

Debug Commands

The commands in this section are for troubleshooting the GGSN. For information about other debug commands, see the *Cisco IOS Debug Command Reference*.

Caution

Because debugging output is assigned high priority in the CPU process, it can diminish the performance of the router or even render it unusable. For this reason, use **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. Moreover, it is best to use **debug** commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased **debug** command processing overhead will affect system use.

This chapter contains the following:

TID/IMSI/MSISDN-Based Conditionally Triggered Debugging

When the TID/IMSI/MSISDN-based conditionally triggered debugging feature is enabled, the GGSN generates debugging messages for PDP contexts that match a particular tunnel ID (TID), International Mobile Subscriber Identity (IMSI) value, or Mobile Station ISDN number (MSISDN) entering or leaving the GGSN. The GGSN will not generate debugging output for PDP contexts containing a different TID, IMSI, or MSISDN value.

Normally, the GGSN will generate debugging messages for every PDP context, resulting in a large number of messages that consume system resources and can make it difficult to find the specific information you need. By limiting the number of debugging messages, you can receive messages related to only to PDP contexts you want to troubleshoot.

Usage Guidelines for TID/IMSI/MSISDN-Based Conditional Debugging

Use the following guidelines when configuring TID/IMSI/MSISDN-based conditional debugging on a GGSN.

1. Before enabling a **debug gprs** command, first enable TID/IMSI/MSISDN-based debugging using the **debug condition calling** command. Ensure that the TID/IMSI or MSISDN string match the ones from the Create PDP Context Request.

Examples:

For a create request with TID 12345678090000B0, you would enter:

```
GGSN# debug condition calling 12345678090000B0
Condition 1 set
GGSN#
```

For a create request with IMSI 21436579000000, you would enter:

```
GGSN# debug condition calling 21436579000000
Condition 2 set
GGSN#
```

For a create request with MSISDN 1112223344, you would enter:

```
GGSN# debug condition calling msisdn-1112223344
Condition 3 set
GGSN#
```

To verify the set conditions, enter:

```
GGSN# show debug condition all
Condition 1: calling 12345678090000B0 (0 flags triggered)
Condition 2: calling 21436579000000 (0 flags triggered)
Condition 3: calling 1112223344 (0 flags triggered)
GGSN#
```

2. After turning on TID, IMSI, or MSISDN-based debugging, turn on GPRS debugging by entering the **debug gprs gtp** or the **debug gprs charging** commands.

Once this step is completed, when Create PDP Context Requests are received, the GGSN will display debug messages for those create requests with either a matching TID, IMSI, or MSISDN.

3. Because the **no debug all** command does not disable conditional debug flags, to ensure that you do not receive a flood of debugging messages when disabling debugging, turn off GPRS debug flags first using the **no debug all** command as follows:

```
GGSN# no debug all
All possible debugging has been turned off
GGSN#
```

```
GGSN# show debug condition all
Condition 1: calling 12345678090000B0 (1 flags triggered)
Condition 2: calling 21436579000000 (1 flags triggered)
Condition 3: calling 1112223344 (1 flags triggered)
```

```
GGSN#
```

4. Disable the conditional debug flags using the **no debug condition all** command:

```
GGSN# no debug condition all
Removing all conditions may cause a flood of debugging messages to result, unless
specified debugging flags are first removed.
```

```
Proceed with the removal of all conditions [yes/no] y
2 conditions have been removed
```

5. Verify that the conditional debug flags have been removed using the **show debug condition all** command:

```
GGSN# show debug condition all
% No conditions found
```

debug condition

To limit output for some debug commands based on specified conditions, use the **debug condition** command in privileged EXEC mode. To remove the specified condition, use the **no** form of this command.

```
debug condition { called dial-string | calling dial-string | calling [tid | imsi | msisdn-msisdn] |
ip ip-address | next-call gprs { apn apn-name | peer sgsn-ip-address | <cr> } | username
username | vcid vc-id }
```

```
no debug condition { condition-id | all }
```

Syntax Description

called <i>dial-string</i>	Generates debugging messages for interfaces with the called party number.
calling <i>dial-string</i>	Generates debugging messages for interfaces with the calling party number.
calling [<i>tid</i> <i>imsi</i> msisdn - <i>msisdn</i>]	Displays events related to GTP processing on the GGSN based on tunnel identifier (TID), international mobile system identifier (IMSI), or Mobile Station ISDN number (MSISDN) in a PDP Context Create Request message.
ip <i>ip-address</i>	Generates debugging messages for the IP address specified.
next-call gprs	Generates debugging messages for the next call seen by the GGSN. Up to 5 next-call conditional debugs settings, or PDPs with next-call debug conditions can be set at any given time.
apn <i>apn-name</i>	Generates debugging messages for the next call seen from a specific APN.
peer <i>sgsn-ip-address</i>	Generates debugging messages for the next call from a specific SGSN.
<cr> (carriage return/Enter)	Generates debugging messages for any next call.
username <i>username</i>	Generates debugging messages for interfaces with the specified username.
vcid <i>vc-id</i>	Generates debugging messages for the VC ID specified.
<i>condition-id</i>	Removes the condition indicated.
all	Removes all conditional debugging conditions.

Defaults

No default behavior or values.

Command History

Release	Modification
12.3(2)XB	This command was introduced on the GGSN.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into the Cisco IOS Release 12.3(14)YU and the msisdn keyword option was added.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.

Release	Modification
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE and the next-call gprs keyword options were added.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

Ensure that you enable TID/IMSI/MSISDN-based conditional debugging using the **debug condition calling** command before configuring the **debug gprs gtp** and **debug gprs charging**.

In addition, ensure that you disable the **debug gprs gtp** and **debug gprs charging** commands using the **no debug all** command before disabling conditional debugging using the **no debug condition** command. This will prevent a flood of debug messages when you disable conditional debugging.

Note

Conditional debugging does not apply to **debug gprs gtp events**, **debug gprs gtp messages**, or **debug gprs gtp packets**. For **debug gprs gtp parsing**, the conditional debugging starts to limit its output only after the PDP context is created (the TID value is not empty).

For more information on using the GGSN TID/IMSI/MSISDN-based conditional debugging, see [“TID/IMSI/MSISDN-Based Conditionally Triggered Debugging” section on page 672](#).

debug condition next-call

Up to 5 next-call conditional debugs settings, or PDPs with next-call debug conditions can be set at any given time.

To monitor and manage the next-call conditional debugging, use the:

- **show debugging condition** command to display existing debug next-call conditions or PDPs with next-call debug conditions
- **clear gprs gtp debug next-call** command to clear debugs set for existing PDPs
- **no debug condition** command with the **next-call** keyword specified to remove a next-call debug condition.

For conditional debugging for an APN, use the **debug condition called** command in privileged EXEC mode.

Examples

Example 1

The following examples configure a conditional debug session based on a TID 12345678090000B0, IMSI 21436579000000, and MSISDN 408525823010:

```
GGSN# debug condition calling 12345678090000B0
Condition 1 set
GGSN#
```

```
GGSN# debug condition calling 21436579000000
Condition 2 set
GGSN#
```

```
GGSN# debug condition calling msisdn 408525823010
Condition 3 set
GGSN#
```

Example 2

The following examples configure a conditional debug session for calls seen by a specific APN named “APN1”:

```
GGSN# debug condition next-call gprs apn APN1
```

Example 3

The following example stops all conditional debugging:

```
Router# no debug conditional all  
All possible debugging has been turned off  
Router#
```

debug aaa coa

To display debug information for CoA processing, use the **debug aaa coa** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug aaa coa

no debug aaa coa

Syntax Description

This command has no keywords or arguments

Defaults

Debugging for POD packets is not enabled.

Command History

Release	Modification
12.4(15)XQ	This command was introduced.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

Use the **debug aaa coa** to display debug information for CoA processing.

Examples

The following is an example of debug information for CoA processing:

```
SAMI 5/3: *Mar 4 23:51:02.820: COA: 10.10.10.10 request queued
SAMI 5/3: *Mar 4 23:51:02.820: ++++++ CoA Attribute List ++++++
SAMI 5/3: *Mar 4 23:51:02.820: 410414A8 0 00000009 string-session-id(337) 15
080808012521869
SAMI 5/3: *Mar 4 23:51:02.820: 4189D04C 0 00000009 qos-profile(507) 28
25621F9301FEFE245E1414003200
SAMI 5/3: *Mar 4 23:51:02.820:
SAMI 5/3: *Mar 4 23:51:02.820: COA: Sending ACK from port 1700 to 10.10.10.10/1700
```

debug diameter

To display information about Diameter processing on the gateway GPRS support node (GGSN), use the **debug diameter** command in privileged EXEC mode.

debug diameter {dcca | connection | error | packet | event | fsm | failover | all}

Syntax Description

dcca	Displays Diameter Credit Control Application-related information.
connection	Displays Diameter peer connection information.
error	Displays errors related to Diameter processing.
packet	Displays Diameter packets.
event	Displays Diameter-related events.
fsm	Displays Diameter-related fault state machine messages.
failover	Displays information about DCCA server failovers.
all	Displays all Diameter-related information.

Defaults

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.3(14)YQ	This command was introduced.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with Diameter processing.

Examples

The following configuration example displays Diameter-related events:

```
debug diameter event
```

debug ggsn quota-server

To display debug information related to quota server processing on the GGSN, use the **debug ggsn quota-server** privileged EXEC command.

debug ggsn quota-server [detail | packets [dump] | events | parsing | errors]

Syntax Description

detail	Displays extended details about quota server operations on the GGSN.
packets	Displays packets sent between the quota server process on the GGSN and the CSG. Optionally, displays output in hexadecimal notation.
events	Displays events related to quota server processing on the GGSN.
parsing	Displays details about GTP TLV parsing between the quota server and the Content Services Gateway.
errors	Displays errors related to quota server processing on the GGSN

Defaults

No default behavior or values.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.3(14)YQ	This command was introduced.
12.4(9)T	This command was integrated into Cisco IOS Release 12.4(9)T.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between the GGSN quota server process and the CSG.

Examples

The following example enables the display of detailed quota server processing debug output—pre-allocated quota and quota push:

```
Router#debug ggsn quota-server detail
ggsn quota-server details debugging is on
Router#
Jun  2 02:40:39.391: GGSN-QS:Encoding QUOTA PUSH REQUEST
Jun  2 02:40:39.391: GGSN-QS:Adding TLV USER_INDEX
```

```

Jun  2 02:40:39.391: GGSN-QS: IP Address: 3.3.3.1 User ID: 12345
Jun  2 02:40:39.391: GGSN-QS:Adding TLV SERVICE_ID: 1
Jun  2 02:40:39.391: GGSN-QS:Adding TLV QUADRANS_GRANTED
Jun  2 02:40:39.391: GGSN-QS:  Quadrans: 1250 Threshold: 1000 Units: SECONDS

Router#

```

debug gprs category fsm event

To display debug information related to service-aware GGSN category events, and state transactions, use the **debug gprs category fsm event** privileged EXEC command.

debug gprs category fsm event

Syntax Description This command has no arguments or keywords.

Defaults No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.3(14)YQ	This command was introduced.
	12.4(9)T	This command was integrated into Cisco IOS Release 12.4(9)T.
	12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
	12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
	12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
	12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
	12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
	12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
	12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines This command is useful for system operators and development engineers if problems are encountered with eGGSN processing.

Examples

Example 1—PDPs with Pre-Allocated Quota

The following example enables the display of eGGSN events and state transactions—pre-allocated quota. This is PDP context create, prepaid subscriber data transfer, and then context teardown.

PDP Context Create:

```
Router#debug gprs category fsm event
eGGSN category fsm event debugging is on
Router#

Jun  2 02:55:34.939: GPRS:123405000000010:freeing all categories
Jun  2 02:55:34.939: GPRS:123405000000010:delete_category 1
Jun  2 02:55:34.939: GPRS:123405000000010:freeing service-aware subblock
Router#

```

Example 2—PDPs without Pre-Allocated Quota

The following example enables the display of eGGSN events and state transactions—for PDPs without pre-allocated quota.

PDP Context Create:

```
Router#debug gprs category fsm event
eGGSN category fsm event debugging is on
Router#
Jun  2 02:58:45.727: GPRS:1234050000000010:created service-aware subblock
Jun  2 02:58:48.623: GPRS:1234050000000010:it is the only one PDP of the user, need CCR
msg
Jun  2 02:58:48.623: GPRS:1234050000000010:sent ccr_init
Router#
```

PDP Context Delete:

```
Router#
Jun  2 02:59:06.975: GPRS:1234050000000010:eggsn_get_final_usage_report
Jun  2 02:59:06.975: GPRS:1234050000000010:freeing all categories
Jun  2 02:59:06.975: GPRS:1234050000000010:freeing service-aware subblock
Router
```

debug gprs dcca

To display troubleshooting information about Diameter Credit Control Application (DCCA) processing on the gateway GPRS support node (GGSN), use the **debug gprs dcca** privileged EXEC command.

debug gprs dcca

Syntax Description This command has no arguments or keywords.

Defaults No default behavior or values.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.3(14)YQ	This command was introduced.
	12.4(9)T	This command was integrated into Cisco IOS Release 12.4(9)T.
	12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
	12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
	12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
	12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
	12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
	12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
	12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines This command is useful for system operators and development engineers if Diameter protocol problems are encountered on the GGSN.

Examples

Example 1

The following is a sample of DCCA debug information with pre-allocated quota.

```
Router#debug gprs dcca

Router#

debug gprs dfp

To display debug messages for GPRS DFP weight calculation, use the **debug gprs dfp** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug gprs dfp

no debug gprs dfp

Syntax Description

This command has no arguments or keywords.

Defaults

No default behavior or values.

Command History

Release	Modification
12.1(9)E	This command was introduced.
12.2(4)MX	This command was integrated into Cisco IOS Release 12.2(4)MX.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

See the following caution before using **debug** commands:

Caution

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. Moreover, it is best to use **debug** commands during periods of lower network flows and fewer users. Debugging during these periods reduces the effect these commands have on other users on the system.

This command displays debug messages for GPRS DFP weight calculation. To display debug messages for the DFP agent subsystem, use the **debug ip dfp agent** command.

Examples

The following example configures a debug session to check all GPRS DFP weight calculation:

```
Router# debug gprs dfp  
GPRS DFP debugging is on  
Router#
```

The following example stops all debugging:

```
Router# no debug all  
All possible debugging has been turned off  
Router#
```

debug gprs dhcp

To display information about Dynamic Host Configuration Protocol (DHCP) processing on the gateway GPRS support node (GGSN), use the **debug gprs dhcp** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug gprs dhcp

no debug gprs dhcp

Syntax Description

This command has no arguments or keywords.

Defaults

No default behavior or values.

Command History

Release	Modification
12.2(4)MX	This command was introduced.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with DHCP processing on the GGSN. To display standard debug messages between the DHCP client on the router and a DHCP server, you can also use the **debug dhcp** or **debug dhcp detail** commands with the **debug gprs dhcp** command.

Caution

Because the **debug gprs dhcp** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following example shows sample output for DHCP processing on the GGSN:

```
Router# debug gprs dhcp
2d13h: GPRS:DHCP req:TID 1111111100000099, Req 1
2d13h: GPRS:Requesting IP address for pdp 1111111100000099 from server 172.16.0.8 tableid
0
2d13h: GPRS:DHCP ip allocation pass (10.88.17.43) for pdp 1111111100000099
2d13h: GPRS:Using DHCP ip address 10.88.17.43 for pdp 1111111100000099
```

The following example shows sample output for standard debug messaging for DHCP processing on the router between the DHCP client and a DHCP server:

```
2d13h: DHCP: proxy allocate request
2d13h: DHCP: new entry. add to queue
2d13h: DHCP: SDiscover attempt # 1 for entry:
2d13h: DHCP: SDiscover: sending 283 byte length DHCP packet
2d13h: DHCP: SDiscover with directed serv 172.16.0.8, 283 bytes
2d13h: DHCP: XID MATCH in dhcpc_for_us()
2d13h: DHCP: Received a BOOTREP pkt
2d13h: DHCP: offer received from 172.16.0.8
2d13h: DHCP: SRequest attempt # 1 for entry:
2d13h: DHCP: SRequest- Server ID option: 172.16.0.8
2d13h: DHCP: SRequest- Requested IP addr option: 10.88.17.43
2d13h: DHCP: SRequest placed lease len option: 604800
2d13h: DHCP: SRequest: 301 bytes
2d13h: DHCP: SRequest: 301 bytes
2d13h: DHCP: XID MATCH in dhcpc_for_us()
2d13h: DHCP: Received a BOOTREP pkt
2d13h: DHCP Proxy Client Pooling: ***Allocated IP address: 10.88.17.43
```

Related Commands

Command	Description
debug dhcp	Displays debug messages between the DHCP client on the router and a DHCP server.

debug gprs gtp

To display information about the GPRS Tunneling Protocol (GTP), use the **debug gprs gtp** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

```
debug gprs gtp { events | messages | packets }
```

```
no debug gprs gtp { events | messages | packets }
```

Syntax Description

events	Displays events related to GTP processing on the GGSN.
messages	Displays GTP signaling messages that are sent between the SGSN and GGSN.
packets	Displays GTP packets that are sent between the SGSN and GGSN.

Defaults

No default behavior or values.

Command History

Release	Modification
12.1(1)GA	This command was introduced.
12.1(5)T	This command was integrated into Cisco IOS Release 12.1(5)T.
12.2(4)MX	This command was integrated into Cisco IOS Release 12.2(4)MX, and the ppp {details events} option was added.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between the GGSN and the SGSN using GTP.

Caution

Because the **debug gprs gtp** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following example enables the display of events related to GTP processing on the GGSN:

```
Router# debug gprs gtp events
```

The following example enables the display of GTP signaling messages:

```
Router# debug gprs gtp messages
```

The following example enables the display of GTP packets sent between the SGSN and GGSN:

```
Router# debug gprs gtp packets
```

The following example enables the display of GTP PPP events between the SGSN and GGSN:

```
Router# debug gprs gtp ppp events
```

The following example enables the display of detailed GTP PPP debug output along with GTP PPP events between the SGSN and GGSN:

```
Router# debug gprs gtp ppp details
```

```
Router# debug gprs gtp ppp events
```

debug gprs gtp parsing

To display information about the parsing of GPRS Tunneling Protocol (GTP) information elements (IEs) in signaling requests, use the **debug gprs gtp parsing** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug gprs gtp parsing

no debug gprs gtp parsing

Syntax Description

This command has no arguments or keywords.

Defaults

No default behavior or values.

Command History

Release	Modification
12.2(4)MX	This command was introduced.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers to verify parsing of GTP IEs in signaling requests that are received by GDM or by the GGSN. If the packet is parsed successfully, you will receive a message along with the TID for the packet as shown in the following example:

```
GPRS:TID:7300000000000000:Packet Parsed successfully
```

The **debug gprs gtp parsing** command can be used to verify GDM or GGSN processing of IEs.

**Caution**

Because the **debug gprs gtp parsing** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following example enables the display of debug messages that occur while GDM or the GGSN parses GTP IEs:

```
Router# debug gprs gtp parsing
```

debug gprs gtp ppp

To display information about PPP PDP type processing on the gateway GPRS support node (GGSN), use the **debug gprs gtp ppp** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

```
debug gprs gtp ppp {events | details}
```

```
no debug gprs gtp ppp {events | details}
```

Syntax Description

events	Displays messages specific to certain conditions that are occurring during PPP PDP type processing.
details	Displays more extensive and lower-level messages related to PPP PDP type processing.

Defaults

No default behavior or values.

Command History

Release	Modification
12.2(4)MX	This command was introduced.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.

12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with PPP PDP type processing on the GGSN.

You can enable both forms of the **debug gprs gtp ppp** command at the same time, as separate command line entries. The **events** keyword generates output specific to certain conditions that are occurring, which helps qualify the output being received using the **details** option.

Caution

Because the **debug gprs gtp ppp** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following debug examples provide sample output for a Create PDP Context request and clear PDP context using PPP PDP type on the GGSN. The examples show output while both debug events and details are enabled on the GGSN.

Example 1

The following example displays details and events output related to PPP PDP context processing for a Create PDP Context requested received by the GGSN:

```
Router# debug gprs gtp ppp events
GTP PPP events display debugging is on
Router# debug gprs gtp ppp details
GTP PPP details display debugging is on

```

debug gprs gtp ppp-regeneration

To display information about PPP regeneration processing on the GGSN, use the **debug gprs gtp ppp-regeneration** privileged EXEC command. To disable debugging output, use the **no** form of this command.

```
debug gprs gtp ppp-regeneration { events | details }
```

```
no debug gprs gtp ppp-regeneration { events | details }
```

Syntax Description

events	Displays messages specific to certain conditions that are occurring during PPP regeneration processing.
details	Displays more extensive and lower-level messages related to PPP regeneration processing.

Defaults

No default behavior or values.

12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between GDM and a GGSN.

You can enable both forms of the **debug gprs gtp ppp-regeneration** command at the same time, as separate command line entries. The **events** keyword generates output specific to certain conditions that are occurring, which helps qualify the output being received using the **details** option.

Caution

Because the **debug gprs gtp ppp-regeneration** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following debug examples provide sample output for a create PDP context request and clear PDP context using PPP regeneration on the GGSN. The examples show output while both debug events and details are enabled on the GGSN.

Example 1

The following example displays details and events output related to PPP regeneration processing for a create PDP context requested received by the GGSN:

```
Router# debug gprs gtp ppp-regeneration details

12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between the GGSN and the SAN using iSCSI.

Examples

The following example displays GPRS iSCSI debugging:

```
Router#
SAMI 9/3: GPRS:Fn is ggsn_iscsi_send_leftover_dtrs_to_cgw

Router#
```

debug gprs prepaid stand-alone

To display information about GGSN standalone prepaid quota enforcement processing, use the **debug gprs prepaid stand-alone** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

```
debug gprs prepaid stand-alone {errors | events | timers}
```

```
no debug gprs prepaid stand-alone {errors | events | timers}
```

Syntax Description

errors	Displays errors related to GPRS standalone prepaid quota enforcement.
events	Displays events related to GPRS standalone prepaid quota enforcement.
timers	Displays timer events related to GPRS standalone prepaid quota enforcement.

Defaults

No default behavior or values.

Command History

Release	Modification
12.4(22)YE	This command was introduced.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with GGSN stand-alone mode prepaid quota enforcement.

Examples

The following example displays errors related to GGSN standalone prepaid quota enforcement:

```
Router# debug gprs prepaid stand-alone errors
```

debug gprs radius

To display information about Remote Access Dial-In User Service (RADIUS) processing on the gateway GPRS support node (GGSN), use the **debug gprs radius** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug gprs radius

no debug gprs radius

Syntax Description

This command has no arguments or keywords.

Defaults

No default behavior or values.

Command History

Release	Modification
12.2(4)MX	This command was introduced.
12.2(8)YD	This command was integrated into Cisco IOS Release 12.2(8)YD.
12.2(8)YW	This command was integrated into Cisco IOS Release 12.2(8)YW.
12.3(2)XB	This command was integrated into Cisco IOS Release 12.3(2)XB.
12.3(8)XU	This command was integrated into Cisco IOS Release 12.3(8)XU.
12.3(11)YJ	This command was integrated into Cisco IOS Release 12.3(11)YJ.
12.3(14)YQ	This command was integrated into Cisco IOS Release 12.3(14)YQ.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between a RADIUS server and the GGSN.

Caution

Because the **debug gprs radius** command generates a significant amount of output, use it only when traffic on the GPRS network is low, so other activity on the system is not adversely affected.

Examples

The following example enables the display of debug messages related to RADIUS processing on the GGSN:

```
Router# debug gprs radius
```

debug gprs redundancy

To display debug messages, errors, events, or packets related to GTP session redundancy (GTP-SR), use the **debug gprs redundancy** privileged EXEC command. To disable debugging output, use the **no** form of this command.

debug gprs redundancy [**debug** | **errors** | **events** | **packets**]

no debug gprs redundancy [**debug** | **errors** | **events** | **packets**]

Syntax Description

debug	Displays debug messages related to GTP-SR.
errors	Displays errors related to GTP-SR.
events	Displays events related to GTP-SR.
packets	Displays packets related to GTP-SR packets.

Defaults

Disabled.

Command Modes

Global configuration

Command History

Release	Modification
12.3(11)YJ	This command was introduced.
12.3(14)YQ	This command was incorporated in Cisco IOS Release 12.3(14)YQ.
12.4(9)T	This command was integrated into Cisco IOS Release 12.4(9)T.
12.3(14)YU	This command was integrated into Cisco IOS Release 12.3(14)YU.
12.4(2)XB	This command was integrated into Cisco IOS Release 12.4(2)XB.
12.4(9)XG	This command was integrated into Cisco IOS Release 12.4(9)XG.
12.4(15)XQ	This command was integrated into Cisco IOS Release 12.4(15)XQ.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command displays debug level messages, errors, events, or packets for GTP-SR. It is useful for system operators and development engineers if problems are encountered with communication between the two GGSNs configured as an redundant pair and on which GTP-SR is enabled.

Examples

Example 1.

The following sample outputs is for a GGSN failover and switchover of standby to active. There is no PDP context involved in this debug collection.

Active GGSN:

```
Router-a#show gprs redundancy
```

GPRS redundancy is enabled and Unit-Status is Standby

Redundancy Transport Infrastructure status

Redundancy Infrastructure state: STANDBY HOT
Peer Redundancy Infrastructure state: ACTIVE

GGSN Redundancy system up since: 21:29:21 EDT Aug 19 2000

```

Example 2

The following sample outputs is for PDP context setup, prepaid subscriber traffic, and then PDP context teardown. The debug is given for both active and Standby GGSN. There is no GGSN switchover.

Active GGSN:

```

Router-a#debug gprs redundancy
GPRS CF packets debugging is on
GPRS CF events debugging is on
GPRS CF errors debugging is on
GPRS CF debug debugging is on
Router-a#show gprs redundancy
GPRS redundancy is enabled and Unit-Status is Active

Redundancy Transport Infrastructure status

Related Commands

Command	Description
clear gprs redundancy statistics	Clears statistics related to GTP-SR.
gprs redundancy	Enables GTP-SR on a GGSN.
gprs redundancy charging sync-window cdr rec-seqnum	Configures the window size used to determine when the CDR record sequence number must be synchronized to the Standby GGSN.
gprs redundancy charging sync-window gtp seqnum	Configures the window size used to determine when the GTP' sequence number must be synchronized to the Standby GGSN.
show gprs redundancy	Displays statistics related to GTP-SR.

debug gprs verbose

To set the debug verbosity level, use the **debug gprs verbose** command in privileged EXEC command.

debug gprs verbose *level*

Syntax Description

level Level of messages to display. Valid values are:

- 1—Displays critical debug messages.
- 2—Displays diagnostic debug messages.
- 3—Displays all detailed debug messages.

Defaults

3

Command Modes

Privileged EXEC

Command History

Release	Modification
12.4(22)YE	This command was introduced.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if Diameter protocol problems are encountered on the GGSN.

Examples

The following example configures the GGSN to display only critical debug messages:

```
Router# debug gprs verbose 1
```

debug ip iscsi

To display information about the iSCSI processing on the GGSN, use the **debug ip iscsi** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug ip iscsi {all | error | event | packet} [detail]

no debug ip iscsi {all | error | event | packet} [detail]

Syntax Description

all	Displays all iSCSI debug information.
error	Displays error messages related to iSCSI processing on the GGSN.
event	Displays events related to iSCSI processing on the GGSN.
packet	Displays iSCSI packets that are sent between the GGSN and SAN.
detail	(Optional) Displays detailed packet and event information.

Defaults

No default behavior or values.

Command History

Release	Modification
12.4(15)XQ	This command was introduced.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between the GGSN and the SAN using iSCSI.

Examples

The following example displays iSCSI debugging at the time of login:

```

=====
Router#debug ip iscsi all
iSCSI All debugging is on

Router#show debug
iSCSI:
  iSCSI Events debugging is on
  iSCSI Events Detailed debugging is on
  iSCSI Packets debugging is on
  iSCSI Packets Detailed debugging is on
  iSCSI Error debugging is on

Router#conf t
Enter configuration commands, one per line.  End with CNTL/Z.
Router(config)#gprs iscsi LINUX
Router(config)#end
Router#

debug record-storage-module

To display debugging information related to the record storage module (RSM), use the **debug record-storage-module** command in privileged EXEC mode. To disable debugging output, use the **no** form of this command.

debug record-storage-module [**all** | **dsm** | **error** | **event**]

no debug record-storage-module [**all** | **dsm** | **error** | **event**]

Syntax Description

all	Displays all RSM flags.
dsm	Displays data store manager debug information.
error	Displays RSM-related errors.
event	Displays RSM-related events.

Defaults

No default behavior or values.

Command History

Release	Modification
12.4(15)XQ	This command was introduced.
12.4(22)YE	This command was integrated into Cisco IOS Release 12.4(22)YE.
12.4(22)YE1	This command was integrated into Cisco IOS Release 12.4(22)YE1.
12.4(22)YE2	This command was integrated into Cisco IOS Release 12.4(22)YE2.

Usage Guidelines

This command is useful for system operators and development engineers if problems are encountered with communication between the GGSN and the SCSI target.

Examples

The following example displays RSM-related debugging at the time of the write process:

```
Router#
SAMI 9/3: %GPRSFLTMG-4-CHARGING: GSN: 32.0.0.2, TID: 0000000000000000, APN: NULL, Reason:
3, GSN GTP' Transfer Failure
Router#
SAMI 9/3: RSM-Event-Det: Write by appl GGSN for profile LINUX
SAMI 9/3: RSM-FUNC: Write Handler
SAMI 9/3: RSM-DSM-DET: Allocate write buffer
SAMI 9/3: RSM-DSM-DET: rem_len= 260966, bytes= 1178
SAMI 9/3: RSM-DSM: Write to file now
SAMI 9/3: RSM-DSM-DET: sda3:/root/00000001/00000001.dat exists
SAMI 9/3: RSM-DSM: Size of sda3:/root/00000001/00000001.dat is 780686
SAMI 9/3: RSM-DSM-DET: Write to sda3:/root/00000001/00000001.dat
SAMI 9/3: RSM-DSM-DET: sda3:/root/00000001/00000001.dat size is 781864 bytes
SAMI 9/3: RSM-DSM-DET: Call the write response handler
Router#show debug
Record Storage Module:
  RSM DSM debugging is on
  RSM DSM DETAIL debugging is on
  RSM EVENT DETAIL debugging is on
```

```
RSM EVENT debugging is on
RSM ERROR debugging is on
```

The following example displays RSM-related debugging at the time of the read process:

```
Router#
SAMI 9/3: RSM-Event-Det: Read by appl GGSN for profile LINUX
SAMI 9/3: RSM-DSM-DET: Allocate read buffer
SAMI 9/3: RSM-DSM-DET: Data buffer empty, read from disk
SAMI 9/3: RSM-DSM: Read from file sda3:/root/00000001/00000001.dat
SAMI 9/3: RSM-DSM-DET: Read fd is illegal in drive sda3
SAMI 9/3: RSM-DSM-DET: sda3:/root/00000001/00000001.dat exists
