Interface Index Display for SNMP

The Interface Index Display for SNMP feature introduces new commands and command modifications that allow advanced users of Simple Network Management Protocol (SNMP) to view information about the interface registrations directly on the managed agent. (For the purposes of this document, the agent is the routing device running Cisco software.) In other words, the commands in this feature allow the user to display MIB information from the agent without using an external NMS.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information about Interface Index Display for SNMP

Interface Index Display for SNMP

The Interface Index Display for SNMP feature introduces new commands and command modifications that allow advanced users of SNMP to view information about interface registrations directly on the managed agent. You can display MIB information from the agent without using an external NMS.

This feature addresses three objects in the Interfaces MIB: ifIndex, ifAlias, and ifName. For complete definitions of these objects, see the IF-MIB.my file available at the Cisco SNMPv2 MIB website.

Feature Information for Interface Index Display for SNMP

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to . An account on Cisco.com is not required.

Table 1: Feature Information for Interface Index Display for SNMP

Feature Name	Releases	Feature Information
Interface Index Display for SNMP	12.2(2)T	The Interface Index Display for SNMP feature introduces new commands and command modifications that allow advanced users of SNMP to view information about interface registrations directly on the managed agent. You can display MIB information from the agent without using an external NMS.
		This feature addresses three objects in the Interfaces MIB: *ifIndex*, *ifAlias*, and *ifName*.
		For complete definitions of these objects, see the IF-MIB.my file available at the Cisco SNMPv2 MIB website.
