**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-CAP\_NOT\_COMPATIBLE: CTS HA capability not compatible

**Explanation** CTS HA failed during capability negotiation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-GET\_BUFFER: CTS HA ISSU client failed to get buffer for message. Error: %d (%s)

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-INIT: CTS HA ISSU client initialization failed to %s. Error: %d (%s)

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-MSG\_NOT\_COMPATIBLE\_WITH\_PEER: Message [dec] in component [dec] is not compatible with the peer.

**Explanation** Message not compatible with the peer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-SEND\_NEGO\_FAILED: CTS HA ISSU client failed to send negotiation message. Error: %d (%s)

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-SESSION\_REGISTRY: CTS HA ISSU client failed to register session information. Error: %d (%s)

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %CTS\_HA\_ISSU-3-SESSION\_UNREGISTRY: CTS HA ISSU client failed to unregister session information. Error: %d (%s)

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to unregister session information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

## CTS\_HA\_ISSU-6

**Error Message** %CTS\_HA\_ISSU-6-INCOMPAT: CTS HA ISSU client negotiation results incompatible

**Explanation** The Cisco TrustSec (CTS) high availability (HA) ISSU client message version is not compatible on the active and standby devices. As a result, no CTS data will be synchronized to the standby device.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

# CWAN\_ALARM Messages

This section contains Constellation WAN (CWAN) alarm messages.

## CWAN\_ALARM-6

**Error Message** %CWAN\_ALARM-6-INFO: [chars] [chars] [chars] [chars] [chars]

**Explanation** This message provides alarm assertion or deassertion information.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %CWAN\_ALARM-6-SONET: [chars] [chars] [chars] [chars] [chars]

**Explanation** This message is generated whenever an alarm is present in the system (and the alarm status has been reported to the RP) or an alarm has been removed from the system (and the alarm status has been reported to the RP).

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %CTS-6-SXP\_PASSWORD\_CHANGE: CTS SXP password changed

**Explanation** The Cisco TrustSec (CTS) Security Exchange Protocol (SXP) system password has been changed.

**Recommended Action** No action is required.

**Error Message** %CTS-6-SXP\_STATE\_CHANGE: CTS SXP %s

**Explanation** The Cisco TrustSec (CTS) Security Exchange Protocol (SXP) system component has changed its operational state.

**Recommended Action** No action is required.

# CWAN\_ATM Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN ATM port (CWAN\_ATM) messages.

## CWAN\_ATM-3

**Error Message** %CWAN\_ATM-3-LOWMEM: Could not allocate memory for RFC 1483 packet cloning.

**Explanation** Memory is running low.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %CWAN\_ATM-3-PORT\_ERR: Invalid PORT [dec]

**Explanation** The specified port does not exist.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_ATM-3-VCD\_ERR: Invalid PortVCD [hex]

**Explanation** The specified port VCD does not exist.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_ATM-3-VC\_ERR: Invalid VC [hex]

**Explanation** The specified VC does not exist on the port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_ATM-3-VC\_OR\_PORT\_ERR: Invalid VCD [hex] or Port: [dec]

**Explanation** Either the port or the VCD is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_ATM-5

**Error Message** %CWAN\_ATM-5-UNKNOWN\_VCD: Unknown port vcd [hex] in egress packet

**Explanation** An unknown VCD has been received in the egress path of the module. This condition is most likely a transient condition, and it is usually caused by VCs that are being disassembled and reassembled while traffic is being passed.

**Recommended Action** No action is required.

## CWAN\_ATOM-HA Messages

This section contains Any Transport over MPLS (AToM) high availability messages.

### CWAN\_ATOM-HA-2

**Error Message** %CWAN\_ATOM\_HA-2-ISSU\_ERROR: [chars] [chars]

**Explanation** Platform ATOM HA ISSU client error.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

### CWAN\_ATOM-HA-3

**Error Message** %CWAN\_ATOM\_HA-3-CF\_ERROR: [chars] [dec]

**Explanation** Platform ATOM HA CF client error.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %CWAN\_ATOM\_HA-3-RF\_ERROR: [chars] [dec]

**Explanation** Platform ATOM HA RF client error.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

## CWAN\_CHOC Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN Channelized OC48/OC12-related (CWAN\_CHOC) messages.

### CWAN\_CHOC-4

**Error Message** %CWAN\_CHOC-4-CORRUPT: [chars] information seems to be corrupted, bad value = [int]

**Explanation** Incorrect parameters were detected internally.

**Recommended Action** This is only a debug warning message. The unexpected value is discarded.

## CWAN\_CHOC\_DSX Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN CHOC DSX LC Common (CWAN\_CHOC\_DSX) messages.

### CWAN\_CHOC\_DSX-3

**Error Message** %CWAN\_CHOC\_DSX-3-NODESTROYSUBBLOCK: The [chars] subblock named [chars] was not removed

**Explanation** A software error occurred. This message displays when IDB subblocks cannot be removed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_CT3 Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Channelized T3 (CWAN\_CT3) messages.

### CWAN\_CT3-3

**Error Message** %CWAN\_CT3-4-CORRUPT: [chars] information seems to be corrupted, bad value =[int]

**Explanation** Incorrect parameters were detected internally.

**Recommended Action** This is only a debug warning message. The unexpected value is discarded.

## CWAN\_FWD\_TABLES Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module forwarding tables messages.

### CWAN\_FWD\_TABLES-3

**Error Message** %CWAN\_FWD\_TABLES-3-CHUNK\_CREATE\_FAIL: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-CHUNK\_DESTROY\_FAIL: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-CHUNK\_MALLOC\_FAIL: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-ENTRY\_BUILD\_FAIL: [chars] [int]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-INVALID\_DEST\_INFO: [chars] [hex] [hex] [hex]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-INVALID\_INDEX: [chars] [int]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-INVALID\_OPR\_TYPE: [chars] [dec]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-MALLOC\_FAILED: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_FWD\_TABLES-3-TABLE\_ERROR: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_HA Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module high availability (CWAN\_HA) messages.

### CWAN\_HA-2

**Error Message** %CWAN\_HA-2-CCB\_PLAYBACK\_ERROR: CCB playback failed for slot [dec].

**Explanation** The high availability component for WAN modules failed to synchronize new state information for the specified slot.

**Recommended Action** Reload the redundant supervisor engine to force a fresh bulk synchronization. If this error recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Examine both the active supervisor engine and the redundant supervisor engine for messages.

**Error Message** %CWAN\_HA-2-CCB\_RECORD\_ERROR: CCB record failed for slot [dec].

**Explanation** The high availability component for WAN modules failed to record new state information for the specified slot. The system is falling back to RPR mode for high availability.

**Recommended Action** Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-2-IFCFG\_PLAYBACK\_ERROR: Interface Configuration command [int] playback failed for slot [int]/[int].

**Explanation** The high availability component for WAN modules failed to synchronize new state information for the specified slot. The redundant system is no longer synchronized with the active system. The redundant supervisor engine was reloaded shortly after this error was encountered.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-2-IFCFG\_RECORD\_ERROR: Interface Configuration command [int] record failed for slot [int]/[int].

**Explanation** The high availability component for WAN modules failed to record some new state information for the specified slot. The system is falling back to RPR mode for high availability.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_HA-3

**Error Message** %CWAN\_HA-3-CCB\_INIT\_ERROR: Failed to initialize CCB list for slot [dec] .

**Explanation** The high availability component for WAN modules failed to properly initialize state information for the specified slot. The system is falling back to RPR mode for high availability.

**Recommended Action** Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-3-IFCFG\_CMD\_NOT\_UNIQUE: More than one command registered for unique-key generator for interface configuration command [int] .

**Explanation** The high availability component for WAN modules is unable to properly synchronize state information for the current configuration due to a conflict in command identifiers.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-3-IFCFG\_INIT\_ERROR: Failed to initialize Interface Configuration list for slot [int]/[int] .

**Explanation** The high availability component for WAN modules failed to properly initialize state information for the specified slot. The system is falling back to RPR mode for high availability.

**Recommended Action** Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Examine both the active supervisor engine and the redundant supervisor engine for messages.

**Error Message** %CWAN\_HA-3-IFCFG\_NO\_UNIQUE\_KEY: No unique-key generator registered for interface configuration command [int].

**Explanation** The high availability component for WAN modules is unable to properly synchronize state information for the current configuration. The system is falling back to RPR mode for high availability.

**Recommended Action** Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_HA-4

**Error Message** %CWAN\_HA-4-CCB\_PLAYBACK\_ERROR: CCB playback failed for slot [dec].

**Explanation** The high availability component for WAN modules failed to synchronize some new state information for the specified slot.

**Recommended Action** Reload the standby supervisor engine to force a fresh bulk synchronization. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-CCB\_RECORD\_ERROR: CCB record failed for slot [dec].

**Explanation** The high availability component for WAN modules failed to record some new state information for the specified slot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-IFCFG\_DFLT\_LIST\_ERROR: For Interface Configuration command %u, default retval list search resulted 0x%x for slot %u/%u

**Explanation** The high availability (HA) component for WAN modules failed to synchronize new state information for the specified slot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show platform redundancy if-config default-retvals** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-IFCFG\_PLAYBACK\_ERROR: Interface Configuration command [int] playback failed for slot [int]/[int].

**Explanation** The high availability component for WAN modules failed to synchronize some new state information for the specified slot.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

**Error Message** %CWAN\_HA-4-IFCFG\_RECORD\_ERROR: Interface Configuration command [int] record failed for slot [int]/[int].

**Explanation** The high availability component for WAN modules failed to record some new state information for the specified slot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-LTLSYNCFail: Failed to sync LTL data during [chars] for [chars] [int]: (slot=[dec], slotunit=[dec], if\_num=[dec]) to standby (vlan=[int], hash=[int], ltl=[int])

**Explanation** Some local target logic (LTL) data did not synchronize correctly from the active to the standby RP.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-NOSRPBULKSYNC: Failed to [chars] srp bulk data (slot=[dec], intf=[dec], type=[dec]), ret code [dec]

**Explanation** The synchronization of RP bulk data and SRP bulk data failed from the active supervisor engine to the redundant supervisor engine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-NOSRPSYNC: Failed to sync srp packet (slot=[dec], intf=[dec]) to standby, HA\_SYNC\_STATUS=[dec]

**Explanation** The RP dynamic synchronization of SRP packets failed from the active supervisor engine to the redundant supervisor engine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HA-4-SRPSYNC: Slot [dec]: [chars]

**Explanation** The specified error occurred while synchronizing the SRP states from the active supervisor engine RP to the redundant supervisor engine RP.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_HAL Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Halcyon (CWAN\_HAL) messages.

### CWAN\_HAL-3

**Error Message** %CWAN\_HAL-3-CHUNK\_CREATE\_FAIL: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-CHUNK\_MALLOC\_FAIL: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-DELETION\_FAILED: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-FILL\_OCE\_INFO\_FAIL: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-ILLEGAL\_DEAGG\_PROT\_TYPE: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-ILLEGAL\_OBJ\_TYPE: [chars] [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-INSERTION\_OR\_UPDATION\_FAILED: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-LABEL\_SPACE\_INCONSISTENT: [chars] [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-NULL\_OBJ\_HANDLE: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-NULL\_PLT\_SPACE: [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-TABLE\_CREATION\_FAILED: [chars] [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_HAL-3-TABLE\_DELETION\_FAILED: [chars] [chars]

**Explanation** There is a problem with internal software coding. This message should not appear under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_HAL-4

**Error Message** %CWAN\_HAL-4-UN\_SUPPORTED\_CONFIG: %s

**Explanation** The configuration of the WAN module is not supported. A common cause is configuring TE on a GRE tunnel.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_IFMGR Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Interface Manager (CWAN\_IFMGR) messages.

### CWAN\_IFMGR-4

**Error Message** %CWAN\_IFMGR-4-CREATEFAIL: IM Driver Creation Failed: Interface [dec]/[dec]: [chars]

**Explanation** Driver failed to create an interface with the interface manager.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %CWAN\_IFMGR-4-DESTROYFAIL: IM Driver Destroy Failed: Interface [dec]/[dec]: [chars]

**Explanation** Driver failed to destroy the interface with the interface manager.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %CWAN\_IFMGR-4-REGISTERFAIL: IM Registration Failed: [chars]

**Explanation** Driver failed to register with the interface manager.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

# CWANLC Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module (CWANLC) messages.

## CWANLC-3

**Error Message** %CWANLC-3-FPD\_INCOMPATIBLE: FPD ID=[int] image in this FPD package is for revision [int].x boards. It is incompatible with current board revision of [int].[int]

**Explanation** This FPD package does not contain images that are compatible with the current line card revision.

**Recommended Action** Perform the FPD upgrade operation with a newer version of an FPD image package that is compatible with the Cisco IOS software that is operating on the switch. Consult with the FPD image package section of the Cisco IOS software release note to confirm that your line card revision is supported for a particular release.

**Error Message** %CWANLC-3-CWANLC\_EARL\_VERSION\_NOTICE: CWAN receives mismatch Earl version notification. New Earl[int] vs Earl[int]

**Explanation** The RP determined through an SCP find operation that the version of the EARL switching engine on the module has changed. This message occurs during a switchover operation. The version of the EARL switching engine is specified in the message text.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWANLC-3-FATAL: [chars]

**Explanation** The OSM encountered a fatal error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWANLC-3-FPD\_INCOMPATIBLE: FPD ID=[int] image in this FPD package is for revision [int].x boards. It is incompatible with current board revision of [int].[int]

**Explanation** This FPD package does not contain images that are compatible with the current board revision.

**Recommended Action** Perform the FPD upgrade operation with a newer version of the FPD image package that is compatible with the running Cisco IOS software. Consult with the FPD image package section of the Cisco IOS software release note to confirm if your board revision is supported for a particular release.

**Error Message** %CWANLC-3-IPCPORT: Failed to %s IPC port '%s', error %s

**Explanation** The line card failed to create a port for communication with the route processor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWANLC-3-LTL\_NOPPEPORTMAP: Failed to retrieve default port mapping for packet processor [int]

**Explanation** The line card software initialization was not completed correctly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWANLC-3-TVPN\_NOMEM: Failed to start vpn, not enough memory

**Explanation** The OSM could not start VPN due to insufficient memory.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWANLC-5

**Error Message** %CWANLC-5-NOSCPPING: Linecard has not sent SCP PING responses for too long

**Explanation** The SCP ping mechanism is used by the RP and SP processors to monitor whether the line card that is executing Cisco IOS is in a healthy state. This SCP ping response has not been sent by the line card for a long time; the line card has exported its context information to the RP and may be power cycled. The exported context is available in the output of the **show diag** command.

**Recommended Action** Save the **show diag** command output and contact your Cisco technical support representative if the line card is reset.

## CWANLC\_ATM Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN ATM module (CWANLC\_ATM) messages.

### CWANLC\_ATM-3

**Error Message** %CWANLC\_ATM-3-NOVSPACE: [chars]: out of VP space for VPI [dec]

**Explanation** Out of virtual paths (VPs) on the segmentation and reassembly (SAR) engine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWANLC\_ATM-3-VCCLOSEFAIL: [chars]: Failed to remove VC [dec]/[dec] cause [int]

**Explanation** An attempt to remove a virtual circuit on the module failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_POSEIDON Messages

This section contains Optical Services Module (OSM) GE-WAN Route Processor (RP) driver messages.

**Error Message** %CWAN\_POSEIDON-6-ALARM\_INFO: [chars] [chars] [chars] [chars] [chars]

**Explanation** This message is generated whenever an alarm is present in the system and the alarm status has been reported to the RP, or an alarm has been removed from the system and the alarm status has been reported to the RP.

**Recommended Action** This is an informational message only. No action is required.

## CWAN\_QINQ Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN QinQ (CWAN\_QINQ) messages.

### CWAN\_QINQ-3

**Error Message** %CWAN\_QINQ-3-CWAN\_POCH\_QINQ\_NULL\_EGRESS: [chars] QinQ Ether VC have received invalid egress assignment on phyport [chars]for trunk encapsulation dot1q [int]

**Explanation** The port channel QinQ Ether VC subinterface being configured contains an invalid egress port assignment. The egress traffic of the OSM port will be stopped for this EVC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. At the line card, enter the **show cwan qinq** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_QINQ-3-CWAN\_QINQ\_TRUNK\_DATAINCONSISTENCY: QinQ data integrity check failed for bridge-vlan [int] dot1q [int] using trunk encapsulation dot1q [int], existing record shows mapping with encapsulation dot1q [int].

**Explanation** A data integrity error related to QinQ was detected while a trunk was being configured for the bridge VLAN that is indicated in the message text. The error will be ignored, and the QinQ update will proceed normally.

**Recommended Action** Enter the **show cwan qinq** command on the module. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_RP Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN route processor driver (CWAN\_RP) messages.

### CWAN\_RP-0

**Error Message** %CWAN\_RP-0-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-0-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### CWAN\_RP-1

**Error Message** %CWAN\_RP-1-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-1-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-1-OVERRIDE\_MAC\_INVALID: [chars] has invalid override-mac-address.

**Explanation** The user issued an override MAC address that does not match the MAC address of the MSFC. This condition can occur if the configuration was moved to new hardware or the MAC address command was used on another interface. While the system automatically corrects this condition, the configuration needs to be adjusted.

**Recommended Action** Modify the override MAC address command in the configuration.

## CWAN\_RP-2

**Error Message** %CWAN\_RP-2-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-2-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_RP-3

**Error Message** %CWAN\_RP-3-FAILED\_CONFIG: Failed to send line card config message [chars] for slot [int] port [int]

**Explanation** The RP could not send the specified configuration message to the line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-IFCFG\_CMD\_NOT\_OWNER: Process '[chars]' waiting for interface configuration command ([hex]) to slot [int]/[int] without acquiring lock owned by process '[chars]'

**Explanation** A process on the RP sent a configuration command to the slot specified in the message and a different process waited for the result. This condition could cause incorrect line card configuration states.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-3-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-MODULE\_TYPE: cannot find FCI for module type [int] in slot [int]

**Explanation** An internal software error occurred while the system was detecting the module type in the specified slot. The module operation will be affected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-PROCMSG: Process msg send failed for process[dec]

**Explanation** An attempt to send a process message failed for the specified process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-UPGRADE\_ERROR: Slot [int]: The ROMMON upgrade failed to complete.

**Explanation** An error occurred during the upgrade process.

**Recommended Action** If the module reloads successfully, examine the file and try the upgrade process. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-3-WAN\_BRIDGING\_CONFIG\_EXCEEDED: The number of VPLS/EoMPLS/Bridging/QinQ VCs exceeded the maximum supported by the platform

**Explanation** The user attempted to configure more VPLS, EoMPLS, and bridging VCs than the number that is supported by the platform.

**Recommended Action** Review the configuration guidelines for the features that are being configured, and reduce the number of VPLS, EoMPLS, and bridging VCs to the number that is supported by the platform.

## CWAN\_RP-4

**Error Message** %CWAN\_RP-4-CONFIG\_MISMATCH: Irreconcilable Configuration difference between Active & Standby Supervisors due to OIR/Config Event -> Reloading Standby Supervisor to synchronize the configuration.

**Explanation** An unexpected configuration difference exists between the active and standby supervisor engines.

**Recommended Action** The standby supervisor engine is being reloaded. No action is required.

**Error Message** %CWAN\_RP-4-EMPTY\_CWANBAYS: FLEXWAN in slot [dec] is empty. Please remove the Flexwan or insert it with atleast one PA

**Explanation** The FlexWAN in the specified slot does not contain any port adapters.

**Recommended Action** The FlexWAN should be removed. This is an unsupported configuration.

**Error Message** %CWAN\_RP-4-IFCFG\_CMD\_TIMEOUT: Interface configuration command ([hex]) to slot [int]/[int] timed out

**Explanation** The RP sent a configuration command to the slot specified in the message and received no confirmation for the command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-4-INCR\_CFG\_SYNC\_FAIL: 7600 incremental running-config sync for [[dec]/[dec]] failed - [chars]([dec]), Reload Standby

**Explanation** The specified 7600 series router incremental running configuration synchronization has failed.

**Recommended Action** Power cycle the redundant supervisor engine.

**Error Message** %CWAN\_RP-4-INVALID\_UNIT: Invalid 7600 Unit: [[dec]/[dec]].

**Explanation** The specified 7600 series router slot and CPU are beyond the chassis limit.

**Recommended Action** Power cycle the redundant supervisor engine.

**Error Message** %CWAN\_RP-4-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-4-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-4-MODULE\_CONFIG\_MISSING: configuration missing for slot [int]

**Explanation** Some information is missing regarding the configuration of the module in the specified slot. Any startup configuration for the interfaces will not be applied. If the module in the specified slot is a FlexWAN, details about the port adapters in the FlexWAN are missing from the configuration information. This information is missing from the **SLOTCACHE** ROMMON variable.

**Recommended Action** If the module in the slot specified in the error message has not previously been inserted, it has no previous configuration; therefore, no action is required. If the configuration for the specified slot in the startup configuration is suitable for the module in that slot, after the module has loaded, manually apply the configuration by using one of the following two methods. The second method requires a system reload.

- Enter the **copy nvram:startup-config system:running-config** command to reapply your saved configuration and then enter the **no shutdown** command on all interfaces whose configuration was rejected. Enter the **copy system:running-config nvram:startup-config** command to save your configuration and the WAN module slot configuration.
- Enter the **copy** command to copy your startup configuration to a temporary location (for example, **copy nvram:startup-config bootflash:tmp-config**), and then enter the **copy system:running-config nvram:startup-config** command to update the WAN module slot configuration. Enter the **copy** command to restore the temporary copy of the startup configuration (for example, **copy bootflash:tmp-config nvram:startup-config**), and then enter the **reload** command to reload the system.

After using the second method, you may want to use the **delete** command to remove the temporary copy of the startup configuration. To prevent this condition from recurring, ensure that the **SLOTCACHE** variable is updated whenever modules that require it (FlexWANs, but not OSMs) are moved between slots in the chassis. The **SLOTCACHE** variable is updated when the running configuration is written to the startup configuration using the **copy system:running-config nvram:startup-config** command (or the deprecated **write memory** equivalent). The two methods of restoring the configuration for the module ensure that the **SLOTCACHE** variable is updated.

## CWAN\_RP-5

**Error Message** %CWAN\_RP-5-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-5-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_RP-6

**Error Message** %CWAN\_RP-6-ADF\_FILE: Slot [int]: Using VPN-SM Upgrade File: "[chars]"

**Explanation** The system is booting the specified upgrade image for the VPN Services Module.

**Recommended Action** No action is required.

**Error Message** %CWAN\_RP-6-AUX\_FILE: Slot [int]: Found VPN-SM Firmware in File: "[chars]"

**Explanation** The file specified in the message was found and will be loaded instead of the bundled image by the VPN Services Module.

**Recommended Action** No action is required.

**Error Message** %CWAN\_RP-6-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-6-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-6-LC\_RESET: The RP is reloaded, resetting slot [dec] is necessary. Please ignore errors if any, till the linecard comes up.

**Explanation** If the system is running Catalyst operating system software on the supervisor engine and Cisco IOS software on the MSFC, the WAN line cards that power up before the RP powers up will be reset automatically.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %CWAN\_RP-6-NO\_LC\_IMAGE: Line card image in slot [dec] for card\_id [dec] is not bundled with IOS.

**Explanation** The line card in the specified slot will be powered down to prevent it from running an image that is not supported by the RP. If the line card image is compatible with the image running on the RP, there might be another problem with the software.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_RP-6-OUT\_OF\_RESOURCE: [chars] configuration has exceeded available internal resources.

**Explanation** The resources required for configuration are no longer available. They may have been acquired by another application.

**Recommended Action** If the requested resources have not been allocated to another application, contact your Cisco technical support representative for further assistance.

**Error Message** %CWAN\_RP-6-OVERRIDE: Slot [int]: ...Overriding Intrinsic VPN-SM Firmware.

**Explanation** The specified image will be used instead of the bundled image.

**Recommended Action** No action is required.

**Error Message** %CWAN\_RP-6-UPGRADE\_COMPLETE: Slot [int]: ROMMON upgrade complete. Reset the card for the changes to take effect.

**Explanation** The ROMMON upgrade has completed successfully. The module must be reloaded for the changes to take effect.

**Recommended Action** No action is required.

## CWAN\_RP-7

**Error Message** %CWAN\_RP-7-LCLOG\_MSG : slot [dec]/[dec]: [chars]

**Explanation** An error has occurred on a module. The slot and CPU number are indicated after the CWAN\_RP-7-LCLOG\_MSG text. The error message that appears after the slot number is the original message from the module.

**Recommended Action** Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWAN\_SLOT Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN slot (CWAN\_SLOT) messages.

### CWAN\_SLOT-1

**Error Message** %CWAN\_SLOT-1-CF\_ADDFAILED: Failed to register chkpt client, client = %d

**Explanation** The checkpoint facility client could not be registered.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SLOT-1-CF\_NOBUF: Failed to get chkpt buffer, client = %d

**Explanation** The checkpoint facility could not obtain buffer memory.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## CWAN\_SP Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN switch processor (CWAN\_SP) messages.

### CWAN\_SP-3

**Error Message** %CWAN\_SP-3-INIT\_FAIL: Failed to allocate [dec] bytes memory needed for CWAN SP module initialization

**Explanation** A memory allocation failure has occurred during initialization of WAN SP module.

**Recommended Action** Upgrade to a higher memory size on the switch processor (SP).

### CWAN\_SP-4

**Error Message** %CWAN\_SP-4-UNKNOWN\_PW: Unknown CWAN pseudo wire on vlan [dec], port [dec] / [dec]

**Explanation** An unknown WAN pseudowire is being used.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# CWAN\_SPA Messages

This section contains shared port adapter (SPA) on OSR messages.

**Error Message** %CWAN\_SPA-3-CREATION\_FAILURE: slot=[dec] subslot=[dec], spa\_type=[hex], lc\_type=[hex].

**Explanation** An attempt to create a SPA object has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-DIAG\_CONFIG: [chars] did not complete [dec]/[dec]

**Explanation** An error has occurred during diagnostic test.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-INVALID\_DATA\_INSTANCE: interface type [chars], slot [dec] port [dec] vc [dec] : [chars]

**Explanation** The data required to support the specified interface is not available.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-INVALID\_IF\_INDEX: index= [dec], cardType=[hex], spaType=[hex], slot [dec] subSlot [dec] slotunit [dec] vc [dec]

**Explanation** The index for the interface is not valid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-INVALID\_INDX\_RANGE: index1= [dec], index2= [dec], maxIndex= [dec]

**Explanation** Invalid index range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-MEM\_ALLOC\_ERROR: [chars]

**Explanation** A memory allocation error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-NULL\_SPA\_PTR:

**Explanation** The pointer to a SPA object is null.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-NULL\_VFT: [chars] virtual function table is not initialized. spaType= [hex]

**Explanation** A required function table is not initialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-NULL\_VFUNC: [chars] vector is not initialized. spaType= [hex]

**Explanation** A required function vector is not initialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-POWER\_CYCLE: [chars] occurred on Shared Port Adapter [int]/[int]

**Explanation** An error has occurred that will cause the shared port adapter to be power cycled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWAN\_SPA-3-SPA\_CREATION\_FAILURE: slot=[dec] subslot=[dec], PID=[chars] lc\_type=[hex] .

**Explanation** An attempt to create a SPA object has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWPA Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router port adapter module (CWPA) messages.

### CWPA-2

**Error Message** %CWPA-2-BAD\_HWVERS: Unable to determine board hardware version

**Explanation** The module software cannot read the module hardware version. This condition indicates a hardware error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWPA-2-PAOIR: Port adapter OIR not supported, reloading

**Explanation** An OIR operation occurred on the port adapters of the specified module, but OIR is not supported on the port adapter. This error has caused the module to fail and reload.

**Recommended Action** Do not attempt OIR on the port adapters of the specified module.

**Error Message** %CWPA-2-PA\_VOLFAIL: Port adapter [dec]V failed, Reloading flexwan

**Explanation** The module encountered an error involving power delivery to the module. Probable causes for this error are an environmental condition, an overtemperature condition, or inconsistent voltage to the module.

**Recommended Action** Verify that the input voltage and the temperature of the module are within acceptable ranges.

**Error Message** %CWPA-2-WHICH\_INT: Unexpected [chars] interrupt, INT status = [hex]

**Explanation** The module specified in the error message has encountered an unexpected interrupt.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWPA-3

**Error Message** %CWPA-3-DIAGFAIL: Failed to handle diag [chars] [dec]

**Explanation** The module failed to execute a diagnostics command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWPA-3-PROCCREATEFAIL: Failed to create [chars] process

**Explanation** A module failed to create a process that is necessary for proper functioning of the module.

**Recommended Action** If a statistics export process was not created, check the I/O rate and the bytes that are getting incremented in the **show interface** command output for the nonchannelized interfaces on the FlexWAN and Enhanced FlexWAN modules. You can also get the statistics from the **show interface acc** command output or the **show interface stats** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWPA-4

**Error Message** %CWPA-4-HEADER\_TOO\_BIG: Needs [dec] bytes, with only [dec] bytes available. Packet size [int], received from [chars], buffer [hex] packet start [hex]:

[hex]: [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

[hex]: [hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

**Explanation** A packet was sent from the port adapter to either the route processor or the line card. That packet did not have enough available space to append the header. A new particle has been linked to the packet to store the header.

**Recommended Action** No action is required.

## CWPABRIDGE Messages

This section contains CWPA bridging messages.

**Error Message** %CWPABRIDGE-3-BADLTL: [chars] got bad LTL index [hex] for vlan [int] ckt\_id [int] sent from RP

**Explanation** The RP has provided the line card with an invalid value for the local target logic (LTL) index value.

**Recommended Action** If the bridging traffic stops going through, copy the message exactly as it appears on the console or in the system log. At the RP console exec prompt, enter the following commands:

```
show log,  
show cwan bridge,  
show atm vlan,  
show mac-address-table dynamic detail,  
show cwan ltl
```

The output of these commands will enable the engineer to gather more information about the condition. Contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %CWPABRIDGE-3-NOCLONEDPAK: Unable to allocate pak header for cloned pak

**Explanation** A line card is not able to allocate a pak header for a cloned pak that is used for flooding packets among bridged WAN links.

**Recommended Action** On the Cisco support website, use the online Software Advisor and check the release notes for the code you are running to determine the minimum amount of memory. If you have sufficient memory and are still seeing this error message, load the previous image on the unit to return the unit to an operational state and retrieve the information needed to report this problem. Copy the contents of the line card's **crashinfo** data from the **cwan slot/bay bootflash:** command, where slot and bay belong to the line card. When you open a TAC case, provide the line card's **crashinfo** data and the output of the **show tech** command from the router.

# CWRPSPA Messages

This section contains messages for shared port adapters (SPAs) on the Catalyst 6500 Series Switch and Cisco 7600 Series Router WAN route processor (RP).

## CWRPSPA-3

**Error Message** %CWRPSPA-3-HWIDB\_FAILURE: Creation: slot [dec] subSlot [dec] port [dec] vc [dec]

**Explanation** Failed to create a hardware interface descriptor block (HWIDB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWRPSPA-3-INVALID\_PORT\_NUM: slot=[dec] port=[dec], hwidbType=[hex], max\_port\_num=[dec], Lctype=[hex]

**Explanation** The port number is out of range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWRPSPA-3-MAX\_SPA: Power to IPSEC-SPA-2G in [chars] is denied because it has exceeded the number allowed([dec])

**Explanation** The number of IPSEC-SPA-2G port adapters in a chassis is limited. This message displays when the number of IPSEC-SPA-2G port adapters in the chassis has exceeded the limit.

**Recommended Action** Use only the number of supported IPSEC-SPA-2G port adapters.

**Error Message** %CWRPSPA-3-NO\_HOST\_INFO: slot [dec] subSlot [dec], spaType [hex]

**Explanation** Failed to get information about the host line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWRPSPA-4

**Error Message** %CWRPSPA-4-SPA\_CMD\_NO\_RESP: [chars]: No response for interface configuration command [int]

**Explanation** A timeout occurred while the RP was waiting for a response from the line card. This condition may occur when the line card CPU is too busy to respond to the configuration command.

**Recommended Action** Retry the configuration command.

**Error Message** %CWRPSPA-4-SPA\_RESP\_CMD\_MISMATCH: [chars]: Expecting response to interface configuration command [int] but received response to command [int].

**Explanation** An internal synchronization error occurred while configuring the interface. The configuration may not have succeeded.

**Recommended Action** Check that the running configuration for the interface is correct. If this message occurred on the standby, try reloading the standby to ensure that its configuration is in sync. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWRPSPA-6

**Error Message** %CWRPSPA-6-CARDRELOAD: Module [int] reload due to SPA insert in [int]/[int].

**Explanation** When inserting a SPA on the specified module, the module resets.

**Recommended Action** This message is informational. No action is required.

## CWSLC Messages

This section contains WAN SiByte Module (CWSLC) messages.

### CWSLC-3

**Error Message** %CWSLC-3-DIAGFAIL: Failed to handle diag [chars] [dec]

**Explanation** The module failed to execute a diagnostics command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWSLC-3-DIAGSKIP: Skipped diag for port [dec]

**Explanation** The module skipped diagnostics for the specified port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWSLC-3-DIAGWARNING: Backplane DIP switches settings incorrect

**Explanation** The backplane DIP switches need to be set properly.

**Recommended Action** Refer to the *7600 SIP and SPA Hardware Installation Guide* for information about how DIP switches must be set.

**Error Message** %CWSLC-3-IPCALLOCFAIL: Failed to allocate IPC buffer [chars]

**Explanation** An Enhanced FlexWAN module failed to allocate a buffer for communication with the route processor (MSFC).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWSLC-3-IPCSENFFAIL: Failed to send IPC message [chars]

**Explanation** An Enhanced FlexWAN module failed to send a message to the route processor (MSFC).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWSLC-3-LC\_ENCAP\_UPDATEFAIL: Could not update encapsulation on [chars] to [int]

**Explanation** The line card failed to update the new encapsulation that was requested. The interface data structures could not be temporarily locked to perform the encapsulation change

**Recommended Action** If the interface does not come up with the new encapsulation, remove and reconfigure the encapsulation on the interface. If the error persists after a few attempts at reconfiguration, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLC Messages

This section contains WAN Optical Services Module (CWTLC) messages.

### CWTLC-0

**Error Message** %CWTLC-0-FATAL\_EXCEPTION: [chars]

**Explanation** The OSM encountered a fatal exception.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### CWTLC-2

**Error Message** %CWTLC-2-FATAL\_ATM: [chars]

**Explanation** The OSM encountered a fatal line management interrupt. This error is not recoverable and will cause the system to fail.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-2-PCITIMEOUT: Fatal Local I-O Bus [dec] Timeout Addr = [hex]

**Explanation** The OSM encountered a PCI timeout.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-2-PLIM\_RX: [chars]

**Explanation** The OSM encountered an FPGA error that caused a sequence error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-2-SLAVEPCI: [chars]

**Explanation** The OSM encountered a PCI error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-2-TESTCRASH: [chars]

**Explanation** The user entered a command that caused the module to fail.

**Recommended Action** No action is required.

## CWTLIC-3

**Error Message** %CWTLIC-3-ATMTXFIFO: [chars]

**Explanation** The OSM encountered an error with the FPGA that has caused the FIFO queue to exceed the maximum limit. This condition will cause the system to fail.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-CONST\_SWITCHING\_BUS\_INTERFACE\_ASIC\_ERR: Constellation Switching Bus Interface Asic [[dec]] error: [chars]

**Explanation** The CWTLIC switching bus interface ASIC received an error.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-CONST\_SWITCHING\_BUS\_INTERFACE\_ASIC\_HWERR: Constellation Switching Bus Interface Asic [[dec]] HW error: [chars]

**Explanation** The CWTLIC switching bus interface ASIC received a hardware error and will be reset.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-DMA\_ENGINE\_ASIC\_ERR: DMA Engine Asic [[dec]] error: [chars]

**Explanation** The CWTLC DMA engine ASIC received an error.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-0-DMA\_ENGINE\_ASIC\_FATAL\_ERR: DMA Engine Asic[[dec]] fatal error: [chars]

**Explanation** The CWTLC DMA engine ASIC received a fatal error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-ERR\_DETAIL: [chars]

**Explanation** This message provides additional error details for a previous message, which may be of use to your technical support representative.

**Recommended Action** Follow the instructions for any system messages preceding this one and be sure to include the text from this error.

**Error Message** %CWTLC-3-EXCEPTION\_ERR: [chars]

**Explanation** The OSM encountered an error exception.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-FABRIC\_INTERFACE\_ASIC\_FATAL: OSM Fabric Interface ASIC Fatal Error. ERROR CODE: [chars]

**Explanation** The OSM fabric interface ASIC received a fatal error.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-FABRIC\_INTERFACE\_ASIC\_PXF: CWAN PXF Client [[dec]] Not Running

**Explanation** An ASIC device on the OSM has detected that the designated PXF client is not running.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-FR\_BAD\_BRIDGING: Frame Relay: old bridge-vlan([int]) or new bridge-vlan([int]) on the bridged interface [chars] is malformed

**Explanation** This is an unexpected update from the route processor and should be ignored.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %CWTLC-3-FR\_INTLEVEL: unexpected interrupt level invocation of frame-relay handler: [chars] if\_number([dec]) dlci([dec])

**Explanation** Some feature code mistakenly invoked the module Frame Relay handler, which is designed to run at process level. This condition may lead to data corruption and a module failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-LTL\_ERR: Inconsistent port selection [hex] assignment for PXF([dec]) Vlan([dec]) on PXF([int])

**Explanation** The port selection information stored in the database is not valid.

**Recommended Action** Shut down the interface VLAN and restart the interface VLAN.

**Error Message** %CWTLC-3-MCAST\_REPL\_ENGINE\_FATAL: Multicast Replication Engine Asic Fatal Error. Resetting ASIC.

**Explanation** The OSM multicast replication engine ASIC received a fatal error.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-MEDUSA\_FATAL: OSM Medusa ASIC Fatal Error. ERROR CODE: [chars]

**Explanation** The OSM Medusa ASIC received the specified fatal error.

**Recommended Action** No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-MEDUSAPXF: CWAN PXF Client [[dec]] Not Running

**Explanation** An ASIC device on the OSM has detected that the specified PXF client is not running.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-NOMEM: [chars]

**Explanation** The OSM could not obtain statistics due to depleted memory.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-NO\_STATID: PXF([dec]): no stat\_id is available for statistics collection

**Explanation** The OSM has used up all resources for statistics collection. No additional resources are available for further statistics collection.

**Recommended Action** Reduce the number of features configured on the specified PXF. If conditions warrant, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-OLDIOFPGA: Upgrade your I/O FPGA

**Explanation** The OSM has an earlier release of the I/O FPGA software.

**Recommended Action** Contact your Cisco technical support representative to upgrade the I/O FPGA software.

**Error Message** %CWTLC-3-PLIM\_TX: [chars]

**Explanation** The OSM encountered an FPGA error that caused a sequence error. The module will attempt to recover from the error.

**Recommended Action** If the system recovers, no action is required. If the system does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-PORTERROR: Port control error, cmd=[chars], port=[dec]

**Explanation** The port control command function has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-SECPAIRINT: Unexpected VA/Toaster interrupt from second pair

**Explanation** The OSM experienced an unexpected interrupt.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-TITANFATAL: Titan Fatal Error. Resetting ASIC.

**Explanation** The OSM Titan ASIC received a fatal error.

**Recommended Action** No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-TMC\_STATID\_INCONSISTENCY: PXF([dec]):Inconsistent stats id([hex]) [int] packets dropped.

**Explanation** The WAN module received inconsistent statistics from the PXF. The PXF reported that a packet was dropped, but the PXF did not report the correct packet count.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-3-TMTRIE\_ALLOC\_FAILED: Failed to allocate toaster mtrie nodes.

**Explanation** The system encountered an error while it was attempting to allocate memory from a WAN OSM component.

**Recommended Action** Reduce the number of routes associated with a VRF identifier or upgrade the WAN OSM to a higher version.

**Error Message** %CWTLC-3-UNSUPPORTED\_LABEL\_RANGE: The maximum label range configured for this system exceeds the [int] limit supported by the OSM module.

**Explanation** The MPLS label range configured for this system is not supported. The maximum label range limit is specified in the message.

**Recommended Action** Change the maximum MPLS label range by entering the **mpls label range** command.

**Error Message** %CWTLC-3-VTMS: [chars]

**Explanation** The OSM could not schedule the wheel entry. The reason for the error is specified in the error message text.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-3-VTMSQ\_NOTIDLE: Queue not idle when modifying Q([hex])

**Explanation** The VTMS queue was in the process of being modified for a change in QoS configuration, but packets were still going through the queue. When the queue is being modified, there is usually no traffic in the queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLC-4

**Error Message** %CWTLC-4-ASIC\_RESET: Reset asics - [chars]

**Explanation** The ASICs on the OSM are resetting. System traffic should recover and continue normally after the module resets.

**Recommended Action** No action is required.

**Error Message** %CWTLC-4-CONST\_SWITCHING\_BUS\_INTERFACE\_ASIC\_CONFIG\_ERR: Constellation Switching Bus Interface Asic [[dec]] configuration failed after [dec] retries.

**Explanation** The CWTLC switching bus interface ASIC failed to be configured correctly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-4-MEDUSAERROR: Medusa Error. [chars]

**Explanation** The CWTLC Medusa ASIC received a recoverable error.

**Recommended Action** No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-4-PINNACLE\_OLDIOFPGA: Link negotiation maybe be affected, upgrade I/O FPGA

**Explanation** The system detected an earlier release of the I/O FPGA software. The I/O FPGA software needs to be upgraded to the latest release.

**Recommended Action** Upgrade the I/O FPGA software to the newest release. If you require assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With

some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-4-PORT\_ASIC\_OLDIOFPGA: Link negotiation maybe be affected, upgrade I/O FPGA

**Explanation** An earlier version of the I/O FPGA software has been detected.

**Recommended Action** Upgrade the I/O FPGA software to the latest version. If you require assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC-4-TMC\_INVALID\_STATID: PXF:Invalid-Statid ([dec]) for vc [int] under interface [int]

**Explanation** The OSM has encountered an internal error while setting up the statistics system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLIC-5

**Error Message** %CWTLIC-5-BUS\_SEQ\_ERR: Constellation bus Sequence Error. Resetting port ASICS.

**Explanation** The SP detected a sequence error on the backplane bus of the OSM. The system called a reset sequence from the EARL to recover from this error. System traffic should recover and continue normally.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-5-DATAPATH\_RECOVERY\_PATCH: EARL reset patch invoked.

**Explanation** The ASICs on the OSM were reset so that the module could recover from a bus sequence error. This condition usually occurs under heavy traffic with HA-related switchover or a module OIR operation. System traffic should recover and continue normally.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC-5-FABRIC\_INTERFACE\_ASIC\_RE\_INIT: Fabric Interface Asic Re-initialize.

**Explanation** The OSM fabric interface ASIC is being reinitialized because of a system backplane bus sequence error, a fatal ASIC error, or a line card error.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CW TLC-5-MEDUSA\_RE\_INIT: Medusa Re-initialize.

**Explanation** The OSM Medusa ASIC is being reinitialized because of a system backplane bus sequence error or a fatal ASIC error on the module itself.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CW TLC-5-PENDING\_PATCH: Invoke pending data recovery patch.

**Explanation** The ASICs on the OSM line card has been reset so that it can recover from backplane switching bus sequence errors or local hardware ASIC errors. This condition is usually occurs under stress traffic with HA-related switchover or a line card OIR operation. System traffic should recover and continue normally.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CW TLC-6

**Error Message** %CW TLC-6-FABRIC\_INTERFACE\_ASIC\_MODECHANGE: Fabric Interface Asic switching bus Mode changed to [chars]

**Explanation** The supervisor engine has changed the CW TLC fabric interface ASIC switching bus mode.

**Recommended Action** No action is required.

## CWTLC\_ATOM Messages

This section contains Any Transport over MPLS messages for WAN Optical Services Modules (CWTLC\_ATOM).

### CWTLC\_ATOM-3

**Error Message** %CWTLC\_ATOM-3-INTFID\_ERR: The internal interface ID [hex] for the AToM interface [chars] is invalid for the connection ID [hex]

**Explanation** The internal interface ID that is required by the OSM to establish an AToM connection is either invalid or is mismatched with the control plane MPLS data structure for this connection. The current interface ID of the OSM has lost its synchronization with the interface ID of the control plane for this connection. This condition is usually caused by unfavorable network conditions such as a failover operation and can occur during normal system operation.

**Recommended Action** Enter the appropriate AToM commands for either the Frame Relay over MPLS, Cell Relay over MPLS, AAL5 over MPLS, or Frame Relay local switching to remove the AToM connection, then add the connection again. Performing this action once should successfully reestablish the connection.

**Error Message** %CWTLC\_ATOM-3-OSM\_BB1\_CONFIG\_UNSUPPORTED: Attempt to configure Frame Relay over MPLS or Frame Relay localswitching on a non-enhanced OSM

**Explanation** Frame Relay over MPLS and Frame Relay local switching features are supported only on enhanced Optical Services Modules. Nonenhanced OSMs do not support these features.

**Recommended Action** Remove the configuration of the unsupported features, or upgrade this module to an enhanced OSM.

## CWTLC\_CHOC Messages

This section contains Cyclops Channelized OC48/OC12 (CWTLC\_CHOC) messages.

### CWTLC\_CHOC-3

**Error Message** %CWTLC\_CHOC-3-HWERROR: [chars]

**Explanation** The module hardware has experienced the specified error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLC\_CHOC\_DSX Messages

This section contains Optical Services Module (OSM) CHOC DSX LC common messages.

**Error Message** %CWTLC\_CHOC\_DSX-3-HWERROR: [chars]

**Explanation** A hardware error involving the OSM line card has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLC\_CHOCX Messages

This section contains Optical Services Module (OSM) Channelized OC12/OC3 module (CWTLC\_CHOCX) messages.

### CWTLC\_CHOCX-3

**Error Message** %CWTLC\_CHOCX-3-HWERROR: [chars]

**Explanation** The module hardware has experienced the specified error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# CWTLC\_GEWAN Messages

This section contains Gigabit Ethernet WAN module (CWTLC\_GEWAN) messages.

## CWTLC\_GEWAN-3

**Error Message** %CWTLC\_GEWAN-3-FPGA\_PROG\_FAILED: [chars] FPGA initialization failed due to [chars]

**Explanation** The FPGA could not be initialized. The cause of this condition is specified in the message text on the console or in the system log. As a result of this condition, the device is not operational and has been disabled.

**Recommended Action** Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-3-GEMAC\_9K\_MODE\_FIX\_FAILED: Fix for 9k buffer mode failed for GEMAC[[dec]]

**Explanation** An error has occurred while the system was setting the GEMAC component of the Gigabit Ethernet WAN module in 9,000-buffer mode (a buffer mode that supports jumbo frames). This condition occurred on the port specified in the error message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-3-GEMAC\_INIT\_FAILED: Device initialization failed for GEMAC[[dec]]

**Explanation** An error occurred during initialization of the GEMAC device.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-3-IF2PORT: Cannot determine port from interface [dec] for operation [dec] with [[enet]]

**Explanation** The port number could not be determined from the given interface number.

**Recommended Action** Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-3-MAC\_OP\_BAD: Unknown MAC address operation [dec] with [[enet]] on port [dec]

**Explanation** The specified MAC address operation is unknown and cannot be performed.

**Recommended Action** Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC\_GEWAN-3-PORT\_AUTONEG\_FAIL: Failed to [chars] auto-negotiation [chars] on port [dec]

**Explanation** The enabling/disabling of the auto-negotiation functionality on a GE-WAN port has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC\_GEWAN-3-PORT\_CMD\_FAIL: Port [chars] failed on port [dec]

**Explanation** A GE-WAN port command has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC\_GEWAN-3-TABLE\_ADD\_REMOVE\_FAILED: MAC address table [chars] with [[enet]] failed on port [dec]

**Explanation** The addition or removal of a MAC address from the MAC address table has failed.

**Recommended Action** Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-3-ZICO\_INIT\_FAILED: Device initialization failed for Zico FPGA [[dec]]

**Explanation** An error occurred during initialization of the protocol converter FPGA.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLC\_GEWAN-5

**Error Message** %CWTLC\_GEWAN-5-GEMAC\_INTR: [chars]: [chars]

**Explanation** The GEMAC component of the Gigabit Ethernet WAN module caused an error interruption.

**Recommended Action** Reload the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_GEWAN-5-LINKFPGA\_INTR: Index [[dec]] Cause [[hex]]: [chars]

**Explanation** The link FPGA component of the Gigabit Ethernet WAN module caused an error interruption to occur.

**Recommended Action** Reload the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## CWTLIC\_QOS Messages

This section contains Optical Services Module (OSM) supervisor engine line card QoS messages.

**Error Message** %CWTLIC\_QOS-3-CHUNK\_INIT\_FAIL: [chars]: [chars] allocation failed

**Explanation** The OSM detected a memory allocation failure. The installed amount of memory could be insufficient for the software features that are configured.

**Recommended Action** If this message appears continuously, a memory upgrade might be required.

**Error Message** %CWTLIC\_QOS-3-CHUNK\_MALLOC\_FAIL: [chars]: chunk\_malloc for [chars] failed

**Explanation** The OSM detected a memory allocation failure. The installed amount of memory could be insufficient for the software features that are configured.

**Recommended Action** If this message appears continuously, a memory upgrade might be required.

**Error Message** %CWTLIC\_QOS-3-MISC: [chars]: [chars] [dec]

**Explanation** The OSM detected the software error event that is specified in the message text.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLIC\_QOS-4-STATS\_CLASS\_INFO\_INVALID: Stats process found invalid class\_info [[hex]], stat\_type [[hex]] caller\_pc [[hex]] caller\_pc1 [[hex]].

**Explanation** The OSM has detected invalid class data. This condition is transient when the policy map is modified and the update is propagated to the OSM.

**Recommended Action** If this message appears continuously, reset the line card by entering the **hw-module module <> reset** command. Copy the message exactly as it appears on the console or in the system log. Enter the **show tech-support** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %CWTLC\_QOS-3-WRED\_CLASS\_INDEX\_NOT\_FOUND: sub-class limit has exceeded

**Explanation** The OSM supports only 29 WRED classes: 8 CS, 12 AF, 1 EF, and 8 user-defined DSCP values.

**Recommended Action** Refer to the technical documentation for more information about WRED configurations on the OSM.

## CWTLC\_RP Messages

This section contains WAN Toaster-based module route processor (CWTLC\_RP) messages.

### CWTLC\_RP-3

**Error Message** %CWTLC\_RP-3-TMEM\_IMPROPER\_SEL: Improperly nested PXF [int] memory select/deselect at nested level [int]. Value stored with select ([hex]) does not match the value passed with deselect ([hex])

**Explanation** The last PXF select operation was not followed by a deselect operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DATACORRUPTION-1

**Error Message** %DATACORRUPTION-1-UNAVAILABLE: %s, -PC= 0x%08X

**Explanation** Data corruption has been detected

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DATA\_DESCR-3

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Defer failure on %s for descriptor %u-%u/%u/%u/%u

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Encode failure: %s, descriptor type=%d

**Explanation** An internal data descriptor could not be encoded for synchronization for the interface or controller in the run-time module specified in the message output. The failure most likely occurred because of a software error. The descriptor type specified in the message output identifies the type of failure. The system state between the active and standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Found expired message entry for descriptor %u-%u/%u/%u

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Internal error on data descriptor queue: %s

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An error occurred during the processing of a data descriptor. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Lookup Failure: %0-8x.%0-8x.%0-8x.%0-8x.%0-8x (%u-%u/%u)

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit. Show data-descriptor controller. Copy the message exactly as it appears on the console or in the system log. Research and attempt to

resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Lookup Failure:  
%0-8x.%0-8x.%0-8x.%0-8x.%0-8x (%u-%u/%u/%u/%u)

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit. Show data-descriptor hwidb. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Lookup Failure:  
%0-8x.%0-8x.%0-8x.%0-8x.%0-8x (%u-%u/%u/%u/%u)

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit. Show data-descriptor [hwidblswidblcontroller]. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DATA\_DESCR-3-UNAVAILABLE: Lookup Failure:  
%0-8x.%0-8x.%0-8x.%0-8x.%0-8x (%u-%u/%u/%u/%u)

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer between redundant route processor units. An interface corresponding to a data descriptor index was not found on the Standby unit when it was looked up. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the failing data descriptor index. The system state between the Active and Standby units might not be properly synchronized.

**Recommended Action** Gather system logs and error messages at both the active and the standby units. Issue the recommended show commands at the active unit. Show data-descriptor [hwidblswidblcontroller]. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# DBUS Messages

This section contains data bus (DBUS) messages.

## DBCONN-3

**Error Message** %DBCONN-3-UNAVAILABLE: Bad TP name configured for server %s

**Explanation** The tpname configured for the dbconn server is not recognized by the remote database server.

**Recommended Action** Configure a TP name that is available on the remote database server. Most DB2 systems will accept the DRDA default TP name of xexcept for SQL/DS. Contact your SNA network administrator and/or your DB2 administrator to determine the TP name used by your DB2. To use the DRDA default, do not explicitly configure a TP name for your dbconn server.

**Error Message** %DBCONN-3-UNAVAILABLE: Bad license key configured for Database Connection.

**Explanation** The license key configured with the dbconn license configuration command is not valid.

**Recommended Action** Check that the license key was entered correctly in the dbconn license configuration command. Refer to the dbconn feature documentation for information on how to obtain a valid license key.

**Error Message** %DBCONN-3-UNAVAILABLE: Bad remote LU '%s' configured for server %s

**Explanation** The remote LU configured for the dbconn server is incorrect.

**Recommended Action** Contact your SNA network administrator to determine the correct name of the remote LU for DB2 on the remote database server. Be sure to check that the SNA network name is correct as well as the LU name.

**Error Message** %DBCONN-3-UNAVAILABLE: DRDA protocol error from server %s, SYNERCD x' %02X'

**Explanation** An unexpected DRDA protocol error occurred between dbconn and the remote database server.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach

the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. If possible, also provide the output of the debug dbconn drda command, and an SNA line trace between the router and the remote database server, for the period during which this message appeared.

**Error Message** %DBCONN-3-UNAVAILABLE: License is about to expire for Database and Transaction Connection.

**Explanation** This system is using a temporary key for its Database and Transaction Connection. The license is about to expire.

**Recommended Action** Contact StarQuest Software to acquire a permanent key.

**Error Message** %DBCONN-3-UNAVAILABLE: License is expired for Database and Transaction Connection.

**Explanation** This system is using a temporary key for its Database and Transaction Connection. The license is expired.

**Recommended Action** Contact StarQuest Software to acquire a permanent key.

**Error Message** %DBCONN-3-UNAVAILABLE: Number of connections for TXCONN and DBCONN is at 90%% license limit.

**Explanation** The number of allowed Database and Transaction Connection client in this system is reaching the limit.

**Recommended Action** Contact StarQuest Software to acquire more license.

**Error Message** %DBCONN-3-UNAVAILABLE: Unknown mode '%s' configured for server %s

**Explanation** The mode configured for the dbconn server was rejected by the remote database server.

**Recommended Action** Contact your SNA network administrator to determine the correct name of the mode to use to connect to DB2 on the remote database server.

## DBCONN-5

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** An unspecified security failure has occurred. The database host system may be able to provide more specific information.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The password passed in by the client was rejected by the remote database server because it's expired.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The password passed in by the client was rejected by the remote database server.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The remote database server requires a userid and password, but the password was not provided.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The remote database server requires a userid, but the userid was not provided.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The userid and/or password passed in by the client were rejected by the remote database server.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The userid used to connect to the remote database server has been revoked.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: APPC security failed, client %i using userid '%s' for server %s

**Explanation** The userid used to connect to the remote database server is not valid.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: All WLM routes on server %s have become unavailable. Recovery is in progress.

**Explanation** A load balanced WLM server has lost connectivity to all destinations in its server list. All client connections to this server will be rejected until a host in the complex becomes available again.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: Client %i connected to server %s has timed out after %TE.

**Explanation** The client was idle for too long, and the idle timeout configured for the dbconn server expired.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

**Error Message** %DBCONN-5-UNAVAILABLE: WLM transport type mismatch on server %s.

**Explanation** The transport type within a server list received from a Workload Manager load balanced database does not match the transport type of the corresponding dbconn server. If the conflicting server list specifies SNA transport type, the default mode #INTER will be used to establish the connection.

**Recommended Action** This is an informational message only. LOG\_STD\_NO\_ACTION

## DBUS-2

**Error Message** %DBUS-2-UNAVAILABLE: Slot %d, unknown controller type 0x%x, ignoring

**Explanation** A processor reported a controller type that is unknown to the system. The processor will not be used and needs to be repaired.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DBUS-3

**Error Message** %DBUS-3-UNAVAILABLE: DBUS software not ready for slot %d after %s, elapsed %u, status 0x%x

**Explanation** An interface processor failed to come online after being reset. A software or hardware error occurred.

**Recommended Action** Please refer to Bug Toolkit on the Cisco web-site to check for existing bugs. If you do not find one, obtain the output of show tech and show log and open a TAC case.

**Error Message** %DBUS-3-UNAVAILABLE: Down rev RSP EPROM found HSA system, upgrade EPROM, or remove one RSP

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Invalid EEPROM data found for card in slot %d, card disabled

**Explanation** The ID EEPROM on the indicated card is not programmed correctly.

**Recommended Action** Call your Cisco technical support representative for a replacement.

**Error Message** %DBUS-3-UNAVAILABLE: Invalid controller type %d in slot %d

**Explanation** An interface processor responded with an unknown or illegal controller type when queried. This should not happen unless the running software does not support the interface processor in question, or the interface processor fails.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: No driver support in this image for %s in slot %d (card type %d) - disabled

**Explanation** The Cisco IOS image does not have driver support code for the specified interface processor.

**Recommended Action** Remove the unsupported interface processor card, or reload the router with a Cisco IOS image that has driver support code for that interface processor card.

**Error Message** %DBUS-3-UNAVAILABLE: No magic number found in RP1 EEPROM

**Explanation** The structure containing the system MAC address needed by the OIR facility cannot be found in the RP EEPROM. The RP must be returned for reprogramming.

**Recommended Action** Return the RP for reprogramming and call your Cisco technical support representative for assistance.

**Error Message** %DBUS-3-UNAVAILABLE: ORFS is not initialized

**Explanation** When oir-remove-failing-slot is invoked, the software attempts to initialize parameters. This initialization failed and the service will not be available.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d control 0x%x, status 0x%x

**Explanation** A processor reported an error. This message is sent out in conjunction with other error messages to provide additional information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d disabled, will be restarted.

**Explanation** A processor was disabled due to an error. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Reinstall the processor or download the microcode. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d has an unsuccessfully configured PA in bay %d

**Explanation** The PA in the slot is not successfully configured, either because the VIP is incompatible with it or because the IOS has no pertinent drivers.

**Recommended Action** Please refer to the documentation of the PA to get a list of compatible VIP's. If the VIP that contains the PA is listed as supported, please refer to the CCO page for IOS versions that support the PA. Otherwise, seat the PA in one of the supported VIP's and verify that the IOS version supports the PA.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d has an unsupported PA in bay %d

**Explanation** The PA in the slot is not supported, either because the VIP is incompatible with it or because the IOS has no pertinent drivers.

**Recommended Action** Please refer to the documentation of the PA to get a list of compatible VIP's. If the VIP that contains the PA is listed as supported, please refer to the CCO page for IOS versions that support the PA. Otherwise, seat the PA in one of the supported VIP's and verify that the IOS version supports the PA.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, CBus Error

**Explanation** A processor reported a bus error. The processor will be reset and not used until the next on-line insertion and removal (OIR) event or microcode download, when it will be retested.

**Recommended Action** Reinstall the processor or download the microcode. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, Internal Error

**Explanation** A processor reported an internal error. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Reinstall the processor or download the microcode. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, Internal Error due to VIP crash

**Explanation** A processor reported an error. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Reinstall the processor or download the microcode. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, WCS Controller Instruction Error

**Explanation** The writable control store (WCS) is the set of devices on each interface processor that contains the running microcode. It can be loaded either from the ROM on the interface processor or from the system by using the downloadable microcode facility. In this message, a processor reported a WCS controller instruction error. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, WCS Controller Parity Error

**Explanation** A processor reported a WCS parity error. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Replace the processor or download microcode. If this message recurs, call your Cisco technical support representative for assistance.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, WCS controller in error state (0x%x), resetting

**Explanation** The processor in the slot identified in the error message reported a writable control store (WCS) controller error. The processor will be reset and new microcode loaded. This error message appears only when microcode is downloaded.

**Recommended Action** Reset the processor and load new microcode. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, dbus error, slot (0x%x) and complement (0x%x) do not match

**Explanation** A processor reported a mismatch between the contents of the slot register and its complement. This condition indicates a hardware failure in the diagnostic bus controller on that processor or on the diagnostic bus. The processor will be reset and not used until the next OIR event or microcode download, when it will be retested.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, error loading WCS, status 0x%x cmd/data 0x%x pos %d

**Explanation** A processor indicated an error condition while downloading microcode. The status, cmd/data, and pos numbers shown in the message reflect the error condition, the last byte of microcode loaded, and the position in the file, respectively. If this error appears, the microcode download is aborted and the ROM microcode is loaded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, flow cntrl error loading WCS, last data 0x%x pos %d

**Explanation** A processor indicated an error condition while downloading microcode. The status, cmd/data, and pos numbers shown in the message reflect the error condition, the last byte of microcode loaded, and the position in the file, respectively. If this error appears, the microcode download is aborted and the ROM microcode is loaded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: Slot %d, too many DBUS messages

**Explanation** A board in the slot identified in the error message tried to send too many logger messages.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: bad or no response, slot %u

**Explanation** A board in the slot identified in the error message failed to respond.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DBUS-3-UNAVAILABLE: ready wait timeout, slot %u

**Explanation** The field-programmable gate arrays on an interface processor failed to load after being reset. This indicates a probable software or hardware problem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DCU-1

**Error Message** %DCU-1-UNAVAILABLE: The maximum number of DCU ports (%d) is exceeded

**Explanation** System detected too many DCU ports.

**Recommended Action** Check the configuration.

## DCU-3

**Error Message** %DCU-3-UNAVAILABLE: %s: DCU keep-alive failure, card reset

**Explanation** Port Adapter has stopped processing keep-alives.

The system should recover. No action is required.

## DEC21140-1

**Error Message** %DEC21140-1-UNAVAILABLE: %s timed out, csr5=%#x

**Explanation** The software failed to initialize/restart a Fast Ethernet interface.

**Recommended Action** Try resetting the interface by doing a **shutdown followed by a no shutdown**. **If the message recurs, try reseating the Port Adaptor. If reseating also does not work call your technical support representative for assistance.** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** The number of interfaces found was not what was expected. This possibly indicates a hardware failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-1-UNAVAILABLE: msgtxt\_initfail

**Explanation** The Fast Ethernet port initialization failed. This can be caused by disconnected cabling or a failure to detect the media in use.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DEC21140-2

**Error Message** %DEC21140-2-UNAVAILABLE: Interface %s does not support ISL

**Explanation** ISL is not supported on the specified interface's hardware.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DEC21140-3

**Error Message** %DEC21140-3-UNAVAILABLE: %s csr0=%#x, csr5=%#x

**Explanation** The Fast Ethernet controller has signalled an error condition on the specified port. CSR5 Register Description: bit 13: Fatal Bus Error bit 11: General-Purpose Timer Expired bit 09: Receive Watchdog Timeout bit 08: Receive Process Stopped bit 07: Receive Buffer Unavailable bit 03: Transmit Jabber Timeout bit 02: Transmit Buffer Unavailable bit 01: Transmit Process Stopped bit 25:23 Error Bits (Valid only when csr5 is set) CSR5 Error Type 000 Parity error 001 Master abort 010 Target abort

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: %s doesn't support the configured duplex and speed combination

**Explanation** The Fast Ethernet port was configured for a duplex/speed combination that this particular hardware doesn't support.

**Recommended Action** Specify a different speed and duplex combination. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: %s overflow error

**Error Message** %DEC21140-3-UNAVAILABLE: %s overflow error

**Explanation** The Fast Ethernet receiver was unable to hand received data to a hardware buffer because the input rate exceeded the receiver's ability to handle the data. This could be caused by excessive system load.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: %s packet buffer, pak=0x%x

**Explanation** This indicates an internal software inconsistency.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: %s transmit error

**Explanation** The DEC21140 chip set operates in cut-through mode. The controller initiates the transmission before the complete packet is received by the internal FIFOs and expects that remaining portion of the packet will follow. Because of excessive traffic on the PCI or system bus, the remaining portion does not arrive on time in the internal FIFOs.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: Bay %d device ID seen as %#x, expected %#x

**Explanation** The Fast Ethernet driver failed to initialize.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: Unit %d, Tx FIFO underflow

**Explanation** The Fast Ethernet transmitter was ready to transmit before a packet was in the buffer. This could be caused by excessive system load.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-3-UNAVAILABLE: Unit %d, receive FIFO overflow

**Explanation** The Fast Ethernet receiver was unable to hand received data to a hardware buffer because the input rate exceeded the receiver's ability to handle the data. This could be caused by excessive system load.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DEC21140-5

**Error Message** %DEC21140-5-UNAVAILABLE: %s cable/connector problem?

**Explanation** The Fast Ethernet port did not find a carrier when preparing to transmit a packet, meaning that it is no longer receiving signals from the LAN. This can be caused by disconnected Fast Ethernet cabling or a transceiver failure.

**Recommended Action** Check your Fast Ethernet wiring and port adapter. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: %s cable/transceiver problem?

**Explanation** The Fast Ethernet port lost carrier while transmitting, meaning that it is no longer receiving signals from the LAN. This can be caused by disconnected Fast Ethernet cabling or a transceiver failure.

**Recommended Action** Check your Fast Ethernet wiring and port adapter. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: %s excessive collisions

**Explanation** The Ethernet Controller failed to transmit a packet because of excessive collisions. The packet was dropped. This condition can happen only in half-duplex mode and when the Ethernet segment is congested.

**Error Message** %DEC21140-5-UNAVAILABLE: %s transmit error

**Explanation** Late collisions happen when a collision occurs after transmitting the preamble. The packet will be retransmitted but this could indicate that another device is failing to detect when the network is in use.

**Recommended Action** Verify that both peers are in the same duplex mode. If this recurs, check for malfunctions in other devices on the Fast Ethernet.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DEC21140-5-UNAVAILABLE: %s transmit timed out

**Explanation** The transmitter for the port adapter's Fast Ethernet port has timed out and caused the transmission of a packet to fail.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: Interface %s failed to remove Addr:=%e from HWAF

**Explanation** Removal of hardware address from HWAF failed. We encountered failure because search in the HWAF table failed, for the requested address. Failure should not occur, when interface is not operating in promiscuous mode.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, enormous packet received

**Explanation** A packet received via Fast Ethernet was dropped due to excessive size.

**Recommended Action** Adjust the MTU of the interface if necessary. Otherwise no action is required.

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, excessive collisions

**Explanation** A Fast Ethernet packet has been dropped because too many attempts to transmit it were stopped by collisions. This can be caused by a Fast Ethernet segment which is full to capacity or by other equipment on the LAN malfunctioning.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, jabber timeout

**Explanation** The transmitter for the port adapter's Fast Ethernet port has timed out and caused the transmission of a packet to fail.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, late collision error

**Explanation** Late collisions happen when a collision occurs after transmitting the preamble. The packet will be retransmitted but this could indicate that another device is failing to detect when the network is in use.

**Recommended Action** If this recurs, check for malfunctions in other devices on the Fast Ethernet.

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, lost carrier

**Explanation** The Fast Ethernet port lost carrier while transmitting, meaning that it is no longer receiving signals from the LAN. This can be caused by disconnected Fast Ethernet cabling or a transceiver failure.

**Recommended Action** If the message recurs, check your Fast Ethernet cabling and port adapter first. If the problem cannot be located, follow these directions. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DEC21140-5-UNAVAILABLE: Unit %d, no carrier

**Explanation** The Fast Ethernet port did not find a carrier when preparing to transmit a packet, meaning that it is no longer receiving signals from the LAN. This can be caused by disconnected Fast Ethernet cabling or a transceiver failure.

**Recommended Action** Check your Fast Ethernet cabling and port adapter. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DFC-1

**Error Message** %DFC-1-UNAVAILABLE: DFC in slot %d has incorrect board id of %d

**Explanation** A DFC board should have a correct board ID. Have the board cookie programmed correctly, or try a new board.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFC-1-UNAVAILABLE: DFC in slot %d has old Tulum version %d when should be %d

**Explanation** A DFC board should have the latest Tulum Version. If the Tulum version is not the latest, then board needs to be updated appropriately.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFC-1-UNAVAILABLE: DFC in slot %d has old hw rev %d.%d when should be %d.%d

**Explanation** A DFC board should have the latest revision. If the hw revision is not the latest, then board needs to be updated to the printed out version.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DFC\_CARRIER-1

**Error Message** %DFC\_CARRIER-1-UNAVAILABLE: DFC Carrier in slot %d has old hw revision %d.%d when hw revision should be %d.%d.

**Explanation** A DFC carrier card should have the latest revision. If the hw revision is not the latest, then board needs to be updated to the printed out version.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DEV\_SELENE Messages

This section contains messages related to the Selene FPGA device.

### DEV-SELENE-3

**Error Message** %DEV\_SELENE-3-DEV\_INIT\_FAILURE: Selene [dec] initialization failed.

**Explanation** The initialization of the Selene FPGA device on this linecard failed.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-EFIFO\_ECC: Selene [dec] Egress [dec] Burst FIFO Read ECC error

**Explanation** A FIFO ECC error condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-FIFO\_ECC: Selene [dec] Ingress [dec] [chars] Priority  
FIFO Read ECC Error

**Explanation** An ECC Error was detected while reading from a queue in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-FIFO\_FULL: Selene [dec] Ingress [dec] [chars] Priority  
FIFO Full

**Explanation** An ingress packet queue full condition was detected in a FPGA device on the linecard. This may be caused by a flow-control misconfiguration due to incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-FIFO\_SEQ: Selene [dec] Egress [dec] Burst FIFO Read  
Sequence error

**Explanation** A FIFO sequence error condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-INV\_POE: Selene [dec] Egress [dec] Invalid POE error, [hex]

**Explanation** An invalid Port of Exit error condition was detected in a FPGA device on the linecard. This may be caused by incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-INV\_VLAN: Selene [dec] Egress [dec] Invalid Vlan error

**Explanation** An invalid vlan error condition was detected in a FPGA device on the linecard. This may be caused by a software error.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_CRC: Selene [dec] Metropolis Rx [dec] Packet CRC Error

**Explanation** A packet checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_FCS: Selene [dec] Metropolis Rx [dec] Packet Header Checksum Error

**Explanation** A packet header checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_GNT: Selene [dec] Metropolis Rx [dec] Giant Packet Error

**Explanation** A giant frame was received in a FPGA device on the linecard. This may be due to incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_LEN: Selene [dec] Metropolis Rx [dec] Packet Length Mismatch

**Explanation** An incorrect length was detected for packet received in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_MIN: Selene [dec] Metropolis Rx [dec] Minimum Packet Length Error

**Explanation** A frame smaller than the minimum size was received in a FPGA device on the linecard. This may be due to incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-MRX\_SEQ: Selene [dec] Metropolis Rx [dec] Sequence Error

**Explanation** A sequence error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-SRAM\_ECC: Selene [dec] SRAM [chars] [chars] ECC error, error status: [hex]

**Explanation** An ECC error was detected in SRAM memory in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_CODE: Selene [dec] XAUI [dec] Coding Error

**Explanation** A XAUI lane coding error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_CRC: Selene [dec] XAUI [dec] Checksum Error

**Explanation** A XAUI interface checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_FRM: Selene [dec] XAUI [dec] Framing error

**Explanation** XAUI interface framing error was detected on a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_GNT: Selene [dec] XAUI [dec] Giant Frame Error

**Explanation** A giant frame was detected in a FPGA device on the linecard. This may be due to incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the

Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_LEN: Selene [dec] XAUI [dec] Packet Length Error

**Explanation** A packet with bad length value was detected in a FPGA device on the linecard. This may be caused by incorrect Network Processor software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_MIN: Selene [dec] XAUI [dec] Min Packet Size Error

**Explanation** A frame smaller than the minimum allowed size was detected in a FPGA device on the linecard. This may be due to incorrect software.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_RX\_RDY: Selene [dec] XAUI [dec] Rx Rdy changed state

**Explanation** XAUI interface on a FPGA device on the linecard changed receive ready state. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_SEQ: Selene [dec] XAUI [dec] Sequence Error

**Explanation** A XAUI interface sequence error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_TX\_ECC: Selene [dec] XAUI [dec] Tx FIFO ECC error

**Explanation** A FIFO queue ECC error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_TX\_FULL: Selene [dec] XAUI [dec] Tx FIFO Full

**Explanation** A FIFO queue full condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DEV\_SELENE-3-XAUI\_TX\_RDY: Selene [dec] XAUI [dec] Tx Rdy changed state

**Explanation** XAUI interface on a FPGA device on the linecard changed transmit ready state. This may be caused by a hardware malfunction.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support**

command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

## DEV-SELENE-5

**Error Message** %DEV\_SELENE-5-FC\_CS: Selene [dec] Channel [int] Egress Flow-control Status change

**Explanation** A flow-control status change was detected between a FPGA device and a network processor on the linecard.

**Recommended Action** No action is required.

## DFP Messages

This section contains Dynamic Feedback Protocol messages.

### DFP-4

**Error Message** %DFP-4-UNAVAILABLE: %s Application did not set pointer

**Explanation** Application passed invalid pointer to DFP subsystem

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: %s Application sent too many values

**Explanation** Application sent too many values to DFP subsystem

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: %s Service has not been registered with DFP.

**Explanation** No such service registered with DFP subsystem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: %s security information in CASA packet from manager %i service %s.

**Explanation** Security check failed.

**Recommended Action** Make sure all CASA/DFP systems are configured with the same password.

**Error Message** %DFP-4-UNAVAILABLE: Could not queue request for %s for service %s

**Explanation** Could not queue request to the DFP process for specific action

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Could not start process for service %s

**Explanation** Could not start DFP Process for service %s

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Failure binding port %u to socket for service %s.

**Explanation** Problem with call to socket bind.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i Service %s - Unknown connection state %u

**Explanation** Unknown connection state processing DFP timer

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i: Service %s - Could not parse message

**Explanation** Could not parse message from DFP Manager

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i: Service %s - Socket\_recv error %d

**Explanation** Socket\_recv error receiving message from DFP Manager

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i: Service %s - Too many read errors

**Explanation** Too many errors reading message header from DFP Manager

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i: Service %s - Unknown message type %u

**Explanation** Message from DFP Manager has unknown type

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Manager %i:%u - Send failed

**Explanation** Sending a message to DFP Manager failed

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Process enqueue failed: %s

**Explanation** An unexpected error occurred while enqueueing a DFP element

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Service %s - Listen failed

**Explanation** Listen for DFP Manager failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Service %s - attempted to register before DFP Subsystem is up.

**Explanation** Problem with order of subsystem initialization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: Service %s is already intialized, cannot re-initialize

**Explanation** The application has attempted to re-initialize a service

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: The DFP packet is too small from manager %i service %s.

**Explanation** A DFP packet has been received that is too small.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DFP-4-UNAVAILABLE: The string %s exceeds 15 characters - too long for service name.

**Explanation** The user input a service string that exceeds 15 characters

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DHCPD Messages

This section contains Dynamic Host Configuration Protocol daemon (DHCPD) messages.

### DHCPD-2

**Error Message** %DHCPD-2-UNAVAILABLE: DHCP could not open UDP port %u.

**Explanation** DHCP could not open UDP port 67 (bootps).

**Recommended Action** Check if another application is using UDP port 67. If the port is available, add more memory.

**Error Message** %DHCPD-2-UNAVAILABLE: DHCP could not start its %s process.

**Explanation** DHCP could not start one of its processes.

**Recommended Action** Add more memory.

**Error Message** %DHCPD-2-UNAVAILABLE: DHCP has detected a deadlock condition (excessive read failures).

**Explanation** The DHCP server could not read bindings from any database agent. All read attempts have failed. To prevent a possible deadlock, the server has made all pool addresses available for assignment.

**Recommended Action** Verify that all URLs are correct and connectivity exists between the server and all database agents. Check for corrupt database files. All files must contain the \*time\* and \*end\* keywords. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the appropriate timeouts. Restart the DHCP server.

**Error Message** %DHCPD-2-UNAVAILABLE: Recvmsg failed unexpectedly. DHCP services have been terminated.

**Explanation** Reason for failure is unknown.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DHCPD-2-UNAVAILABLE: There is inadequate memory for DHCP services.

**Explanation** DHCP could not allocate mandatory data structures.

**Recommended Action** Add more memory.

## DHCPD-2

**Error Message** %DHCPD-3-UNAVAILABLE: DHCP could not read bindings from %s.

**Explanation** The DHCP server could not read bindings from the specified database agent.

**Recommended Action** Verify that the URL is correct and connectivity exists between the server and database agent. Check for a corrupt database file. The file must contain the \*time\* and \*end\* keywords. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the database transfer timeout.

**Error Message** %DHCPD-3-UNAVAILABLE: DHCP could not write bindings to %s.

**Explanation** The DHCP server could not write bindings to the specified database agent.

**Recommended Action** Verify that the URL is correct and connectivity exists between the server and database agent. Execute the command, show ip dhcp database. If there are aborted file transfers, increase the database transfer timeout.

## DHCPD-4

**Error Message** %DHCPD-4-UNAVAILABLE: DHCP address conflict: client %s declined %I.

**Explanation** The DHCP client has detected an address conflict. Another host is using the specified IP address. After resolving the conflict, execute the command, clear ip dhcp conflict.

**Recommended Action** Resolve the misconfiguration. Clear the conflict from the DHCP database.

**Error Message** %DHCPD-4-UNAVAILABLE: DHCP address conflict: server pinged %I.

**Explanation** The DHCP server has detected an address conflict. Another host is using the specified IP address. After resolving the conflict, execute the command, clear ip dhcp conflict.

**Recommended Action** Resolve the misconfiguration. Clear the conflict from the DHCP database.

**Error Message** %DHCPD-4-UNAVAILABLE: DHCP will run as a relay agent only.

**Explanation** DHCP could not start its database process. The server component has been disabled. Only the relay agent is active.

**Recommended Action** Add more memory.

## DHCP\_SNOOPING Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP\_SNOOPING) messages.

### DHCP\_SNOOPING-3

**Error Message** %DHCP\_SNOOPING-3-DHCP\_SNOOPING\_INTERNAL\_ERROR: DHCP Snooping internal error, [chars]

**Explanation** A software verification test failed in the DHCP snooping process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### DHCP\_SNOOPING-4

**Error Message** %DHCP\_SNOOPING-4-AGENT\_OPERATION\_FAILED: DHCP snooping binding transfer failed. [chars]

**Explanation** This message provides the reason for failure when a database transfer has failed.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-AGENT\_OPERATION\_FAILED\_N: DHCP snooping binding transfer failed([dec]). [chars]

**Explanation** This message provides the reason for failure when a database transfer has failed. This log message is rate limited.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-DHCP\_SNOOPING\_ERRDISABLE\_WARNING: DHCP Snooping received [dec] DHCP packets on interface [chars]

**Explanation** DHCP Snooping detected a DHCP packet rate limit violation on a particular interface. The interface will be error disabled.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-IP\_SOURCE\_BINDING\_PVLAN\_WARNING: IP source filter may not take effect on secondary vlan [dec] where IP source binding is configured. [chars]

**Explanation** If the private VLAN feature is enabled, the IP source filter on the primary VLAN will automatically propagate to all secondary VLANs.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-QUEUE\_FULL: Fail to enqueue DHCP packet into processing queue: [chars], the queue is most likely full and packet will be dropped.

**Explanation** DHCP packets are coming into the CPU at a much higher rate than the DHCP snooping process can handle them. These unhandled DHCP packets will be dropped to prevent system from denial of service attack.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-SSO\_SYNC\_ACK\_ERROR: Error is encountered in processing acknowledgement for DHCP snooping binding sync, %s. ack message txn id: 0x%x

**Explanation** An error occurred in handling the acknowledgement of DHCP snooping binding synchronization. This message is usually caused by the ACK message being ignored.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-4-STANDBY\_AGENT\_OPERATION\_FAILED: DHCP snooping binding transfer failed on the Standby Supervisor. %s

**Explanation** This message provides the reason of failure when a database transfer has failed on the standby supervisor.

**Recommended Action** No action is required.

## DHCP\_SNOOPING-5

**Error Message** %DHCP\_SNOOPING-5-DEST\_NOT\_FOUND: %s: Could not find destination port.  
Destination MAC %e

**Explanation** The switch is unable to determine the destination port for a DHCP reply. This message may be an indication of a malicious user connected to the port.

**Recommended Action** Using debug commands, identify the users that are attached to the port. Enter the **debug ip dhcp snooping mac-addr** command, where *mac-addr* is the MAC address shown in the error message. Any subsequent DHCP packet that is received with *mac-addr* as the source MAC or DHCP CHADDR (client hardware address) will cause a message to appear on the console indicating the port from which the packet originated. If the error message recurs, check the user connected to the port indicated in the debug message.

## DHCP\_SNOOPING-6

**Error Message** %DHCP\_SNOOPING-6-AGENT\_OPERATION\_SUCCEEDED: DHCP snooping database [chars] succeeded.

**Explanation** The given binding transfer has succeeded. This message is logged only once after some failure to indicate that the switch has recovered from failures.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-6-BINDING\_COLLISION: Binding collision. [dec] bindings ignored

**Explanation** The given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the system has a binding for the given MAC address and VLAN combination by the time the switch read the ignored binding from the file.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-6-INTERFACE\_NOT\_VALID: Interface not valid. [dec] bindings ignored.

**Explanation** The given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the interface specified by the ignored binding either does not exist in the system or it's a router or DHCP snooping trusted port.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-6-LEASE\_EXPIRED: Lease Expired. [dec] bindings ignored.

**Explanation** The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because their lease has expired.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-6-PARSE\_FAILURE: Parsing failed for [dec] bindings.

**Explanation** The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because of parsing failures.

**Recommended Action** No action is required.

**Error Message** %DHCP\_SNOOPING-6-VLAN\_NOT\_SUPPORTED: Vlan not supported. [dec] bindings ignored.

**Explanation** The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the VLAN specified by the ignored binding no longer exists in the system.

**Recommended Action** No action is required.

## DHCP\_SNOOPING\_CAT3550 Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP\_SNOOPING) messages for the Cisco Catalyst 3550.

### DHCP\_SNOOPING\_CAT3550-3

**Error Message** %DHCP\_SNOOPING\_CAT3550-3-MVR\_INSTALL: Cannot install [chars] ACLs for DHCP Snooping, probably no TCAM space

**Explanation** There is insufficient space in the TCAM to install the specified ACLs for DHCP snooping.

**Recommended Action** Reduce the number of PACLs or VACLs to make space in the TCAM.

**Error Message** %DHCP\_SNOOPING\_CAT3550-3-UNEXPECTED\_EVENT: Process received unknown event (major [hex], minor [hex]).

**Explanation** A process can register to be notified when various events occur in the router. This message indicates that a process received an event it did not know how to handle.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DHCP\_SNOOPING\_ISSU Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP\_SNOOPING) in-service software upgrade (ISSU) messages.

### DHCP\_SNOOPING\_ISSU-2

**Error Message** %DHCP\_SNOOPING\_ISSU-2-GET\_BUFFER: DHCP Snooping ISSU client failed to get buffer for message. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-2-INIT: DHCP Snooping ISSU client initialization failed to %s. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-2-SEND\_NEGO\_FAILED: DHCP Snooping ISSU client failed to send negotiation message. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-2-SESSION\_NEGO: DHCP Snooping ISSU client encountered unexpected client nego\_done. Error: %d (%s)

**Explanation** An ISSU-compliant client transitions through a series of internal states. The DHCP snooping ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-2-SESSION\_REGISTRY: DHCP Snooping ISSU client failed to register session information. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

## DHCP\_SNOOPING\_ISSU-3

**Error Message** %DHCP\_SNOOPING\_ISSU-3-INVALID\_SESSION: DHCP Snooping ISSU client does not have a valid registered session.

**Explanation** The DHCP snooping ISSU client does not have a valid registered session.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-3-MSG\_NOT\_OK: DHCP Snooping ISSU client 'Message Type %d' is not compatible

**Explanation** The DHCP snooping ISSU client received an incompatible message from the peer device. The message cannot be processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-3-MSG\_SIZE: DHCP Snooping ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client was unable to calculate the MTU for the specified message. The DHCP snooping ISSU client is not able to send the message to the standby device.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-3-SESSION\_UNREGISTRY: DHCP Snooping ISSU client failed to unregister session information. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client failed to unregister session information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %DHCP\_SNOOPING\_ISSU-3-TRANSFORM\_FAIL: DHCP Snooping ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

**Explanation** The DHCP snooping ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the DHCP snooping state between the active device and the standby device is not identical.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

## DHCPV6C Messages

This section contains DHCPv6 client messages.

**Error Message** %DHCPV6C-3-NOPACKET: Cannot setup or duplicate a socket packet

**Explanation** An error occurred that is probably related to a resource problem within the system.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %DHCPV6C-3-NOSOCKET: Cannot create DHCPv6 client socket

**Explanation** A DHCPv6 socket could not be created. This error is probably the result of either IP not being enabled on any interface or a resource problem with the system.

**Recommended Action** Enable IP on the interface. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## DHCPV6S Messages

This section contains DHCPv6 server messages

### DHCPV6S-3

**Error Message** %DHCPV6S-3-DBNOTLOADED: Binding database not loaded

**Explanation** A DHCPv6 binding database could not be loaded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DHCPV6S-3-DBOPEN: Opening [chars]: [chars]

**Explanation** A DHCPv6 binding database file could not be opened.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DHCPV6S-3-DBREAD: Reading file: [chars]

**Explanation** A DHCPv6 binding database file could not be read.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DHCPV6S-3-DBWRITE: Writing file: [chars]

**Explanation** The system could not write to a DHCPv6 binding database file.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DHCPV6S-3-NOPACKET: Cannot setup or duplicate a DHCPv6 server socket packet

**Explanation** An error occurred that is probably due to a resource problem within the system.

**Recommended Action** No action is required.

# DIAG Messages

This section contains online diagnostics (DIAG) messages.

## DIAG-3

**Error Message** %DIAG-3-ALWAYS\_ENABLE\_TEST: [chars]: The users are not allow to disable monitoring for Test #[dec]

**Explanation** The specified health monitoring test cannot be disabled.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-3-FIXED\_INTERVAL\_TEST: [chars]: The users are not allow to change monitoring interval of Test #[dec]

**Explanation** The specified health monitoring test interval cannot be changed.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-3-INVALID\_DEVICE: Invalid device number : [chars]

**Explanation** The system made a diagnostics request on a device that does not exist.

**Recommended Action** Ensure that the specified device number exists and is valid.

**Error Message** %DIAG-3-INVALID\_MONITORING\_INTERVAL: [chars]: The [chars] [ID=[dec]] monitoring interval must be at least [dec] millisec

**Explanation** The specified test monitoring interval is too small.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-3-INVALID\_TEST: Invalid test: [chars]

**Explanation** A test that does not exist was requested. [chars] describes the test.

**Recommended Action** Ensure the specified test is supported by the switching module. The list of available tests and their associated test IDs can be retrieved using the **show diagnostic content** command.

**Error Message** %DIAG-3-MONITOR\_DISABLE: [chars]: The monitoring test:[dec] is disable since default interval is Zero

**Explanation** The specified test is no longer a health-monitoring test.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-3-MONITOR\_INTERVAL\_ZERO: [chars]: Monitoring interval is 0. Cannot enable monitoring for Test #[dec]

**Explanation** The system cannot enable health monitoring for the specified test because the interval is set to zero.

**Recommended Action** Reset the health monitoring interval for the test, and reenable health monitoring.

**Error Message** %DIAG-3-NOT\_MONITORING\_TEST: [chars]: The test:[dec] cannot be used as health monitoring test

**Explanation** The specified test is not a health-monitoring test.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-3-TEST\_SKIPPED: [chars]: [chars]{ID=[dec]} is skipped

**Explanation** The diagnostic test cannot be run.

**Recommended Action** No action is required. The system is working properly.

## DIAG-4

**Error Message** %DIAG-4-CONFIG\_REAPPLY: Please reapply config command [chars] after the card is online.

**Explanation** This message appears when the specified configuration command cannot be applied. [chars] is the configuration command that you must reapply.

**Recommended Action** The system is working properly and the specified command cannot be applied. Reapply the configuration command after the module is online.

## DIAG-6

**Error Message** %DIAG-6-SCHEDULE\_IS\_REMOVED: [chars]: Schedule Diagnostic for [[chars] [chars] [dec]:[dec].] is removed

**Explanation** The scheduled online diagnostics test was removed because the test is no longer applicable.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-6-SIMULATED\_TEST\_RESULT: [chars]: [chars] test result is simulated.

**Explanation** The result of the specified test is simulated. The message does not indicate a software or hardware fault. The first [chars] is the message notification and the second [chars] is the test name.

**Recommended Action** No action is required. The test failure is simulated as specified by the user.

**Error Message** %DIAG-6-SKIP\_ONDEMAND\_ACTIVE\_TO\_STANDBY\_TEST: [chars]: [chars] cannot be executed.

**Explanation** The diagnostics test is bypassing the specified redundant test because the redundant test cannot be executed.

**Recommended Action** No action is required. The system is working properly.

**Error Message** %DIAG-6-TEST\_SKIPPED\_FROM\_ACTIVE: [chars]: [chars] cannot be executed from active supervisor.

**Explanation** The specified test cannot be run from the active supervisor engine.

**Recommended Action** No action is required. The test cannot be run, but the system is working properly.

## DIALER-2

**Error Message** %DIALER-2-UNAVAILABLE: Dialer count 0 on %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DIALER-2-UNAVAILABLE: No software interface associated with hw interface %s

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative and report the error message, the system version, and the router configuration. (Use the show version command to obtain the software version.)

**Error Message** %DIALER-2-UNAVAILABLE: Unexpected null pointer in %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DIALER-4

**Error Message** %DIALER-4-UNAVAILABLE: Current MTU setting of %d on %s is being overwritten by setting of %d defined by %s.

**Explanation** This is a warning message indicating that an interface setting is changed based on a dialer rotary group membership.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DIALER-6

**Error Message** %DIALER-6-UNAVAILABLE: Interface %s bound to profile %s

**Explanation** This is a status message indicating that a dialer interface has been bound to a dialer profile.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DIALER-6-UNAVAILABLE: Interface %s unbound from profile %s

**Explanation** This is a status message indicating that a dialer interface has been unbound to a dialer profile.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DIALPEER\_DB-3

**Error Message** %DIALPEER\_DB-3-UNAVAILABLE: Addition of dial-peers limited by available memory

**Explanation** The available memory does not permit the addition of more dial-peers.

**Recommended Action** Increase the processor memory in order to be able to add more dialpeers.

**Error Message** %DIALPEER\_DB-3-UNAVAILABLE: Addition of dial-peers limited by platform

**Explanation** This platform does not permit the addition of more dial-peers.

**Recommended Action** Reduce the number of dial-peers in your numbering plan.

## DIALPEER\_DB-6

**Error Message** %DIALPEER\_DB-6-UNAVAILABLE: Addition of too many dial-peers may affect performance

**Explanation** The number of dial-peers is high. This will have an effect on the dial-peer lookup time, resulting in longer call setup time.

**Recommended Action** Use the minimum number of dial-peers necessary for your numbering plan.

## DIALSHELF-2

**Error Message** %DIALSHELF-2-UNAVAILABLE: %s slot %d after %d secs in state '%s'

**Explanation** The specified dial shelf slot timed out as per the message. Either a software or a hardware component has failed.

**Recommended Action** Try removing and reinserting the card. If that does not help, try a different card. If problem persists, contact your technical support representative.

**Error Message** %DIALSHELF-2-UNAVAILABLE: Card type %d in slot %d

**Explanation** The software does not have a driver for the card in specified slot.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIALSHELF-2-UNAVAILABLE: DSC in slot %d changes state to down.

**Explanation** DSC in dial shelf went down.

**Recommended Action** Try to bring up that DSC by 1) Check LCD and LEDs of the DSC. 2) Check RS DSC connection. If none of above works, please report it to your technical support representative.

## DIALSHELF-3

**Recommended Action** representative.

**Error Message** %DIALSHELF-3-UNAVAILABLE: %s (%d)

**Explanation** The router shelf received an invalid message from the DSC in the dial shelf. This is a software error or compatibility issue. Check the software versions on the router shelf and the DSC.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIALSHELF-3-UNAVAILABLE: Invalid change from %s (%d) to %s (%d) for slot %d

**Explanation** The software detected an invalid state change for the specified slot. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIALSHELF-3-UNAVAILABLE: Unknown event %d for slot %d

**Explanation** The software generated an unknown event for the specified slot. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIALSHELF-3-UNAVAILABLE: Unknown message type %d from DSC

**Explanation** The router shelf received an unknown message from the DSC in the dial shelf. This is a software error or compatibility issue. Check the software versions on the router shelf and the DSC.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DIALSHELF-4

**Error Message** %DIALSHELF-4-UNAVAILABLE: Number of %s may exceed recommended configuration

**Explanation** On NPE200 more than one CT3 or more than two T1/E1 are installed, this exceeds the recommended configuration.

**Recommended Action** Stay within recommended limit of CT3/T1/E1, or install split dial-shelf configuration or upgrade router-shelf to NPE300.

## DIALSHELF-6

**Error Message** %DIALSHELF-6-UNAVAILABLE: Reload requested for card in shelf %d slot %d.

**Explanation** The command 'hw-module slot / reload' was entered. This is a confirmation that the command is being processed.

**Recommended Action** None

## DIGISIGN-2

**Error Message** %DIGISIGN-2-UNAVAILABLE: %%CRITICAL: System identified a mismatch between the show version output and the key type used in signing. %s is a signed %s software

**Explanation** System identified a mismatch in software type. This might be a modified software.

**Recommended Action** Do not use this file. The file might be corrupted or modified. Open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the image and version information you have gathered.

**Error Message** **DIGISIGN-3** %DIGISIGN-3-UNAVAILABLE: %%ERROR: Digital signature is not valid for file %s

**Explanation** The specified Cisco IOS Software image has an invalid digital signature. A valid digital signature ensures the integrity of the image.

**Recommended Action** Do not use this file. The file might be corrupted or modified. Please attempt to copy the file again, or download the file again from the <http://www.cisco.com> page before copying it. If you continue to get this error message, open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the information you have gathered.

**Error Message** %DIGISIGN-3-UNAVAILABLE: %%ERROR: Failure in processing signature envelope for system image: %s

**Explanation** The loaded Cisco IOS software image has an invalid digital signature envelope. A valid digital signature envelope ensures the integrity of the image. The loaded Cisco IOS software image might be corrupted or modified. The failure type is one of the following: (1) Signature envelope version is not supported (2) Duplicate entries are found in signature envelope (3) Signature envelope is incomplete (4) Invalid image type (5) Invalid length in signature envelope (6) Invalid pad bytes (7) Invalid signature length (8) Unable to allocate memory (9) Invalid type in signer ID (10) Invalid signer ID length (11) Unknown signature algorithm (12) Invalid key type

**Recommended Action** Do not use this file. The file might be corrupted or modified. Please attempt to copy the file again, or download the file again from the <http://www.cisco.com> page before copying it. If you continue to get this error message, open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the image and version information you have gathered.

**Error Message** %DIGISIGN-3-UNAVAILABLE: %%ERROR: No keys found for verifying the digital signature in file %s

**Explanation** No keys found in the device key storage for validating the digital signature. A valid key is needed to validate the digital signature in the image.

**Recommended Action** The device does not have a valid key to verify the digital signature. Open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the information you have gathered.

**Error Message** %DIGISIGN-3-UNAVAILABLE: Cannot verify %s, as it is signed with development key

**Explanation** The software image cannot be verified because it is signed with a development key.

**Recommended Action** To allow booting a development-signed image, use the software authenticity development command

## DIGISIGN-4

**Error Message** %DIGISIGN-4-UNAVAILABLE: %%WARNING: Digital signature is not found in file %s

**Explanation** The specified image file does not have a digital signature. Only Cisco IOS Software Images are digitally signed. If you enter **verify**, **copy**, or **reload** command, and the specified file is not a digitally signed Cisco IOS Software Image the system displays this warning message because the file does not have a signature. A valid digital signature ensures the integrity of the image.

**Recommended Action** If the specified file is an unsigned Cisco IOS Software image be cautious when deciding whether or not to use this file. The system will not boot using this image.

**Error Message** %DIGISIGN-4-UNAVAILABLE: %%WARNING: Digital signature verification failed for file %s: %s

**Explanation** Validation failure due to invalid key while verifying the digital signature.

**Recommended Action** Do not use this file. The file might be corrupted or modified. Please attempt to copy the file again, or download the file again from the <http://www.cisco.com> page before copying it. If you continue to get this error message, open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the device information you have gathered.

**Error Message** %DIGISIGN-4-UNAVAILABLE: %%WARNING: Digital signature verification failed for file %s: %s

**Explanation** Validation failure while verifying the digital signature.

**Recommended Action** Do not use this file. The file might be corrupted or modified. Please attempt to copy the file again, or download the file again from the <http://www.cisco.com> page before copying it. If you continue to get this error message, open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), and contact your Cisco technical support representative with the information you have gathered.

**Error Message** %DIGISIGN-4-UNAVAILABLE: %s signed with development key will not be booted

**Explanation** With this configuration enabled, the system will be unable to boot software that is signed with a development key.

**Recommended Action** Use the [no] form of this configuration (no software authenticity development) to correct the condition.

**Error Message** %DIGISIGN-6-UNAVAILABLE: %s

**Explanation** System identified a key version mismatch between the key which was used to sign the image and the keys stored on the device

**Recommended Action** If the image is signed with a key version newer than the device keys, then follow the procedure for key revocation, which is documented at [cisco.com](http://cisco.com). If the image is signed with a key version that is now obsolete, please obtain the latest signed copy of this image from [cisco.com](http://cisco.com).

## DIRECTOR-3

**Error Message** %DIRECTOR-3-UNAVAILABLE: %s can not create ip alias

**Explanation** Most likely a resource problem within the system.

**Recommended Action** Reboot the system as soon as possible. If the problem continues to occur, report it to your technical support representative.

**Error Message** %DIRECTOR-3-UNAVAILABLE: %s port in use

**Explanation** The IP address requested has been found to be already in use on some interface connected to the system or within the system itself.

**Recommended Action** Either select another IP address for use, or locate the system making use of this address and reconfigure it to use another.

**Error Message** %DIRECTOR-3-UNAVAILABLE: %s unable to create socket

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIRECTOR-3-UNAVAILABLE: %s unable to write to socket

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIRECTOR-3-UNAVAILABLE: DRP %i was down %TE ago in the last %d minute period ! There may be problems related to this DRP agent.

**Explanation** The remote DRP agent has not responded within the time period reported

**Recommended Action** Make sure the remote DRP agent is running and that it is accessible from the system reporting the problem.

**Error Message** %DIRECTOR-3-UNAVAILABLE: Excessive HTTP request overloading: dropping HTTP req from .

**Explanation** HTTP requests are overloading the web redirector

**Recommended Action** Web redirector is automatically discarding HTTP request traffic.

**Error Message** %DIRECTOR-3-UNAVAILABLE: Metric %s referenced but not found

**Error Message** %DIRECTOR-3-UNAVAILABLE: Server error ('%s'), Code %d - %s

**Explanation** The HTTP return code indicates a server failure error

**Recommended Action** Check the URL configured. Check the configured HTTP server.

**Error Message** %DIRECTOR-3-UNAVAILABLE: URL is elsewhere ('%s'), Code %d - %s

**Explanation** The HTTP return code indicates the page is not actually on this server

**Recommended Action** Check the URL configured. Check the configured HTTP server.

**Error Message** %DIRECTOR-3-UNAVAILABLE: plug-in returned orphan status

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DIRECTOR-3-UNAVAILABLE: unable to create %s process

**Explanation** Most likely a resource problem within the system.

**Recommended Action** Reboot the system as soon as possible. If the problem continues to occur, report it to your technical support representative.

## DIRECTOR-5

**Error Message** %DIRECTOR-5-UNAVAILABLE: server %i (on port %d) has gone %s

**Explanation** The remote server has gone up or down

**Recommended Action** None.

## DIRECTOR-6

**Error Message** %DIRECTOR-6-UNAVAILABLE: answer type %s host %s cli %i id# %d none

**Explanation** DNS reply logging: no server found.

**Recommended Action** None.

**Error Message** %DIRECTOR-6-UNAVAILABLE: answer type %s host %s cli %i id# %d svr %i

**Explanation** DNS reply logging with server found.

**Recommended Action** None.

**Error Message** %DIRECTOR-6-UNAVAILABLE: no answer for (host %s cli %i type %s id# %d) %s

**Explanation** No server found.

**Recommended Action** None.

**Error Message** %DIRECTOR-6-UNAVAILABLE: query type %s host %s cli %i id# %d

**Explanation** DNS query logging.

**Recommended Action** None.

**Error Message** %DIRECTOR-6-UNAVAILABLE: select %i (host %s cli %i type %s id# %d) %s

**Explanation** Report server selection process.

**Recommended Action** None.

## DLC-2

**Error Message** %DLC-2-UNAVAILABLE: no memory for %s

**Explanation** There was not enough free memory to complete the operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DLC-3

**Error Message** %DLC-3-UNAVAILABLE: Close Station, invalid P\_CEP

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLC-3-UNAVAILABLE: Function %s: value %#x passed in parameter %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLC-3-UNAVAILABLE: unknown port type %x

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DIAG-SP

**Error Message** %DIAG-SP-6-DIAG\_OK: %s: Passed %s

**Explanation** The diagnostic tests did not detect any error on the card.

**Recommended Action** This is an informational message stating that the line card passed the diagnostic tests.

**Error Message** %OIR-SP-6-DOWNGRADE\_EARL: Module %d %s installed is not identical to system PFC and will perform at current system operating mode.

**Explanation** The PFC/DFC module is at a higher hardware revision than the level of the system PFC. The PFC/DFC module will operate at the same level as that of the system PFC.

**Recommended Action** No action is required.

**Error Message** %DIAG-SP-6-RUN\_MINIMUM: %s: Running Minimal Diagnostics...

**Explanation** Minimum Diagnostic is running on the card

**Recommended Action** This is an informational message and the system is working properly.

## DLSWC Messages

This section contains Data-link Switching System messages.

### DLSWC-3

**Error Message** %DLSWC-3-UNAVAILABLE: %s %d

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s Bad clsi SAP id = %x %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s Invalid confirm %s %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s Invalid indication %s, %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s Invalid ret code (0x%x) %s, %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: %s primitive not valid for dlsw %s %s

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: SSP OP = %d(%s) %s from %s

**Explanation** A Silicon Switch Program (SSP) frame was received from the remote peer.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWC-3-UNAVAILABLE: SSP OP = %d(%s) %s to %s %s

**Explanation** A Silicon Switch Program (SSP) frame was sent to the remote peer.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWC-3-UNAVAILABLE: bad peer op in peer\_to\_core %d

**Explanation** A data-link switching system error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWC-3-UNAVAILABLE: bad ssp hdr in proc ssp - %s = 0x%x

**Explanation** A Silicon Switch Processor (SSP) header received from the remote peer contains errors in one of the fields.

**Recommended Action** If the remote peer is a nonCisco router, confirm that it supports the DLSw RFC 1795 standard.

## DLSWMasterSlave

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s %x from %e

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s from %e

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s, %s

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s: %s

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s: %s from %e

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DLSWMasterSlave-3-UNAVAILABLE: %s: %s to %e

**Explanation** DLSw Master-Slave Error

**Recommended Action** LOG\_STD\_NO\_ACTION

## DLSWP Messages

### DLSWP-3

**Error Message** %DLSWP-3-UNAVAILABLE: %s %d; %s

**Explanation** The largest frame size configured in the DLSW remote peer definition is being changed because the MTU size configured on the interface, used by DLSW, is less than the configured value of the largest frame on DLSW remote peer definition. The largest frame size is being changed to that configured on the interface.

**Recommended Action** If you wish to use this largest frame size for DLSW, increase the MTU on the interface to a value larger than the configured largest frame size.

**Error Message** %DLSWP-3-UNAVAILABLE: %s %s

**Explanation** A DLSW peer failed: - keepalive failure, dlsw between cisco peers is sending a peer keepalive by default every 30 sec. After missing 3 consecutive keepalives the peer is taken down. - We are not promiscuous, Rej conn from peer a.b.c.d The local dlsw peer is not configured for promiscuous and we receive a request to open a dlsw peer for which we have no corresponding dlsw

remote peer statement. - received tcp fini, dlsw peer code has received a tcp fini from the underlying tcp subsystem. To obey the tcp fini dlsw wring bring down the peer connection for which the tcp fini was received.

**Recommended Action** - keepalive failure Check end to end connectivity between the DLSW peers - We are not promiscuous, Rej conn from peer a.b.c.d correct your configuration. - received tcp fini, Check the underlying tcp connection between the two dlsw peers.

**Error Message** %DLSWP-3-UNAVAILABLE: %s

**Explanation** A general error condition was detected as described in the message text. This error should not cause any network problems unless it happens repeatedly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWP-3-UNAVAILABLE: %s: %s

**Explanation** Priority keyword was used on one router but not on the other. The priority keyword is an option on the DLSW remote peer definition. If priority keyword is used on one router, it must be used on the other.

**Recommended Action** If you wish to use prioritization, use it on both routers.

**Error Message** %DLSWP-3-UNAVAILABLE: %s: invalid %s %d

**Explanation** A bad parameter value was passed to function chars1 - invalid parameter chars2 with value. This error should not cause any network problems unless it happens repeatedly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DLSWP-3-UNAVAILABLE: No memory to %s

**Explanation** The router ran out of system memory for operation, as described in the message text. Most likely, the router image requires more system memory (RAM) than the router contains.

**Recommended Action** Consult with your Cisco technical support representative about memory requirements for a specific image.

**Error Message** %DLSWP-3-UNAVAILABLE: passive open failed from %i(%d) - %d

**Explanation** The system does not have enough main memory (RAM) for TCP to allocate the data structures required to accept an incoming TCP connection. Most likely, the router image requires more system memory (RAM) than the router contains.

**Recommended Action** Consult with your Cisco technical support representative about memory requirements for a specific image.

**Error Message** %DLSWP-3-UNAVAILABLE: uninitialized peer %s from %i(%d) to %i(%d)

**Explanation** DLSw received a packet on an uninitialized peer connection.

**Recommended Action** Verify configuration and DLSw peer status on both routers.

## DLSWP-5

**Error Message** %DLSWP-5-UNAVAILABLE: %s %s

**Explanation** A DLSW peer is either connected or disconnected

**Recommended Action** None, informational message only.

## DM Messages

This section contains Dispatch Manager (DM) messages.

### DM-1

**Error Message** %DMA-1-UNAVAILABLE: DRQ stalled. Dumping DRQ.

**Explanation** The path from VIP to backplane has stalled. The DRQ table is being dumped for debugging

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the hex dump following this message

**Error Message** %DMA-1-UNAVAILABLE: Empty packet is being sent to backplane.  
particle\_ptr=%#x

**Explanation** drq\_io receives a packet that has particle count 0. coding error -- hurt performance

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the show log on the reporting VIP

**Error Message** %DMA-1-UNAVAILABLE: Giant detected; size %d

**Explanation** This error message appears only in custom built images when a sanity check fails. A packet that was too large was sent over the backplane by a VIP.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the output of show tech.

**Error Message** %DMA-1-UNAVAILABLE: Not enough pci memory left over for DMA

**Explanation** Misconfiguration has resulted in overutilization of PCI memory

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the output of show diag and show controller cbus

**Error Message** %DMA-1-UNAVAILABLE: Not enough processor memory left over for DMA

**Explanation** Misconfiguration has resulted in overutilization of memory

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the output of show diag and show controller cbus

## DM-3

**Error Message** %DMA-3-UNAVAILABLE: pak not cleaned up by Egress processing (appId %d)

**Explanation** After dtq dispatched a packet to Egress processing, packet is not cleaned up by application

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible also provide the show log on the reporting VIP

## DMB-0

**Error Message** %DMB-0-UNAVAILABLE: %s

**Explanation** DMB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMA Messages

This section contains dynamic memory access (DMA) messages.

## DMA-3

**Error Message** %DMA-3-DTQ\_DISPATCH\_DIRTY\_PAK: pak not cleaned up by Egress processing (appId [dec])

**Explanation** After DTQ dispatched a packet to egress processing, the packet was not cleaned up by the application.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. If possible, also provide the **show log** on the reporting VIP.

# DMB Messages

This section contains Dynamic Message Broker (DMB) messages.

## DMB-0

**Error Message** %DMB-0-DMB\_EMERG: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-1

**Error Message** %DMB-1-DMB\_ALERT: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-2

**Error Message** %DMB-2-DMB\_CRIT: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-3

**Error Message** %DMB-3-DMB\_ERR: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-4

**Error Message** %DMB-4-DMB\_WARNING: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-5

**Error Message** %DMB-5-DMB\_NOTICE: %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMB-6

**Error Message** %DMB-6-DMB\_INFO: %s

**Explanation** This message displays information from the Dynamic Message Broker (DMB).

**Recommended Action** No action is required.

## DMB-7

**Error Message** %DMB-7-DMB\_ASSERT: Assertion Failure ( %s @%s:%d ) : %s

**Explanation** An internal error occurred in the Dynamic Message Broker (DMB).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMTDSL-1

**Error Message** %DMTDSL-1-UNAVAILABLE: DMTDSL(%d/%d), Init failed, %s

**Explanation** The ADSL network module hardware may be bad

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DMTDSL-3

**Error Message** %DMTDSL-3-UNAVAILABLE: DMTDSL(%d/%d), Could not find ATM interface.

**Explanation** The DSL network module hardware may be bad

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DMTDSL-3-UNAVAILABLE: DMTDSL(%d/%d), Hardware failed self test

**Explanation** The DSL chipset failed its self test

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DMTDSL-3-UNAVAILABLE: DMTDSL(%d/%d), Out of memory

**Explanation** The router does not have enough memory installed to run this image

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DMTDSL-3-UNAVAILABLE: DMTDSL(%d/%d), interface not initialized.

**Explanation** The ATM network module hardware may be bad

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DMTDSL-3-UNAVAILABLE: DMTDSL, Could not find ATM interface.

**Explanation** The DSL network module hardware may be bad

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# DNET Messages

## DNET-3

**Error Message** %DNET-3-UNAVAILABLE: Hello type %x for my address from %d.%d via %s

**Explanation** The system is receiving its own DECnet packets. Either a serial line is looped back or another host with the same DECnet address is already present on the LAN.

**Recommended Action** Check the serial lines (if present) and the DECnet configuration.

**Error Message** **DNET-4** %DNET-4-UNAVAILABLE: Duplicate DECnet Accounting List Entry for nodes %d.%d - %d.%d

**Explanation** A synchronization problem has occurred whilst a new transit DECnet Accounting List Entry was being added and a duplicate entry has been found.

**Recommended Action** Show decnet accounting. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DNET-4-UNAVAILABLE: Map entry %d.%d conflicts with adjacency to %d.%d

**Explanation** Your DECnet configuration is incorrect. A host that is specified as nonlocal is present on your local network.

**Recommended Action** Correct the configuration. Call your technical support representative if you need assistance.

## DNSERVER-3

**Error Message** %DNSSERVER-3-UNAVAILABLE: Bad DNS query from %i

**Explanation** A client sent a DNS query to the server which has been found to be incorrectly formatted.

**Recommended Action** Check the DNS server and the network attached to it.

**Error Message** %DNSSERVER-3-UNAVAILABLE: Can't initialize DNS server

**Explanation** Internal problems with initializing ports for the DNS server

**Recommended Action** Make sure the DNS server port is available on the local machine.

**Error Message** %DNSSERVER-3-UNAVAILABLE: DNS query from %i too short

**Explanation** A client sent a short DNS query packet to the server

**Recommended Action** Check the client and the network attached to it.

**Error Message** %DNSSERVER-3-UNAVAILABLE: Low available memory: dropping from .

**Explanation** There is not enough free memory to handle DNS queries.

**Recommended Action** DNS server is automatically discarding DNS request traffic.

**Error Message** %DNSSERVER-3-UNAVAILABLE: Low available memory: dropping TCP request from .

**Explanation** There is not enough free memory to handle DNS queries.

**Recommended Action** DNS server is automatically discarding DNS request traffic.

**Error Message** %DOSFS-3-UNAVAILABLE: %s %s

**Explanation** disk could not be reset while the system is initiated reload. This will cause a transient disk error, disk timeout error, when the ROMMON initialization code tries to reads the DIB. This is a transient error and the system will be able to access the disk and continue normal operation.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DOSFS Messages

This section contains DOS file system (DOSFS) messages.

### DOSFS-3

**Error Message** %DOSFS-3-RESETERR: [chars] [chars]

**Explanation** The disk could not be reset while the system has initiated reload. A transient disk error or disk timeout error will occur when the ROMMON initialization code tries to reads the device information block. This is a transient error and the system will be able to access the disk and continue normal operation.

**Recommended Action** No action is required.

## DOSFS-4

**Error Message** %DOSFS-4-DFS\_FSCK\_ERR: Error while running fsck on the file [chars].

**Explanation** The file system consistency check (fsck) program became stuck in a loop while walking through the cluster chain of a file and has aborted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DOSFS-5

**Error Message** %DOSFS-5-DFS\_CLOSE\_ERR: Error during close of the file [chars].  
[chars]

**Explanation** An error occurred during a file-close operation.

**Recommended Action** Enter the **fsck filesystem prefix:** command to check and attempt to repair the disk. If this does not fix the problem, format the disk.

**Error Message** %DOSFS-5-DIBERR: [chars] [chars]

**Explanation** The system cannot boot an image from the flash disk because the device information block (DIB) is different. The flash disk can be read by the router, but will require formatting by the router before an image can be booted from it.

**Recommended Action** Follow any instructions provided in the error message. Before storing an image to the flash disk and trying to boot from this device, enter the **format** command to format the flash disk from the router. Copy the desired image to the flash disk and boot from the device.

# DOT1AD Messages

This section contains 801.1ad messages.

## DOT1AD-4

**Error Message** %DOT1AD-4-DOT1QTUNNEL\_PORT: Port %s is a dot1q-tunnel port, it conflicts with Dot1ad configuration

**Explanation** IEEE 802.1ad configuration cannot coexist with 802.1q tunnel ports.

**Recommended Action** Disable the 802.1q tunnel configuration on the ports before enabling 802.1ad.

**Error Message** %DOT1AD-4-DOT1X\_PORT: Port %s is configured for DOT1X, it conflicts with Dot1ad configuration

**Explanation** IEEE 802.1ad configuration cannot coexist with 802.1X enabled ports.

**Recommended Action** Disable the 802.1X configuration on the ports before enabling 802.1ad.

**Error Message** %DOT1AD-4-ETHERTYPEMISMATCH\_PORT: Port %s ethertype cannot be changed to Dot1ad ethertype, it conflicts with Dot1ad configuration

**Explanation** The Ethertype on the port cannot be changed to 802.1ad Ethertype.

**Recommended Action** Replace the module with a unit that supports Ethertype change, or power down the module before enabling 802.1ad.

**Error Message** %DOT1AD-4-L2PT\_PORT: Port %s is a l2protocol-tunnel port, it conflicts with Dot1ad configuration

**Explanation** IEEE 802.1ad configuration cannot coexist with a Layer 2 protocol tunnel port.

**Recommended Action** Disable the Layer 2 protocol tunnel configuration on the port before enabling 802.1ad.

**Error Message** %DOT1AD-4-LACP\_PORT: Port %s is a part of an LACP channel, it conflicts with Dot1ad configuration

**Explanation** IEEE 802.1ad configuration cannot coexist with LACP ports.

**Recommended Action** Disable the LACP configuration on the port before enabling 802.1ad.

**Error Message** %DOT1AD-4-OAM\_PORT: Port %s is configured for OAM, it conflicts with Dot1ad configuration

**Explanation** IEEE 802.1ad configuration cannot coexist with OAM-enabled ports.

**Recommended Action** Disable the OAM configuration on the port before enabling 802.1ad.

**Error Message** %DOT1AD-4-PLATFORM\_RESOURCE\_UNAVAILABLE: Platform does not have resources to support dot1ad configuration

**Explanation** The hardware match registers required by 802.1ad are not available.

**Recommended Action** Unconfigure the features that use the match registers (such as CFM or CGVRP) before enabling 802.1ad.

**Error Message** %DOT1AD-4-STP\_CONFLICT: STP mode conflicts with Dot1ad configuration as it is not in MST mode

**Explanation** The current Spanning Tree Protocol (STP) mode conflicts with the 802.1ad configuration.

**Recommended Action** Change the STP mode to Multiple Spanning Tree (MST) before enabling 802.1ad.

## DOT1Q\_TUNNELLING Messages

This section contains 801.1Q tunnelling messages.

### DOT1Q\_TUNNELLING-4

**Error Message** %DOT1Q\_TUNNELLING-4-MTU\_WARNING:  
System MTU of [dec] might be insufficient for 802.1Q tunnelling.  
802.1Q tunnelling requires system MTU size of [dec] to handle maximum size ethernet frames.

**Explanation** The system MTU setting might not be a large enough value to support 802.1Q tunnelling. When 802.1Q tunnelling is being used, the system MTU setting might need to be adjusted to add the 4-byte overhead associated with the additional 802.1Q tag.

**Recommended Action** Enter the **system mtu** command in global configuration mode to adjust the system MTU setting to take into account the additional 802.1Q tag.

# DOT1X Messages

This section contains IEEE 802.1X (DOT1X) messages.

## DOT1X-4

**Error Message** %DOT1X-4-UNKN\_ERR: An unknown operational error occurred.

**Explanation** The 802.1X process cannot operate due to an internal system error.

**Recommended Action** Reload the device.

## DOT1X-5

**Error Message** %DOT1X-5-DROP\_MAC: Disallowed MAC address [enet] trying to authenticate.

**Explanation** Authentication using 802.1X is not allowed for a host whose MAC address is configured as a drop entry in the MAC address table.

**Recommended Action** Remove the drop entry if this host is to be allowed access.

**Error Message** %DOT1X-5-ERR\_INVALID\_AAA\_ATTR: Got invalid AAA attribute settings [chars]

**Explanation** The authorization settings that were obtained are either unsupported or are invalid.

**Recommended Action** Change the value so that the correct settings are obtained.

**Error Message** %DOT1X-5-ERR\_INVALID\_TUNNEL\_MEDIUM\_TYPE: Got an invalid value [chars] for TUNNEL\_MEDIUM\_TYPE [chars]

**Explanation** The provided TUNNEL\_MEDIUM\_TYPE is either unsupported or invalid.

**Recommended Action** Change the tunnel medium type value to one that is supported.

**Error Message** %DOT1X-5-ERR\_INVALID\_TUNNEL\_TYPE: Got an invalid value of [chars] for TUNNEL\_TYPE [chars]

**Explanation** The provided TUNNEL\_TYPE is either unsupported or invalid.

**Recommended Action** Change the tunnel type value to one that is supported.

**Error Message** %DOT1X-5-ERR\_PER\_USR\_IP\_ACL: Applied per-user IP ACL was unsuccessful on interface [chars]

**Explanation** The 802.1X process could not successfully apply a per-user IP ACL. A possible reason for this condition could be an invalid per-user base (or pub) ACL from the RADIUS server.

**Recommended Action** Examine the per-user base configuration for the RADIUS server and configure a correct one.

**Error Message** %DOT1X-5-ERR\_PER\_USR\_MAC\_ACL: Applied per-user MAC ACL was unsuccessful on interface [chars]

**Explanation** The 802.1X process could not successfully apply a per-user MAC ACL. A possible reason for this condition could be an invalid per-user base (or pub) ACL from the RADIUS server.

**Recommended Action** Examine the per-user base configuration for the RADIUS server and configure a correct one.

**Error Message** %DOT1X-5-ERR\_PVLAN: Dot1x cannot be enabled on private vlan port [chars]

**Explanation** 802.1X could not be enabled on the specified private VLAN port. This condition was caused by trying to set 802.1X port control to automatic mode on a PVLAN port.

**Recommended Action** Change the port to access or routed mode, and retry enabling 802.1X on the port.

**Error Message** %DOT1X-5-ERR\_PVLAN\_EQ\_VVLAN: Dot1x can not be enabled on a port with Access VLAN equal to Voice VLAN.

**Explanation** A port could not enable 802.1X because the access VLAN is equal to a voice VLAN. This condition was caused by trying to set 802.1X port control to automatic or force-unauthorized mode on a voice VLAN that is equal to an access VLAN port.

**Recommended Action** Change the voice VLAN or the access VLAN on the interface, and retry the 802.1X operation.

**Error Message** %DOT1X-5-ERR\_PVLAN\_TRUNK: Dot1x can not be enabled on private VLAN trunk ports.

**Explanation** 802.1X cannot coexist with private VLAN trunking on the same port.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %DOT1X-5-ERR\_RADIUSVLAN\_EQ\_VVLAN: RADIUS attempted to assign a VLAN to Dot1x port [chars] whose Voice VLAN is same as AccessVlan

**Explanation** The RADIUS server attempted to assign a VLAN to a supplicant on a port with a voice VLAN that is equal to an access VLAN.

**Recommended Action** Either update the RADIUS configuration so that an access VLAN is not equal to voice VLAN or change the voice VLAN on the specified port.

**Error Message** %DOT1X-5-ERR\_STATIC\_MAC: Dot1x can not be enabled on a port configured with Static MAC addresses.

**Explanation** A port could not enable 802.1X because the port is configured with static MAC addresses. This condition was caused by trying to set 802.1X port control to auto or force-unauthorized mode on a port that is configured with static MAC addresses.

**Recommended Action** Remove the static MAC addresses on the port, and retry the 802.1X operation.

**Error Message** %DOT1X-5-ERR\_VLAN\_INTERNAL: The VLAN [dec] is being used internally and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN is used internally and cannot be assigned for use again on this port

**Recommended Action** Update the configuration to not use this VLAN.

**Error Message** %DOT1X-5-ERR\_VLAN\_INVALID: The VLAN [dec] is invalid and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN specified is out of range and cannot be assigned for use on this port.

**Recommended Action** Update the configuration to use a valid VLAN.

**Error Message** %DOT1X-5-ERR\_VLAN\_RESERVED: The VLAN [dec] is a reserved vlan and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN specified is a reserved VLAN and cannot be assigned for use on this port.

**Recommended Action** Update the configuration to not use this VLAN.

**Error Message** %DOT1X-5-ERR\_VVID\_NOT\_SUPPORTED: Dot1x can not be enabled on this port with Voice VLAN configured.

**Explanation** 802.1X cannot coexist on the same port with Voice VLANs.

**Recommended Action** Remove voice VLANs configuration on this port and retry the 802.1X operation.

**Error Message** %DOT1X-5-FAIL: Authentication failed for client (%s) on Interface %s

**Explanation** Authentication was unsuccessful for the specified client.

**Recommended Action** No action is required.

**Error Message** %DOT1X-5-SUCCESS: Authentication successful for client (%s) on Interface %s

**Explanation** Authentication was successful for the specified client.

**Recommended Action** No action is required.

## DOT1X\_SWITCH Messages

This section contains 802.1X switch messages.

### DOT1X\_SWITCH-4

**Error Message** %DOT1X\_SWITCH-4-PROC\_START\_ERR: Unable to start dot1x switch process.

**Explanation** The system failed to create the 802.1X switch process.

**Recommended Action** Reload the device.

### DOT1X\_SWITCH-5

**Error Message** %DOT1X\_SWITCH-5-ERR\_ADDING\_ADDRESS: Unable to add address %e on %s

**Explanation** The authenticated host's address could not be added. This is probably because either the TCAM is full or the address exists as a secure address on another port.

**Recommended Action** If the TCAM is full, clear some dynamic addresses to make room for the host's address. If the host's address is secured on another port, manually remove it from that port.

**Error Message** %DOT1X\_SWITCH-5-ERR\_INVALID\_PRIMARY\_VLAN: Attempt to assign primary VLAN %d to 802.1x port %s

**Explanation** An attempt was made to assign a primary VLAN to an 802.1x port, which is not allowed.

**Recommended Action** Update the configuration to use a different VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_INVALID\_SEC\_VLAN: Attempt to assign invalid secondary VLAN %d to PVLAN host 802.1x port %s

**Explanation** An attempt was made to assign a non-secondary VLAN to a PVLAN host 802.1x port.

**Recommended Action** Change the mode of the port so that it is no longer a PVLAN host port or use a valid secondary VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_PRIMARY\_VLAN\_NOT\_FOUND: Primary VLAN for VLAN [dec] does not exist or is shutdown for dot1x port [chars]

**Explanation** An attempt was made to use a private VLAN whose primary VLAN does not exist or is shut down.

**Recommended Action** Make sure the primary VLAN exists and is not shut down. Also verify that the private VLAN is associated with a primary VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_RADIUS\_VLAN\_NOT\_FOUND: Attempt to assign non-existent VLAN %s to dot1x port %s

**Explanation** An attempt was made by RADIUS to assign a VLAN with a particular name or ID to a supplicant on a port, but the name or ID could not be found on the switch.

**Recommended Action** Make sure a VLAN with the specified name or ID exists on the switch.

**Error Message** %DOT1X\_SWITCH-5-ERR\_SEC\_VLAN\_INVALID: Attempt to assign secondary VLAN %d to non-PVLAN host 802.1x port %s

**Explanation** An attempt was made to assign a secondary VLAN to a port that is not a PVLAN host port, which is not allowed.

**Recommended Action** Change the mode of the port so that it is configured as a PVLAN host port or use a different VLAN that is not configured as a secondary VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_SPAN\_DST\_PORT: Attempt to assign VLAN %d to 802.1x port %s, which is configured as a SPAN destination

**Explanation** An attempt was made to assign a VLAN to an 802.1x port that is configured as a SPAN destination port.

**Recommended Action** Change the SPAN configuration so that the port is no longer a SPAN destination port or change the configuration so that no VLAN is assigned.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_EQ\_MDA\_INACTIVE: Multi-Domain Authentication cannot activate because Data and Voice VLANs are the same on port %s

**Explanation** Multi-Domain Authentication (MDA) host mode cannot be activated if the configured data VLAN on a port is the same as voice VLAN.

**Recommended Action** Change either the voice VLAN or the access (data) VLAN on the interface so they are not equal.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_EQ\_VVLAN: Data VLAN [dec] on port [chars] cannot equal to Voice VLAN.

**Explanation** The 802.1x assigned VLAN on a port cannot be the same as the voice VLAN.

**Recommended Action** Change either the voice VLAN or the access 802.1X assigned VLAN on the interface so they are not equal anymore. This change will cause the authentication to proceed normally on the next retry.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_INTERNAL: The VLAN [dec] is being used internally and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN is used internally and cannot be assigned for use again on this port.

**Recommended Action** Update the configuration to not use this VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_INVALID: The VLAN [dec] is invalid and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN specified is out of range and cannot be assigned for use on this port.

**Recommended Action** Update the configuration to use a valid VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_NOT\_FOUND: Attempt to assign non-existent or shutdown VLAN [dec] to dot1x port [chars]

**Explanation** An attempt was made to assign a VLAN to a supplicant on a port, but the VLAN was not found in the VTP database.

**Recommended Action** Make sure the VLAN exists and is not shutdown or use another VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_NOT\_VALID: Attempt to assign non-existent group or shutdown VLAN to 802.1x port [chars]

**Explanation** An attempt was made to assign a VLAN to an 802.1x port, but the VLAN was not found in the VTP database. Group not found.

**Error Message** Make sure the VLAN exists and is not shutdown or use another VLAN.%DOT1X\_SWITCH-5-ERR\_VLAN\_ON\_ROUTED\_PORT: Attempt to assign VLAN %d to routed 802.1x port %s

**Explanation** An attempt was made to assign a VLAN to a routed 802.1x port, which is not allowed.

**Recommended Action** Change the mode of the port so that it is no longer a routed port or change the configuration so that no VLAN is assigned.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_PROMISC\_PORT: Attempt to assign VLAN %d to promiscuous 802.1x port %s

**Explanation** An attempt was made to assign a VLAN to a promiscuous 802.1x port, which is not allowed.

**Recommended Action** Change the mode of the port so that it is no longer a promiscuous port or change the configuration so that no VLAN is assigned.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_RESERVED: The VLAN [dec] is a reserved vlan and cannot be assigned for use on the Dot1x port [chars] Vlan

**Explanation** The VLAN specified is a reserved VLAN and cannot be assigned for use on this port.

**Recommended Action** Update the configuration not to use this VLAN.

**Error Message** %DOT1X\_SWITCH-5-ERR\_VLAN\_RSPAN: Attempt by 802.1x to assign RSPAN VLAN [dec]. 802.1x is incompatible with RSPAN

**Explanation** Remote SPAN should not be enabled on a VLAN in which ports are configured with 802.1X enabled.

**Recommended Action** Either disable the remote SPAN configuration on the VLAN OR disable 802.1X on all of the ports in this VLAN.

## DP83815 Messages

This section contains DP83815 10/100 Mbps Integrated PCI Ethernet Media Access Controller messages.

### DP83815-1

**Error Message** %DP83815-1-UNAVAILABLE: %s failed to initialized

**Explanation** The software failed to initialize/restart an Ethernet/Fast Ethernet interface.

**Recommended Action** Show tech-support. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DP83815-1-UNAVAILABLE: %s status = 0x%08x

**Explanation** The interface could not access system resources for a long time. This problem may occur under very heavy loads.

**Recommended Action** Show tech-support. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DP83815-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** The software could not identify the interface card.

**Recommended Action** Show tech-support. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DP83815-3-UNAVAILABLE: %s packet buffer, pak=0x%x

**Explanation** The software detected an error in descriptor ownership.

**Recommended Action** Show tech-support. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DP83815-3-UNAVAILABLE: %s transmit error

**Explanation** While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

**Recommended Action** The system should recover. LOG\_STD\_NO\_ACTION

## DP83815-3

**Error Message** %DP83815-3-OWNERR: [chars] packet buffer, pak=[hex]

**Explanation** The software detected an error in descriptor ownership.

**Recommended Action** Clear the interface. If the problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DP83815-3-UNDERFLO: [chars] transmit error

**Explanation** While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

**Recommended Action** The system should recover. No action is required.

## DP83815-5

**Error Message** %DP83815-5-LATECOLL: [chars] transmit error

**Explanation** Late collisions occurred on the Ethernet or Fast Ethernet interface.

**Recommended Action** If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. For regular Ethernet, the system should recover. No action is required.

**Error Message** %DP83815-5-LOSTCARR: [chars] cable/transceiver problem?

**Explanation** The cable or transceiver is not connected.

**Recommended Action** Connect the cable or transceiver. No action is required.

## DP83815-6

**Error Message** %DP83815-6-EXCESSCOLL: [chars]

**Explanation** Ethernet or Fast Ethernet is seeing multiple collisions. This condition may occur under heavy loads.

**Recommended Action** The system should recover. No action is required.

**Error Message** %DP83815-6-NOTDP83815: Slot [dec] device ID seen as [hex], expected [hex]

**Explanation** The software did not recognize the interface chips.

**Recommended Action** Reseat the interface card. If the message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DRIP-3

**Error Message** %DRIP-3-UNAVAILABLE: DRIP: Assertion failed: %s

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DRIP-6

**Error Message** %DRIP-6-UNAVAILABLE: DRIP conflict with CRF %d.

**Explanation** A DRIP conflict has occurred. The virtual ring or pseudo ring's CRF is being re-used in the network.

**Recommended Action** Make sure that the CRF vlanid of the virtual ring and the pseudo ring is unique in the network.

## DRP-3

**Error Message** %DRP-3-UNAVAILABLE: Unable to open socket

**Explanation** The requested operation could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %DRP-3-UNAVAILABLE: multiple DRP commands encountered

**Explanation** Multiple DRP commands were found in a single DRP packet.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DRP-3-UNAVAILABLE: unable to determine metric for %i, %i subnetted

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DRP-3-UNAVAILABLE: unable to send response to %i:%d

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DRP-7

**Error Message** %DRP-7-UNAVAILABLE: no route for destination %i

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DS3E3SUNI

**Error Message** %DS3E3SUNI-1-UNAVAILABLE: msgtxt\_nomemory

**Explanation** An operation could not be accomplished because of a low-memory condition. The current system configuration, network environment, or possibly a software error might have exhausted or fragmented the system's memory.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a configuration that has more memory.

## DSCC-4

**Error Message** %DSC-4-UNAVAILABLE: Setting config-register to 0x0 will prevent the feature boards from booting when router shelf is rebooted

**Explanation** Dial-shelf Controller cannot be booted manually

**Recommended Action** Set the config-register to 0x2 for auto boot

## DSCC-4-1

**Error Message** %DSCC4-1-UNAVAILABLE: DSCC4(%d/%d), SCC%d init failed

**Explanation** The software failed to initialize/restart an SCC of a serial interface

**Recommended Action** Clear the serial interface. If the message recurs, call your technical support representative for assistance.

## DSCC4

**Error Message** %DSCC4-3-UNAVAILABLE: %s

**Explanation** DSCC4 analyze device failure is detected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCC4-3-UNAVAILABLE: %s

**Explanation** Generic error message

**Error Message** %DSCC4-3-UNAVAILABLE: DSCC4(%d/%d), Buffer ownership error, pak=0x%x

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative to obtain a software upgrade.

**Error Message** %DSCC4-3-UNAVAILABLE: DSCC4(%d/%d), invalid clock rate (index %d) requested

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative to obtain a software upgrade.

**Error Message** %DSCC4-3-UNAVAILABLE: DSCC4(%d/%d), packet (size %d) too big

**Explanation** A packet greater than the assigned MTU of this serial interface was queued up for transmission.

**Recommended Action** The system should recover. No action is required. If the message recurs, it may indicate an error related to data traffic patterns. Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSCC4-3-UNAVAILABLE: DSCC4(%d/%d), packet (size %d) was less than 2 bytes

**Explanation** A small packet (less than 2 bytes) was queued up for transmission. The interface cannot handle such small packets for transmission.

**Recommended Action** The system should recover. No action is required. If the message recurs, it may indicate a hardware error related to data traffic patterns. Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSCC4-3-UNAVAILABLE: DSCC4, Incorrect SCC number

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative to obtain a software upgrade.

**Error Message** %DSCC4-3-UNAVAILABLE: No memory for %s of unit %d

**Explanation** The router does not have enough memory to perform the function

**Recommended Action** Consider adding more shared memory. Copy the error message exactly as it appears, and report it to your technical support representative.

## DSCCLOCK-3

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Clock moving to FREERUN from HOLDOVER

**Explanation** The current primary TDM clock has been deleted and hence the system primary has switched to the DSC local oscillator, which is the current highest priority good clock. Phase continuity is maintained during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Clock moving to NORMAL from HOLDOVER, selected clock is on slot %d port %d line %d

**Explanation** The current primary TDM clock has been deleted and hence the system primary has switched to the clock coming in via the trunk specified by the slot/port, which is the current highest priority good clock. Phase continuity is maintained during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Duplicate priority (%d) clock sources: slot %d port %d, and slot %d port %d.

**Explanation** While using split-dial-shelf separate clocks sources (one on each router shelf) with the same priority have been configured

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Failed to allocate memory for the DSC clocks

**Explanation** The clock switching software has failed to allocate memory while adding a clock.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Failed to select any clock as the system clock. Remaining in HOLDOVER mode

**Explanation** The clock selection algorithm has failed to select any clock as the TDM primary clock.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Moving to NORMAL mode from HOLDOVER mode without phase correction, clock is slot %d port %d line %d

**Explanation** The source trunk port of the TDM primary clock which had gone bad, has turned good again before the holdover timer expiry. Hence the primary has moved from HOLDOVER to NORMAL state without phase correction between input trunk reference and the output TDM clock.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Moving to NORMAL mode from HOLDOVER mode, clock is slot %d port %d line %d

**Explanation** The TDM primary clock which is in HOLDOVER mode and whose source was a trunk port, has switched to the same trunk port and moved to NORMAL mode with a phase alignment between input source clock and output TDM reference clock. Most likely the router-shelf and hence the feature boards have reloaded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Switching to the clock on slot %d port %d line %d

**Explanation** The TDM primary clock is switching to the clock coming in via the trunk specified, most likely after the router-shelf and hence feature boards reload. The phase of the output TDM clock is forced to align with the input reference during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Switching to the clock on slot %d port %d line %d as the current primary has gone bad

**Explanation** The TDM primary clock has switched to a backup clock coming in via the specified trunk as the current primary clock has gone bad.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: Switching to the user configured clock on slot %d port %d line %d

**Explanation** The TDM primary clock is switching from a default clock or a lower priority user configured clock to a (higher priority) user configured clock coming in via a trunk. Phase continuity is maintained during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: The System Primary Clock is down. Moving to HOLDOVER state and waiting to see if it comes up

**Explanation** This message is generated whenever the current primary clock goes bad. The TDM clock circuit goes into HOLDOVER mode and a holdover timer is started to see if the bad clock turns good within the holdover time.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCCLOCK-3-UNAVAILABLE: The System Primary Clock is up. Moving to NORMAL state from HOLDOVER

**Explanation** The TDM primary clock which had gone bad, has turned good within the holdover time. Hence the TDM primary clock switches to the NORMAL mode from the HOLDOVER mode.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DSCCLOCK-5

**Error Message** %DSCCLOCK-5-UNAVAILABLE: Clock moving to NORMAL from FREERUN, selected clock is on slot %d port %d line %d

**Explanation** The primary TDM clock, which has been running off the local oscillator of DSC in FREERUN mode, has switched to the line clock coming in via the specified trunk.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DSCEXTCLK-3

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Clock moving to NORMAL from HOLDOVER, selected clock is external clock on DSC

**Explanation** The current primary TDM clock has been deleted and hence the system primary has switched to the clock coming in via the external network reference clock on the DSC front panel, which is the current highest priority good clock. Phase continuity is maintained during the switchover

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Moving to NORMAL mode from HOLDOVER mode without phase correction, selected external clock on DSC

**Explanation** The DSC front panel clock which is the source of the current TDM primary clock and which had gone bad, has turned good again before the holdover timer expiry. Hence the primary has moved from HOLDOVER to NORMAL state without phase correction between input reference and the output TDM clock.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Moving to NORMAL mode from HOLDOVER mode, selected external clock on DSC

**Explanation** The TDM primary clock which is in HOLDOVER mode and whose source was a the DSC front panel clock, has switched to the same clock and moved to the NORMAL mode.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Switching to the external clock on DSC

**Explanation** The TDM primary clock is switching to the clock coming in via the DSC front panel, most likely after the router-shelf and hence feature boards reload. The phase of the output TDM clock is forced to align with the input reference during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Switching to the external clock on DSC as the current primary has gone bad

**Explanation** The TDM primary clock has switched to a backup clock coming in via the DSC front panel external clock feed as the current primary clock has gone bad.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCEXTCLK-3-UNAVAILABLE: Switching to the user configured external clock on DSC

**Explanation** The TDM primary clock is switching from a default clock or a lower priority user configured clock to the (higher priority) user configured clock coming in via the DSC front panel clock feed. Phase continuity is maintained during the switchover.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DSCEXTCLK-5

**Error Message** %DSCEXTCLK-5-UNAVAILABLE: Clock moving to NORMAL from FREERUN, selected clock is external clock on DSC

**Explanation** The primary TDM clock, which has been running off the local oscillator of DSC in FREERUN mode, has switched to the external network reference clock being fed from the DSC front panel.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DSCREDCLK-2

**Error Message** %DSCREDCLK-2-UNAVAILABLE: Clock command hardware failed

**Explanation** The

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCREDCLK-2-UNAVAILABLE: Clock on other DSC has failed - immediate clock takeover

**Explanation** The backup DSC clock has detected failure on the other DSC clock hardware and is taking over to become the active clock manager.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSCREDCLK-2-UNAVAILABLE: Removal of other DSC detected - immediate clock takeover

**Explanation** The backup DSC clock has detected removal of the other DSC

**Recommended Action** Reinstall a DSC in other DSC slot to provide DSC.

## DSCREDCLK-3

**Error Message** %DSCREDCLK-3-UNAVAILABLE: Active DSC requests backup to takeover clock - delaying for sync

**Explanation** The other DSC has requested the current DSC to take over active clock management, but the current DSC is waiting for clock hardware synchronization before doing so, to avoid call loss.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSCREDCLK-3-UNAVAILABLE: Active DSC requests backup to takeover clock - done

**Explanation** The other DSC has requested the current DSC to take over active clock management, and the current DSC has done so.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSCREDCLK-3-UNAVAILABLE: Other DSC IOS keepalive failure - clock takeover

**Explanation** The other DSC has failed to respond to keepalives to the current DSC and so the current DSC is taking over to become the active clock manager.

**Recommended Action** Recover DSC in other DSC slot to provide backup DSC.

## DSCREDCLK-5

**Error Message** %DSCREDCLK-5-UNAVAILABLE: Backup clock matched to active clock reference, external clock on DSC

**Explanation** The backup DSC has detected a change in the selected clock reference on the active DSC and has changed it's own clock hardware to match the new selection. The selected clock reference is now from the DSC front panel external clock feed.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSCREDCLK-5-UNAVAILABLE: Backup clock matched to active clock reference, slot %d line %d

**Explanation** The backup DSC has detected a change in the selected clock reference on the active DSC and has changed it's own clock hardware to match the new selection. The selected clock reference is now from the specified trunk line.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSCREDCLK-5-UNAVAILABLE: Backup clock moving to NORMAL to phase lock to active clock

**Explanation** The backup DSC has detected a change to the clock

**Recommended Action** LOG\_STD\_NO\_ACTION

## DSC\_ENV-0

**Error Message** %DSC\_ENV-0-UNAVAILABLE: Slot %d, %s %u %s

**Explanation** The card enviromental parameters specified are outside the normalrange of operation.

**Recommended Action** Check blowers and ambient room temperature

**Error Message** %DSC\_ENV-0-UNAVAILABLE: Slot %d, %s

**Explanation** Fans in the blower unit have failed. Operation of unit may lead to cards overheating and being shutdown

**Recommended Action** Power down dial-shelf to avoid overheating. Replace faulty fans

**Error Message** %DSC\_ENV-0-UNAVAILABLE: Temperature/Voltage has reached a critical level for DSC in slot %d. No backup DSC available. Powering down all feature boards in the chassis.

**Explanation** The temperature or voltage sensor has reached a condition outside the acceptable range for the DSC. No backup is available to takeover control/monitoring of the feature boards so all feature boards are being shutdown.

**Recommended Action** Attempt to resolve voltage/temperature problems. If the problem is not resolved, call your technical support representative for assistance.

## DSC\_ENV-1

**Error Message** %DSC\_ENV-1-UNAVAILABLE: Slot %d, %s %u %s

**Explanation** The card environmental parameters specified are outside the normal range of operation.

**Recommended Action** Check blowers and ambient room temperature

## DSC\_ENV-2

**Error Message** %DSC\_ENV-2-UNAVAILABLE: Slot %d, %s %s %u %s

**Explanation** The environmental parameters have returned from a state other than normal to normal

**Recommended Action** Do nothing. Conditions are nominal

**Error Message** %DSC\_ENV-2-UNAVAILABLE: Slot %d, %s %u %s

**Explanation** The card environmental parameters specified are outside the normal range of operation.

**Recommended Action** Check blowers and ambient room temperature

**Error Message** %DSC\_ENV-2-UNAVAILABLE: Slot %d, %s

**Explanation** A fan in the blower unit has failed. Operation of unit can continue but failure should be looked into

**Recommended Action** Replace faulty fan

## DSC\_REDUNDANCY-3

**Error Message** %DSC\_REDUNDANCY-3-UNAVAILABLE: Other DSC/router in split mode

**Explanation** There is another router connected to the dial shelf. In this situation both must be configured in split mode

**Recommended Action** Configure the other router in split mode

**Error Message** %DSC\_REDUNDANCY-3-UNAVAILABLE: Slot ownership conflict detected for slot %d

**Explanation** There is another router connected to the dial shelf, it is claiming ownership of a slot that this router is also claiming

**Recommended Action** Fix the ownership conflict by reconfiguring one of the routers so that it doesn't own the slot

**Error Message** %DSC\_REDUNDANCY-3-UNAVAILABLE: Tdm Split conflict detected,my tdm %d, other rs %d

**Explanation** There is another router connected to the dial shelf, it is claiming ownership of backplane timeslots that this router requires. This is probably due to OIR activity moving trunk cards from one half of the split to the other.

**Recommended Action** Fix the ownership conflict by reloading the router whose tdm number is greater than the trunk capacity for that router. In some cases it may be necessary to reset both routers.

## DSI-2

**Error Message** %DSI-2-UNAVAILABLE: Out of range PCI port %d

**Explanation** The software specified an out-of-range port on the dial shelf interconnect board. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DSI-3

**Error Message** %DSI-3-UNAVAILABLE: From %s (%d) to %s (%d) for slot %d

**Explanation** The software detected a state change for the specified slot.

**Recommended Action** None. Message is informational.

**Error Message** %DSI-3-UNAVAILABLE: From %s (%d) to %s (%d) for slot %d

**Explanation** The software detected an mbus agent state change for the specified slot.

**Recommended Action** None. Message is informational.

**Error Message** %DSI-3-UNAVAILABLE: Invalid change from %s (%d) to %s (%d) for slot %d

**Explanation** The software detected an invalid state change for the specified slot's mbus agent. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSI-3-UNAVAILABLE: Invalid change from %s (%d) to %s (%d) for slot %d

**Explanation** The software detected an invalid state change for the specified slot. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSI-3-UNAVAILABLE: Unknown event %d for slot %d

**Explanation** The software generated an unknown event for the specified slot. This is a software error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DSPDD-1

**Error Message** %DSPDD-1-UNAVAILABLE: DSPDD internal error [%s:%d

**Explanation** The router or access server has detected an internal error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSPDD-1-UNAVAILABLE: DSPDD internal firmware error [%s:%d

**Explanation** The router or access server has detected an internal error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSPDD-1-UNAVAILABLE: DSPRM internal error[%s:%d]

**Explanation** The router or access server has detected an internal error.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSPDD-1-UNAVAILABLE: IOS buffer pool unavailable [%s:%d]

**Explanation** The router or access server could not allocate internal resources.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %DSPDD-1-UNAVAILABLE: IOS memory unavailable [%s:%d]

**Explanation** The router or access server could not allocate memory for internal data structures.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## DSPRM-3

**Error Message** %DSPRM-3-UNAVAILABLE: Insufficient DSP resources for timeslot %d on port %s

**Explanation** The configuration requires more DSP resources than are available.

**Recommended Action** Change the configuration to specify fewer used timeslots. Install additional DSP resources to allow more complex configurations.

**Error Message** %DSPRM-3-UNAVAILABLE: Unable to create internal interface descriptor

**Explanation** There are insufficient resources to create a necessary data structure.

**Recommended Action** Verify that there is sufficient main memory.

## DSPRM-5

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, NOT RESPONDING - auto restart(%d times)

**Explanation** The DSP failed the background keep-alive test.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, changed state to %s

**Explanation** The DSP resource changed state.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, is in the failed state

**Explanation** The DSP entered the FAILED state due to alarm indications.

**Recommended Action** Replace the DSP resource.

**Error Message** %DSPRM-5-UNAVAILABLE: DSP Jukebox(%d) in slot %s, changed state to %s

**Explanation** The DSP JUKEBOX changed state.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: Jukebox transmit overlay resp %d on slot %s, failed

**Explanation** The Jukebox received failed response code.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DSIP-3

**Error Message** %DSIP-3-UNAVAILABLE: IPC subsystem API error(%s), %s, %s

**Explanation** This message indicates that Nitro Interconnect Protocol has encountered a problem while dealing with the port specified in the error message. The exact problem can be further decoded by the IPC error message(first parameter), the action involved (second parameter) and the port name (third parameter)

**Error Message** %DSIP-3-UNAVAILABLE: IPC subsystem API error, can not create seat by the seatid %d for the slot %d

Nitro Interconnect Protocol reliable stack has failed to create seat for the specified slot. DTP Messages  
This section contains Dynamic Trunking Protocol (DTP) filtering messages.

**Error Message** %DTP-5-DOMAINMISMATCH: Unable to perform trunk negotiation on port [chars] because of VTP domain mismatch.

**Explanation** The two ports involved in trunk negotiation belong to different VTP domains. Trunking is possible only when the ports involved belong to the same VTP domain.

**Recommended Action** Ensure that the two ports that are involved in trunk negotiation belong to the same VTP domain.

## DSPRM-5

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, NOT RESPONDING - auto restart(%d times)

**Explanation** The DSP failed the background keep-alive test.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, changed state to %s

**Explanation** The DSP resource changed state.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: DSP %d in slot %s, is in the failed state

**Explanation** The DSP entered the FAILED state due to alarm indications.

**Recommended Action** Replace the DSP resource.

**Error Message** %DSPRM-5-UNAVAILABLE: DSP Jukebox(%d) in slot %s, changed state to %s

**Explanation** The DSP JUKEBOX changed state.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSPRM-5-UNAVAILABLE: Jukebox transmit overlay resp %d on slot %s, failed

**Explanation** The Jukebox received failed response code.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DSPU-3

**Error Message** %DSPU-3-UNAVAILABLE: ACTPU Neg rsp received from PU %s

**Explanation** Remote PU rejected the router's request for an SSCP-PU session.

**Recommended Action** Verify PU configuration parameters at the router and at the remote PU. Determine whether the problem exists at the remote PU, and correct it. If the problem persists, call your Cisco technical support representative for assistance.

**Error Message** %DSPU-3-UNAVAILABLE: Bad SNA data received from PU %s, data= %s

**Explanation** Unrecognized SNA data was received from the remote PU.

**Recommended Action** Correct the problem at the remote PU. If the problem persists, call your Cisco technical support representative for assistance.

**Error Message** %DSPU-3-UNAVAILABLE: CLSI bad Adaptor correlator, header= %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSPU-3-UNAVAILABLE: CLSI bad identifier type, header= %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSPU-3-UNAVAILABLE: CLSI bad identifier, header= %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSPU-3-UNAVAILABLE: Connect in from host %s with remote address %s failed.

**Explanation** Connection with the remote host could not be established.

**Recommended Action** Verify host configuration parameters at the router and at the host. Determine whether the router is configured to accept connection from this host.

**Error Message** %DSPU-3-UNAVAILABLE: Connect in from pu %s with remote address %s failed.

**Explanation** Connection with the remote PU could not be established.

**Recommended Action** Verify PU configuration parameters at the router and at the remote PU. Determine whether the router is configured to accept connectIn from this remote PU.

**Error Message** %DSPU-3-UNAVAILABLE: Connect in from remote address %s failed.

**Explanation** Connection with remote station could not be established.

**Recommended Action** Verify configuration parameters at the router and at the remote station. Determine whether the router is configured to accept connectIn from this remote station.

**Error Message** %DSPU-3-UNAVAILABLE: Connect in from remote address %s failed; insufficient memory.

**Explanation** Connection with the remote station could not be established because of insufficient memory in the router.

**Recommended Action** Correct low memory problem in the router. If the problem persists, call your technical support representative for assistance.

**Error Message** %DSPU-3-UNAVAILABLE: Connect out to host %s failed.

**Explanation** Connection with the remote host could not be established.

**Recommended Action** Verify host configuration parameters at the router and at the host. Determine whether the host is active and responding to connection requests.

**Error Message** %DSPU-3-UNAVAILABLE: Connect out to pu %s failed.

**Explanation** Connection with the remote PU could not be established.

**Recommended Action** Verify PU configuration parameters at the router and at the remote PU. Determine whether the remote PU is active and responding to connection requests.

**Error Message** %DSPU-3-UNAVAILABLE: Connection attempt failed from XID= %s, ACTPU not supported

**Explanation** The remote station did not request PU 2.0 activation; connection with remote station is terminated.

**Recommended Action** Correct link station configuration parameters at the remote station to request a system services control point (SSCP)-PU session with the router.

**Error Message** %DSPU-3-UNAVAILABLE: Connection attempt failed from XID= %s, Invalid MaxIFrame= %d

**Explanation** An invalid MaxIFrame value in an exchange identification (XID) was received from the remote station; connection with remote station could not be established.

**Recommended Action** Correct link station configuration at the remote station.

**Error Message** %DSPU-3-UNAVAILABLE: Connection attempt failed from XID= %s, Invalid WindowSize= %d

**Explanation** An invalid WindowSize value in an exchange identification (XID) was received from the remote station; connection with remote station could not be established.

**Recommended Action** Correct link station configuration at the remote station.

**Error Message** %DSPU-3-UNAVAILABLE: DSPU could not free buffer - buffer corrupted

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSPU-3-UNAVAILABLE: LU %d received a Notify Neg Resp from host %s

**Explanation** Remote host rejected the router's request to activate/deactivate an SSCP-LU session.

**Recommended Action** Verify host configuration parameters at the router and at the remote host. Determine whether the problem exists at the remote host and correct it. If the problem persists, call your technical support representative for assistance.

**Error Message** %DSPU-3-UNAVAILABLE: XID Format not supported, XID= %s

**Explanation** Unsupported XID received from the remote station; connection with remote station could not be established.

**Recommended Action** Configure the remote station to send supported XID (if possible). Supported XID formats are: XID Format 0 XID Format 3

**Error Message** %DSPU-3-UNAVAILABLE: XID Negotiation Error, bad byte= %d, bad bit= %d, sense data= %s

**Explanation** XID3 with an error indication was received from the remote station; connection with the remote station could not be established.

**Recommended Action** Determine, from the CV 22 byte or bit information, which field in the XID3 is rejected by the remote station, and correct the link station configuration parameters at either the router or the remote station.

## DSX0-5

**Error Message** %DSX0-5-UNAVAILABLE: RBS of controller %d timeslot %d is down

**Explanation** This message indicates that Robbed-Bit Signaling (RBS) has been disabled on the specified timeslot and controller.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSX0-5-UNAVAILABLE: RBS of controller %d timeslot %d is up

**Explanation** This message indicates that Robbed-Bit Signaling (RBS) has been enabled on the specified timeslot and controller.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSX0-5-UNAVAILABLE: RBS of slot %d controller %d timeslot %d is dynamic busyout

**Explanation** This message indicates that Robbed-Bit Signaling (RBS) has been dynamically busied-out on the specified timeslot and controller.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSX0-5-UNAVAILABLE: RBS of slot %d controller %d timeslot %d is static busyout

**Explanation** This message indicates that Robbed-Bit Signaling (RBS) has been statically busied-out on the specified timeslot and controller.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %DSX0-5-UNAVAILABLE: RBS of slot %d controller %d timeslot %d is unbusyout

**Explanation** This message indicates that Robbed-Bit Signaling (RBS) has been restored from a busied-out condition on the specified timeslot and controller.

**Recommended Action** LOG\_STD\_NO\_ACTION

## DSX1-1

**Error Message** %DSX1-1-UNAVAILABLE: Munich 32 channel input queue is congested

**Explanation** Can't allocate receive buffers since input queue is at its maximum, this indicates data is coming faster than the receiver can handle.

**Recommended Action** Reduce data goes into this channel and or increase the number of input queue.

**Error Message** %DSX1-1-UNAVAILABLE: T1/E1 Firmware in slot %d is not running

**Explanation** Critical error occurred in the T1/E1 Firmware and it stopped running. Access server needs to be reloaded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSX1-1-UNAVAILABLE: T1/E1 Firmware in slot %d is running

**Explanation** T1/E1 Firmware is now running after recovering from critical error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSX1-1-UNAVAILABLE: Trunk Firmware in slot %d reset failed

**Explanation** Trunk could not be restarted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DSX1-3

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 action request failure: Ctrl = 0x%08x, Channel = %d

**Explanation** Munich 32 does not respond to request

**Recommended Action** If message continue to print out, contact customer support

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 action request timeout: Ctrl = 0x%08x, Channel = %d

**Explanation** Munich 32 is not response to action request

**Recommended Action** If problem persist, contact customer support

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 bad interrupt queue: Ctrl = 0x%08x, Channel = %d

**Explanation** There might be an overflow on interrupt queue

**Recommended Action** Contact tech support

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 bit rate not match: Ctrl = 0x%08x, Channel = %d

**Explanation** Command can not be carried out, there is a mismatch on bit rate

**Recommended Action** Make sure the configured data matched the supported speed

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 channel invalid: Ctrl = 0x%08x, Channel = %d

**Explanation** The channel select is not valid

**Recommended Action** Make sure the channel supports the needed feature

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 channel memory allocation error: Ctrl = 0x%08x, Channel = %d

**Explanation** The requested operation could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 error configuring channelized interface: Ctrl = 0x%08x, Channel = %d

**Explanation** There is unidentify error occurs to Munich 32

**Recommended Action** If message repeat, contact tech support

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 in unknown state: Ctrl = 0x%08x, Channel = %d

**Explanation** Munich 32 goes into unknown state

**Recommended Action** If message persists, contact customer support

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 no timeslot available: Ctrl = 0x%08x, Channel = %d

**Explanation** All timeslot on Munich are assigned.

**Recommended Action** Make sure there are channel available before use

**Error Message** %DSX1-3-UNAVAILABLE: Munich 32 timeslot already configured: Ctrl = 0x%08x, Channel = %d

**Explanation** This timeslot was assigned and can not be used

**Recommended Action** Make sure the timeslot is available before use

**Error Message** %DSX1-3-UNAVAILABLE: T1/E1 Firmware in slot %d restarted

**Explanation** T1/E1 Firmware restarted. All the active calls on the T1/E1 lines will be disconnected and the controllers will come back up within few seconds

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DSX1-3-UNAVAILABLE: msgtxt\_nomemory

**Explanation** The requested operation could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## DSX1-6

**Error Message** %DSX1-6-UNAVAILABLE: %s clock is now selected as clock source

**Explanation** One of the events (LOS or AIS or CLI command ..) has caused a change in clock selected

**Recommended Action** LOG\_STD\_NO\_ACTION

## DS\_MODEM-3

**Error Message** %DS\_MODEM-3-UNAVAILABLE: DS-RS flow control has got out of sync, connection has too many particles free. slot:%d ttynum:%d parts\_avail:%d

**Explanation** Indicates the flow control accounting on the DS has got out of sync.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DS\_MODEM-3-UNAVAILABLE: Not enough particles - modem number:%d particles needed:%d available:%d; CTS %s

**Explanation** Indicates a break down of flow control between RS-DS, RS has sent more particles than are available for this connection.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

#### Recommended Action

**Error Message** %DS\_MODEM-3-UNAVAILABLE: Output drop - modem number:%d refunded %d; particle count %d, pool size %d, queue size %d

**Explanation** Temporarily unable to allocate particle for sending traffic to modem module, indicates a break down of flow control between RS-DS.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

#### Recommended Action

**Error Message** %DS\_MODEM-3-UNAVAILABLE: Static receive paktype unavailable

**Explanation** A software structure was found in an unexpected state during run-time for the indicated modem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

#### Recommended Action

**Error Message** %DS\_MODEM-3-UNAVAILABLE: Unexpected DSIP data callback for modem

**Explanation** An unexpected software event occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## DS\_TDM-3

**Error Message** %DS\_TDM-3-UNAVAILABLE: Slot %d: convention broken for Mezz's Recomb. bus t'slots: %s-st%02u-ts%03u/gts%04u %s (%i:%d) not found.

**Explanation** The CBAC code was searching its database for information for a particular inspection session, but this information was not found.

**Recommended Action** If this message recurs, copy it down exactly as it appears and contact your technical support representative for assistance.

## DUAL Messages

This section contains Distributed Update Algorithm (DUAL) Enhanced Interior Gateway Routing Protocol (EIGRP) messages.

### DUAL-3

**Error Message** %DUAL-3-BADIGRPSAP: Cannot send incremental SAP update to peer on %s. Increasing output-sap-delay may help

**Explanation** An incremental SAP update could not be sent because it might cause a loss of synchronization of the SAP tables between peers.

**Recommended Action** Increase the output SAP delay on the listed interface to reduce buffer usage. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DUAL-3-BADIGRPSATYPE: Unsupported SAP type for EIGRP being %s - type %x

**Explanation** This message appears when you receive or attempt to send a SAP message with a type code that is neither a general query nor a general response, or when you receive a general query that is not addressed to the broadcast address.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. If possible, also provide the output of the **debug ipx sap activity** and **debug ipx sap event** commands for the period during which this message appeared.

**Error Message** %DUAL-3-PFXLIMIT: %s %d: %s prefix limit reached.

**Explanation** The number of prefixes for the Enhanced Interior Gateway Routing Protocol (EIGRP) has reached the configured or default limit.

**Recommended Action** Take preventive action by identifying the source of the prefixes. Enter the **show ip eigrp accounting** command for details.

## DUAL-4

**Error Message** %DUAL-4-PFXLIMITTHR: %s %d: %s threshold prefix level reached.

**Explanation** The number of prefixes in the topology database has reached the configured or default threshold level.

**Recommended Action** Take preventive action by identifying the source of the prefixes. Enter the **show ip eigrp accounting** command for details.

## DUAL-5

**Error Message** %DUAL-5-NBRCHANGE: [chars] [dec]: Neighbor [chars] ([chars]) is [chars]: [chars]

**Explanation** A neighbor has gone up or down. The displayed information is [routing protocol] [Autonomous System number]: Neighbor [IP address] ([interface]) is [up or down]: [reason].

**Recommended Action** No action is required.

# DUAL\_ACTIVE Messages

This section contains dual-active chassis (DUAL\_ACTIVE) messages.

## DUAL\_ACTIVE-1

**Error Message** %DUAL\_ACTIVE-1-DETECTION: Dual-active condition detected: shutting down all non-VSL interfaces

**Explanation** A dual-active situation has occurred because VSL went down. The VSL has become inactive and both virtual switches have taken over the role of the active virtual switch. To fix this condition, the standby virtual switch has become active and taken control of the network. All non-VSL interfaces on the original active virtual switch will be internally shut down in hardware.

**Recommended Action** Attempt to determine the reason why VSL has gone down and correct it. Once VSL has been reestablished, the original active virtual switch will reload. Enter all variations of the commands:

```
show switch virtual troubleshooting last
show vslp lmp status
show switch virtual dual-active summary
show switch virtual dual-active pagp
show switch virtual dual-active bfd
```

If you cannot determine the cause of the problem from the commands you entered, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DUAL\_ACTIVE-1-RECOVERY: BFD running on [chars] triggered dual-active recovery

**Explanation** Bidirectional Forwarding Detection (BFD) detected a dual-active scenario on the specified interface and caused the switch to go into recovery mode.

**Recommended Action** No action is required.

**Error Message** %DUAL\_ACTIVE-1-VSL\_DOWN: VSL is down - switchover, or possible dual-active situation has occurred

**Explanation** The virtual switch link (VSL) between the active and standby switches has gone offline. The following are possible reasons for the switchover condition:

- -A switchover has occurred and the standby virtual switch has become the active virtual switch.

- A dual-active situation has occurred, and the original active virtual switch has gone into recovery mode, which would bring down all non-VSL interfaces on the original active virtual switch.
- A dual-active situation has occurred, but the original active virtual switch did not detect the dual active state and did not go into recovery mode. This condition may be the result of multiple system failures or an incorrect configuration that caused the dual-active situation to not be detected.

**Recommended Action** Attempt to determine the reason why the VSL has gone offline and correct it if it is a dual-active situation. Enter all variations of the commands:

```
show switch virtual troubleshooting last
show vsrp lmp status
show switch virtual dual-active summary
show switch virtual dual-active pagp
show switch virtual dual-active bfd
```

If you cannot determine the cause of the problem from the commands you entered, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %DUAL\_ACTIVE-1-VSL\_RECOVERED: VSL has recovered during dual-active situation: Reloading switch [dec]

**Explanation** The virtual switch link (VSL) between the two active virtual switches in a dual-active situation has gone online. The virtual switch in recovery mode must be reloaded to reenable all non-VSL interfaces that were shut down when the dual-active situation first occurred.

**Recommended Action** No action is required.

## DUAL\_ACTIVE-3

**Error Message** %DUAL\_ACTIVE-3-PORT\_ERR\_IN\_RECOVERY: Port [chars] [chars] error

**Explanation** Port information could not be extracted or a non-VSL port could not be disabled while the active virtual switch was going into recovery mode.

**Recommended Action** Attempt to determine why the port information could not be extracted or why the non-VSL port could not be disabled.

**Error Message** %DUAL\_ACTIVE-3-REGISTRY\_ADD\_ERR: Failure in adding to [chars] registry

**Explanation** Could not add a function to the registry.

**Recommended Action** No action is required.

## DUAL\_ACTIVE-4

**Error Message** %DUAL\_ACTIVE-4-CONFIG: [chars]

**Explanation** If VSL goes down due to any reason, standby switch will take over as active immediately. If the original active chassis is still operational, both chassis are now active. This situation is called a dual-active scenario. A dual-active scenario can have adverse effects on network stability, because both chassis use the same IP addresses, SSH keys, and STP bridge ID. The virtual switching system (VSS) must detect a dual-active scenario and take recovery action for which at least one of the following detection methods should be configured: a/ Enhanced Pagp b/ IP BFD c/ Fast-hello. Please refer to Software configuration guide for more details.

**Recommended Action** Configure one or more dual-active detection methods as per configuration guide.

## DVMRP Messages

This section contains Dense wavelength division multiplexing messages.

## DVMRP-5

**Error Message** %DVMRP-5-NBRUP: Neighbor [IP\_address] is up on [chars]

**Explanation** A DVMRP multicast neighbor is active on the specified interface. This is caused by the arrival and acceptance of DVMRP probes via that interface. This may indicate that a multicast session has been subscribed via a path passing through this router. Note that DVMRP activity is mutually exclusive of tagswitching, so this will cause tagswitching to be disabled on that interface.

**Recommended Action** No action is required.

# DWDM Messages

This section contains EDistance Vector Multicast Routing Protocol (DVMRP) messages.

## DWDM-3

**Error Message** %DWDM-3-CLEAR\_G709\_CTR: 23414.2.c:205:64: backslash and newline separated by spaceUnable to clear g709 counter in slot [dec] rc = [dec]

**Explanation** The SPA driver was unable to clear the G.709 OTN protocol counters for bit errors.

**Recommended Action** Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

**Error Message** %DWDM-3-CONFIG\_ALARM\_REPORT: Failed to config report alarm [chars] slot [dec] rc = [dec]

**Explanation** The SPA driver could not configure one of the reporting status of the alarms.

**Recommended Action** Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

**Error Message** %DWDM-3-CONFIG\_ALARM\_THRESHOLD: Failed to config threshold alarm [chars] slot [dec] rc = [dec]

**Explanation** The SPA driver could not configure one of the threshold alarms for the optical data or transport unit.

**Recommended Action** Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative

**Error Message** %DWDM-3-CONFIG\_TX\_POWER: Failed to config transmit power [dec] on slot [dec] rc = [dec]

**Explanation** The SPA driver detected a error in configuring the Tx power level for the UT2 transponder module

**Recommended Action** Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DWDM-3-DWDM\_CONFIG\_FAIL: Failed to [chars] [chars] in slot [dec] rc = [dec]

**Explanation** The SPA driver detected failure during configuring one of the DWDM parameters

**Recommended Action** Reload the SPA card and if the problem persists, contact the technical support representative.

**Error Message** %DWDM-3-DWDM\_GET\_INFO\_FAIL: Failed receiving [chars] from slot [dec] rc = [dec]

**Explanation** The SPA driver did not receive the necessary optics information from the slot.

**Recommended Action** Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

**Error Message** %DWDM-3-DWDM\_NULL\_INFO: DWDM info is NULL in [dec]

**Explanation** The SPA driver detected NULL information for DWDM.

**Recommended Action** Reload the SPA and if the problem persists contact the technical support representative.

**Error Message** %DWDM-3-IPC\_SHIM\_INIT: DWDM IPC SHIM init failed

**Explanation** The SPA driver detected failure during DWDM IPC SHIM initialization

**Recommended Action** Please power down and reseal the indicated SPA card. If the problem persists please contact your technical support representative.

**Error Message** %DWDM-3-LC\_ERR\_STATS: error sending LC stats to RP

**Explanation** The SPA driver encountered an error while sending the LC stats to the RP.

**Recommended Action** Reload the SPA card and if the problem persists call the technical support representative.

**Error Message** %DWDM-3-MALLOC\_FAIL: malloc failure creating G.709 port on slot [dec]

**Explanation** The SPA driver detected a memory error on the SPA card.

**Recommended Action** Reload the card and if the problem persists call TAC.

**Error Message** %DWDM-3-RPC\_FAILED: Application error rc = [dec]:

**Explanation** The system failed to retrieve the information required to execute the command.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DWDM-3-RPC\_INIT\_FAIL: DWDM RPC init failure

**Explanation** The system failed to create the resources required to process user interface commands for transceivers. The error is not fatal but some **show** commands could fail.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DWDM-3-RPC\_PROCESSING\_ERROR: DWDM RPC error: [chars]

**Explanation** Non Fatal error occurred in processing an RPC message.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %DWDM-3-RX\_G709\_INFO: Failed receiving G709 info from slot [dec] rc = [dec]

**Explanation** The SPA driver did not receive the necessary G.709 OTN protocol information from the slot.

**Recommended Action** Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

**Error Message** %DWDM-3-RX\_LOS\_THRESHOLD: Failed to config rx los threshold = [dec] on slot [dec] rc = [dec]

**Explanation** The SPA driver detected an error in configuring the transponder receive power threshold.

**Recommended Action** Reload the SPA card and if the problem persists call TAC.

**Error Message** %DWDM-3-TIMER\_ERR: Timer error

**Explanation** The Driver did not obtain an expired timer from the timer tree for the DWDM process.

**Recommended Action** The SPA driver has encountered an error event on the SPA card. If the condition persists, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

## DWDM-4

**Error Message** %DWDM-4-G709ALARM: [chars]: [chars] [chars]

**Explanation** The specified G709 Alarm has been declared or released.

**Recommended Action** Repair the source of the alarm.

## EAP Messages

This section contains Extensible Authentication Protocol (EAP) messages.

### EAP-2

**Error Message** %EAP-2-PROCESS\_ERR: [chars]

**Explanation** A critical condition exists that prevents the system from performing an operation related to an EAP process.

**Recommended Action** Reload the system.

## EAP-4

**Error Message** %EAP-4-BADPKT: IP=[IP\_address] | HOST=[chars]

**Explanation** The system received an invalid or malformed EAP packet from the specified host.

**Recommended Action** Check the specified host for the EAP operation.

## EAP-6

**Error Message** %EAP-6-MPPE\_KEY: IP=[chars] | MPPE\_RECV\_KEY\_LENGTH=[dec]

**Explanation** The system received an MPPE key for the specified host.

**Recommended Action** No action is required.

# EARL Messages

This sections contains Enhanced Address Recognition Logic (EARL) messages.

## EARL-0

**Error Message** %EARL-0-TASK\_SPAWN\_FAIL: Failed to initialize task "[chars]"

**Explanation** The EARL component failed to start a task required by the system to work properly. The task name is specified in the error message. Most errors will cause a system reload. However, in some cases, only the feature that failed to start will be affected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL-2

**Error Message** %EARL-2-PATCH\_INVOCATION\_LIMIT: [dec] Recovery patch invocations in the last 30 secs have been attempted. Max limit reached

**Explanation** The system attempted the EARL recovery for the maximum number of times that are permitted in the last 30 seconds. The module has been automatically reset instead of attempting recovery.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL-2-SWITCH\_BUS\_IDLE: Switching bus is idle for [dec] seconds

**Explanation** The EARL did not switch any packets on the EARL bus. A module or line card attempted to access the bus and could not. In most cases, this error appears when a card is not properly seated. A recovery mechanism will attempt to fix the problem. The system reloads if the problem cannot be corrected.

**Recommended Action** Reseat all modules and line cards on the switch. If the error message recurs after reseating the cards, a hardware problem may exist.

**Error Message** %EARL-2-SWITCH\_BUS\_STALL: Switching bus stall detected. Backplane bus stall status: [dec]

**Explanation** The EARL did not switch any packets on the EARL bus. A recovery mechanism will attempt to fix the problem. The system reloads if the problem cannot be corrected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL-3

**Error Message** %EARL-3-FABRIC\_CONNECTION : Recovering from sequence error detected on fabric connection.

**Explanation** A sequence error was detected by the crossbar and bus fabric interface. This error can be fatal. Recovery is being attempted.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL-3-RESET\_LC: Resetting module in slot [dec]. (Errorcode [dec])

**Explanation** The specified module did not respond to a critical message. This condition indicates a hardware error and might be a transient error only. The system has reset the module to fix the error.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL-4

**Error Message** %EARL-4-BUS\_CONNECTION : Interrupt [chars] occurring in EARL bus connection.

**Explanation** An error interrupt is occurring for the switching bus interface.

**Recommended Action** Enter the **show earl status** command on the consoles of the switch supervisor engine and any DFC-enabled modules. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL-4-EBUS\_SEQ\_ERROR: Out of Sync error.

**Explanation** The EARL has detected an out-of-synchronization condition on the bus. A recovery mechanism will attempt to fix the problem.

**Recommended Action** Reseat and then reset the module. If the error remains, upgrade the software to Cisco IOS Release 12.2(18)SXF or later.

**Error Message** %EARL-4-NF\_USAGE: Current Netflow Table Utilization is [dec]%

**Explanation** The NetFlow table utilization exceeds a preset threshold percentage.

**Recommended Action** No action is required.

## EARL\_ACL\_FPGA Messages

This section contains Enhanced Address Recognition Logic ACL field-programmable gate array (EARL\_ACL\_FPGA) messages.

### EARL\_ACL\_FPGA-2

**Error Message** %EARL\_ACL\_FPGA-2-INTR\_FATAL: EARL ACL FPGA : Non-fatal interrupt [chars]

**Explanation** The EARL ACL FPGA detected the specified unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_ACL\_FPGA-3

**Error Message** %EARL\_ACL\_FPGA-3-INTR\_WARN: EARL ACL FPGA : Non-fatal interrupt [chars]

**Explanation** The EARL ACL FPGA detected the specified unexpected nonfatal condition.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_ACL\_FPGA-4

**Error Message** %EARL\_ACL\_FPGA-4-CPU\_PAR\_ERR: EARL ACL FPGA : CPU Parity error [chars]

**Explanation** The EARL ACL FPGA detected a CPU parity error.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_ACL\_FPGA-4-MEM\_PAR\_ERR: EARL ACL FPGA: Counter Memory Parity error. Error address [hex]

**Explanation** The EARL ACL FPGA detected a memory parity error.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_DRV\_API Messages

This section contains Enhanced Address Recognition Logic Driver API (EARL\_DRV\_API) messages.

### EARL\_DRV\_API-0

**Error Message** %EARL\_DRV\_API-0-TASK\_SPAWN\_FAIL: Failed to spawn task "[chars]"

**Explanation** The system failed to perform the specified task.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### EARL\_DRV\_API-2

**Error Message** %EARL\_DRV\_API-2-SIG\_INST\_FAIL: [chars]: Failed to install signal handler

**Explanation** The system failed to install the process signal handler.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_DRV\_API-4

**Error Message** %EARL\_DRV\_API-4-NOMEM: Malloc failed: [chars] [dec]

**Explanation** The system is running out of memory.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_L2\_ASIC Messages

This section contains Enhanced Address Recognition Logic Layer 2 ASIC (EARL\_L2\_ASIC) messages.

### EARL\_L2\_ASIC-0

**Error Message** %EARL\_L2\_ASIC-0-EXCESSIVE\_FT\_TBL\_ECC\_ERR: EARL L2 ASIC [dec]: Too many bad entries in L2 Forwarding Table

**Explanation** The EARL Layer 2 ASIC detected too many errors in the forwarding table. This condition indicates hardware malfunction and causes the system to reload.

**Recommended Action** If this problem is seen more than once, it could be a case of faulty hardware. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-0-FATAL\_INTR: L2 Forwarding Engine: fatal interrupt: interrupt status [hex], interrupt mask [hex]

**Explanation** Critical interrupts might have caused system forwarding to cease.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_L2\_ASIC-2

**Error Message** %EARL\_L2\_ASIC-2-PARITY\_ERR: L2 Forwarding Engine: parity interrupt #[dec]: address [hex], Data: [hex], [hex], [hex], [hex]

**Explanation** A parity error was detected while accessing the Layer 2 forwarding table.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_L2\_ASIC-3

**Error Message** %EARL\_L2\_ASIC-3-INTR\_FATAL: EARL L2 ASIC [dec]: fatal interrupt [chars]

**Explanation** The EARL Layer 2 ASIC detected an unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to fix the problem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-3-INTR\_WARN: EARL L2 ASIC [dec]: Non-fatal interrupt [chars]

**Explanation** The EARL Layer 2 ASIC detected an unexpected nonfatal condition.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_L2\_ASIC-4

**Error Message** %EARL\_L2\_ASIC-4-DBUS\_HDR\_ERR: EARL L2 ASIC #[dec]: Dbus Hdr. Error occurred. Ctrl1 [hex]

**Explanation** The EARL Layer 2 ASIC detected an invalid header in the DBUS. This error is due to hardware that has failed, an incorrect configuration of the module software, or invalid packets that were dropped because of an OIR operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-DBUS\_SEQ\_ERR: EARL L2 ASIC #[dec]: Dbus Seq. Error occurred (Ctrl1 [hex])

**Explanation** The EARL Layer 2 ASIC detected a DBUS sequence mismatch error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-FT\_ERR: EARL L2 ASIC [dec]: Forwarding table bank [dec] encountered [chars] ecc error at address [hex]

**Explanation** The EARL Layer 2 ASIC detected a nonfatal condition in one of the banks of the forwarding table. The bank and address of the forwarding table are specified in the error message.

**Recommended Action** This message is informational. The device has detected and corrected the error.

**Error Message** %EARL\_L2\_ASIC-4-FT\_INVLD\_ADDR: Forwarding table bank [dec] encountered invalid address [hex]

**Explanation** The EARL Layer 2 ASIC attempted to access an invalid address in the forwarding table. Because there are only 12 pages (0–11) per line, access to page 12–15 will be invalid.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-INTR\_THROTTLE: Throttling "[chars]" interrupt exceeded permitted [int]/[dec] interrupts/msec

**Explanation** Excessive interrupts were generated by the EARL ASIC. Interrupt throttling has been performed to protect the supervisor engine.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-INV\_REG: EARL L2 ASIC: Attempt to [chars] invalid register

**Explanation** An attempt was made to read or write to an invalid register of the EARL Layer 2 ASIC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-L2L3\_SEQ\_ERR: EARL L2 ASIC #[dec]: L2L3 Mismatch seq #[hex]

**Explanation** The EARL Layer 2 ASIC detected a Layer 2-Layer 3 sequence mismatch error. A recovery mechanism will attempt to fix the problem.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L2\_ASIC-4-SRCH\_ENG\_FAIL: EARL L2 ASIC Search Engine has failed

**Explanation** The EARL Layer 2 ASIC search engine failed to terminate a search. A recovery mechanism fixes the unexpected condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_L3\_ASIC Messages

This section contains Enhanced Address Recognition Logic (EARL) Layer 3 ASIC messages.

### EARL\_L3\_ASIC-3

**Error Message** %EARL\_L3\_ASIC-3-INTR\_FATAL: EARL L3 ASIC: fatal interrupt [chars]

**Explanation** The EARL Layer 3 ASIC detected an unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L3\_ASIC-3-INTR\_WARN: EARL L3 ASIC: Non-fatal interrupt [chars]

**Explanation** The EARL Layer 3 ASIC detected an unexpected non-fatal condition. This indicates that a bad packet was received and dropped. Several conditions can cause a packet to be considered bad; for example, the size of an Ethernet frame was reported to be different than the expected IP packet size. In older Cisco IOS releases, these packets are normally dropped without being logged.

**Recommended Action** This message is informational only, and can occur due to conditions such as bad NIC cards, bad NIC drivers, or a bad application. Use a network sniffer or configure a SPAN session to identify the source device that is sending the erroneous packets. Also, examine the adjacent Cisco device for errors. The following commands can be configured to stop verifying checksum or length errors:

**no mls verify ip checksum** — Disables checking of packets for checksum errors

**no mls verify ip length** — Disables checking of packets for length errors

**no mls verify ip same-address** — Disables checking of packets for having the same source and destination IP address

## EARL\_L3\_ASIC-4

**Error Message** %EARL\_L3\_ASIC-4-CPU\_PAR\_ERR: EARL L3 ASIC: CPU Parity error. Error data [hex]. Error address [hex]

**Explanation** The EARL Layer 3 ASIC detected a CPU parity error. This condition is caused by an interprocess communication error between the CPU and Layer 3 ASIC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_L3\_ASIC-4-INTR\_THROTTLE: Throttling "[chars]" interrupt exceeded permitted [int]/[dec] interrupts/msec

**Explanation** Excessive interrupts were generated by the EARL ASIC. Interrupt throttling has been performed to protect the supervisor engine.

## EARL\_NETFLOW Messages

This section contains Enhanced Address Recognition Logic NetFlow (EARL\_NETFLOW) messages.

### EARL\_NETFLOW-0

**Error Message** %EARL\_NETFLOW-0-NF\_ECC\_MAX: Netflow ECC Error Threshold Reached, Total Ecc Errors [[dec]]

**Explanation** The total number of NetFlow ECC errors has crossed the maximum threshold. The maximum allowable of NetFlow ECC errors is 2000. The system will perform a crash dump and will be inoperable. The output of the **show tech-support** command will also be displayed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_NETFLOW-3

**Error Message** %EARL\_NETFLOW-3-NF\_ECC\_RSRV: Netflow ECC Error Occured, Reserved NF location [[hex]]

**Explanation** The number of ECC errors per NetFlow TCAM entry has reached the maximum threshold (three or more ECC errors). The NetFlow TCAM location will now be marked as reserved and can no longer be used.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_NETFLOW-3-NF\_ECC\_SOFT\_MAX: Too many Netflow ECC errors have occurred, Total Ecc Errors [[dec]]

**Explanation** The total number of NetFlow ECC errors has exceeded the soft limit number. The soft limit of NetFlow ECC errors is 2500. The hard limit is 5000. When the hard limit is reached, the line card will reboot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_NETFLOW-4

**Error Message** %EARL\_NETFLOW-4-ICAM\_THRLD: Netflow ICAM threshold exceeded, ICAM Utilization [[dec]%

**Explanation** The NetFlow ICAM is almost full. Aggressive aging is temporarily enabled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_NETFLOW-4-NF\_AGG\_CACHE\_THR: Netflow [chars] aggregation cache is almost full.

**Explanation** The aggregation cache for NetFlow is almost full. This condition might cause a high CPU load.

**Recommended Action** Consider increasing the size of the aggregation cache, or remove the aggregation cache configuration specified in the error message.

**Error Message** %EARL\_NETFLOW-4-NF\_FULL: Netflow Table Full, ICAM occupancy [[dec]%, TCAM occupancy [[dec]%, Entry creation failures [[dec]]

**Explanation** The NetFlow table is full, possibly because of faulty hashing behavior.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EARL\_NETFLOW-4-NF\_TIME\_SAMPLING: Time-based sampling requests could not be processed in time.

**Explanation** Time-based sampling requests could not be processed in a timely fashion. This condition means that the sampling result might not be accurate.

**Recommended Action** Consider using packet-based sampling. Packet-based sampling uses an algorithm that ensures the sampling results will be accurate, even if they are not processed in the allotted time.

**Error Message** %EARL\_NETFLOW-4-TCAM\_THRLD: Netflow TCAM threshold exceeded, TCAM Utilization [[dec]%

**Explanation** The NetFlow TCAM is almost full. Aggressive aging is temporarily enabled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EARL\_NETFLOW-5

**Error Message** %EARL\_NETFLOW-5-NF\_ECC\_REMOVE: Netflow ECC Error Occured, Deleted NF entry [[hex]]

**Explanation** A NetFlow ECC error occurred. The affected NetFlow entry has been deleted at the address specified so that a new entry will be created.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# EC Messages

This section contains EtherChannel, Link Aggregation Control Protocol (LACP), and Port Aggregation Protocol (PAgP) messages.

## EC-5

**Error Message** %EC-5-CANNOT\_BUNDLE\_QOS1: Removed [chars] from port channel as QoS attributes of port and port-channel are different.

**Explanation** The port specified in the error message cannot join the port channel, because the QoS attributes of this port are not consistent with the QoS attributes of the port channel.

**Recommended Action** Match the QoS attributes of the specified port to the QoS attributes of other member ports in the port channel. Use the **show queuing interface** command to display the QoS attributes of a port.

**Error Message** %EC-5-COMPATIBLE: [chars] is compatible with port-channel members

**Explanation** The specified port was not operational earlier because its attributes were different from the attributes of the port channel or the attributes of the ports within the port channel. The system detects that the attributes of the specified port now match the port channel attributes.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %EC-5-DONTBNL2: [chars] suspended: port in half-duplex for LACP

**Explanation** For LACP EtherChannel, if the member port is in half-duplex mode, the port will be in a suspended state.

**Recommended Action** Configure port duplex to full duplex.

**Error Message** %EC-5-MINLINKS\_MET: Port-channel [chars] is up as its bundled ports ([dec]) meets min-links

**Explanation** The administrative configuration of minimum links is equal to or less than the number of bundled ports. As a result, this port channel is operational.

**Recommended Action** No action is required.

**Error Message** %EC-5-MINLINKS\_NOTMET: Port-channel [chars] is down bundled ports ([dec]) doesn't meet min-links

**Explanation** The administrative configuration of minimum links is greater than the number of bundled ports. As a result, this port channel is no longer operational.

**Recommended Action** Reduce the number of minimum links for the specified group, or add more ports to this port channel so that they bundle.

**Error Message** %EC-5-PROTO\_MISMATCH: Port-Channel [dec] has one aggregator with protocol mismatch

**Explanation** EtherChannel software disabled an aggregator under this port-channel and encountered a protocol mismatch on the aggregator. This means that the ports in the port-channel have not been all configured with the same protocol and this needs to be fixed.

**Recommended Action** Please verify the port-channel members configuration and fix it so that all the ports use the same protocol.

**Error Message** %EC-5-SUSPENDED: Port [chars] in port-channel [chars] is being suspended

**Explanation** EtherChannel software is unable to bundle the physical port in the port-channel. As the standalone disable feature is enabled, the port is going in the suspended state. Please check the configuration on the peer side of this port-channel.

**Recommended Action** Please verify the port-channel configuration of the port connected to the port for which this error message appeared.

**Error Message** %EC-5-VSS\_MINLINKS\_MET: Members of the Port-channel [chars] on switch [dec] is up as its bundled ports ([dec]) meets min-links

**Explanation** The administrative configuration of minimum links is equal or less than the number of bundled ports from the switch. Therefore all the ports in the port channel from that switch has been brought up.

**Recommended Action** None.

**Error Message** %EC-5-VSS\_MINLINKS\_NOTMET: All the members of the Port-channel [chars] is down on switch [dec] as the number of bundled ports ([dec]) doesn't meet min-links

**Explanation** The administrative configuration of minimum links is greater than the number of bundled ports from the switch. Therefore all the ports in port-channel from that switch has been brought down.

**Recommended Action** Reduce the min-links configuration for this group or add more ports to this port-channel from the switch to have them bundle.

# EM Messages

This section contains Event Manager (EM) messages.

## EM-3

**Error Message** %EM-3-EXCEED: EM exceed maximum open events ([dec]).

**Explanation** The total number of open events exceeded the maximum number of possible open events. The maximum number that the EM server permits is specified in the error message. EM clients are either opening too many events or not closing events within the permitted time period.

**Recommended Action** Enter the **show em state | inc *em\_type*** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-3-FAIL: The specified EM Function failed ([chars]).

**Explanation** The specified EM function failed. This condition might be caused by incorrect logic or a memory corruption.

**Recommended Action** Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-3-NOMEM: The EM failed to allocate memory resources for the specified EM function ([chars]).

**Explanation** The EM failed to allocate memory resources for the specified function because memory is running low.

**Recommended Action** Enter the **show memory summary** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-3-NULLPTR: The pointer in a specified EM function ([chars]) is incorrectly NULL.

**Explanation** The pointer in the specified EM function is incorrectly NULL. This condition might be caused by incorrect logic or a memory corruption.

**Recommended Action** Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EM-4

**Error Message** %EM-4-AGED: The specified EM client (type=[dec], id=[dec]) did not close the EM event within the permitted amount of time ([dec] msec).

**Explanation** A timeout occurred. This condition is minor and should not affect the functionality of the switch.

**Recommended Action** Enter the **show em state** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-4-INVALID: The specified EM function ([chars]) received Invalid operands <[dec]>.

**Explanation** The EM client used invalid API parameters.

**Recommended Action** Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-4-LIMIT: EM exceed open events limit ([dec]).

**Explanation** The EM has exceeded the permitted number of open events. The open event limit is 5000.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-4-NOTUP: The EM is not available ([chars]).

**Explanation** The EM is not available because some basic initialization failed. This condition might be caused by failure of a basic infrastructure functionality or a memory corruption.

**Recommended Action** Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-4-SEARCH: The EM function ([chars]) searched for the specified open event ([dec]), but the search failed.

**Explanation** The specified EM function could not find the specified open event. This condition might be caused by a memory corruption.

**Recommended Action** Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM-4-SENDFAILED: The specified EM client (type=[dec]) failed to send messages to standby.

**Explanation** The redundant supervisor engine is not updated because the specified EM client failed to send messages to the redundant supervisor engine. Do not attempt to failover to redundant supervisor engine.

**Recommended Action** Enter the **show checkpoint clients** command. If you cannot determine the cause of the error from the error message text or from the **show checkpoint clients** output, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# EM\_ISSU Messages

This section contains Event Manager (EM) in-service software upgrade messages.

## EM\_ISSU-2

**Error Message** %EM\_ISSU-2-GET\_BUFFER: Event Manager ISSU client failed to get buffer for message. Error: %d (%s)

**Explanation** The Event Manager ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-2-INIT: Event Manager ISSU client initialization failed to %s. Error: %d (%s)

**Explanation** The Event Manager ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-2-SEND\_NEGO\_FAILED: Event Manager ISSU client failed to send negotiation message. Error: %d (%s)

**Explanation** The Event Manager ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-2-SESSION\_NEGO: Event Manager ISSU client encountered unexpected client nego\_done. Error: %d (%s)

**Explanation** The Event Manager ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-2-SESSION\_REGISTRY: Event Manager ISSU client failed to register session information. Error: %d (%s)

**Explanation** The Event Manager ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

## EM\_ISSU-3

**Error Message** %EM\_ISSU-3-INVALID\_SESSION: Event Manager ISSU client does not have a valid registered session.

**Explanation** The Event Manager ISSU client does not have a valid registered session.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-3-MSG\_NOT\_OK: Event Manager ISSU client 'Message Type %d' is not compatible

**Explanation** The Event Manager ISSU client received an incompatible message from the peer device. The message cannot be processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-3-MSG\_SIZE: Event Manager ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

**Explanation** The Event Manager ISSU client was unable to calculate the MTU for the specified message. The Event Manager ISSU client is unable to send the message to the standby device.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-3-OPAQUE\_MSG\_NOT\_OK: Event Manager ISSU client 'Opaque Message Type %d' is not compatible

**Explanation** The Event Manager ISSU client received an incompatible (opaque) message from the peer device. The message cannot be processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-3-SESSION\_UNREGISTRY: Event Manager ISSU client failed to unregister session information. Error: %d (%s)

**Explanation** The Event Manager ISSU client failed to unregister session information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %EM\_ISSU-3-TRANSFORM\_FAIL: Event Manager ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

**Explanation** The Event Manager ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the Event Manager state between the active device and the standby device is not identical.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

## ENT\_ALARM Messages

This section contains entity alarm messages.

### ENT\_ALARM-3

**Error Message** %ENT\_ALARM-3-NOALARMENT: [chars]

**Explanation** All entities that could have alarm conditions set for them should be registered with the alarm subsystem for the Cisco IOS software. This message indicates that the normal registration of entities in the Cisco IOS software alarm subsystem has failed, and that one or more entities could not be registered. The message text indicates the alarm entity that could not be registered. Any alarm conditions against the entity specified in the message text cannot be reported. This message does not indicate that the entity specified in the message has undergone an error condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENT\_ALARM-6

**Error Message** %ENT\_ALARM-6-INFO: [chars] [chars] [chars] [chars] [chars]

**Explanation** This message provides alarm assertion or deassertion information.

**Recommended Action** This is an informational message only. No action is required.

## ENT\_API Messages

This section contains Entity MIB API (ENT\_MIB) messages.

### ENT\_API-4

**Error Message** %ENT\_API-4-NOALIAS: Physical entity not found when adding an alias with physical index = [dec] and logical index = [dec] to the Entity MIB

**Explanation** A timing issue was detected when the system or the module is brought up. This issue has no impact on system performance or management functionality.

**Recommended Action** No action is required.

**Error Message** %ENT\_API-4-NOPORT: Physical entity does not have a Port PhysicalClass when adding an alias with physical index = [int], logical index = [int], phyDescr = [chars], phyName = [chars], phyClass = [int], phyContainedIn = [int], to the Entity MIB

**Explanation** An attempt to add an alias entry to the Entity MIB was made. The physical entity with the specified index does not have an entPhysicalClass of 10 (Port class) and so the alias entry creation failed. See RFC2737 for the definition of the PhysicalClass textual convention and the aliasMappingEntry object.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# ENVIRONMENT Messages

This section contains environment messages.

## ENVIRONMENT-3

**Error Message** %ENVIRONMENT-3-OVERTEMP: [chars] [chars] [chars] [chars]

**Explanation** The internal chassis temperature has exceeded the maximum temperature threshold.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVIRONMENT-3-RPS\_FAILED: [chars] [chars] [chars] [chars]

**Explanation** Only one power supply was detected for the system in dual-power mode, or the power supply is failing.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVIRONMENT-3-UNDERTEMP: [chars] [chars] [chars] [chars]

**Explanation** The internal chassis temperature is below the minimum temperature threshold.

**Recommended Action** No action is required.

## ENVIRONMENT-4

**Error Message** %ENVIRONMENT-4-CONFIG\_OVERTEMP: [chars] [chars] [chars] [chars]

**Explanation** The chassis inside temperature has exceeded the configured threshold, but is less than or equal to the maximum allowable internal chassis temperature.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENVM Messages

This section contains environmental monitoring (ENVM) messages.

### ENVM-2

**Error Message** %ENVM-2-TEMP\_SENSOR\_READFAIL: Failed to access the Temperature sensor on the linecard. Resetting the linecard.

**Explanation** The local CPU on the Enhanced FlexWAN module was unable to access the temperature sensor on the module. The module will attempt to recover by resetting itself.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENVM-3

**Error Message** %ENVM-3-DISABLE: Environmental monitoring for [chars] disabled ([chars])

**Explanation** Environmental monitoring for the indicated hardware component could not be initiated. This error message is displayed if environmental monitoring for the whole system, or a particular hardware component is disabled. Operating the system with the environmental monitoring disabled can be dangerous.

**Recommended Action** Address the cause for the environmental monitoring being disabled as indicated in the error message. Depending on whether a particular hardware component is affected or the whole system, either the card should be removed or the entire system taken offline for a power shutdown until the problem is resolved. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-3-ENVDATA\_MISSING: Environmental monitoring information for card in [chars] is not present in the IDPROM

**Explanation** Environmental threshold data for the card in the specified slot is not present in the board IDPROM. The system will not monitor the voltage and temperature readings for the specified card.

**Recommended Action** Enter the **show diag slot-number** command for the specified slot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-3-ENVINFO\_MISSING: Voltage threshold information for [chars] is not present in the [chars]IDPROM for the card in [chars]

**Explanation** Environmental threshold data for the specified voltage is missing from the threshold table in the IDPROM. The system will not monitor the voltage and temperature readings for the specified card.

**Recommended Action** Enter the **show diag** *slot-number* command for the specified slot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-3-SUBSLOT\_SHUTDOWN: Environmental monitor initiated shutdown of the card in subslot [dec]/[dec] ([chars] measured at [chars])

**Explanation** The environmental monitor initiated a subslot shutdown due to a temperature or voltage condition.

**Recommended Action** Look at previous environmental messages to determine the cause of the shutdown and correct if possible. If you think the shutdown was in error, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-3-TEMP\_SENSOR\_DISABLED: Access to Temperature sensor on module in slot [dec] is disabled

**Explanation** During previous reloads, this module experienced a timeout while accessing the temperature sensor. All further access to the temperature sensor will be disabled. This condition indicates a possible problem with the temperature sensor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENVM-4

**Error Message** %ENVM-4-LONGBUSYREAD: C2W Interface busy for long time reading temperature sensor [dec]

**Explanation** The Cisco 2 wire (C2W) interface has taken an unusually long time to read the specified temperature sensor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-4-LONGBUSYWRITE: C2W Interface busy for long time writing temperature sensor [dec]

**Explanation** The Cisco 2 wire (C2W) interface has taken an unusually long time to write to the specified temperature sensor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENVM-4-RPSFAIL: [chars] may have a failed channel

**Explanation** One of the power supplies in a dual (redundant) power supply may have failed.

**Recommended Action** Check the inputs to the power supply or replace the faulty power supply as soon as possible to avoid an unplanned outage. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error.

Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support

**Error Message** %ENVM-4-WRITEERROR: Error writing temperature sensor [dec]

**Explanation** The Cisco 2 wire (C2W) interface has encountered an error while writing to the specified temperature sensor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENV\_MON Messages

This section contains environmental monitor (ENV\_MON) messages.

### ENV\_MON-2

**Error Message** %ENV\_MON-2-BUSBRD\_TEMP: [chars] temperature has reached critical levels

**Explanation** The specified temperature sensor has signaled an overtemperature condition.

**Recommended Action** Check the supply. Attempt to resolve the temperature problem. Check to ensure that all router doors are in place and are closed. Check to ensure that the fans are operating. Remove the affected cards, check their temperature and, if required, allow them to cool and reinsert them. Operation of overtemperature equipment is not recommended because the equipment might become damaged. If the condition is not resolved, power the unit off. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ENV\_MON-5

**Error Message** %ENV\_MON-5-CSC\_FAIL\_SUPPLY\_POWER\_TO\_FANS: CSC in slot [dec] could not supply power to fan tray

**Explanation** The indicated clock and scheduler card (CSC) could not supply power to the fan trays.

**Recommended Action** Turn the router off and then on to attempt to clear the problem. Remove and reinsert the fan tray, and then the CSC. If the problem persists, contact your Cisco technical support representative to replace the indicated CSC.

## ENV\_MON-6

**Error Message** %ENV\_MON-6-CANTSHUT: Cannot shut down card in this slot

**Explanation** The attempt to shut down the line card has failed.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-INSALM: ALARMCARD [chars] was inserted in slot [dec]

**Explanation** The OIR facility has detected the insertion of an alarm card from the slot specified in the message text.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-INSFAN: The Fan tray has been inserted into slot [dec]

**Explanation** The OIR facility has detected the insertion of a PEM from the slot specified in the message text.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-INSPEM: PEM number [chars] inserted into slot [dec]

**Explanation** The OIR facility has detected the insertion of a PEM from the slot specified in the message text.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-INSPEM\_GSR\_POWERSELF: Powersupply [chars] inserted

**Explanation** The OIR facility detected the insertion of a PEM on the power shelf-based internet router.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-INTERNAL\_ERROR: Internal error [dec] in [chars] - contact Cisco technical support

**Explanation** An unexpected internal error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ENV\_MON-6-REMARM: ALARMCARD [chars] was removed from slot [dec]

**Explanation** The OIR facility detected the removal of alarm card from the slot specified in the message text.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-REMFAN: The Fan tray has been removed from slot [dec]

**Explanation** The OIR facility has detected that the fan tray has been removed.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-REMPER: PEM number [chars] removed from slot [dec]

**Explanation** The OIR facility has detected the removal of a PEM from the slot specified in the message text.

**Recommended Action** No action is required.

**Error Message** %ENV\_MON-6-REMPER\_GSR\_POWERSELF: Powersupply [chars] removed

**Explanation** The OIR facility has detected the removal of a PEM on a power shelf-based internet router.

**Recommended Action** No action is required.

# EOBC Messages

This section contains Ethernet out-of-band channel (EOBC) messages.

## EOBC-0

**Error Message** %EOBC-0-EOBC\_JAM\_FATAL: [chars] in slot [dec] is jamming the EOBC channel. It has been disabled.

**Explanation** The primary supervisor engine EOBC hardware is faulty. There is no redundant supervisor engine to take over, so the switch has been shut down.

**Recommended Action** Immediately replace the supervisor engine in the slot specified in the error message.

## EOBC-2

**Error Message** %EOBC-2-EOBC\_JAM: EOBC channel is jammed. Attempting to diagnose the source of the problem and recover if possible.

**Explanation** The SP is unable to communicate with other processors in the system because of a problem with the EOBC channel. The problem could be due to faulty EOBC hardware on the supervisor engine or due to a module with a faulty connector to the EOBC channel. The SP will attempt to recover automatically. The success of this automatic recovery will be communicated through more messages.

**Recommended Action** No action is required.

**Error Message** %EOBC-2-EOBC\_JAM\_RECOVERED: [chars] in slot [dec] is jamming the EOBC channel. It has been disabled. [chars]

**Explanation** The specified module has faulty hardware and is adversely affecting the operation of the switch. The remaining modules will be power cycled and brought online.

**Recommended Action** Immediately replace the module in the slot specified in the error message.

## EOBC-3

**Error Message** %EOBC-3-NOEOBCBUF: No EOBC buffer available. Dropping the packet.

**Explanation** The EOBC receive buffer pool has been exhausted. No further input packets can be processed until some buffers are returned to the pool.

**Recommended Action** After buffers are returned to the pool, if processing continues normally, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at

<http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EOS Messages

This section contains EOS ASIC (EOS) messages.

### EOS-2

**Error Message** %EOS-2-EOS\_INIT\_FAILURE : The EOS FPGA initialization failed due to [chars]

**Explanation** The EOS FPGA initialization was not successful because of a hardware problem with the board. This condition will cause packet drops.

**Recommended Action** Contact your Cisco technical support representative to obtain a replacement board.

**Error Message** %EOS-2-EOS\_INT : [chars]

**Explanation** A fatal interrupt has occurred. As a result, the device has been reinitialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOS-2-INT : [chars]

**Explanation** A fatal interrupt has occurred. As a result, the device has been reinitialized. If the reported condition is a CRC or ECC parity error, the device will attempt to correct the error. Infrequent parity errors can usually be ignored, but persistent parity errors may indicate a hardware failure.

**Recommended Action** Reseat and reset the module. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOS-2-NULL\_EOS\_OBJECT : The EOS device object pointer is set to NULL

**Explanation** The memory location of the EOS device object is invalid. The EOS FPGA operation is disabled and the device interrupt is now masked.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EOS-3

**Error Message** %EOS-3-EOS\_PAUSE\_FAIL: [chars]

**Explanation** An attempt to pause the forwarding of traffic from an EOS ASIC interface FPGA to another ASIC has timed out. Depending on the status register value of the ASIC interface FPGA, traffic disruption might occur.

**Recommended Action** If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOS-3-EOS\_UNPAUSE\_FAIL : EOS status register is 0x[hex]

**Explanation** An attempt to unpause traffic from the EOS FPGA to the Hyperion ASIC timed out. This condition may lead to traffic disruption.

**Recommended Action** If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOS-3-QUEUE\_ALLOC\_FAILED: Failed to allocate queue in the EOS FPGA for SPA in bay ([dec])

**Explanation** The system failed to allocate the EOS ASIC queue for the SPA in the specified bay. This condition might lead to traffic disruption.

**Recommended Action** If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EOS-4

**Error Message** %EOS-4-EOS\_WARN\_INT: [chars]

**Explanation** The EOS ASIC interface FPGA received a nonfatal interrupt. This interrupt should not affect normal operation.

**Recommended Action** No action is required.

## EOS-5

**Error Message** %EOS-5-PAUSE\_FAIL: [chars]

**Explanation** An attempt to pause the forwarding of traffic from an EOS ASIC interface FPGA to another ASIC has timed out. Depending on the status register value of the ASIC interface FPGA, traffic disruption might occur.

**Recommended Action** If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EOU Messages

This section contains Extensible Authentication Protocol over UDP (EOU) messages.

### EOU-2

**Error Message** %EOU-2-PROCESS\_ERR: Router could not create a EAPoUDP process

**Explanation** The system could not create an Extensible Authentication Protocol over UDP process.

**Recommended Action** Reload the system.

### EOU-4

**Error Message** %EOU-4-BAD\_PKT: IP=[IP\_address] | Bad Packet=[chars]

**Explanation** The system received an invalid or malformed EAP packet from the specified host.

**Recommended Action** Check the specified host for the EAP operation.

**Error Message** %EOU-4-MSG\_ERR: Unknown message event received

**Explanation** The EOU authentication process received an unknown message event.

**Recommended Action** If this message recurs, reload the system.

**Error Message** %EOU-4-PROCESS\_STOP: PROCESS=[chars] | ACTION=[chars].

**Explanation** The specified process has stopped.

**Recommended Action** Reload the system.

**Error Message** %EOU-4-SOCKET: EAPoUDP socket binding fails for PORT=[hex]. Check if the interface has valid IP address.

**Explanation** The EOU socket could not bind its port to an valid interface address.

**Recommended Action** This condition is probably caused by a missing IP address on the interface. Configure a valid IP address for the interface.

**Error Message** %EOU-4-UNKN\_EVENT\_ERR: UNKNOWN Event for HOST=[IP\_address] | Event=[dec].

**Explanation** An unknown event for the EOU process has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOU-4-UNKN\_PROCESS\_ERR: An unknown operational error occurred.

**Explanation** The EOU process cannot function due to an internal system error.

**Recommended Action** Reload the system.

**Error Message** %EOU-4-UNKN\_TIMER\_ERR: An unknown Timer operational error occurred

**Explanation** The EOU process cannot function due to an internal system error.

**Recommended Action** Reload the system.

**Error Message** %EOU-4-VALIDATION: Unable to initiate validation for  
HOST=[IP\_address] | INTERFACE=[chars].

**Explanation** EOU could not start posture validation for the specified host. This condition is probably caused by a failure to bind the EOU port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EOU-4-VERSION\_MISMATCH: HOST=[IP\_address] | Version=[dec]

**Explanation** The specified host detected a mismatch in EOU versions.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EOU-5

**Error Message** %EOU-5-AAA\_DOWN: AAA unreachable. METHODLIST=[chars] |  
HOST=[IP\_address] | POLICY=[chars].

**Explanation** AAA servers defined by the method list are unreachable for the given host and the policy being applied.

**Recommended Action** Check connectivity to the AAA servers.

**Error Message** %EOU-5-RESPONSE\_FAILS: Received an EAP failure response from AAA for  
host=[IP\_address]

**Explanation** The system received an EAP failure response from AAA, which indicates the unsuccessful validation of host credentials.

**Recommended Action** No action is required.

## EOU-6

**Error Message** %EOU-6-AUTHSTATUS: [chars] | [IP\_address]

**Explanation** This message displays the authentication status (Success, Failure) for the specified host.

**Recommended Action** This message is informational. No action is required.

**Error Message** %EOU-6-AUTHTYPE: IP=[IP\_address] | AuthType=[chars]

**Explanation** This message displays the authentication type for the specified host.

**Recommended Action** This message is informational. No action is required.

**Error Message** %EOU-6-CTA: IP=[IP\_address] | CiscoTrustAgent=[chars]

**Explanation** This message indicates whether or not Cisco Trust Agent was detected on the specified host.

**Recommended Action** Install Cisco Trust Agent on the host if it was not detected.

**Error Message** %EOU-6-IDENTITY\_MATCH: IP=[IP\_address] | PROFILE=EAPoUDP | POLICYNAME=[chars]

**Explanation** Because the system found the specified host in the EOU identity profile, there will be no EOU association with the host and the local policy.

**Recommended Action** If you do not want the specified host to be exempted from authentication, remove its entry from EOU identity profile.

**Error Message** %EOU-6-POLICY: IP=[IP\_address] | [chars]=[chars]

**Explanation** The system received policy attributes from AAA for the specified host.

**Recommended Action** This message is informational. No action is required.

**Error Message** %EOU-6-POSTURE: IP=[IP\_address] | HOST=[chars] | Interface=[chars]

**Explanation** This message displays the posture validation status for the specified host.

**Recommended Action** This message is informational. No action is required.

**Error Message** %EOU-6-SESSION: IP=[IP\_address] | HOST=[chars] | Interface=[chars]

**Explanation** An entry was created or deleted for the host on the specified interface.

**Recommended Action** This message is informational. No action is required.

**Error Message** %EOU-6-SQ: IP=[IP\_address] | STATUSQUERY| [chars]

**Explanation** The status query result for the specified host either failed or was invalid.

**Recommended Action** This message is informational. No action is required.

## EPIF Messages

**Error Message** %EPIF\_PORT-0-INTERNAL\_PANIC: [chars]

**Explanation** A Panic Condition.

## EPLD\_STATUS\_OPEN Messages

This section contains EPLD programming status file data processing (EPLD\_STATUS\_OPEN) messages.

### EPLD\_STATUS\_OPEN-4

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_ALLOC: %Error: Can't allocate [dec] bytes for epld status data

**Explanation** The system is unable to allocate required memory to access the file.

**Recommended Action** Determine the memory usage of the system, and retry the operation.

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_OPEN: %Error: Can't open [chars]

**Explanation** The system is unable to open the specified file.

**Recommended Action** Ensure that the filename is correct. Enter the **dir** command to verify the filename.

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_READ: %Error: status file [chars] read failed

**Explanation** An unknown error occurred while the system was reading the status program file to a local buffer.

**Recommended Action** Delete and recopy the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_REMOVE: %Error: status file [chars] remove failed

**Explanation** An unknown error occurred while the system was removing the status program file from nonvolatile memory.

**Recommended Action** Delete the file manually. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_SIZE: %Error: Bad file size [chars]

**Explanation** The file is too small or too large for a programming status file.

**Recommended Action** Enter the **dir** command, and determine the size of the file. Retry the operation.

**Error Message** %EPLD\_STATUS\_OPEN-4-ERROR\_WRITE: %Error: status file [chars] write failed

**Explanation** An unknown error occurred while the system was writing the status program file to nonvolatile memory.

**Recommended Action** Delete and recopy the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# EPM Messages

This section contains Policy Enforcement Module (EPM) messages.

## EPM-4

**Error Message** %EPM-4-POLICY\_APP\_FAILURE: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | POLICY\_TYPE=%s | POLICY\_NAME=%s | RESULT=FAILURE | REASON=%s

**Explanation** The displayed policy for the client could not be applied by the Policy Enforcement Module (EPM) for the reason indicated in the message.

**Recommended Action** Take appropriate action based the failure reason indicated in the message.

## EPM-6

**Error Message** %EPM-6-AAA: POLICY=%s | EVENT=%s

**Explanation** A download request has been sent and downloaded successfully for the specified downloadable ACL (dACL).

**Recommended Action** No action is required.

**Error Message** %EPM-6-IPEVENT: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | EVENT=%s

**Explanation** An IP wait, release, or assignment event has occurred with respect to the specified host.

**Recommended Action** No action is required.

**Error Message** %EPM-6-POLICY\_APP\_SUCCESS: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | POLICY\_TYPE=%s | POLICY\_NAME=%s | RESULT=SUCCESS

**Explanation** The displayed policy for the client has been applied successfully by the EPM.

**Recommended Action** No action is required.

**Error Message** %EPM-6-POLICY\_REQ: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | EVENT=%s

**Explanation** A policy application or remove request has been received by the EPM.

**Recommended Action** No action is required.

## ERR\_C6K\_Stack\_MIB Messages

This section contains error messages.

**Error Message** %ERR\_C6K\_STACK\_MIB-3-ERR\_C6K\_STACK\_MIB\_ICC\_NO\_PROC: [chars]: Failed to create the vs\_stack\_mib\_sp ICC Process

**Explanation** Failed to create the vs\_stack\_mib\_sp ICC Process.

**Recommended Action** No action is required.

**Error Message** %ERR\_C6K\_STACK\_MIB-3-ERR\_C6K\_STACK\_MIB\_ICC\_Q\_NULL: [chars]: Failed to create the ICC queue for C6K STACK MIB

**Explanation** Failed to create the ICC queue for C6K STACK MIB.

**Recommended Action** No action is required.

## ERR\_DET Messages

This section contains error detection messages.

### ERR\_DET-5

**Error Message** %ERR\_DET-5-ERR\_DET\_LOW\_MEM: Very low memory, dump debuginfo, local %u, io %u

**Explanation** A low-memory condition was detected. Debugging information will be dumped.

**Recommended Action** No action is required.

**Error Message** %ERR\_DET-5-ERR\_DET\_NO\_EOBC\_INPUT: No EOBC input, dump debuginfo, interval %u, times %u

**Explanation** No Ethernet Out-of-Band Channel (EOBC) input was received. Debugging information will be dumped.

**Recommended Action** No action is required.

# ESCON Messages

This section contains Enterprise Systems Connection (ESCON) messages.

## ESCON-3

**Error Message** %ESCON-3-ACCESS\_FAIL: LRC access Failed

**Explanation** Line card redundancy controller (LRC) access has failed.

**Recommended Action** Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

**Error Message** %ESCON-3-CRC16\_ERR\_THR\_ALM: ESCON CRC-16 Error Threshold [chars]

**Explanation** The threshold of allowable CRC-16 errors has been exceeded.

**Recommended Action** Check the client receive cable and the SFP optics. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESCON-3-CRC32\_ERR\_THR\_ALM: CRC-32 Error Threshold [chars]

**Explanation** The threshold of allowable CRC-32 errors has been exceeded.

**Recommended Action** Check the client receive cable and SFP optics. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESCON-3-ESCON\_RDWRFAIL: Read/write failed [[chars]]

**Explanation** A read or write error occurred while the hardware was being accessed.

**Recommended Action** Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

**Error Message** %ESCON-3-HEC\_ERR\_THR\_ALM: CDL-HEC Error Threshold [chars]

**Explanation** The threshold of allowable CDL HEC errors has been exceeded.

**Recommended Action** Check the network cable for sharp bends, and ensure the connectors are clean and connected properly.

**Error Message** %ESCON-3-HW\_LASER\_DOWN\_ALM: Remote Loss of Light [chars]

**Explanation** The optics laser has been disabled.

**Recommended Action** Check the remote client receive cable and the SFP optics.

**Error Message** %ESCON-3-IDPROM\_ACCESS\_FAIL: Access to IDPROM Failed

**Explanation** The IDPROM could not be accessed.

**Recommended Action** Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

**Error Message** %ESCON-3-INT\_LPBK\_FAIL: Internal CardLoopback Failed

**Explanation** An internal card loopback has failed.

**Recommended Action** Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

**Error Message** %ESCON-3-LASER\_TX\_FAULT\_ALM: Optic Laser Transmit Fault [chars]

**Explanation** An optical laser transmission fails on an ESCON aggregation card.

**Recommended Action** Remove and reinsert the ESCON SFP optics. If the problem persists, replace the ESCON SFP optics.

**Error Message** %ESCON-3-LOCAL\_FL\_LASER\_DOWN\_ALM: Local Failure [chars]

**Explanation** The optics laser has been disabled.

**Recommended Action** Check the trunk and switch fabric connection.

**Error Message** %ESCON-3-LOSS\_OF\_LIGHT\_ALM: Transceiver Loss of Light [chars]

**Explanation** The cable for the transceiver has been cut or removed.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-LOSS\_OF\_LOCK\_ALM: Transceiver CDR Loss of Lock [chars]

**Explanation** The CDR cannot lock onto the signal.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-LOSS\_OF\_SYNC\_ALM: Transceiver Loss of Sync [chars]

**Explanation** The transceiver has lost its synchronization.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-LPBK\_THRU\_PSC\_FAIL: Loopback through PSC Failed

**Explanation** An attempt to loopback through the processor and switch card (PSC) has failed.

**Recommended Action** Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

**Error Message** %ESCON-3-MIB\_HW\_LASER\_DOWN\_ALM: Laser Disabled [chars] [chars]  
[chars]

**Explanation** The client-side laser has been disabled.

**Recommended Action** Check the remote client receive cable and the SFP optics.

**Error Message** %ESCON-3-MIB\_LASER\_TX\_FLT\_ALM: Laser Transmit Fault [chars] [chars]  
[chars]

**Explanation** The client laser encountered a fault during transmittal.

**Recommended Action** Remove and reinsert the ESCON SFP optics. If the problem persists, replace the ESCON SFP optics.

**Error Message** %ESCON-3-MIB\_LOCAL\_FL\_LASER\_DOWN\_ALM: Local Failure, Laser Disabled  
[chars] [chars] [chars]

**Explanation** The client-side laser has been disabled.

**Recommended Action** Check the trunk and switch fabric connection.

**Error Message** %ESCON-3-MIB\_LOSS\_OF\_LIGHT\_ALM: Loss of Light [chars] [chars] [chars]

**Explanation** The client side transceiver detects a loss of light on an ESCON aggregation card.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-MIB\_LOSS\_OF\_LOCK\_ALM: Loss of Lock [chars] [chars] [chars]

**Explanation** The client side transceiver detects a loss of lock on an ESCON aggregation card.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-MIB\_LOSS\_OF\_SYNC\_ALM: Loss of Sync [chars] [chars] [chars]

**Explanation** The client side transceiver detects a loss of synchronization on an ESCON aggregation card.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-SEQ\_ERR\_THR\_ALM: ESCON SEQ Error Threshold [chars]

**Explanation** The threshold of allowable sequence errors has been exceeded.

**Recommended Action** Check the network cable for sharp bends, and ensure that the connectors are clean and connected properly.

**Error Message** %ESCON-3-SYM\_ERR\_THR\_ALM: 8b/10b Error Threshold [chars]

**Explanation** The threshold of allowable 8-byte or 10-byte errors has been exceeded.

**Recommended Action** Check the client receive cable and the SFP optics.

**Error Message** %ESCON-3-UNKNOWN\_SFP\_INSERTED: Unknown SFP inserted [chars]

**Explanation** An SFP has been inserted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# ESF\_CRASHINFO Messages

This section contains Extended SuperFrame crashinfo data messages.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_BAD\_REGION: Unable to initialize crashinfo data collection Unknown region type specified: [chars]

**Explanation** Initialization of the crashinfo data collection facility failed. An unknown region type was specified.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_BAD\_VENDOR\_ID: Unable to initialize crashinfo data collection - the device vendor ID is invalid: [hex], should be: [hex]

**Explanation** Initialization of the crashinfo data collection facility failed due to an incorrect device vendor ID.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_COLLECTION\_FAILED: Unable to collect ESF crashinfo data

**Explanation** ESF crashinfo data collection has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_DEV\_IN\_RESET: Unable to initialize crashinfo data collection - the device is still in reset: [chars]

**Explanation** Initialization of the crashinfo data collection facility failed due to the device being in reset state.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_INIT\_FAILED: Unable to initialize ESF crashinfo data collection: [chars]

**Explanation** Initialization of the ESF crashinfo data collection facility failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_PCI\_CMD\_STAT: Unable to initialize crashinfo data collection PCI\_CMD\_STAT error indication: [hex]

**Explanation** Initialization of the crashinfo data collection facility failed due to a PCI\_CMD\_STAT error indication.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-CRASHINFO\_UNSUPPORTED\_START\_STR: Unable to initialize crashinfo data collection Start string symbol not supported: [chars]

**Explanation** Initialization of the crashinfo data collection facility failed due to unsupported start string.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-INIT\_FAILED: Unable to create crashinfo file, subsystem not properly initialized

**Explanation** An attempt to produce a crashinfo prior to successful completion of subsystem initialization has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-OPEN\_FAILED: Unable to open crashinfo file [chars] ([dec])

**Explanation** Unable to open the file that was used to gather crashinfo.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-WRITE\_FAILED: Unable to write to crashinfo file [chars]: [chars]

**Explanation** Unable to open the file that was used to gather crashinfo.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_CRASHINFO-2-WRITING\_CRASHINFO: Writing crashinfo to [chars]

**Explanation** Crashinfo data is written to the specified file.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# ESF\_DRIVER Messages

This section contains SIP-400 ESF driver messages.

**Error Message** %ESF\_DRIVER-2-CHECKSUM\_FAILURE: Loading of the CPU code on [chars] failed due to checksum error

**Explanation** When code is loaded onto the CPU of the ESF engine, the code is read back and a checksum is calculated. The checksum that was read before the code was loaded onto the CPU does not match the checksum that was read after the code was loaded. This condition is an indication of a failure of the Rambus RAM for the ESF engine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-FORWARDING\_PROCESSOR\_READ\_FAILURE: Read of register address [hex] failed on [chars].

**Explanation** The host processor tried to read a forwarding processor register on the ESF engine. The read failed after several retries because of collisions with other accesses to that register.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-FORWARDING\_PROCESSOR\_WRITE\_FAILURE: Write of register address [hex] failed on [chars].

**Explanation** The host processor attempted to write a register on the forwarding processor for the ESF engine. The write failed after several retries because of collisions with other messages that were attempting to access that register.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-PCI\_BUS\_ERROR: A PCI bus error occurred on [chars]: [chars] (addr=[hex]).

**Explanation** The host processor communicates with the ESF engine by using a PCI interface. While a PCI transaction was being performed, the transaction failed, which caused a bus error on the host processor. The address specified in the message text is the approximate address of the PCI transaction

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-PROD\_ID\_FAILURE: Retrieving the product id failed on [chars]

**Explanation** The host processor could not read the product ID register of the ESF engine. This condition occurs if the ESF engine fails to initialize.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-RDRAM\_INIT\_FAILURE: RDRAM failed to init on [chars]: condition = [chars].

**Explanation** During initialization of the Rambus DRAM, several waiting conditions occur while the code is polling a register to obtain a lock bit. One of the waiting conditions has exceeded the timeout period.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-RDRAM\_SETUP\_FAILURE: The initialization of the RDRAM failed on the [chars]

**Explanation** The Rambus DRAM could not be initialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-SRAM\_SETUP\_FAILURE: The initialization of the SRAM failed on the [chars]

**Explanation** The SRAM could not be initialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-START\_FORWARDING\_PROCESSOR\_FAILURE: The starting of forwarding processor failed on the [chars]

**Explanation** The forwarding processors of the ESF engine have to be started before processing can begin. The CPU on the ESF engine assists in the starting of the forwarding engines. The CPU reported that an error occurred while the forwarding engines were being started.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-UCODE\_LOAD\_FAILURE: The loading of microcode failed (rc=[dec]) on [chars]

**Explanation** Before processing can begin, microcode has to be loaded on each forwarding processor of the ESF engine. The CPU on the ESF engine assists in the loading of the microcode. While microcode was being loaded, the CPU reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-UNEXPECTED\_PCI\_DOORBELL\_INT: Received an unexpected PCI interrupt ([dec]) from [chars] (mb0=[hex] mb1=[hex] mb2=[hex] mb3=[hex])

**Explanation** The CPU on the ESF engine communicates to the host processor through the PCI interface using various bits in an interrupt register. This error indicates that the host processor does not know how to interpret one of those bits.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_DRIVER-2-UNKNOWN\_VENDOR\_ID: The vendor id ([hex]) of [chars] does not match any known vendor id.

**Explanation** The vendor ID on the ESF engine does not match the vendor ID that is supplied by the manufacturer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ESF\_IPC Messages

This section contains IPX2800 IPC messages.

### ESF\_IPC-2

**Error Message** %ESF\_IPC-2-BAD\_HANDLER\_ID: An invalid handler ID was specified: [hex]

**Explanation** An invalid handler ID was specified. The handler ID is required to specify which thread the IPC message is being sent to.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-INVALID\_ARGUMENT: An invalid argument was specified:  
[chars]

**Explanation** An invalid argument was specified to one of the IPC library functions.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-PRINT\_DATA\_INDICATION\_FAILED: An error occurred trying to process a PRINT DATA request: [hex] ([dec]:[dec]:[dec]): [chars] ([hex] [hex] [hex])

**Explanation** An error occurred in processing the PRINT DATA request from a thread.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-SEND\_MSG\_TIMEOUT: IPC command timeout: [hex] [hex] [hex] [hex].

**Explanation** The thread to which an IPC command was issued did not respond in the required time period.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-START\_MSG\_TIMEOUT: A timeout occurred waiting for the NP to register to support processing IPC commands.

**Explanation** Each network processor (NP) must register to handle processing an IPC soon after startup. If it does not register within the required time period, then initialization cannot be completed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-UNABLE\_TO\_ACCESS\_ESF\_MEMORY: Unable to access NP memory: [chars]

**Explanation** An error occurred trying to access network processor (NP) memory.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-UNABLE\_TO\_CREATE\_MSG: Unable to create IPC message

**Explanation** Insufficient resources exist to create a message used for processing the requested IPC command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-2-UNABLE\_TO\_SEND\_MSG: Unable to send IPC message

**Explanation** Insufficient resources exist to send a message used for processing the requested IPC command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ESF\_IPC-3

**Error Message** %ESF\_IPC-3-FATAL\_ERROR\_MSG: Fatal Error indication from [hex] ([dec]:[dec].[dec]): [chars]

**Explanation** A thread has generated a fatal error indication.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-3-NON\_FATAL\_ERROR\_MSG: Error indication from [hex] ([dec]:[dec].[dec]): [chars]

**Explanation** A thread has generated a nonfatal error indication.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-3-NON\_FATAL\_ERROR\_MSG\_ERROR: Error indication from [hex] ([dec]: [dec]. [dec]): [hex] [hex] [hex]

**Explanation** An error occurred trying to process a nonfatal error indication from a thread running on a network processor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ESF\_IPC-6

**Error Message** %ESF\_IPC-6-PRINT\_DATA\_INDICATION: Print Data indication from [chars] - [hex] ([dec]: [dec]. [dec]): [chars]

**Explanation** A network processor thread requested the display of a particular section of memory. This is normally used for debugging.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ESF\_IPC-6-STATUS\_UPDATE\_MSG: Status update from [hex] ([dec]: [dec]. [dec]): [hex]

**Explanation** A thread has generated a status update indication.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ETHCNTR Messages

This section contains the Ethernet controller (ETHCNTR) error messages. These messages are a result of a failure of the switch software when trying to program the hardware. Most of these errors lead to incorrect switch behavior, and should be reported to your Cisco technical support representative.

### ETHCNTR-2

**Error Message** %ETHCNTR-2-MOLSENDTIMEOUT: Molecule send timeout, queue [dec], molecule [hex] [hex]

**Explanation** An attempt to read or write one or more of the hardware settings failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### ETHCNTR-3

**Error Message** %ETHCNTR-3-FLOWCONTROL\_DUPLEX\_ERROR: Flowcontrol will not take effect until duplex is set to auto.

**Explanation** Flow control cannot take effect until the duplex mode has been set to auto.

**Recommended Action** Set the duplex mode to auto.

**Error Message** %ETHCNTR-3-HALF\_DUX\_COLLISION\_EXCEED\_THRESHOLD: Collisions at [chars] exceed threshold. Considered as loop-back.

**Explanation** The collision at a half-duplex port has exceeded the threshold, and the port is considered to be a loopback port.

**Recommended Action** No action is required.

**Error Message** %ETHCNTR-3-MOLSENDINT: Molecule send from interrupt handler

**Explanation** An interrupt handler is accessing the hardware in a manner that is not permissible for an interrupt handler.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ETHCNTR-3-NO\_HARDWARE\_RESOURCES: Not enough hardware resources. Shutting down [chars]

**Explanation** The system currently contains more VLANs and routed ports than the hardware can support.

**Recommended Action** Reduce the total number of VLANs and routed ports to fewer than 1,023. To maintain this configuration and connectivity across reboots, save the configuration to NVRAM.

## ETHER\_CFM Messages

This section contains Ethernet Connectivity Fault Manager (ETHER\_CFM) messages.

### ETHER\_CFM-3

**Error Message** %ETHER\_CFM-3-CROSS\_CONNECTED\_CSI: Service ID of received CC [chars] does not match local Service ID [chars].

**Explanation** For a specified service within a domain, the service ID in the continuity check (CC) message should match the locally configured service ID.

**Recommended Action** Verify that the service IDs are configured correctly using the **show ethernet cfm domain** command.

**Error Message** %ETHER\_CFM-3-LR\_FROM\_WRONG\_FP: received Loopback Reply with correct Transaction Identifier, but from a Maintenance Point different than Loopback Message's destination

**Explanation** An unknown destination sent a reply to a loopback message that was intended for another device.

**Recommended Action** Verify that the correct destination MAC address was specified in the CLI while sending the loopback message.

**Error Message** %ETHER\_CFM-3-MEP\_NOT\_CONFIGURED: received CC from unconfigured remote MEP.

**Explanation** While performing a crosscheck, a continuity check (CC) message was received from a remote maintenance endpoint (MEP) that is not configured under the domain submode.

**Recommended Action** Verify whether the remote MEP should be added to the remote MEP list under the domain using the **show ethernet cfm domain** command.

**Error Message** %ETHER\_CFM-3-RCV\_LOCAL\_MPID: MPID of CC matches local MPID.

**Explanation** The remote maintenance endpoint identifier (MPID) matches a MPID configured locally for the service.

**Recommended Action** Either the local MPID or remote MPID should be changed because the MPID should be unique for each service in a network.

**Error Message** %ETHER\_CFM-3-TM\_EGRESS\_BOUNDRY: egress path found for TM is at a higher level than the traceroute message.

**Explanation** Traceroute found a domain boundary on egress because the egress port level is higher than the traceroute message level.

**Recommended Action** Check that the MIP level on the egress port is at an appropriate level.

## ETHER\_CFM-5

**Error Message** %ETHER\_CFM-5-IGNORED\_VLAN: Ignored VLAN %u in '%s'

**Explanation** An invalid VLAN was ignored in the configuration.

**Recommended Action** No action is required.

## ETHER\_LMI Messages

This section contains Ethernet Local Management Interface (ETHER\_LMI) messages.

## ETHER\_LMI-6

**Error Message** %ETHER\_LMI-6-MISMATCHED\_VLAN\_CONFIGURED: VLAN %s configured but not in VLAN mapping for UNI %s

**Explanation** VLANs are configured on the user network interface (UNI) but do not exist according to VLAN mapping received from the network by the Ethernet local management interface (LMI).

**Recommended Action** Verify that the configuration of VLANs on the UNI match those assigned.

**Error Message** %ETHER\_LMI-6-MISMATCHED\_VLAN\_NOT\_CONFIGURED: VLAN %s not configured but in VLAN mapping for UNI %s

**Explanation** VLAN mappings received from the network by the Ethernet local management interface (LMI) do not match those that are configured on the user network interface (UNI).

**Recommended Action** Verify that the configuration of VLANs on the UNI match those assigned.

## ETHERNET\_LACP Messages

This section contains Ethernet Link Aggregation Control Protocol (LACP) messages.

**Error Message** %ETHERNET\_LACP-1-ISSU\_NOMEMORY: Unit [dec], no memory for [chars]

**Explanation** The requested operation could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %ETHERNET\_LACP-3-ISSU\_SENDFAILED: LACP ISSU: send message failed, rc = [dec]

**Explanation** The sending of a message has failed. This is an informational message only.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETHERNET\_LACP-4-ISSU\_INCOMPATIBLE: lacp-issu-compat: returned FALSE

**Explanation** The ISSU compatibility matrix check has failed. This is an informational message only.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETHERNET\_LACP-4-ISSU\_XFORM: [chars]: failed, rc=[chars]

**Explanation** The ISSU transform has failed. This is an informational message only.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETHERNET\_LACP-4-RF\_CLIENT\_BUNDLE: LACP HA: Unable initiate checkpoint bundle mode.

**Explanation** LACP is unable to initialize checkpoint bundle mode. This is an informational message only.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETHERNET\_LACP-4-RF\_CLIENT\_INIT: LACP HA: Unable to initiate RF client.

**Explanation** LACP is unable to initialize as a RF client. This is an informational message only.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

# ETHERNET\_MLACP Messages

This section contains Ethernet Multichassis Link Aggregation Control Protocol (LACP) messages.

## ETHERNET\_MLACP-3

**Error Message** %ETHERNET\_MLACP-3-PEER\_ICCP\_VERSION\_INCOMPATIBLE: Peer ICCP version [dec] is incompatible with local ICCP version [dec].

**Explanation** mLACP peer is running with a different version of ICCP. Incompatible ICCP would prevent mLACP from working properly.

**Recommended Action** Reboot peer with identical IOS version would correct the issue. Compatible ICCP version between different IOS images can still be achieved by doing show lacp multichassis group on the both devices to check if ICCP versions are compatible. If ICCP versions are incompatible, repeat IOS image loading and CLI above until a compatible image is loaded.

**Error Message** %ETHERNET\_MLACP-3-SYS\_CFG\_DUPL\_ID: Remote mLACP peer has duplicate mLACP node-id [dec]

**Explanation** A remote mLACP peer is configured with the same mLACP node-id as this device.

**Recommended Action** Reconfigure the mLACP node-id to be unique between the two devices with the **mlacp node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

**Error Message** %ETHERNET\_MLACP-3-SYS\_CFG\_INVALID\_ID: Received invalid mLACP node-id [dec] from peer

**Explanation** A remote mLACP peer is configured with an invalid mLACP node-id.

**Recommended Action** Reconfigure the peer to send a valid mLACP node-id with the **mlacp node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

## ETHERNET\_MLACP-4

**Error Message** %ETHERNET\_MLACP-4-CORE\_CONNECTED: mLACP has recovered from a core isolation failure. Attempting to recover [dec] LAGs in redundancy group [int]

**Explanation** mLACP has recovered from core isolation and has attempted to recover the LAGs in the redundancy group.

**Recommended Action** This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on core isolation failures and related configuration commands.

**Error Message** %ETHERNET\_MLACP-4-CORE\_ISOLATION: mLACP Core isolation failure: Attempting to failover [dec] LAGs in redundancy group [int]

**Explanation** mLACP has detected isolation from the core and has attempted to failover.

**Recommended Action** Use the **show redundancy interchassis** command to determine which core facing interface has triggered the isolation failure. Correct the failure for the given interface, this will clear the mLACP core isolation failure. Reference the mLACP section of the IOS documentation for more information on core isolation failures and related configuration commands.

**Error Message** %ETHERNET\_MLACP-4-ICRM\_CLIENT\_RECV\_BAD\_LEN: Received an mLACP TLV with bad length [dec], total message length [dec]

**Explanation** The mLACP TLV length is longer than the total message length.

**Recommended Action** Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative. Provide the representative with the exact message being seen as well as the output of the following commands, **show version**, **show run**, **show lacp multi-chassis group**, and **show lacp multi-chassis port-channel**.

**Error Message** %ETHERNET\_MLACP-4-ICRM\_CLIENT\_RECV\_NO\_TYPELEN: Received an mLACP TLV without a type and/or length field ([dec])

**Explanation** mLACP received an improperly formatted TLV from the peer. As a result the local and peer devices may have mismatched state data.

**Recommended Action** Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

**Error Message** %ETHERNET\_MLACP-4-ICRM\_CLIENT\_RECV\_REJ: Received rejected mLACP TLV from peer with message ID [dec]

**Explanation** A remote mLACP peer has rejected an mLACP TLV.

**Recommended Action** Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

**Error Message** %ETHERNET\_MLACP-4-PEER\_DISCONNECT: An mLACP peer has disconnected from redundancy group [int], attempting to reconnect

**Explanation** mLACP has detected that a peer device from the specified redundancy group has disconnected. mLACP will attempt to reconnect to the device until successful.

**Recommended Action** This message is typically caused by a configuration event on the peer router, and so no action may be necessary. However if this message is unexpected then issue the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

**Error Message** %ETHERNET\_MLACP-4-PEER\_DOWN: mLACP Peer down failure: Attempting to make [dec] local LAGs active in redundancy group [int]

**Explanation** mLACP has detected a peer down failure and has attempted to make the local port-channels become active.

**Recommended Action** The peer down failure should be corrected by re-enabling communication with the peer mLACP device. Use the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

**Error Message** %ETHERNET\_MLACP-4-PEER\_RECONNECT\_FAILED: The attempt to reconnect to the peer in redundancy group [int] has failed

**Explanation** After an mLACP peer device disconnected, an attempt was made to reconnect, however that attempt has failed.

**Recommended Action** To reinitialize the connection, unconfigure **mlacp interchassis group** from the port-channel, and then reconfigure it. After doing that, issue **show redundancy interchassis** to get the peer member IP connection status and the mLACP connection state. If the peer member IP connection status is not CONNECTED then there is a more basic communication issue that needs to be fixed. Otherwise if the peer member IP is CONNECTED but the mLACP state is not CONNECTED, then there could be a software issue. In that case collect the output of **show redundancy interchassis**, **show lacp multi-chassis group**, and **show lacp multi-chassis port-channel**. Then please contact your Cisco technical support representative and provide the collected information.

**Error Message** %ETHERNET\_MLACP-4-PEER\_UP: mLACP has recovered from a peer down failure in redundancy group [int]

**Explanation** mLACP is now in communication with the peer device, and has recovered from a previous peer down failure.

**Recommended Action** This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on peer down failures and related configuration commands.

## ETHERNET\_MLACP-6

**Error Message** %ETHERNET\_MLACP-6-PEER\_CONNECT: mLACP peer is now connected in redundancy group [int]

**Explanation** This message indicates that the local mLACP device is now connected to a peer device in the specified redundancy group.

**Recommended Action** No action is required. To view the peer information the command **show lacp multi-chassis port-channel** or **show lacp multi-chassis group** may be issued.

## ETHERNET\_OAM Messages

This section contains Ethernet Operation, Administration, and Maintenance (ETHERNET\_OAM) messages.

### ETHERNET\_OAM-2

**Error Message** %ETHERNET\_OAM-2-CRIT\_ERR: The Ethernet OAM protocol has encountered the critical error: [chars].

**Explanation** The protocol has encountered a critical error as specified in the message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### ETHERNET\_OAM-3

**Error Message** %ETHERNET\_OAM-3-LOOPBACK\_ERROR: Loopback operation on interface [chars] has encountered an error([chars]).

**Explanation** Because of the specified error, the loopback operation has ended abnormally.

**Recommended Action** No action is required.

## ETHERNET\_OAM-5

**Error Message** %ETHERNET\_OAM-5-EVENTTLV: [chars] is received from the remote client on interface [chars].

**Explanation** An event TLV is received from the remote OAM client, which detected errors in receiving frames from this local interface.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-5-LINK\_MONITOR: [chars] detected over the last [chars] on interface [chars].

**Explanation** A monitored error has been detected to have crossed the user-specified threshold.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-5-LINK\_MONITOR\_HT\_CROSS: High threshold was crossed on Port Channel [chars]'s last operational member port [chars]. Interface [chars] is kept online.

**Explanation** A monitored error has been detected to have crossed the user-specified threshold.

**Recommended Action** No action is required.

## ETHERNET\_OAM-6

**Error Message** %ETHERNET\_OAM-6-ENTER\_SESSION: The client on interface [chars] has entered the OAM session.

**Explanation** Ethernet OAM client on the specified interface has detected a remote client and has entered the OAM session.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-6-EXIT\_SESSION: The client on interface [chars] has left the OAM session.

**Explanation** Ethernet OAM client on the specified interface has experienced some state change.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-6-LINK\_TIMEOUT: The client on interface [chars] has timed out and exited the OAM session.

**Explanation** The Ethernet OAM client on the specified interface has not received any OAMPDUs in the number of seconds for timeout that were configured by the user. The client has exited the OAM session.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-6-LOOPBACK: Interface [chars] has [chars] the [chars] loopback mode.

**Explanation** The specified interface has entered or exited loopback mode because of protocol control or an external event, such as the interface link going down.

**Recommended Action** No action is required.

**Error Message** %ETHERNET\_OAM-6-RFI: The client on interface [chars] has received a remote failure indication from its remote peer(failure reason = [chars])

**Explanation** The remote client indicates a Link Fault, or a Dying Gasp (an unrecoverable local failure), or a Critical Event in the OAMPDU. In the event of Link Fault, the Fnetwork administrator may consider shutting down the link.

**Recommended Action** In the event of a link fault, consider shutting down the link.

**Error Message** %ETHERNET\_OAM-6-RFI\_CLEAR: The client on interface %s has received a clear of remote failure indication from its remote peer(failure reason = %s action = %s)

**Explanation** The remote client received a message to clear a link fault, or a dying gasp (an unrecoverable local failure), or a critical event in the operations, administration, and maintenance Protocol Data Unit (OAMPDU). The error-disable state can only be cleared by entering the **shutdown** command followed by the **no shutdown** command on the interface.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ETHER\_SERVICE Messages

This section contains Ethernet service messages.

### ETHER\_SERVICE-6

**Error Message** %ETHER\_SERVICE-6-EVC\_STATUS\_CHANGED: status of %s changed to %s

**Explanation** The Ethernet virtual connection (EVC) status has changed.

**Recommended Action** No action is required.

**Error Message** %ETHER\_SERVICE-6-EVC\_VLAN\_NOT\_CONFIGURED: VLANs %s not configured at %s but is in a CEVLAN/EVC map

**Explanation** The specified VLANs are part of the CEVLAN/EVC map for an EVC associated with the specified interface, but the VLANs are not configured on that interface.

**Recommended Action** Verify the configurations of VLANs on the interface.

## ETSEC Messages

This section contains messages.

### ETSEC-1

**Error Message** %ETSEC-1-INITFAIL: PQ3/FE([dec]), Init failed, CSR[dec]=[hex]

**Explanation** The software failed to initialize/restart an Ethernet/Fast Ethernet interface.

**Recommended Action** Clear the interface. If the message recurs, call your technical support representative for assistance.

**Error Message** %ETSEC-1-INITFAILP: PQ3/FE([dec]), Init failed at [chars]

**Explanation** The FEC could not allocate a I/O buffer pool.

**Recommended Action** Clear the interface. If the message recurs, call your technical support representative for assistance.

**Error Message** %ETSEC-1-MEMERR: PQ3/FE([dec]), Memory error, CSR[dec]=[hex]

**Explanation** The interface could not access system resources for a long time. This problem may occur under very heavy loads.

**Recommended Action** The system should recover. No action is required. If the message recurs, call your technical support representative for assistance.

**Error Message** %ETSEC-1-SHOWFAIL: PQ3/FE([dec]), Memory error at [chars]

**Recommended Action** Clear the interface. If the message recurs, call your technical support representative for assistance.

## ETSEC-2

**Error Message** %ETSEC-2-EXCEPTION: Fatal Error, Interface [chars] not transmitting

**Explanation** The software detected critical error and recovery failed, resulting in system crash.

**Recommended Action** Collect crashinfo files, syslogs and console dumps.

**Error Message** %ETSEC-2-NOISL: Interface [chars] does not support ISL

**Explanation** The interface cannot be configured as an ISL trunk.

**Recommended Action** Check the configuration.

## ETSEC-3

**Error Message** %ETSEC-3-CREATE\_IBC\_FAILED: Creation of etsec ibc idb failed

**Explanation** etsec ibc idb creation has failed

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-INIT\_IBC\_FAILED: Initialization of etsec ibc failed

**Explanation** etsec ibc initialization has failed

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-INIT\_ICDM\_FAILED: Initialization of icdm driver failed

**Explanation** icdm driver initialized failed for etsec ibc

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-INIT\_MAC\_DRIVER\_FAILED: Initialization of ethernet mac driver failed

**Explanation** ethernet mac driver initialized failed for etsec ibc

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-MASKED\_RCV\_INTR: etsec\_ibc\_rcv\_interrupt called while masked: [int]

**Explanation** etsec\_ibc\_rcv\_interrupt called while already masked

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-NO\_BUFFER\_POOLS: Initialization of private buffer pools failed

**Explanation** Private buffer pools were not created for etsec ibc.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-NO\_PARTICLE: no particle available to populate the ethernet dma ring

**Explanation** No particle available to populate the ethernet dma ring.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-OVERFLO: PQ3/FE([dec]), Receive overflow

**Explanation** While receiving a frame, the controller chip's local buffer transmitted insufficient data because data could not be transferred to DRAM fast enough to keep pace with its input rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

**Recommended Action** The system should recover. No action is required.

**Error Message** %ETSEC-3-OWNERR: PQ3/FE([dec]), Buffer ownership error, pak=[hex]

**Explanation** The software detected an error in descriptor ownership.

**Recommended Action** Try a later version of the software. If the message recurs, call your technical support representative for assistance.

**Error Message** %ETSEC-3-RECOVER\_TX: Interface [chars] TX workaround invoked

**Explanation** The software detected the interface was not transmitting packets. The workaround patch has been invoked.

**Recommended Action** The system should recover. No action is required.

**Error Message** %ETSEC-3-RESTART: Interface [chars] Restarted Due to [chars] Error

**Explanation** The software detected critical error and etsec driver was restarted to restore EoBC traffic flow.

**Recommended Action** The system should recover. No action is required.

**Error Message** %ETSEC-3-RX\_ADD\_BUFFER\_FAILED: particle not added to the ethernet dma ring

**Explanation** Particle not added to the Ethernet dma ring.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %ETSEC-3-UNDERFLO: PQ3/FE([dec]), Transmit underflow

**Explanation** While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

**Recommended Action** The system should recover. No action is required.

## ETSEC-4

**Error Message** %ETSEC-4-BABBLE: PQ3/FE([dec]), Babble error, CSR[dec]=[hex]

**Explanation** The transmitter has been on the channel longer than the time taken to transmit the largest frame.

**Recommended Action** The system should recover. No action is required.

## ETSEC-5

**Error Message** %ETSEC-5-COLL: PQ3/FE([dec]), Excessive collisions, TDR=[dec], TRC=[dec].

**Explanation** Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

**Recommended Action** The system should recover. No action is required.

**Error Message** %ETSEC-5-EXCESSCOLL: PQ3/FE([dec]), Excessive collision

**Explanation** Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

**Recommended Action** The system should recover. No action is required.

**Error Message** %ETSEC-5-FIFO\_RECOVER: [chars] ([dec]) detected freeze, last([dec]) new([dec]) tx cntr. tx\_pending ([dec]). applying patch

**Explanation** The interface is used for IPC/SCP communication between RP and SP. In a rare situation when fifo tx engine is stuck and requires a toggle there is no data loss when the recovery patch is executed. Patch is applicable to MPC8548 version 2.0 silicon only.

**Recommended Action** None - software patch will be executed.

**Error Message** %ETSEC-5-LATECOLL: PQ3/FE([dec]), Late collision

**Explanation** Late collisions occurred on the Ethernet/Fast Ethernet interface.

**Recommended Action** If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. For regular Ethernet, the system should recover. No action is required.

**Error Message** %ETSEC-5-LOSTCARR: PQ3/FE([dec]), Lost carrier. Transceiver problem?

**Explanation** The cable is not connected to the port.

**Recommended Action** Connect the cable to the port.

## EVENT\_TRACE Messages

This section contains event trace subsystem messages.

### EVENT\_TRACE-3

**Error Message** %EVENT\_TRACE-3-GROUP\_ID: Duplicate registration of group-id [dec]

**Explanation** Software subsystem is trying to register a group ID for an event trace that has already been used by another subsystem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EXFREE Messages

This section contains external memory manage messages.

### EXFREE-2

**Error Message** %EXFREE-2-EXMEMFREE: Free a non allocated ptr [hex] size [dec].

**Explanation** The system is trying to free a memory. Not all of it is marked as allocated.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EXFREE-2-EXMEMINIT: EXMEM [dec]: [chars]

**Explanation** The requested external memory allocator failed to be initialized. The reasons are not clear.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EXFREE-2-EXMEMLOCK: [chars] detected error ptr [hex] size [dec].

**Explanation** The system is attempting to lock or unlock a memory location that was either already locked or unlocked.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EXFREE-2-EXMEMPARAM: Bad parameter ([dec]) when calling to the allocator utility

**Explanation** An illegal parameter was used when a call to the allocator utility was made. This condition may indicate data corruption.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EXFREE-2-EXMEMRESET: EXMEM [dec]: [chars]

**Explanation** The requested external memory allocator failed to be reset. The reasons are not clear.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EXFREE-4

**Error Message** %EXFREE-4-EXMALLOCFAIL: External memory allocation of [int] bytes failed from EXMEM [dec]

**Explanation** The requested memory allocation is not available from the specified memory pool. The current system configuration, network environment, or possibly a software error might have exhausted or fragmented the router's memory.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EXPRESS\_SETUP Messages

This section contains Express Setup messages.

### EXPRESS\_SETUP-3

**Error Message** %EXPRESS\_SETUP-3-UNABLE\_TO\_RESET\_CONFIG: [chars]

**Explanation** The system is unable to reset the configuration.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## EXPRESS\_SETUP-6

**Error Message** %EXPRESS\_SETUP-6-CONFIG\_IS\_RESET: [chars]

**Explanation** The configuration is reset and the system will now reboot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %EXPRESS\_SETUP-6-MODE\_ENTERED:

**Explanation** Express setup mode is now active.

**Recommended Action** No action is required.

**Error Message** %EXPRESS\_SETUP-6-MODE\_EXITED:

**Explanation** Express setup mode is no longer active.

**Recommended Action** No action is required.

# FABRIC Messages

This section contains Fabric (FABRIC) messages.

## FABRIC-3

**Error Message** %FABRIC-3-DISABLE\_FAB: The fabric manager disabled active fabric in slot [dec] due to the error ([dec]) on this channel (FPOE [dec]) connected to slot [dec]

**Explanation** The firmware detected a severe fabric error and reported the error to the fabric manager. The manager has disabled the active fabric.

**Recommended Action** The Fabric Manager will automatically resynchronize the fabric channel to recover from the error. The problem may occur when the fabric card or the line card does not have good contact with backplane. You should insert the fabric and line cards firmly into the chassis.

**Error Message** %FABRIC-3-EM\_RECOVERY\_ISSU\_NEGO\_FAILED: Attempting EM recovery for EM type %d, but ISSU negotiation was unsuccessful/incomplete.

**Explanation** On a switchover, the fabric manager is trying to recover for events that were opened on the peer before the switchover, but not closed. These events are maintained by the event manager (EM). The fabric manager found that ISSU negotiation was either unsuccessful or incomplete. Because the data may not have been synchronized correctly between the active and standby devices, this is an error condition.

**Recommended Action** No action is required.

**Error Message** %FABRIC-3-ERRORS\_DDRSYNC: Line card DDR channels sync error fpoe/slot [dec] / [dec].

**Explanation** A transmit FIFO overrun or underrun in the DDR channels has occurred. The error indicates a clock mismatch. If this condition is persistent, the hardware is faulty.

**Recommended Action** The system will attempt to resynchronize the DDR channel and the fabric channel.

**Error Message** %FABRIC-3-LOST\_SYNC: [chars] endpoint of fpoe:[dec] lost Sync. to [chars] fabric,#[dec] times recovered success, trying to recover now!

**Explanation** The endpoint has lost synchronization with the fabric and is trying to recover.

**Recommended Action** No action is required.

## FABRIC-4

**Error Message** %FABRIC-4-DISABLE\_FAB: Please disable fabric service: active sup [dec] (error [dec])

**Explanation** All supervisor engine fabric channels have errors.

**Recommended Action** Disable fabric services for the switch. Disable power for external switch fabric modules. Disable fabric service for internal switch fabric modules, but keep the supervisor engines powered on.

**Error Message** %FABRIC-4-LINECARDMODE\_CFG\_MISMATCH: Service module in the slot [dec] cannot pass traffic to the distributed etherchannel configured.

**Explanation** Because of the hardware limitation of the service module in the slot specified, traffic from these modules cannot pass through the distributed EtherChannel as configured.

**Recommended Action** Force the service modules switching mode to bus mode by entering the **fabric switching-mode force busmode** command, or change the channel configuration so that the affected modules do not need to pass traffic through the EtherChannel.

**Error Message** %FABRIC-4-SERVICEMOD\_CHANGE\_BUSMODE: The switching mode of service module in slot [dec] can be changed to its default as the distributed etherchannel config is removed.

**Explanation** The switching mode of the service modules can be reverted to the default by entering the **no fabric switching-mode force busmode** command.

**Recommended Action** Restore the default by entering the **no fabric switching-mode force busmode** command.

**Error Message** %FABRIC-4-SUP\_SWITCHOVER: Supervisor switchover from slot [dec] (error [dec])

**Explanation** The active supervisor engine fabric channel has errors.

**Recommended Action** A switchover to the redundant supervisor engine occurs automatically.

## FABRIC-5

**Error Message** %FABRIC-5-CANNOT\_CLEAR\_BLOCK: The fabric in slot [dec] cannot support clear-block feature.

**Explanation** A user enabled the clear-block mechanism, but the fabric in the specified slot cannot support the feature.

**Recommended Action** No action is required.

**Error Message** %FABRIC-5-CANNOT\_SUPPORT\_FP\_INVERSION: The module you have installed in slot [dec] is running an older revision of firmware/software which may cause inconsistent system behavior. Please refer to the release notes for a minimum recommended software release for mentioned module.

**Explanation** The specified module can not support FP bit inversion with the current software release. The fabric clear block will disregard the COS setting for this module.

**Recommended Action** No action is required.

**Error Message** %FABRIC-5-CLEAR\_BLOCK: Clear block option is [chars] for the fabric in slot [dec].

**Explanation** The fabric manager has changed the status of the clear-block mechanism for all fabric channels. The status (on or off) is indicated in the message.

**Recommended Action** No action is required.

**Error Message** %FABRIC-5-ERRORS\_BUFFER: In fabric slot [dec], memory buffer for fpoe/slot [dec]/[dec] is full.

**Explanation** Either the buffer size is less than the packet size or the uplink buffer cannot respond to flow control from the fabric.

**Recommended Action** Examine the fabric memory configuration.

**Error Message** %FABRIC-5-ERRORS\_TIMEOUT: Time out for input from fpoe/slot [dec]/[dec] to slot [dec].

**Explanation** A timeout in the fabric input buffer occurred because of a problem from the destination slot. The transient error is observed when the module is removed. If the error is persistent, the module local bus might be locked.

**Recommended Action** Reset the module in the destination slot if the error is persistent.

**Error Message** %FABRIC-5-FABRIC\_FAILOVER: The fabric in slot [dec] has failed over due to fabric errors on slot [dec]. Fabric in slot [dec] is now the current active fabric.

**Explanation** The Switch Fabric Module in the specified slot failed over and active supervisor switch to former standby supervisor.

**Error Message** No action is required.%FABRIC-5-LINECARDMODE\_BUS\_FORCED: The switching mode of module in slot [dec] is forced to bus-mode.

**Explanation** The **fabric switching-mode force busmode** command has been applied.

**Recommended Action** No action is required.

**Error Message** %FABRIC-5-NOT\_ALLOWED: Power not allowed to module [dec] : [chars] .

**Explanation** Certain types of linecards is not given power for some reason. Detailed reason is given in the message body.

**Recommended Action** No action is required.

## FABRIC-6

**Error Message** %FABRIC-6-TIMEOUT\_ERR: Fabric in slot [dec] reported timeout error for channel [dec] (Module [dec], fabric connection [dec])

**Explanation** Firmware code on the fabric detected that the input or output buffer was not moving. To recover from this condition, the system will automatically resynchronize the fabric channel.

**Recommended Action** The system automatically recovers from this condition by doing a fabric channel resynchronization. If the system experiences this condition persistently, directly connect to the console of the fabric and the module to determine if any errors are being reported by the firmware. Also, reseal and reset the module.

## FABRIC\_INTF\_ASIC Messages

This section contains switch fabric interface ASIC (FABRIC\_INTF\_ASIC) messages.

### FABRIC\_INTF\_ASIC-4

**Error Message** %FABRIC\_INTF\_ASIC-4-DEV\_CONFIG\_FAIL: The Switch Fabric interface ASIC configuration failed

**Explanation** The switch fabric interface ASIC could not be configured.

**Recommended Action** If the switch fabric is inactive (down), this message can be expected. If the module comes online and traffic processing resumes, ignore this message. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. On the Route Processor, capture the **show logging** and **show version** commands.

**Error Message** %FABRIC\_INTF\_ASIC-4-FABRICCRCERRS: [dec] Fabric CRC error events in 100ms period

**Explanation** The switch fabric interface encountered more CRC error events than the supervisor engine CRC error threshold allows.

**Recommended Action** The line card has notified the supervisor engine and the error has been logged. No action is required from the user.

## FABRIC\_INTF\_ASIC-5

**Error Message** %FABRIC\_INTF\_ASIC-5-CHAN\_LINK\_SPEED\_OOB: Array access bounds violated, channel\_num=[int], link\_num=[int], speed=[int]

**Explanation** Cisco IOS code has attempted to access an internal array with an invalid index for SSA channel number or link number or speed.

**Recommended Action** No action is required if there is no system impact. If traffic stops or linecard fails, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FABRIC\_INTF\_ASIC-5-DEV\_INIT\_FAILURE: The Switch Fabric interface ASIC initialization failed

**Explanation** The switch fabric interface ASIC was not successfully initialized. As a result, this device is not operational and has been disabled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FABRIC\_INTF\_ASIC-5-FABRICDOWN\_CRCERRS: [dec] Fabric CRC error events in 100ms period

**Explanation** The switch fabric interface encountered more CRC errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down). The line card has notified the supervisor engine of this condition and the error has been logged.

**Recommended Action** This message indicates normal system operation. No action is required.

**Error Message** %FABRIC\_INTF\_ASIC-5-FABRICDOWN\_SYNCERRS: [dec] Fabric sync error events in 100ms period

**Explanation** The switch fabric interface encountered more synchronization errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down).

**Recommended Action** This message indicates normal system operation. No action is required.

**Error Message** %FABRIC\_INTF\_ASIC-5-FABRICSYNC\_DONE: Fabric sync on [chars] channel done.

**Explanation** The switch fabric interface ASIC was resynchronized.

**Recommended Action** No action is required.

**Error Message** %FABRIC\_INTF\_ASIC-5-FABRICSYNC\_REQ: Fabric sync requested on [chars] channel ([dec])

**Explanation** The line card has requested that the supervisor engine resynchronize its fabric interface ASIC.

**Recommended Action** No action is required.

**Error Message** %FABRIC\_INTF\_ASIC-5-NOFABRICPROCESS: The Switch Fabric interface fabric process could not be created

**Explanation** The switch fabric interface does not have a link process running: the system failed to create this process. This module will not support the fabric interface.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FABRIC\_INTF\_ASIC-5-NULL\_DEV\_OBJECT: The Switch Fabric interface device object pointer is set to NULL

**Explanation** The memory location of the switch fabric interface device object is invalid. The switch fabric interface ASIC operation is disabled and the device interrupt is now masked.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FABRIC\_INTF\_ASIC-5-SMB\_ACCESSERROR: The Module Switch Fabric interface ASIC cannot be accessed

**Explanation** The switch fabric interface ASIC access (read or write) failed. The serial bus that connected to the switch fabric interface ASIC on this module is not functioning correctly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FABRIC\_SP

**Error Message** %FABRIC-SP-5-CLEAR\_BLOCK: Clear block option is [chars] for the fabric in slot [dec].

**Explanation** The fabric manager has changed the status of the clear-block mechanism for all fabric channels. The status (on or off) is indicated in the message.

**Recommended Action** No action is required.

**Error Message** %FABRIC-SP-5-FABRIC\_MODULE\_ACTIVE: The Switch Fabric Module in slot [dec] became active

**Explanation** The Switch Fabric Module in the specified slot is active as the switching fabric.

**Recommended Action** No action is required.

# FIB Messages

This section contains Forwarding Information Base (FIB) messages.

## FIB-2

**Error Message** %FIB-2-FIBFEATSESINIT: Error initializing CEF repop feature session queue

**Explanation** Initialization of a CEF feature session queue could not be accomplished because of a low-memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %FIB-2-FIBRETRY\_EXCEEDED: CEF table download to slot [dec] not performed as IPC port did not come up

**Explanation** The FIB could not be fully downloaded. As a result of this condition, hardware switching might not be functional on the module.

**Recommended Action** Reset the module to overcome this condition.

**Error Message** %FIB-2-HW\_IF\_INDEX\_ILLEGAL: Attempt to create CEF interface for [chars] with illegal index: [dec]

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the information with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-2-IF\_NUMBER\_ILLEGAL: Attempt to create CEF interface for [chars] with illegal if\_number: [dec]

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FIB-3

**Error Message** %FIB-3-FIBSBNOFN: Missing [chars] subblock [chars] function for [chars]

**Explanation** Functions for distributing this subblock are missing from the image.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-3-MAC\_ACCT: [chars]: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-3-PREC\_ACCT: [chars]: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FIB-4

**Error Message** %FIB-3-FIB\_STATS\_ERROR: Internal Error - type [dec], slot [dec], total\_len [dec], msg\_len [dec], seg\_len [dec]

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-4-FIBNULLHWIDB: Missing hwidb for fibhwidb [chars] (ifindex [dec])

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-4-FIBNULLIDB: Missing idb for fibidb [chars] (if\_number [dec]).

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-4-FIBRETRY\_WARNING: IPC port for slot [dec] to become available for CEF table download (retried [dec] times)

**Explanation** The FIB table failed to download for the number of times specified in the message.

**Recommended Action** If the FIB table is successfully downloaded in a subsequent retry, no action is required. If the operation is not successful, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FIB-4-FIBXDRINV : Invalid format. [chars]

**Explanation** Because the VLAN interface was deleted while still in the administrative up state, the HSRP MAC address remains in the adjacency table. This message is not sent if the VLAN interface is first put into an administrative down state before being deleted.

**Recommended Action** No action is required.

## FIB-6

**Error Message** %FIB-6-FIBLCTUNDELSEQ: Update received on a linecard for a deleted tunnel([chars]) - ignored.

**Explanation** An update was received on a line card for a tunnel that has already been deleted. The update was ignored.

**Recommended Action** No action is required.

## FILESYS Messages

This section contains fileSYS messages.

### FILESYS-3

**Error Message** %FILESYS-3-RUNNING\_SYNC\_FAILED: The active is unable to synchronize the running configuration to standby, so standby will be reloaded

**Explanation** The active supervisor engine cannot access its running configuration to synchronize the configuration to the standby supervisor engine. This can be caused by temporary resource issues such as high CPU.

**Recommended Action** No action is required. This message is for informational purposes only.

### FILESYS-4

**Error Message** %FILESYS-4-CLPDINT: Management interrupts are [chars] for pcmcia device in socket [dec]. [chars]

**Explanation** A faulty PCMCIA flash device might be generating spurious insert or remove interrupts continuously. The PCMCIA controller's interrupt generation will be disabled temporarily, and will be reenabled after a few seconds. If an alternate PCMCIA device is inserted while the interrupts are disabled, the alternate device may not be readable. In this case, you must remove and reinsert the PCMCIA device.

**Recommended Action** Replace the PCMCIA flash device.

### FILESYS-5

**Error Message** %FILESYS-5-CFLASH: Compact flash card [chars] [chars]

**Explanation** A file system's status has changed.

**Recommended Action** Follow any instructions provided with the message.

**Error Message** %FILESYS-5-IFLASH : Internal Flash [chars] [chars]

**Explanation** A file system's status has changed. This can occur after the switch is converted from Catalyst OS software to Cisco IOS software. When you enter the **dir bootflash:** command, an unformatted flash memory returns a "bad device block info" or "invalid magic number" error message.

**Recommended Action** Format the flash memory using the **format** command and follow any instructions provided with the message. Otherwise, no action is required.

**Error Message** %FILESYS-5-UNKNDEV : Unknown device [chars] [chars]

**Explanation** A file system's status has changed. The flash device cannot be recognized by the switch. The 16-MB MEM-C6K-FLC16M and 24 MB MEM-C6K-FLC24M linear flash PC cards are preformatted and are ready to use, but the MEM-C6K-ATA-1-64M and 64 MB MEM-C6K-FLC64M flash PC cards are not preformatted. You must format these cards before using them to store files. In addition, the Supervisor Engine 1 and Supervisor Engine 2 do not support the same flash PC card format. To use a flash PC card with a Supervisor Engine 2, you must format the card with a Supervisor Engine 2. To use a flash PC card with a Supervisor Engine 1, you must format the card with a Supervisor Engine 1.

**Recommended Action** Format the flash memory using the **format** command and follow any instructions provided with the message. Otherwise, no action is required.

# FM Messages

This section contains Feature Manager (FM) messages.

## FM-2

**Error Message** %FM-2-ACL\_MERGE\_EXCEPTION: ACL merge internal error due to features configured on interface [chars] in [chars] direction, traffic may be switched in software

**Explanation** The configured features for this interface caused the merge to abort because of an internal error. The traffic on this interface and the interfaces sharing TCAM label with this interface will be sent to the software.

**Recommended Action** Redefine and reapply or unconfigure one or more features on the interface.

**Error Message** %FM-2-ACL\_MERGE\_NUM\_ACES: ACL merge aborted due to number of ACEs threshold for features on interface [chars] in [chars] direction, traffic may be switched in software

**Explanation** The configured features for this interface may have caused the merge to abort because of hitting the 64000 ACE merge threshold. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

**Recommended Action** Redefine and reapply or unconfigure one or more features on the interface.

**Error Message** %FM-2-FIE\_EXCEPTION: Feature interaction internal error due to features configured on interface [chars] in [chars] direction, traffic may be switched in software

**Explanation** The configured features for this interface caused an internal error in the feature interaction. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

**Recommended Action** Redefine and reapply or unconfigure one or more features on the interface.

**Error Message** %FM-2-FLOWMASK\_CONFLICT: Features configured on interface [chars] have conflicting flowmask requirements, traffic may be switched in software

**Explanation** The configured features for this interface have a flow mask conflict. The traffic on this interface and the interfaces sharing the TCAM label with this interface may not comply with the features under this condition. The traffic on these interfaces will be sent to the software.

**Recommended Action** Redefine and reapply or unconfigure one or more features to avoid the conflict.

**Error Message** %FM-2-TCAM\_ERROR: TCAM programming error %d

**Explanation** A software error caused a failure in programming ACLs into the TCAM.

**Recommended Action** Choose the Order Dependent Merge (ODM) algorithm for merging the ACL. Shut down the VLAN interface and reenable the interface after ten minutes. If the error message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FM-2-TCAM\_MEMORY: ACL merge abandoned when merging Interface [chars] [chars] ACLs due to insufficient memory. Interface traffic handled in Software.

**Explanation** The capacity of the hardware TCAM has been exceeded and the packets will be now process-switched. The first [chars] value indicates the VLAN interface for which the ACL merge fails, and the second [chars] indicates whether the ACL is ingress or egress.

**Recommended Action** Choose the Order Dependent Merge (ODM) algorithm for merging the ACL. Shut down the VLAN interface and reenable the interface after ten minutes. If the error message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FM-2-TCP\_FLAG\_HW\_EXCEPTION: No VLOUs available for TCP FLAGS for interface [chars] in [chars] direction: all features on the interface for the specified direction will be NOT effective

**Explanation** No VLOUs are available for TCP flags. This condition cannot be handled in the software for all the features configured on the interface. A message is printed on the console to notify the user of this error condition. Because there are no features that the software can handle, the system will program an entry to permit all traffic.

**Recommended Action** The hardware TCAM can handle up to 9 logical operations per interface and up to 64 logical operations in total. To recover from this error, recompute the ACLs for the features that cannot be handled in the software (for example, VACLs) to move entries using TCP flags before others entries are moved and to minimize the usage of TCP flags.

**Error Message** %FM-2-TCP\_FLAG\_SW\_EXCEPTION: No VLOUs available for TCP FLAGS on interface [chars] in [chars] direction: traffic will be software switched, features which are NOT processable in software will be NOT effective

**Explanation** No VLOUs are available for TCP flags. This condition cannot be handled in the software for some features configured on the interface. A message is printed on the console to notify the user of this error condition. Because there are some features that can be handled in the software (for example, VACLs and RACLs), an exception entry and traffic on this interface will be sent to the software.

**Recommended Action** The hardware TCAM can handle up to 9 logical operations per interface and up to 64 logical operations in total. To recover from this error, recompute the ACLs for the features that cannot be handled in the software (for example, VACLs) to move entries using TCP flags before others entries are moved and to minimize the usage of TCP flags.

## FM-3

**Error Message** %FM-3-LABELERROR: Incorrect label to [chars] vlan label attribute copy callback srclabel [dec], dstlabel [dec]

**Explanation** The Feature Manager attribute copy callback was called with an incorrect source or destination label.

**Recommended Action** Enter the **show running-config** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FM-3-NOTEMPTY: Illegal copy of attribute to non empty [chars] vlan label [dec]

**Explanation** The Feature Manager attribute copy callback was called with a destination label already being used by a VLAN or routed port.

**Recommended Action** Enter the **show running-config** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FM-3-UNKNOWNACTION: Unknown VMR access group action [hex]

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FM-4

**Error Message** %FM-4-EXCESSESECONDARY: More than [dec] secondary IP addresses configured on interface [chars]

**Explanation** When secondary IP addresses are configured on an interface, the hardware is usually programmed so that the ICMP redirect functionality on the CPU is not notified of packets sent between two subnets configured on the same interface. If many secondary IP addresses are configured on the same interface it becomes impractical to program the hardware in this manner. This message is logged, and the CPU will be notified of every packet sent between two subnets on this interface. No ICMP redirects will be sent in error, but the CPU usage may increase because of the additional notifications.

**Recommended Action** Enter the **no ip redirects** command on the interface to reduce the CPU load on the system.

**Error Message** %FM-4-MPLS\_RSVD\_VLAN\_ERROR: Failed attempt to remove the default feature from MPLS reserved vlan [chars]

**Explanation** MPLS reserved vlan's have a default 'permit ip any any' ACL configured. In some corner cases an event is generated to unconfigure this default feature. Such instances should be blocked.

**Recommended Action** No functional impact. Contact TAC with the traceback and also with the configuration steps that lead to the error message.

**Error Message** %FM-4-FLOWMASK\_REDUCED: Features configured on interface [chars] have conflicting flowmask requirements, some features may work in software

**Explanation** The configured features for this interface have a flow mask conflict. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

**Recommended Action** Redefine and reapply or unconfigure one or more features to avoid the conflict.

**Error Message** %FM-4-IPSG\_VACL: VACL Capture & IPSG conflict on i/f [chars]

**Explanation** Because VACL capture and IPSG is not supported on the same VLAN port, VACL capture will be inactive. To activate VACL capture, reconfigure the feature after removing IPSG.

**Recommended Action** Remove either IPSG or VACL capture on this interface.

**Error Message** %FM-4-L2\_DYN\_TCAM\_EXCEPTION: Failed to install Dynamic TCAM entry to filter Layer 2 traffic, error status: [dec], host IP address: [IP\_address], interface: [chars]

**Explanation** There is an error in installing the per-user policies in the Dynamic TCAM region to filter Layer 2 traffic. The TCAM might be full. As a result, host ingress traffic will be subjected to the default interface ACL.

**Recommended Action** Attempt to free up TCAM resources.

**Error Message** %FM-4-L2EOU\_INSP: INSPECTION & L2EOU conflict on i/f [chars]

**Explanation** The inspection feature and the Layer 2 EAP over UDP (L2EOU) feature are not supported on the same VLAN. The inspection feature will be inactive. To activate the inspection feature, reconfigure it after removing the L2EOU feature.

**Recommended Action** Remove either the Layer 2 EAP over UDP (L2EOU) feature or the inspection feature from the interface.

**Error Message** %FM-4-L2EOU\_VACL: VACL Capture & L2EOU conflict on i/f [chars]

**Explanation** Because VACL capture and the Layer 2 EAP over UDP (EOU) feature are not supported on the same VLAN port, VACL capture will be inactive. To activate VACL capture, reconfigure the feature after removing the L2EOU feature.

**Recommended Action** Remove either the Layer 2 EAP over UDP (EOU) feature or VACL capture on this interface.

**Error Message** %FM-4-TCAM\_ADJ: Hardware ACL adjacency capacity exceeded

**Explanation** The hardware does not have the capacity to handle all of the configured adjacencies.

**Recommended Action** The configured policies have too many adjacencies to fit in the hardware. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Reduce the number of adjacencies in the policies.

**Error Message** %FM-4-TCAM\_DYN\_ENTRY\_EXCEPTION: Failed to install Dynamic TCAM entry in TCAM for Interface:[chars]

**Explanation** Dynamic installation of an ACE failed because of TCAM resource exhaustion. Layer 3 traffic will be handled by the software.

**Recommended Action** Attempt to free up TCAM resources.

**Error Message** %FM-4-TCAM\_MASK: Hardware TCAM MASK entry capacity exceeded

**Explanation** The hardware TCAM has exhausted its available storage and does not have the capacity to store all configured ACLs.

**Recommended Action** If the ACL merge algorithm is currently binary decision diagrams (BDD), space could be freed by changing the merge algorithm to order dependent merge (ODM). Enter the **show fm summary** command to determine the current merge algorithm. Enter the **mls aclmerge algorithm odm** command to change the merge algorithm from BDD to ODM. Enter the **mls tcam priority** command to prioritize interfaces for hardware switching. Attempt to share the same ACLs across multiple interfaces in order to reduce TCAM resource contention. If server load balancing is configured, enter the **mls ip slb search wildcard rp** command to reduce the amount of TCAM space used by server load balancing. After you enter the command, server load balancing will increase its utilization of the route processor.

## FMCORE Messages

This section contains Core Feature Manager (FMCORE) messages.

### FMCORE-2

**Error Message** %FMCORE-2-ACL\_FAILURE: Interface [chars] traffic will not comply with ACLs in [chars] direction(s)

**Explanation** ACLs will not be applied on traffic for the specified interface because of a TCAM resource contention.

**Recommended Action** The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

**Error Message** %FMCORE-4-RACL\_REDUCED: Interface [chars] routed traffic will be software switched in [chars] direction

**Explanation** TCAM resource contention prevents ACLs from being applied in the TCAM for this interface. The traffic on this interface will be sent to software so that the ACLs can be applied.

**Recommended Action** The configured ACLs are too large to all fit in the hardware TCAM. Enter the **mls tcam priority** command to prioritize the interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

**Error Message** %FMCORE-2-VACL\_FAILURE: Interface [chars] traffic will not comply with VACLs in [chars] direction(s)

**Explanation** VACLs will not be applied on traffic for this interface because of a TCAM resource contention.

**Recommended Action** The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

## FMCORE-4

**Error Message** %FMCORE-4-RACL\_REDUCED: Interface [chars] routed traffic will be software switched in [chars] direction

**Explanation** A TCAM resource contention prevents ACLs from being applied in the TCAM for the specified interface. The traffic on the interface will be sent to software so that the ACLs can be applied.

**Recommended Action** The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

## FMCORE-6

**Error Message** %FMCORE-6-RACL\_ENABLED: Interface [chars] routed traffic is hardware switched in [chars] direction

**Explanation** Earlier TCAM resource contention may have prevented ACLs from being applied in the TCAM for this interface. It has been enabled and traffic on this interface is hardware switched.

**Recommended Action** No need to take an action for this as it is an informational message not an error message.

## FM\_EARL6 Messages

This section contains Enhanced Address Recognition Logic 6 Feature Manager (FM\_EARL6) messages.

### FM\_EARL6-4

**Error Message** %FM\_EARL6-4-RACL\_REDUCED\_MCAST\_RATELIM\_WARN: Enabling acl [chars] rate-limiter will cause Multicast traffic to be dropped in hardware on interface [chars] in [chars] direction

**Explanation** A TCAM resource contention prevents routed ACLs from being programmed in the TCAM for the specified interface in the specified direction. All Layer 3 traffic will be sent to CPU to have RACLs enforced in software. Due to a lack of resources, multicast special VMRs cannot be programmed. In this condition, rate limiting for traffic bridged to the CPU by the ACL is incompatible with the status of the multicast interface and will cause multicast traffic to be dropped in the hardware.

**Recommended Action** Do not enter the **mls unicast acl {input | output}** command.

**Error Message** %FM\_EARL6-4-VACL\_PVLAN: VACL config is NOT supported on secondary Vlan: [chars] and will be removed

**Explanation** Current implementation of the FM does not support the configuration of VACLs on secondary VLANs. The VACL configuration is removed from the VLAN interface once it becomes a secondary private VLAN. Both the hardware and the software will be updated accordingly.

**Recommended Action** Make the VLAN a primary VLAN or a regular (nonprivate) VLAN. Reapply the VLAN filter.

## FM\_EARL7 Messages

This section contains Enhanced Address Recognition Logic 7 Feature Manager (FM\_EARL7) messages.

### FM\_EARL7-2

**Error Message** %FM\_EARL7-2-IPV6\_PORT\_QOS\_MCAST\_FLOWMASK\_CONFLICT: QoS configuration on port [chars] conflicts for flowmask with IPv6 multicast forwarding on SVI interface [chars]

**Explanation** The port-based QoS microflow policing configuration for this interface has a flow mask conflict with IPv6 multicast forwarding. The traffic on the SVI interface will be sent to the software under this condition.

**Recommended Action** Unconfigure the latest configuration change, modify the conflicting QoS configuration, and reapply.

**Error Message** %FM\_EARL7-2-IPV6\_QOS\_MCAST\_FLOWMASK\_CONFLICT: QoS configuration on interface [chars] conflicts for flowmask with IPv6 multicast forwarding, traffic may be switched in software

**Explanation** The QoS microflow policing configuration for this interface has a flow mask conflict with IPv6 multicast forwarding. The traffic on this interface will be sent to the software under this condition.

**Recommended Action** Unconfigure the latest configuration change, modify the conflicting QoS configuration, and reapply.

**Error Message** %FM\_EARL7-2-SWITCH\_PORT\_QOS\_FLOWMASK\_CONFLICT: QoS configuration on switch port [chars] conflicts for flowmask with feature configuration on SVI interface [chars]

**Explanation** The QoS configuration on the specified port has a conflict with a feature configuration on an SVI interface. QoS or other features might not function correctly under these circumstances.

**Recommended Action** Unconfigure the latest configuration change, modify the conflicting configuration, and reapply the features.

## FM\_EARL7-4

**Error Message** %FM\_EARL7-4-FEAT\_CONFLICT\_ON\_IDB: IP ADMISSSION feature conflicts with other features on interface [chars], feature will work in software

**Explanation** The IP admission feature conflicts with other features on this interface.

**Recommended Action** Unconfigure any conflicting features and reapply the IP admission feature.

**Error Message** %FM\_EARL7-4-FEAT\_FLOWMASK\_REQ\_CONFLICT: Feature [chars] requested flowmask [chars] conflicts with other features on interface [chars], flowmask request Unsuccessful for the feature

**Explanation** The flow mask requested by the specified feature conflicts with other features. The requested flow mask cannot be programmed for the feature.

**Recommended Action** Redefine and reapply the feature, or unconfigure one or more features and reapply the specified feature to avoid the conflict.

**Error Message** %FM\_EARL7-4-FEAT\_FLOWMASK\_REQ\_CONFLICT\_ON\_SP: Flowmask requested on interface [chars] conflicts with other features on interface for Protocol [chars], flowmask request Unsuccessful for the feature

**Explanation** The flow mask requested by the feature conflicts with other features. The requested flow mask cannot be programmed for the feature.

**Recommended Action** Redefine and reapply the feature, or reconfigure one or more features and reapply the feature to avoid the conflict.

**Error Message** %FM\_EARL7-4-FLOW\_FEAT\_FLOWMASK\_REQ\_FAIL: Flowmask request for the flow based feature [chars] for protocol [chars] is unsuccessful, hardware acceleration may be disabled for the feature

**Explanation** The flow mask request for the flow-based feature is unsuccessful. This condition might occur because of a TCAM resource exception, a flow mask registers resource exception, or an unresolvable flow mask conflict with other NetFlow-based features. The NetFlow shortcut installation and hardware acceleration for the feature might be disabled under this condition, and the feature might be applied in the software.

**Recommended Action** Determine the netflow shortcut installation enable/disable status for the feature by entering the **show fm fe flowmask** command. If the NetFlow shortcut installation and hardware acceleration is disabled for the feature, reconfigure or unconfigure some of the other features to remove the TCAM resource exception or the flow mask conflict/flow mask resource exception condition. Reapply the feature for the flow mask request to succeed, and reenables the NetFlow shortcut installation for the feature.

**Error Message** %FM\_EARL7-4-FEAT\_QOS\_FLOWMASK\_CONFLICT: Features configured on interface [chars] conflict for flowmask with QoS configuration on switch port [chars], traffic may be switched in software

**Explanation** The configured features for the specified interface have flow mask conflicts with the QoS configuration on the switch port. The traffic on this interface will be sent to software.

**Recommended Action** Undo the latest configuration change, modify the conflicting QoS configuration on the switch port, and reapply the features.

**Error Message** %FM\_EARL7-4-FLOW\_FEAT\_FLOWMASK\_REQ\_FAIL: Flowmask request for the flow based feature [chars] for protocol [chars] is unsuccessful, hardware acceleration may be disabled for the feature

**Explanation** The flow mask request for the flow-based feature is unsuccessful. This may happen due to TCAM resource exception or flow mask registers resource exception or due to unresolvable flow mask conflict with other NetFlow-based features. NetFlow shortcut installation and hardware acceleration for the feature may be disabled under this condition and the feature may be applied in software.

**Recommended Action** Check the NetFlow shortcut installation enable/disable status for the feature by entering the **show fm fe flowmask** command. If NetFlow shortcut installation/hardware acceleration is disabled for the feature, reconfigure or unconfigure some of the other features to remove the TCAM resource exception or the flow mask conflict/flow mask resource exception condition. Reapply the feature for the flow mask request to succeed and reenables the NetFlow shortcut installation for the feature.

**Error Message** %FM\_EARL7-4-MLS\_FLOWMASK\_CONFLICT: mls flowmask may not be honored on interface [chars] due to flowmask conflict

**Explanation** The configured MLS flow mask conflicts with other features or with the QoS configuration. The traffic on the specified interface will be sent to the software. NDE might not function correctly for the specified interface under this condition.

**Recommended Action** Remove the conflicting configuration, and reconfigure the MLS flow mask.

**Error Message** %FM\_EARL7-4-MLS\_FLOWMASK\_NO\_TCAM\_RESOURCES: mls flowmask may not be honored on interface [chars] due to TCAM resource shortage

**Explanation** The requirements for the configured features exceed the TCAM resources. The flow mask may not be programmed in the hardware. Under this condition, the traffic on the specified interface is sent to the software. NDE may not function correctly for this interface.

**Recommended Action** Redefine and reapply some of the features, or unconfigure one or more features.

**Error Message** %FM\_EARL7-4-MLS\_IPV6\_FORCED\_COMPRESS\_MODE: Use IPv6 mask values of 88 or lower in forced compress mode for consistent processing of incompressible IPv6 addresses in both hardware and software.

**Explanation** IPv6 compress mode is a hardware feature. If compress mode is force-enabled and IPv6 ACLs are built with mask values 89 or greater, inconsistent behavior in IPv6 ACL processing could result with incompressible addresses. Using IPv6 mask values of 88 and lower while forcing compress mode ensures proper hardware processing of IPv6 ACL entries.

**Recommended Action** Use IPv6 mask values of 88 or lower in forced compress mode for consistent processing of incompressible IPv6 addresses in both hardware and software.

**Error Message** %FM\_EARL7-4-NO\_FLOWMASK\_REGISTERS: Feature configuration on interface [chars] could not allocate required flowmask registers, traffic may be switched in software

**Explanation** The flow mask requirements for configured features on the specified interface cannot be met because there are no available flow mask registers. The traffic on this interface will be sent to software.

**Recommended Action** Remove one or more NetFlow-based features or QoS microflow policing from the configuration, and reapply the features.

**Error Message** %FM\_EARL7-4-RACL\_REDUCED\_MCAST\_RATELIM\_WARN: Enabling acl [chars] rate-limiter will cause Multicast traffic to be dropped in hardware on interface [chars] in [chars] direction

**Explanation** A TCAM resource contention prevents routed ACLs from being programmed in TCAM for the specified interface in the specified direction. All Layer 3 traffic will be sent to CPU to have RACLs enforced in software. Due to a lack of resources, multicast special VMRs cannot be programmed. In this condition, rate limiting for traffic bridged to CPU by the ACL is incompatible with the status of the multicast interface and will cause multicast traffic to be dropped in hardware.

**Recommended Action** Do not enter the **mls unicast acl {input | output}** command.

**Error Message** %FM\_EARL7-4-VACL\_PVLAN: VACL config is NOT supported on secondary Vlan: [chars] and will be removed

**Explanation** The current implementation of the Feature Manager does not support the configuration of VACLs on secondary VLANs. The VACL configuration is removed from the VLAN interface once it becomes a secondary private VLAN. Both the hardware and the software will then be updated accordingly.

**Recommended Action** Change the VLAN to be a primary VLAN or a regular (nonprivate) VLAN and reapply the VLAN filter.

## FPD\_MGMT Messages

This section contains FPD Management Subsystem (FPD\_MGMT) messages.

### FPD\_MGMT-2

**Error Message** %FPD\_MGMT-2-CREATE\_FAIL: Couldn't create [chars].

**Explanation** The system does not have enough free main memory to create the specified resource.

**Recommended Action** Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Enter the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FPD\_MGMT-3

**Error Message** %FPD\_MGMT-3-BNDL\_CARD\_TYPE\_MISMATCH: The [chars] file does not contain the card type ([hex]) in the image bundle to indicate the support of the target card. Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The image bundle in the specified file does not contain a correct card type value for the target card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BNDL\_CRC\_CHECK\_FAIL: The [chars] file contains a corrupted image bundle - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The file failed the CRC checking process. This failure indicates a corrupt FPD image bundle or package file.

**Recommended Action** Try to download again the required package from the Cisco Software Center website as the specified one might be corrupted. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BNDL\_NAME\_PREFIX\_MISMATCH: The [chars] file contains a bundle name prefix ([chars]) that does not match with the expected value of "[chars]" for the image bundle. Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The content of the selected FPD image bundle does not match its filename.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BNDL\_WRONG\_HDR\_LEN: The [chars] file contains wrong header length for the image bundle: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the target card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BNDL\_WRONG\_MAGIC\_NUM: The [chars] file contains a wrong magic number for the image bundle: [hex] (expected [hex]). Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the target card or the file could be corrupted.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BNDL\_WRONG\_SIZE: The [chars] file contains incorrect image bundle size: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the target card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-BUNDLE\_EXTRACT\_ERROR: Cannot extract the [chars] bundle from [chars] - [chars]

**Explanation** There has been a bundle file-extraction error. The cause of the failure is specified in the message. The specified file might not be a valid FPD image package file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-CLOSE\_FAILED: Failed to close [chars] file.

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-DUPLICATE\_UPGRADE\_RESULT: Upgrade result already received for the FPD image upgrade of FPD ID [int] for [chars] card in [chars].

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-FPD\_UPGRADE\_FAILED: [chars] (FPD ID=[int]) image upgrade for [chars] card in [chars] has FAILED.

**Explanation** The FPD image upgrade process has failed for the specified device.

**Recommended Action** Retry the upgrade operation again. If the affected card remains disabled by the system after attempts to retry the upgrade, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-IMG\_CRC\_CHECK\_FAILED: The FPD image for [chars] (FPD ID [int]) in [chars] file is corrupted - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

**Explanation** The image failed the CRC checking process, this indicates a corrupt FPD image bundle or package file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-IMG\_DATA\_UNCOMPRESS\_ERROR: Could not uncompress [chars] FPD image for [chars] in [chars].

**Explanation** An error has been detected during the uncompress operation of the compressed FPD image data.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-IMG\_VER\_NOT\_FOUND: FPD image version information is not available for [chars] card in [chars]. All the FPD images will be upgraded to recover from this error.

**Explanation** The FPD image version information for the specified card is not available because the system was not able to extract this information for all the FPDs in the card. This could be the result of a corrupted FPD image from a power failure.

**Recommended Action** If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, follow the recommended action described for the FPD\_MGMT-5-CARD\_DISABLED message.

**Error Message** %FPD\_MGMT-3-INCOMP\_BNDL\_VER: The selected [chars] file contain an image bundle that has a version number that is incompatible for this IOS release - [chars]. Selected version = [int].[int], minimum compatible version = [int].[int]. Please make sure that this is a valid FPD image [chars] file for card in [chars].

**Explanation** The version of the selected FPD image bundle does not contain a valid version number that is compatible for the Cisco IOS release. The major version number should be the same and the minor version number should be at least equal to the minimal required version.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-INCOMP\_IMG\_VER: Incompatible [chars] (FPD ID=[int]) image version detected for [chars] card in [chars]. Detected version = [int].[int], minimum required version = [int].[int]. Current HW version = [int].[int].

**Explanation** An incompatible FPD image version has been detected. The FPD image must be upgraded either automatically or manually to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, the card will be disabled.

**Recommended Action** If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, follow the recommended action described for the FPD\_MGMT-5-CARD\_DISABLED message.

**Error Message** %FPD\_MGMT-3-INVALID\_IMAGE\_SIZE: The [chars] FPD image from [chars] file does not have a valid image size: expected size = [dec] bytes, actual size = [dec] bytes.

**Explanation** The size of the specified FPD image does not have the expected size. The FPD image bundle or package might not be a valid file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-INVALID\_IMG\_VER: Invalid [chars] (FPD ID=[int]) image version detected for [chars] card in [chars].

**Explanation** The specified field programmable device contains an invalid version for the FPD image, because the system was not able to extract this information from the specified card. A failed upgrade attempt might have corrupted the FPD image identification on the device.

**Recommended Action** If the automatic upgrade feature is not enabled, the affected card will be disabled. If this happens, follow the recommended action described for the FPD\_MGMT-5-CARD\_DISABLED message.

**Error Message** %FPD\_MGMT-3-INVALID\_PKG\_FILE: The indicated file ([chars]) is not a valid FPD image package file - [chars]

**Explanation** The file format does not appear to be a valid FPD image package.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-INVALID\_PKG\_FILE\_SIZE: The indicated file ([chars]) does not have a valid FPD image package file size, minimum size = [dec] bytes.

**Explanation** The file size of the specified FPD image package does not meet the required minimum size. The file is too small to be a valid FPD image package file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-INVALID\_UPGRADE\_RESULT: Invalid upgrade result '[int]' received for the FPD image upgrade of [chars] (FPD ID=[int]) for [chars] card in [chars].

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-IPC\_FAILED: Failed to send IPC message to [chars] in [chars] - [chars]

**Explanation** The system failed to send a message via IPC to the specified card. The cause of the specific IPC failure is specified in the message text.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FPD\_MGMT-3-MAJOR\_VER\_MISMATCH: Major image version mismatch detected with [chars] (FPD ID=[int]) for [chars] card in [chars]. Image will need to be [chars] from version [int].[int] to at least a minimum version of [int].[int]. Current HW version = [int].[int].

**Explanation** A major image version mismatch has been detected. This incompatibility will need to be resolved by doing an upgrade or downgrade operation, either automatically, or manually, to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, then the card will be disabled.

**Recommended Action** If the automatic upgrade feature is not enabled, the affected card will be disabled. If this happens, you can perform the upgrade using the **upgrade hw-module** privileged EXEC command. For more information about these commands, refer to the FPD image upgrade feature documentation in the software configuration guide for the target card.

**Error Message** %FPD\_MGMT-3-MISSING\_BUNDLE\_ENTRY: Failed to find a matching entry in the programmable device bundle information table.

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-MISSING\_DEV\_INFO: Could not find [chars] (FPD ID=[int]) information for [chars] card in [chars].

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-MISSING\_IMAGE: Could not find the required [chars] image (FPD ID=[int] and FPD version=[int].[int].[int]) compatible with HW version=[int].[int]) from the [chars]-fpd.bundle in [chars] file. Please make sure that this is a valid FPD image [chars] file for [chars] card in [chars].

**Explanation** The specified FPD image bundle or package file might not be the correct one. If this is an FPD image package file, then an incompatible package file might have been renamed with a filename that matched the one that the system is expecting for this Cisco IOS software release. You should never rename an FPD image package file name.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-OPEN\_FAILED: Failed to open [chars] ([chars]). Please make sure that the required file is in a valid path.

**Explanation** The system cannot access the required file from the specified URL.

**Recommended Action** Ensure that the specified URL is a valid path and the system has access to the file system where the file has been placed.

**Error Message** %FPD\_MGMT-3-OUT\_OF\_MEMORY: Could not allocate the required [dec] bytes of memory.

**Explanation** The system does not have enough free main memory to download the bundle file.

**Recommended Action** Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Enter the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FPD\_MGMT-3-PKG\_VER\_MISMATCH\_NOTE: The FPD image package being used ([chars]) is not the right version for this IOS version (it appears that a '[chars]' package was renamed to '[chars]'). An attempt to find the required FPD image will still be performed with this package.

**Explanation** The indicated FPD image package that is being used in FPD automatic upgrade does not contain the correct version information for the Cisco IOS version that is running in the system. This condition can occur if a different version of the FPD image package was renamed to match the filename that the Cisco IOS image is expecting to use. The upgrade operation will still be performed by trying to find the required FPD image from the renamed package file.

**Recommended Action** If the upgrade operation fails because the required FPD image cannot be found with the renamed FPD image package, replace the wrong package file with a valid one and perform the upgrade operation again.

**Error Message** %FPD\_MGMT-3-PKG\_FILE\_SEARCH\_FAILED: FPD image package ([chars]) cannot be found in system's flash card or disk to do FPD upgrade.

**Explanation** By default, if the **upgrade fpd path** *fpd-pkg-url* global configuration command is not configured, then the system will try to locate the required FPD image package file from removable flash cards or disks that are accessible by the system for an FPD upgrade. This message indicates that the system could not find the package file.

**Recommended Action** Make sure that the specified FPD image package file is copied into a flash card or disk that is accessible by the system, then restart the FPD upgrade by reinserting the target card or entering a system command to reload or power-cycle the target card.

**Error Message** %FPD\_MGMT-3-PKG\_VER\_FILE\_EXTRACT\_ERROR: Cannot extract the [chars] version file from [chars] - [chars]

**Explanation** There is a package version file extraction error. The cause of the failure is specified in the message. The specified file might not be a valid FPD image package file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-READ\_BNDL\_HDR\_ERROR: Failed to read the FPD bundle header from [chars] file.

**Explanation** The specified file might not be a valid FPD image bundle or package file.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-READ\_ERROR: Could not read the [chars] file.

**Explanation** The system cannot read the required file from the specified URL.

**Recommended Action** Make sure that the specified URL is a valid path and that the system has access to the file system where the file has been placed.

**Error Message** %FPD\_MGMT-3-SEND\_IMG\_FAILED: [chars] (FPD ID=[int]) image for [chars] card in [chars] has failed to be sent for upgrade operation - [chars]

**Explanation** The FPD image was not able to be sent for the upgrade operation. The system might be too busy to handle this operation. The affected card will be disabled by this failure.

**Recommended Action** Wait until the system load is lower to try again with the manual upgrade procedure by using the **upgrade hw-module** privileged EXEC command. If the symptom persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-SW\_ERROR: NULL

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-TOO\_MANY\_FPD\_ENTRIES: Too many FPD entries for the FPD Bundle Info Table. Required number of entries = [int], maximum number of entries allowed = [int].

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-UNKNOWN\_BNDL\_HDR\_FORMAT: Unknown header format version: [hex]

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-UPGRADE\_LIST\_FULL: Could not add a new entry in the FPD Management Upgrade List. No upgrade will be performed for the [chars] card in [chars].

**Explanation** There is a problem in the internal software coding. This message should not be seen under normal operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-WRONG\_IMG\_DATA\_LEN: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong data length: total data length (with padding) = [int] bytes, data length = [int] bytes. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-WRONG\_IMG\_HDR\_LEN: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong header length: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show**

**upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-WRONG\_IMG\_MAGIC\_NUM: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong magic number: [hex] (expected [hex]). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

**Explanation** The specified file might not be a valid FPD image bundle or package file for the card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FPD\_MGMT-3-WRONG\_IMG\_MAJOR\_VER: The selected FPD image for upgrade contains wrong FPD image major version number = '[int]' (expected number = '[int]') for [chars] (FPD ID [int]). Please make sure that the file being used for upgrade is a valid FPD image [chars] for card in [chars].

**Explanation** The file used for upgrade might not be a valid FPD image bundle or package file for the card.

**Recommended Action** Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FPD\_MGMT-4

**Error Message** %FPD\_MGMT-4-BYPASS\_AUTO\_UPGRADE: The automatic FPD image upgrade feature is not enabled, bypassing the image upgrade for [chars] card in [chars].

**Explanation** The automatic FPD image upgrade feature is not enabled. The incompatible image will not be automatically upgraded. The card will be disabled until the image is upgraded to a compatible version.

**Recommended Action** Enable the automatic FPD image upgrade by entering the **upgrade fpd auto** global configuration command, or enter the **upgrade hw-module** privileged EXEC command for a manual upgrade operation. For more information about these commands, refer to the FPD image upgrade feature document for the target card. (This documentation can be found in the software configuration guide for the target card.)

**Error Message** %FPD\_MGMT-4-CFG\_NOT\_SYNCED: Failed to sync "[chars]" command to standby: [chars]

**Explanation** A FPD configuration command failed to get synced to standby RP due to the indicated error condition. Usually this can happen if the standby RP hardware doesn't support the type of filesystem supported on the active one.

**Recommended Action** Configure again the command with a filesystem that is supported on both standby and active RP. To find out if a specific filesystem is also supported on standby RP, the **dir ?** command can be used to display a list of filesystem supported on both standby and active RP.

**Error Message** %FPD\_MGMT-4-UPGRADE\_EXIT: Unexpected exit of FPD image upgrade operation for [chars] card in [chars].

**Explanation** The FPD image upgrade operation was interrupted by the physical removal of the card from the system or by the use of other commands that have interrupted the normal operation of the target card. The partial upgrade operation might have left the card unusable because of corrupted FPD images.

**Recommended Action** If the card does not come up after reinserting into the system, perform the recovery upgrade operation by entering the **upgrade hw-module** privileged EXEC command. With this command, the system will attempt to reprogram the image to recover from the previous partial upgrade operation. For more information about performing a recovery upgrade operation, refer to the FPD image upgrade feature document for the target card (this documentation can be found in the software configuration guide for the target card).

**Error Message** %FPD\_MGMT-4-VERSION\_CHECK\_ABORTED: FPD image version check operation has been aborted for [chars] card in [chars] because manual upgrade has already been started.

**Explanation** The FPD image version check operation required for the automatic upgrade feature is not being performed for the specified card because the **upgrade hw-module** privileged EXEC command has already being executed. These two operations cannot be performed at the same time.

**Recommended Action** If an automatic upgrade operation is required, do not enter the **upgrade hw-module** privileged EXEC command for the manual upgrade while the target card is initializing. Enter the **show hw-module subslot fpd** command and ensure that the target card is displayed in the command output before proceeding with the manual upgrade.

## FPD\_MGMT-5

**Error Message** %FPD\_MGMT-5-CARD\_DISABLED: [chars] card in [chars] is being disabled because of an incompatible FPD image version. Note that the [chars] package will be required if you want to perform the upgrade operation.

**Explanation** The specified card contains an incompatible FPD image version, and is being disabled to avoid operational problems with the existing Cisco IOS software. This can happen if the automatic upgrade feature has not been enabled with the **upgrade fpd auto** global configuration command, if the automatic upgrade operation failed to perform the required upgrade, or because it could not find the necessary FPD image package file. Upgrade the incompatible image so that the system can enable the card.

**Recommended Action** The FPD image upgrade can be performed automatically by making sure that the automatic upgrade feature is enabled with the **upgrade fpd auto** global configuration command and the necessary FPD image package file is located in the system's default file system (for instance, disk0:) or in a location specified by the **upgrade fpd path directory-url** global configuration command. When the automatic upgrade feature is enabled, the upgrade is triggered by the reinsertion of the card into the system or the use of a system command to reload or power-cycle the target card. nother way to perform the upgrade is through the use of the **upgrade hw-module** privileged EXEC command. For more information about these commands, refer to the FPD image upgrade feature document for the target card (this documentation can be found in the software configuration guide for the target card).

**Error Message** %FPD\_MGMT-5-POST\_UPGRADE\_REMINDER: [chars] card in [chars] will require a [chars] for the FPD image upgrade to take effect.

**Explanation** The indicated card will require manual intervention after the FPD image upgrade. The specified operation is required for the upgraded FPD image to take effect.

**Error Message** No action is required.%FPD\_MGMT-5-CARD\_POWER\_CYCLE: [chars] card in [chars] is being power cycled for the FPD image upgrade to take effect.

**Explanation** The specified card is being power cycled after the FPD image upgrade. This action allows the target card to be operational with the new upgraded FPD image or images.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-5-UPGRADE\_ATTEMPT: Attempting to automatically upgrade the FPD image(s) for [chars] card in [chars]. Use 'show upgrade fpd progress' command to view the upgrade progress ...

**Explanation** The automatic FPD image upgrade feature is enabled with the **upgrade fpd auto** global configuration command. The system is currently upgrading an incompatible image version automatically.

**Recommended Action** The upgrade process can take a long time. The FPD\_MGMT-6-UPGRADE\_TIME message gives an estimate of the total upgrade time. No action is required.

## FPD\_MGMT-6

**Error Message** %FPD\_MGMT-6-BUNDLE\_DOWNLOAD: Downloading FPD image bundle for [chars] card in [chars] ...

**Explanation** The system is downloading the field programmable device image bundle to the system main memory.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-OVERALL\_UPGRADE: All the attempts to upgrade the required FPD images have been completed for [chars] card in [chars]. Number of successful/failure upgrade(s): [int]/[int].

**Explanation** All the FPD image upgrades have completed for the specified card.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-PENDING\_UPGRADE: [int] more FPD image upgrade operation will be required on [chars] in [chars] after additional power-cycle operation on the target card.

**Explanation** All upgrade operations have not completed, and additional power-cycle operations are required before the upgraded or new FPD image will be applied to the system configuration. The message text specifies the number of pending upgrade operations that will be performed. More than one power-cycle operation might be required to complete the overall upgrade process.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-UPGRADE\_PASSED: [chars] (FPD ID=[int]) image in the [chars] card in [chars] has been successfully updated from version [chars] to version [int].[int]. Upgrading time = [time-stamp]

**Explanation** The FPD image upgrade process has completed successfully for the specified device.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-UPGRADE\_RETRY: Attempting to recover from the failed upgrades ...

**Explanation** Because of an image upgrade failure, the system will attempt another upgrade operation for the same FPD image.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-UPGRADE\_START: [chars] (FPD ID=[int]) image upgrade in progress for [chars] card in [chars]. Updating to version [int].[int]. PLEASE DO NOT INTERRUPT DURING THE UPGRADE PROCESS (estimated upgrade completion time = [time-stamp]) ...

**Explanation** The FPD image upgrade process has started. Do not interrupt the upgrade operation because any interruption could render the target card unusable. Avoid actions such as removing the target card from the system, powering off the system, or using commands that can power-cycle the target card during the upgrade process.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %FPD\_MGMT-6-UPGRADE\_TIME: Estimated total FPD image upgrade time for [chars] card in [chars] = [time-stamp].

**Explanation** The estimated total time for all FPD images to be upgraded is displayed for the specified card.

**Recommended Action** This is an informational message only. No action is required.

## FPOE\_DB Messages

This section contains fabric port of exit (FPOE) messages.

### FPOE\_DB-4

**Error Message** FPOE\_DB-4-ENTRY\_USAGE\_ABOVE: FPOE DB entry usage is above [dec] %< [dec] of [dec] >

**Explanation** FPOE database entry usage went above the warning threshold.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FPOE\_DB-4-ENTRY\_USAGE\_BELOW: FPOE DB entry usage is below [dec] %< [dec] of [dec] >

**Explanation** FPOE database entry usage went below the warning threshold.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FPOE\_DB-4-ENTRY\_USAGE\_FULL: FPOE DB entry usage is full <[dec] of [dec] >

**Explanation** The FPOE database entry usage is full.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FPOE\_DB-4-ENTRY\_USAGE\_NOT\_FULL: FPOE DB entry usage is not full <[dec] of [dec] >

**Explanation** The FPOE database entry usage is not full.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# FR Messages

This section contains Frame Relay (FR) messages.

## FR-3

**Error Message** %FR-3-FR\_PVC\_STATUS\_Q\_CREATE\_ERROR: FR PVC status event queue error: failed to create queue

**Explanation** Unable to create FR PVC status event queue

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FR-3-MAP\_DELETE\_ERROR: [chars]

**Explanation** An error occurred while deleting a Frame Relay map.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FR-3-MFR\_UNEXPECDEVENT: MFR Timer process error: event table is NULL for event [dec], state [dec]

**Explanation** The event was ignored because the state transition table is NULL. Normal processing continues.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FR-3-SVC\_SETUP: [chars]: interface [chars]: DLCI [dec]

**Explanation** An error occurred while attempting to set up a Frame Relay SVC. There may have been an attempt to set up an SVC using a DLCI that is already in use.

**Recommended Action** Check if the DLCI is already in use. For example, a PVC may be configured to use the same DLCI by entering the **show frame-relay pvc** command. If so, remove the configuration.

## FR-5

**Error Message** %FR-5-CONVERT\_ROUTE: Converting route pair to connect

**Explanation** A pair of Frame Relay routes is being converted to connections.

**Recommended Action** No action is required.

## FR\_ADJ Messages

This section contains Frame Relay adjacency messages.

**Error Message** %FR\_ADJ-3-ADD\_MEMBER: Unable to add adjacency for vc-bundle [chars] member [dec]

**Explanation** An error occurred while adding an adjacency for a VC-bundle member.

**Recommended Action** Delete the VC bundle and reconfigure on the same interface.

**Error Message** %FR\_ADJ-3-ARRAY\_FULL: Unable to setup adjacencies for vc-bundle [chars]

**Explanation** An error occurred while setting up VC-bundle adjacencies.

**Recommended Action** Try shutting down the subinterface on which the VC bundle is configured. After a minute or so, verify that the adjacencies on the subinterface have been deleted. Reconfigure the VC bundle.

**Error Message** %FR\_ADJ-3-ARRAY\_INDEX\_ERROR: Adjacency array index is incorrect for vc-bundle [chars] member [dec]

**Explanation** An error occurred while setting up VC-bundle adjacencies.

**Recommended Action** Try shutting down the subinterface on which the VC bundle is configured. After a minute or so, verify that the adjacencies on the subinterface have been deleted. Reconfigure the VC bundle.

## FR\_HA Messages

This section contains frame relay redundancy messages.

### FR\_HA-3

**Error Message** %FR\_HA-3-ISSU: [chars]: [chars]

**Explanation** A Frame Relay ISSU error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FR\_HA-3-SYNC: [chars]: code [dec]

**Explanation** An error occurred when synchronizing the Frame Relay state to the standby route processor. This may affect nonstop forwarding capability on Frame Relay interfaces during and after switchover until the state is recovered through normal protocol operation.

**Recommended Action** Reset the standby processor to attempt the synchronization again. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# FRR\_OCE Messages

This section contains Fast Reroute OCE messages.

## FRR\_OCE-3

**Error Message** %FRR\_OCE-3-GENERAL: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FRR\_OCE-3-INVALIDPAR: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FRR\_OCE-3-NULLPOINTER: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FR\_RP Messages

This section contains Frame Relay Route Processor (FR\_RP) messages.

### FR\_RP-3

**Error Message** FR\_RP-3-IPC\_STATS\_INVALID\_DLCI: Error processing IPC msg - msg type [chars]

**Explanation** An error occurred while an IPC statistics message was being processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FR\_RP-3-IPC\_STATS\_INVALID\_INTERFACE: Error processing IPC msg - msg type [chars]

**Explanation** An error occurred while an IPC statistics message was being processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FR\_RP-3-IPC\_STATS\_INVALID\_MSG: Error processing IPC msg - msg type [chars]

**Explanation** An error occurred while an IPC statistics message was being processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** FR\_RP-3-IPC\_STATS\_MISC: Error processing IPC msg - [chars]

**Explanation** An error occurred while an IPC statistics message was being processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FR\_VCB Messages

This section contains Frame Relay VC bundle messages.

### FR\_VCB-3

**Error Message** FR\_VCB-3-ADJ\_SRC\_ERROR: Error sourcing adjacency - vc-bundle [chars] dlci [dec]

**Explanation** An error occurred while setting up the adjacency for a member PVC.

**Recommended Action** Reconfigure the VC bundle. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FR\_VCB-3-BUMPING: Bumping error - vcb [chars] - [chars]

**Explanation** An error occurred while bumping traffic in a VC bundle.

**Recommended Action** As a workaround, reconfigure the VC bundle to avoid bumping.

**Error Message** %FR\_VCB-3-CONFIG: Configuration error - vcb [chars] - [chars]

**Explanation** An error occurred while interpreting the VC bundle configuration.

**Recommended Action** Try reconfiguring the VC bundle.

**Error Message** %FR\_VCB-3-FIBSW\_MISSING\_TABLE\_ENTRY: FIB switching error - vc-bundle [chars]

**Explanation** An error occurred while FIB switching packet(s) across a VC bundle.

**Recommended Action** As a workaround, delete the VC bundle and use a PVC to substitute for the VC bundle.

**Error Message** %FR\_VCB-3-PROCESS\_SWITCHING: Switching error - vcb [chars] - [chars]

**Explanation** An error occurred while switching packets across a VC bundle.

**Recommended Action** As a workaround, delete the VC bundle and employ a PVC to substitute for the VC bundle.

## FR\_VCB-5

**Error Message** %FR\_VCB-5-UPDOWN: FR VC-Bundle [chars] changed state to [chars]

**Explanation** The state of a Frame Relay VC bundle changed to up/down.

**Recommended Action** This is an informational message only. No action is required.

## FR\_VIP Messages

This section contains Frame Relay VIP messages.

## FR\_VIP-3

**Error Message** %FR\_VIP-3-INCONSISTENT: Invalid state on VIP: DLCI [dec]: Slot [dec]: Error code [dec]

**Explanation** An error occurred while the Frame Relay state of the VIP was being processed.

**Recommended Action** Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot.

**Error Message** %FR\_VIP-3-MISSING\_STATE: Missing state on VIP: DLCI [dec]: Slot [dec]

**Explanation** An error occurred while an IPC statistics unit was being prepared.

**Recommended Action** Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot.

**Error Message** %FR\_VIP-3-SWITCHING: [chars] DLCI [dec]: [chars]

**Explanation** An error was detected while a packet was being switched on the VIP.

**Recommended Action** Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot, or unconfigure then reconfigure the interface. If this does not solve the problem, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FR\_VIP-5

**Error Message** %FR\_VIP-5-FLUSH: Flushing frame relay state

**Explanation** The Frame Relay state of the VIP card is being cleared.

**Recommended Action** No action is required.

## FS\_IPHC Messages

This section contains Fast IP Header Compression messages.

## FS\_IPHC-2

**Error Message** %FS\_IPHC-2-LC\_IPHC\_SETUP\_FAIL: Failed to initialise or allocate memory for IP Compression database.

**Explanation** The IP compression main database could not be created because of a lack of memory resources. The line card cannot allocate memory for an IP compression database.

**Recommended Action** If possible, add more memory to the VIP. Obtain more free memory on the VIP by reducing the features that are used or buffer allocations. Enter the **ip rtp compression-connections** command in interface configuration mode to reduce the number of contexts configured on all interfaces on the affected line card.

## FS\_IPHC-4

**Error Message** %FS\_IPHC-4-LC\_IPCSENDFAIL: LC unable to send IPHC msg to RP ([int])

**Explanation** The IP compression main database could not be created because of a lack of memory resources. The line card cannot allocate memory for an IP compression database.

**Recommended Action** If possible, add more memory to the VIP. Obtain more free memory on the VIP by reducing the features that are used or buffer allocations. Enter the **ip rtp compression-connections** command in interface configuration mode to reduce the number of contexts configured on all interfaces on the affected line card.

**Error Message** %FS\_IPHC-4-RP\_NOIPCBUFFER: Unable to malloc IPC msg buffer ([int]) on RP

**Explanation** The line card was unable to send IPHC information to the route processor because of a lack of memory in its private memory pool.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FTTM Messages

This section contains Full Ternary TCAM Manager (FTTM) messages.

## FTTM-3

**Error Message** %FTTM-3-ERROR: [chars]

**Explanation** An FTTM manager error has occurred. The cause of the error is given in the message itself.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FW-3

**Error Message** %FW-3-SMTP\_INVALID\_COMMAND: Invalid SMTP command (%s) (total %d chars) from initiator (%i:%d)

**Explanation** The CBAC code detected an invalid SMTP command in the inspected SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system. The command is rejected and the connection is reset by the firewall immediately.

**Recommended Action** This message is for informational purposes only, but may indicate a security problem.

## FW-4

**Error Message** %FW-4-ALERT\_OFF: %s, count (%d/%d) current 1-min rate: %d

**Explanation** Either the number of half-open connections or the new connection initiation rate has gone below the max-incomplete low threshold. This message indicates that the rate of incoming new connections has slowed down and is issued only when the max-incomplete low threshold is crossed.

**Recommended Action** This message is for informational purposes only, but may indicate that an attack has stopped.

**Error Message** %FW-4-ALERT\_ON: %s, count (%d/%d) current 1-min rate: %d

**Explanation** Either the max-incomplete high threshold of half-open connections or the new connection initiation rate has been exceeded. This error message indicates that an unusually high rate of new connections is coming through the firewall, and a DOS attack may be in progress. This message is issued only when the max-incomplete high threshold is crossed.

**Recommended Action** This message is for informational purposes only, but may indicate a security problem.

**Error Message** %FW-4-HOST\_TCP\_ALERT\_ON: Max tcp half-open connections (%d) exceeded for host %i.

**Explanation** The max-incomplete host limit of half-open TCP connections has been exceeded. This message indicates that a high number of half-open connections is coming to the protected server, and may indicate that a SYN flood attack is in progress and is targeted to the specified server host.

**Recommended Action** This message is for informational purposes only, but may indicate that a SYN flood attack was attempted. If this alert is issued frequently and identified to be mostly false alarms, then the max-incomplete host threshold value is probably set too low, and there is a lot of legitimate traffic coming in to that server. In this case, the max-incomplete host parameter should be set to a higher number to avoid false alarms.

**Error Message** %FW-4-TCP\_MAJORDOMO\_EXEC\_BUG: Majordomo Execute Attack - from %i to %i

**Explanation** A bug in the Majordomo program will allow remote users to execute arbitrary commands at the privilege level of the server.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-TCP\_SENDMAIL\_BAD\_FROM\_SIG: Sendmail Invalid Sender - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-TCP\_SENDMAIL\_BAD\_FROM\_SIG: Sendmail Invalid Sender - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-TCP\_SENDMAIL\_BAD\_TO\_SIG: Sendmail Invalid Recipient - from %i to %i

**Explanation** Triggers on any mail message with a ' 'pipe' (|) symbol in the recipient field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-TCP\_SENDMAIL\_DECODE: Sendmail Decode Alias - from %i to %i

**Explanation** Triggers on any mail message with ": decode@" in the header. The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-TCP\_SENDMAIL\_INVALID\_COMMAND: Invalid SMTP command - %i to %i

**Explanation** Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system.

**Recommended Action** This is unusual traffic and may warrant investigation.

**Error Message** %FW-4-TCP\_SENDMAIL\_INVALID\_COMMAND: Invalid SMTP command - %i to %i

**Explanation** Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system.

**Recommended Action** This is unusual traffic and may warrant investigation.

**Error Message** %FW-4-TCP\_SENDMAIL\_OLD\_SIG: Archaic Sendmail Attacks - from %i to %i

**Explanation** Triggers when "wiz" or "debug" commands are sent to the SMTP port.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-UNBLOCK\_HOST: New TCP connections to host %i no longer blocked

**Explanation** New TCP connection attempts to the specified host are no longer blocked. This message indicates that the blocking of new TCP attempts to the specified host has been lifted.

**Recommended Action** This message is for informational purposes only, but may indicate a SYN flood attack was attempted to the host.

**Error Message** %FW-4-UNAVAILABLE: %s, count (%d/%d) current 1-min rate: %d

**Explanation** Either the max-incomplete high threshold of half-open connections or the new connection initiation rate has been exceeded. This error message indicates that an unusually high rate of new connections is coming through the firewall, and a DOS attack may be in progress. This message is issued only when the max-incomplete high threshold is crossed.

**Recommended Action** This message is for informational purposes only, but may indicate a security problem.

**Error Message** %FW-4-UNAVAILABLE: %s, count (%d/%d) current 1-min rate: %d

**Explanation** Either the number of half-open connections or the new connection initiation rate has gone below the max-incomplete low threshold. This message indicates that the rate of incoming new connections has slowed down and is issued only when the max-incomplete low threshold is crossed.

**Recommended Action** This message is for informational purposes only, but may indicate that an attack has stopped.

**Error Message** %FW-4-UNAVAILABLE: Archaic Sendmail Attacks - from %i to %i

**Explanation** Triggers when "wiz" or "debug" commands are sent to the SMTP port.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-UNAVAILABLE: Invalid SMTP command - %i to %i

**Explanation** Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system.

**Recommended Action** This is unusual traffic and may warrant investigation.

**Error Message** %FW-4-UNAVAILABLE: Majordomo Execute Attack - from %i to %i

**Explanation** A bug in the Majordomo program will allow remote users to execute arbitrary commands at the privilege level of the server.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-UNAVAILABLE: Max tcp half-open connections (%d) exceeded for host %i.

**Explanation** The max-incomplete host limit of half-open TCP connections has been exceeded. This message indicates that a high number of half-open connections is coming to the protected server, and may indicate that a SYN flood attack is in progress and is targeted to the specified server host.

**Recommended Action** This message is for informational purposes only, but may indicate that a SYN flood attack was attempted. If this alert is issued frequently and identified to be mostly false alarms, then the max-incomplete host threshold value is probably set too low, and there is a lot of legitimate traffic coming in to that server. In this case, the max-incomplete host parameter should be set to a higher number to avoid false alarms.

**Error Message** %FW-4-UNAVAILABLE: New TCP connections to host %i no longer blocked

**Explanation** New TCP connection attempts to the specified host are no longer blocked. This message indicates that the blocking of new TCP attempts to the specified host has been lifted.

**Recommended Action** This message is for informational purposed only, but may indicate a SYN flood attack was attempted to the host.

**Error Message** %FW-4-UNAVAILABLE: Sendmail Decode Alias - from %i to %i

**Explanation** Triggers on any mail message with "': decode@" in the header. The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-UNAVAILABLE: Sendmail Invalid Recipient - from %i to %i

**Explanation** Triggers on any mail message with a ' 'pipe' (|) symbol in the recipient field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %FW-4-UNAVAILABLE: Sendmail Invalid Sender - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

## FW-6

**Error Message** %FW-6-SESS\_AUDIT\_TRAIL: %s session initiator (%i:%d) sent %u bytes -- responder (%i:%d) sent %u bytes

**Explanation** This message documents the per-session transaction log of network activities. The message is issued at the end of each inspected session and it records the source/destination addresses and ports, as well as the number of bytes transmitted by the client and server.

**Recommended Action** This message is for informational purposes only, and can be used to collect the basic accounting for the inspected sessions.

**Error Message** %FW-6-UNAVAILABLE: %s session initiator (%i:%d) sent %u bytes -- responder (%i:%d) sent %u bytes

**Explanation** This message documents the per-session transaction log of network activities. The message is issued at the end of each inspected session and it records the source/destination addresses and ports, as well as the number of bytes transmitted by the client and server.

**Recommended Action** This message is for informational purposes only, and can be used to collect the basic accounting for the inspected sessions.

## FX1000 Messages

This section contains FX1000 messages.

### FX1000-1

**Error Message** %FX1000-1-UNAVAILABLE: %s, initialization failed, no buffer memory

**Explanation** The GigabitEthernet port initialization failed due to insufficient memory

**Recommended Action** Upgrade the GigabitEthernet Interface Processor with larger memory model. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FX1000-1-UNAVAILABLE: Could not initialize structure

**Explanation** The driver failed to initialize a structure

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FX1000-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** Possible hardware error resulted in too few GE interfaces discovered

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FX1000-3

**Error Message** %FX1000-3-UNAVAILABLE: %s, error interrupt, csr\_STATUS=%#x

**Explanation** The GigabitEthernet controller has signalled an error condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %FX1000-3-UNAVAILABLE: %s, packet too big (%d), src %e, dst %e

**Explanation** The interface detects a packet larger than what is defined by mtu

**Recommended Action** Check the other station's MTU setting LOG\_STD\_NO\_ACTION

**Error Message** %FX1000-3-UNAVAILABLE: FX1000(%d/%d), packet too big (%d), from %e

**Explanation** The interface detects a packet larger than what is defined by mtu

**Recommended Action** Check the other station's MTU setting

**Error Message** %FX1000-3-UNAVAILABLE: FX1000(%d/%d), unknown device (%x)

**Explanation** Somehow the GE PA does not contain a Gigabit controller chip

**Recommended Action** Could be a mislabeled PA

**Error Message** %FX1000-3-UNAVAILABLE: PA bay %u, device number %u: unknown device (%#x)

**Explanation** Somehow the GE PA does not contain a Gigabit controller chip

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## FX1000-5

**Error Message** %FX1000-5-UNAVAILABLE: %s cable/transceiver problem?

**Explanation** The GigabitEthernet port detects link failure, meaning that it is no longer receiving signals from the LAN. This can be caused by disconnected GigabitEthernet cabling, a transceiver (GBIC) failure, or the remote end has shutdown.

**Recommended Action** Check your GigabitEthernet wiring and port adapter. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GBIC Messages

This section contains Gigabit Interface Converter (GBIC) messages.

### GBIC-4

**Error Message** %GBIC-4-CHECK\_SUM\_FAILED: GBIC EEPROM data check sum failed for GBIC interface [chars]

**Explanation** The GBIC was identified as a Cisco GBIC, but the system was unable to read vendor-data information to verify its correctness.

**Recommended Action** Remove and reinsert the GBIC. If it fails again in the same way, the GBIC may be defective.

**Error Message** %GBIC-4-NOREAD\_VSDATA: Unable to read vendor-specific data for GBIC interface [chars]

**Explanation** The GBIC was identified as a Cisco GBIC, but the system was unable to read identifying vendor-specific information to verify its authenticity.

**Recommended Action** Remove and reinsert the GBIC. If it fails again in the same way, the GBIC may be defective.

**Error Message** %GBIC-4-UNRECOGNIZED\_EXTTYPE: GBIC interface [chars] has unrecognized extended type

**Explanation** The GBIC was identified as a Cisco GBIC, but the system does not recognize its reported extended type code.

**Recommended Action** Check the list of supported GBICs for this version of the system software. An upgrade may be required for newer GBICs. Even if unrecognized, the GBIC may still operate properly, perhaps with limited functionality.

## GBIC-6

**Error Message** %GBIC-6-UNAVAILABLE: Unrecognizable GBIC found in %s (module mask 0x%02x)

**Explanation** The GBIC presented data to the system which did not correctly identify the type of the GBIC. It will be handled as a 'generic' GBIC.

**Recommended Action** If the GBIC fails to become operational, carefully reinsert it in the slot. If it continues to fail after reinsertion, the GBIC may be defective or incompatible with the switch.

**Error Message** %GBIC-6-UNAVAILABLE: Unrecognizable GBIC found in %s (serial data 0x%02x)

**Explanation** The GBIC presented data to the system which did not correctly identify the type of the GBIC. It will be handled as a 'generic' GBIC.

**Recommended Action** If the GBIC fails to become operational, carefully reinsert it in the slot. If it continues to fail after reinsertion, the GBIC may be defective or incompatible with the switch.

## GBIC\_1000BASET Messages

This section contains Gigabit Interface Converter (GBIC) module messages.

### GBIC\_1000BASET-6

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: 1000-BaseT GBIC module is detected in %s. Speed and duplex will be autonegotiated

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on speed/duplex.

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: 1000-BaseT GBIC module is detected in %s. Speed and duplex will be autonegotiated

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on speed/duplex.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation on duplex.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on duplex.

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation on duplex.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on duplex.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation on speed.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on speed.

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation on speed.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation on speed.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation.

**Error Message** %GBIC\_1000BASET-6-UNAVAILABLE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GBIC\_1000BASET-6-GBIC\_1000BASET\_NO\_CONFIG\_NEGOTIATE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation.

**Explanation** 1000-BaseT GBIC modules only support autonegotiation.

**Recommended Action** No action is required.

## GBIC\_SECURITY Messages

This section contains Gigabit Interface Converter (GBIC) security check messages.

## GBIC\_SECURITY-4

**Error Message** %GBIC\_SECURITY-4-UNAVAILABLE: EEPROM checksum error for GBIC in %s

**Explanation** The GBIC in the port specified in the error message has invalid EEPROM data.

**Recommended Action** Remove the GBIC from the specified port.

**Error Message** %GBIC\_SECURITY-4-UNAVAILABLE: Error in reading GBIC serial ID in %s

**Explanation** Error when reading GBIC type from EEPROM

**Recommended Action** Please remove GBIC from this Port

**Error Message** %GBIC\_SECURITY-4-UNAVAILABLE: GBIC in %s failed security check

**Explanation** The GBIC in the port specified in the error message has invalid EEPROM data.

**Recommended Action** Remove the GBIC from the specified port.

**Error Message** %GBIC\_SECURITY-4-UNAVAILABLE: Internal error occurred in setup for GBIC interface %s

**Explanation** The system could not allocate resources, or had some other problem, in the setup for the specified GBIC interface.

**Recommended Action** Reload the system. If the problem persists, contact TAC.

## GBIC\_SECURITY\_CRYPT Messages

This section contains Gigabit Interface Converter (GBIC) security check messages.

### GBIC\_SECURITY\_CRYPT-4

**Error Message** %GBIC\_SECURITY\_CRYPT-4-UNAVAILABLE: GBIC in port %d has bad crc

**Explanation** The GBIC was identified as a Cisco GBIC, but it does not have valid CRC in the EEPROM data.

**Recommended Action** Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Even if the GBIC is unrecognized by the system, the GBIC may still operate properly, but might have limited functionality.

**Error Message** %GBIC\_SECURITY\_CRYPT-4-UNAVAILABLE: GBIC in port %d manufactured by an unrecognized vendor

**Explanation** The GBIC was identified as a Cisco GBIC, but the system was unable to match its manufacturer with one on the known list of Cisco GBIC vendors

**Recommended Action** Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required.

**Error Message** %GBIC\_SECURITY\_CRYPT-4-UNAVAILABLE: Identification check failed for GBIC in port %d

**Explanation** The GBIC was identified as a Cisco GBIC, but the system was unable to verify its identity

**Recommended Action** Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Otherwise, verify that the GBIC was obtained from Cisco or from a supported vendor.

## GBIC\_SECURITY\_UNIQUE Messages

This section contains Gigabit Interface Converter (GBIC) security unique messages.

### GBIC\_SECURITY\_UNIQUE-3

**Error Message** %GBIC\_SECURITY\_UNIQUE-3-UNAVAILABLE: GBIC interface %d/%d is a duplicate of GBIC interface %d/%d

**Explanation** The GBIC was identified as a Cisco GBIC, but its vendor ID and serial number match that of another interface on the system.

**Recommended Action** Cisco GBICs are assigned unique serial numbers. Verify that the GBIC was obtained from Cisco or a supported vendor

### GBIC\_SECURITY\_UNIQUE-4

**Error Message** %GBIC\_SECURITY\_UNIQUE-4-DUPLICATE\_SN: GBIC interface [dec]/[dec] has the same serial number as another GBIC interface

**Explanation** The GBIC was identified as a Cisco GBIC, but its serial number matches that of another interface on the system.

**Recommended Action** Cisco GBICs are assigned unique serial numbers. Verify that the GBIC was obtained from Cisco or a supported vendor.

# GDOI Messages

This section contains Group Domain of Interpretation (GDOI) messages.

## GDOI-1

**Error Message** %GDOI-1-GDOI\_ACE\_DENY: A Group Member ACL policy containing deny was attempted. This is not supported.

**Explanation** A Group Member ACL policy containing deny was attempted. This is not supported.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GDOI-1-GDOI\_ACL\_NUM: The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified.

**Explanation** The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GDOI-1-KS\_NO\_RSA\_KEYS: RSA Key - [chars] : Not found, Required for group [chars]

**Explanation** RSA keys are required for signing and verifying rekey messages, but no RSA keys were found in the key server.

**Recommended Action** Ask the administrator of the key server to create the required RSA key pair.

**Error Message** %GDOI-1-UNAUTHORIZED\_IDENTITY: Group [chars] received registration from unauthorized identity: [chars]

**Explanation** The registration request was dropped because the requesting device was not authorized to join the group.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GDOI-1-UNAUTHORIZED\_IPADDR: Group [chars] received registration from unauthorized ip address: [chars]

**Explanation** The registration request was dropped because the requesting device was not authorized to join the group.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GDOI-1-UNREGISTERED\_INTERFACE: Group [chars] received registration from unregistered interface.

**Explanation** Receiving registration from an unregistered interface. Processing has stopped.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GDOI-4

**Error Message** %GDOI-4-GM\_RE\_REGISTER: The IPsec SA created for group [chars] may have been expired or cleared. Re-register to KS.

**Explanation** The IPsec SA created for one group may have been expired or cleared. You need to reregister to the key server (KS).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GDOI-5

**Error Message** %GDOI-5-GM\_REGS\_COMPL: Registration complete for group [chars] using address [chars]

**Explanation** Registration was completed for the specified group.

**Recommended Action** No action is required.

## GEFC Messages

This section contains GE-FC line card messages.

## GEFC-3

**Error Message** %GEFC-3-ACCESS\_FAIL: LRC access Failed

**Explanation** An attempt to access the line card redundancy controller (LRC) has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-BDI\_E\_ALM: End-to-End Backward Defect Indication [chars]

**Explanation** An attempt to access the line card redundancy controller (LRC) has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-FPGA\_NOT\_SUPPORT: Jamesport FPGA need upgrade. slot:[dec] port:[dec] [chars] function

**Explanation** The FPGA on the Jamesport card requires an upgrade so that it can support JP2 functions.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-GEFC\_INTRPEND: Pending unexpected interrupt [addr [hex] = [hex]]

**Explanation** One or more pending unexpected interrupts have occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-GEFC\_MAGICFAIL: Magic number read failed [[chars]]

**Explanation** The FPGA has reset.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-GEFC\_PTFAILASSERTED: Unexpected portfail asserted

**Explanation** One or more unexpected port failures have been asserted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-GEFC\_RDWRFAIL: Read/write failed [[chars]]

**Explanation** A read or write error occurred while the hardware was being accessed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-IDPROM\_ACCESS\_FAIL: Access to IDPROM Failed

**Explanation** An attempt to access to the IDPROM has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-INT\_LPBK\_FAIL: Internal CardLoopback Failed

**Explanation** An attempt to perform an internal card loopback operation has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-KPA\_TIMEOUT\_ALM: Keep-alive timeout [chars]

**Explanation** Either normal packets or CDL idle packets were not received.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-LASER\_TX\_FAULT\_ALM: Optic Laser Transmit Fault [chars]

**Explanation** A transceiver laser transmittal fault has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-LOSS\_OF\_LIGHT\_ALM: Loss of Light [chars]

**Explanation** The cable for the transceiver has been cut or removed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-LOSS\_OF\_LOCK\_ALM: Transceiver CDR Loss of Lock [chars]

**Explanation** The CDR is experiencing problems while attempting to lock onto the signal.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-LOSS\_OF\_SYNC\_ALM: Transceiver Loss of Sync [chars]

**Explanation** A loss of synchronization error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_HW\_LASER\_DOWN\_ALM: Laser Disabled [chars] [chars] [chars]

**Explanation** The client laser has been disabled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_KPA\_TIMEOUT\_ALM: Keep-alive timeout [chars] [chars] [chars]

**Explanation** Normal packets or CDL idle packets were not received.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_LASER\_TX\_FLT\_ALM: Laser Transmit Fault [chars] [chars] [chars]

**Explanation** A client laser transmittal fault has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_LOSS\_OF\_LIGHT\_ALM: Transceiver Loss of Light [chars] [chars] [chars]

**Explanation** No light is being received from the client side.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_LOSS\_OF\_LOCK\_ALM: Loss of Lock [chars] [chars] [chars]

**Explanation** The GEFC has lost its lock on the signal.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_LOSS\_OF\_SYNC\_ALM: Loss of Sync [chars] [chars] [chars]

**Explanation** The GEFC has lost its synchronization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-MIB\_SFP\_VENDOR\_UNKNOWN: Unknown Vendor SFP inserted [chars] [chars] [chars]

**Explanation** The SFP is not qualified to work with Cisco products.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-TX\_CRC\_ERR\_THR\_ALM: GEFC TX CRC Error Threshold [chars]

**Explanation** The maximum threshold for transmission CRC errors has been exceeded.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-3-UNKNOWN\_SFP\_INSERTED: Unknown SFP inserted [chars]

**Explanation** An unknown SFP has been inserted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GEFC-6

**Error Message** %GEFC-6-UNAVAILABLE: Flow control become active at slot:%d port:%d

**Explanation** Flow control active

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GEFC-6-UNAVAILABLE: Flow control become inactive at slot:%d port:%d

**Explanation** Flow control deactive

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# GENERAL Messages

This section contains Zenith route processor messages.

## GENERAL-2

**Error Message** %GENERAL-2-CRITEVENT: [chars]

**Explanation** A critical error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GENERAL-3

**Error Message** %GENERAL-3-EREVENT: [chars]

**Explanation** This is a general error message to be used for sanity tests.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GENERAL-3-WSHALEVENT: [chars]

**Explanation** This message provides general error information to be used for sanity testing.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GENERIC\_SUBBLOCK Messages

This section contains generic subblock messages.

### GENERIC\_SUBBLOCK-2

**Error Message** %GENERIC\_SUBBLOCK-2-UNAVAILABLE: Failed to build message for GSB: %s

**Explanation** An attempt to build a message for distribution of generic subblock failed

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GENERIC\_SUBBLOCK-2-UNAVAILABLE: GSB %s is not ISSU aware. Cannot distribute it to ISSU-aware slots

**Explanation** This GSB is expected to be ISSU aware but it is not. IT cannot be distributed safely to ISSU-aware slots as it may not be correctly interpreted

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GENERIC\_SUBBLOCK-2-UNAVAILABLE: Late registration of GSB type %s, with id %d

**Explanation** An attempt to register a new generic subblock type was received after subblocks have already been allocated from the control structure with previously registered types

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GENERIC\_SUBBLOCK-2-UNAVAILABLE: Unpacked %d bytes and attempted to consume %d bytes for GSB: %s

**Explanation** A discrepancy was detected between length of message expected versus length of message received

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GIGASTACK-1

**Error Message** %GIGASTACK-1-UNAVAILABLE: The link neighbor of link %d of Gigastack GBIC in %s did not respond to the loop detection request. If loop topology is deployed, make sure all switches in the stack are running the latest software.

**Explanation** No acknowledgement for Gigastack loop detection request is received from one of the links on a Gigastack GBIC. Either the neighboring switch does not support Gigastack Loop breaking algorithm, or the link between the two Gigastack GBICs is broken. Under this condition, a Gigastack loop topology will not be automatically detected and the connectivity between switches in the stack could be lost.

**Recommended Action** If loop topology is used in the Gigastack, make sure the latest software is running on all switches in the stack. Check the Gigastack GBICs involved to make sure they are functioning.

## GIGASTACK-3

**Error Message** %GIGASTACK-3-UNAVAILABLE: Gigastack GBIC in %s initialization failed.

**Explanation** Gigastack GBIC failed POST.

**Recommended Action** Remove the Gigastack GBIC and re-insert it into the GBIC slot.

## GIGASTACK-6

**Error Message** %GIGASTACK-6-UNAVAILABLE: Gigastack GBIC in %s is selected as Master Loop Breaker. Link 2 of the Gigastack GBIC is disabled to break the loop.

**Explanation** Loop is detected in the Gigastack and this Gigastack GBIC is selected as the Master Loop Breaker. Link 2 of this Gigastack GBIC is disabled to break the loop.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GIGASTACK-6-UNAVAILABLE: Link loss is detected in the Gigastack loop Link 2 of the Gigastack GBIC in %s is re-enabled.

**Explanation** Loop formed by Gigastack modules is broken because of link loss. Link 2 of the Master Loop Breaker is re-enabled to replace the broken link

**Recommended Action** LOG\_STD\_NO\_ACTION

## GK Messages

This section contains GK-H.323 Gatekeeper messages.

### GK-3

**Error Message** %GK-3-SUBNET\_NOT\_FOUND: Subnet not found under specified IP address [IP\_address]/[IP\_address].

**Explanation** Not Available

**Recommended Action** Not Available

## GK-6

**Error Message** %GK-6-UNAVAILABLE: The IP address which has been changed was the gatekeeper's configured RAS address. Existing RAS clients will no longer be able to reach the gatekeeper.

**Explanation** The IP address being changed at the interface was statically assigned to the gatekeeper for its RAS signaling via the zone local command. This action will automatically replace the gatekeeper's static RAS address with the new IP address. Since the gatekeeper's old RAS address is no longer valid, existing clients which have registered to this gatekeeper via the old RAS address will no longer be able to communicate with this gatekeeper.

**Recommended Action** It is the user's responsibility to notify existing RAS clients to re-register their systems to the gatekeeper's new RAS address as shown in the show gatekeeper zone status display

**Error Message** %GK-6-UNAVAILABLE: The IP address which has been removed was the gatekeeper's configured RAS address. The system will automatically assign a new IP address (if available) to be used as the gatekeeper's RAS address. Existing RAS clients will no longer be able to reach the gatekeeper.

**Explanation** The IP address being removed at the interface was statically assigned to the gatekeeper for its RAS signaling via the zone local command. This action will automatically remove the gatekeeper's static RAS address. Since the gatekeeper no longer has a configured RAS address, the router will automatically assign an IP address (if there is any) to the gatekeeper. Existing clients which have registered to this gatekeeper via the old RAS address will no longer be able to communicate with this gatekeeper.

**Recommended Action** It is the user's responsibility to notify existing RAS clients to re-register their systems to the gatekeeper's new RAS address as shown in the show gatekeeper zone status display

**Error Message** %GK-6-UNAVAILABLE: The connection to GKTMP server %s(%i) appears to be hung and will be closed.

**Explanation** Messages are being backed up in the gatekeeper's write queue in the connection with the specified server name. The connection is assumed to have gone bad and the gatekeeper is closing the connection. This implies that messages will not be sent to that server for processing until either the gatekeeper or the server re-initiates the connection.

**Recommended Action** Check with the specified server for possible connection error.

**Error Message** %GK-6-UNAVAILABLE: The gatekeeper's RAS address has been automatically changed by the system. Existing RAS clients may no longer be able to reach the gatekeeper.

**Explanation** The IP address being changed at the interface causes the system to look for a better IP address to be used for the gatekeeper's RAS address. Existing clients which have registered to this gatekeeper via the old RAS address may no longer be able to communicate with this gatekeeper.

**Recommended Action** It is the user's responsibility to notify existing RAS clients to re-register their systems to the gatekeeper's new RAS address as shown in the show gatekeeper zone status display

# GLBP Messages

This section contains Gateway Load Balancing Protocol messages.

## GLBP-3

**Error Message** %GLBP-3-UNAVAILABLE: Cannot add MAC address %e to interface %s - not supported

**Explanation** A software or hardware error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GLBP-4

**Error Message** %GLBP-4-BADAUTH: Bad authentication received from %s, group %d

**Explanation** Two routers participating in a Gateway Load Balancing Protocol group disagree on the valid authentication string.

**Recommended Action** Use the **glbp authentication** interface command to repair the GLBP authentication discrepancy between the local system and the one whose IP address is reported.

**Error Message** %GLBP-4-DUPADDR: Duplicate address %s on %s, sourced by %e

**Explanation** The IP address in a GLBP message received on the interface is the same as the router's own IP address. This may be because of misconfiguration, or because of a malfunctioning switch

**Recommended Action** Check the configurations on all the GLBP routers, and make sure that any switches you have are functioning properly.

**Error Message** %GLBP-4-UNAVAILABLE: %s Grp %d active routers virtual IP address %s is different to the locally configured address %s

**Explanation** The GLBP virtual IP address contained in the Hello message from the Active router is different to that configured locally.

**Recommended Action** Check the configuration on all GLBP routers.

**Error Message** %GLBP-4-UNAVAILABLE: %s Grp %d address %s is already assigned on this interface

**Explanation** The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to this interface.

**Recommended Action** Check the configuration on all GLBP routers.

**Error Message** %GLBP-4-UNAVAILABLE: %s Grp %d address %s is already assigned to %s group %d

**Explanation** The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to a different GLBP group.

**Recommended Action** Check the configuration on all GLBP routers.

**Error Message** %GLBP-4-UNAVAILABLE: %s Grp %d address %s is already assigned to, or overlaps with, an address on another interface or application

**Explanation** The GLBP virtual IP address contained in the Hello message cannot be learnt as it is already assigned to, or overlaps with, an address on another interface or application.

**Recommended Action** Check the configuration on all GLBP routers.

**Error Message** %GLBP-4-UNAVAILABLE: %s Grp %d address %s is in the wrong subnet for this interface

**Explanation** The GLBP virtual IP address contained in the Hello message cannot be learnt as it is not within a subnet configured on the interface.

**Recommended Action** Check the configuration on all GLBP routers and ensure that the virtual IP address is within a configured subnet.

**Error Message** %GLBP-4-UNAVAILABLE: Bad authentication received from %s, group %d

**Explanation** Two routers participating in a Gateway Load Balancing Protocol group disagree on the valid authentication string.

**Recommended Action** Use the `glbp authentication interface` command to repair the GLBP authentication discrepancy between the local system and the one whose IP address is reported.

**Error Message** %GLBP-4-UNAVAILABLE: Duplicate address %s on %s, sourced by %e

**Explanation** The IP address in a GLBP message received on the interface is the same as the router's own IP address. This may be because of misconfiguration, or because of a malfunctioning switch

**Recommended Action** Check the configurations on all the GLBP routers, and make sure that any switches you have are functioning properly.

## GLBP-6

**Error Message** %GLBP-6-UNAVAILABLE: %s Grp %u Fwd %u state %s - %s

**Explanation** The GLBP forwarder has changed state

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %GLBP-6-UNAVAILABLE: %s Grp %u state %s - %s

**Explanation** The GLBP gateway has changed state

**Recommended Action** LOG\_STD\_NO\_ACTION

## GPRSFLTMG Messages

This section contains Global Packet Radio Service fault management messages.

### GPRSFLTMG-0

**Error Message** %GPRSFLTMG-0-UNAVAILABLE: %s

**Explanation** Two reasons for this error message, 1. DHCP Client failed to get started, this could be because of malloc failures. 2. GPRS DHCP Process failed to start

**Recommended Action** If this error message is seen it is recommended not to use this GGSN for PDP session establishment with SGSN with dynamic IP request. Check the available memory in the box and for the first reason try to get 'debug dhcp detail' before the failure. Contact your technical support representative with the error message you got.

**Error Message** %GPRSFLTMG-0-UNAVAILABLE: %s

**Explanation** A Process could not be started

**Recommended Action** Please contact your technical support representative with the error message you got and with the output of 'show gprs gtp status'.

**Error Message** %GPRSFLTMG-0-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** Available resources exhausted to continue GGSN service because of the following reasons : 1. Number of pending signaling messages reaches limit. 2. Out of Memory - Insufficient in GGSN. 3. System failure - Permanent system failure has occurred.

**Recommended Action** 1. Check whether you can increase number of PDP that can be handled by GGSN. If the problem recurs, contact your technical support representative with the error message you got and with the output of 'show gprs gtp status'.

**Error Message** %GPRSFLTMG-0-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** Available resources exhausted to continue GGSN service because of the following reasons : 1. Number of PDP reaches Limit. 2. Number of Network Initiated PDP reached percentage - Insufficient in GGSN. 3. Number of IP PDP regenerated PPP reaches limit.

**Recommended Action** 1. Check whether you can increase number of PDP that can be handled by GGSN. If the problem recurs , contact your technical support representative with the error message you got and with the output of 'show gprs gtp status'.

**Error Message** %GPRSFLTMG-0-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** You get this error messages because of one of the following reasons : 1. Path fail - No echo message is received from the GSN peer and time out. 3. GGSN service up - GGSN service starts. 4. GGSN service down - GGSN service shutdown. 5. Primary Charging Gateway down - Primary charging gateway is not reachable or unconfigured. 6. Primary Charging Gateway up - Primary Charging gateway is up or its configured . 7. Secondary Charging Gateway up - Secondary Charging Gateway is up or its configured. 8. Secondary Charging Gateway becomes unreachable or unconfigured.

**Recommended Action** Error messages with reasons 3,6 and 7 are informational. For error messages with the other reasons contact your technical support representative with the error message you got.

## GPRSFLTMG-3

**Error Message** %GPRSFLTMG-0-RESOURCE: GSN: [IP\_address], TID: [hex] [hex], APN: [chars], Reason: [dec], [chars]

**Explanation** Available resources exhausted to continue GGSN service because of the following reasons :

1. Number of PDP reaches Limit.
2. Number of Network Initiated PDP reached percentage - Insufficient in GGSN.
3. Number of IP PDP regenerated PPP reaches limit.

**Recommended Action** Check whether you can increase number of PDP that can be handled by GGSN. If the problem recurs, contact your technical support representative with the error message you got and with the output of the **show gprs gtp status** command.

## GPRSFLTMG-4

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** One of the following Mobility Related problem has occurred : 1. MS GPRS Detached. 2. MS GPRS present. 3. MS not GPRS responding for network initiated PDP - MS does not respond for packets initiated by external network. 4. MS Refused for network initiated PDP. 5. IMSI unknown for network initiated PDP.

**Recommended Action** If the problem recurs , contact your technical support representative with the error message you got

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** A PDP Activation has been failed because of one of the following reasons: 1. No RADIUS server present for Authentication - No RADIUS server is configured or configured RADIUS server is not reachable. 2. Authentication fail - Authentication failed for invalid username or password. 3. Missing PAP/CHAP in non-transparent mode - PAP/CHAP IE is missing in the packet in non-transparent mode. 4. Missing username - User name field is not present in the PDP activation Request sent.

**Recommended Action** 1. Check whether RADIUS server is configured properly and able to ping it. 2. Check whether RADIUS server is configured properly. For the other reasons copy and save the error message with the output of 'show running' command. and contact your technical support representative.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** Failed to allocate IP address dynamically because of one of the following reason: 1. a. DHCP/RADIUS server IP address has been wrongly configured in GGSN. b. DHCP/RADIUS server is reachable but the configuration to allocate IP address might be wrong. or c. Properly configured DHCP/RADIUS server is unreachable. 2. Dynamic IP allocation is disabled in the APN configuration . 3. Missing PAP/CHAP information from radius client in transparent mode - Username and Password is missing in the PDP Activation Request.

**Recommended Action** 1.a. Check whether the GGSN is configugred with the valid DHCP/RADIUS server IP address. b. Check whether DHCP/RADIUS server is configured properly to allocate IP address . c. If the configurations are fine, then check whether the server is reachable from GGSN. 2. Configure IP allocation pool as either DHCP proxy client or RADIUS client in the APN . If you could not solve the problem still contact your technical support representative with the error message you got.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** PDP activation has failed due to one of the APN related problem : 1. APN not configured - The APN requested in the PDP Request is not configured in the GGSN router. 2. Subscribe mode on APN but selection mode field not verified. 3. Duplicate static IP address to access same APN. 4. Session already exists for a different APN.

**Recommended Action** Check the APN configuration correspondingly. If that can't solve the problem, get the output of 'sh run' and 'sh gprs access-point all' , copy the error message exactly as it appears, and report to your technical support representative.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %d, %s

**Explanation** QoS negotiaion/update has failed since resources not available.

**Recommended Action** Contact your technical support representative with the error messages and the output of command 'sh gprs gtp status' .

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** You get this syslog message due to one of the following reasons : 1. Primary/Secondary Charging gateway configured/unconfigured. 2. GSN GTP' Transfer Failure - Failure in sending CDRs to Charging gateway configured. 3. GSN CGF Echo Request Failure/Restored - Failure/Success of Echo messages sent charging gateway to check the connectivity of the Charging gateway configured. 4. GSN CDR Capacity Full/Free - Status of GSN CDR buffer full/free , the subsequent packet might be dropped if the buffer is full. 5. GSN CDR Discard Notification - a status whether the GSN CDRs are getting discard/buffered.

**Recommended Action** 1. This is informational . 2. Check whether the charging gateways are configured correctly and are active with the charging functionality. 3. If the configured charging gateway is up and reachable from the GSN, check whether charging function is enabled in the gateway. 4,5. If you have configured gprs char charging-send-buffer-size with minimum bytes , you may configure maximum bytes. If the problem recurs , contact your technical support representative with the error message you got

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** A PDP Activation has been failed because of one of the following reasons: 1. No RADIUS server present for Authentication - No RADIUS server is configured or configured RADIUS server is not reachable. 2. Authentication fail - Authentication failed for invalid username or password. 3. Missing PAP/CHAP in non-transparent mode - PAP/CHAP IE is missing in the packet in non-transparent mode. 4. Missing username - User name field is not present in the PDP activation Request sent.

**Recommended Action** 1. Check whether RADIUS server is configured properly and able to ping it. 2. Check whether RADIUS server is configured properly. For the other reasons copy and save the error message with the output of 'show running' command. and contact your technical support representative.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** Failed to allocate IP address dynamically because of one of the following reason: 1. a. DHCP/RADIUS server IP address has been wrongly configured in GGSN. b. DHCP/RADIUS server is reachable but the configuration to allocate IP address might be wrong. or c. Properly configured DHCP/RADIUS server is unreachable. 2. Dynamic IP allocation is disabled in the APN configuration . 3. Missing PAP/CHAP information from radius client in transparent mode - Username and Password is missing in the PDP Activation Request.

**Recommended Action** 1.a. Check whether the GGSN is configured with the valid DHCP/RADIUS server IP address. b. Check whether DHCP/RADIUS server is configured properly to allocate IP address . c. If the configurations are fine, then check whether the server is reachable from GGSN. 2. Configure IP allocation pool as either DHCP proxy client or RADIUS client in the APN . If you could not solve the problem still contact your technical support representative with the error message you got.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** PDP activation has failed due to one of the APN related problem : 1. APN not configured - The APN requested in the PDP Request is not configured in the GGSN router. 2. Subscribe mode on APN but selection mode field not verified. 3. Duplicate static IP address to access same APN. 4. Session already exists for a different APN.

**Recommended Action** Check the APN configuration correspondingly. If that can't solve the problem, get the output of 'sh run' and 'sh gprs access-point all' , copy the error message exactly as it appears, and report to your technical support representative.

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Reason: %d, %s

**Explanation** QoS negotiaiton/update has failed since resources not available.

**Recommended Action** Contact your technical support representative with the error messages and the output of command 'sh gprs gtp status' .

**Error Message** %GPRSFLTMG-4-UNAVAILABLE: GSN: %i, TID: %08x%08x, APN: %s, Username: %s Reason: %d, %s

**Explanation** One of the following Mobility Related problem has occurred : 1. MS GPRS Detached. 2. MS GPRS present. 3. MS not GPRS responding for network initiated PDP - MS does not respond for packets initiated by external network. 4. MS Refused for network initiated PDP. 5. IMSI unknown for network initiated PDP.

**Recommended Action** If the problem recurs , contact your technical support representative with the error message you got.

## GPRSMIB-4

**Error Message** %GPRSMIB-4-UNAVAILABLE: Invalid GPRSMIB message (msg\_type %x) received

**Explanation** An internal software error occurred.

**Recommended Action** Contact your technical support representative.

**Error Message** %GPRSMIB-4-UNAVAILABLE: fragmentation error (s\_uid = %x) received

**Explanation** An internal software error occurred.

**Recommended Action** contact your technical support representative.

## GRIP-2

**Error Message** %GRIP-2-UNAVAILABLE: Error %s route - null table

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## GRIP-3

**Error Message** %GRIP-3-UNAVAILABLE: Invalid number of paths (%d) for %q

**Explanation** An internal inconsistency was detected in the XNS routing table structure.

**Recommended Action** Note the parameters associated with this message and call your technical support representative for assistance.

## GT64010-1

**Error Message** %GT64010-1-UNAVAILABLE: DMA interrupt stalled, restarted engine %d

**Explanation** The driver timed out waiting for completion of DMA task. The DMA engine has been restarted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GT64010-3

**Error Message** %GT64010-3-UNAVAILABLE: Attempt to install already installed timer %d

**Explanation** An attempt was made to initialize a timer element that is already in use.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT64010-3-UNAVAILABLE: Interrupt error, c=%#x, m=%#x, rc=%#x

**Explanation** An unexpected interrupt was registered from a DMA engine that was not initialized by software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT64010-3-UNAVAILABLE: Interrupt error, c=%#x, m=%#x, rc=%#x

**Explanation** An unexpected timer interrupt was received from a timer element that was not initialized by software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT64010-3-UNAVAILABLE: Referencing unused DMA channel %d

**Explanation** An access to an uninitialized DMA engine was attempted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT64120-3-UNAVAILABLE: %d single bit memory errors corrected by the system

**Explanation** The system has seen so many single bit errors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GT96100-1

**Error Message** %GT96100-1-UNAVAILABLE: DMA interrupt stalled, restarted engine %d

**Explanation** The driver timed out waiting for completion of DMA task. The DMA engine has been restarted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GT96100-3

**Error Message** %GT96100-3-UNAVAILABLE: Attempt to install already installed timer %d

**Explanation** An attempt was made to initialize a timer element that is already in use.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT96100-3-UNAVAILABLE: CPU corrected %d single bit memory errors

**Explanation** The system has seen so many single bit errors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT96100-3-UNAVAILABLE: Interrupt error, c=%#x, m=%#x, rc=%#x

**Explanation** An unexpected interrupt was registered from a DMA engine that was not initialized by software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT96100-3-UNAVAILABLE: Interrupt error, c=%#x, m=%#x, rc=%#x

**Explanation** An unexpected timer interrupt was received from a timer element that was not initialized by software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GT96100-3-UNAVAILABLE: Referencing unused DMA channel %d

**Explanation** An access to an uninitialized DMA engine was attempted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## GTP-0

**Error Message** %GTP-0-UNAVAILABLE: GSN: %i, TEID: %x, APN: %s, Reason: %s

**Explanation** A PDP context activation failed at the packet parsing state for one of the following reasons: 1. Mandatory IE is missing in the PDP . 2. Mandatory IE incorrect - Mandatory IE has invalid range of value. 3. Mandatory IE out of sequence - The Mandatory IEs are not in sequence. 4. Invalid message format. 5. Optional IE incorrect - Optional IE present in the packet has invalid range of value. 6. Version not support - The GGSN Node does not support the GTP version recieved. 7. Non-charging msg in charging path. 8. Charging msg in GTP path. 9. Unknown GTP message. 10.Message too short - GTP message received is too short to contain all expected inform IE. 11.Unexpected message seen.

**Recommended Action** Copy the error message exactly as it appears, and report to your technical support representative.

**Error Message** %GTP-0-UNAVAILABLE: GSN: %i, TID: %x%x, APN: %s, Reason: %s

**Explanation** A PDP context activation failed at the packet parsing state for one of the following reasons: 1. Mandatory IE is missing in the PDP . 2. Mandatory IE incorrect - Mandatory IE has invalid range of value. 3. Mandatory IE out of sequence - The Mandatory IEs are not in sequence. 4. Invalid message format. 5. Optional IE incorrect - Optional IE present in the packet has invalid range of value. 6. Version not support - The GGSN Node does not support the GTP version recieved. 7. Non-charging msg in charging path. 8. Charging msg in GTP path. 9. Unknown GTP message. 10.Message too short - GTP message received is too short to contain all expected inform IE. 11.Unexpected message seen.

**Recommended Action** Copy the error message exactly as it appears, and report to your technical support representative.

**Error Message** %GTP-0-UNAVAILABLE: GSN: %i, TID: %x%x, APN: %s, Reason: %s

**Explanation** Available resources exhausted to continue GGSN service because of the following reasons : 1. Number of pending signaling messages reaches limit. 2. Out of Memory - Insufficient in GGSN. 3. System failure - Permanant system failure has occured.

**Recommended Action** 1. Check whether you can increase number of PDP that can be handled by GGSN. If the problem recurs , contact your technical support representative with the error message you got and with the output of 'show gprs gtp status'.

## GTP-2

**Error Message** %GTP-2-UNAVAILABLE: GSN service %s changed state to %s

**Explanation** SGSN service starts or shutdown

**Recommended Action** If this message recurs, contact your technical support representative.

**Error Message** %GTP-2-UNAVAILABLE: GTP PDP activation/update failed, GSN: %i, TEID: %x, Reason: %s

**Explanation** A PDP context activation failed

**Recommended Action** If this message recurs, contact your technical support representative.

**Error Message** %GTP-2-UNAVAILABLE: GTP PDP activation/update failed, GSN: %i, TID: %x%x, Reason: %s

**Explanation** A PDP context activation failed

**Recommended Action** If this message recurs, contact your technical support representative.

## GTP-3

**Error Message** %GTP-3-UNAVAILABLE: APN: %s, Reason: %s

**Explanation** A required configuration is missing

**Recommended Action** Please make sure the missing commands are configured

## GTP-4

**Error Message** %GTP-4-UNAVAILABLE: GSN: %i, TID: %x%x, APN: %s, Reason: %s

**Explanation** GGSN has received PDP update request with different Recovery Information Element in the same path.

**Recommended Action** Contact your technical support representative with the error messages you got.

## GTP-6

**Error Message** %GTP-6-UNAVAILABLE: GSN: %i, TID: %x%x, APN: %s, Reason: %s

**Explanation** PDP context purged because of PDP context idle timeout

**Recommended Action** This is purely informational

## GULF2488-3

**Error Message** %GULF2488-3-UNAVAILABLE: gulf2488 channel provisioning failed (slice:%d ch:%d): %s

**Explanation** required resources unavailable.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GULF2488-3-UNAVAILABLE: gulf2488 channel unprovisioning failed (slice:%d ch:%d): %s

**Explanation** required resources unavailable.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %GULF2488-3-UNAVAILABLE: gulf2488 chip initialization failed (errcode=%d): %s

**Explanation** required resources unavailable.

**Recommended Action** Reinsert the linecard. If still fails, do 'test cwtlc show seeprom red', swap hardware, and Copy the error message exactly as it appears, and report it to your technical support representative.

## G\_QOS\_Classify Messages

This section contains messages.

**Error Message** %G\_QOS\_CLASSIFY-3-NOMEM: Memory Allocation Failure - [chars]

**Explanation** Memory required to service one or more Network Processors could not be allocated.

**Recommended Action** This error may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled via the configuration. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %G\_QOS\_CLASSIFY-3-QOS\_CONFIG: error detected: [chars]

**Explanation** A QoS policymap classification configuration error was detected.

**Recommended Action** This configuration error is not considered fatal to the operation of the Network Processors. The software is designed to detect and report the error condition. Change the QoS Policymap Filter configuration to correct the problem.

**Error Message** %G\_QOS\_CLASSIFY-4-MACACL\_CONFIG: [chars]

**Explanation** Only source mac address in extended named MAC ACL is supported on X40G linecard interfaces.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

## GT96100 Messages

This section contains GT96100 DMA controller driver messages.

### GT96100-3

**Error Message** %GT96100-3-ECC: CPU corrected [dec] single bit memory errors

**Explanation** The system has detected and corrected single-bit errors. The number of errors is displayed in the message text.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA Messages

This section contains high availability system messages.

## HA-2

**Error Message** %HA-2-UNAVAILABLE: %d linecard(s) not quiesced exceeds limit of %d, all slots will be reloaded.

**Explanation** This is a cutover notice about a High Availability System linecard error condition. The linecard(s) did not quiesce properly. Within the current configuration, the number of errors detected requires the system to do a full reload of all of the linecards.

**Recommended Action** If you OIR removed the active RSP or have legacy IPs installed in the system this message is normal. Otherwise, copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: %s %s

**Explanation** This is a critical error message about a High Availability System interprocess communication status or condition. A message of this type indicates that an interprocess communication failure occurred between the active system and the standby system.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: %s

**Explanation** This is a critical error message about a High Availability System cutover status or condition. A message of this type indicates that a critical failure occurred during cutover of the standby system to the active system. Messages of this type indicate that the active system relinquished system control that the standby system failed to properly take over as the active.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: %s

**Explanation** This is a critical error message about a High Availability System initialization status or condition. A message of this type indicates that a failure occurred during high availability system initialization.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: %s

**Explanation** This is an important High Availability System notice logging the state of a system cutover of the standby system to the active system. Messages of this type indicate that the active system relinquished system control and that the standby system is taking over as active.

**Recommended Action** If the message is due to a failure condition, copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance. If the message is not due to a failure condition, no action is required.

**Error Message** %HA-2-UNAVAILABLE: CCB playback failed.

**Explanation** This is a critical error message about a High Availability System status or condition.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: CCB record failed.

**Explanation** This is a critical error message about a High Availability System status or condition.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-2-UNAVAILABLE: Slot %d did not quiesce, it will be disabled and then reloaded.

**Explanation** This is a cutover notice about a High Availability System linecard error condition. The linecard did not quiesce properly.

**Recommended Action** This message is normal if the slot contains a legacy IP. Otherwise, copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

## HA-3

**Error Message** %HA-3-UNAVAILABLE: %s

**Explanation** This is a error message about a High Availability System state synchronization error status or condition.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-3-UNAVAILABLE: %s

**Explanation** This is a error message about a High Availability System status or condition.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-3-UNAVAILABLE: RF event not processed till %d milliseconds. Code = %d

**Explanation** The event sent to the redundancy facility was not processed till the specific time delay.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-3-UNAVAILABLE: Tif number %d (Card Type %x, (S)PA Type %x) already allocated in the Standby (Hash Index %llx) - Standby Reloading

**Explanation** An error was encountered in reserving the TIF (Channel ID) number meant for a specific physical/logical interface in the standby route processor. This occurs if there is a race condition in the synchronization of TIF numbers and the running configuration from the active route processor to the standby route processor. In most situations, this error is self-correcting.

**Recommended Action** This error affects the standby route processor only. Upon encountering this error, standby route processor reloads itself automatically and reestablishes synchronization with the active route processor. If the standby does not reload itself automatically, reload it from the active route processor console by entering the **how-module standby reload** command. If this command fails, reload the standby by entering the **hw-module standby reset** command. If the standby route processor still does not reload or this error is seen again, collect the output from **show c7300**, **show c7300 ha tif entries**, **show c7300 ha statistics**, **show c7300 ha registers**, **show redundancy**, **show redundancy state**, **show redundancy switchover history**, **show redundancy history**, and **show checkpoint clients**. Also, copy the running configuration and the system messages exactly as they appear on the console or in the system log. Contact your Cisco technical support representative and provide the representative with the gathered information.

**Error Message** %HA-3-UNAVAILABLE: Tifkey %llx (Card Type %x, (S)PA Type %x) not present in the Standby Tif table (Hash Slot %d) - Standby Reloading

**Explanation** The standby route processor encountered an error in the reception of the TIF number (channel ID) for the indicated interface from the active route processor. In most situations, this error is self-correcting.

**Recommended Action** This error affects the standby route processor only. Upon encountering this error, standby route processor reloads itself automatically and reestablishes synchronization with the active route processor. If the standby does not reload itself automatically, reload it from the active route processor console by entering the **how-module standby reload** command. If this command fails, reload the standby by entering the **hw-module standby reset** command. If the standby route processor still does not reload or this error is seen again, collect the output from **show c7300**, **show c7300 ha tif entries**, **show c7300 ha statistics**, **show c7300 ha registers**, **show redundancy**, **show redundancy state**, **show redundancy switchover history**, **show redundancy**

**history**, and **show checkpoint clients**. Also, copy the running configuration and the system messages exactly as they appear on the console or in the system log. Contact your Cisco technical support representative and provide the representative with the gathered information.

## HA-4

**Error Message** %HA-4-DATADESCR\_DECODE\_ERROR: Failed to decode descriptor %d %u %u %u %d

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer to another RP. An interface corresponding to the if\_index was not found on the Standby RP. HA synchronization will fail for that interface

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** HA-4-UNAVAILABLE: %s (rc %d, event %s)

**Explanation** Failure to send 7300 checkpointing data.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: %s (rc %d, event %s)

**Explanation** Failure to send UNIX checkpointing data.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: %s

**Explanation** An error was encountered in a data sync operation

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: %s

**Explanation** This is a warning message about a High Availability System status, condition, or event.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-4-UNAVAILABLE: Creation of %s process failed

**Explanation** Creation of a platform high availability process failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: Data Encode - %s (%s)

**Explanation** Failure to encode 7300 checkpointing data descriptors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: Data decode - %s (%d)

**Explanation** Failure to decode 7300 checkpointing data descriptors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: Failed to allocate buffer for inter-RP IPC message receive

**Explanation** An error was encountered in the reception of IPC messages from the peer Route Processor because a packet buffer to receive the packet could not be allocated.

**Recommended Action** The 'show buffers' command can be used to confirm that the IPC buffer pool is suffering misses. Intermittent errors will be handled by the IPC mechanism of retries. However, if this error message is seen with regularity, the system may need to be upgraded to have more memory as the IPC buffer pool is automatically sized in direct proportion to the total amount of memory in the system. Note that there is no configuration command to resize the IPC buffer pool.

**Error Message** %HA-4-UNAVAILABLE: Failed to decode descriptor %d %u %u %u %d

**Explanation** Data descriptors are used to encode an interface index in a compact fashion for transfer to another RP. An interface corresponding to the if\_index was not found on the Standby RP. HA synchronization will fail for that interface

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs..

**Error Message** %HA-4-UNAVAILABLE: Incompatible RP (%s) in slot %d - Peer RP being held in reset state

**Explanation** The peer Route Processor (RP) is not compatible with the active RP and so it will be held in reset state.

**Recommended Action** The peer RP must be removed and replaced with a RP that is the same type as the active RP to have it successfully boot as the standby.

**Error Message** %HA-4-UNAVAILABLE: Initialization of standby Route Processor in slot %d failed

**Explanation** The initialization of the standby route processor failed. This will result in the high availability features not being operational.

**Recommended Action** If additional error messages indicate that the type of the standby RP is incompatible with the current active RP, then that should be fixed by inserting a compatible standby RP. If the standby RP is of a type that is compatible with the active RP, then an attempt should be made to remove and firmly re-insert the standby RP. If the problem persists, please contact your Cisco technical support representative with this information.

**Error Message** %HA-4-UNAVAILABLE: Platform CF - %s

**Explanation** Failure in some 7300 checkpointing activity.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: Platform CF - %s

**Explanation** Failure in some UNIX checkpointing activity.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA-4-UNAVAILABLE: Reset of %s RP triggered %s

**Explanation** Reset of the active RP was triggered by the standby RP in response to some event that caused the standby RP to conclude that the active RP was no longer functional.

**Recommended Action** The crashing route processor (RP) will produce a crashinfo file and a core dump if that was configured. These files provide information about the events that triggered the RP to reset. Contact your Cisco technical support representative with this information.

**Error Message** %HA-4-UNAVAILABLE: Unable to lock the configuration session.

**Explanation** This is a warning message indicating that the configuration session could not be locked. Simultaneous configuration sessions can corrupt the configuration.

**Recommended Action** Copy the message exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

## HA-5

**Error Message** %HA-5-UNAVAILABLE: %s

**Explanation** This is a notice message about a High Availability System status, condition, or event.

**Recommended Action** No action required.

**Error Message** %HA-5-UNAVAILABLE: %s

**Explanation** This is a notice message about a High Availability System synchronization status, condition, or event.

**Recommended Action** No action required.

**Error Message** %HA-5-UNAVAILABLE: %s hw-module slot %d image %s : %s

**Explanation** This is a notice message about a High Availability System hardware module configuration status, condition, or event.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-5-UNAVAILABLE: Active HA version (%u.%u) differs from standby HA version (%u.%u)

**Explanation** This is a notice about High Availability System version mismatch between the active and standby systems.

**Recommended Action** No action required.

**Error Message** %HA-5-UNAVAILABLE: Active IOS version differs from standby IOS version

**Explanation** This is a notice about High Availability System version mismatch between the active and standby systems.

**Recommended Action** No action required.

**Error Message** %HA-5-UNAVAILABLE: Maximum sync retries exceeded. Reloading standby and cancelling sync.

**Explanation** This is a notice message about a High Availability System synchronization status, condition, or event. The synchronization operation failed.

**Recommended Action** Copy the notice exactly as it appears. Check both the active system and standby system for messages. Call your technical support representative for assistance.

**Error Message** %HA-5-UNAVAILABLE: Operating mode is %s, %smode is %s.

**Explanation** This is a notice about the High Availability System mode.

**Recommended Action** Make sure that both the active system and standby systems are correctly configured and operational.

**Error Message** %HA-5-UNAVAILABLE: Reloading standby and retrying sync operation (retry %d).

**Explanation** This is a notice message about a High Availability System synchronization status, condition, or event. The synchronization operation will be retried.

**Recommended Action** No action required.

**Error Message** %HA-5-UNAVAILABLE: Unable to reload the standby. %s

**Explanation** The active RSP was unable to reload the standby because of the reason indicated in the message. This may be because the slave is in unplugged state, or because there is a redundancy forced switchover process in progress, or because the reload function is incorrectly called from the standby to the active.

**Recommended Action** If the message says Standby (slave) is unplugged, verify that the slave is properly seated in the chassis. If the message says Switchover is in progress, it means that currently a switchover is in progress, and no action is necessary. If you are getting the message Standby cannot reload the Active, then run the **show logging** and **show tech-support** commands and report the error to your Cisco technical support representative and provide him with the output of the commands.

## HA-6

**Error Message** %HA-6-FALLBACK: [chars] - configured mode([chars]), fallback mode([chars])

**Explanation** The specified route processor redundancy mode has fallen back to the mode specified in the message.

**Recommended Action** No action is required.

**Error Message** %HA-6-NOCOEXIST: Line card in slot [dec] ([chars]) cannot co-exist in [chars] redundancy mode

**Explanation** The specified line card cannot coexist with the rest of the system in the current redundancy mode configuration of the system.

**Recommended Action** No action is required.

**Error Message** %HA-6-STANDBY\_READY: Standby RP in slot [dec] is operational in [chars]mode  
The standby route processor is operational.

**Recommended Action** No action is required.

**Error Message** %HA-6-SWITCHOVER: Route Processor switched from being standby to being active

**Explanation** This route processor has switched over to become the active route processor.

**Recommended Action** No action is required.

**Error Message** %HA-6-TOOBIG: Running config too big, config sync failed

**Explanation** The running configuration was too large to be synchronized.

**Recommended Action** No action is required.

## HA\_CLIENT Messages

**Error Message** %HA\_CLIENT-3-RF\_REG\_FAILED: RF registration for the %s HA client failed with return code %u

**Explanation** The specified HA client failed to register properly with the Redundancy Facility (RF). This should not happen and suggests a software problem.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# HA\_CONFIG\_SYNC Messages

This section contains high availability configuration synchronization messages.

## HA\_CONFIG\_SYNC-3

**Error Message** %HA\_CONFIG\_SYNC-3-BOOTVAR: Cannot communicate boot variable to standby (%s)

**Explanation** The active supervisor failed to send the specified boot variable to the standby supervisor. As a result, a subsequent reload or a switchover operation will probably result in the standby supervisor booting a wrong image.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-CONFREG: Cannot communicate config register to standby

**Explanation** The active supervisor failed to send the configuration register to the standby supervisor. As a result, the active and standby supervisors might not have matching configuration registers.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-FS\_BULK\_CFGSYNC: %s [%s]

**Explanation** A synchronization of the file system bulk configuration has failed. The reason for the failure is provided in the string.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-ISSU\_MTU: CONFIG SYNC Failed to get MTU Size for session[[dec]] msg\_type[[dec]], MTU[[dec]], rc[[dec]]

**Explanation** An ISSU configuration synchronization failed to get the message MTU.

**Recommended Action** Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** HA\_CONFIG\_SYNC-3-ISSU\_REG: CONFIG SYNC [chars] rc([dec])

**Explanation** An ISSU configuration synchronization registration error has occurred.

**Recommended Action** Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** HA\_CONFIG\_SYNC-3-ISSU\_XFORM: CONFIG SYNC [chars] msg\_type[[dec]], rc[[dec]]

**Explanation** An ISSU configuration synchronization failed to transform a message.

**Recommended Action** Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA\_CONFIG\_SYNC-6

**Error Message** %HA\_CONFIG\_SYNC-6-BULK\_CFGSYNC\_SUCCEED: Bulk Sync succeeded

**Explanation** A bulk synchronization has succeeded.

**Recommended Action** No action is necessary.

**Error Message** %HA\_CONFIG\_SYNC-6-LBL\_PRC\_SUBCODE: CONFIG SYNC : Subcode not matching for command %s Active subcode[0x%x], Standby subcode[0x%x]

**Explanation** The line-by-line synchronization of a command has succeeded. A command entered on the active system was successfully synchronized with the standby system. However, the subcode of parser return code returned by the active system differed from the subcode returned by the standby system.

**Recommended Action** Normally, no action is required. If any problems with line-by-line synchronization are found, copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# HA\_EM Messages

This section contains Embedded Event Manager (HA\_EM) messages.

## HA\_EM-3

**Error Message** %HA\_EM-3-ACTION\_CNS\_OPEN\_FAIL: [chars]: Unable to open connection to CNS Event Agent: [dec]

**Explanation** The Cisco Network Services (CNS) action process failed to open a CNS handle to the event agent.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMC\_CBH\_PROCESS\_CREATE: [chars]: callback handler process create failed for eid: [dec]

**Explanation** The process create function reported an error while trying to create the callback handler process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMC\_FH\_INIT: [chars]: fh\_init failed : [dec]

**Explanation** The fh\_init function reported an error while trying to initialize EEM for a callback process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_ACTION\_INFO: [chars]: Error occurred while fetching action information: [dec].

**Explanation** The Embedded Event Manager Policy Director failed to gather action information registered for the event.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_ADJUST\_HIST\_SIZE: [chars]: Error attempting to adjust event history table size.

**Explanation** The Embedded Event Manager policy director could not adjust the size of the event history table.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_ACTION\_NOTRACK: %s: unable to set state for tracking object number %u; object does not exist or is not a stub-object.

**Explanation** The Embedded Event Manager applet attempted to set the state of a tracking object that does not exist.

**Recommended Action** Only set the state of tracking objects that have already been configured in the system. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-FMPD\_CHECKSUM\_MISMATCH: %s: file checksum mismatch

**Explanation** The checksum value of an installed policy does not match the value provided by the installation manager.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_EMPTY\_QUEUE: [chars]: The [chars] event detector I/O queue empty.

**Explanation** The I/O queue is unexpectedly empty.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_ERROR: Error executing applet %s statement %s

**Explanation** The Embedded Event Manager policy director found an error when processing an applet.

**Recommended Action** Check syntax of applet statement. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-FMPD\_EXECUTE\_CALLBACK: %s: failed to execute callback

**Explanation** Failed to execute callback routine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_FH\_INIT: %s: could not initialize Embedded Event Manager service: %s

**Explanation** An internal error was detected when initializing Embedded Event Manager service.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_CREATE: %s: failed to create an IPC port: %s

**Explanation** Embedded Event Manager failed to create an IPC port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_OPEN: %s: failed to open an IPC port: %s

**Explanation** Embedded Event Manager failed to open an IPC port.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_REGISTER: %s: failed to register an IPC port: %s

**Explanation** Embedded Event Manager failed to register an IPC port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NOEID: %s: No such event id found.

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NOESID: %s: No such event spec id found.

**Explanation** The Embedded Event Manager Policy Director could not find the event for the event spec. ID.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NO\_PROC: %s: Failed to create process

**Explanation** The process create function reports an error

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMFD\_OID\_UNAVAIL: %s: The following oid has become unavailable: %s

**Explanation** The registered oid is no longer available in the system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_PROCESS\_XML: %s: error processing xml buffer

**Explanation** An error occurred processing the event publish information xml buffer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). **Error Message** %HA\_EM-3-FMPD\_EXECUTE\_CALLBACK: [chars]: failed to execute callback

**Explanation** Failed to execute a callback routine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_FH\_INIT: [chars]: could not initialize Embedded Event Manager service: [chars]

**Explanation** An internal error was detected when initializing the Embedded Event Manager service.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_GET\_Prio: [chars]: failed to get process priority: [chars]

**Explanation** There has been an internal error. A call to get a process-scheduling priority failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_CREATE: [chars]: failed to create an IPC port: [chars]

**Explanation** Embedded Event Manager failed to create an IPC port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_OPEN: [chars]: failed to open an IPC port: [chars]

**Explanation** Embedded Event Manager failed to open an IPC port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_IPC\_PORT\_REGISTER: [chars]: failed to register an IPC port: [chars]

**Explanation** Embedded Event Manager failed to register an IPC port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NOEID: %s: No such event id found.

**Explanation** The Embedded Event Manager (EEM) policy director could not find a record of the event ID.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NOESID: [chars]: No such event spec id found.

**Explanation** The Embedded Event Manager policy director could not find the triggered event specification ID.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_NO\_PROC: %s: Failed to create process

**Explanation** The Embedded Event Manager (EEM) policy director could not create a process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_OVL\_NOTIF\_REG: [chars]: could not register for Version Manager notification: [chars]

**Explanation** An internal error was detected when registering for Version Manager notification.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_POLICY\_UNREG\_ERR: [chars]: could not unregister policy [chars]: [chars]

**Explanation** A registered policy changed or deleted by the last installation update was detected. Because the update used the start option, the old policy was automatically unregistered. This message signaled an unsuccessful unregistration.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_POLICY\_UNREGREG\_ERR: [chars]: could not replace policy [chars]: [chars]

**Explanation** A registered policy changed by the last installation update was detected. Because the update used the start option, the old policy was automatically replaced by the new policy. This message signaled an unsuccessful replacement of the policy.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_PROCESS\_XML: %s: error processing xml buffer

**Explanation** An error occurred in processing the event publishing information XML buffer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMPD\_PTHRD\_CREATE: [chars]: failed to create POSIX thread: [chars]

**Explanation** An internal error occurred when trying to create a POSIX thread.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. **Error Message** %HA\_EM-3-FMS\_POLICY\_HASH: %s: The hash computation routine reported an error; %s

**Explanation** The fh\_hash\_md5\_fd() function reported the specified error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMS\_POLICY\_LOOKUP\_FAIL: [chars]: Failed to look up in the table the registration specification for policy [chars].

**Explanation** A table lookup for the registration specification for the policy has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMS\_QUEUE\_INIT: [chars]: The Unable to initialize queue.

**Explanation** The queue cannot be initialized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-FMS\_SWITCH\_NOT\_RF\_ACTIVE: [chars]: This processor is not in ACTIVE state (state = [dec]). Switchover must be performed on ACTIVE processor.

**Explanation** Switchovers must occur on the active unit, not the standby unit.

**Recommended Action** Ensure that the switchover occurs on a unit that is designated as an active unit and not a standby unit.

## HA\_EM-4

**Error Message** %HA\_EM-4-FMPD\_EVENT\_CREATE: %s: failed to create an event: %s

**Explanation** Failed to create an Embedded Event Manager event.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-4-FMPD\_EVENT\_REG: %s: failed to register an event: %s

**Explanation** Failed to register an Embedded Event Manager event.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-4-FMPD\_IPC\_GET\_PAK: [chars]: failed to allocate an IPC buffer

**Explanation** Embedded Event Manager failed to allocate a buffer from IPC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-4-FMPD\_IPC\_SEND\_MSG: [chars]: failed to send an IPC message: [chars]

**Explanation** Embedded Event Manager failed to send a message through IPC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-4-FMPD\_NO\_ACTION: No action configured for applet [chars]

**Explanation** No action has been configured for the specified applet.

**Recommended Action** Configure at least one action for this applet.

**Error Message** %HA\_EM-4-FMPD\_NO\_EVENT: No event configured for applet [chars]

**Explanation** No event has been configured for the specified applet.

**Recommended Action** Configure an event for this applet.

**Error Message** %HA\_EM-4-FMPD\_NOTAGNAME: %s: No tag %s found corresponding to this event publish.

**Explanation** The Embedded Event Manager policy director could not associate the tag name with a published event.

**Recommended Action** In the **action info type event reqinfo** command, use only tag names that correspond to the published event.

**Error Message** %HA\_EM-4-FMPD\_NO\_TRACK: Use of the "track" keyword in the correlate statement is not supported in this image. All tracked objects will return the "unset" state of 0

**Explanation** The Embedded Event Manager Track ED is not supported in this image.

**Recommended Action** If you require Embedded Event Manager Track ED, upgrade to an image that supports the feature.

## HA\_EM-6

**Error Message** %HA\_EM-6-FMPD\_CONTEXT\_RETRIEVE: Failed to retrieve context for key %s: %s

**Explanation** Failed to context retrieve variable information for event.

**Recommended Action** Ensure context information with the given key is saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-FMPD\_CONTEXT\_SAVE: Failed to save variable context for key %s: %s

**Explanation** Failed to context save variable information for event.

**Recommended Action** Ensure context information with the same key is not already saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-FMPD\_DIVIDE\_ZERO: Invalid operand in arithmetic division, cannot divide by zero

**Explanation** Arithmetic division does not allow divide by zero.

**Recommended Action** Ensure denominator provided to division action is non-zero.

**Error Message** %HA\_EM-6-FMPD\_EEM\_CONFIG: Embedded Event Manager configuration: %s

**Explanation** The Embedded Event Manager (EEM) reports an error in the Event Manager (EM) configuration.

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-FMPD\_OPERAND\_INVALID: Invalid operand in action, expected value within range %ld to %ld, received: %s

**Explanation** Arithmetic actions only accept valid long integer values.

**Recommended Action** Ensure value provided to action is long integer.

**Error Message** %HA\_EM-6-FMPD\_POLICY\_CHANGED: [chars]: registered policy [chars] changed by the last installation update

**Explanation** A registered policy was changed by the last installation update. If the update used the start option, the old policy was automatically unregistered and the new policy registered. Otherwise, the old policy would remain registered and functional until the user unregisters it manually.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %HA\_EM-6-FMPD\_POLICY\_DELETED: [chars]: registered policy [chars] deleted by the last installation update

**Explanation** A registered policy was deleted by the last installation update. If the update used the start option, the policy was automatically unregistered. Otherwise, the policy would remain registered and functional until the user unregisters it manually.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %HA\_EM-6-FMPD\_POLICY\_UNREGREG\_SUCC: [chars]: policy [chars] replaced successfully

**Explanation** A registered policy changed by the last installation update was detected. Because the update used the start option, the old policy was automatically replaced by the new policy. This message signaled a successful replacement of the policy.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %HA\_EM-6-FMPD\_POLICY\_UNREG\_SUCC: [chars]: policy [chars] unregistered successfully

**Explanation** A registered policy changed or deleted by the last installation update was detected. Because the update used the start option, the old policy was automatically unregistered. This message signaled a successful unregistration.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %HA\_EM-6-FMPD\_REGCOMP: Error compiling regular expression: %s

**Explanation** An error was encountered when compiling the given regular expression.

**Recommended Action** Check syntax of regular expression pattern. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-FMPD\_SWITCH\_HARDWARE: %s: Policy has requested a hardware switchover

**Explanation** An Embedded Event Manager policy requested that a hardware switchover occur.

**Recommended Action** No action is required.

**Error Message** %HA\_EM-6-FMPD\_UPDATE\_POLICY\_COPY: Policy update has copied %d bytes from %s to %s

**Explanation** As a result of an event manager update command, an Embedded Event Manager (EEM) policy has been copied.

**Recommended Action** No action is required.

**Error Message** %HA\_EM-6-FMPD\_UPDATE\_POLICY\_REGISTER: Policy update has successfully re-registered policy %s

**Explanation** As a result of an event manager update command, an EEM policy has been successfully reregistered.

**Recommended Action** No action is required.

**Error Message** %HA\_EM-6-FMPD\_UPDATE\_POLICY\_REGISTER\_FAIL: Policy update has failed to register policy %s %s

**Explanation** As a result of an event manager update command, an EEM policy could not be registered.

**Recommended Action** No action is required.

**Error Message** %HA\_EM-6-FMPD\_UPDATE\_POLICY\_UNREGISTER\_FAIL: Policy update has failed to unregister policy %s %s

**Explanation** As a result of an event manager update command, an EEM policy could not be unregistered.

**Recommended Action** No action is required.

**Error Message** %HA\_EM-6-FMS\_MODIFY\_POLICY: %s: unable to modify the policy to class %s: scheduling rule unavailable.

**Explanation** There is no scheduler rule configured to service this event class.

**Recommended Action** Please configure a scheduler rule before modifying the event.

**Error Message** %HA\_EM-6-FMS\_SWITCH\_HARDWARE: [chars]: Policy has requested a hardware switchover

**Explanation** An Embedded Event Manager policy requested that a hardware switchover occur.

**Recommended Action** This is an informational message only. No action is required.

## HA\_EM-7

**Error Message** %HA\_EM-7-ACTION\_ADD\_PARSER: [chars]: Unable to add action [chars] command;

**Explanation** Failed to add the specified action command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_CNS\_AGENT\_UNAVAIL: [chars]: CNS Event Agent not available: [dec]

**Explanation** The CNS Event Agent is currently not available.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_CNS\_CLEAR\_RESTART: [chars]: Unable to clear restart callback;

**Explanation** The CNS action process failed to clear restart callback.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_CNS\_SET\_RESTART: [chars]: Unable to set restart callback;

**Explanation** The CNS action process failed to set restart callback.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_ENQUEUE\_FAIL: [chars]: Unable to enqueue [chars];

**Explanation** The enqueueing function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_WB\_CREATE: [chars]: create\_watched\_boolean failed: [chars]

**Explanation** The create\_watched\_boolean function reported an error trying to create the watched boolean.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-ACTION\_WB\_DELETE: [chars]: delete\_watched\_boolean failed: [chars]

**Explanation** The delete\_watched\_boolean function reported an error trying to delete the watched boolean.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_CB\_DM\_THREADPOOL\_CREATE: [chars]: dispatch\_manager\_threadpool\_create failed [chars]

**Explanation** The dispatch manager reported an error trying to create a thread pool.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_CB\_DM\_THREADPOOL\_START: [chars]:  
dispatch\_manager\_threadpool\_start failed [chars]

**Explanation** The dispatch manager reported an error trying to start a thread pool.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_ENQUEUE\_FAIL: [chars]: Unable to enqueue [chars];

**Explanation** The enqueueing function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_INV\_REPLY: [chars]: Application client library unable to handle message receive.

**Explanation** The API received a message reply when it was not in a state to accept such messages.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_MALLOC: [chars]: Unable to allocate [chars];

**Explanation** The malloc function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMC\_REG\_CBH\_PULSE: %s: Unable to locate reg callback entry for pulse code %d

**Explanation** The registration callback handler was unable to validate the pulse code received.

**Recommended Action** The pthread\_create function reported an error.

**Error Message** %HA\_EM-7-FMC\_REG\_CBH\_SEND: %s: Unable to send response for FH\_MSG\_CALLBACK\_DONE %s

**Explanation** The registration callback handler was unable to send the FH\_MSG\_CALLBACK\_DONE message to the Embedded Event Manager Server.

**Recommended Action** The pthread\_create function reported an error.

**Error Message** %HA\_EM-7-FMFD\_ADD\_PARSER: [chars]: Unable to add [chars] event detector command;

**Explanation** The event detector failed to add a command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_CHKPT\_ITERATE\_END: [chars]: call to chkpt\_iterate\_end returned unexpected failure.

**Explanation** An attempt to register an application with the checkpointing server has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_CHKPT\_NULL\_PTR: [chars]: Got a null [chars] but non-null value was expected

**Explanation** An attempt to do further processing has failed because a null value was received when a non-null value was expected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_CHKPT\_TBL\_ADD: [chars]: could not save a record into a checkpointing table: [chars]

**Explanation** An attempt to save a record into the specified checkpointing table has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_CHKPT\_TBL\_REMOVE: [chars]: could not delete a record from a checkpointing table: [chars]

**Explanation** An attempt to delete a record from the specified checkpointing table has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_CHKPT\_TBL\_RESET: [chars]: could not reset a record in a checkpointing table: [chars]

**Explanation** An attempt to reset a record in the specified checkpointing table has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_COND\_WAIT: [chars]: conditional wait error: [chars]

**Explanation** Internal error. The event detector has failed to perform a conditional wait.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_COUNTER\_SET: [chars]: failed to set a counter: [chars]

**Explanation** An attempt to set an Embedded Event Manager counter has failed.

**Error Message** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_DE\_FETCH: %s: %s[%d]

**Explanation** Internal error. The event detector has failed to fetch a data element from the statistics data engine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_DM\_CREATE: [chars]: could not create dispatch manager: [chars]

**Explanation** The event detector has failed to create a dispatch manager.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_ENQUEUE\_FAIL: [chars]: Unable to enqueue [chars];

**Explanation** The enqueueing function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_EVENT\_CREATE: [chars]: failed to create an event:  
[chars]

**Explanation** An attempt to create an Embedded Event Manager event has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_EVENT\_REG: [chars]: failed to register an event:  
[chars]

**Explanation** An attempt to register an Embedded Event Manager event has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_EVENT\_TYPE: [chars]: unknown event type [dec]

**Explanation** An unknown Embedded Event Manager event type was detected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_FILE\_OPEN: [chars]: failed to open file [chars] : [chars]

**Explanation** An attempt to open the specified file has failed due to an internal error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_FORMAT\_TIME: [chars]: error attempting to format time string

**Explanation** An attempt to format a time string has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_GET\_NODE\_NAME: [chars]: failed to get the local node name: [chars]

**Explanation** An attempt to get the local node name has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_HIST\_QERR: %s

**Explanation** Internal error. The event detector has failed to get a free history list entry.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_INV\_COMPARE\_OP: %s: invalid comparison operator: %d

**Explanation** Internal error. The value comparison operator is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_INV\_STATS\_TYPE: %s: invalid statistics value type: %d

**Explanation** Internal error. The statistics data type is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_INV\_TM: %s: invalid timer: type=%d, timer=%p

**Explanation** Internal error. The timer value is invalid or not as expected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_INV\_TM\_TYPE: %s: invalid timer type: %d

**Explanation** Internal error. The timer type is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_LAST\_POLICY: [chars]: invalid last policy name replied [chars]

**Explanation** There has been an internal error. The last policy name that the script director replied to the **show event manager policy registered** command is an invalid policy name.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_LONG\_PATHNAME: [chars]: too long path name

**Explanation** There has been an internal error. A path name could not be formed because it exceeded the maximum length.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_MALLOC: [chars]: Unable to allocate [chars]; [chars]

**Explanation** The malloc function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_MET\_RBLD: %s: %s

**Explanation** Internal error. The event detector has failed to rebuild the metric list from the checkpointed records.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_MSGSEND\_RETRY\_ERR: %s: %d

**Explanation** The event detector has exceeded its maximum number of retries to send a pulse to the embedded event manager to notify of an event publish.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_NO\_CLOCK: [chars]: unable to read clock using clock\_gettime: [chars]

**Explanation** The clock reading function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_NO\_MEM: [chars]: not enough memory: [chars]

**Explanation** Memory allocation failed due to a low-memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %HA\_EM-7-FMFD\_OE\_CREATE: %s: could not create an occurrence entry

**Explanation** Internal error. The event detector has failed to create an entry for the matched occurrence list.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_OE\_REMOVE: %s: could not remove an occurrence entry

**Explanation** Internal error. The event detector has failed to remove an entry for the matched occurrence list.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_OID\_UNAVAIL: [chars]: The following oid has become unavailable: [chars]

**Explanation** An internal error has occurred. The registered OID is no longer available in the system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_OPEN\_CONF: [chars]: could not open event detector config file: [chars]

**Explanation** The event detector has failed to open the configuration file for event detector information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. **Error Message** %HA\_EM-7-FMFD\_PUB\_TM\_ALLOC: %s: Unable to allocate memory for event publish timer block

**Explanation** Internal error. The event detector has failed to allocate memory for the event publish timer block.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_READ\_CONF: [chars]: could not read event detector config file: [chars]

**Explanation** The event detector has failed to read the configuration file for event detector information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_RESOURCE\_MONITOR\_REGISTER\_FAIL: %s:  
resource\_monitor\_register failed; return code = %d

**Explanation** The resource\_monitor\_register function reported an error trying to register for RMI notifications.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_ADDR\_ILLEGAL: %s: Illegal SNMP address type

**Explanation** The SNMP address is illegal.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_ADDR\_IPV6: %s: SNMP IPV6 address is not supported

**Explanation** The IPV6 address is not supported.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_BUILD\_PDU\_FAILED: %s: SNMP build pdu failed

**Explanation** The SNMP pdu build has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_COMM\_FAIL: %s: Unable to create SNMP octet community string; string = %s

**Explanation** The community string was not able to build into a SNMP octet string

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_ERRCODE: %s: %s

**Explanation** The SNMP error code.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_MAKE\_PDU\_FAILED: %s: SNMP make pdu failed

**Explanation** The SNMP pdu make has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_MSG\_FAIL: %s: Unable to create a SNMP message; community = %s

**Explanation** The SNMP message failed to be created

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_OID\_INVALID: %s: Invalid SNMP oid length %d

**Explanation** The SNMP oid has invalid length

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_OID\_MAKE\_FAIL: %s: Unable to build an oid string into a SNMP oid; oid = %s

**Explanation** The oid string was not able to build into a SNMP oid

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_REQ\_FAILED: %s: SNMP request failed

**Explanation** The SNMP request has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_RESP\_CANCEL: %s: SNMP response cancelled

**Explanation** The SNMP response has been cancelled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_RESP\_ERROR: %s: SNMP response error; error\_status = %d

**Explanation** The SNMP response has error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_RESP\_Q\_EMPTY: %s: SNMP proxy exec got event, but queue is empty

**Explanation** The SNMP proxy got event but the queue is empty.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_RESP\_TIMEOUT: %s: SNMP response has timed out

**Explanation** The SNMP response has timed out.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_UNKNOWN\_TYPE: %s: Unknown SNMP operation or response type %d

**Explanation** The operation or response type is unknown.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_SNMP\_VARBIND\_FAIL: %s: Unable to create a SNMP varbind

**Explanation** The oid failed to make into a SNMP varbind

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_SWITCH\_FAIL: %s: The system is unable to switch to standby processor. Switchover cancelled.

**Explanation** Switchovers must occur when STANDBY is available and ready.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_THRD\_POOL\_CREATE: [chars]: could not create thread pool: [chars]

**Explanation** The event detector has failed to create a thread pool.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMPD\_TIMER\_ARM: [chars]: failed to arm a timer: [chars]

**Explanation** An attempt to arm an Embedded Event Manager timer has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMFD\_TM\_LEAF\_NEW: %s: could not create a leaf timer

**Explanation** Internal error. The event detector has failed to create a managed leaf timer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_ASYNC\_ATTACH\_CHKPT: [chars]: Failed to attach to handle chkpt asynchronous events; [chars]

**Explanation** The event pulse attach event function reported an error trying to attach the checkpoint pulse handler.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_CHKPT\_ITERATE\_END: [chars]: call to chkpt\_iterate\_end returned unexpected failure.

**Explanation** An attempt to register an application with the checkpointing server has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. **Error Message** %HA\_EM-7-FMS\_NULL\_SCRIPT\_NAME: %s: The script name is NULL

**Explanation** An invalid script name was passed as an argument into the specified function.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_POLICY\_EXEC: %s: Policy execution %s

**Explanation** The Embedded Event Manager policy execution state has been changed to the state named in the message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_POLICY\_MAX\_ENTRIES: [chars]: Maximum number of script publish entries exceeded; some events have been discarded

**Explanation** An attempt to publish an event requiring a script failed because there is no more room in the script publish queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_REALLOC\_FAIL: [chars]: Unable to reallocate [chars]; [chars]

**Explanation** The reallocation function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_STRDUP: %s: Failed to duplicate string %s; %s

**Explanation** The strdup function reported an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_SWITCH\_FAIL: [chars]: The system is unable to switch to standby processor. Switchover cancelled.

**Explanation** Switchovers must occur when a standby processor is available and ready.

**Recommended Action** Ensure that a standby processor is available and ready.

**Error Message** %HA\_EM-7-FMS\_WB\_CREATE: [chars]: create\_watched\_boolean failed; [chars]

**Explanation** The create watched boolean function reported an error trying to create the watched boolean.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-FMS\_WQ\_CREATE: [chars]: create\_watched\_queue failed; [chars]

**Explanation** The create watched queue function reported an error trying to create the watched queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-PTHREAD\_MUTEX\_LOCK: [chars]: Error locking mutex [chars]; [chars]

**Explanation** The pthread mutex lock function reported an error while attempting to lock the specified mutex.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-7-PTHREAD\_MUTEX\_UNLOCK: [chars]: Error unlocking mutex [chars]; [chars]

**Explanation** The pthread mutex unlock function reported an error while attempting to unlock the specified mutex.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HAL-1

**Error Message** %HAL-1-UNAVAILABLE: %s

**Explanation** A HAL Port Adapter was detected which has a revision earlier than rev3. This port adapter pre-dates the router platform it has been installed in, and is not a supported combination.

**Recommended Action** Upgrade to a HAL Port Adapter which is rev3 or above.

**Error Message** %HAL-1-UNAVAILABLE: %s could not be disabled by %s

**Explanation** The shutdown failed to disable the interface.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: %s could not be enabled by %s

**Explanation** The restart failed to enable the interface.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: %s could not be reset by %s

**Explanation** The restart failed to reset the interface.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: %s init failed at %s

**Explanation** HAL initialization failure.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: Failed to configure %d interfaces in bay %d, shutting down bay

**Explanation** The HAL hardware failed. Some components on the board failed to initialize.

**Recommended Action** Replace the HAL port adapter.

**Error Message** %HAL-1-UNAVAILABLE: Found %d interfaces in bay %d, shutting down bay

**Explanation** The HAL hardware failed. Some components on the board failed to initialize.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: Microcode to slot %d

**Explanation** Failed to download firmware into the HAL port adapter.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: Slot %d firmware init (%s)

**Explanation** HAL firmware initialization failure.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-1-UNAVAILABLE: Slot %d for microcode download

**Explanation** An error was detected on the communication path between VIP and HAL.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## HAL-2

**Error Message** %HAL-2-UNAVAILABLE: %#08x %08x %08x %08x

**Explanation** HAL firmware crash information

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-2-UNAVAILABLE: %s: packet received for unknown VC %d

**Explanation** The virtual channel encapsulation is corrupted.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-2-UNAVAILABLE: HAL F/W crashed in bay %d: %#x - reset

**Explanation** HAL firmware does not update the software watchdog.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## HAL-3

**Recommended Action** support representative.

**Error Message** %HAL-3-UNAVAILABLE: %s - Accumulator is not available

**Explanation** An invalid TX accumulator is detected.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: %s

**Explanation** General error information.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: %s packet buffer, pak=0x%x

**Explanation** A software or hardware error occurred. The HAL driver detected that the transmit ring is in an inconsistent and unrecoverable state.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: %s: failed to send %s love letter

**Explanation** A love letter was not sent to RSP.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Failed to receive reply %d from bay %d firmware

**Explanation** A message was not received from HAL firmware.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Failed to send msg %d to %s driver firmware

**Explanation** A port related message was not sent to HAL firmware.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Failed to send msg %d to bay %d firmware

**Explanation** A message was not sent to HAL firmware.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Failed to send msg %s to bay %d firmware

**Explanation** Specified message was not sent to HAL firmware.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Received unexpected mailbox message (id = %d)

**Explanation** Unexpected message from HAL firmware.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HAL-3-UNAVAILABLE: Slot %d device ID seen as %#x, expected %#x  
(Mueslix)

**Explanation** Failed to detect the hdlc controller on the HAL.

**Recommended Action** Replace the HAL port adaptor.

**Error Message** %HAL-3-UNAVAILABLE: Slot %d device ID seen as %#x, expected %#x  
(PLX9060)

**Explanation** The PLX 9060 was not detected on the HAL.

**Recommended Action** Replace the HAL port adaptor.

## HA\_IFINDEX Messages

This section contains high availability system messages.

**Error Message** %HA\_IFINDEX-2-INIT\_ERROR: [chars]

**Explanation** This is a critical error message about a high availability system initialization status or condition. A message of this type indicates that a failure occurred during high availability system initialization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HARDWARE Messages

This section contains hardware resources messages.

### HARDWARE-3

**Error Message** %HARDWARE-3-ASICNUM\_ERROR: Port-ASIC number [dec] is invalid

**Explanation** Each port ASIC is identified by an ID. The port ASIC number that is specified in the message text is invalid. This condition indicates an internal error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HARDWARE-3-INDEX\_ERROR: Index value [dec] is invalid

**Explanation** An index was attempted to be placed into the hardware table, but that index is out of the configured range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HARDWARE-3-INTRNUM\_ERROR: Port-ASIC Interrupt number [dec] is invalid

**Explanation** An interrupt ID that was used for a port ASIC is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HARDWARE-3-PORTNUM\_ERROR: port number [dec] is invalid

**Explanation** Each interface in a given port ASIC is identified by an index value. The port number used is not within the specified range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HARDWARE-3-STATS\_ERROR: Statistics ID [dec] is invalid

**Explanation** Each statistic that is supported by the port ASIC is identified using an ID. The ID provided by the caller is not within the configured range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HAWKEYE-1

**Error Message** %HAWKEYE-1-UNAVAILABLE: HAWKEYE(bay %d), Port adapter requires Rev 2 CPU, shutting down bay

**Explanation** This message is specific to Cisco 7200 series router platforms. It indicates that the device driver has detected an NPE150 CPU version earlier than revision 2. The token ring device driver requires capabilities of a NPE150 revision 2 and later CPU.

**Recommended Action** Upgrade the 7200 router processor to an NPE150 Revision 2 or later.

**Error Message** %HAWKEYE-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** This message may be emitted during IOS initialization or after a token ring port adapter/module is OIR inserted. The message indicates that the token ring device driver was unable to communicate with all of the interfaces expected to be on the port adapter/module. This could mean that one or more of the interfaces is not functioning.

**Recommended Action** Re-seat the port adapter/module in the slot. Also try installing it in another slot if available. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HAWKEYE-1-UNAVAILABLE: PCI memory unavailable for %s

**Explanation** The device driver for this interface was unable to allocate the necessary amount of shared memory between the driver and the interface hardware. This condition can occur if the system contains less than the recommended minimum amount of SRAM for the current interface combination. Shared memory blocks are required for the interface to function. So, this interface will be inoperable until the memory shortage is corrected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HAWKEYE-3

**Error Message** %HAWKEYE-3-UNAVAILABLE: %s failed to initialize - %s

**Explanation** The token ring interface encountered an error while attempting to open a connection to the ring. The specific error that occurred is described in the last half of the error message as one of the following: 1) 'microcode checksum failed' - the MAC microcode was found to be corrupted inside the interface's local memory. 2) 'failed to build receive descriptor ring' - there was not enough system memory available to allocate receive buffers for packets. 3) 'init failed' - the interface hardware rejected the device driver's request to configure and open the interface.

**Recommended Action** Reset the interface using the 'clear interface token' exec command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HAWKEYE-3-UNAVAILABLE: Interface %s, adapter check error

**Explanation** The token ring interface encountered an unrecoverable error condition while it was operating and connected to the ring. The interface will automatically shut itself down.

**Recommended Action** Issue the 'clear interface token' command to restart the interface. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still

require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA\_CONFIG\_SYNC-3

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s

**Explanation** Active and Standby configuration out of sync LBL what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s

**Explanation** Bulk config sync failure, the reason for the failure will be provided in the string

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s

**Explanation** General Config Sync Problem

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s

**Explanation** Line by Line sync failure what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s [%s]

**Explanation** Bulk config sync fileys failure, the reason for the failure will be provided in the string

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: %s with error code [ %s ]

**Explanation** An ISSU Config Sync Registration Error occurred. The details about what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: CONFIG SYNC %s msg\_type[%d], rc[%d]

**Explanation** An ISSU Config Sync failed to transform message. The details about what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: CONFIG SYNC Failed to get MTU Size for session[%d] msg\_type[%d], MTU[%d], rc[%d]

**Explanation** An ISSU Config Sync failed to get Message MTU. The details about what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: Cannot communicate boot variable to standby (%s)

**Explanation** Active failed to send the boot variable specified to standby. A reload or a switchover operation will likely result in the standby booting a wrong image.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: Cannot communicate config register to standby

**Explanation** Active failed to send the config register to standby. The active and standby supervisors won't have the same config registers.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-3-UNAVAILABLE: IPC operation failed for [ %s ] with error code [ %s ]

**Explanation** A config sync error occurred. The details about what was attempted and what went wrong will be printed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_CONFIG\_SYNC-6-UNAVAILABLE: Bulk Sync succeeded

**Explanation** Bulk Sync has succeeded

**Recommended Action** No action necessary

**Error Message** %HA\_CONFIG\_SYNC-6-UNAVAILABLE: CONFIG SYNC : Subcode not matching for command %s Active subcode[0x%x], Standby subcode[0x%x]

**Explanation** The line by line synchronization of a command has succeeded. A command entered on the active system was successfully synchronized with the standby system. However, the sub code of Parser Return Code, that were returned by the Active and Standby systems were different. However, the sub code of Parser Return Code, that were returned by the Active and Standby systems were different.

**Recommended Action** Normally, no action is required. If, however, any problems with line by line synchronization are found, copy this message exactly as it appears on the console or in the system log and contact your Cisco technical support representative.

## HA\_EM-3

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Checksum error for policy %s - this policy will not be run

**Explanation** The checksum computed for the specified policy does not match the original checksum computed when the policy was registered.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Error attempting to fetch event information: %s.

**Explanation** The Embedded Event Manager Policy Director failed to receive event info for a callback.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Error occurred while fetching TTY number.

**Explanation** The Embedded Event Manager failed to fetch a TTY number.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Error occurred while fetching action information: %d.

**Explanation** The Embedded Event Manager Policy Director failed to gather action information registered for the event.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Error occurred while fetching variable information: %d.

**Explanation** The Embedded Event Manager Policy Director was unable to set the variable with the requested information.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Error occurred while performing action: %s.

**Explanation** The Embedded Event Manager Policy Director failed to perform an action for the registered event.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Failed to create process

**Explanation** The process create function reports an error

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Failed to look up in the table the registration specification for policy %s.

**Explanation** A table lookup for the registration specification for the policy failed.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Failed to perform CNS action: %s

**Explanation** The Embedded Event Manager failed attempting to send a CNS message.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: No such event id found.

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: No such event spec id found.

**Explanation** The Embedded Event Manager Policy Director could not find the event for the event spec. ID.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Published event type does not match event spec.

**Explanation** The Embedded Event Manager Policy Director detected a mis-match in event type between the published event and the event spec.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The %s event detector I/O queue empty.

**Explanation** The I/O queue is empty at this point, and should not be.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The I/O queue empty.

**Explanation** The I/O queue is empty at this point, and should not be.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The Unable to enqueue packet onto queue.

**Explanation** The queue is not in a state to handle enqueues.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The Unable to initialize queue.

**Explanation** The queue cannot be initialized.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The following oid has become unavailable: %s

**Explanation** The registered oid is no longer available in the system.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: The hash computation routine reported an error; %s

**Explanation** The fh\_hash\_md5\_fd() function reported the specified error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: This processor is not in ACTIVE state (state = %d). Switchover must be performed on ACTIVE processor.

**Explanation** Switchovers must occur on ACTIVE unit, not STANDBY unit.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Unable to initialize queue;

**Explanation** The queue initialization function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Unable to open %s; %s

**Explanation** The open function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Unable to open connection to CNS Event Agent: %d

**Explanation** The CNS Action process failed to open CNS handle to Event Agent.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: Unknown event type found in applet.

**Explanation** The Embedded Event Manager applet had an unknown event type.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: callback handler process create failed for eid: %d

**Explanation** The process\_create function reported an error trying to create the callback handler process.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: could not find environment variable: %s

**Explanation** The Embedded Event Manager policy director could not find the environment variable specified in the action message.

**Recommended Action** Only use well known Embedded Event Manager environment variables. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: could not initialize Embedded Event Manager service: %s

**Explanation** An internal error was detected when initializing Embedded Event Manager service.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: could not initialize queue

**Explanation** An internal error was detected when initializing Embedded Event Manager queue.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: error processing xml buffer

**Explanation** An error occurred processing the event publish information xml buffer.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: failed to create an IPC port: %s

**Explanation** Embedded Event Manager failed to create an IPC port.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: failed to execute callback

**Explanation** Failed to execute callback routine.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: failed to open an IPC port: %s

**Explanation** Embedded Event Manager failed to open an IPC port.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: failed to register an IPC port: %s

**Explanation** Embedded Event Manager failed to register an IPC port.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: fh\_init failed : %d

**Explanation** The fh\_init function reported an error trying to initialize EEM for a callback process.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: file checksum mismatch

**Explanation** The checksum value of an installed policy does not match the value provided by the installation manager.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: %s: unable to set state for tracking object number %u; object does not exist or is not a stub-object.

**Explanation** The Embedded Event Manager applet attempted to set the state of a tracking object that does not exist.

**Recommended Action** Only set the state of tracking objects that have already been configured in the system. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-3-UNAVAILABLE: Error attempting to access an unopened CLI session: %s

**Explanation** An error occurred attempting to access an unopened CLI session: %s

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Error disconnecting from CLI session: %s

**Explanation** An error occurred while disconnecting from the CLI session.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Error executing applet %s statement %s

**Explanation** The Embedded Event Manager policy director found an error when processing an applet.

**Recommended Action** Check syntax of applet statement. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Error occurred when sending mail to SMTP server: %s : %s

**Explanation** An unexpected error occurred when sending mail to SMTP server.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Unable to establish CLI session: %s

**Explanation** Unable to establish CLI session.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Unable to read CLI response: %s

**Explanation** Unable to read CLI response.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-3-UNAVAILABLE: Unable to send CLI command: %s

**Explanation** Unable to send CLI command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Recommended Action**

**Error Message** %HA\_EM-3-UNAVAILABLE: Unable to send notification using all SMTP servers

**Explanation** An unexpected error occurred when sending mail to all SMTP servers.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Recommended Action**

**Error Message** %HA\_EM-3-UNAVAILABLE: Use of the rack keyword in the correlate statement is not supported in this image.

**Explanation** The Embedded Event Manager Track ED is not supported in this image.

**Recommended Action** Track ED is not available in this image

## HA\_EM-4

**Error Message** %HA\_EM-4-UNAVAILABLE: %s: No tag %s found corresponding to this event publish.

**Explanation** The Embedded Event Manager policy director could not associate the tagname with a published event.

**Recommended Action** Only use tagnames in the action info type event reqinfo command which correspond to the published event.

**Error Message** %HA\_EM-4-UNAVAILABLE: %s: failed to allocate an IPC buffer

**Explanation** Embedded Event Manager failed to allocate a buffer from IPC.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-4-UNAVAILABLE: %s: failed to create an event: %s

**Explanation** Failed to create an Embedded Event Manager event.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-4-UNAVAILABLE: %s: failed to register an event: %s

**Explanation** Failed to register an Embedded Event Manager event.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-4-UNAVAILABLE: %s: failed to send an IPC message: %s

**Explanation** Embedded Event Manager failed to send a message through IPC.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-4-UNAVAILABLE: Cisco Signature not found or invalid. %s has been registered as a user policy.

**Explanation** Cisco Signature not found or invalid.

**Recommended Action** Sign with Cisco signature.

**Error Message** %HA\_EM-4-UNAVAILABLE: No action configured for applet %s

**Explanation** No action has been configured for this applet.

**Recommended Action** Configure at least one action for this applet.

**Error Message** %HA\_EM-4-UNAVAILABLE: No event configured for applet %s

**Explanation** No event has been configured for this applet.

**Recommended Action** Configure an event for this applet.

**Error Message** %HA\_EM-4-UNAVAILABLE: No threads are configured to service event class %s

**Explanation** The Embedded Event Manager has no scheduler threads to service this event class.

**Recommended Action** Configure threads for the event class using the 'event manager scheduler' command.

## HA\_EM-6

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: %s

**Explanation** The Embedded Event Manager reports an error on Event Manager configuration

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Cannot change a class %s %s to priority LAST. LAST is for default policies only

**Explanation** Embedded Event Manager Scheduler Command can only change a default policy to priority LAST.

**Recommended Action** The command is applicable to default policies only.

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Cannot modify a LAST policy to class %s. LAST policies are for class default only.

**Explanation** Embedded Event Manager LAST policy is for default class only.

**Recommended Action** The command is applicable to default policies only.

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Error adding trapvar to queue %s

**Explanation** The trap variable was not added to the queue.

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: No variable %s

**Explanation** The variable is not defined.

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Policy has requested a hardware switchover

**Explanation** An Embedded Event Manager policy requested that a hardware switchover occur.

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Policy has requested a hardware switchover

**Explanation** An Embedded Event Manager policy requested that a hardware switchover occur.

**Recommended Action** None

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: Policy has requested a system reload;

**Explanation** An Embedded Event Manager policy requested that the system be reloaded.

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: cannot %s a running policy with jobid %d.

**Explanation** Embedded Event Manager Scheduler Command cannot change a running policy.

**Recommended Action** The command is not applicable to a running policy.

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: duplicate oid

**Explanation** The oid is a duplicate

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: number of values exceeded %d

**Explanation** The number of values per variable exceeded the maximum

**Recommended Action** Check the EEM applet or policy configuration

**Error Message** %HA\_EM-6-UNAVAILABLE: %s: unable to modify the policy to class %s: scheduling rule unavailable.

**Explanation** There is no scheduler rule configured to service this event class.

**Recommended Action** Please configure a scheduler rule before modifying the event.

**Error Message** %HA\_EM-6-UNAVAILABLE: Error compiling regular expression: %s

**Explanation** An error was encountered when compiling the given regular expression.

**Recommended Action** Check syntax of regular expression pattern. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-UNAVAILABLE: Failed to retrieve context for key %s: %s

**Explanation** Failed to context retrieve variable information for event.

**Recommended Action** Ensure context information with the given key is saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-UNAVAILABLE: Failed to save variable context for key %s: %s

**Explanation** Failed to context save variable information for event.

**Recommended Action** Ensure context information with the same key is not already saved. If the message continues to occur, copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-6-UNAVAILABLE: Invalid operand in action, expected value within range %ld to %ld, received: %s

**Explanation** Arithmetic actions only accept valid long integer values.

**Recommended Action** Ensure value provided to action is long integer.

**Error Message** %HA\_EM-6-UNAVAILABLE: Invalid operand in arithmetic division, cannot divide by zero

**Explanation** Arithmetic division does not allow divide by zero.

**Recommended Action** Ensure denominator provided to division action is non-zero.

**Error Message** %HA\_EM-6-UNAVAILABLE: Policy update has copied %d bytes from %s to %s

**Explanation** An EEM policy has been copied as a result of an event manager update command

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-6-UNAVAILABLE: Policy update has failed to register policy %s %s

**Explanation** An EEM policy has failed to be registered as a result of an event manager update command

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-6-UNAVAILABLE: Policy update has failed to unregister policy %s %s

**Explanation** An EEM policy has failed to be unregistered as a result of an event manager update command

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_EM-6-UNAVAILABLE: Policy update has successfully re-registered policy %s

**Explanation** An EEM policy has been successfully re-registered as a result of an event manager update command

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA\_EM-7

**Error Message** %HA\_EM-7-UNAVAILABLE: %s

**Explanation** Internal error. The event detector has failed to get a free history list entry.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: %d

**Explanation** The event detector has exceeded its maximum number of retries to send a pulse to the embedded event manager to notify of an event publish.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: %s

**Explanation** Internal error. The event detector has failed to rebuild the metric list from the checkpointed records.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: %s

**Explanation** The SNMP error code.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: %s guard word corrupted; %p

**Explanation** The guard word for the specified control block does not contain what is expected.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: %s[%d]

**Explanation** Internal error. The event detector has failed to fetch a data element from the statistics data engine.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Application client library unable to handle message receive.

**Explanation** The API received a msg reply when it was not in a state to accept such messages.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: CNS Event Agent not available: %d

**Explanation** The CNS Event Agent is currently not available.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Class %s: Maximum number of %d %s publish entries exceeded; some events have been discarded

**Explanation** An attempt to publish an event failed because there is no more room in the publish queue.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Failed to allocate Event Detector context control block; %s

**Explanation** The get\_fd function reported an error trying to allocate a Event Detector context control block.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Failed to duplicate string %s; %s

**Explanation** The strdup function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Failed to open Event Detector context control block

**Explanation** The open\_fd function reported an error trying to open a Event Detector context control block.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Illegal SNMP address type

**Explanation** The SNMP address is illegal.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Invalid SNMP oid length %d

**Explanation** The SNMP oid has invalid length

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Invalid argument string: %s

**Explanation** An invalid argument string was passed to the specified function.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Policy execution %s

**Explanation** The Embedded Event Manager policy execution state has been changed to the state named in the message.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP IPV6 address is not supported

**Explanation** The IPV6 address is not supported.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP build pdu failed

**Explanation** The SNMP pdu build has failed.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP make pdu failed

**Explanation** The SNMP pdu make has failed.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP proxy exec got event, but queue is empty

**Explanation** The SNMP proxy got event but the queue is empty.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP request failed

**Explanation** The SNMP request has failed.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP response cancelled

**Explanation** The SNMP response has been cancelled.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP response error; error\_status = %d

**Explanation** The SNMP response has error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: SNMP response has timed out

**Explanation** The SNMP response has timed out.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: The script name is NULL

**Explanation** An invalid script name was passed as an argument into the specified function.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: The system is unable to switch to standby processor. Switchover cancelled.

**Explanation** Switchovers must occur when STANDBY is available and ready.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to add %s event detector command;

**Explanation** The Event detector failed to add command.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to add action %s command;

**Explanation** Failed to add action command.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to allocate %s; %s

**Explanation** The malloc function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to allocate %s;

**Explanation** The malloc function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to allocate memory for event publish timer block

**Explanation** Internal error. The event detector has failed to allocate memory for the event publish timer block.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to build an oid string into a SNMP oid; oid = %s

**Explanation** The oid string was not able to build into a SNMP oid

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to clear restart callback;

**Explanation** The CNS Action process failed to clear restart callback.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to create SNMP octet community string; string = %s

**Explanation** The community string was not able to build into a SNMP octet string

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to create a SNMP message; community = %s

**Explanation** The SNMP message failed to be created

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to create a SNMP varbind

**Explanation** The oid failed to make into a SNMP varbind

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to enqueue %s;

**Explanation** The enqueue function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to locate reg callback entry for pulse code %d

**Explanation** The registration callback handler was unable to validate the pulse code received.

**Recommended Action** The pthread\_create function reported an error.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to reallocate %s; %s

**Explanation** The realloc function reported an error.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to send response for FH\_MSG\_CALLBACK\_DONE %s

**Explanation** The registration callback handler was unable to send the FH\_MSG\_CALLBACK\_DONE message to the Embedded Event Manager Server.

**Recommended Action** The pthread\_create function reported an error.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unable to set restart callback;

**Explanation** The CNS Action process failed to set the restart callback.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: Unknown SNMP operation or response type %d

**Explanation** The operation or response type is unknown.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: could not create a leaf timer

**Explanation** Internal error. The event detector has failed to create a managed leaf timer.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: could not create an occurrence entry

**Explanation** Internal error. The event detector has failed to create an entry for the matched occurrence list.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: could not remove an occurrence entry

**Explanation** Internal error. The event detector has failed to remove an entry for the matched occurrence list.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: create\_watched\_boolean failed: %s

**Explanation** The create\_watched\_boolean function reported an error trying to create the watched boolean.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: create\_watched\_boolean failed; %s

**Explanation** The create\_watched\_boolean function reported an error trying to create the watched boolean.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: create\_watched\_queue failed; %s

**Explanation** The create\_watched\_queue function reported an error trying to create the watched queue.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: delete\_watched\_boolean failed: %s

**Explanation** The delete\_watched\_boolean function reported an error trying to delete the watched boolean.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: error attempting to format time string

**Explanation** Format time failure.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: invalid comparison operator: %d

**Explanation** Internal error. The value comparison operator is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: invalid last policy name replied %s

**Explanation** Internal error. The last policy name the script director replied to show fm policy registered command is an invalid policy name.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: invalid statistics value type: %d

**Explanation** Internal error. The statistics data type is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: invalid timer type: %d

**Explanation** Internal error. The timer type is invalid or not supported.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: invalid timer: type=%d, timer=%p

**Explanation** Internal error. The timer value is invalid or not as expected.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: not enough memory: %s

**Explanation** Allocating memory failed due to a low-memory condition.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: resource\_monitor\_register failed; return code = %d

**Explanation** The resource\_monitor\_register function reported an error trying to register for RMI notifications.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

**Error Message** %HA\_EM-7-UNAVAILABLE: %s: unknown event type %d

**Explanation** An unknown Embedded Event Manager even type was detected.

**Recommended Action** Copy the message exactly as it appears, and report it your technical support representative.

## HD-1

**Error Message** %HD-1-UNAVAILABLE: 4T Port Adapter fault on port %d in slot %d

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HD-1-UNAVAILABLE: Loopback not supported for a 4T DTE/X.21, port %d in slot %d

**Explanation** Loopback mode is not allowed when using an X.21 DTE cable on a Quad serial NIM port.

**Recommended Action** Do not enable loopback, or use a different cable type.

**Error Message** %HD-1-UNAVAILABLE: msgtxt\_badringsize

**Explanation** An internal software error occurred.

**Recommended Action** If message recurs, call your technical support representative for assistance.

## HD-5

**Error Message** %HD-5-UNAVAILABLE: Unit %d excessive modem control changes

**Explanation** Too many modem control interrupts have been received. The port was disabled to prevent excessive use of the CPU.

**Recommended Action** Check the cable on the serial port.

## HA\_WD Messages

This section contains high availability system messages.

### HA\_WD-3

**Error Message** %HA\_WD-3-DM\_SEND\_PULSE: [chars]: could not send priority pulse to receiver: [chars]

**Explanation** An attempt to send a priority pulse to the receiver has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-3-PROCFS\_PASS: [chars]: procfs pass ended in error after five consecutive passes

**Explanation** A call to the wd\_procfs\_per\_process() function ended in error after five consecutive passes.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-3-PTHRD\_SETDETACHSTATE: [chars]: could not set detach state of a POSIX thread: [chars]

**Explanation** An internal error was detected when trying to set the detach state of a POSIX thread.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-3-PTHRD\_SETSCHEDPARAM: [chars]: could not set scheduler param of a POSIX thread: [chars]

**Explanation** An internal error was detected when trying to set the scheduler parameter of a POSIX thread.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-3-RESTART\_WDSYSMON: [chars]: Error returned from sysmgr\_restart\_self() [chars]

**Explanation** An error was returned from the sysmgr\_restart\_self API.

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative

and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA\_WD-6

**Error Message** %HA\_WD-6-BLOCKED\_THREAD: A default priority thread CPU starvation condition was detected

**Explanation** Some higher priority threads are blocking the CPU.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-6-CPU: [chars]

**Explanation** The CPU is blocked by one or more high priority threads.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HA\_WD-6-DLK: [chars]

**Explanation** An unresolved process or Cisco IOS scheduler deadlock was detected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HA\_WD-7

**Error Message** %HA\_WD-7-GUARD\_WORD\_CORRUPTED: [chars]: [chars] guard word corrupted [hex]

**Explanation** The named control block guard word was corrupted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HDLC Messages

This section contains high-level data link control (HDLC) messages.

### HDLC-1

**Error Message** %HDLC-1-ISSU\_NOMEMORY: Unit [dec], no memory for [chars]

**Explanation** The requested operation could not be accomplished because of a low-memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

### HDLC-4

**Error Message** %HSRP-4-BADAUTH: Bad authentication from %s, group %d, remote state %s

**Explanation** Two routers participating in HSRP disagree on the valid authentication string.

**Recommended Action** Use the standby authentication command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

**Error Message** %HDLC-4-ISSU\_INCOMPATIBLE: hdlc-issu-compat: returned FALSE

**Explanation** The compatibility checking has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDLC-4-ISSU\_SENDFAILED: HDLC ISSU: send message failed, rc = [dec]

**Explanation** An attempt to send a message has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDLC-4-ISSU\_XFORM: [chars]: failed, rc=[chars]

**Explanation** The transform has failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HDV-1

**Error Message** %HDV-1-UNAVAILABLE: HDV in slot %d: No PCI memory available.

**Explanation** The system is experiencing memory exhaustion in the PCI/packet memory. This is probably due to heavy traffic congestion but could also be a software error.

**Recommended Action** Review the configuration for performance bottlenecks. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDV-1-UNAVAILABLE: HDV in slot %d: VIC daughter card (%s/0x%x) is unsupported

**Explanation** The VIC card plugged into the HDV is not of a supported type

**Recommended Action** Replace this VIC with a type that is supported by this version of IOS, or change the version of IOS to support this VIC type.

**Error Message** %HDV-1-UNAVAILABLE: HDV in slot %d: VIC daughter card has an unknown id of 0x%x

**Explanation** The software did not recognize the type of VIC card plugged into the HDV Port Module.

**Recommended Action** Check the part number on the VIC card to see if it is supported in the version of IOS operational on the router or contact your technical support representative.

**Error Message** %HDV-1-UNAVAILABLE: HDV in slot %d: no VIC card is inserted in the HDV.

**Explanation** The software did not detect the presence of a VIC card inserted in the HDV Port Module.

**Recommended Action** Check that there is a VIC card inserted properly into the HDV. If so, then check the part number on the VIC card to see if it is supported in the version of IOS operational on the router or contact your technical support representative.

**Error Message** %HDV-1-UNAVAILABLE: HDV in slot %d: packet size (%d) too big.

**Explanation** A packet greater than the 256 bytes received on this interface.

**Recommended Action** The system should recover. No action is required. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HDV-2

**Error Message** %HDV-2-UNAVAILABLE: HDV in slot %d: An unrecoverable error occurred.

**Explanation** The HDV card experienced an internal unrecoverable error. This may be due to a internal firmware error or bad HDV hardware.

**Recommended Action** Power down, reinsert the network module and reboot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HDV-3

**Error Message** %HDV-3-UNAVAILABLE: HDV in slot %d: Incorrect %d PM-ID device not supported.

**Explanation** A interface controller device did not have the correct PM-ID.

**Recommended Action** Check that the HDV is inserted properly. If necessary, turn off the router and reinsert the HDV Port Module. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDV-3-UNAVAILABLE: HDV in slot %d: reports an invalid device id of %#x.

**Explanation** The HDV port module hardware may be bad or improperly seated.

**Recommended Action** Power down, reinsert the network module and reboot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDV-3-UNAVAILABLE: HDV in slot %d: the HDV failed to initialize properly.

**Explanation** An initialization action failed for the HDV. This can be caused by a lack of system resources, improper or no VIC installed in the port module, or it may be bad HDV hardware.

**Recommended Action** Power down. Check that a supported VIC module is properly installed in the HDV module. Reinsert the VIC module. Then reinsert the Port Module and reboot the router. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDV-3-UNAVAILABLE: HDV in slot %d: the firmware on the port module did start properly.

**Explanation** The firmware on the card did not start after a reset. This is usually caused by a bad HDV module or improperly seated HDV module.

**Recommended Action** Power down. Reinsert the HDV port module and reboot the router. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HDV-3-UNAVAILABLE: HDV in slot %d: the port module did not reset and start up properly.

**Explanation** The hardware on the card did not start after a reset. This is usually caused by a bad HDV module or improperly seated HDV module.

**Recommended Action** Power down. Reinsert the HDV port module and reboot the router. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HDX-3

**Error Message** %HDX-3-UNAVAILABLE: On int %d/%d, unexpected state %d, event %d

**Explanation** A bad state, event pair is detected in the rx/tx half duplex state machine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# HLFM Messages

This section contains Forwarding Manager messages.

## HLFM-3

**Error Message** %HLFM-3-MACFREE\_ERROR: MAC address [enet], vlad [dec] is still referenced; cannot free

**Explanation** An attempt was made to free a MAC address before all references to it had been released.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HLFM-3-MAP\_ERROR: IP address [IP\_address] not in mac tables, mac-address [enet], vlan [dec]

**Explanation** The IP address and MAC address tables have lost their synchronization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HLFM-3-MOD\_SD: Failed to modify Station Descriptor with index [dec], vlan [dec], di [dec], error [dec], mad [dec], ref-count [dec]

**Explanation** The forwarding manager is attempting to modify a station descriptor that is no longer in use or is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HMM\_ASYNC-3

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Digital modem %d/%d on Simm %d failed power on diagnostics.

**Explanation** Digital modem failed to pass power on diagnostics. It will not be used.

**Recommended Action** If remaining Simm(s) passed diagnostics, remove or replace this problem Simm before continuing. Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: HMM Digital Modem Card %d experienced a TDM Synthesis Error.

**Explanation** Digital Modem Card failed to send or receive PCM data in time to avoid data loss. This may cause the modems to speed shift, retrain, or hangup.

**Recommended Action** Verify that the DS1 interface(s) share a common clock source. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: HMM Modem %d/%d Mailbox is Full, command %#x not sent.

**Explanation** Error delivering commands to Modem Module. This may be a transient failure. If this message repeats every 30 seconds it may indicate a failed Modem Module.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: HMM Modem %d/%d failed to accept a new command.

**Explanation** Modem failed to accept a new command. This may be a transient failure or the modem may remain unusable until a system reset.

**Recommended Action** You may try to reset the modem by issuing the clear modem slot/port command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: HMM: Digital Modem Card %d hardware exception : %s

**Explanation** This may be an intermittent or permanent hardware failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: No memory for %s of unit %d

**Explanation** The router does not have enough memory to perform the function

**Recommended Action** Consider adding more shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Received unknown message 0x%x at mail offset %d from modem %d/%d.

**Explanation** Received unidentified message from modem. This is symptomatic of running with an incompatible version of modem firmware.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Simm %d in slot %d has halted due to a Runtime Error.

**Explanation** The Portware running on the Simm was halted due a runtime error. The six modems contained on the Simm have been marked Bad and are no longer usable until the system is reloaded.

**Recommended Action** Copy the error message exactly as it appears, along with show modem and show modem log output, and report it to your technical support representative.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unable to creaet pool %d raw Tx mode buffers

**Explanation** The router does not have enough I/O memory for buffers

**Recommended Action** Consider adding more shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unable to create TTY structure for line %d

**Explanation** Unable to create tty line control block for the specified line This may be due to not having enough memory in the router

**Recommended Action** Consider adding more shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unable to create pool for %d raw Rx mode buffers

**Explanation** The router does not have enough I/O memory for buffers

**Recommended Action** Consider adding more shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unable to download firmware image to digital modem card in slot %d.

**Explanation** Failed to bring up the processor on the digital modem card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unable to download modem firmware image to Simm %d in slot %d.

**Explanation** Failed to load modem firmware into the Simm.

**Recommended Action** If firmware successfully loaded into remaining Simm(s), remove or replace this problem Simm before continuing. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HMM\_ASYNC-3-UNAVAILABLE: Unknown Platform type to support HMM Network Module

**Explanation** The Network Module is not compatible with the current platform that it is plugged into.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HMM\_ASYNC-4

**Error Message** %HMM\_ASYNC-4-UNAVAILABLE: HMM Digital Modem Card %d contains no active modems.

**Explanation** There are no modems installed on the network module.

**Recommended Action** Make sure the network module contains properly installed MICA-6DM Simm(s).

## HOOD-3

**Error Message** %HOOD-3-UNAVAILABLE: msgtxt\_badunit

**Explanation** An internal software error occurred.

**Recommended Action** If the message recurs, call your technical support representative for assistance.

## HOOD-5

**Error Message** %HOOD-5-UNAVAILABLE: Unit %d, HP100VG, cable error. Training failed

**Explanation** A 100VG cable or hub is faulty.

**Recommended Action** If the message recurs, and either the cable or hub appears to be good, repair or replace the router module.

**Error Message** %HOOD-5-UNAVAILABLE: Unit %d, HP100VG, no tone detected. Check cable, hub

**Explanation** A 100VG cable is faulty.

**Recommended Action** If the message recurs, and either the cable or hub appears to be good, repair or replace the router module.

**Error Message** %HOOD-5-UNAVAILABLE: Unit %d, excessive collisions

**Explanation** An Ethernet cable is broken or unterminated, or the transceiver is unplugged.

**Recommended Action** If the transceiver appears to be properly terminated, repair or replace the router.

**Error Message** %HOOD-5-UNAVAILABLE: Unit %d, lost carrier. Transceiver problem?

**Explanation** An Ethernet transceiver is unplugged or faulty.

**Recommended Action** Repair or replace the controller.

# HP100VG Messages

## HP100VG

**Error Message** %HP100VG-1-UNAVAILABLE: %s access to network denied

**Explanation** Access to the network is denied because of incompatible configuration.

**Recommended Action** Check the configuration of the hub for Frame Format, Promiscuous, and Repeater bit to indicate proper configuration.

**Error Message** %HP100VG-1-UNAVAILABLE: %s configuration not compatible with the network

**Explanation** Configuration of the router module is not compatible to the network

**Recommended Action** Check the configuration of the hub for Frame Format, Promiscuous, and Repeater bit to indicate proper configuration

**Error Message** %HP100VG-1-UNAVAILABLE: %s unable to login to the hub

**Explanation** Unable to login to the hub.

**Recommended Action** Take action based on the following error messages.

**Error Message** %HP100VG-1-UNAVAILABLE: On %s LAN segment

**Explanation** Two VG devices on the same LAN segment have the same MAC address.

**Recommended Action** Check router configuration to make sure that no duplicate MAC address is configured.

**Error Message** %HP100VG-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** No VG interface detected.

**Recommended Action** Make sure 100VG PA is properly seated in the slot. Otherwise repair or replace the 100VG PA interface module.

## HP100VG-3

**Error Message** %HP100VG-3-UNAVAILABLE: %s hardware CAM device not found

**Explanation** Could not find Hardware CAM on the PA module

**Recommended Action** Repair or replace the 100VG PA interface module.

**Error Message** %HP100VG-3-UNAVAILABLE: %s packet buffer, pak=0x%x

**Explanation** A software or hardware error occurred. The HP100VG driver detected that the buffer ring is in an inconsistent and unrecoverable state.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HP100VG-3-UNAVAILABLE: Bay %d device ID seen as %#x, expected %#x

**Explanation** Could not find 100VG PCI device

**Recommended Action** Make sure 100VG PA is properly seated in the slot. Otherwise repair or replace the 100VG PA interface module.

## HP100VG-5

**Error Message** %HP100VG-5-UNAVAILABLE: %s cable fault; tone not detected

**Explanation** An 100VG cable is faulty.

**Recommended Action** Repair or replace the cable. If either the cable appears to be good, repair or replace the VG PA interface module.

**Error Message** %HP100VG-5-UNAVAILABLE: %s cable/hub problem?

**Explanation** The VG controller detects link to the hub is down due to cable, hub or vg controller problem.

**Recommended Action** Repair or replace the cable or hub. If either the cable or hub appears to be good, repair or replace the VG PA interface module.

**Error Message** %HP100VG-5-UNAVAILABLE: %s training failed

**Explanation** An 100VG cable or hub is faulty.

**Recommended Action** Repair or replace the cable or hub. If the cable or hub appears to be good, repair or replace the VG PA interface module.

# HSRP Messages

This section contains Hot Standby Router Protocol (HSRP) messages.

## HSRP-3

**Error Message** %HSRP-3-MISCONFIG: Attempt to change [chars] MAC address to [enet] when DECNET already running

**Explanation** An HSRP group attempted to become active on an interface that can only support a single MAC address and that is running DECnet. If the **standby use-bia** command has not been entered on the interface, HSRP would normally set the interface MAC address to the HSRP virtual MAC address, but this configuration is not allowed if DECnet is running.

**Recommended Action** Enter the **standby use-bia** command on the interface.

**Error Message** %HSRP-3-NOSOCKET: Unable to open socket

**Explanation** The system was unable to initialize an IP connection for the Hot Standby protocol.

**Recommended Action** Make sure that there is at least one interface configured to run IP.

## HSRP-4

**Error Message** %HSRP-4-BADAUTH: Bad authentication from [IP\_address], group [dec], remote state [chars]

**Explanation** Two routers participating in HSRP disagree on the valid authentication string.

**Recommended Action** Use the **standby authentication** command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

**Error Message** %HSRP-4-BADAUTH2: Bad authentication from [IP\_address]

**Explanation** Two routers participating in HSRP disagree on the valid authentication string.

**Recommended Action** Use the **standby authentication** command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

**Error Message** %HSRP-4-BADVIP: [chars] Grp [dec] address [IP\_address] is in the wrong subnet for this interface

**Explanation** The HSRP virtual IP address contained in the Hello message cannot be learned as it is not within a subnet configured on the interface.

**Recommended Action** Check the configuration on all HSRP routers and ensure that the virtual IP address is within a configured subnet.

**Error Message** %HSRP-4-DIFFVIP1: [chars] Grp [dec] active routers virtual IP address [IP\_address] is different to the locally configured address [IP\_address]

**Explanation** The HSRP virtual IP address contained in the Hello message from the active router is different from the virtual IP address configured locally.

**Recommended Action** Check the configuration on all HSRP routers in the group and ensure they are all configured with the same virtual IP address.

**Error Message** %HSRP-4-DUPADDR: Duplicate address [IP\_address] on [chars], sourced by [enet]

**Explanation** The IP address in an HSRP message received on the specified interface is the same as the IP address of the router. Another router might be configured with the same IP address. The most likely cause is a network loop or a misconfigured switch that is causing the router to see its own HSRP Hello messages.

**Recommended Action** Check the configurations on all the HSRP routers to ensure that the interface IP addresses are unique. Check that no network loops exist. If port channels are configured, check that the switch is correctly configured for port channels. Enter the **standby use-bia** command so that the error message displays the interface MAC address of the sending router, which can be used to determine if the error message is caused by a misconfigured router or a network loop.

**Error Message** %HSRP-4-DUPVIP1: [chars] Grp [dec] address [IP\_address] is already assigned to [chars] group [dec]

**Explanation** The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to a different HSRP group.

**Recommended Action** Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

**Error Message** %HSRP-4-DUPVIP2: [chars] Grp [dec] address [IP\_address] is already assigned on this interface

**Explanation** The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to this interface.

**Recommended Action** Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

**Error Message** %HSRP-4-DUPVIP3: [chars] Grp [dec] address [IP\_address] is already assigned to, or overlaps with, an address on another interface or application

**Explanation** The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to, or overlaps with, an address on another interface or application.

**Recommended Action** Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

## HSRP-5

**Error Message** %HSRP-5-STATECHANGE: [chars] Grp [dec] state [chars] -> [chars]

**Explanation** The router has changed state.

**Recommended Action** No action is required.

## HTSP-3

**Error Message** %HTSP-3-UNAVAILABLE: no free event structure available from %s for DSP message

**Explanation** There were no event structures remaining in the system pools to alert the router of a voice or signaling event.

**Recommended Action** Check that the voice port for which the event was reported is still operational. If not, clear the voice port.

**Error Message** %HTSP-3-UNAVAILABLE: voice port %s: Ground Start trunking not supported

**Explanation** This voice port does not support the 'connection trunk' command when ground start signaling is configured. Trunking mode on this voice is supported when using loop start signaling.

**Recommended Action** Shut down the voice port, remove the 'connection trunk' and/or 'signal groundStart' command from the voice port configuration, and unshut the voice port.

**Error Message** %HTSP-3-UNAVAILABLE: voice port %s: call connection id [0x%x 0x%x 0x%x 0x%x]

**Explanation** There was a capabilities mismatch between the two call legs. capabilities are negotiated between call legs for CODEC, VAD and FAX rate.

**Recommended Action** Check that the dial peer configuration is appropriate for the interface in question. Also check that and configuration on the interface is correct.

**Error Message** %HTSP-3-UNAVAILABLE: voice port %s: status=0x%x message=0x%x text=%s

**Explanation** The DSP reported a fatal error. All calls on the DSP were dropped and a DSP reload was attempted.

**Recommended Action** Verify that the DSP reloaded properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message.

## HTSP-5

**Error Message** %HTSP-5-UNAVAILABLE: Trunk port(channel) [%s] is %s

**Explanation** Trunk port:channel changed state.

**Recommended Action** LOG\_STD\_NO\_ACTION

## HTTP Messages

This section contains Hypertext Transfer Protocol (HTTP) messages.

## HTTP-3

**Error Message** %HTTP-3-INIT\_FAIL: HTTP Process Init failed.

**Explanation** Initialization of the HTTP subsystem has failed.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %HTTP-3-OUTOF\_MEM: HTTP out of memory.

**Explanation** An error occurred during initialization of the HTTP process. The HTTP process could not create crucial internal data structures that are required for operation of the HTTP subsystem. The most likely reason for this condition is an exhaustion of system memory.

**Recommended Action** Reduce other system activity to ease memory demands. if conditions warrant, upgrade to a larger memory configuration.

**Error Message** %HTTP-3-PROC\_NOCREAT: Unable to create HTTP process.

**Explanation** An error occurred during initialization of the HTTP process. The HTTP process that processes all HTTP requests and responses could not be created.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %HTTP-3-SERVER\_RESTART\_FAILED: Server restart failed. Disabling HTTP server.

**Explanation** TCP process was restarted affecting the HTTP server. Attempts to restart HTTP server failed.

**Recommended Action** Check status of TCP process. Enable the HTTP server after TCP process has started.

## HTTP-6

**Error Message** %HTTP-6-SERVER\_SETUP\_FAILED: Server setup failed

**Explanation** Setup of the HTTP or HTTPS server to listen on the specified port number has failed.

**Recommended Action** Disable the server, verify that port number is correct and enable the server. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## HUB-1

**Error Message** %HUB-1-UNAVAILABLE: Bad port number %d

**Explanation** An internal software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HUB-1-UNAVAILABLE: Invalid hub type %d and number %d

**Explanation** An internal software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HUB-1-UNAVAILABLE: Read op %d not allowed

**Explanation** An internal software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HUB-1-UNAVAILABLE: Write op %d not allowed

**Explanation** An internal software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %HUB-1-UNAVAILABLE: msgtxt\_nomemory

**Explanation** The system detected that there is not enough memory for the hub initialization.

**Recommended Action** If conditions warrant, upgrade to larger memory configuration.

## HUJR-3

**Error Message** %HUJR-3-UNAVAILABLE: Read/write failed [%s]

**Explanation** A read/write error occurred when accessing the hardware

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HW Messages

This section contains hardware messages.

### HW-2

**Error Message** %HW-2-OBSOLETE\_HW\_VER: Module Version in [chars] is obsolete  
 \*\*\*\*\*  
 IMPORTANT !!! \* \* The module in [chars] is obsolete and must be returned \* \* via

RMA to Cisco Manufacturing. If it is a lab unit, \* \* it must be returned to Proto Services for upgrade. \*

\*\*\*\*\*

**Explanation** The specified hardware is obsolete and needs to be replaced.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HWMATM\_MOD-3

**Error Message** %HWMATM\_MOD-3-UNAVAILABLE: Unexpected null pointer in %s at %d

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HW\_API Messages

This section contains hardware API messages.

### HW\_API-3

**Error Message** %HW\_API-3-BACKWALK\_REQUEST: Backwalk request failed, [chars]

**Explanation** A request to walk internal data structures has failed. Depending on the criticality of the data, the accuracy of forwarding may be affected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-BACKWALK\_REQUEST\_VALUE: Backwalk request failed, [chars] ([hex])

**Explanation** A request to walk internal data structures has failed. Depending on the criticality of the data, the accuracy of forwarding may be affected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-INVALID\_CONTEXT: Invalid context [hex]

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-INVALID\_OBJ: Invalid object [hex]

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-INVALID\_TYPE: Invalid type [dec]

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-INVALID\_WALK\_SPEC: Invalid walk spec [hex]

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-NO\_OBJ\_TYPE\_LIST\_ENTRY: Invalid sw\_obj\_type ([dec]) used with obj\_type\_list

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-NO\_OBJ\_TYPE\_LIST\_ENTRY2: Invalid sw\_obj\_link\_type ([dec]) used with obj\_type\_list

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-RESILIENCE\_NO\_HANDLER: No handlers in place for [chars] sw object creation failure.

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-VECTOR: Failed to set [chars] vector for [chars], [chars]

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HW\_API-3-WALK\_MODE\_UNSUPPORTED: Walk mode '[chars]' unsupported

**Explanation** An internal API error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HW\_VPN-1

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Command 0x%x failed with status 0x%x

**Explanation** A command was sent to the Encryption AIM, and it responded that the command had an error. The details of the failure depend upon the circumstances, but in all likelihood the Encryption AIM is faulty and should be replaced.

**Recommended Action** Make a note of the error message and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: EAIM responded incorrectly to hello: received 0x%x expected 0x%x

**Explanation** A command was sent to the Encryption AIM, and it was expected to echo back the data that was sent to it. Instead of receiving the expected data, the indicated data was received instead.

**Recommended Action** Make a note of the error message and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Invalid Amount of RAM for PA ID, memsize = 0x%x

**Explanation** The Power On Self Test (POST) reported an incorrect memory size.

**Recommended Action** The EAIM must be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Invalid command reply: expected 0x%x received 0x%s

**Explanation** A command was sent to the Encryption AIM, and its replay contained an unexpected reply code. The details of the failure depend upon the circumstances, but in all likelihood the Encryption AIM is faulty and should be replaced.

**Recommended Action** Make a note of the error message and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Key management error, cmd=0x%x status=0x%x

**Explanation** An unexpected error occurred during the execution of a key management command by the EAIM.

**Recommended Action** Make a note of the status value and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Packet Encryption/Decryption error, status=%u

**Explanation** An unexpected error occurred during the encryption and/or decryption of a packet.

**Recommended Action** This message can occur occasionally during normal operation of the system. It may occur during the transition to a new session key for a Security Association. In such cases, it may be ignored. However, if it happens frequently, or is associated with traffic disruption, then make a note of the status value and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Power On Self Test failed, alert status = 0x%x

**Explanation** The Power On Self Test (POST) for the EAIM failed.

**Recommended Action** The EAIM must be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: %s: Timeout on reply to command to Encryption AIM

**Explanation** A command has been sent to the Encryption AIM, and there has not been a reply to the command in a reasonable amount of time. The Encryption AIM is faulty and should be replaced.

**Recommended Action** Make a note of the error message and contact a Cisco representative. The EAIM will most likely need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: AIM in slot %u not supported by this HW revision.

**Explanation** The revision level of the C2600 'Elmer' PLD does not support encryption AIM. The PLD needs to be reprogrammed.

**Recommended Action** The C2600 'Elmer' PLD needs to be reprogrammed to a later revision. Refer to CCO Release Notes for the C2600 and Encryption AIM for an explanation of how to reprogram the PLD.

**Error Message** %HW\_VPN-1-UNAVAILABLE: EAIM: Device Initialization failure

**Explanation** The EAIM failed to respond properly to attempts at initialization.

**Recommended Action** The EAIM must be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: EAIM: Initialization failed at %s

**Explanation** The EAIM device would not reset properly. Indicative of a hardware failure.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. The EAIM will need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: EAIM: Invalid PCI device ID: %u

**Explanation** The EAIM device has improperly identified itself on the router bus

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative. The EAIM will need to be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: Encryption AIM busy

**Explanation** You have entered a command which involves an Encryption AIM, but the Encryption AIM is busy executing another command.

**Recommended Action** Wait until the present command has completed. If the present command doesn't seem to complete in a reasonable amount of time, then the Encryption AIM is defective and must be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: Encryption AIM not present in system

**Explanation** You have entered a command which involves an Encryption AIM, but no encryption AIM is present in the system.

**Recommended Action** Don't enter encryption AIM commands unless an Encryption AIM is present. If an encryption AIM is installed, then it is defective and must be replaced.

**Error Message** %HW\_VPN-1-UNAVAILABLE: This Encryption AIM type not supported on this router platform

**Explanation** You have installed an encryption AIM designed for one particular type of router platform (e.g. C2600) on another router platform (e.g. C3620). Different Encryption AIMs are supported by each router platform.

**Recommended Action** The Encryption AIM must be removed and one compatible with your router must be installed in its place.

## HW\_VPN-6

**Error Message** %HW\_VPN-6-UNAVAILABLE: %s: disabled

**Explanation** The EAIM has been disabled

**Recommended Action** The EAIM will need to be replaced.

**Error Message** %HW\_VPN-6-UNAVAILABLE: %s: starting up

**Explanation** The specified EAIM has initialized successfully.

**Recommended Action** This is an informational message only. It occurs in normal operation.

**Error Message** %HW\_VPN-6-UNAVAILABLE: Cannot support more than one Encryption AIMs

**Explanation** A second Encryption AIM was discovered present in the system. The Encryption AIM software only supports a single Encryption AIM. All other Encryption AIMs installed will be ignored.

**Recommended Action** Remove one of the Encryption AIMs installed in your system.

## HWIF\_QOS Messages

This section contains HWIF QoS messages.

**Error Message** %HWIF\_QOS-6-EOM\_FORCE\_TRUSTED: EoMPLS on [chars] caused install of 'trust cos' state

**Explanation** If EoMPLS is configured on the interface or any of its subinterfaces, the no trust state is automatically replaced by trust cos.

**Recommended Action** Remove all EoMPLS configurations from the interface to restore the no trust state.

**Error Message** %HWIF\_QOS-6-EOM\_RESTORE\_UNTRUSTED: The 'no trust' state is restored on EoMPLS removal from [chars]

**Explanation** If EoMPLS is unconfigured on the interface and all its subinterfaces, the configured no trust state is restored.

**Recommended Action** This is an informational message only. No action is required.

**Error Message** %HWIF\_QOS-6-EOM\_TRUST\_NOT\_INSTALLED: 'no trust' command is not installed on [chars] in presence of EoMPLS

**Explanation** If EoMPLS is configured on the interface or any of its subinterfaces, the **no trust** command is not installed.

**Recommended Action** Remove all EoMPLS configurations from the interface.

## HYPERION Messages

This section contains Hyperion ASIC (HYPERION) messages.

### HYPERION-3

**Error Message** %HYPERION-3-FAILURE\_INTR\_CFG: Failure to setup the Hyperion device interrupts.

**Explanation** The internal ASIC on a line card could not be initialized. The device is not operational and has been disabled. The data path is not operational.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HYPERION-4

**Error Message** %HYPERION-4-EARL\_BUS\_SYNC\_ERR: Failed to sync Earl bus, Hyperion version [dec]

**Explanation** The HYPERION ASIC in the line card failed to synchronize with the Earl bus.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-4-HYP\_RESET: Hyperion Error Interrupt. Resetting ASIC.

**Explanation** The Hyperion ASIC in the SPA or Enhanced FlexWAN module has received a fatal error. The ASIC is automatically reset, and the SPA or Enhanced FlexWAN module attempts to continue normal operation.

**Recommended Action** No action is required if traffic recovers. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-4-HYP\_RESET: Hyperion ASIC reset, interrupt [chars]

**Explanation** The Hyperion ASIC in the SPA or Enhanced FlexWAN module has received a fatal error. The ASIC is automatically reset, and the SPA or Enhanced FlexWAN module attempts to continue normal operation.

**Recommended Action** No action is required if traffic recovers. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-4-UNEXPECTED\_VERSION: Unexpected Hyperion version.

**Explanation** The line card is unable to recognize the version of the Hyperion ASIC.

**Recommended Action** No action is required if traffic passes through the line card. If traffic does not pass through the line card, check the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl) to determine in which version this problem is fixed and upgrade accordingly. If traffic does not pass after the upgrade, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## HYPERION-5

**Error Message** %HYPERION-5-BUS\_MODE\_CHANGE: The System Switching Bus Mode changed to [chars] mode

**Explanation** The system switching bus interface device mode changed switching bus modes. The mode is specified in the system message.

**Recommended Action** The supervisor engine instructed the module to change the mode on the switching bus. No action is required.

**Error Message** %HYPERION-5-BUS\_SEQ\_ERR: Constellation bus Sequence Error. Resetting Hyperion ASIC.

**Explanation** The switch processor has detected a sequence error on the backplane bus. A reset sequence from the EARL has been called to recover from this error. System traffic should recover and continue normally.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-5-HYP\_INIT\_FAILURE: The Hyperion ASIC initialization failed

**Explanation** The Hyperion ASIC initialization was not successful. The Hyperion ASIC is not operational and is disabled.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you

cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-5-HYP\_INTR\_INFO: [chars]

**Explanation** This message provides more information about the interrupts from the backplane bus ASIC to the line card CPU.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-5-HYP\_RESET\_INFO: [chars]

**Explanation** This message provides more information about the interrupts leading to the reset of the backplane bus ASIC.

**Recommended Action** If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %HYPERION-5-NULL\_HYP\_OBJECT: The Hyperion device object pointer is set to NULL

**Explanation** The memory location of the Hyperion ASIC device object is invalid. The Hyperion ASIC operation is disabled, and the device interrupt is now masked.

**Recommended Action** If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ICC Messages

This section contains Inter-Card Communication (ICC) messages.

### ICC-2

**Error Message** %ICC-2-NOMEM: No memory available for %s

**Explanation** The ICC subsystem could not obtain the memory it needed.

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

### ICC-3

**Error Message** %ICC-3-MAST\_BAD\_FREE: ICC multicast memory already freed

**Explanation** One of the ICC multicast request's memory was found to be free when response arrived

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### ICC-4

**Error Message** %ICC-4-BAD\_ACCOUNTING: ICC received a bad class %d

**Explanation** The intercard communication (ICC) process received an invalid class and therefore cannot account for the message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC-4-COMM: Communication failure occurred while %s

**Explanation** A communication failure has occurred between this card and another card in the system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC-4-CONSISTENCY: Internal consistency check: %s

**Explanation** An internal inconsistency was found in some ICC data structures.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC-4-HEARTBEAT: Card %d failed to respond to heartbeat

**Explanation** A communication failure has occurred between the primary and the specified line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ICC-5

**Error Message** %ICC-5-REQ\_WATERMARK: [dec] pkts for class [chars] request [dec] are waiting to be processed

**Explanation** The processor has received packets for the class request and the packets are waiting to be processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ICC-6

**Error Message** %ICC-6-INFO: [chars] [hex] [hex] [hex]

**Explanation** This message provides ICC subsystem generic information or error information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC-6-MCAST\_TIMEOUT: ICC multicast request timed out

**Explanation** One of the ICC multicast request timed out without response.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## I82543-1

**Error Message** %I82543-1-UNAVAILABLE: %s - Cannot create IDB subblock due to insufficient memory

**Explanation** There was insufficient system memory to create the subblock.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: %s - Could not install or use i82543 IDB subblock

**Explanation** An internal IOS error prevented the IDB subblock from being installed or used.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: %s, initialization failed, no buffer memory

**Explanation** The Ethernet port initialization failed due to insufficient memory

**Recommended Action** The router requires more packet memory - consider upgrade. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still

require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Could not init buffer pools

**Explanation** The driver failed to get a pool of buffers from IOS

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Could not initialize structure

**Explanation** The driver failed to initialize a structure

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Invalid Interface Descriptor Block

**Explanation** The driver tried to fetch the interface's IDB and failed

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: MAC Still in Reset

**Explanation** An attempt was made to access the MAC while it was in reset

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** Possible hardware error resulted in too few interfaces discovered

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Plugin function table incomplete or missing

**Explanation** The driver could not access the PA's specific function table

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Problem getting particle size

**Explanation** The driver was unable to get the particle size for this interface

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Unknown IDBTYPE while starting i82543

**Explanation** The IDBTYPE in the interface's instance structure is undefined for this driver

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Unknown media-type in subblock

**Explanation** The media-type specified in the driver subblock is invalid

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-1-UNAVAILABLE: Unknown or invalid chip mode (MII/TBI)

**Explanation** The driver subblock contains an invalid or undefined chip operating mode (MII or TBI mode)

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## I82543-2

**Error Message** %I82543-2-UNAVAILABLE: Interface %s does not support ISL

**Explanation** ISL is not supported on the specified interface's hardware.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %I82543-3-UNAVAILABLE: %s, error interrupt, csr\_STATUS=%#x

**Explanation** The i82543 controller has signalled an error condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-3-UNAVAILABLE: %s, packet too big (%d), src %e, dst %e

**Explanation** The interface detects a packet larger than what is defined by MTU

**Recommended Action** Check the other station's MTU setting LOG\_STD\_NO\_ACTION

**Error Message** %I82543-3-UNAVAILABLE: Bay %u, device number %u: unknown device (%#x)

**Explanation** Somehow the PA does not contain an Intel 82543 controller chip

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %I82543-3-UNAVAILABLE: Interface %s has an unsupported PHY

**Explanation** The specified interface has an unsupported PHY chip on the board

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IBM2692-1

**Error Message** %IBM2692-1-UNAVAILABLE: %s %s creation failed

**Explanation** The router or access server could not allocate memory for the descriptors.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IBM2692-1-UNAVAILABLE: Bay %d port adapter requires Rev 2 CPU

**Explanation** The Token Ring PCI Port Adapter driver depends on capabilities of the Revision 2 processor.

**Recommended Action** Upgrade the processor to Revision 2.

**Error Message** %IBM2692-1-UNAVAILABLE: IBM2692 (%d/%d), LL queue overflow.

**Explanation** A packet buffer queue overflowed. This message indicates a packet was lost, probably due to traffic congestion.

**Recommended Action** A small number of queue overflows might not be a cause for concern. Reducing the load on the router or installing a higher-performance router should alleviate this problem.

**Error Message** %IBM2692-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** One of the interface controller devices on the module did not initialize properly.

**Recommended Action** Power down, reinsert the network module, and reboot. If the message recurs, call your technical support representative for assistance.

## ICE-3

**Error Message** %ICE-3-UNAVAILABLE: %s

**Explanation** Error Messages

**Recommended Action** try debug command

## ICC\_ISSU\_NEGO Messages

This section contains Inter-Card Communication (ICC) in-service software upgrade (ISSU) negotiation messages.

### ICC\_ISSU\_NEGO-3

**Error Message** %ICC\_ISSU\_NEGO-3-CLIENT\_EVENT\_QUEUE\_CREATE: Failed to create ICC nego client queue (client %d, endpoint 0x%x)

**Explanation** The intercard communication (ICC) ISSU negotiation process failed to create a client watched queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-CLIENT\_FREE\_EVENTS\_ALLOCATION: Failed to allocate ICC Nego free events (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process failed to allocate ICC negotiation free events.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-CLIENT\_FREE\_EVENT\_ENQUEUE: Failed to enqueue event to free event queue (type %d, client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process failed to enqueue an event to the free event queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-CLIENT\_FREE\_EVENT\_QUEUE\_CREATE: Failed to create ICC nego client queue (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process failed to create a client free events queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-CLIENT\_PROCESS\_CREATE: Failed to create ICC nego client process (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process failed to create a client process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-DROPPING\_MSG: Dropping message (client %d)

**Explanation** The ICC negotiation process dropped a client message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-ICC\_INIT\_SEND: Failed to send the ICC Nego Init message (endpoint 0x%x)

**Explanation** The ICC negotiation process failed to send the negotiation initialization message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INCONSISTENT\_MEDMAN\_DATA: Inconsistent MEDMan data (unique key %d)

**Explanation** The ICC negotiation process Multiple Endpoint Data Manager (MEDMan) data is inconsistent.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INTERNAL\_ICC\_PAK: Failed to get an ICC pak (internal message %d, size %d)

**Explanation** The ICC negotiation process failed to get an ICC packet for an internal message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_CLIENT: Invalid client %d

**Explanation** The ICC negotiation client is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_CLIENT\_PID\_GENERIC: Invalid client process pid, can't be the generic process (client %d, endpoint 0x%x, pid %d)

**Explanation** An attempt was made to send a client process message to the ICC negotiation generic process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_DS: Invalid ICC Nego data structure

**Explanation** The internal ICC negotiation data structure is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_DS\_CLIENT: Invalid ICC Nego data structure (client %d)

**Explanation** The internal ICC negotiation data structure is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_MSG: Invalid message (type %d)

**Explanation** The ICC negotiation message is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_PCOL\_DS: Invalid ICC Nego process collector data structure (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process collector data structure is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_QUEUE: Invalid ICC Nego client queue (client %d)

**Explanation** The internal ICC negotiation watched queue is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-INVALID\_STATUS: Invalid client negotiation status (client %d, status %s)

**Explanation** The ICC negotiation client negotiation status is invalid.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-MEDMAN\_DS\_CREATION: Failed to create the client data structure in MEDMan (client %d, endpoint 0x%x, error %s)

**Explanation** The ICC negotiation process could not create the client data structure in the Multiple Endpoint Data Manager (MEDMan).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-MEDMAN\_REGISTRATION: Failed to register with MEDMan

**Explanation** The ICC negotiation process failed to register with the Multiple Endpoint Data Manager (MEDMan).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-MSG\_ENQUEUEING: Failed to enqueue msg to the ICC Nego generic process (client %d)

**Explanation** The ICC negotiation process failed to enqueue a process message to the ICC negotiation generic process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-MSG\_ENQUEUEING\_CLIENT: Failed to enqueue msg to the ICC Nego generic process (client %d, e\_id 0x%x, type %d)

**Explanation** The ICC negotiation process failed to enqueue a process message to an ICC negotiation client process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NEGO\_CANNOT\_COMPLETE: Negotiation cannot complete (endpoint 0x%x)

**Explanation** The ICC negotiation cannot complete.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NOTIFY\_CLIENT: Failed to notify client %d (e\_id 0x%x)

**Explanation** The ICC negotiation process failed to notify a client.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NO\_FREE\_EVENT: Couldn't get a free event (type %d, client %d, e\_id 0x%x)

**Explanation** The ICC negotiation process failed to get a free event for a client.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NO\_INTERNAL\_CB: No callback for internal message %d

**Explanation** No ICC negotiation callback has been defined for this internal message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NO\_QUEUE: Couldn't get an event queue (type %d, client %d, e\_id 0x%x)

**Explanation** The ICC negotiation process failed to get an event queue for a client.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NO\_UK: Couldn't retrieve the unique key

**Explanation** The ICC negotiation process failed to retrieve the unique key for a client endpoint pair.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NVI\_EMPTY\_MSG: Received an empty NVI ICC message

**Explanation** The ICC negotiation process received an empty NVI ICC message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NVI\_ICC\_SEND: Failed to send the ICC Nego NVI ICC message (endpoint 0x%x)

**Explanation** The ICC negotiation process failed to send the NVI ICC message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NVI\_REQ\_PAK: Failed to get an ICC req pak for the ICC Nego NVI message

**Explanation** The ICC negotiation process failed to get an ICC request packet for the NVI internal message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-NVI\_RESP\_PAK: Failed to get an ICC resp pak for the ICC Nego NVI message

**Explanation** The ICC negotiation process failed to get an ICC response packet for the NVI internal message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-OPEN\_PORT\_RELIABLE: Can't open reliable port (endpoint 0x%x, client %s - %d)

**Explanation** The ICC negotiation process cannot open a reliable port to the endpoint for the ISSU client. The ISSU client might not be able to negotiate.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-OPEN\_PORT\_UNRELIABLE: Can't open unreliable port (endpoint 0x%x, client %d)

**Explanation** The ICC negotiation process cannot open an unreliable port to the endpoint for the ISSU client. The ISSU client might not be able to negotiate.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-OUT\_OF\_MEMORY: System is running out of memory

**Explanation** There is not enough available memory in the system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-PCOL\_INCONSISTENT\_PID: Inconsistent ICC Nego process collector process id (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process collector process ID is inconsistent.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-PROCESS\_CREATE: Failed to create ICC nego process

**Explanation** The ICC negotiation failed to create a process to handle the messages.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-PROCESS\_KILL\_INTERNAL: Internal process kill failed (pid %d, process collector pid %d)

**Explanation** The ICC negotiation process failed to terminate an internal process due to an inconsistent process ID.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-PROC\_LEVEL\_MSG\_GENERIC: Invalid process level message in the generic process (client %d, level %d)

**Explanation** The level of messages for the ICC negotiation process is invalid in the generic process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-PROC\_LEVEL\_MSG\_INTERRUPT: Invalid process level message in the ICC interrupt (client %d, level %d)

**Explanation** The level of messages for the ICC negotiation process is invalid in the ICC interrupt.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-SEND\_UK: Failed to send unique key to process (client %d, endpoint 0x%x)

**Explanation** The ICC negotiation process failed to send the unique key to the new client process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-TIMER\_NOT\_AWAKE: ICC Nego pcol timer was not awake when getting a timer event

**Explanation** The ICC negotiation process collector timer was not awake when receiving a timer event.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-TIMER\_NOT\_RUNNING: ICC Nego pcol timer was not running when getting a timer event

**Explanation** The ICC negotiation process collector timer was not running when getting a timer event.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ICC\_ISSU\_NEGO-3-WATCHED\_QUEUE\_CREATION: Failed to create the watched queue

**Explanation** The ICC negotiation process could not create the watched queue.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ICC\_ISSU\_TAGGING Messages

This section contains Inter-Card Communication (ICC) in-service software upgrade (ISSU) tagging messages.

### ICC\_ISSU\_TAGGING-3

**Error Message** %ICC\_ISSU\_TAGGING-3-NOT\_XFORM: Untransformed message detected  
(class:%d, request:%d, sender:%x)

**Explanation** During runtime, the intercard communication (ICC) ISSU tagging process detected an untransformed ICC message. This message must be transformed or suspended to support ISSU.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ICPM Messages

**Error Message** %ICPM-3-ALLOC: Cannot alloc %s

**Explanation** An attempt to allocate an ICPM data structure failed because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

### IDBINDEX\_SYNC-3

**Error Message** %IDBINDEX\_SYNC-3-IDBINDEX\_ASSIGN: Failed to assign an index to IDB type %d, for interface

**Explanation** An interface index cannot be allocated for this interface due to an internal software error. This is an unrecoverable error that results in this interface not being usable for traffic.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-IDBINDEX\_ENTRY\_MISMATCH: An interface index mismatched its active table entry:

**Explanation** An interface index was found which did not match the active interface descriptor block (IDB) index table entry with the corresponding synchronization key. This condition is due to an internal software error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-IDBINDEX\_LINK: Driver for IDB type '%d' changed the Identity of interface

**Explanation** The interface index table cannot be updated with the new identity provided for this interface due to an internal software error. The driver might not have deleted the old identity first, or the driver might have accidentally changed the identity.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-IDBINDEX\_RETRIEVE: Cannot retrieve if-index for this interface:

**Explanation** The interface index number was not found in the interface index table for the interface specified in the error message. This condition might have been caused by the interface index number not being properly synchronized by the primary processor card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-INIT\_ERR: %s

**Explanation** The interface index synchronization ISSU client has an initialization error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-IPC\_ERR: %s: %s.

**Explanation** The interface index synchronization interprocess communication (IPC) session has an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-ISSU\_ERR: %s%s, rc=%d

**Explanation** The interface index synchronization ISSU client has an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-RF\_ERR: %s %d.

**Explanation** An error occurred in the interface index synchronization of the redundancy facility (RF) client.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-TRANSFORM: Require IF-Index ISSU transformation function %s %s

**Explanation** The interface index synchronization process has identified a missing ISSU transformation function. This condition may lead to misoperation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-3-VALIDATE: Cannot validate if-index for this interface:

**Explanation** The identity of this interface could not be validated against the stored identity within the interface descriptor block (IDB) index table. This condition probably occurred due to the identity of the IDB changing without first explicitly unlinking the previous identity.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDBINDEX\_SYNC-4

**Error Message** %IDBINDEX\_SYNC-4-RESERVE: Failed to lookup existing ifindex for an interface on the Standby, allocating a new ifindex from the Active (ifindex=%d, idbtype=%s)

**Explanation** A lookup failure occurred for an interface on the standby unit. An attempt was made to resolve the issue by reserving a new interface index on the active unit. If this failure was caused by a defect in the key encoding, then traffic may stop on this interface if the system switches over.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBINDEX\_SYNC-4-TRUNCATE: Overflow in %s when encoding interface sync key, got %d maximum is %d

**Explanation** During the creation of a unique synchronization key to represent an interface, one of the attributes making up the key was truncated to fit in the allocated space in the key. This condition might lead to overlapping key allocations, which would cause an error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDBINDEX\_SYNC\_KEY Messages

This section contains Interface Descriptor Block (IDB) key synchronization messages.

### IDBINDEX\_SYNC\_KEY-3

**Error Message** %IDBINDEX\_SYNC\_KEY-3-UNKNOWN\_TYPE: Interface type is unknown and cannot be synced:

**Explanation** An internal software error has occurred related to the interface descriptor block (IDB) key synchronization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

### IDBMAN-3

**Error Message** %IDBMAN-3-AGGPORTMISMATCH: %s: %s(%d / %d) does match internal slot/port state %s(%d / %d)

**Explanation** There is an internal error that caused an invalid aggregate port to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-DELETEDAGGPORT: %s(%d / %d) Group %d has been deleted, but is being reused.

**Explanation** There is an internal error that caused an interface that has been deleted to be reused for a new aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-INVALIDAGGPORTBANDWIDTH: %s(%d / %d) has an invalid bandwidth value of %d

**Explanation** There is an internal error that caused an invalid bandwidth to be used for an aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-INVALIDPORT: %s: trying to use invalid port number %d ( Max %d )

**Explanation** There is an internal error that caused an invalid port number to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-INVALIDVLAN: %s: trying to use invalid Vlan %d

**Explanation** There is an internal error that caused an invalid Vlan to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-NOTANAGGPORT: %s( %d / %d ) is not an aggregate port

**Explanation** There is an internal error that caused an interface that is not an aggregate port to be used for aggregate port operations

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-PORTNOTINAGGPORT: %s(%d / %d) is not present in Aggport %s(%d / %d)

**Explanation** There is an internal error that caused an invalid port to be referred to be part of an aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s( %d / %d ) is not an aggregate port

**Explanation** There is an internal error that caused an interface that is not an aggregate port to be used for aggregate port operations

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s(%d / %d) Group %d has been deleted, but is being reused.

**Explanation** There is an internal error that caused an interface that has been deleted to be reused for a new aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s(%d / %d) has an invalid bandwidth value of %d

**Explanation** There is an internal error that caused an invalid bandwidth to be used for an aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s(%d / %d) is not present in Aggport %s(%d / %d)

**Explanation** There is an internal error that caused an invalid port to be referred to be part of an aggregate port.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s: %s(%d / %d) does match internal slot/port state %s(%d / %d)

**Explanation** There is an internal error that caused an invalid aggregate port to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s: Vlan %d is in use by %s

**Explanation** Each L3 interface has a Vlan associated with it. This message indicates that the Vlan associated with the interface is being used by some other L3 Interface, which is not anticipated to happen

**Recommended Action** This is an informational message only, no action is required.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s: Vlan %d not set since it already has Vlan %d

**Explanation** There is an internal error that caused an interface to not have its Vlan set to the requested value

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s: trying to use invalid Vlan %d

**Explanation** There is an internal error that caused an invalid Vlan to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-UNAVAILABLE: %s: trying to use invalid port number %d ( Max %d )

**Explanation** There is an internal error that caused an invalid port number to be used by the software.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-VLANINUSE: %s: Vlan %d is in use by %s

**Explanation** Each L3 interface has a Vlan associated with it. This message indicates that the Vlan associated with the interface is being used by some other L3 Interface, which is not anticipated to happen

**Recommended Action** The standby supervisor engine is reloaded automatically to recover from the problem. If the standby supervisor engine does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-3-VLANNOTSET: %s: Vlan %d not set since it already has Vlan %d

**Explanation** There is an internal error that caused an interface to not have its Vlan set to the requested value

**Recommended Action** The standby supervisor engine is reloaded automatically to recover from the problem. If the standby supervisor engine does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDBMAN Messages

This section contains Interface Descriptor Block Manager (IDBMAN) messages.

### IDBMAN-4

**Error Message** %IDBMAN-4-ACTIVEPORTSINAGGPORT: %s( %d / %d ) has %d active ports, but is being removed

**Explanation** There is an internal error that caused an aggregate port with active ports to be removed

**Recommended Action** The standby supervisor engine is reloaded automatically to recover from the problem. If the standby supervisor engine does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-4-CONFIG\_WRITE\_FAIL: FFailed to generate configuration for interface [chars]

**Explanation** The system failed to generate a configuration for the specified interface because of a problem with the file system. The active and standby supervisor engines will have configurations that do not match.

**Recommended Action** The standby supervisor engine is reloaded automatically to recover from the problem. If the standby supervisor engine does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDBMAN-4-IDB\_LIMIT: Maxinum interface count reached the limit of [dec] ([dec]+[dec]). Module is disabled.

**Explanation** The number of interfaces has reached the maximum limit and the module has been disabled.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDBMAN-6

**Error Message** %IDBMAN-6-UNAVAILABLE: Vlan %d is mapped to %s

**Explanation** Informational message indicating that the given Vlan is mapped to the given interface

**Recommended Action** No action is required.

**Error Message** %IDBMAN-6-VLANMAPPED: Vlan %d is mapped to %s

**Explanation** Informational message indicating that the given Vlan is mapped to the given interface

**Recommended Action** No action is required.

## IDB\_IDENTITY-3

**Error Message** %IDB\_IDENTITY-3-UNAVAILABLE: Memory allocation failure for HWIDB type %d

**Explanation** A memory allocation failure occurred when trying to allocate the identity for this HWIDB. This HWIDB will not be allocated an IF Index which will prevent it from being used for forwarding data.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDMGR Messages

This section contains ID manager messages.

### IDMGR-3

**Error Message** %IDMGR-3-UNAVAILABLE: %s

**Explanation** A malloc failure occurred in ID Manager.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDMGR-3-UNAVAILABLE: %s

**Explanation** An id\_get attempted at interrupt level.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDMGR-3-UNAVAILABLE: bad id in %s (id: 0x%lX)

**Explanation** An ID Manager error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IDMGR-3-UNAVAILABLE: bad new ID table size

**Explanation** A bad new table request to ID Manager occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IDPROM-3

**Error Message** %IDPROM-3-UNAVAILABLE: Corrupt or missing IDPROM Checksum

**Explanation** This message indicates the IDPROM of this unit could not be accessed or was found to be corrupt, either due to a hardware problem or manufacturing problem.

**Recommended Action** Report this error to your technical support representative.

## IDPROM-4

**Error Message** %IDPROM-4-UNAVAILABLE: Corrupt or missing IDPROM Magic number

**Explanation** This message indicates the IDPROM of this unit could not be accessed or was found to be corrupt, either due to a hardware problem or manufacturing problem.

**Recommended Action** Report this error to your technical support representative.

## IDS-4

**Error Message** %IDS-4-ICMP\_ECHO\_REPLY\_SIG: Sig:2000:ICMP Echo Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 0 (Echo Reply).

**Recommended Action** This is extremely common network traffic. Suspicion should be aised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_ECHO\_REPLY\_SIG: Sig:2000:ICMP Echo Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 0 (Echo Reply).

**Recommended Action** This is extremely common network traffic. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_ECHO\_SIG: Sig:2004:ICMP Echo Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 8 (Echo Request). Commonly used to perform reconnaissance sweeps. Suspicion should be raised when a large number of these packets are found on the network.

**Recommended Action** The ICMP Echo Request is issued by the source to determine if the destination is "alive". When the destination receives the request it will reply with an ICMP Echo Reply. This request/reply pair is most commonly implemented via the "ping" utility. Many network management tools use this utility or some derivative. This is extremely common network traffic. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_FRAGMENT\_SIG: Sig:2150:Fragmented ICMP Traffic - from %i to %i

**Explanation** Triggers when a IP datagram is received with the protocol field of the IP header set to 1 (ICMP) and either the more fragments flag is set to 1 (ICMP) or there is an offset indicated in the offset field.

**Recommended Action** IP datagrams may be fragmented normally as they are transported across the network, but ICMP is rarely fragmented. The traffic should be investigated. If no legitimate reason for the fragmentation can be found and especially if the packets seem to be originating from a single source, prudent security practices would suggest that the host be shunned.

**Error Message** %IDS-4-ICMP\_INFO\_REPLY\_SIG: Sig:2010:ICMP Information Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 16 (ICMP Information Reply). No known exploit exists.

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_INFO\_REPLY\_SIG: Sig:2010:ICMP Information Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 16 (ICMP Information Reply). No known exploit exists.

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_INFO\_SIG: Sig:2009:ICMP Information Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 15 (Information Request).

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_INFO\_SIG: Sig:2009:ICMP Information Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 15 (Information Request).

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_MASK\_REPLY\_SIG: Sig:2012:ICMP Address Mask Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 18 (Address Mask Reply). No known exploits incorporate this option.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_MASK\_REPLY\_SIG: Sig:2012:ICMP Address Mask Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 18 (Address Mask Reply). No known exploits incorporate this option.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_MASK\_SIG: Sig:2011:ICMP Address Mask Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 17 (Address Mask Request). ICMP Address Mask Requests could be used to perform reconnaissance sweeps of networks.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_MASK\_SIG: Sig:2011:ICMP Address Mask Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 17 (Address Mask Request). ICMP Address Mask Requests could be used to perform reconnaissance sweeps of networks.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_PARAMPROB\_SIG: Sig:2006:ICMP Parameter Problem on Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 12 (Parameter Problem on Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Parameter Problem datagrams are issued when a router has had to drop a datagram because it was malformed. This is a normal and necessary type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_PARAMPROB\_SIG: Sig:2006:ICMP Parameter Problem on Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 12 (Parameter Problem on Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Parameter Problem datagrams are issued when a router has had to drop a datagram because it was malformed. This is a normal and necessary type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_PING\_OF\_DEATH\_SIG: Sig:2154:ICMP Ping of Death Attack - from %i to %i

**Explanation** Triggers when a IP datagram is received with the protocol field of the IP header set to 1 (ICMP), the Last Fragment bit is set, and  $(IP\ offset * 8) + (IP\ data\ length) > 65535$  that is to say, the IP offset (which represents the starting position of this fragment in the original packet, and which is in 8 byte units) plus the rest of the packet is greater than the maximum size for an IP packet. This indicates a denial of service attack.

**Recommended Action** This indicates a denial of service attack. It is likely that the source address has been spoofed making shunning ineffective

**Error Message** %IDS-4-ICMP\_PING\_OF\_DEATH\_SIG: Sig:2154:ICMP Ping of Death Attack - from %i to %i

**Explanation** Triggers when a IP datagram is received with the protocol field of the IP header set to 1 (ICMP), the Last Fragment bit is set, and  $(IP\ offset * 8) + (IP\ data\ length) > 65535$  that is to say, the IP offset (which represents the starting position of this fragment in the original packet, and which is in 8 byte units) plus the rest of the packet is greater than the maximum size for an IP packet. This indicates a denial of service attack.

**Recommended Action** This indicates a denial of service attack. It is likely that the source address has been spoofed making shunning ineffective

**Error Message** %IDS-4-ICMP\_REDIRECT\_SIG: Sig:2003:ICMP Redirect - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 5 (Redirect).

**Recommended Action** The redirect message may be issued from a router to inform a host of a better route to a requested destination. The host then updates its routing table to include this route. This method of updating routing tables is an uncommon practice today. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_REDIRECT\_SIG: Sig:2003:ICMP Redirect - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 5 (Redirect).

**Recommended Action** The redirect message may be issued from a router to inform a host of a better route to a requested destination. The host then updates its routing table to include this route. This method of updating routing tables is an uncommon practice today. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-ICMP\_SOURCEQUENCH\_SIG: Sig:2002:ICMP Source Quench - from %i to %i

**Explanation** Triggers when an IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 4 (Source Quench). This datagram may be used in network management to provide congestion control. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions.

**Recommended Action** This datagram may be used in network management to provide congestion control. A source quench packet will be issued when a router is beginning to lose packets due to the transmission rate of a source. The source quench is a request to the source to reduce the rate of datagram transmission. This datagram type is rarely if ever seen on networks and some systems do not even support it. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_SOURCEQUENCH\_SIG: Sig:2002:ICMP Source Quench - from %i to %i

**Explanation** Triggers when an IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 4 (Source Quench). This datagram may be used in network management to provide congestion control. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions.

**Recommended Action** This datagram may be used in network management to provide congestion control. A source quench packet will be issued when a router is beginning to lose packets due to the transmission rate of a source. The source quench is a request to the source to reduce the rate of datagram transmission. This datagram type is rarely if ever seen on networks and some systems do not even support it. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_TIME\_REPLY\_SIG: Sig:2008:ICMP Timestamp Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the type field in the ICMP header set to 14 (Timestamp Reply). No known exploits incorporate this option.

**Recommended Action** The ICMP Timestamp Request/Reply pair can be used to synchronize system clocks on the network. The requesting system issues the Timestamp Request bound for a destination, the destination system responds with a Timestamp Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_TIME\_SIG: Sig:2007:ICMP Timestamp Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 13 (Timestamp Request). ICMP Timestamp Requests could be used to perform reconnaissance sweeps of networks. No known exploits incorporate this option.

**Recommended Action** The ICMP Timestamp Request/Reply pair can be used to synchronize system clocks on the network. The requesting system issues the Timestamp Request bound for a destination, the destination system responds with a Timestamp Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_TIMXCEED\_SIG: Sig:2005:ICMP Time Exceeded for a Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 11 (Time Exceeded for a Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Time Exceeded datagrams are issued when a router has had to drop a datagram whose Time to Live (TTL) flag has expired. This is a normal and necessary type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_TIMXCEED\_SIG: Sig:2005:ICMP Time Exceeded for a Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 11 (Time Exceeded for a Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Time Exceeded datagrams are issued when a router has had to drop a datagram whose Time to Live (TTL) flag has expired. This is an normal and necessary type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-ICMP\_TOOLARGE\_SIG: Sig:2151:Large ICMP Traffic - from %i to %i

**Explanation** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation.

**Recommended Action** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation. If no legitimate reason for the large packet size can be found and especially if the packets seem to be originating from a single source, prudent security practices would suggest that the host be shunned.

**Error Message** %IDS-4-ICMP\_TOOLARGE\_SIG: Sig:2151:Large ICMP Traffic - from %i to %i

**Explanation** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation.

**Recommended Action** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation. If no legitimate reason for the large packet size can be found and especially if the packets seem to be originating from a single source, prudent security practices would suggest that the host be shunned.

**Error Message** %IDS-4-ICMP\_UNREACH\_SIG: Sig:2001:ICMP Host Unreachable - from %i to %i

**Explanation** Triggers when an IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 3 (Host Unreachable). This is the common response. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions.

**Recommended Action** This is the common response provided to a client when there is no path available to the requested host. This is a very common type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-IPFRAG\_ATTACK\_SIG: Sig:1100:IP Fragment Attack - from %i to %i

**Explanation** Triggers when any IP datagram is received with the 'more fragments' flag set to 1 or if there is an offset indicated in the offset field.

**Recommended Action** IP datagrams may be fragmented normally as they are transported across the network. This is not uncommon, but is unusual enough that the traffic should be investigated. This is especially important if the network is protected by a packet filtering firewall.

**Error Message** %IDS-4-IPOPTS\_BAD\_SIG: Sig:1000:Bad IP Option List - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the list of IP options in the IP datagram header is incomplete or malformed. No known exploits purposely incorporate this option.

**Recommended Action** There is no legitimate use for malformed datagrams. This may be indicative of systems that are experiencing problems with their kernel or NIC cards. This is unusual traffic and warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IPOPT\_LSRR\_SIG: Sig:1004:IP options-Loose Source Route - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 3 (Loose Source Route). This option may be misused to defeat authentication mechanisms that rely on IP addresses as their basis for trust relationships.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this type of traffic is rarely if ever used and should comprise much less than 1% of network traffic. Small amounts of source routed traffic most probably indicates that a network problem is being investigated. Large amounts of source routed traffic is more suspicious and a thorough investigation of the source and reason is indicated.

**Error Message** %IDS-4-IPOPT\_RR\_SIG: Sig:1001:IP options-Record Packet Route - from %i to %i

**Explanation** The IP options list contains one or more options that perform various network management or debugging tasks. This alarm may indicate a reconnaissance attack is in progress against your network.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this is unusual traffic that warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IPOPT\_RR\_SIG: Sig:1001:IP options-Record Packet Route - from %i to %i

**Explanation** The IP options list contains one or more options that perform various network management or debugging tasks. This alarm may indicate a reconnaissance attack is in progress against your network.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this is unusual traffic that warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IPOPT\_SATID\_SIG: Sig:1005:IP options-SATNET ID - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 8 (SATNET stream identifier). No known exploit exists.

**Recommended Action** This option is obsolete and should not be encountered. When on-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IPOPT\_SECURITY\_SIG: Sig:1003:IP options-Provide s,c,h,tcc - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 2. No known exploit exists.

**Recommended Action** This signature will trigger if you have implemented IP security options on your network. However, this is rarely, if ever, implemented. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IPOPT\_SSRR\_SIG: Sig:1006:IP options-Strict Source Route - from %i to %i

**Explanation** Triggers on receipt of an IP datagram in which the IP option list for the datagram includes option 2 (Strict Source Routing). This option may be misused to defeat authentication mechanisms that rely on IP addresses as their basis for trust relationships.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this type of traffic is rarely if ever noted and should comprise much less than 1% of network traffic. Small amounts of source routed traffic most probably indicates that a network problem is being investigated. Large amounts of source routed traffic is more suspicious and a thorough investigation of the source and reason is indicated.

**Error Message** %IDS-4-IPOPT\_SSRR\_SIG: Sig:1006:IP options-Strict Source Route - from %i to %i

**Explanation** Triggers on receipt of an IP datagram in which the IP option list for the datagram includes option 2 (Strict Source Routing). This option may be misused to defeat authentication mechanisms that rely on IP addresses as their basis for trust relationships.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this type of traffic is rarely if ever noted and should comprise much less than 1% of network traffic. Small amounts of source routed traffic most probably indicates that a network problem is being investigated. Large amounts of source routed traffic is more suspicious and a thorough investigation of the source and reason is indicated.

**Error Message** %IDS-4-IPOPT\_TS\_SIG: Sig:1002:IP options-TimeStamp - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 4 (Timestamp). This alarm indicates that a reconnaissance attack may be in progress against your network.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this is unusual traffic that warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-IP\_IMPOSSIBLE\_SIG: Sig:1102:Impossible IP Packet - from %i to %i

**Explanation** This triggers when an IP packet arrives with source equal to destination address. This signature will catch the so-called Land Attack.

**Recommended Action** This should never occur in legitimate traffic.

**Error Message** %IDS-4-IP\_UNKNOWN\_PROTO\_SIG: Sig:1101:Unknown IP Protocol - from %i to %i

**Explanation** Triggers when an IP datagram is received with the protocol field set to 101 or greater. The use of these protocol types is highly unusual and should be investigated.

**Recommended Action** Locally developed protocols that may use these protocol types will trigger the signature. The use of these protocol types is highly unusual and should be investigated. When on-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-LOST\_CONNECT: Connection to HostID:%u OrgID:%u

**Explanation** Triggers when a connection drops and there is no previous connection.

**Recommended Action** This message indicates that the IDS cannot communicate with the Director. Check connectivity to the Director and check Postoffice configuration on both the router and the Director.

**Error Message** %IDS-4-RPC\_CALLIT\_REQUEST: Sig:6103:Proxied RPC Request - from %i to %i

**Explanation** Triggers when a proxied RPC request is sent to the portmapper of a target host.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_DUMP\_REQUEST: Sig:6102:RPC Dump - from %i to %i

**Explanation** Triggers when an RPC dump request is issued to a target host.

**Recommended Action** This is a common procedure performed by many system administrators and wary users to determine which RPC services are being offered. Executing this procedure is most likely due to curiosity on the part of a novice user or a system administrator performing system maintenance. If upon investigation no valid user can be associated with this event, prudent security practices would suggest shunning the source.

**Error Message** %IDS-4-RPC\_DUMP\_REQUEST: Sig:6102:RPC Dump - from %i to %i

**Explanation** Triggers when an RPC dump request is issued to a target host.

**Recommended Action** This is a common procedure performed by many system administrators and wary users to determine which RPC services are being offered. Executing this procedure is most likely due to curiosity on the part of a novice user or a system administrator performing system maintenance. If upon investigation no valid user can be associated with this event, prudent security practices would suggest shunning the source.

**Error Message** %IDS-4-RPC\_PORTREQ\_MOUNTD: Sig:6155:RPC mountd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the mount daemon (mountd) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_REXD: Sig:6175:RPC rexd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the remote execution daemon (rex) port. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this procedure is allowed on your network, those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network, it should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_REXD: Sig:6175:RPC rexd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the remote execution daemon (rex) port. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this procedure is allowed on your network, those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network, it should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPBIND: Sig:6151:RPC ypbind Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP bind daemon (ypbind) port.

**Recommended Action** If this procedure is allowed on your network those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPPASSWDD: Sig:6152:RPC ypbind yppasswdd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP password daemon (yppasswdd) port.

**Recommended Action** If this procedure is allowed on your network those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPPASSWDD: Sig:6152:RPC ypbind yppasswdd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP password daemon (yppasswdd) port.

**Recommended Action** If this procedure is allowed on your network those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPSERV: Sig:6150:RPC ypserv Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP server daemon (ypserv) port.

**Recommended Action** If this procedure is allowed on your network those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPUPDATED: Sig:6153:RPC ypupdated Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP update daemon (ypupdated) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_PORTREQ\_YPXFRD: Sig:6154:RPC ypxfrd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP transfer daemon (ypxfrd) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-RPC\_REXD\_REQUEST: Sig:6180:RPC rexd Attempt - from %i to %i

**Explanation** Triggers when a call to the rexd program is made. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this service is being used legitimately, this alarm will fire. For security purposes, this service really should not be used.

**Error Message** %IDS-4-RPC\_REXD\_REQUEST: Sig:6180:RPC rexd Attempt - from %i to %i

**Explanation** Triggers when a call to the rexd program is made. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this service is being used legitimately, this alarm will fire. For security purposes, this service really should not be used.

**Error Message** %IDS-4-RPC\_SET\_REQUEST: Sig:6100:RPC Port Registration - from %i to %i

**Explanation** Triggers when attempts are made to register new RPC services on a target host.

**Recommended Action** No benign triggers exist for this signature. Prudent security practices suggest that the source of this attempt should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Connection to HostID:%u OrgID:%u

**Explanation** Triggers when a connection drops and there is no previous connection.

**Recommended Action** This message indicates that the IDS cannot communicate with the Director. Check connectivity to the Director and check Postofficeconfiguration on both the router and the Director.

**Error Message** %IDS-4-UNAVAILABLE: Invalid SMTP command - from %i to %i

**Explanation** Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system.

**Recommended Action** This is unusual traffic and may warrant investigation.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1000:Bad IP Option List - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the list of IP options in the IP datagram header is incomplete or malformed. No known exploits purposely incorporate this option.

**Recommended Action** There is no legitimate use for malformed datagrams. This may be indicative of systems that are experiencing problems with their kernel or NIC cards. This is unusual traffic and warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1001:IP options-Record Packet Route - from %i to %i

**Explanation** The IP options list contains one or more options that perform various network management or debugging tasks. This alarm may indicate a reconnaissance attack is in progress against your network.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this is unusual traffic that warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1002:IP options-TimeStamp - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 4 (Timestamp). This alarm indicates that a reconnaissance attack may be in progress against your network.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this is unusual traffic that warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1003:IP options-Provide s,c,h,tcc - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 2. No known exploit exists.

**Recommended Action** This signature will trigger if you have implemented IP security options on your network. However, this is rarely, if ever, implemented. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1004:IP options-Loose Source Route - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 3 (Loose Source Route). This option may be misused to defeat authentication mechanisms that rely on IP addresses as their basis for trust relationships.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this type of traffic is rarely if ever noted and should comprise much less than 1% of network traffic. Small amounts of source routed traffic most probably indicates that a network problem is being investigated. Large amounts of source routed traffic is more suspicious and a thorough investigation of the source and reason is indicated.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1005:IP options-SATNET ID - from %i to %i

**Explanation** Triggers on receipt of an IP datagram where the IP option list for the datagram includes option 8 (SATNET stream identifier). No known exploit exists.

**Recommended Action** This option is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1006:IP options-Strict Source Route - from %i to %i

**Explanation** Triggers on receipt of an IP datagram in which the IP option list for the datagram includes option 2 (Strict Source Routing). This option may be misused to defeat authentication mechanisms that rely on IP addresses as their basis for trust relationships.

**Recommended Action** While network troubleshooting may require the legitimate use of this feature, this type of traffic is rarely if ever noted and should comprise much less than 1% of network traffic. Small amounts of source routed traffic most probably indicates that a network problem is being investigated. Large amounts of source routed traffic is more suspicious and a thorough investigation of the source and reason is indicated.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1100:IP Fragment Attack - from %i to %i

**Explanation** Triggers when any IP datagram is received with the 'more fragments' flag set to 1 or if there is an offset indicated in the offset field.

**Recommended Action** IP datagrams may be fragmented normally as they are transported across the network. This is not uncommon, but is unusual enough that the traffic should be investigated. This is especially important if the network is protected by a packet filtering firewall.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1101:Unknown IP Protocol - from %i to %i

**Explanation** Triggers when an IP datagram is received with the protocol field set to 101 or greater. The use of these protocol types is highly unusual and should be investigated.

**Recommended Action** Locally developed protocols that may use these protocol types will trigger the signature. The use of these protocol types is highly unusual and should be investigated. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:1102:Impossible IP Packet - from %i to %i

**Explanation** This triggers when an IP packet arrives with source equal to destination address. This signature will catch the so-called Land Attack.

**Recommended Action** This should never occur in legitimate traffic.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2000:ICMP Echo Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 0 (Echo Reply).

**Recommended Action** This is extremely common network traffic. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2001:ICMP Host Unreachable - from %i to %i

**Explanation** Triggers when an IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 3 (Host Unreachable). This is the common response. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions.

**Recommended Action** This is the common response provided to a client when there is no path available to the requested host. This is a very common type of network traffic. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2002:ICMP Source Quench - from %i to %i

**Explanation** Triggers when an IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 4 (Source Quench). This datagram may be used in network management to provide congestion control. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions.

**Recommended Action** This datagram may be used in network management to provide congestion control. A source quench packet will be issued when a router is beginning to lose packets due to the transmission rate of a source. The source quench is a request to the source to reduce the rate of datagram transmission. This datagram type is rarely if ever seen on networks and some systems do not even support it. Large numbers of this datagram type on the network are indicative of network difficulties or may be indicative of hostile actions. If no network problems can be identified to account for the traffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2003:ICMP Redirect - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 5 (Redirect).

**Recommended Action** The redirect message may be issued from a router to inform a host of a better route to a requested destination. The host then updates its routing table to include this route. This method of updating routing tables is an uncommon practice today. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2004:ICMP Echo Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 8 (Echo Request). Commonly used to perform reconnaissance sweeps. Suspicion should be raised when a large number of these packets are found on the network.

**Recommended Action** The ICMP Echo Request is issued by the source to determine if the destination is "alive". When the destination receives the request it will reply with an ICMP Echo Reply. This request/reply pair is most commonly implemented via the "ping" utility. Many network management tools use this utility or some derivative. This is extremely common network traffic. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2005:ICMP Time Exceeded for a Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 11(Time Exceeded for a Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Time Exceeded datagrams are issued when a router has had to drop a datagram whose Time to Live (TTL) flag has expired. This is anormal and necessary type of network traffic. Large numbers of this datagramtype on the network are indicative of network difficulties or may beindicative of hostile actions. If no network problems can be identified toaccount for the traffic prudent security practices would suggest that thesource be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2006:ICMP Parameter Problem on Datagram - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 12 (Parameter Problem on Datagram). No known exploits incorporate this option.

**Recommended Action** ICMP Parameter Problem datagrams are issued when a routerhas had to drop a datagram because it was malformed. This is a normal andnecessary type of network traffic. Large numbers of this datagram type onthe network are indicative of network difficulties or may be indicative ofhostile actions. If no network problems can be identified to account for thetraffic prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2007:ICMP Timestamp Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 13 (Timestamp Request). ICMP Timestamp Requests could be used to perform reconnaissance sweeps of networks. No known exploits incorporate this option.

**Recommended Action** The ICMP Timestamp Request/Reply pair can be used to synchronize system clocks on the network. The requesting system issues theTimestamp Request bound for a destination, the destination system responds with a Timestamp Reply message. This is normal network traffic, but isuncommon on most networks. Suspicion should be raised when a large number ofthese packets are found on the network. If no legitimate reason for thistrffic can be identified prudent security practices would suggest that thesource be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2008:ICMP Timestamp Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the type field in the ICMP header set to 14 (Timestamp Reply). No known exploits incorporate this option.

**Recommended Action** The ICMP Timestamp Request/Reply pair can be used to synchronize system clocks on the network. The requesting system issues theTimestamp Request bound for a destination, the destination system responds with a Timestamp Reply message. This is normal network traffic, but isuncommon on most networks. Suspicion should be raised when a large number ofthese packets are found on the network. If no legitimate reason for thistrffic can be identified prudent security practices would suggest that thesource be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2009:ICMP Information Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 15 (Information Request).

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2010:ICMP Information Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 16 (ICMP Information Reply). No known exploit exists.

**Recommended Action** This datagram type is obsolete and should not be encountered. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2011:ICMP Address Mask Request - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 17 (Address Mask Request). ICMP Address Mask Requests could be used to perform reconnaissance sweeps of networks.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2012:ICMP Address Mask Reply - from %i to %i

**Explanation** Triggers when a IP datagram is received with the "protocol" field of the IP header set to 1 (ICMP) and the "type" field in the ICMP header set to 18 (Address Mask Reply). No known exploits incorporate this option.

**Recommended Action** The ICMP Address Mask Request/Reply pair can be used to determine the subnet mask used on the network. The requesting system issues the Address Mask Request bound for a destination, the destination system responds with an Address Mask Reply message. This is normal network traffic, but is uncommon on most networks. Suspicion should be raised when a large number of these packets are found on the network. If no legitimate reason for this traffic can be identified prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2150:Fragmented ICMP Traffic - from %i to %i

**Explanation** Triggers when a IP datagram is received with the protocol field of the IP header set to 1 (ICMP) and either the more fragments flag is set to 1 (ICMP) or there is an offset indicated in the offset field.

**Recommended Action** IP datagrams may be fragmented normally as they are transported across the network, but ICMP is rarely fragmented. The traffic should be investigated. If no legitimate reason for the fragmentation can be found and especially if the packets seem to be originating from a single source, prudent security practices would suggest that the host be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2151:Large ICMP Traffic - from %i to %i

**Explanation** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation.

**Recommended Action** While it is possible to receive ICMP datagrams that have a size greater than 1024 bytes, this is a highly unusual occurrence that warrants investigation. If no legitimate reason for the large packet size can be found and especially if the packets seem to be originating from a single source, prudent security practices would suggest that the host be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:2154:ICMP Ping of Death Attack - from %i to %i

**Explanation** Triggers when a IP datagram is received with the protocol field of the IP header set to 1 (ICMP), the Last Fragment bit is set, and  $(IP\ offset * 8) + (IP\ data\ length) > 65535$  that is to say, the IP offset (which represents the starting position of this fragment in the original packet, and which is in 8 byte units) plus the rest of the packet is greater than the maximum size for an IP packet. This indicates a denial of service attack.

**Recommended Action** This indicates a denial of service attack. It is likely that the source address has been spoofed making shunning ineffective

**Error Message** %IDS-4-UNAVAILABLE: Sig:3040:TCP - No bits set in flags - from %i to %i

**Explanation** Triggers when a TCP packet is received with no bits set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with no bits set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3041:TCP - SYN and FIN bits set - from %i to %i

**Explanation** Triggers when a TCP packet is received with both the SYN and FIN bits set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with the SYN and FIN bits set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3042:TCP - FIN bit with no ACK bit in flags - from %i to %i

**Explanation** Triggers when a TCP packet is received with the FIN bit set but with no ACK bit set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with the FIN bit set but with no ACK bit set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3050:Half-Open Syn Flood - from %i to %i

**Explanation** Triggers when the number of half-open TCP connections exceeds the high-water mark or the one minute high rate mark

**Recommended Action** There are no known sources that would legitimately generate this traffic pattern. This may be indicative of some type of network problem and should be investigated. To avoid depletion of your network resources it is recommended that the source be shunned during the course of the investigation. If no network problems are discovered prudent security practices would suggest that the source be shunned permanently.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3100:Smil Attack - from %i to %i

**Explanation** Triggers on the very common "smil" attack against e-mail servers. This attack attempts to cause e-mail servers to execute programs on the attacker's behalf.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3101:Sendmail Invalid Recipient - from %i to %i

**Explanation** Triggers on any mail message with a 'pipe' (|) symbol in the recipient field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3102:Sendmail Invalid Sender - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3103:Sendmail Reconnaissance - from %i to %i

**Explanation** Triggers when "expn" or "vrfy" commands are issued to the SMTP port.

**Recommended Action** These commands are commonly used to verify that a user mail account exists on the server or to expand an alias to determine who the actual recipients of a message may be. Users that use the EXPN and VRFY functions for legitimate purposes will trigger this signature. The information that can be obtained is useful, but not dangerous on its own. Monitoring of future traffic for patterns of misuse is recommended.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3104:Archaic Sendmail Attacks - from %i to %i

**Explanation** Triggers when "wiz" or "debug" commands are sent to the SMTP port.

**Recommended Action** There is no reason for this type of traffic to be seen on modern networks. There is little chance that there will be any adverse effects from someone attempting these "old" hacks. Prudent security practices would suggest that the source of this attempt be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3105:Sendmail Decode Alias - from %i to %i

**Explanation** Triggers on any mail message with ": decode@" in the header. The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration.

**Recommended Action** The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration. For security purposes this should not be allowed and the service should be disabled. If allowed, users that mail to the alias will trigger this signature. Recommend shunning of hosts that attempt to mail to this alias especially if they are outside of your network.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3106:Excessive Rcpt to: (SPAM) - from %i to %i

**Explanation** Parse for RCPT TO: in header. Alarm on threshold.

**Recommended Action** Some mailing list software may trigger this signature.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3107:Majordomo Execute Attack - from %i to %i

**Explanation** A bug in the Majordomo program will allow remote users to execute arbitrary commands at the privilege level of the server.

**Recommended Action** Prudent security practices would suggest that the source of this attempt be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3150:FTP Remote Command Execution - from %i to %i

**Explanation** Triggers when someone tries to execute the FTP SITE command.

**Recommended Action** The FTP Site command allows a user to execute a limited number of commands via the FTP server on the host machine. No authentication is required to execute the command. The commands that may be executed vary from system to system and on many systems the SITE command is not implemented. Recommend that the SITE command be disabled on FTP servers if possible. If this signature is triggered from a source outside of your network prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3151:FTP SYST Command Attempt - from %i to %i

**Explanation** Triggers when someone tries to execute the FTP SYST command.

**Recommended Action** The FTP SYST command returns the type of operating system that the FTP server is running. Authentication is not required to execute this command. SYST provides information that may be used to refine attack methods. FTP from Linux causes SYST signature to fire. Some proxies, such as the TIS Toolkit, issue the SYST command as a matter of course. Running an FTP version with SYST disabled.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3152:FTP CWD ~root - from %i to %i

**Explanation** Triggers when someone tries to execute the CWD ~root command.

**Recommended Action** There is no known reason that this command should ever be executed. If this signature is triggered from a source outside of your network prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3153:FTP Improper Address Specified - from %i to %i

**Explanation** Triggers if a port command is issued with an address that is not the same as the requesting host.

**Recommended Action** Triggers if a port command is issued with an address that is not the same as the requesting host.

**Error Message** %IDS-4-UNAVAILABLE: Sig:3154:FTP Improper Port Specified - from %i to %i

**Explanation** Triggers if a port command is issued with a data port specified that is 65535.

**Recommended Action** Triggers if a port command is issued with a data port specified that is 65535.

**Error Message** %IDS-4-UNAVAILABLE: Sig:4050:UDP Bomb - from %i to %i

**Explanation** Triggers when the UDP length specified is less than the IP length specified. This malformed packet type is associated with a denial of service attempt.

**Recommended Action** There is no legitimate use for malformed datagrams. This may be indicative of systems that are experiencing problems with their kernel or NIC cards. This is unusual traffic and warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UNAVAILABLE: Sig:4100:Tftp Passwd File - from %i to %i

**Explanation** Triggered when someone tries to tftp a password file.

**Recommended Action** System administrators might use this service to update system files. It is a high security risk if this is normal practice and should be avoided. No other benign triggers exist for this signature. If after investigation the alarm was not generated by a system administrator, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6100:RPC Port Registration - from %i to %i

**Explanation** Triggers when attempts are made to register new RPC services on a target host.

**Recommended Action** No benign triggers exist for this signature. Prudent security practices suggest that the source of this attempt should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6101:RPC Port Unregistration - from %i to %i

**Explanation** Triggers when attempts are made to unregister new RPC services on a target host.

**Recommended Action** No benign triggers exist for this signature. Prudent security practices suggest that the source of this attempt should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6102:RPC Dump - from %i to %i

**Explanation** Triggers when an RPC dump request is issued to a target host.

**Recommended Action** This is a common procedure performed by many system administrators and wary users to determine which RPC services are being offered. Executing this procedure is most likely due to curiosity on the part of a novice user or a system administrator performing system maintenance. If upon investigation no valid user can be associated with this event, prudent security practices would suggest shunning the source.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6103:Proxied RPC Request - from %i to %i

**Explanation** Triggers when a proxied RPC request is sent to the portmapper of a target host.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6150:RPC ypserv Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP server daemon (ypserv) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6151:RPC ypbind Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP bind daemon (ypbind) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6152:RPC ypbind yppasswdd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP password daemon (yppasswdd) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6153:RPC ypupdated Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP update daemon (ypupdated) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6154:RPC ypxfrd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the YP transfer daemon (ypxfrd) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6155:RPC mountd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the mount daemon (mountd) port.

**Recommended Action** If this procedure is allowed on your network those users that employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network they should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6175:RPC rexd Portmap Request - from %i to %i

**Explanation** Triggers when a request is made to the portmapper for the remote execution daemon (rex) port. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this procedure is allowed on your network, those users who employ it will trigger the signature. This may be a serious attempt at gaining unauthorized access and if the source of the attempt is not within your network, it should be shunned.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6180:RPC rexd Attempt - from %i to %i

**Explanation** Triggers when a call to the rexd program is made. The remote execution daemon is the server responsible for remote program execution. This may be indicative of an attempt to gain unauthorized access to system resources.

**Recommended Action** If this service is being used legitimately, this alarm will fire. For security purposes, this service really should not be used.

**Error Message** %IDS-4-UNAVAILABLE: Sig:6190:statd Buffer Overflow - from %i to %i

**Explanation** Triggers when a large statd request is sent.

**Recommended Action** You should not see this in legitimate traffic.

**Error Message** %IDS-4-UNAVAILABLE: Sig:8000:FTP Retrieve Password File - from %i to %i

**Explanation** Triggers on string "passwd" issued during an FTP session.

**Recommended Action** System administrators might use this service to update system files. It is a high security risk if this is normal practice and should be avoided. No other benign triggers exist for this signature. If after investigation the alarm was not generated by a system administrator, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-RPC\_UNSET\_REQUEST: Sig:6101:RPC Port Unregistration - from %i to %i

**Explanation** Triggers when attempts are made to unregister new RPC services on a target host.

**Recommended Action** No benign triggers exist for this signature. Prudent security practices suggest that the source of this attempt should be shunned.

**Error Message** %IDS-4-RPC\_UNSET\_REQUEST: Sig:6101:RPC Port Unregistration - from %i to %i

**Explanation** Triggers when attempts are made to unregister new RPC services on a target host.

**Recommended Action** No benign triggers exist for this signature. Prudent security practices suggest that the source of this attempt should be shunned.

**Error Message** %IDS-4-STR\_MATCH\_SIG: Sig:8000:FTP Retrieve Password File - from %i to %i

**Explanation** Triggers on string "passwd" issued during an FTP session.

**Recommended Action** System administrators might use this service to update system files. It is a high security risk if this is normal practice and should be avoided. No other benign triggers exist for this signature. If after investigation the alarm was not generated by a system administrator, prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-TCP\_FIN\_ONLY\_SIG: Sig:3042:TCP - FIN bit with no ACK bit in flags - from %i to %i

**Explanation** Triggers when a TCP packet is received with the FIN bit set but with no ACK bit set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with the FIN bit set but with no ACK bit set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-TCP\_FTP\_CWDROOT\_SIG: Sig:3152:FTP CWD ~root - from %i to %i

**Explanation** Triggers when someone tries to execute the CWD ~root command.

**Recommended Action** There is no known reason that this command should ever be executed. If this signature is triggered from a source outside of your network prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-TCP\_FTP\_PORT\_BADADDR\_SIG: Sig:3153:FTP Improper Address Specified - from %i to %i

**Explanation** Triggers if a port command is issued with an address that is not the same as the requesting host.

**Recommended Action** Triggers if a port command is issued with an address that is not the same as the requesting host.

**Error Message** %IDS-4-TCP\_FTP\_PORT\_BADPORT\_SIG: Sig:3154:FTP Improper Port Specified - from %i to %i

**Explanation** Triggers if a port command is issued with a data port specified that is <1024 or 65535.

**Recommended Action** Triggers if a port command is issued with a data port specified that is 65535.

**Error Message** %IDS-4-TCP\_FTP\_SITE\_SIG: Sig:3150:FTP Remote Command Execution - from %i to %i

**Explanation** Triggers when someone tries to execute the FTP SITE command.

**Recommended Action** The FTP Site command allows a user to execute a limited number of commands via the FTP server on the host machine. No authentication is required to execute the command. The commands that may be executed vary from system to system and on many systems the SITE command is not implemented. Recommend that the SITE command be disabled on FTP servers if possible. If this signature is triggered from a source outside of your network prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-TCP\_FTP\_SITE\_SIG: Sig:3150:FTP Remote Command Execution - from %i to %i

**Explanation** Triggers when someone tries to execute the FTP SITE command.

**Recommended Action** The FTP Site command allows a user to execute a limited number of commands via the FTP server on the host machine. No authentication is required to execute the command. The commands that may be executed vary from system to system and on many systems the SITE command is not implemented. Recommend that the SITE command be disabled on FTP servers if possible. If this signature is triggered from a source outside of your network prudent security practices would suggest that the source be shunned.

**Error Message** %IDS-4-TCP\_FTP\_SYST\_SIG: Sig:3151:FTP SYST Command Attempt - from %i to %i

**Explanation** Triggers when someone tries to execute the FTP SYST command.

**Recommended Action** The FTP SYST command returns the type of operating system that the FTP server is running. Authentication is not required to execute this command. SYST provides information that may be used to refine attack methods. FTP from Linux causes SYST signature to fire. Some proxies, such as the TIS Toolkit, issue the SYST command as a matter of course. Running an FTP version with SYST disabled.

**Error Message** %IDS-4-TCP\_MAJORDOMO\_EXEC\_BUG: Sig:3107:Majordomo Execute Attack - from %i to %i

**Explanation** A bug in the Majordomo program will allow remote users to execute arbitrary commands at the privilege level of the server.

**Recommended Action** Prudent security practices would suggest that the source of this attempt be shunned.

**Error Message** %IDS-4-TCP\_NO\_FLAGS\_SIG: Sig:3040:TCP - No bits set in flags - from %i to %i

**Explanation** Triggers when a TCP packet is received with no bits set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with no bits set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-TCP\_SENDMAIL\_BAD\_FROM\_SIG: Sig:3102:Sendmail Invalid Sender - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the "From:" field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-TCP\_SENDMAIL\_BAD\_TO\_SIG: Sig:3101:Sendmail Invalid Recipient - from %i to %i

**Explanation** Triggers on any mail message with a "pipe" (|) symbol in the recipient field.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-TCP\_SENDMAIL\_BOUNCE\_SIG: Sig:3100:Smail Attack - from %i to %i

**Explanation** Triggers on the very common "smail" attack against e-mail servers. This attack attempts to cause e-mail servers to execute programs on the attacker's behalf.

**Recommended Action** For security reasons users should not be allowed to execute programs via e-mail servers. This is a very serious indication that your network may be under attack and the source should be shunned immediately.

**Error Message** %IDS-4-TCP\_SENDMAIL\_DECODE: Sig:3105:Sendmail Decode Alias - from %i to %i

**Explanation** Triggers on any mail message with ": decode@" in the header. The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration.

**Recommended Action** The decode alias is used to uudecode files and is primarily implemented as a convenience for system administration. For security purposes this should not be allowed and the service should be disabled. If allowed, users that mail to the alias will trigger this signature. Recommend shunning of hosts that attempt to mail to this alias especially if they are outside of your network.

**Error Message** %IDS-4-TCP\_SENDMAIL\_INVALID\_COMMAND: Invalid SMTP command - from %i to %i

**Explanation** Triggers on an invalid SMTP command in the SMTP connection. This message indicates that a suspicious violation was detected that may be an attack to the mail server system.

**Recommended Action** This is unusual traffic and may warrant investigation.

**Error Message** %IDS-4-TCP\_SENDMAIL\_OLD\_SIG: Sig:3104:Archaic Sendmail Attacks - from %i to %i

**Explanation** Triggers when "wiz" or "debug" commands are sent to the SMTP port.

**Recommended Action** There is no reason for this type of traffic to be seen on modern networks. There is little chance that there will be any adverse effects from someone attempting these "old" hacks. Prudent security practices would suggest that the source of this attempt be shunned.

**Error Message** %IDS-4-TCP\_SENDMAIL\_VRFY\_SIG: Sig:3103:Sendmail Reconnaissance - from %i to %i

**Explanation** Triggers when "expn" or "vrfy" commands are issued to the SMTP port.

**Recommended Action** These commands are commonly used to verify that a user mail account exists on the server or to expand an alias to determine who the actual recipients of a message may be. Users that use the EXPN and VRFY functions for legitimate purposes will trigger this signature. The information that can be obtained is useful, but not dangerous on its own. Monitoring of future traffic for patterns of misuse is recommended.

**Error Message** %IDS-4-TCP\_SYN\_ATTACK\_SIG: Sig:3050:Half-Open Syn Flood - from %i to %i

**Explanation** Triggers when the number of half-open TCP connections exceeds the high-water mark or the one minute high rate mark

**Recommended Action** There are no known sources that would legitimately generate his traffic pattern. This may be indicative of some type of network problem and should be investigated. To avoid depletion of your network resources it is recommended that the source be shunned during the course of the investigation. If no network problems are discovered prudent security practices would suggest that the source be shunned permanently.

**Error Message** %IDS-4-TCP\_SYN\_FIN\_SIG: Sig:3041:TCP - SYN and FIN bits set - from %i to %i

**Explanation** Triggers when a TCP packet is received with both the SYN and FIN bits set in the flags field.

**Recommended Action** There is no legitimate use for malformed TCP datagrams. This is unusual traffic and warrants investigation. Hacker tools will generate TCP packets with the SYN and FIN bits set in the flags field in an attempt to elude intrusion detection. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UDP\_BOMB\_SIG: Sig:4050:UDP Bomb - from %i to %i

**Explanation** Triggers when the UDP length specified is less than the IP length specified. This malformed packet type is associated with a denial of service attempt.

**Recommended Action** There is no legitimate use for malformed datagrams. This may be indicative of systems that are experiencing problems with their kernel or NIC cards. This is unusual traffic and warrants investigation. When non-specific network traffic of this type is encountered, the most prudent action from a security perspective is to shun or disallow it. If the source of this traffic is legitimate the user will then identify him or herself.

**Error Message** %IDS-4-UDP\_TFTP\_PASSWD\_SIG: Sig:4100:Tftp Passwd File - from %i to %i

**Explanation** Triggered when someone tries to tftp a password file.

**Recommended Action** System administrators might use this service to update system files. It is a high security risk if this is normal practice and should be avoided. No other benign triggers exist for this signature. If after investigation the alarm was not generated by a system administrator, prudent security practices would suggest that the source be shunned.

## IDTATM25-1

**Error Message** %IDTATM25-1-UNAVAILABLE: IDTATM25(%d/%d), Init failed at %s.

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-1-UNAVAILABLE: IDTATM25(%d/%d), Init failed, CSR%d=0x%04x.

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-1-UNAVAILABLE: Only found %d interfaces on bay %d, shutting down bay

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## IDTATM25-3

**Error Message** %IDTATM25-3-UNAVAILABLE: Device reported %#x

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-3-UNAVAILABLE: IDB= %s, RX lost sync, Interface reset

**Explanation** RX hang

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-3-UNAVAILABLE: IDB= %s, TX hang, Interface reset

**Explanation** TX hang

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-3-UNAVAILABLE: Interface %s, %s not supported

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-3-UNAVAILABLE: Interface %s, Failed to down vc %d (Cause: %s)

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IDTATM25-3-UNAVAILABLE: Interface %s, Failed to setup vc %d (Cause: %s)

**Explanation** The ATM25 network module hardware may be bad

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## IDTATM25-6

**Error Message** %IDTATM25-6-UNAVAILABLE: ATM transmit bandwidth is limited to smallest shaped value.

**Explanation** Any PVC configured with traffic shaping will limit the entire ATM interface to not exceed the bandwidth of any traffic shaped pvc.

## IF Messages

This section contains interface messages.

### IF-2

**Error Message** %IF-2-IDB\_TABLE\_INIT: Malloc failed while initializing idb table

**Explanation** A memory allocation failure occurred while an IDB table was being initialized.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## IF-3

**Error Message** %IF-3-BADMACADDRTYPE: illegal mac address type, [dec]

**Explanation** This is an internal error that was recovered gracefully.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IF-4

**Error Message** %IF-4-BACKWARD\_COUNTERS: Corrected for backward [chars] counters ([int] -> [int]) on [chars]

**Explanation** The interface specified in the message has a packet counter that has decreased in number. This condition can occur if a packet is counted and then dropped. This event was detected and corrected.

**Recommended Action** If this condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IF-4-NOBGPROCESS: Network background process not running. [chars]

**Explanation** A process which manages network interface background processing is not yet running, but another system process has tried to send the process a message. An interface on the router may have missed a request to bring itself up.

**Recommended Action** Reset the interface by entering a **shutdown** command followed by a **no shutdown** command.

## IFDAMP Messages

This section contains interface dampening (IFDAMP) messages.

### IFDAMP-5

**Error Message** %IFDAMP-5-ZERODELAY: dampening reuse timer is updated with 0 delay time

**Explanation** An inconsistency was detected in the dampening reuse timer wheel.

**Recommended Action** No action is required.

## IFMGR Messages

This section contains interface manager messages.

### IFMGR-3

**Error Message** %IFMGR-3-BADIFINDEXTABLE: The file nvram:ifIndex-table is corrupt.

**Explanation** The file is not in the expected format.

**Recommended Action** If possible, delete the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-DUP\_IFINDEX: Duplicate ifIndex (%d) found for ifDescr

**Explanation** Two interfaces have the same interface index in the interface manager assigned list. The second interface registered with the interface manager will be assigned a new index.

**Recommended Action** If interface index persistence is not required, then no action is required. Otherwise, reload the router with the proper interface index table and image. If the error message only appears from the standby route processor (RP), reload the standby RP.

**Error Message** %IFMGR-3-IFDB: IF manager interface database [chars] failure- [dec]

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-IFINDEX\_PERSIST\_ENTRY\_CORRUPT: [chars] seems to be corrupted. Trying to read [dec] size

**Explanation** The ifIndex table is corrupted.

**Recommended Action** Delete the ifindex table.

**Error Message** %IFMGR-3-INVALID\_PERSISTENT\_DATA: Invalid persistent data

**Explanation** An attempt was made to write invalid persistent data.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-NOIMACP: IF manager control process failed to start

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-NOVECTOR: Interface manager failed to allocate IF vector.  
size %d

**Explanation** The interface vector could not be allocated with the number of elements required, either initially or by a resize operation.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-VECTOREXD: IF manager attempted to use interface [dec]  
outside vector range.

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-VECTORIFSUSPECT: IF manager added interface %d which is  
unexpectedly large.

**Explanation** The ifIndex allocation scheme is trying to add an ifIndex value much larger than the former greatest ifIndex value in the DB. It should assign sequential ifIndex values.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-3-VECTORPOSUSED: IF manager attempted to add interface [dec] which was already added.

**Explanation** An internal software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IFMGR-4

**Error Message** %IFMGR-4-NOIFINDEX: All SNMP if indices are exhausted

**Explanation** All SNMP MIB indexes have been exhausted. Interfaces will not be able to obtain an interface index that they can use to register with the interface MIB.

**Recommended Action** Attempt a system reload. If the problem persists after the system reload, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-4-NOSYNC: ifIndex not being synced between active and standby

**Explanation** When the standby module comes up, the tuple of ifIndex and ifDescr is synchronized so that interfaces get the same ifIndex when they come up. This error happens when the interface does not get the ifIndex for the given ifDescr.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-4-STACK\_RELATIONSHIP\_ADD\_ERROR: [chars]: Request for creating invalid stack relationship [dec], [dec]

**Explanation** The IF MGR received the call to add invalid stack relationship. The higher and lower ifIndex are shown in the message. The module of the IF MGR from which this message is generated is also shown in the message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IFMGR-4-VECTORIFSUSPECT: IF manager added interface [dec] which is unexpectedly large.

**Explanation** The ifIndex allocation scheme gives out sequential ifIndex values. This message comes from the IF-MGR DB when it is trying to add an ifIndex value much larger than the former greatest ifIndex value in the DB.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IFMGR-7

**Error Message** %IFMGR-7-NO\_IFINDEX\_FILE: Unable to open [chars] [chars]

**Explanation** This is an informational message. This means the system found no saved ifIndex information, and ifIndex is not persisted across reboots. The ifIndices will be reassigned.

**Recommended Action** 1. No Action, if 'snmp-server ifIndex persist' is not configured. 2. If 'snmp-server ifindex persist' is configured then copy the error message exactly as it appears, and report it to your technical support representative.

# IFS Messages

This section contains Cisco IOS file system messages.

## IFS-3

**Error Message** %IFS-3-UNAVAILABLE: '%s' file system missing required functions, not created

**Explanation** Some file systems require a certain set of function to be present in order to be usable. This file system does not support all the mandatory functionality.

**Recommended Action** Call your technical support representative for assistance.

**Error Message** %IFS-3-UNAVAILABLE: Data does not match expected internal representation

**Explanation** A mismatch exists between the representation of data extracted from the filesystem and the expectation of its formatting. This may occur when running in a dual-RP environment, with different IOS versions running on the two RPs.

**Recommended Action** Ensure both RPs are running the IOS same version, if running in a dual-RP environment. If not, call your technical support representative for assistance.

**Error Message** %IFS-3-UNAVAILABLE: Failed to add %s, filesystem prefix exists

**Explanation** A file system could not be added because another file system exists with the same name.

**Recommended Action** Contact your technical support representative.

**Error Message** %IFS-3-UNAVAILABLE: Failed to add %s, maximum filesystems %d

**Explanation** The router has reached the maximum number of file systems that can be supported at one time.

**Recommended Action** Contact your technical support representative.

**Error Message** %IFS-3-UNAVAILABLE: Failed to create %s file system, %s

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative for assistance.

**Error Message** %IFS-3-UNAVAILABLE: Failed to create %s simple file system, %s

**Explanation** An internal software error occurred.

**Recommended Action** Call your technical support representative for assistance.

## IFS-4

**Error Message** %IFS-4-UNAVAILABLE: Failed to open %s, maximum open files %d)

**Explanation** The router has reached the maximum number of files that may be open at one time.

**Recommended Action** Close some files and try again. If this messages recurs, contact your technical support representative.

## IGMP Messages

This section contains Internet Group Management Protocol (IGMP) messages.

### IGMP-3

**Error Message** %IGMP-3-NO\_DNS\_SERVER: No DNS server is configured. DNS-based SSM mapping should be disabled if no DNS server is configured.

**Explanation** No domain name service (DNS) server is present. Processing of Internet Group Management Protocol (IGMP) packets may be delayed if the DNS lookup is done continuously.

**Recommended Action** Disable DNS-based source specific multicast (SSM) mapping if no DNS server is present in the network.

**Error Message** %IGMP-3-QUERY\_INT\_MISMATCH: Received a non-matching query interval %d, from querier address %i

**Explanation** An IGMP version mismatch was detected between routers.

**Recommended Action** Configure both interfaces with the same IGMP version.

## IGMP-6

**Error Message** %IGMP-6-IGMP\_CHANNEL\_LIMIT: IGMP limit exceeded for channel (%i, %i) on %s by host %i

**Explanation** The allowed number of IGMP joiners reached the configured limit. New joiners cannot be allowed unless the configuration is changed.

**Recommended Action** Enter the global or interface **ip igmp limit** command to adjust the allowed number of IGMP joiners. If the exceeding of current limits was unexpected, find the IP address of the denied host in the system log.

**Error Message** %IGMP-6-IGMP\_GROUP\_LIMIT: IGMP limit exceeded for group (\*, %i) on %s by host %i

**Explanation** The allowed number of IGMP joiners has exceeded the configured limit. New joiners cannot be allowed unless the configuration is changed.

**Recommended Action** Enter the global or interface **ip igmp limit** command to adjust the allowed number of IGMP joiners. If the exceeding of current limits was unexpected, find the IP address of the denied host in the system log.

## ILACC Messages

This section contains the initial messages.

### ILACC-1

**Error Message** %ILACC-1-UNAVAILABLE: msgtxt\_initfail

**Explanation** The hardware failed to initialize correctly.

**Recommended Action** Repair or replace the controller.

**Error Message** %ILACC-1-UNAVAILABLE: msgtxt\_memoryerror

**Explanation** An Ethernet interface detected a hardware problem.

**Recommended Action** Repair or replace the controller.

## ILACC-3

**Error Message** %ILACC-3-UNAVAILABLE: Unit %d, spurious IDON interrupt, csr%d=0x%04x

**Explanation** An Ethernet interface generated a spurious Initialization Done interrupt.

**Recommended Action** Repair or replace the controller.

**Error Message** %ILACC-3-UNAVAILABLE: Unit %d, underflow error

**Explanation** The Ethernet hardware is requesting data faster than the system can supply it. This condition might indicate that the system is at the limit of its performance.

**Recommended Action** A small number of underflows might not be a cause for concern. You can monitor underflows with the **show interface** command. Reducing the load on the router or installing a higher-performance router should alleviate this problem.

**Error Message** %ILACC-3-UNAVAILABLE: msgtxt\_badunit

**Explanation** An internal software error occurred.

**Recommended Action** If this message recurs, contact your technical support representative.

**Error Message** %ILACC-3-UNAVAILABLE: msgtxt\_ownererror

**Explanation** An Ethernet interface is malfunctioning, or an internal software error occurred.

**Recommended Action** Repair or replace the controller.

## ILACC-4

**Error Message** %ILACC-4-UNAVAILABLE: Unit %d, babble error, csr0 = 0x%x

**Explanation** An Ethernet interface is malfunctioning.

**Recommended Action** Determine whether the malfunction stems from a software or hardware error by turning off all fast switching. Error messages showing that the packet is too large for the link indicate a software error at a high level. Copy the error message exactly as it appears, and report it to your technical support representative. Receiving no error messages indicates a hardware error. Repair or replace the controller.

## ILACC-5

**Error Message** %ILACC-5-UNAVAILABLE: Unit %d, excessive collisions. TDR=%d

**Explanation** An Ethernet cable is broken or unterminated, or the transceiver is unplugged. The time delay reflectometer (TDR) counter is an internal ILACC counter that counts the time (in ticks of 100 ns each) from the start of a transmission to the occurrence of a collision. Because a transmission travels about 35 feet per tick, this value is useful to determine the approximate distance to a cable fault.

**Recommended Action** If the transceiver appears to be properly terminated, repair or replace the Ethernet interface card.

**Error Message** %ILACC-5-UNAVAILABLE: Unit %d, late collision error

**Explanation** An Ethernet transceiver is malfunctioning, the Ethernet is overloaded, or the Ethernet cable is too long.

**Recommended Action** Repair or replace the controller.

**Error Message** %ILACC-5-UNAVAILABLE: Unit %d, lost carrier. Transceiver problem?

**Explanation** An Ethernet transceiver is unplugged or faulty.

**Recommended Action** Repair or replace the controller.

## ILPOWER Messages

This section contains inline power messages.

## ILPOWER-3

**Error Message** %ILPOWER-3-CONTROLLER\_ERR: Controller error, Controller number [dec]: [chars]

**Explanation** An error involving the inline power controller has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ILPOWER-3-CONTROLLER\_IF\_ERR: Controller interface error, [chars]: [chars]

**Explanation** An interface error has been detected between the inline power controller and the system.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ILPOWER-3-CONTROLLER\_PORT\_ERR: Controller port error, Interface [chars]: [chars]

**Explanation** A port error has been reported by the inline power controller.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %ILPOWER-3-ILPOWER\_INTERNAL\_IF\_ERROR: Inline Power internal error, interface %s: %s

**Explanation** A software sanity check failed in the course of Inline Power processing.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## ILPOWER-5

**Error Message** %ILPOWER-5-AC\_DISCONNECT: Interface [chars]: AC disconnect

**Explanation** The AC power has been disconnected.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-DC\_DISCONNECT: Interface [chars]: DC disconnect

**Explanation** The DC power has been disconnected.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-ILPOWER\_MISCONFIG: Interface [chars] is denied power as it requires more power than configured maximum wattage([dec]).

**Explanation** The interface is denied power as it requires more power than the configured maximum wattage.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-ILPOWER\_NOPOWER\_AVAIL: Interface [chars] is denied power because either the system ran out of power or module limit reached.

**Explanation** There is not enough power left in the system to supply to the interface specified in the error message.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-ILPOWER\_POWEROVERDRAWN: Interface [chars] is shutdown as it is consuming more power ([dec]) than the configured maximum value ([dec]).

**Explanation** The specified interface is shut down because it is consuming more power than the configured maximum value.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-LINKDOWN\_DISCONNECT: Interface [chars]: Link down disconnect

**Explanation** A link has been disconnected.

**Recommended Action** No action is required.

**Error Message** %ILPOWER-5-POWER\_GRANTED: Interface [chars]: Power granted

**Explanation** Power has been granted for the interface specified.

**Recommended Action** No action is required.

## ILPOWER-7

**Error Message** %ILPOWER-7-DETECT: Interface [chars]: Power Device detected: [chars]

**Explanation** A power device has been detected.

**Recommended Action** No action is required.

## ILPOWER\_RF Messages

This section contains inline power redundancy facility (RF) messages.

### ILPOWER\_RF-3

**Error Message** %ILPOWER\_RF-3-CREATE\_PROCESS: Inline power RF client failed to create %s process

**Explanation** The inline power redundancy facility (RF) client could not create a process. This condition will cause bulk synchronization to fail.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# IMAGEMGR Messages

This section contains image manager messages.

## IMA-1

**Error Message** %IMA-1-UNAVAILABLE: Command opcode %#x on channel %d on slot %d was rejected.

**Explanation** The IMA firmware has rejected the command because of the current protocol state of the interface, or the opcode is undefined.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Delaying activation of %s until a currently active interface is shutdown.

**Explanation** The IMA network module cannot only support up to 4 activate interfaces at one time. Once more that 4 are no shutdown, each interface will wait for an existing interface to be shutdown before becoming activated.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Download of %s to failed to at %#x on IMA Network Module in slot %d.

**Explanation** An error occurred during the download of firmware to the IMA NM.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: FPGA Download on module in slot %d failed.

**Explanation** An error occurred during the download of the FPGA on the IMA NM.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Module in slot %d had a shared memory error.

**Explanation** Memory on the NM failed power-on diagnostic check.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Network processor on module in slot %d failed to come up.

**Explanation** An error occurred during reset of the IMA NM.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Previous process %d never received mail response from slot %d.

**Explanation** The previous requesting process was terminated before receiving a mail reply.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: The IMA Network Module in slot %d is incompatible with the PCMCIA controller in the router.

**Explanation** The PCMCIA controller is down level.

**Recommended Action** Copy the error message exactly as it appears, and contact your technical support representative for upgrade information.

**Error Message** %IMA-1-UNAVAILABLE: The Network Module in slot %d did not initialize.

**Explanation** The Network Module has failed its initialization.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: The Network Module in slot %d reports an invalid %s device id of %#x.

**Explanation** The IMA network module hardware may be bad.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: The mailbox for channel %d on IMA Network Module in slot %d is completely full. Message %d was dropped.

**Explanation** The IMA NM mailboxes are full and cannot accept any more requests.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMA-1-UNAVAILABLE: Timed out waiting for a response to command %#x from slot %d.

**Explanation** The IMA NM failed to respond with the requested information. Information to be displayed by requesting exec command or SNMP manager is incomplete. This is an extremely rare event and should only happen under severe system load.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IMA-4

**Error Message** %IMA-4-UNAVAILABLE: Link %d will become the common transmit clock once it is added to group %s

**Explanation** The link configured as the common transmit clock is not a member of the group, so it cannot provide the clock. The group will use a common transmit clock that is automatically chosen from one of the other active links.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %IMA-4-UNAVAILABLE: Link %d will initiate the test pattern procedure once its added to group %s.

**Explanation** The link chosen to transmit the test pattern is not a member of the group, thereby preventing the transmission of the test pattern.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %IMA-4-UNAVAILABLE: Stopping test pattern procedure on group %s.

**Explanation** The link transmitting the test pattern has been removed from the group, thereby stopping the transmission of the test pattern.

**Recommended Action** LOG\_STD\_NO\_ACTION

## IMA-5

**Error Message** %IMA-5-UNAVAILABLE: %s is using channel %d but has no configured links.

**Explanation** The IMA interface has been configured Up but has no link members. It cannot become active until active links are added to the group.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %IMA-5-UNAVAILABLE: IMA Group %s now has %d active links, active link bitmap is %#x.

**Explanation** Active Links were added or removed from the Group, changing its bandwidth.

**Recommended Action** LOG\_STD\_NO\_ACTION

## IMAGEMGR-6

**Error Message** %IMAGEMGR-6-AUTO\_ADVICE\_SW: [chars]

**Explanation** A line of output from the auto-advise-software process is being displayed.

**Recommended Action** No action is required.

**Error Message** %IMAGEMGR-6-AUTO\_ADVICE\_SW\_INITIATED: Auto-advise-software process initiated for switch number(s) [chars]

**Explanation** Systems with incompatible software have been detected in the stack. The stack will now determine whether or not software is available to be copied to the incompatible systems, and if so, advise the user how to copy it. Otherwise, the system lets the user know that the software on the stack needs to be updated.

**Recommended Action** No action is required.

**Error Message** %IMAGEMGR-6-AUTO\_COPY\_SW: [chars]

**Explanation** A line of output from the auto-copy-software process is being displayed.

**Recommended Action** No action is required.

**Error Message** %IMAGEMGR-6-AUTO\_COPY\_SW\_INITIATED: Auto-copy-software process initiated for switch number(s) [chars]

**Explanation** Systems with incompatible software have been detected in the stack. The stack determines whether or not software is available to be copied to the incompatible systems, and whether or not it is appropriate to copy the software automatically.

**Recommended Action** No action is required.

**Error Message** %IMAGEMGR-6-AUTO\_DOWNLOAD\_SW: [chars]

**Explanation** A line of output from the automatic software download process is being displayed.

**Recommended Action** No action is required.

**Error Message** %IMAGEMGR-6-AUTO\_DOWNLOAD\_SW\_INITIATED: Auto-download-software process initiated for switch number(s) [chars]

**Explanation** Systems with incompatible software have been detected in the stack. The stack attempts to download software from a previously configured location, and install it to make the systems compatible.

**Recommended Action** No action is required.

## IMAGE\_SIMFS Messages

This section contains In-Memory System Image File System messages.

### IMAGE\_SIMFS-3

**Error Message** %IMAGE\_SIMFS-3-NOPROCESS: Failure spawning Memory Reclaim process

**Explanation** The creation of an Cisco IOS process to compact memory previously held by in-memory image files has failed, probably due to a software defect.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IMAGE\_VFS Messages

This section contains Image Virtual File System messages.

**Error Message** %IMAGE\_VFS-3-UNAVAILABLE: %s image checksum mismatch.

**Explanation** The checksum of the image in memory is different from the expected checksum

**Recommended Action** Check whether the image file is complete and uncorrupted

**Error Message** %IMAGE\_VFS-3-UNAVAILABLE: Failed to locate all the Image files, on bootup

**Explanation** The relevant image file is missing or it couldn't be extracted(due to corruption), or the router has insufficient memory to load the entire image

**Recommended Action** If the TAR file is part of a system image, enter the **show image contents file archive-name**, where *archive-name* is the name of the archive. Enter the **show region** and **show version** commands. Open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), or contact your Cisco technical support representative and provide the representative with the information you have gathered.

**Error Message** %IMAGE\_VFS-3-UNAVAILABLE: Failed to open %s, which was loaded from archive %s

**Explanation** The relevant image file is missing or it could not be extracted (due to corruption), or the Archive itself is missing (In case of Flash based access)

**Recommended Action** If the file is not in memory, check the archive file. If the file is a TAR archive file and not part of a system software image, enter the **archive tar table** *archive-name* command, where *archive-name* is the name of the TAR archive. If the TAR file is part of a system image, enter the **show image contents file** *archive-name*, where *archive-name* is the name of the archive. Enter the **dir all** and **show version** commands. Open a case with the Technical Assistance Center via the Internet at [http://www.cisco.com/cgi-bin/front.x/case\\_tools/caseOpen.pl](http://www.cisco.com/cgi-bin/front.x/case_tools/caseOpen.pl), or contact your Cisco technical support representative and provide the representative with the information you have gathered.

**Error Message** %IMAGE\_VFS-3-UNAVAILABLE: Failure spawning No Cache process

**Explanation** The creation of an IOS process to delete in-memory Image files failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IMAGE\_VFS-3-UNAVAILABLE: archive verification failed for file %s & archive %s.

**Explanation** The archive in the local device is different from the version whose image file has been loaded into memory. This can happen if the archive was deleted from the local device &/or replaced by another file of the same name

**Recommended Action** Check whether the archive file is complete and uncorrupted. Also check if the size of the archive & the last modification time (if available) is what you expect it to be. Enter the **dir all** and **show version** commands.

# INBAND Messages

This section contains inband management messages.

## INBAND-3

**Error Message** %INBAND-3-BAD\_PAK: Possibly un-encapsulated packet passed to Mistral:  
int [chars] type [int] stat [hex] flags [hex] size [dec] offset [dec] requeue\_token  
[int] r1 [int] r2 [int] total detected [int]

**Explanation** There is a badly encapsulated packet from the process level.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INBAND-3-INVALID\_SEND: Invalid send operation (packet on [chars])

**Explanation** An internal error caused illegal call to device driver: normal operation continues.

**Recommended Action** If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %INBAND-3-NO\_BUFFER\_POOLS: Initialization of private buffer pools failed

**Explanation** Private buffer pools were not created for etsec ibc.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

**Error Message** %INBAND-3-TOOBIG: An attempt made to send giant packet on [chars] ([dec] bytes from [hex], max allowed [dec])

**Explanation** An attempt was made to send an oversized packet.

**Recommended Action** Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

## INBAND-6

**Error Message** %INBAND-6-UNAVAILABLE: Bad idb for vector %s: %s vlan %d total %d

**Explanation** Bad idb returned from get\_l3\_swidb

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INBAND\_or\_EOBC-3

**Error Message** %INBAND\_or\_EOBC-3-UNAVAILABLE: Invalid send operation (packet on %s)

**Explanation** Internal error caused illegal call to device driver:normal operation continues

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INDXOBJ-3

**Error Message** %INDXOBJ-3-UNAVAILABLE: index object routine %s called from interrupt context

**Explanation** inappropriate index object routine called from interrupt routine.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTERFACE\_API Messages

This section contains binary API for the interface descriptor block messages.

### INTERFACE\_API-1

**Error Message** %INTERFACE\_API-1-NOMOREHWIDBNUMBERS: No more hardware IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

**Explanation** No more hardware IDB numbers can be issued. The maximum allowed number has been reached for this platform.

**Recommended Action** In addition to the following, copy the information from the **show idb** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-1-NOMORESUIDBNUMBERS: No more software IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

**Explanation** No more software IDB numbers can be issued. The maximum allowed number has been reached for this platform.

**Recommended Action** In addition to the following, copy the information from the **show idb** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTERFACE\_API-3

**Error Message** %INTERFACE\_API-3-CANNOTGETMTU: Error [dec] received while getting MTU: [chars]. Using default [int]

**Explanation** A software error has occurred while attempting to retrieve the MTU value from the interface.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-3-IFNUMTOIDBERROR: Error occurred while using the ifnum to idb table for interface [chars], if number [dec], during [chars]

**Explanation** A software error has occurred. An operation on the interface number to the IDB mapping table could not be performed successfully.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-3-INVALIDSUBBLOCKPARAMETERS: Invalid subblock parameters for [chars] were supplied.

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-3-NOADDSUBBLOCK: The [chars] subblock named [chars] was not added to [chars]

**Explanation** A software error has occurred. IDB subblocks could not be added.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-3-SUBNUMDBERR: subnum [hex] error in [chars]

**Explanation** A software error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTERFACE\_API-4

**Error Message** %INTERFACE\_API-4-UNAVAILABLE: %s may not be referencing the correct swidb

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-4-UNAVAILABLE: A error occurred while using the Index Table utility for %s.

**Explanation** A software error has occurred; this message is displayed when an Index table feature could not be used successfully.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-4-UNAVAILABLE: Function %s detected an invalid %s pointer of %08lX, ignoring

**Explanation** A software error has occurred, this message is displayed when an invalid pointer is detected.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-4-UNAVAILABLE: pak-if\_input is not initialized

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTERFACE\_API-4-UNAVAILABLE: pak-if\_output is not initialized

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTF\_SYNC-2

**Error Message** %INTF\_SYNC-2-UNAVAILABLE: %s

**Explanation** A software error occurred during initialization of the Interface Sync RF subsystem

**Recommended Action** Check for sufficient processor memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTF\_SYNC-3

**Error Message** %INTF\_SYNC-3-UNAVAILABLE: Incorrectly formatted message (0x%x, 0x%x) received by %s

**Explanation** Inconsistent message data was received from the peer CPU, possibly due to an incompatible image version.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTF\_SYNC-3-UNAVAILABLE: Unable to transmit message type %d from %s

**Explanation** A transmit error occurred while sending msg to other CPU, due to msg translation

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTF\_SYNC-3-UNAVAILABLE: Unable to transmit message type %d from %s

**Explanation** A transmit error occurred while sending msg to other CPU, due to non-availability of buffer

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTF\_SYNC-3-UNAVAILABLE: Unknown message type 0x%x received by %s

**Explanation** An unknown message type was received from the peer CPU, possibly due to an incompatible image version.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTF\_SYNC-5

**Error Message** %INTF\_SYNC-5-UNAVAILABLE: Msgtype %s sent by %s unsupported by peer.

**Explanation** Peer responded that it didn't recognize a message sent by this CPU, possibly due to a different image version.

**Recommended Action** May require a software upgrade on the Standby CPU. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## INTR\_MGR Messages

This section contains interrupt manager messages.

**Error Message** %INTR\_MGR-3-BURST: [chars] [chars] [[dec]]

**Explanation** A burst of hardware interrupts of the specified type has occurred.

**Recommended Action** The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTR\_MGR-3-INTR: [chars] [chars]

**Explanation** The specified interrupt event has been detected.

**Recommended Action** The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %INTR\_MGR-3-MAXBURST: [chars] [chars] [[dec]]

**Explanation** The specified hardware interrupt has exceeded the maximum allowed number of bursts.

**Recommended Action** The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IOCARD-3

**Error Message** %IOCARD-3-UNAVAILABLE: %s in slot%d is not supported on %s chassis

**Explanation** The software identified and disabled the FE on the I/O card

**Recommended Action** No action required.

**Error Message** %IOCARD-3-UNAVAILABLE: IO card discovered in non-zero slot %d

**Explanation** An IO card was detected in a non-zero slot.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IOS\_LICENSE-2

**Error Message** %IOS\_LICENSE-2-UNAVAILABLE: No memory available for %s

**Explanation** The Ios licensing subsystem could not obtain the memory it needed.

**Recommended Action** If this error message recurs, attempt to reduce memory usage by reducing the number of router features, or interfaces, enabled. Alternatively, add more memory. To display total memory usage for a router enter **show memory summary** at the privileged command line prompt. To display buffer usage enter **show buffers** at the prompt.

**Error Message** %IOS\_LICENSE-2-UNAVAILABLE: No valid license available to run any feature

**Explanation** The Ios licensing subsystem could not get a valid license to run any feature on the box, please purchase a license.

**Recommended Action** Purchase a valid license to run the features you require on the box. You should contact the cisco portal or a TAC engineer to get a license. You can do a **show license** at the privileged command line prompt to get the list of available feature in the box

## IOS\_LICENSE-3

**Error Message** %IOS\_LICENSE-3-UNAVAILABLE: %s

**Explanation** The ios licensing subsystem failed to create a process/watched boolean etc to watch request from the remote show subsys license commands

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

**Error Message** %IOS\_LICENSE-3-UNAVAILABLE: %s failed

**Explanation** The rttys calls in the Ios licensing subsystem failed for some reason, please capture the error msg and forward it to the appropriate licensing component

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

**Error Message** %IOS\_LICENSE-3-UNAVAILABLE: %s failed with an error = %s

**Explanation** The ipc calls in the Ios licensing subsystem failed for some reason, please capture the error msg and forward it to the appropriate licensing component

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

**Error Message** %IOS\_LICENSE-3-UNAVAILABLE: an unknown message type was received, dropping it, msg\_type = %d

**Explanation** Ios licensing subsystem received a msg type which it does not recognizes or support

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component.

## IOS\_LICENSE\_IMAGE\_APPLICATION-3

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-3-UNAVAILABLE: %s

**Explanation** The ios image licensing subsystem received an event for an unknown version of a feature

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-3-UNAVAILABLE: %s

**Explanation** The ios image licensing subsystem received an event which it does not understand or recognizes

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-3-UNAVAILABLE: %s

**Explanation** The ios licensing subsystem failed to create a process/watched boolean etc to watch request from the remote show subsys license commands

**Recommended Action** please capture the error msg and forward it to the appropriate licensing component

## IOS\_LICENSE\_IMAGE\_APPLICATION-6

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-6-UNAVAILABLE: %s %s.

**Explanation** There is no valid license available on the box and we are running on a default feature

**Recommended Action** please purchase a license to activate required features

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-6-UNAVAILABLE: EULA must be accepted for license level = %s

**Explanation** This is an informational message to inform user that the user needs to reissue the command from an interactive terminal

**Recommended Action** This is an informational message, no action is required

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-6-UNAVAILABLE: Module name = %s Next reboot level = %s and License = %s

**Explanation** This is an informational message to display the change in the next reboot license level

**Recommended Action** This is an informational message, no action is required

**Error Message** %IOS\_LICENSE\_IMAGE\_APPLICATION-6-UNAVAILABLE: Please issue 'license boot' config command to make extension license (%s) available for use.

**Explanation** This is an informational message to info user that to make extension license available to support image level, licensing image level needs to be configured

**Recommended Action** This is an informational message, no action is required

# IP Messages

This section contains Internet Protocol (IP) messages.

## IP-3

**Error Message** %IP-3-LOOPPAK: Looping packet detected and dropped src=[IP\_address], dst=[IP\_address], hl=[int], tl=[int], prot=[int], port=[int], dport=[int] in=[chars], nexthop=[IP\_address], out=[chars] options=[chars]

**Explanation** A looping packet was detected. A common cause is a misconfiguration of an IP helper address. The helper address should be the same address as that of the server of the intended service. Putting the address of the router in the helper address causes a routing loop to be created.

**Recommended Action** To resolve this issue, analyze the source and destination address of the looped packets. Verify that the configuration of IP helper addresses in the switch correctly point to the right device (for example the DHCP server, the DNS server, or WINS server).

**Error Message** %IP-3-MAXIRDP: Attempt to send IRDP to proxies exceeding configurable limit: [dec], interface: [chars], secondary = [dec], proxy = [dec]

**Explanation** The sum of configured secondary addresses and configured proxy addresses exceeds the number of total addresses that the IRDP can support in its implementation.

**Recommended Action** Reduce the number of either the secondary IP addresses or proxy addresses configured for the interface.

**Error Message** %IP-3-NOOUTINTF: Output interface not available. source address: [IP\_address], destination address: [IP\_address], routing type: [int]

**Explanation** The output interface for this packet is not set.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IP-4

**Error Message** %IP-4-UNAVAILABLE: Bad IP address and mask %i%m in class\_resolve()

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-4-UNAVAILABLE: Duplicate address %i on %s, sourced by %e

**Explanation** Another system is using your IP address.

**Recommended Action** Change the IP address of one of the two systems.

**Error Message** %IP-4-UNAVAILABLE: IP unicast reverse-path check disabled on %s

**Explanation** The IP verify unicast reverse-path feature was disabled because CEF was disabled (either through configuration or due to an internal error).

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-4-UNAVAILABLE: Zero MAC address for %i in ARP cache

**Explanation** An entry in the ARP cache have a NULL MAC address

**Recommended Action** If this message recurs, call your technical support representative for assistance.

## IP-5

**Error Message** %IP-5-UNAVAILABLE: %s

**Explanation** Error occurred in IP access checks.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-5-UNAVAILABLE: %s

**Explanation** Error occurred in intialisation of TURBOACL.

**Recommended Action** Show process. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-5-UNAVAILABLE: Attempting web install from host %i

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IP-5-UNAVAILABLE: Selected IP address %i

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-5-UNAVAILABLE: Sending DNS response to %i (request was for %i)

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP-5-UNAVAILABLE: Terminating DNS process

**Explanation** A hardware or software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IP-6

**Error Message** %IP-6-L2MCASTDROP: Layer 2 Multicast packet detected and dropped, src=[IP\_address], dst=[IP\_address]

**Explanation** Layer 2 Multicast packet with Layer3 Unicast Destination was dropped.

**Recommended Action** No action is required.

**Error Message** %IP-6-PHYBCASTDROP: Physical broadcast packet detected and dropped, src=[IP\_address], dst=[IP\_address]

**Explanation** Layer 2 Broadcast packet with Layer3 Unicast Destination was dropped.

**Recommended Action** No action is required.

## IPA-3

**Error Message** %IPA-3-UNAVAILABLE: %s: invalid mailbox command: %02X

**Explanation** A subsystem attempted to register a mailbox command that is out of range.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPA-3-UNAVAILABLE: %s: unknown mailbox command: %02X %02X %02X %02X

**Explanation** The channel port adapter sent a mailbox command that the driver did not expect. This may occur if there is a version mismatch between the system image and the microcode.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPA-3-UNAVAILABLE: Port IO %s process terminating.

**Explanation** Unexpected termination of a port io process.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPA-3-UNAVAILABLE: bay [%s] mailbox response timed out after (%u + %u) usecs, mbx=%08X

**Explanation** A mailbox command sent from driver to the channel port adapter never completed within the expected time limit. As a result of this error, the channel port adapter driver will reset the port adapter and reload microcode to it.

**Recommended Action** The reset and reload rectified the problem. If that did not occur, then try the **microcode reload** operation again. If the error still occurs, record the output from the following commands:

- **show tech**
- **dir slot0:**
- **dir slot1:**
- **show log**

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPA-3-UNAVAILABLE: bay [%u] failed to establish %s connection (%04X)

**Explanation** An attempt to establish the console or debugger connection with the channel port adapter failed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

# IPACCESS Messages

This section contains IP security messages.

## IPACCESS-2

**Error Message** %IPACCESS-2-NOMEMORY: Alloc fail for acl-config buffer. Disabling distributed mode on lc

**Explanation** Unable to malloc a buffer to send access-list configuration down to linecards.

**Recommended Action** Enter a show chunks command and report the output, along with this error message, to your technical support representative.

**Error Message** %IPACCESS-2-UNAVAILABLE: Alloc fail for acl-config buffer. Disabling distributed mode on lc

**Explanation** Unable to malloc a buffer to send access-list configuration down to linecards.

**Recommended Action** Enter a show chunks command and report the output, along with this error message, to your technical support representative.

**Error Message** %IPACCESS-2-UNAVAILABLE: Incorrect length acl ipc xdr of type=%s len=%d received

**Explanation** Received an acl message of the wrong size for that type

**Recommended Action** Report this error message, to your tech support representative.

**Error Message** %IPACCESS-2-UNAVAILABLE: Invalid request to allocate chunk of size %d

**Explanation** We only allow acl chunks of max size IPACCESS\_LARGE\_CHUNK\_SZ

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPACCESS-4

**Error Message** %IPACCESS-4-INVALIDACL: Invalid ACL field: [chars] is [dec]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPC Messages

This section contains InterProcessor Communication (IPC) messages.

### IPC-2

**Error Message** %IPC-2-UNAVAILABLE: %s: Cannot send IPC message from 0x%x to 0x%x:  
info 0x%x

**Explanation** An error occurred when sending IPC message

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: Bad refcount in %s, ptr=%x, count=%d

**Explanation** A reference count is used to track the usage of IPC messages. A function increments the count when it begins to use a message and decrements it when it finishes. When the count becomes zero, the data structure is freed. This message indicates that when the count was accessed, it was found to be zero or negative.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: Boolean NULL in IPC message: %x.

**Explanation** A watched boolean that was allocated while sending the message is found to be NULL, when an ACK arrived.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: IPC port pre-closure overflow : 0x%x : 0x%x

**Explanation** An application attempts to close an ipc port when there are messages pending in retransmit queue and ipc defer table overflows.

**Recommended Action** Show ipc ports open. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: IPC test: %s

**Explanation** The IPC test routines.

**Recommended Action** IPC test only - no action required.

**Error Message** %IPC-2-UNAVAILABLE: Invalid IPC Zone 0x%x.

**Explanation** Some operation is attempted on a zone ID not known to IPC

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: Invalid operation at interrupt level: %s %x

**Explanation** Debug Message. An IPC application has attempted an IPC action which has been prohibited from being performed at the interrupt level.

**Recommended Action** Show ipc ports. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: Lock done a deleted element 0x%x

**Explanation** An internal inconsistency was found in some IPC data structures.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: Message for %x.%x has no receive queue or dispatch routine

**Explanation** The IPC user failed to provide any means of handling the received message.

**Recommended Action** Show ipc ports. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: No handler for ACK with data for port %x.

**Explanation** The IPC receiver appended data to an ACK. But at the sender, there is no corresponding ACK handler.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-2-UNAVAILABLE: No memory available for %s

**Explanation** The IPC protocol subsystem could not obtain the memory it needed.

**Recommended Action** If this error message recurs, attempt to reduce memory usage by reducing the number of router features, or interfaces, enabled. Alternatively, add more memory. To display total memory usage for a router enter **show memory summary** at the privileged command line prompt. To display buffer usage enter **show buffers** at the prompt. To display IPC usage enter **show ipc queue** at the prompt

**Error Message** %IPC-2-UNAVAILABLE: Unlock done on already unlocked element 0x%x

**Explanation** An internal inconsistency was found in some IPC data structures.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPC-3

**Error Message** %IPC-3-INVALID\_PORT\_INFO: Invalid port\_info in the retry queue message - SRC\_PORT = [hex], DEST\_PORT = [hex], MSG\_TYPE = [hex]

**Explanation** The IPC protocol subsystem detected that the port information is inconsistent. The port information is probably already freed by the application.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Enter the **show tech ipc** command from the master and the slave, to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-3-ISSU\_API\_ERR: [chars] failed with error code [dec]

**Explanation** An ISSU API could not perform an operation for the IPC layer. The message text includes the error code from ISSU library.

**Recommended Action** Enter the **show issu client** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-3-ISSU\_ERROR: [chars] failed with error code [dec] for seat [hex]

**Explanation** An ISSU API could not perform an operation for the IPC layer. The message text includes the error code from ISSU library.

**Recommended Action** Enter the **show issu fsm** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will

supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPC-4

**Error Message** %IPC-4-MSGMAXTIMEOUT: Invalid maximum timeout value [dec] seconds; Period - [dec]; Retries - [dec]

**Explanation** The maximum message timeout for an IPC message exceeds 2 minutes.

**Recommended Action** Enter the **show version** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-4-NOPORT: Port Not Found. [hex] --> [hex], Index:[hex], Seq: [dec], flags: [hex], size: [dec]

**Explanation** IPC received a message which is destined for a port that cannot be found by IPC.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status**, **show ipc ports**, and **debug ipc errors** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-4-UNAVAILABLE: Failed for message size %d

**Explanation** System unable to allocate IPC message of required size.

**Recommended Action** If this error message recurs, copy the error message exactly as it appears on the console or in the system log, contact your Cisco technical support representative with the gathered information. To display total memory usage for a router enter **show memory summary** at the privileged command line prompt. To display buffer usage enter **show buffers** at the prompt. To display IPC usage enter **show ipc queue** at the prompt

**Error Message** %IPC-4-UNAVAILABLE: Invalid maximum timeout value %d seconds; Period - %d; Retries - %d

**Explanation** The maximum message timeout for an IPC message exceeds 2 minutes

**Recommended Action** Capture 'sh version' and contact TAC

**Error Message** %IPC-4-UNAVAILABLE: Port Not Found. %x -- %x, Index:%x, Seq: %d, flags: %x, size: %d

**Explanation** IPC Received a message which is destined for a port that cannot be found by IPC

**Recommended Action** Capture 'sh ipc status', 'sh ipc ports' and 'deb ipc errors' outputs and contact TAC

## IPC-5

**Error Message** %IPC-5-UNAVAILABLE: %d messages pending in %s for the port %s(%x.%x) seat %x

**Explanation** Several IPC messages are pending to be processed. If the number increases, it may result in the IPC header cache or buffers being exhausted.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s %s=0x%x %s=0x%x

**Explanation** IPC failed to register the control port

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s %s=0x%x, %s 0x%x

**Explanation** IPC module could not find an IPC entity that is expected to be existing always

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s

**Explanation** IPC API is called with invalid argument.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s

**Explanation** IPC message returned is Null

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s Dest Port 0x%x Session 0x%x Source 0x%x

**Explanation** While processing an incoming message, IPC encountered invalid data in its internal data structures.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: %s: Flow control callback function is not provided by IPC Client %s

**Explanation** An IPC application cannot be controlled if flow need to be slowed down. This might result in drop of IPC packets

**Recommended Action** Show ipc ports. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: Cannot hold RPC message port: %#x, index: %d, type: %#x

**Explanation** An RPC request for an application could not be added to the RPC request table because pending requests have filled the RPC request table.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: Failed to initialize IPC client

**Explanation** An IPC application cannot be initialized because its initialization function does not appear in the IPC initialization list.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: Invalid registration

**Explanation** An IPC application has attempted to register NULL function in the IPC initialization list.

**Recommended Action** Show tech-support ipc. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: Passed Null backpressure handler

**Explanation** IPC cannot register application's NULL function in the IPC Backpressure handler list.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-5-UNAVAILABLE: Q=0x%x %s %d

**Explanation** IPC queue is full.

**Error Message** OUTPUT\_INTERPRETER%IPC-5-UNAVAILABLE: Send message to peer for %s failed. Reason: %s

**Explanation** Client using IPC App Port has not been able to send message

**Recommended Action** If the reason is 'no such port', then this may be caused because of the difference in the versions of IOS running on Active and the standby. Any other reason, please collect 'sh ipc stat' 'sh ipc rpc', 'sh ipc port' on active and standby RPs and contact tac

**Error Message** %IPC-5-UNAVAILABLE: VIP-%s

**Explanation** The Cisco IOS software, running on a Versatile Interface Processor (VIP) card, generated this message. The error message has been passed to the Route Processor (RP) or Route Switch Processor (RSP) for display. This message appears only if the user has configured the service slavelog command.

**Recommended Action** This is actually a Cisco IOS error message from a VIP. Handle it as indicated by the text after the 'VIP-' string in the error message.

## IPC-6

**Error Message** %IPC-6-MAXRPCTIMEOUT: Maximum RPC timeout value [dec] seconds set for port [hex]

**Explanation** The maximum RPC timeout for an IPC message exceeds the maximum expected value of 10 minutes.

**Recommended Action** Enter the **show techsupport ipc** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities

will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC-6-STATEFUL: %s

**Explanation** A stateful interprocess communication (IPC) event occurred.

**Recommended Action** No action is required.

## IPCGRP-3

**Error Message** %IPCGRP-3-UNAVAILABLE: %s %s

**Explanation** Failed to create IPC port on RP.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s (%u)

**Explanation** The ID associated with an IPC card is either missing, duplicated, or cannot be created.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s (%u)

**Explanation** The IPC application tried to send a message that was larger than IPC could handle. The message was not transmitted.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s (%u)

**Explanation** The slave IPC cannot register with master.It cannot exchange messages with the master.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s

**Explanation** An IPC card has registered itself to the IPC master twice. The card malfunctioned and its IPC is not active.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s

**Explanation** Nonblocking IPC command queue initialization failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s

**Explanation** REXEC-On IPC command failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: %s: %s

**Explanation** An IPC error was detected

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPCGRP-3-UNAVAILABLE: Cannot find hwidb for interface(%u/%u)

**Explanation** Interface identifier does not exist for the interface addressed by the corresponding IPC message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: Event %u from slot%u/%u: %s

**Explanation** IPC event processing operational errors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: IPC command %u (slot%u/%u): %s

**Explanation** IPC command processing operational errors.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: Incorrect msg size (size=%u)

**Explanation** Wrong size of a REXEC-On IPC command.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: Invalid interface(%u/%u/%u)

**Explanation** Invalid interface addressed by the corresponding IPC message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: Null %s ipc message

**Explanation** An empty IPC message, which is not expected to be received.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: Received empty ipc rexec cmd message

**Explanation** REXEC-On IPC command failure.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPCGRP-3-UNAVAILABLE: System call for command %u (slot%u/%u) : %s  
(Cause: %s)

**Explanation** IPC kernel system call error.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPCOIR-3

**Error Message** %IPCOIR-3-UNAVAILABLE: Card in slot %d/%d has an invalid card type in IDPROM

**Explanation** The linecard IDPROM is unprogrammed or has failed.

**Recommended Action** Contact customer support.

**Error Message** %IPCOIR-3-UNAVAILABLE: Couldn't load %s...

**Explanation** The indicated image is inaccessible

**Recommended Action** Check the filename.

**Error Message** %IPCOIR-3-UNAVAILABLE: IPC failed (%s) %s slot %u/%u

**Explanation** The IOS IPC protocol reported an unexpected error.

**Recommended Action** Make sure the indicated card is still plugged in.

**Error Message** %IPCOIR-3-UNAVAILABLE: Image version stamp missing

**Explanation** The loaded image did not contain a recognizable version stamp

**Recommended Action** Replace the image with known-good bits, and try again.

**Error Message** %IPCOIR-3-UNAVAILABLE: Incorrect API message version 0x%x

**Explanation** The linecard and IOS images are badly out of phase.

**Recommended Action** Contact customer support.

**Error Message** %IPCOIR-3-UNAVAILABLE: Incorrect message version obj 0x%x op 0x%x version 0x%x

**Explanation** The linecard and IOS images are badly out of phase.

**Recommended Action** Contact customer support.

**Error Message** %IPCOIR-3-UNAVAILABLE: Remote server refused to load slot %u/%u

**Error Message** %IPCOIR-3-UNAVAILABLE: TFTP of %s from %s failed...

**Explanation** The indicated image is inaccessible

**Recommended Action** Check file permissions, network connectivity.

**Error Message** %IPCOIR-3-UNAVAILABLE: Unable to create driver plugin in slot %d/%d.

**Explanation** A valid linecard driver plugin create failed.

**Recommended Action** Perhaps a memory allocation failure, should not happen.

**Error Message** %IPCOIR-3-UNAVAILABLE: Unable to get an IPC msg buffer in %d tries: slot %u/%u

**Explanation** The IOS IPC buffer pool was empty for a sustained period of time.

**Recommended Action** Install more processor SDRAM in the PRE.

**Error Message** %IPCOIR-3-UNAVAILABLE: Unable to initialize PRE ports.

**Explanation** The PRE plugin init sequence failed.

**Recommended Action** Determine and fix cause.

**Error Message** %IPCOIR-3-UNAVAILABLE: Unable to preanalyze driver plugin in slot %d/%d.

**Explanation** A valid linecard driver preanalyze failed.

**Recommended Action** Possibly incompatible card types

**Error Message** %IPCOIR-3-UNAVAILABLE: Unsupported card type (0x%x) in slot %d/%d.

**Explanation** The linecard is not supported by this version of IOS

**Recommended Action** Contact customer support.

## IPCOIR-4

**Error Message** %IPCOIR-4-UNAVAILABLE: Get IPC msg buf failed %d time(s): slot %u/%u  
- retry in %d sec

**Explanation** The IOS IPC buffer pool was temporarily empty.

**Recommended Action** Consider installing more processor SDRAM in the PRE.

## IPC\_RPM-3

**Error Message** %IPC\_RPM-3-UNAVAILABLE: %s %s

**Explanation** The ID associated with an IPC card is either missing, duplicated, or cannot be created.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RPM-3-UNAVAILABLE: %s (%d)

**Explanation** An invalid IPC message was received during cc command execution

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPC\_RPM-3-UNAVAILABLE: %s (%d)

**Explanation** The IPC application tried to send a message that was larger than IPC could handle. The message was not transmitted.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RPM-3-UNAVAILABLE: %s

**Explanation** IPC card registered itself to the IPC master twice.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RPM-3-UNAVAILABLE: %s

**Explanation** The IPC ran out of memory buffers.

**Recommended Action** Reduce the number of applications currently running on the IPC. Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RPM-3-UNAVAILABLE: WARNING: ECC Single Bit Error Correction

**Explanation** A ECC Single Bit Error was detected and corrected.

**Recommended Action** Use the command 'debug rpm ecc' to look at the total number of ECC errors since the system was booted. 'debug rpm ecc count' will set the number of ECC errors that will cause a Switch Over.

## IPC\_RSP\_CBUS-3

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: %s (%d)

**Explanation** System controller Bengal has reported an error/event

**Recommended Action** Read error reports. SBE are generally not fatal. Most others are

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: %s (%d)

**Explanation** The ID associated with an IPC card is either missing, duplicated, or cannot be created.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: %s (%d)

**Explanation** The IPC application tried to send a message that was larger than IPC could handle. The message was not transmitted.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: %s

**Explanation** An IPC card has registered itself to the IPC master twice. The card malfunctioned and its IPC is not active.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: %s

**Explanation** The IPC ran out of memory device (MEMD) buffers.

**Recommended Action** Reduce the number of applications currently running on the IPC. Copy the error message exactly as it appears, and report it to your technical support representative.

**Error Message** %IPC\_RSP\_CBUS-3-UNAVAILABLE: Hardware queue for card at slot %d not found

**Explanation** IPC messages cannot be transmitted due to a missing hardware queue. The messages were discarded, and subsequent messages will not be transmitted to that card.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## IP\_DEVICE\_TRACKING Messages

This section contains switch IP host tracking HA (IP\_DEVICE\_TRACKING) messages.

### IP\_DEVICE\_TRACKING-4

**Error Message** %IP\_DEVICE\_TRACKING-4-TABLE\_LOCK\_FAILED: Table already locked by process-id [dec] ([chars])

**Explanation** The IP device tracking table could not be updated because of another process holds a lock on the table.

**Recommended Action** No action is required.

**Error Message** %IP\_DEVICE\_TRACKING\_HA-4-ENTRY\_OUT\_OF\_SYNC: Host mac-address [enet] ip-address [IP\_address] interface [chars]

**Explanation** An inconsistency has been detected between the active supervisor engine IP device tracking table and the standby supervisor engine IP device tracking table for this host.

**Recommended Action** No action is required.

## IP\_DEVICE\_TRACKING\_HA-3

**Error Message** %IP\_DEVICE\_TRACKING\_HA-3-UNAVAILABLE: %s

**Explanation** A run-time module could not obtain the resources that are required to complete a task. The failure most likely occurred because of a software error or a lack of system memory. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_DEVICE\_TRACKING\_HA-3-UNAVAILABLE: Failed to send %s message to active for %s, %s

**Explanation** The specified synchronization message, which is an internal IPC message, could not be sent to the active unit in the specified run-time module. The failure most likely occurred because of a software error. Additional details on the nature of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_DEVICE\_TRACKING\_HA-4-UNAVAILABLE: Host mac-address %e ip-address %i interface %s

**Explanation** An inconsistency has been detected in the IP device tracking table for this host between active and standby

**Recommended Action** LOG\_STD\_NO\_ACTION

# IPFAST Messages

This section contains IP fast-switching (IPFAST) messages.

## IPFAST-2

**Error Message** %IPFAST-2-FAILOPENIPCPORT: Could not open the IPC ports. [chars]

**Explanation** The IPFAST process could not open the IPC port to communicate to the line card or route processor.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-FASTPORTCREATEERR: Attempt to create [chars] failed after [dec] retries (last error:[chars])

**Explanation** The line card attempted to create a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-FASTPORTOPEN: Requested to open [chars], id [int] when already open. Attempting to re-open.

**Explanation** The line card is attempting to open a port to the route processor when one is already open. This behavior could be transient but might result in multiple ports opened for the same purpose.

**Recommended Action** The router should be able to recover from this situation. If CEF problems develop for this line card, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at

<http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-FASTPORTOPENERR: Attempt to open [chars] failed after [dec] retries (last error:[chars])

**Explanation** The line card attempted to open a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-FASTPORTREGISTERERR: Attempt to register [chars] failed after [dec] retries (last error:[chars])

**Explanation** The line card attempted to register a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-INVALSIZE: The IP fast path received an IPC message with an invalid size(size/type - [dec]/[dec])

**Explanation** The IP fast path switching module has received an IPC message with an invalid size.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-2-MSGDROP: IPC queue limit is reached and message is dropped.  
queue limit = [dec] cumulative drops = [dec]

**Explanation** The IPC raw queue limit for IP fast path has been reached.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPFAST-3

**Error Message** %IPFAST-3-UNAVAILABLE: Cache update request at interrupt level:  
%i(%s) -%i(%s)

**Explanation** A programming error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-3-UNAVAILABLE: Found existing %s specific entry %i%m..%m-%i  
(%s) when attempting to create %i%d..%d-%i (%s)

**Explanation** Problems related to the IP route cache triggered this debugging message.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-3-UNAVAILABLE: Invalid cache destination %i/%d

**Explanation** The system attempted to add a cache entry for an invalid address.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPFAST-4

**Error Message** %IPFAST-4-UNAVAILABLE: Attempt to create %s failed. Will be retried %d times (last error:%s)

**Explanation** The Linecard is attempting to create a port to the Route processor but has failed. This could be a transient behavior and hence retries will be attempted

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPFAST-4-UNAVAILABLE: Attempt to open %s failed. Will be retried %d times (last error:%s)

**Explanation** The Linecard is attempting to open a port to the Route processor but has failed. This could be a transient behavior and hence retries will be attempted

**Recommended Action** The router should be able to recover from this situation. If CEF gets disabled for this line card copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Recommended Action** %IPFAST-4-UNAVAILABLE: Attempt to open the IPC ports failed. %s

**Explanation** ipfast failed an attempt to open the ipc port to communicate to the LC/RRP/SP.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %IPFAST-4-UNAVAILABLE: Attempt to register %s failed. Will be retried %d times (last error:%s)

**Explanation** The Linecard is attempting to register a port to the Route processor but has failed. This could be a transient behavior and hence retries will be attempted

**Recommended Action** The router should be able to recover from this situation. If CEF gets disabled for this line card, copy the error message exactly as it appears and report it to your Cisco technical support representative

**Error Message** %IPFAST-4-UNAVAILABLE: Error invalidating IP fast cache due to memory shortage

**Explanation** Running short of memory triggered this debugging message. This could result in wrong switching decisions.

**Recommended Action** The router memory should be upgraded and if the problem persists copy the error exactly as it appears and report it to your technical support representative.

**Error Message** %IPFAST-4-UNAVAILABLE: Error trying to delete prefix entry for %i/%d (expected %#x, got %#x)

**Explanation** Problems related to the IP route cache triggered this debugging message.

**Recommended Action** The router should correct for this error. If the router cannot forward packets properly or is experiencing other problems, copy the error message exactly as it appears and report it to your Cisco technical support representative.

**Error Message** %IPFAST-4-UNAVAILABLE: Error trying to insert prefix entry for %i/%d (expected %#x, got %#x)

**Explanation** Problems related to the IP route cache triggered this debugging message.

**Recommended Action** The router should correct for this error. If the router cannot forward packets properly or is experiencing other problems, copy the error message exactly as it appears and report it to your Cisco technical support representative.

## IPFAST-5

**Error Message** %IPFAST-5-SUCCEEDOPENIPCPORT: Attempt to open the IPC ports succeeded. [chars]

**Explanation** The IP fast switching has succeeded in an attempt to open the IPC port to communicate with the line card or route processor.

**Recommended Action** No action is required.

## IPFAST-6

**Error Message** %IPFAST-6-UNAVAILABLE: Cache invalidation request for %s

**Explanation** The system is invalidating all cache requests for a given interface.

**Recommended Action** LOG\_STD\_NO\_ACTION

**Error Message** %IPFAST-6-UNAVAILABLE: Packet too short from %i, datagram size %d, ttl %d

**Explanation** An IP packet which is too short was received

**Recommended Action** LOG\_STD\_NO\_ACTION

## IPFLOW-2

**Error Message** %IPFLOW-2-UNAVAILABLE: Error initializing Flow Export Template Table

**Explanation** Initialization of the Flow export template table could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPFLOW-2-UNAVAILABLE: Error initializing Flow Export queue

**Explanation** Initialization of the Flow export queue could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPFLOW-2-UNAVAILABLE: Error initializing Flow background process

**Explanation** Initialization of the Flow background process could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPFLOW-2-UNAVAILABLE: Error initializing Flow feature queue

**Explanation** Initialization of the Flow feature queue could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPFLOW-2-UNAVAILABLE: Error initializing IP flow cache

**Explanation** Initialization of the Flow cache could not be accomplished because of a low memory condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPFLOW-3

**Error Message** %IPFLOW-3-UNAVAILABLE: NULL

**Explanation** Flow export is disabled because export destination address matches with one of the interface's IP addresses

**Recommended Action** IP addresses of all the interfaces must be checked to make sure none of them matches with flow export destination IP address.

## IPFLOW-4

**Error Message** %IPFLOW-4-UNAVAILABLE: Error creating %s

**Explanation** Version 9 export template length is zero

**Recommended Action** LOG\_STD\_DBG\_ACTION

## IPMCAST\_LIB-3

**Error Message** %IPMCAST\_LIB-3-UNAVAILABLE: Failed to sync multicast limit state to the standby RP

**Explanation** An internal failure prevented sending of multicast limit information to the standby RP. Some multicast traffic disruption is possible following a route processor failover.

**Recommended Action** LOG\_STD\_NO\_ACTION

## IPMCAST\_LIB-4

**Error Message** %IPMCAST\_LIB-4-UNAVAILABLE: Adding %s interface '%s' denied for (%s, %s)

**Explanation** The maximum number of times the given interface appears as incoming or outgoing for some multicast state is reached.

**Recommended Action** LOG\_STD\_NO\_ACTION

## IP\_HOST\_ISSU Messages

This section contains IP host in-service software upgrade (ISSU) messages.

## IP\_HOST\_ISSU-2

**Error Message** %IP\_HOST\_ISSU-2-GET\_BUFFER: IP Host ISSU client failed to get buffer for message. Error: %d (%s)

**Explanation** The IP host ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-2-INIT: IP Host ISSU client initialization failed to %s.  
Error: %d (%s)

**Explanation** The IP host ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-2-SEND\_NEGO\_FAILED: IP Host ISSU client failed to send negotiation message. Error: %d (%s)

**Explanation** The IP host ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-2-SESSION\_NEGO: IP Host ISSU client encountered unexpected client nego\_done. Error: %d (%s)

**Explanation** The IP host ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-2-SESSION\_REGISTRY: IP Host ISSU client failed to register session information. Error: %d (%s)

**Explanation** The IP host ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

## IP\_HOST\_ISSU-3

**Error Message** %IP\_HOST\_ISSU-3-CAP\_INVALID\_SIZE: IP\_HOST ISSU client capability list is empty.

**Explanation** The IP host ISSU client capability exchange list is empty, which is an invalid condition.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-CAP\_NOT\_COMPATIBLE: IP Host ISSU client capability exchange result incompatible.

**Explanation** Based on the results of the capability exchange, the IP host ISSU client is not compatible with the peer.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-INVALID\_SESSION: IP Host ISSU client does not have a valid registered session.

**Explanation** The IP host ISSU client does not have a valid registered session.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-MSG\_NOT\_OK: IP Host ISSU client 'Message Type %d' is not compatible

**Explanation** The IP host ISSU client received an incompatible message from the peer device. The message cannot be processed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-MSG\_SIZE: IP Host ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

**Explanation** The IP host ISSU client was unable to calculate the MTU for the specified message. As a result, the client is not able to send the message to the standby device.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-SESSION\_UNREGISTRY: IP Host ISSU client failed to unregister session information. Error: %d (%s)

**Explanation** The IP host ISSU client failed to unregister session information.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

**Error Message** %IP\_HOST\_ISSU-3-TRANSFORM\_FAIL: IP Host ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

**Explanation** The IP host ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the IP host state between the active device and the standby device is not identical.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

## IPMCAST\_LIB Messages

This section contains IP multicast library messages.

### IPMCAST\_LIB-4

**Error Message** %IPMCAST\_LIB-4-RPF\_DEPTH\_ERR: Depth for rpf lookup greater than [dec] for [chars]

**Explanation** The number of recursions for resolution of a given route has exceeded the allowed maximum. This is usually due to misconfiguration.

**Recommended Action** Review and fix the router configuration. If you require further assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPMCAST\_LIB-4-RPF\_STATIC\_ERR: No match for RIB static route [ipv6\_addr]/[dec] in static table for root [ipv6\_addr]

**Explanation** An internal error has occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPMCAST\_LIB-6

**Error Message** %IPMCAST\_LIB-6-TIMER\_BUSY: Timer drift is accumulating, [dec] msec

**Explanation** There is large amount of processing load and the timers are accumulating delay.

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPMCAST\_LIB\_RPF

**Error Message** %IPMCAST\_LIB\_RPF-3-INTERNAL\_ERROR: An internal error has occurred while obtaining RPF information (%s)

**Explanation** RPF handling Internal error

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %IPMCAST\_LIB\_RPF-3-RIB\_REGISTER\_FAIL: Failed to register with RIB, multicast RPF lookups will notfunction

**Explanation** Multicast could not register with RIB to obtain RPF information later. This will cause severe problem when there is multicast traffic flow, since it will not be possible to obtain RPF information

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPMCAST\_LIB\_RPF-3-RW\_INIT\_FAIL: Failed to START/STOP Route-watch debugging for '%s'

**Explanation** Multicast could not START or STOP Route-watch debugging for the specific Address-family (IPv4/IPv6), listed.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at <http://tools.cisco.com/Support/BugToolKit/action.do?hdnAction=searchBugs>. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPMCAST\_LIB\_RPF-3-RW\_START\_FAIL: Error trying to start RPF route watch for prefix %s in table %u (%s), RPF information will not be obtained

**Explanation** An internal error has occurred while trying to obtain RPF information for a prefix. As a result, subsequent changes in RPF information for the prefix will also not be obtained. This will impact the multicast traffic flow for this prefix

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %IPMCAST\_LIB\_RPF-3-STOP\_FAIL: Error trying to stop RPF watch for a prefix

**Explanation** Internal error has occurred while trying to stop obtaining RPF change information

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %IPMCAST\_LIB\_RPF-4-RIB\_UNREGISTER\_FAIL: Multicast failed to unregister with RIB

**Explanation** Multicast could not unregister with RIB when multicast is disabled. There will not be any existing traffic flow since multicast is already disabled. However if enabled again, and if problem is seen with multicast traffic flow, it should be reported

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPMCAST\_LIB\_RPF-4-RTMGR\_TOPO\_ERR: Unexpected error accessing topology specific information

**Explanation** An internal error has occurred while accessing topology specific information. The RPF information may not be obtained, resulting in problems with multicast flows

**Recommended Action** If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPMCAST\_RPF-3-INTERNAL\_ERROR: An internal error has occurred while obtaining RPF information (%s)

**Explanation** RPF handling Internal error

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %IPMCAST\_RPF-4-FOREIGN\_VRF: RPF for %i (VRF %s) resolves in a foreign VRF (%s)

**Explanation** RPF resolves in a foreign VRF without specifying any encapsulation OR non-IP transport, multicast cannot handle this, hence a tree will no be built. This could be a temporary condition, but if the error persist, check your routing configuration

**Recommended Action** If this error recurs, then issue the **show tech-support** and **show logging** commands, contact your Cisco technical support representative, and provide the representative with the gathered information.

**Error Message** %IPMCAST\_RPF-4-RPF\_LOOKUP\_LOOP: RPF route lookup loop for %i

**Explanation** A routing loop occurred during the recursive resolution of an RPF address

**Recommended Action** Check routing tables used for RPF.

## IPMOBILE-2

**Error Message** %IPMOBILE-2-UNAVAILABLE: IPMOBILE assertion failed: %s

**Explanation** The software detected an inconsistency. This is considered a serious error. The router attempts to continue, but IP Mobility processing may be impaired.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPMOBILE-3

**Error Message** %IPMOBILE-3-UNAVAILABLE: Unable to open socket

**Explanation** The requested operation could not be accomplished because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

## IPM\_C54X-1

### Recommended Action

**Error Message** %IPM\_C54X-1-UNAVAILABLE: DSP %d, packet(size %d) too big.

**Explanation** A packet greater than the 256 bytes received on this interface.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-1-UNAVAILABLE: No more ring descriptors available on %d slot.

**Explanation** The DSP driver cannot queue messages up to the dma engine for transmit.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Reset the DSP's on this port module.

**Error Message** %IPM\_C54X-1-UNAVAILABLE: dsp %d NOT RESPONDING.

**Explanation** The DSP driver cannot queue messages up to the dma engine for transmit.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Reset the DSP's on this port module.

## IPM\_C54X-3

**Error Message** %IPM\_C54X-3-UNAVAILABLE: %d SPMM Modules to support this configuration

**Explanation** Certain configurations require more than 1 SPMM module

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: %s Unable to download the Application overlay firmware. Status returned 0x%x

**Explanation** Error initializing the DSP with the application/overlay firmware.

**Recommended Action** Power down, reinsert the Port Module and reboot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: Can't get dsp resources

**Explanation** There are not enough DSP's for all the VIC's in the router.

**Recommended Action** There are more VIC's in the router than the DSP's can support. You need to upgrade your DSP module to get more DSP's. You can run 'show diag' to figure out how many DSP's the router has.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: DSP %d Sending alarm indication

**Explanation** The dsp is indicating an unexpected event has occurred and may not continue to process calls.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: DSP %d Sending alarm indication

**Explanation** The dsp is indicating that it is not able to properly initialize the port(s) it services.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: DSP %d Unable to download the Boot loader firmware, ret = 0x%x

**Explanation** Error initializing the DSP with the bootloader firmware.

**Recommended Action** Power down, reinsert the Port Module and reboot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: Epic TDM Switch failure

**Explanation** The EPIC TDM switch failed to acknowledge a command

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: Host is unable to transmit packets to DSP %d

**Explanation** IOS is unable to communicate with one of the DSPs

**Recommended Action** Reload the IOS image running on the host and Copy the error message exactly as it appears, and .

**Error Message** %IPM\_C54X-3-UNAVAILABLE: No buffers available for DSP buffer pool

**Explanation** Unable to allocate buffers to DSP receive buffer pool.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_C54X-3-UNAVAILABLE: Unable to allocate IDB

**Explanation** Unable to allocate DSP Interface IDB.

**Recommended Action** Copy the error message exactly as it appears, and report it to your technical support representative.

## IPM\_C54X-4

**Error Message** %IPM\_C54X-4-UNAVAILABLE: Unsupported or Bad PVDM in SPMM slot %x

**Explanation** The type of Packet Voice DSP Module present is not supported.

**Recommended Action** You may need to replace the unsupported Packet Voice DSP Module, or upgrade to a version of IOS that supports the PVDM you have. Please refer to documentation to find out what type of PVDMs are supported with which versions on this router.

## IPM\_DSPRM-3

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: ALARM indication received from dsp %d in dsp group %d

**Explanation** DSP has failed and indicated an alarm.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: BAD init config response received from dsp %d in dsp group %d

**Explanation** Initial configuration failed in dsp firmware.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: BAD restart indication received from dsp %d in dsp group %d

**Explanation** DSP firmware download is not successful.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: Boot loader download failed for dsp %d in dsp group %d

**Explanation** DSP boot loader firmware download is not successful.

**Recommended Action** Remove/put back DSP module or replace it

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: Could not bring DSP %d in DSP group %d in service

**Explanation** DSP did not come up after repeated attempts to download firmware.

**Recommended Action** Check if the dsp is not bad and reload the trunk. If problem persists call support

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: Insufficient DSP resources %s

**Explanation** DSP resources are not available to open a voice channel or to run a voice codec.

**Recommended Action** Check dsp resource usage and see if number of active calls exceeds the limits.

**Error Message** %IPM\_DSPRM-3-UNAVAILABLE: Port %d/%d not found in any DSP group

**Explanation** T1 port is not added to any dsp group.

**Recommended Action** Check if tdm-clock has been configured for this port.

## IPM\_NV\_EEPROM-3

**Error Message** %IPM\_NV\_EEPROM-3-UNAVAILABLE: Detected invalid NVRAM size: %d bytes

**Explanation** The detected size of NVRAM is not one of the supported sizes. The NVRAM may be bad.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPM\_NV\_EEPROM-3-UNAVAILABLE: Failed to erase config due to internal error

**Explanation** Password protection feature failed to erase config due to internal error

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPNAT Messages

This section contains IP Network Address Translation (IPNAT) messages.

### IPNAT-4

**Error Message** %IPNAT-4-ADDR\_ALLOC\_FAILURE: Address allocation failed for [IP\_address], pool [chars] might be exhausted

**Explanation** An address could not be allocated from the IP NAT pool. This condition can cause a translation failure and might result in packets being dropped. The counter for missed packets will be incremented.

**Recommended Action** Determine if the NAT pool has been exhausted. To reuse any existing addresses in the NAT pool for new packet flows, clear the current NAT entries using the **clear ip nat translation** command.

### IPNAT-6

**Error Message** %IPNAT-6-CREATED: [chars]

**Explanation** A NAT flow entry was created.

**Recommended Action** No action is required.

**Error Message** %IPNAT-6-DELETED: [chars]

**Explanation** A NAT flow entry was deleted.

**Recommended Action** No action is required.

# IPRT Messages

This section contains IP routing (IPRT) messages.

## IPRT-2

**Error Message** %IPRT-2-UNAVAILABLE: Bad route\_compress() call, sdb= %x

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPRT-3

**Error Message** %IPRT-3-UNAVAILABLE: Bad path pointer of %x for %i, %d max

**Explanation** A software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPRT-3-UNAVAILABLE: Community list check with bad list %d

**Explanation** A user specified an invalid BGP community list number.

**Recommended Action** Check the system configuration to make sure that the community list specified falls within the valid range.

**Error Message** %IPRT-3-UNAVAILABLE: IP routing table creation failure - %s

**Explanation** An internal software error occurred preventing the creation of new IP routing table.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPRT-3-UNAVAILABLE: IP routing table limit exceeded - %s, %i%m

**Explanation** The number of routes in the named IP routing table has reached the configured limit. No further routes will be added to the table

**Recommended Action** Reduce the number of routes in the table, or reconfigure the limit

**Error Message** %IPRT-3-UNAVAILABLE: IP routing table limit warning - %s

**Explanation** The number of routes in the named IP routing table has reached the configured warning limit.

**Recommended Action** Reduce the number of routes in the table, or reconfigure the limit

**Error Message** %IPRT-3-UNAVAILABLE: No memory available for %s

**Explanation** The requested operation failed because of a low memory condition.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPRT-3-UNAVAILABLE: Un-installing static route %i%m from %s routing table with outgoing interface %s

**Explanation** Restricting the access of static routes that point across vrfs

**Recommended Action** Remove the static routes that are pointing across VRF interfaces

**Error Message** %IPRT-3-UNAVAILABLE: Unable to register IP Routing as a client of RF.

**Explanation** This is a severe error as far as IP routing NSF is concerned

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPRT-4

**Error Message** %IPRT-4-ROUTECOUNTNEGATIVE: IP route counter negative - %s, %i  
Attempt: %d

**Explanation** Attempt to decrement IP route counter into negative value

**Recommended Action** Use **clear ip route \*** command to reset the route counter. If the message still comes out consistently, copy the messages exactly as they appear, and report it to your technical support representative.

**Error Message** %IPRT-4-TRACKOBJECTNONE: Illegal tracking number 0 on static route %i%  
m [%d/0] via %i, table %d, client %d

**Explanation** The tracking number 0 was assigned to a static route, but 0 is not a legal value.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPRT-4-UNAVAILABLE: Redistribution prefix limit has been reached %s  
- %d prefixes

**Explanation** We have reached the maximum number of redistributed prefixes

**Recommended Action** Check if redistribution of large number of prefixes is desired and has not been configured by mistake

**Error Message** %IPRT-4-UNAVAILABLE: Redistribution prefix threshold has been reached  
%s - %d prefixes

**Explanation** We have reached the threshold level of number of redistributed prefixes

**Recommended Action** Check if redistribution of large number of prefixes is desired and has not been configured by mistake

**Error Message** %IPRT-4-UNAVAILABLE: can't track this type of object

**Explanation** Route maps only support STATE type track objects. This object is not a STATE object

**Recommended Action** Reconfigure the track object to make it a STATE object.

## IPSECV6 Messages

This section contains encryption feature messages.

### IPSECV6-4

**Error Message** %IPSECV6-4-UNAVAILABLE: IP protocol in packet mismatched with tunnel mode, packet from %s to %s dropped by %s

**Explanation** We tried to send an IPv4 packet into an IPSec-IPv6 tunnel, or an IPv6 packet into an IPSec-IPv4 tunnel. The tunnel cannot handle this type of packet, and so the packet is dropped.

**Recommended Action** Modify the tunnel configuration, either by removing the incorrect IP address type from the tunnel interface, or by changing the tunnel mode to match the IP address type.

**Error Message** %IPSECV6-4-UNAVAILABLE: Rec'd packet not an IPSEC packet. (ip)  
dest\_addr= %P, src\_addr= %P, prot= %d

**Explanation** Rec'd packet matched crypto map ACL, but is not IPSEC-encapsulated. IPSEC Peer is sending unencapsulated packets. There may simply be a policy setup error on the peer. Some might consider this a hostile event.

**Recommended Action** Contact the peer's administrator to compare policy settings.

**Error Message** %IPSECv6-4-UNAVAILABLE: decaps: rec'd IPSEC packet has invalid spi for destaddr=%P, prot=%d, spi=0x%x(%d), srcaddr=%P

**Explanation** Rec'd IPSEC packet specifies SPI that doesn't exist in SADB. This may be a temporary condition due to slight differences in aging of SAs between the IPSEC peers, or it may be because the local SAs have been cleared. It may also be because of bogus packets sent by the IPSEC peer. Some might consider this a hostile event.

**Recommended Action** If the local SAs have been cleared, the peer may not know this. In this case, if a new connection is established from the local router, the two peers may reestablish successfully. Otherwise if the problem occurs for more than a brief period, either attempt to establish a new connection or contact the peer's administrator.

**Error Message** %IPSECv6-4-UNAVAILABLE: decapsulate: packet has bad %s length destaddr=%P, prot=%d, len=%d

**Explanation** Rec'd IPSEC packet is malformed: possibly encapsulation error? The peer is sending malformed packets. It may be due to a decryption error. Some might consider this a hostile event.

**Recommended Action** Contact the peer's administrator.

**Error Message** %IPSECv6-4-UNAVAILABLE: decapsulate: packet missing %s, destaddr=%P, actual prot=%d

**Explanation** Rec'd IPSEC packet missing an expected AH or ESP header The peer is sending packets that don't match the negotiated security policy. Some might consider this a hostile event.

**Recommended Action** Contact the peer's administrator.

## IPV6FIB-3

**Error Message** %IPV6FIB-3-UNAVAILABLE: Inconsistent global state '%s' %s

**Explanation** IPV6FIB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6FIB-4

**Error Message** %IPV6FIB-4-UNAVAILABLE: Invalid XDR length. Type/event %d/%s. XDR %d, buffer %d

**Explanation** IPV6FIB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6FIB-4-UNAVAILABLE: Invalid format. %s

**Explanation** IPV6FIB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6FIB-4-UNAVAILABLE: Missing cef idb for %s during %s

**Explanation** IPV6FIB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6FIB-4-UNAVAILABLE: Missing cef table for tableid %lu during %s event

**Explanation** IPV6FIB\_INTERNAL\_ERROR

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IP\_SNMP Messages

This section contains IP Simple Network Management Protocol (SNMP) messages.

### IP\_SNMP-4

**Error Message** %IP\_SNMP-4-UNAVAILABLE: Oversize message from %i, datagram size %u, udp length %u

**Explanation** An incoming SNMP packet had a length field so large that the system had to assume it was in error. This system made a correct reaction to bad external data. Since SNMP packets should originate from systems under the same administration, this may indicate that the network host used to originate the SNMP request had a problem in its networking layer. Alternatively, if the SNMP packet originated from outside the local administrative domain, it could indicate a failed attempt at security penetration and that site should be watched more closely.

**Recommended Action** If the origin is local, no action is required. If the origin is determined to be malicious, either contact the administrator of the originating site or install filters to prevent access by that site, as circumstances warrant.

**Error Message** %IP\_SNMP-4-UNAVAILABLE: SNMP trap source %s has no ip address

**Explanation** The user entered an snmp-server trap-source command. The interface requested for use as the source address has no ipv4 address associated with it. The SNMP trap is being sent anyway, but without the source address that the user intended.

**Recommended Action** There are two possible solutions. Either enter a no snmp-server trap-source command to disable the request for a specific source IP address, or add an IP address to the interface referenced in the snmp-server trap-source configuration command.

**Error Message** %IP\_SNMP-4-UNAVAILABLE: SNMP trap source %s has no ipv6 address

**Explanation** The user entered an snmp-server trap-source command. The interface requested for use as the source address has no ipv6 address associated with it. The SNMP trap is being sent anyway, but without the source address that the user intended.

**Recommended Action** There are two possible solutions. Either enter a no snmp-server trap-source command to disable the request for a specific source IP address, or add an IPV6 address to the interface referenced in the snmp-server trap-source configuration command.

## IPV6 Messages

This section contains IP version 6 messages.

### IPV6-3

**Error Message** %IPV6-3-(-1): Cannot start the IPv6 process; router will not process IPv6 packets.

**Explanation** The IPv6 process could not be started. This machine will not be able to process any IPv6 packets.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPV6-3-INTERNAL: Internal error, [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6-3-INTERNAL\_PAK: Internal error ([chars]): [hex] [hex] [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

[http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6-3-NO\_UNIQUE\_IDENTIFIER: Cannot determine an unique IPv6 identifier for the system. IPv6 will not be started.

**Explanation** An unique IPv6 Identifier could not be determined for the system. Therefore the IPv6 process will not be started. This machine will not be able to process any IPv6 packets.

**Recommended Action** Verify that there is at least one interface in this machine that supports IEEE-style addresses.

**Error Message** %IPV6-3-RIB: [chars]

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6-3-UNFRAGMENTABLE: Cannot fragment packet: unfragmentable part length [dec], MTU of [dec]

**Explanation** An internal software error occurred. A single packet originated by this system could not be fragmented and has been dropped. Normal system operation continues.

**Recommended Action** This is a transient error. However, this condition indicates other errors in the software that will require further examination by your Cisco technical support representative. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6-4

**Error Message** %IPV6-4-DUPLICATE\_OPTIMISTIC: Duplicate address %P on %s

**Explanation** You have elected not to run duplicate address detection (DAD), but another system is using your IPv6 address.

**Recommended Action** Change the IPv6 address of one of the two systems.

**Error Message** %IPV6-4-LLA\_CONFLICT: LLA conflict for static neighbor on [chars] : [chars]

**Explanation** A neighborhood discovery (ND) message from the specified neighbor carries a link-layer address (LLA) other than the configured address.

**Recommended Action** Reconfigure the static neighbor with the correct link-layer address.

**Error Message** %IPV6-4-MAXPDB: Exceeded maximum supported IPv6 Routing Protocol instances

**Explanation** Configuration of a routing protocol has failed because it would exceed the maximum supported number of routing protocols.

**Recommended Action** Reduce the number of IPv6 routing protocol instances configured.

## IPV6-6

**Error Message** %IPV6-6-ACCESSLOGSP: list [chars]/[dec] [chars] [chars] [chars]->, [dec] packet [chars]

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** No action is required.

**Error Message** %IPV6-4-MULTICAST: Application does not support multicast destination address , packet dropped.

**Explanation** An internal software error occurred. A multicast destination address was used in an local application which does not yet handle IPv6 multicast.

**Recommended Action** Use a unicast address in commands on the router. If the problem persists, or you feel the command should support multicast, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6\_ACL-6

**Error Message** %IPV6\_ACL-6-ACCESSLOGSP: list %s/%d %s %s %P %s- %P, %d packet%s

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** Informational only. No action required.

**Error Message** %IPV6\_ACL-6-UNAVAILABLE: list %s/%d %s %d %P %s- %P, %d packet%s

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** Informational only. No action required.

**Error Message** %IPV6\_ACL-6-UNAVAILABLE: list %s/%d %s %s %P %s- %P (%d/%d), %d packet%s

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** Informational only. No action required.

**Error Message** %IPV6\_ACL-6-UNAVAILABLE: list %s/%d %s %s %P %s- %P, %d packet%s

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** Informational only. No action required.

**Error Message** %IPV6\_ACL-6-UNAVAILABLE: list %s/%d %s %s %P(%d) %s- %P(%d), %d packet%s

**Explanation** A packet matching the log criteria for the given access list was detected.

**Recommended Action** Informational only. No action required.

## IPV6\_ADDRESS-3

**Error Message** %IPV6\_ADDRESS-3-UNAVAILABLE: %P/%d can not be configured on %s, %s

**Explanation** An error was encountered while configuring an IPv6 address

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6\_ADDRESS-3-UNAVAILABLE: Cannot determine an unique IPv6 identifier for the system.IPv6 will not be started.

**Explanation** An unique IPv6 Identifier could not be determined for the system.Therefore the IPv6 process will not be started.This machine will not be able to process any IPv6 packets.

**Recommended Action** Verify that there is at least one interface in this machine that supports IEEE-style addresses.

**Error Message** %IPV6\_ADDRESS-3-UNAVAILABLE: Cannot start an IPv6 process; router will not process IPv6 packets.

**Explanation** An IPv6 process could not be started. This machine will not be able to process any IPv6 packets.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPV6\_ADDRESS-3-UNAVAILABLE: Internal error, %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6\_ADDRESS-3-UNAVAILABLE: Uninitialized interface pointer - %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6\_ADDRMGR-3

**Error Message** %IPV6\_ADDRMGR-3-UNAVAILABLE: Internal error, %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6\_FORWARDING-3

**Error Message** %IPV6\_FORWARDING-3-UNAVAILABLE: Cannot fragment packet: unfragmentable part length %d, MTU of %d

**Explanation** An internal software error occurred. A single packet originated by this system could not be fragmented and has been dropped. Normal system operation continues.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6\_FORWARDING-3-UNAVAILABLE: Cannot start an IPv6 forwarding process; router will not process IPv6 packets.

**Explanation** An IPv6 process could not be started. This machine will not be able to process any IPv6 packets.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPV6\_FORWARDING-3-UNAVAILABLE: Uninitialized buffer pointer - %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6\_FORWARDING-3-UNAVAILABLE: Uninitialized interface pointer - %s

**Explanation** An internal software error occurred.

**Recommended Action** Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

**Error Message** %IPV6\_FORWARDING-4-UNAVAILABLE: Application does not support multicast destination address (%P), packet dropped.

**Explanation** An internal software error occurred. A multicast destination address was used in an local application which does not yet handle IPv6 multicast.

**Recommended Action** Use a unicast address in commands on the router, if the problem persists, or you feel the command should support multicast, then please contact the TAC with the failing command line.

**Error Message** %IPV6\_ICMP-3-UNAVAILABLE: Uninitialized buffer pointer - %s

**Explanation** An internal software error occurred.

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at [http://www.cisco.com/cgi-bin/Support/Bugtool/launch\\_bugtool.pl](http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

## IPV6\_INTF-3

**Error Message** %IPV6\_INTF-3-UNAVAILABLE: Cannot start IPv6 Interface Process.

**Explanation** The IPv6 Interface Process could not be started. Interfaces will not be enabled for IPv6 Processing. This machine will not be able to process any IPv6 packets.

**Recommended Action** Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

**Error Message** %IPV6\_INTF-3-UNAVAILABLE: Internal error, %s

**Explanation** An internal software error occurred.
