

Local Template-Based ATM PVC Provisioning

First Published: February 3, 2003
Last Updated: November 20, 2009

The Local Template-Based ATM Provisioning feature enables ATM permanent virtual circuits (PVCs) to be provisioned automatically as needed from a local configuration. ATM PVC autoprovisioning can be configured on a PVC, an ATM PVC range, or a virtual circuit (VC) class. If a VC class configured with ATM PVC autoprovisioning is assigned to an interface, all the PVCs on that interface will be autoprovisioned; this configuration is sometimes referred to as an *infinite range*.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the [Feature Information for Local Template-Based ATM PVC Provisioning, page 13](#).

Use Cisco Feature Navigator to find information about platform support and Cisco IOS and Catalyst OS software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Restrictions for Local Template-Based ATM PVC Provisioning

The number of PVCs that can be established on an interface that is configured as an infinite range is limited to the maximum number of VCs that the platform can support.

Information About Local Template-Based ATM PVC Provisioning

Autoprovisioned ATM PVCs are not created until there is activity on the virtual path identifier (VPI)/virtual channel identifier (VCI) pair. When the interface is disabled and reenabled using the **shutdown** and **no shutdown** commands, autoprovisioned PVCs that are part of a PVC range or infinite range are removed upon shutdown and are not reestablished until the first incoming packet triggers PVC creation. During router reload, autoprovisioned PVCs are created when there is activity on the connection.

The total number of VCs that can be configured on an ATM port adapter is limited by the capacity of port adapter. In cases of ATM link oversubscription, where a PVC range or infinite range is configured to provision more PVCs than the port adapter allows, the PVCs can be configured with a timeout so that they can be dynamically brought down as needed. When the timeout expires, the idle PVCs are removed, allowing the PVC range or infinite range of PVCs to share system resources.

ATM PVC local autoprovisioning supports the following applications: PPP over ATM, PPP over Ethernet, ATM routed bridge encapsulation, and routed RFC 1483.

The Local Template-Based ATM Provisioning feature enables ATM PVCs to be created automatically as needed from a local configuration, making the provisioning of large numbers of digital subscriber line (DSL) subscribers easier, faster, and less prone to error.

How to Configure Local Template-Based ATM PVC Provisioning

This section contains the following tasks:

- [Configuring ATM PVC Local Autoprovisioning in a VC Class](#) (required)
- [Configuring ATM PVC Local Autoprovisioning on a PVC](#) (required)
- [Configuring ATM PVC Local Autoprovisioning on an ATM PVC Range](#) (required)
- [Configuring ATM PVC Local Autoprovisioning on PVC Within a Range](#) (required)
- [Verifying ATM PVC Autoprovisioning](#) (required)
- [Monitoring and Maintaining ATM PVC Local Autoprovisioning](#) (optional)

Configuring ATM PVC Local Autoprovisioning in a VC Class

Perform this task to enable ATM PVC local autoprovisioning in a VC class. A VC class configured with ATM PVC autoprovisioning can be assigned to an ATM interface, an ATM PVC, an ATM PVC range, and an ATM PVC with a range.

Note

If a VC class that is configured with ATM PVC autoprovisioning is assigned to an ATM interface, all PVCs on the interface will be autoprovisioned.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **vc-class atm** *vc-class-name*
4. **create on-demand**
5. **idle-timeout** *seconds* [*minimum-rate*]
6. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	vc-class atm <i>vc-class-name</i> Example: Router(config)# vc-class atm vctest	Creates a VC class for an ATM PVC, SVC, or ATM interface and enters ATM VC class configuration mode.
Step 4	create on-demand Example: Router(config-vc-class)# create on-demand	Configures ATM PVC autoprovisioning, which enables a PVC or range of PVCs to be created automatically on demand.
Step 5	idle-timeout <i>seconds</i> [<i>minimum-rate</i>] Example: Router(config-vc-class)# idle-timeout 10	(Optional) Configures the idle timeout parameter for tearing down ATM SVC connections or autoprovisioned ATM PVC connections.
Step 6	end Example: Router(config-vc-class)# end	Returns to privileged EXEC mode.

Configuring ATM PVC Local Autoprovisioning on a PVC

Perform this task to enable ATM PVC local autoprovisioning on a PVC. ATM PVC local autoprovisioning can also be configured on a PVC by assigning a VC class that has been configured with ATM PVC local autoprovisioning to the PVC.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface atm *slot/port***
4. **atm autovc retry *interval***
5. **pvc [*name*] vpi/vci**
6. **create on-demand**
7. **idle-timeout *seconds* [*minimum-rate*]**
8. **end**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	interface atm <i>slot/port</i> Example: Router(config)# interface atm 2/0	Configures an ATM interface and enters interface configuration mode.
Step 4	atm autovc retry <i>interval</i> Example: Router(config-if)# atm autovc retry 32	(Optional) Configures the interval at which the router will repeat the attempt to create autoprovisioned PVCs after a failure of the initial creation attempt.
Step 5	pvc [<i>name</i>] vpi/vci Example: Router(config-if)# pvc vctest 32/3	Creates an ATM PVC and enters ATM virtual circuit configuration mode.
Step 6	create on-demand Example: Router(config-if-atm-vc)# create on-demand	Configures ATM PVC autoprovisioning, which enables a PVC or range of PVCs to be created automatically on demand.

	Command or Action	Purpose
Step 7	<code>idle-timeout seconds [minimum-rate]</code> Example: Router(config-if-atm-vc)# idle-timeout 12	(Optional) Configures the idle timeout parameter for tearing down ATM SVC connections or auto-provisioned ATM PVC connections.
Step 8	<code>end</code> Example: Router(config-if-atm-vc)# end	Returns to privileged EXEC mode.

Configuring ATM PVC Local Auto-provisioning on an ATM PVC Range

Perform this task to enable ATM PVC auto-provisioning on an ATM PVC range. ATM PVC local auto-provisioning can also be configured on a range by assigning a VC class that has been configured with ATM PVC local auto-provisioning to the range.

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `interface atm slot/port`
4. `atm autovc retry interval`
5. `range [range-name] pvc start-vpilstart-vci end-vpilend-vci`
6. `create on-demand`
7. `idle-timeout seconds [minimum-rate]`
8. `end`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>enable</code> Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2	<code>configure terminal</code> Example: Router# configure terminal	Enters global configuration mode.
Step 3	<code>interface atm slot/port</code> Example: Router(config)# interface atm 2/0	Configures an ATM interface and enters interface configuration mode.

	Command or Action	Purpose
Step 4	atm autovc retry <i>interval</i> Example: Router(config-if)# atm autovc retry 12	(Optional) Configures the interval at which the router will repeat the attempt to create autoprovisioned PVCs after a failure of the initial creation attempt.
Step 5	range [<i>range-name</i>] pvc <i>start-vpi/start-vci end-vpi/end-vci</i> Example: Router(config-if)# range pvc pvctest 2/3 4/6	Defines a range of ATM PVCs and enters ATM PVC range configuration mode.
Step 6	create on-demand Example: Router(config-if-atm-range)# create on-demand	Configures ATM PVC autoprovisioning, which enables a PVC or range of PVCs to be created automatically on demand.
Step 7	idle-timeout <i>seconds</i> [<i>minimum-rate</i>] Example: Router(config-if-atm-range)# idle-timeout 12	(Optional) Configures the idle timeout parameter for tearing down ATM SVC connections or autoprovisioned ATM PVC connections.
Step 8	end Example: Router(config-if-atm-range)# end	Returns to privileged EXEC mode.

Configuring ATM PVC Local Autoprovisioning on PVC Within a Range

Perform this task to enable ATM PVC autoprovisioning on a PVC within an ATM PVC range. ATM PVC local autoprovisioning can also be configured on a PVC within a range by assigning a VC class that has been configured with ATM PVC local autoprovisioning to the PVC.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface atm** *slot/port*
4. **atm autovc retry** *interval*
5. **range** [**range-name**] **pvc** *start-vpi/start-vci end-vpi/end-vci*
6. **pvc-in-range** [*pvc-name*] [[*vpi*]/*vci*]
7. **create on-demand**
8. **idle-timeout** *seconds* [*minimum-rate*]

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none">Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	interface atm slot/port Example: Router(config)# interface atm 2/0	Configures an ATM interface and enters interface configuration mode.
Step 4	atm autovc retry interval Example: Router(config-if)# atm autovc retry 23	(Optional) Configures the interval at which the router will repeat the attempt to create autoprovisioned PVCs after a failure of the initial creation attempt.
Step 5	range [range-name] pvc start-vpi/start-vci end-vpi/end-vci Example: Router(config-if)# range range1 pvc 2/4 5/6	Defines a range of ATM PVCs and enters ATM PVC range configuration mode.
Step 6	pvc-in-range [pvc-name] [[vpi/]vci] Example: Router(config-if-atm-range)# pvc-in-range pvc1	Defines an individual PVC within a PVC range and enables PVC-in-range configuration mode.
Step 7	create on-demand Example: Router(config-if-atm-range-pvc)# create on-demand	Configures ATM PVC autoprovisioning, which enables a PVC or range of PVCs to be created automatically on demand.
Step 8	idle-timeout seconds [minimum-rate] Example: Router(config-if-atm-range-pvc)# idle-timeout 10	(Optional) Configures the idle timeout parameter for tearing down ATM SVC connections or autoprovisioned ATM PVC connections.
Step 9	end Example: Router(config-if-atm-range-pvc)# end	Returns to privileged EXEC mode.

Verifying ATM PVC Autoprovisioning

Perform this task to verify if ATM PVC local autoprovisioning is configured and working correctly.

- Step 1** Enter the **show running-config** command to verify that the configuration is correct.
- Step 2** Enter the **show atm pvc** command. PVCs that have been autoprovisioned will have the value “PVC-A” (“A” stands for automatic) in the Type field.

```
Router# show atm pvc
```

Interface	VCD / Name	VPI	VCI	Type	Encaps	SC	Peak Kbps	Avg/Min Kbps	Burst Cells	Sts
5/0.1	117	0	50	PVC-A	SNAP	UBR	149760			UP
5/0.1	118	0	51	PVC-A	SNAP	UBR	149760			UP
5/0.1	119	0	52	PVC-A	SNAP	UBR	149760			UP

- Step 3** Enter the **show atm pvc** command with the *vpi/vci* arguments to see if ATM PVC local autoprovisioning is configured on a specific PVC. If ATM PVC local autoprovisioning is configured, the text “VC Auto Creation Enabled: local” will appear in the output.

```
Router# show atm pvc 0/51
```

```

Monitoring and Maintaining ATM PVC Local Autoprovisioning

To monitor and maintain ATM PVC autoprovisioning, use one or more of the following commands in privileged EXEC mode:

Command or Action	Purpose
Router# <code>debug atm autovc {event error all}</code>	Displays information about autoprovisioned ATM PVC events and errors.
Router# <code>show atm pvc</code>	Displays all ATM PVCs and traffic information.
Router# <code>show atm vc</code>	Displays all ATM PVCs and SVCs and traffic information.

Configuration Examples for Local Template-Based ATM PVC Provisioning

This section provides the following configuration examples:

- [ATM PVC Local Autoprovisioning on an ATM Interface Example](#)
- [ATM PVC Local Autoprovisioning on a PVC Example](#)
- [ATM PVC Local Autoprovisioning on an ATM PVC Range Example](#)
- [ATM PVC Local Autoprovisioning on a PVC Within a Range Example](#)

ATM PVC Local Autoprovisioning on an ATM Interface Example

In the following example, local autoprovisioning is enabled on all PVCs on ATM interface 5/0.

```
vc-class atm auto-pppoe
vbr-nrt 1000 100
protocol pppoe
create on-demand
idle-timeout 300 10
!
interface atm 5/0
class-int auto-pppoe
atm autovc retry 10
```

ATM PVC Local Autoprovisioning on a PVC Example

The following example shows the configuration of local autoprovisioning on a PVC:

```
interface atm 5/0
pvc 1/300
create on-demand
idle-timeout 300 10
```

ATM PVC Local Autoprovisioning on an ATM PVC Range Example

The following example shows the configuration of local autoprovisioning on an ATM PVC range called “auto”:

```
interface atm 5/0
  range auto pvc 0/100 1/200
  create on-demand
```

ATM PVC Local Autoprovisioning on a PVC Within a Range Example

The following example shows the configuration of local autoprovisioning on a PVC within a PVC range:

```
interface atm 5/0
  range auto pvc 0/100 1/200
  pvc-in-range 0/101
  create on-demand
```

Feature Information for Local Template-Based ATM PVC Provisioning

Table 1 lists the features in this module and provides links to specific configuration information. Only features that were introduced or modified in Cisco IOS Release 12.2(15)B, Cisco IOS Releases 12.2(28)SB, Cisco IOS Release 12.2(33)SRE or Cisco IOS Release 15.0(1)M, or a later release appear in the table.

Not all commands may be available in your Cisco IOS software release. For release information about a specific command, see the command reference documentation.

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which Cisco IOS and Catalyst OS software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

Note

Table 1 lists only the Cisco IOS software release that introduced support for a given feature in a given Cisco IOS software release train. Unless noted otherwise, subsequent releases of that Cisco IOS software release train also support that feature.
