmp envmon
```

The following example enables the device to send all traps to the host myhost.example.com using the community string public:

```
Device(config)# snmp-server enable traps
Device(config)# snmp-server host myhost.example.com public
```

The following example will not send traps to any host. The BGP traps are enabled for all hosts, but only the ISDN traps are enabled to be sent to a host.

```
Device(config)# snmp-server enable traps bgp
Device(config)# snmp-server host bob public isdn
```

The following example enables the device to send all inform requests to the host myhost.example.com using the community string public:

```
Device(config)# snmp-server enable traps
Device(config)# snmp-server host myhost.example.com informs version 2c public
```

Feature Information for SNMP Inform Request

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [http://www.cisco.com/go/featurenavigator](#). An account on Cisco.com is not required.

Table 1: Feature Information for SNMP Inform Request

Feature Name	Releases	Feature Information
SNMP Inform Request	Cisco IOS XE Release 3.2SE Cisco IOS XE Release 3.3SE Cisco IOS XE Release 3.5SG	<p>The SNMP Inform Request feature supports sending inform requests. SNMP asynchronous notifications are usually sent as SNMP traps.
