

Cisco UBE Serviceability for Event Logging and Debug Classification

The Cisco Unified Border Element (Cisco UBE) Serviceability for Event Logging and Debug Classification feature helps support, test, and development engineers to troubleshoot during high-density call volumes without significantly impacting performance. This feature introduces a new mechanism for tracing the calls and issues, and generating and collecting needed information, on Cisco UBE via Event Logging.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About Cisco UBE Serviceability for Event Logging and Debug Classification

Serviceability

In a Cisco Unified Border Element (Cisco UBE) system, serviceability refers to the ability of technical support and engineering personnel to troubleshoot issues and restore the service to customers in a high call-volume systems. Cisco UBE includes the following:

- Enhacements to the existing debug logging mechanisms to allow SIP-INFO-DEBUG to be sub-categorized based on importance level (Verbose, Info, Notify, and Critical) and the feature set.
- Cisco UBE Event Trace Manager, which supports tracing for Voice over IP (VoIP) networks.

Event Tracing

Cisco Unified Border Element (Cisco UBE) event tracing enables support, test, and development engineers to debug specific issues related to Cisco UBE. For example, they can use it to identify the root cause of issues that occur in the past. Event -tracing allows various VoIP/SIP events related to the SIP signaling layer of the VoIP call to be traced as they occur. Event tracing provides flexibility to configure the mechanism to a specific customer topology and deployment, including the ability to filter the traces based on call-parameters and time.

The event tracing mechanism allows event-trace messages to be written in raw (binary) or encoded (pretty) format.

Debug Message Categories

The Cisco Unified Border Elelment (Cisco UBE) debug categorization mechanism enhances the existing debug framework by adding more filters to control the verbosity. These categories apply to the existing INFO debugs. The messages are subcategorized to control the amount of information logged when info logging in enabled. Therefore, INFO debugs comprise of the following subcategories based on their importance:

- Critical—These errors are feature specific.
- Notification—These errors provide information on important milestones reached.
- Information—These errors provide details to help an engineer understand the workflow.
- Verbose—These errors provide detailed information on all of the above.

The debug messages can also be subcategorized based on a selected feature set (such as SIP profile, fax, audio, or video).

Only one level can be selected. By default Verbose level is enabled. The amount of information provided by the debug messages grows in the increasing order of their listing. For example, Notification provides additional information to that provided by the previous category (Critical) and so on.

How to Configure Cisco UBE Serviceability for Event Logging and Debug Classification

How to Configure Event Tracing

Controlling Cisco UBE Serviceability Event Tracing

Perform this task to disable, clear, and re-enable event traces, and to allow the event traces to be stored permanently to secondary or network storage.

SUMMARY STEPS

- 1. enable
- 2. monitor event-trace voip ccsip all dump [pretty]
- 3. monitor event-trace voip ccsip all disable
- 4. monitor event-trace voip ccsip all clear
- 5. monitor event-trace voip ccsip all enable

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	monitor event-trace voip ccsip all dump [pretty]	Writes the event trace results in ASCII format to the file configured with the global configuration monitor event-trace voip ccsip
	Example:	dump-file command. If you do not specify the pretty keyword, the trace messages are saved in binary format.
	Device# monitor event-trace voip ccsip all dump pretty	the trace messages are saved in officially format.

Command or Action	Purpose
monitor event-trace voip ccsip all disable	Stops all API, Finite State Machine (FSM), Communicating Nested FSM (CNFSM), message and miscellaneous event tracing.
Example:	
Device# monitor event-trace voip ccsip all disable	
monitor event-trace voip ccsip all clear	Clear the traces for active calls captured so far.
Example:	
Device# monitor event-trace voip ccsip all clear	
monitor event-trace voip ccsip all enable	If event-tracing is disabled, this command reenables event tracing for API, FSM, CNFSM, message and miscellaneous events that
Example:	are configured through global configuration mode. This command
Device# monitor event-trace voip ccsip all enable	does not re-enable global or history event tracing.
	monitor event-trace voip ccsip all disable Example: Device# monitor event-trace voip ccsip all disable monitor event-trace voip ccsip all clear Example: Device# monitor event-trace voip ccsip all clear monitor event-trace voip ccsip all enable Example: Device# monitor event-trace voip ccsip all enable

Configuring Cisco UBE Serviceability Event Tracing

SUMMARY STEPS

- 1. enable
- 2. configure terminal
- **3.** monitor event-trace voip ccsip trace-type [size number]
- 4. monitor event-trace voip ccsip dump dump-type
- **5.** monitor event-trace voip ccsip dump-file *file-name*
- 6. monitor event-trace voip ccsip limit connections max-connections
- 7. monitor event-trace voip ccsip limit memory size
- 8. monitor event-trace voip ccsip stacktrace number
- 9. exit

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	

	Command or Action	Purpose
Step 2	configure terminal	Enters global configuration mode.
	Example:	
	Device# configure terminal	
Step 3	monitor event-trace voip ccsip trace-type [size number]	Enables event tracing for various Voice Over IP (VoIP) CCSIP API events. Event tracing for other
	Example:	events, such as Finite State Machine (FSM), Communicating Nested FSM (CNFSM),
	Device(config) # monitor event-trace voip ccsip api size 50	miscellaneous, message, and global events can be enabled in a similar way.
Step 4	monitor event-trace voip ccsip dump dump-type	(Optional) Specifies the automatic dump policy for VoIP CCSIP events. Available options are marked ,
	Example:	all, or none (default).
	Device(config) # monitor event-trace voip ccsip dump marked	
Step 5	monitor event-trace voip ccsip dump-file file-name	(Optional) Specifies the file where event trace messages are written from memory to permanent
	Example:	storage.
	Device(config) # monitor event-trace voip ccsip dump-file slot0:ccsip-dump-file OR	
	Device(config) #monitor event-trace voip ccsip dump-file ftp://username:password@server_ip//path/ccsip-dump-file	
	OR Device(config) #monitor event-trace voip ccsip dump-file tftp://server_ip//path/ccsip-dump-file.txt	
Step 6	monitor event-trace voip ccsip limit connections	(Optional) Limits the resources used by the event
	max-connections	tracing mechanism based on the number of connections or call legs. The default limit is 1000
	Example:	connections.
	Device(config) # monitor event-trace voip ccsip limit connections 500	
Step 7	monitor event-trace voip ccsip limit memory size	(Optional) Limits the resources used by the event tracing mechanism to 50 MBytes.
	Example:	
	Device(config) # monitor event-trace voip ccsip limit memory 50	
Step 8	monitor event-trace voip ccsip stacktrace number	(Optional) Enables the stack trace at tracepoints and specifies the depth of the stack trace stored.
	Example:	
	<pre>Device(config)# monitor event-trace voip ccsip stacktrace 9</pre>	

	Command or Action	Purpose
Step 9	exit	Exits global configuration mode.
	Example:	
	Device(config)# exit	

Monitoring Cisco UBE Serviceability Event Tracing

Perform this task to monitor Cisco Unified Border Element (Cisco UBE) serviceability for event tracing and logging parameters. Depending on your requirements, you can view the event traces of the Cisco UBE based on several parameters. The commands can be entered in any order.

SUMMARY STEPS

- 1. enable
- 2. show monitor event-trace voip ccsip trace-type filter called-num filter-value all
- 3. show monitor event-trace voip ccsip trace-type all
- 4. show monitor event-trace voip ccsip summary
- 5. show monitor event-trace voip history all

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example: Device> enable	
Step 2	show monitor event-trace voip ccsip trace-type filter called-num filter-value all	Displays the captured event traces for API events for in-progress calls made to the specified number.
	Example:	
	Device# show monitor event-trace voip ccsip api filter called-num 88888 all	
Step 3	show monitor event-trace voip ccsip trace-type all	Displays the captured event traces for Finite State Machine (FSM) and Communicating Nested FSM
	Example:	(CNFSM) events.
	Device# show monitor event-trace voip ccsip fsm all	

	Command or Action	Purpose
Step 4	show monitor event-trace voip ccsip summary	Displays a summary of all captured event traces.
	Example:	
	Device# show monitor event-trace voip ccsip summary	
Step 5	show monitor event-trace voip history all	Displays the captured traces for completed calls.
	Example:	
	Device# show monitor event-trace voip ccsip history all	

Configuring Cisco UBE Serviceability Debug Classification

Perform this task to classify debug messages to support Cisco Unified Border Element (Cisco UBE) serviceability features, and to display Cisco UBE debug category code information.

SUMMARY STEPS

- 1. enable
- 2. debug ccsip info
- **3. debug ccsip feature** feature-name feature-name feature-name feature-name
- 4. debug ccsip level critical
- 5. show cube debug category codes

	Command or Action	Purpose
Step 1	enable	Enables privileged EXEC mode.
	Example:	• Enter your password if prompted.
	Device> enable	
Step 2	debug ccsip info	Enables CCSIP INFO debugging.
	Example:	
	Device# debug ccsip info	

	Command or Action	Purpose
Step 3	debug ccsip feature feature-name feature-name feature-name feature-name feature-name	Enables filtering of CCSIP INFO debugs based on various features. Debugs for specified and enabled features are printed.
	Example:	
	Device# debug ccsip feature audio cac dtmf fax registration	
Step 4	debug ccsip level critical	Enables CCSIP critical level debugging messages.
	Example:	
	Device# debug ccsip level critical	
Step 5	show cube debug category codes	Displays Cisco Unified Border Element debug category code information.
	Example:	
	Device# show cube debug category codes	

Monitoring Active Calls

Perform this task to monitor and display information on the total number of active calls in the system.

SUMMARY STEPS

1. show call active total-calls

	Command or Action	Purpose
Step 1	show call active total-calls	Displays the total number of active calls in the system.
	Example: Device# show call active total-calls Total Number of Active Calls : 110	

Configuration Examples for Cisco UBE Serviceability for Event Logging and Debug Classification

Example: Controlling Cisco UBE Serviceability Event Tracing

The following example shows how to allow the event traces to be stored permanently to secondary storage and how to control event trace logging:

```
Device> enable
Device# monitor event-trace voip ccsip all dump pretty
Device# monitor event-trace voip ccsip all disable
Device# monitor event-trace voip ccsip all clear
Device# monitor event-trace voip ccsip all enable
```

Example: Configuring Cisco UBE Serviceability Event Tracing

The following example shows how to configure event tracing in the system:

```
Device> enable
Device# configure terminal
Device(config)# monitor event-trace voip ccsip api size 50
Device(config)# monitor event-trace voip ccsip fsm size 100
Device(config)# monitor event-trace voip ccsip global size 100
Device(config)# monitor event-trace voip ccsip misc size 50
Device(config)# monitor event-trace voip ccsip misc size 50
Device(config)# monitor event-trace voip ccsip mag size 50
Device(config)# monitor event-trace voip ccsip dump marked
Device(config)# monitor event-trace voip ccsip dump-file slot0:ccsip-dump-file
Device(config)# monitor event-trace voip ccsip limit connections 1000
Device(config)# monitor event-trace voip ccsip stacktrace 9
Device(config)# exit
```

Example: Monitoring Cisco UBE Serviceability Event Tracing

The following example shows how to monitor event tracing in the system:

```
Device> enable
Device# show monitor event-trace voip ccsip api filter called-num 88888 all
Device# show monitor event-trace voip ccsip fsm all
Device# show monitor event-trace voip ccsip summary
Device# show monitor event-trace voip ccsip history all
```

Example: Configuring Cisco UBE Serviceability Debug Classification

The following example shows how to configure debug messages for Cisco Unified Border Element (Cisco UBE) serviceability features:

```
Device> enable
Device# debug ccsip info
SIP Call info tracing is enabled
Device# debug ccsip feature audio cac dtmf fax registration
audio debugging for ccsip info is enabled (active)
fax debugging for ccsip info is enabled (active)
dtmf debugging for ccsip info is enabled (active)
cac debugging for ccsip info is enabled (active)
registration debugging for ccsip info is enabled (active)
```

Device# debug ccsip level critical critical mode tracing for ccsip info is enabled (active) Device# show cube debug category codes

show cube debug category codes values. | Indx | Debug Name | Value 01 | SDP Debugs | 1 02 | Audio Debugs 03 | Video Debugs 04 | Fax Debugs 05 | SRTP Debugs 06 | DTMF Debugs 07 | SIP Profiles Debugs | 64 08 | SDP Passthrough Deb | 128 09 | Transcoder Debugs | 10 | SIP Transport Debugs | 256 512 11 | Parse Debugs 1024 12 | Config Debugs 13 | Control Debugs 4096 14 | Miscellaneous Debugs | 8192 15 | Supp Service Debugs | 16384 16 | Misc Features Debugs| 32768 17 | SIP Line-side Debugs | 65536 18 | CAC Debugs | 131072 19 | Registration Debugs | 262144

Example: Monitoring Active Calls

The following example shows how to view all active calls in the system:

Device> enable
Device# show call active total-calls
Total Number of Active Calls : 110

Feature Information for Cisco UBE Serviceability for Event Logging and Debug Classification

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1: Feature Information for Cisco UBE Serviceability for Event Logging and Debug Classification

Feature Name	Releases	Feature Information
Cisco UBE Serviceability for Event Logging and Debug Classification	15.3(3)M Cisco IOS Release XE 3.10S	The Cisco Unified Border Element (Cisco UBE) Serviceability for Event Logging and Debug Classification feature helps support, test, and development engineers to troubleshoot during high-density call volumes without significantly impacting performance. This feature introduces a new mechanism for tracing the calls and issues, and generating and collecting needed information, on Cisco UBE via Event Logging. The following commands were introduced or modified: debug ccsip feature, debug ccsip level, monitor event-trace voip ccsip, monitor event-trace voip ccsip dump-file, monitor event-trace voip ccsip dump, monitor event-trace voip ccsip limit, monitor event-trace voip ccsip stacktrace, show call active total-calls, show cube debug category codes, and show monitor event-trace voip ccsip (EXEC).
