

Device and Subdevice Manager

To access Device tasks, log into the system (see [“Logging In”](#) section on page 2-23). Then, from the Home page, click the **Devices** tab.

The Device Functional Overview page appears showing:

- View Device
- Add Device
- Discover Device
- Edit Device
- Resynchronize Device
- Clone Device
- Delete Device
- Update Device
- Subdevices
- Query Device Inventory
- Delete Files on Device
- Dynamic Operations

Viewing Device Configuration

Step 1 From the Devices Functional Overview page, click **View Device**.

The Groups list appears.

Step 2 From the Groups list, select the group that holds the device you want to view.

Note You can also use the Advance Search feature on many GUI pages to locate devices based on user-define search parameters (see [“Using Advanced Search Feature”](#) section on page 3-30).

Step 3 The View Device list page appears (see [Figure 3-1](#)).

Figure 3-1 View Device List

Step 4 Click on the icon for the device you want to view.
The Configuration for that device appears (see [Figure 3-2](#)).

Figure 3-2 Device Configuration

Show Line Numbers

Device: dev-1

```

0 version 12.0
1 service timestamps debug uptime
2 service timestamps log uptime
3 no service password-encryption

14 cns id udi image
15 cns event imgw-test35.cisco.com encrypt 11014 keepalive 120 2 reconnect-time 10
16 cns config partial imgw-test35.cisco.com encrypt 443
17 cns inventory
18 cns exec encrypt 443
19 cns image server https://imgw-test35:443/cns/HttpMsgDispatcher status https://imgw-test35:443/cns/HttpMsgDispatcher
20 cns notifications encapsulation xml
21 end
22 %Serial 0%
```

Note The device configuration displayed is the configuration as it appears at the configuration server. It might not be the configuration running on the device.

- Step 5** To view subdevices (if applicable), in the left navigation pane, click **View Subdevices**.
- Step 6** To view Images associated with this device (if applicable), in the left navigation pane, click **View Images**.

Previewing Device Configuration

- Step 1** From the Devices Functional Overview page, click **Edit Device**. The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device in question. The Edit Device list appears.
- Step 3** From the Edit Device list, select the group that holds the device you want to **Preview Device Configuration** or
- Step 4** From the Devices Functional Overview page, click **View Device**. The Groups list appears (see [Figure 3-3](#)).

Figure 3-3 Preview Device Configuration

- Step 5** From the Groups list, select the group that holds the device you want to **Preview Device Configuration** (see [Figure 3-4](#)).

Figure 3-4 Device Configuration

20 cns notifications encapsulation xml
21 end
22 %Serial 0%
```

Step 6 To preview subdevices configuration (if applicable), in the left navigation pane, click **View Subdevices**.

Using Advanced Search Feature

- Step 1** From the Hierarchal View of groups (for example, see [Figure 3-1](#)), click **Advanced Search**.
- Step 2** Use the drop-down arrow to select: **Config ID**, **Event ID**, or **Device Name** for the desired device.
- Step 3** Then enter a value that corresponds to the first part of the argument, then click **Go**.
The results of the search are listed (see [Figure 3-5](#)).

Figure 3-5 Advanced Search Page

View Device

Adding Devices

There are three variations to the Add Device procedures based on **Device Type**:

- Non-Agent Enabled Device (see below).
- Agent Enabled Device (see “[Adding Agent Enabled Devices](#)” section on page 3-39).
- PIX Firewall Device (see “[Adding PIX Firewall Devices](#)” section on page 3-44).
- ASA Firewall Device (see “[Adding ASA Firewall Devices](#)” section on page 3-47).

Adding Non-agent Enabled Devices

- Step 1** From the Devices Functional Overview page, click **Add Device**.
The Device Information page appears (see [Figure 3-6](#)).

Figure 3-6 Device Information Page

Create Device

Enter device information

Device Name: <small>(required)</small>	<input type="text" value="c7200e6"/>
Unique ID: <small>(required)</small>	<input type="text" value="c7200e6"/>
Device Type: <small>(required)</small>	<input type="text" value="Non-Agent Enabled Device"/>
Template File Name:	<input checked="" type="radio"/> Select file: <input type="text" value="DemoRouter.cfgtpl"/> <input type="button" value="Test URL"/> <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>
<input type="button" value="Back"/> <input type="button" value="Next"/> <input type="button" value="Finish"/> <input type="button" value="Cancel"/>	

129449

- Step 2** Enter a valid value (no spaces) in the **Device Name** field.

Table 3-1 shows valid values for these attributes.

Table 3-1 Valid Values for Add Device

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) .(period) :(colon)
Unique ID	Unique ID of the device.	Default or a-z A-Z 0-9 -(hyphen) _ (under-score) .(period) ,(comma) :(colon) /(forward-slash) =(equal) +(plus)
Device Type	Type of device	From drop-down list
Template File Name	Name of the configuration template to associate with the device.	From drop-down list, or user-defined

Step 3 In the **Unique ID** field, accept the default value that appears or enter another valid value (no spaces).

Step 4 For Device Type, from the drop-down list, select **Non-Agent Enabled Device**.

Step 5 Select the Template file name, then click **Next**.

The Group Membership page appears (see Figure 3-7).

Figure 3-7 Group Membership

Create Device

Select group membership
DEVICE TYPE: Agent Enabled Device

129359

Tip Use the Group Manager to set up groups before you add a device (see “Creating Groups” section on page 6-96).

Step 6 Check to select the group(s) of which you want this device to become a member, then click **Next**.

The non-agent information (IMGW) page appears (see [Figure 3-8](#)).

Figure 3-8 Non-agent (IMGW) Information Page

Create Device

Enter non-agent device information

DEVICE TYPE: Non-Agent Enabled Device

Gateway Id (required)

Device Type (required)

Agent Type

Hop Information

Hop Type	IP Address	Port	Username	Password
Select a Hop Type	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>

1299358

Step 7 Enter the name of the device in the **Device Name** field.

[Table 3-2](#) lists valid values for these fields.

Table 3-2 Valid Values for Add IMGW Device

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the IMGW device.	Non-empty string excluding the special characters: !, ", #, \$, %, &, ', (,), *, /, <, >, ?, @, \, ^, ` , ~
Gateway ID	Gateway identifier for this device. This value is established during Setup . See <i>Cisco Configuration Engine Installation and Configuration Guide</i> .	Non-empty string excluding the special characters: !, ", #, \$, %, &, ', (,), *, /, <, >, ?, @, \, ^, ` , ~
Device Type	Type of IMGW device.	From drop-down list
Agent Type	Type of agent you want IMGW to simulate.	From drop-down list

Step 8 Enter the gateway ID in the **Gateway Id** field.

Note This value is established during **Setup**. See *Cisco Configuration Engine Installation and Configuration Guide*.

Step 9 Enter the appropriate Device and Hop information.

Tip Before you enter Hop information, see “Hop Tables” section on page 3-36.

Table 3-3 shows valid values for these fields.

Table 3-3 Valid Values for IMGW Device Hop Information

Attribute	Description	Valid Values
Hop Type	Type of IMGW hop.	From drop-down list
IP Address	IP address of the connecting node in the hop	Valid IP address of the following format: 10.1.14.216
Port	Port number of the node.	Integer values
Username	Username to login to the hop node.	String excluding the special characters: !, “, #, \$, %, &, ', (,), *, /, <, >, ?, @, \, ^, `, ~
Password	Password to login to the hop node.	Non-null string

Step 10 To add another hop, click **Add Another Hop**, then enter hop information.

Step 11 To go back one page, click **Back**.

Step 12 To end this task, click **Finish**.

Step 13 To continue, click **Next**.

The Confirm IDs page appears

Figure 3-9 Confirm IDs Page

Create Device

Confirm IDs
DEVICE TYPE: Non-Agent Enabled Device

Event ID: (required)	<input type="text" value="c7200e6"/>
Config ID: (required)	<input type="text" value="c7200e6"/>
Image ID: (optional, use to create a CIS Device)	<input type="text" value="c7200e6"/>

Subdevices available:

Subdevices attached:

Back Next Finish Cancel

1299321

Step 14 To go back one page, click **Back**.

Step 15 To end this task, click **Finish**.

- Step 16** To continue, click **Next**.
If you click **Next**, the Image Association page appears (see [Figure 3-10](#)).

Figure 3-10 Create Device > Image Association

Create Device

Step 3: Please Select Image(s) to associate with this device

	Name	Image Type	Image Locations	Over Write	Erase FileSystem	Destination
<input type="radio"/>	image1	IOS	ftp://ftp.test@10.1.7.24/ftp/c7200-is-mz.123-1.9.T	<input type="checkbox"/>	<input type="checkbox"/>	
<input type="button" value="Add Another Row"/>						

Step 4: Please select a configuration file that will be sent to the device upon activation of the new image:

Template File: Select file: DemoRouter.cfgtpl Enter URL:

101503

- Step 17** Select the image from the **Name** drop-down list.
The **Image Type** field and **Image Location** drop-down box are populated with corresponding information for the image.
- Step 18** From the **Image Location** drop-down list, select the desired location.
- Step 19** To add another row for image location, click **Add Another Row**.
You can locate multiple copies of an image on separate servers. This allows you to do load-sharing when updating a large number of devices. Each device in a large group can be associated with a copy of the image located at one of many server locations.
- Step 20** In the Destination field, enter a valid URL where the image will be copied.
For example:
disk0:/c7200-mz
- Step 21** To indicate which image is to be activated on the device after distribution, select the radio button in front of each row.
- Step 22** Select the Configuration Control template file you want to send to this device for activation of a new image:

Tip

Use the Configuration Control template that contains the CLI commands required for image activation for this device (see “[Configuration Control Templates](#)” section on page 12-127). If you do not have such a template, see “[Adding a Template](#)” section on page 12-138.

- a. To select a template file from the drop-down list, click the **Select file** radio button.
- b. Use the drop-down list to choose a template file.

OR

To use an external template:

- a. Choose **Enter URL**.
- b. Enter the full URL for the server, directory, and filename where the template is stored. Currently, only **http** is supported.

- c. To test access to the external template, click **Test URL**.

If the server is unavailable or the external template cannot be accessed, an error appears. You can still save this logical device, but the template is not available until you have access to the external template.

- Step 23** To clear this task, click **Cancel**.
- Step 24** To go back to the previous page, click **Back**.
- Step 25** To finish creating this device, click **Finish**.
-

Hop Tables

To access devices by means of Telnet, it is necessary to construct hop tables (see “[HopInfo Examples](#)” section on page 3-38). These are tables that indicate what network path exists to the device, and all the authentication information necessary at each stage, or hop.

What You Should Know About Device Hop Information

The Hop Information (HopInfo) structure describes one portion of the path between source and destination. HopInfo can be chained together to specify how to login to a device. Examples of uses of this structure include:

- Devices with basic authentication mode requiring IP address, username, and password
- Devices with additional authentication modes such as Cisco IOS enable mode
- Embedded-within-embedded applications such as line cards on a Catalyst switch

The latter two examples require a login, but not a hop to a different device. Therefore, they are referred to as *virtual* hops.

[Table 3-4](#) shows the fields in the HopInfo structure:

Table 3-4 HopInfo Structure

Field	Purpose
hop_type	String indicating type of hop.
ip_address	IP address of device (string)
port	TCP port on which to access device (integer)
username	Username with which to login to device (string)
password	Password with which to login to device (string)

Currently Supported Device Types

[Table 3-5](#) through [Table 3-12](#) on page 3-38 provide the HopInfo list for devices that are directly accessible on the network by IMGW. For accessing devices by way of Commserver, see [Table 3-13](#) on page 3-38.

All the rows in these tables are mandatory. Also, the hop_type fields cannot be NULL or empty. The fields marked with **X** are mandatory in IMGW unless they are not required on the device-side.

Table 3-5 *Cisco IOS Device Directly Connected*

hop_type	ip_address	port	username	password
IOS_LOGIN	X		X	X
IOS_EN			X	X

Table 3-6 *Cisco IOS Device Directly Connected Supporting SSH*

hop_type	ip_address	port	username	password
IOS_LOGIN:SSH	X		X	X
IOS_EN			X	X

Table 3-7 *Catalyst Device Directly Connected*

hop_type	ip_address	port	username	password
CATALYST_LOGIN	X		X	X
CATALYST_EN			X	X

Table 3-8 *Catalyst IOS MSFC Blade Directly Connected*

hop_type	ip_address	port	username	password
CATALYST_LOGIN	X		X	X
IOS_CAT_BLADE		X	X	X
IOS_EN			X	X

Table 3-9 *Catalyst IOS Device Directly Connected*

hop_type	ip_address	port	username	password
CATIOS_LOGIN	X		X	X
CATIOS_EN			X	X

Table 3-10 *CSS Device Directly Connected*

hop_type	ip_address	port	username	password
CSS_LOGIN	X		X	X
CSS_EN			X	X

Table 3-11 CE Device Directly Connected

hop_type	ip_address	port	username	password
CE_LOGIN	X		X	X
CE_EN			X	X

Table 3-12 PIX Device Directly Connected

hop_type	ip_address	port	username	password
PIX_LOGIN	X		X	X
PIX_EN			X	X

When any of the above devices is accessed by way of a Commserver (such as a Cisco 2511 Access Server), the resultant HopInfo list has the following two rows prepended to the respective HopInfo list for that device:

Table 3-13 Partial HopInfo List For Commserver Access

hop_type	ip_address	port	username	password
COMMSERVER_LOGIN	X		X	X
COMMSERVER		X	////////////////	X

**Note**

Because the current release does not support port username, the username field of HopInfo structure for COMMSERVER is always ignored by IMGW. Do not set up the port username on the Commserver.

HopInfo Examples**Table 3-14** Cisco IOS Device Directly Connected

CATALYST_LOGIN			Admin	Raining
IOS_CAT_BLADE		15	Admin	winding
IOS_EN			dummy	moonlight

Adding Agent Enabled Devices

- Step 1** From the Devices Functional Overview page, click **Add Device**.
The Device Information page appears (see [Figure 3-11](#)).

Figure 3-11 Device Information Page

Create Device

Enter device information

Device Name: (required)	<input type="text" value="c7200e4"/>
Unique ID: (required)	<input type="text" value="c7200e4"/>
Device Type: (required)	<input type="text" value="Agent Enabled Device"/>
Template File Name:	<input checked="" type="radio"/> Select file: <input type="text" value="DemoRouter.cfgtpl"/> <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>

129320

Step 2 Enter a valid value (no spaces) in the **Device Name** field.

Table 3-19 shows valid values for these attributes.

Table 3-19 Valid Values for Add Device

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Unique ID	Unique ID of the device.	Default or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Device Type	Type of device	From drop-down list
Template File Name	Name of the configuration template to associate with the device.	From drop-down list, or user-defined

Step 3 In the **Unique ID** field, accept the default value that appears or enter another valid value (no spaces).

Step 4 For Device Type, from the drop-down list, select **Agent Enabled Device**.

Step 5 Select the Template file name, then click **Next**.

Note To associate an external template to this device, select **Enter URL** with the appropriate path.

The Group Membership page appears (see [Figure 3-12](#)).

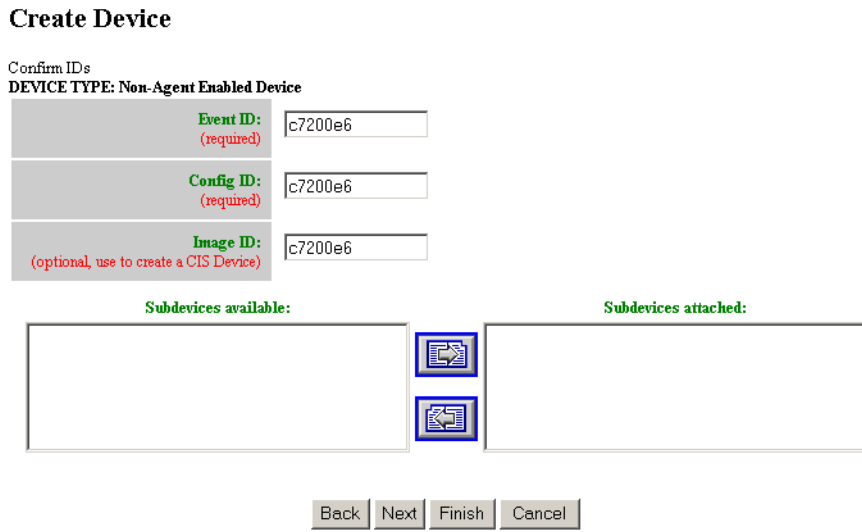

Figure 3-12 Group Membership Page

Tip Use the Group Manager to set up groups before you add a device (see “[Creating Groups](#)” section on page 6-96).

- Step 6** Check to select the group(s) of which you want this device to become a member, then click **Next**. The device IDs page appears (see [Figure 3-13](#)).

Figure 3-13 Device IDs Page

- Step 7** Enter the appropriate IDs. [Table 3-20](#) shows valid values for these attributes.

Table 3-20 Valid Values for Agent Enabled Device IDs

Attribute	Description	Valid Values
Event ID	Event ID to be associated with this device.	Default, or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period) ,(comma) :(colon) /(forward-slash) =(equal) +(plus)
Config ID	Configuration ID to be associated with this device.	Default, or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period), (comma) :(colon) /(forward-slash) =(equal) +(plus)
Image ID	Image ID to be associated with this device.	Default, or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period) ,(comma) :(colon) /(forward-slash) =(equal) +(plus)

Step 8 If applicable, select and assign subdevices to this device.

Step 9 To go back one page, click **Back**.

Step 10 To end this task, click **Finish**.

Step 11 To continue by associating this device with an image, click **Next**.

If you click **Next**, the Image Association page appears (see [Figure 3-14](#)).

Figure 3-14 Create Device > Image Association**Create Device**

Step 3: Please Select Image(s) to associate with this device

	Name	Image Type	Image Locations	OverWrite	Erase FileSystem	Destination
<input type="radio"/>	image1	IOS	ftp://ftp.test@10.1.7.24/ftp/c7200-is-mz.123-1.9.T	<input type="checkbox"/>	<input type="checkbox"/>	
<input type="button" value="Add Another Row"/>						

Step 4: Please select a configuration file that will be sent to the device upon activation of the new image:

Template File:	<input checked="" type="radio"/> Select file: DemoRouter.cfgtpl	<input type="radio"/> Enter URL:	<input type="button" value="Test URL"/>
----------------	---	----------------------------------	---

101503

Step 12 Select the image from the **Name** drop-down list.

The **Image Type** field and **Image Location** drop-down box are populated with corresponding information for the image.

Step 13 From the **Image Location** drop-down list, select the desired location.

Step 14 To add another row for image location, click **Add Another Row**.

You can locate multiple copies of an image on separate servers. This allows you to do load-sharing when updating a large number of devices. Each device in a large group can be associated with a copy of the image located at one of many server locations.

Step 15 In the Destination field, enter a valid URL where the image will be copied.

For example:

disk0:/c7200-mz

Step 16 To indicate which image is to be activated on the device after distribution, select the radio button in front of each row.

Step 17 Select the Configuration Control template file you want to send to this device for activation of a new image:

**Tip**

Use the Configuration Control template that contains the CLI commands required for image activation for this device (see “[Configuration Control Templates](#)” section on page 12-127). If you do not have such a template, see “[Adding a Template](#)” section on page 12-138.

- a. To select a template file from the drop-down list, click the **Select file** radio button.
- b. Use the drop-down list to choose a template file.

OR

To use an external template:

- a. Choose **Enter URL**.
- b. Enter the full URL for the server, directory, and filename where the template is stored. Currently, only **http** is supported.
- c. To test access to the external template, click **Test URL**.

If the server is unavailable or the external template cannot be accessed, an error appears. You can still save this logical device, but the template is not available until you have access to the external template.

- Step 18** To clear this task, click **Cancel**.
- Step 19** To go back to the previous page, click **Back**.
- Step 20** To finish creating this device, click **Finish**.

Adding PIX Firewall Devices

- Step 1** From the Devices Functional Overview page, click **Add Device**.
The Device Information page appears (see [Figure 3-15](#)).

Figure 3-15 Device Information Page

Create Device

Enter device information

Device Name: <small>(required)</small>	<input type="text" value="PIXSJdevice"/>
Unique ID: <small>(required)</small>	<input type="text" value="PIXdevice1"/>
Device Type: <small>(required)</small>	<input type="text" value="Pix Firewall Device"/>
Template File Name:	<input checked="" type="radio"/> Select file: <input type="text" value="DemoRouter.cfgtpl"/> <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>

20190287

Step 2 Enter a valid value (no spaces) in the **Device Name** field.

Table 3-21 shows valid values for these attributes.

Table 3-21 Valid Values for Add Device

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Unique ID	Unique ID which is configured on the device.	Default or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Device Type	Type of device	From drop-down list
Template File Name	Name of the configuration template to associate with the device.	From drop-down list, or user-defined

Step 3 In the **Unique ID** field, accept the default value that appears or enter another valid value (no spaces).

Step 4 For Device Type, from the drop-down list, select **PIX Firewall Device**.

Step 5 Select the Template file name, then click **Next**.

The Group Membership page appears (see Figure 3-16).

Figure 3-16 Group Membership Page

Create Device

Select group membership
DEVICE TYPE: Agent Enabled Device

Tip

Use the Group Manager to set up groups before you add a device (see “Creating Groups” section on page 6-96).

- Step 6** Check to select the group(s) of which you want this device to become a member, then click **Next**. The PixAuthentication Password page appears (see [Figure 3-17](#)).

Figure 3-17 *PIX Authentication Password Page*

Create Device

Step 2: Enter the Authentication Password for Pix Devices

Authentication Password: (required)	<input type="password"/>
Confirm Authentication Password: (required)	<input type="password"/>

101501

- Step 7** Enter authentication password for PIX devices.
A case-sensitive password of up to 16 alphanumeric and special characters. Any character can be used in the password except a question mark and a space.
- Step 8** Click the **Next** button. The **PIX Configuration and Error Actions Type** page appears (see [Figure 3-18](#)).

Figure 3-18 *PIX Configuration and Error Actions Type Page*

Create Device

Select the Configuration and Error actions type for the Pix Firewall Device.

Configuration action:	<input checked="" type="radio"/> Replace. Specifies that the current configuration should be cleared before applying the new configuration. <input type="radio"/> Merge. Allows merging the current configuration with the new configuration file.
Error action:	<input type="radio"/> Continue. Specifies to continue with applying the new configuration, even if there is a configuration error. <input type="radio"/> Revert. Specifies to revert to the old configuration from flash without rebooting, if there is a configuration error. <input type="radio"/> Stop. Specifies to immediately stop reading the rest of the configuration when a command causes an error.

200204

- Step 9** From the **Configuration and Error Actions Type** page, choose the appropriate options (Replace, Merge, Continue, Revert, and Stop).
- Step 10** To go back one page, click **Back**.
- Step 11** To end this task, click **Finish**.
- Step 12** To continue by associating this device with an image, click **Next**.
- Step 13** If you click **Next**, the Image Association page for PIX Firewall Devices appears.
- Step 14** Select the image from the **Name** drop-down list.

The **Image Type** field and **Image Location** drop-down box are populated with corresponding information for the image.

Note Only PIX or PDM images can be associated with a PIX device.

Step 15 From the **Image Location** drop-down list, select the desired location.

Step 16 To add another row for image location, click **Add Another Row**.

Note For PIX devices, you can have only one PIX image and one PDM image.

Step 17 To indicate whether the image is to be activated on the device after distribution, check the box in front of each row.

Step 18 To cancel creating a device and return to the Devices main menu, click **Cancel**.

Step 19 To go back to the previous page, click **Back**.

Step 20 To finish creating this device, click **Finish**.

Adding ASA Firewall Devices

Step 1 From the Devices Functional Overview page, click **Add Device**.

The Device Information page appears (see [Figure 3-19](#)).

Figure 3-19 Device Information Page

Create Device

Enter device information

Device Name: <small>(required)</small>	ASASJdevice
Unique ID: <small>(required)</small>	ASAddevice1
Device Type: <small>(required)</small>	Agent Enabled Device
Template File Name:	<input checked="" type="radio"/> Select file: DemoRouter.cfgtpl <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>

Back Next Finish Cancel

209274

Step 2 Enter a valid value (no spaces) in the **Device Name** field.

Table 3-22 shows valid values for these attributes.

Table 3-22 Valid Values for Add Device

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Unique ID	Unique ID which is configured on the device.	Default or a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
Device Type	Type of device	From drop-down list
Template File Name	Name of the configuration template to associate with the device.	From drop-down list, or user-defined

- Step 3** In the **Unique ID** field, accept the default value that appears or enter another valid value (no spaces).
- Step 4** For Device Type, from the drop-down list, select **ASA Firewall Device**.
- Step 5** Select the Template file name, then click **Next**.
The Group Membership page appears (see [Figure 3-20](#)).

Figure 3-20 Group Membership Page

Create Device

Select group membership
DEVICE TYPE: ASA Firewall Device
 /  default

209276

Tip Use the Group Manager to set up groups before you add a device (see [“Creating Groups” section on page 6-96](#)).

- Step 6** Check to select the group(s) of which you want this device to become a member, then click **Next**.
The ASA Authentication Password page appears (see [Figure 3-21](#)).

Figure 3-21 ASA Authentication Password Page

Create Device

Enter the Authentication Password for ASA Devices
DEVICE TYPE: ASA Firewall Device

Authentication Password: (required)

Confirm Authentication Password: (required)

Back Next Cancel

209276

Step 7 Enter authentication password for ASA devices.

A case-sensitive password of up to 16 alphanumeric and special characters. Any character can be used in the password except a question mark and a space.

Step 8 Click the **Next** button. The **ASA Configuration and Error Actions Type** page appears (see Figure 3-17).

Figure 3-22 ASA Configuration and Error Actions Type Page

Create Device

Select the Configuration and Error actions type for the ASA Firewall Device.

Configuration action:

- Replace.** Specifies that the current configuration should be cleared before applying the new configuration.
- Merge.** Allows merging the current configuration with the new configuration file.

Error action:

- Continue.** Specifies to continue with applying the new configuration, even if there is a configuration error.
- Revert.** Specifies to revert to the old configuration from flash without rebooting, if there is a configuration error.
- Stop.** Specifies to immediately stop reading the rest of the configuration when a command causes an error.

Back Next Finish Cancel

209277

Step 9 From the **Configuration and Error Actions Type** page, choose the appropriate options (Replace, Merge, Continue, Revert, and Stop).

Step 10 To go back one page, click **Back**.

Step 11 To end this task, click **Finish**.

Step 12 To continue by associating this device with an image, click **Next**.

Step 13 If you click **Next**, the Image Association page for PIX Firewall Devices appears.

Step 14 Select the image from the **Name** drop-down list.

The **Image Type** field and **Image Location** drop-down box are populated with corresponding information for the image.

Note Only ASA or ASDM images can be associated with a ASA device.

Step 15 From the **Image Location** drop-down list, select the desired location.

Step 16 To add another row for image location, click **Add Another Row**.

Note For ASA devices, you can have only one ASA image and one ASDM image.

- Step 17** To indicate whether the image is to be activated on the device after distribution, check the box in front of each row.
- Step 18** To cancel creating a device and return to the Devices main menu, click **Cancel**.
- Step 19** To go back to the previous page, click **Back**.
- Step 20** To finish creating this device, click **Finish**.
-

Discovering Devices

Cisco Configuration Engine can discover a device once the device (for this example: **router-3460**) is configured for CNS. For more information about this, see *CNS Image Agent* at:

http://www.cisco.com/en/US/docs/net_mgmt/configuration_engine/3.5/installation/guide/CE_3_ig_security.html

During the execution of **setup.sh** for the Cisco Configuration Engine host, the settings configured would be:

```
...
For detail information about the parameters in this setup, refer to "Cisco Configuration
Engine Administration Guide."
...

Encryption settings:
-----
Enable cryptographic (crypto) operation between Event Gateway(s)/Config server and
device(s) (y/n)? n
Each Event Gateway process serves 500 devices. Maximum number of
Event Gateways allowed is 20.
Enter number of Event Gateways that will be started with crypto operation:[1] 0
Enter number of Event Gateways that will be started with plaintext operation: [5] 2
Enter Cisco-CE Event Bus Network Parameter: [ce_host_hostname or ce_host_ip_address]
```

Note For more information about running **setup.sh**, see the *Cisco Configuration Engine Installation and Configuration Guide*.

- Step 1** Log in to **router-3460**
- Step 2** Using the Cisco IOS CLI command: **show running configuration**, verify that **router-3460** is configured with IP routing. For example:

```
hostname router-3460
...
ip cef
ip host ce_host 10.1.2.3
...
interface Ethernet0/0
ip address 10.1.2.4 255.255.255.0
...
ip default-gateway 10.1.2.1
```

```
...
ip classless
ip route 0.0.0.0 0.0.0.0 10.1.2.1
```

where:

router-3460 is the hostname identifying the device for Cisco Configuration Engine and 10.1.2.3 is the IP address of the Cisco Configuration Engine.

Step 3 Log in to **router-3640** and perform the following operations:

```
configure terminal ip host ce_host 10.1.2.3
cns trusted-server all-agents ce_host
cns id string router-3460
cns id string router-3460 event
cns event ce_host 11013
cns config notify all interval 1 old-format
cns config partial ce_host 80
cns exec 80
```

Note The above configuration will support Discover Device as well as downloading a configuration, which requires **cns config partial ce_host 80**.

Step 4 Verify IP connectivity between **ce_host** and **router-3640** by issuing the **ping** command from **ce_host** to **router-3640** and from **router-3640** to **ce_host**.

Step 5 Create a template.

For our example, name it **router-3460**.

You must insert a minimum of one line in the template. You can add a **!** for this.

Note For more information about creating a template, see [Chapter 12, “Templates.”](#)

Step 6 On the Device Functional Overview page, choose **Discover Device**.

Figure 3-23 Discover Device Page

When the discovery task completes, the following information appears:

```
Discover Devices
There are 1 device(s) currently connected to the IE2100 but not yet created in the
directory.
Select the devices you want to create and click on 'Create'.
Device Name DeviceID Connected Time Template Name Group Name
router-3640 router-3640 1/19/06 9:46:03 AM
- DemoRouter.cfgtpl
- Acquire Running Config /config/default
- Acquire Startup Config
```

Step 7 Click on the check box for **router-3640**, then click on the radio button and move the cursor to **router-3640.cfgtpl**.

Step 8 Choose **Create**.

The following information appears:

```
Status of Discovered Device Creation:
Device Name Template Name Status
router-3640 router-3640.cfgtpl Success
```

Step 9 On the Device Functional Overview page, choose **View Device**.

You should see an icon for **router-3640**.

The icon color should be green indicating communication between **ce_host** and **router-3640** has been established.

Notes:

1. Before a device is discovered or created, we recommend that you configure a template for the device. When Cisco Configuration Engine discovers a device, or you create a device, you then must associate the device with a template. Although Cisco Configuration Engine has a default sample template (DemoRouter.cfgtpl) already created, it is very unlikely that your device will be configured using DemoRouter.cfgtpl. Therefore, create a new template.
2. If **Create Device** is performed after configuring a template for **router-c3460**, then Cisco Configuration Engine will not discover this router (you will not see an icon for **router-c3460** when Discover Device is selected). If you want Cisco Configuration Engine to discover the device then create only a template for the device—DO NOT use the **Create Device** operation. If you use **Create Device**, and you go to **Discover Device**, you will not see an icon for **router-c3460**. However, in either case, **View Device** should show an icon for **router-c3460**.
3. The Cisco Configuration Engine host uses odd numbered event ports for messages sent in plain text. For example, the default Cisco Configuration Engine setting is **5** event gateway ports without crypto enabled. Devices use ports 11013, 11015, 11017, 11019, 11021 depending on what you configured on the device (for **cns event 10.1.2.3 11013** this means event gateway port 11013 is used by **router-c3640** to communicate with the Cisco Configuration Engine host, 10.1.2.3).
4. The Cisco Configuration Engine host uses even numbered event ports for message sent encrypted starting with 11014. For example, if you set the number of event gateways to **2** during setup, then ports 11014 and 11016 would be available for use by a device.

**Note**

- The ports for Event Gateways with crypto operation are even numbers that start from 11012.
- The ports for Event Gateways with plaintext operation are odd numbers that start from 11011.

Editing Devices

- Step 1** From the Devices Functional Overview page, click **Edit Device**.
The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device in question.
The Edit Device list appears (see [Figure 3-24](#)).

Figure 3-24 *Edit Device List*

Step 3 Click on the icon for the device you want to edit. The device configuration appears (see [Figure 3-25](#)).

Figure 3-25 Device Configuration

```

 Show Line Numbers

Template File Name:	<input checked="" type="radio"/> Select file: <input type="text" value="DemoRouter.cfgtpl"/> <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>

Back Next Finish Cancel

129458

Step 2 To modify the device name and Image ID, if applicable, then click **Next**.

Step 3 Select Group Membership, then click **Next**.

The PIX Device Authentication Password page appears, see [Figure 3-32](#).

Figure 3-32 PIX Device Authentication Password

Edit Device

Enter the Authentication Password for Pix Devices
DEVICE TYPE: Pix Firewall Device

Authentication Password: (required)	<input type="password"/>
Confirm Authentication Password: (required)	<input type="password"/>

129923

Step 4 Modify the authentication password if required, then click **Finish**.

A case-sensitive password of up to 16 alphanumeric and special characters. Any character can be used in the password except a question mark and a space.

Editing ASA Device Information

Step 1 From the Edit Device page, click **Edit Information**.

The device information editor page appears (see [Figure 3-33](#)).

Figure 3-33 ASA Device Information Page

Edit Device

Enter device information

Device Name: (required)	<input type="text" value="ASASJdevice"/>
Unique ID: (required)	<input type="text" value="ASAdevice1"/>
Device Type: (required)	<input type="text" value="ASA Firewall Device"/>
Template File Name:	<input checked="" type="radio"/> Select file: <input type="text" value="DemoRouter.cfgtpl"/> <input type="radio"/> Enter URL: <input type="text"/> <input type="button" value="Test URL"/>

129924

Step 2 To modify the device name and Image ID, if applicable, then click **Next**.

- Step 3** Select Group Membership, then click **Next**.
The ASA Device Authentication Password page appears, see [Figure 3-34](#).

Figure 3-34 ASA Device Authentication Password

Edit Device

Enter the Authentication Password for ASA Devices
DEVICE TYPE: ASA Firewall Device

Authentication Password: (required)	<input type="password" value="••••"/>
Confirm Authentication Password: (required)	<input type="password" value="••••"/>

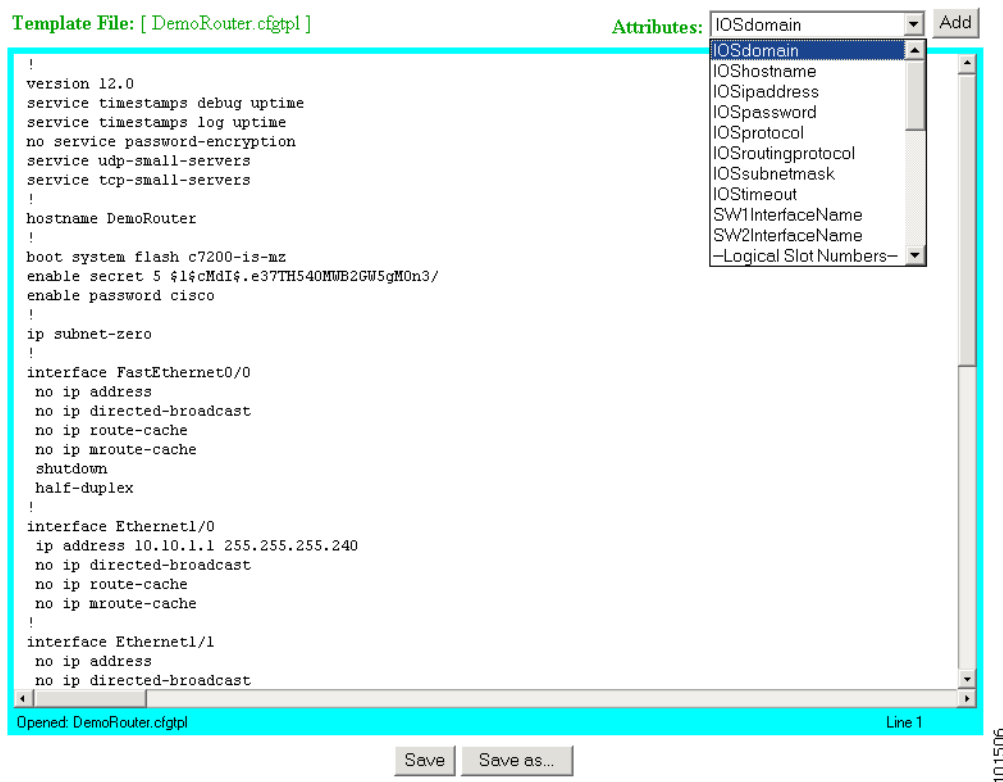

2009288

- Step 4** Modify the authentication password if required, then click **Finish**.
 A case-sensitive password of up to 16 alphanumeric and special characters. Any character can be used in the password except a question mark and a space.
-

Editing Device Templates

- Step 1** From the Edit Device page, click **Edit Template**.
 The template editor appears (see [Figure 3-35](#)).

Figure 3-35 Template Editor

- Step 2** In the **Attributes** field, click the drop-down arrow.
- Step 3** Choose the attribute you want to add to the template, then click **Add**.
- Step 4** Repeat Steps 2 and 3 for all attributes you want to add to the template file.
- Step 5** Delete all unusable strings from the template file.
- Step 6** Edit strings as necessary.

The default multi-line begin and end tags are ^C and ^C respectively. The delimiter for these tags are: ~ ! @ ^ & * - = |. Do not use # or %.

For example, a multi-line test banner might be:

```
banner exec ^C
  This is a Test Banner
  1. Hi
  2. Hello
  3. Test is 1234567890
^C
```

- Step 7** To save your edits, click **Save**.
- Step 8** To save this version as a new template, click **Save as**.

Editing Device Parameters

- Step 1** From the Edit Device page:
- a. If you have administrator-level access click **Edit Parameter-admin**.
 - b. To use Operator-level access click **Edit Parameter-operator**.
- The parameters editor appears.
- Step 2** Edit all active lines as required.
- Step 3** To save your edits, click **Save Parameters**.
-

Editing Contact Information

- Step 1** From the Edit Device page, click **Edit ContactInfo**.
- The contact information appears.
- Step 2** Edit all active fields as required.
- Step 3** To clear your entries, click **Reset**.
- Step 4** To save your edits, click **Update**.
-

Editing Subdevices

For complete information about working with subdevices, including editing (except PIX devices), see [“Working with Subdevices” section on page 3-71](#).

Editing Image Association Information

- Step 1** From the Edit Device page, click **Edit Images**.
- The Edit Device Image page appears.
- Step 2** Edit image and configuration information as required.
- Step 3** To revert to the previous state, click **Cancel**.
- Step 4** To complete this task, click **Finish**.
-

Resynchronizing Devices

If the password of a device becomes corrupted so that there is a mismatch between the device and the corresponding password information help in the directory, you can resynchronize the device with the Cisco Configuration Engine by using the Resync Device function.

- Step 1** From the Devices Functional Overview page, click **Resync Device**.
- Step 2** From the Resync Device page, click on the icon for the device you want to re-synchronize.

Note PIX devices will not be visible on this page.

- Step 3** In the confirmation window that appears, click **Ok**.

Cloning Devices

- Step 1** From the Devices Functional Overview page, click **Clone Device**.
The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device you want to clone.
The Clone Device list appears (see [Figure 3-36](#)).

Figure 3-36 Clone Device List

Clone Device

- Step 3** Select a device to clone.
The Step 1 page appears (see [Figure 3-37](#)).

Figure 3-37 Clone Device > Number of Copies

Clone Device: c7200e2c

Step 1: Enter Number Of copies

Number Of Copies: (required)

Back Next Finish Cancel

129351

Step 4 Determine the number of copies, then click **Next**.
 The Step 2 page appears (see [Figure 3-38](#)).

Figure 3-38 Clone Device > Name and IDs

Clone Device: c7200e2c

Step 2: Create 1 copies of c7200e2c using:

	Prefix	Suffix
Device Name	copyOf	1
Event ID	copyOf	1
Config ID	copyOf	1
Image ID	copyOf	1

Also Clone:

<input checked="" type="checkbox"/>	SubDevice(s)	SubDevice Name Prefix	copyOf
		SubDevice ID Prefix	copyOf
<input checked="" type="checkbox"/>	Image(s)		

129350

Step 5 Enter prefix and suffix for each device copy, then click **Next**.
 The Step 3 page appears (see [Figure 3-39](#)).

Figure 3-39 Clone Device > Review Parameters

Clone Device: c7200e2c

Step 3: Review parameters

The following Devices will be created:

Device Names	Event Ids	Config Ids	Image Ids
copyOfc7200e2c1	copyOfc7200e2c1	copyOfc7200e2c1	copyOfc7200e2c1

The above devices will be created with the following attributes:

ImageRefList	C7200-IS-MZ
Template	DemoRouter.cfgtpl
ActivationTemplate	DemoRouter.cfgtpl
IOSsubdevices	card2b
Group	ou=East,ou=config,ou=CNSApplications,ou=techdoc,o=cisco,c=us
AdminDevType	generic_device

129328

- Step 6** Review the parameters you set for this clone.
- Step 7** If you want to make changes, click **Back**.
- Step 8** To finish this task, click **Finish**.
-

Deleting Devices

- Step 1** From the Devices Functional Overview page, click **Delete Device**.
The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device you want to delete.
The device list appears.
- Step 3** Click the check box for the device(s) you want to delete.
- Step 4** Click **Submit**.
A list of devices selected for deletion appears.
- Step 5** To continue, click **Delete**.
-

Updating Device Configurations and Images

To send an updated version of the configuration or a new image to a device, from the Devices Functional Overview page, click **Update Device**. The Update Device Functional Overview page appears showing:

- Update Configuration
- Update Image
- Customize

Updating Device Configurations

- Step 1** From the Update Devices Functional Overview page, click **Update Config**.
The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device you want to update.

Step 3 Click the check box next to the icon for the device(s) you want to update (see [Figure 3-40](#)).

Figure 3-40 Update Config Group/Device Selection Page

Update Device Config [Advanced Search>>](#)

Note PIX devices will not be visible on this page.

Step 4 Click **Submit**.
The update notification page appears (see [Figure 3-41](#)).

Figure 3-41 Update Configuration Notification Information

Notification Information

Please mark the notification checkbox and complete the step below if a notification will be sent upon job complete.

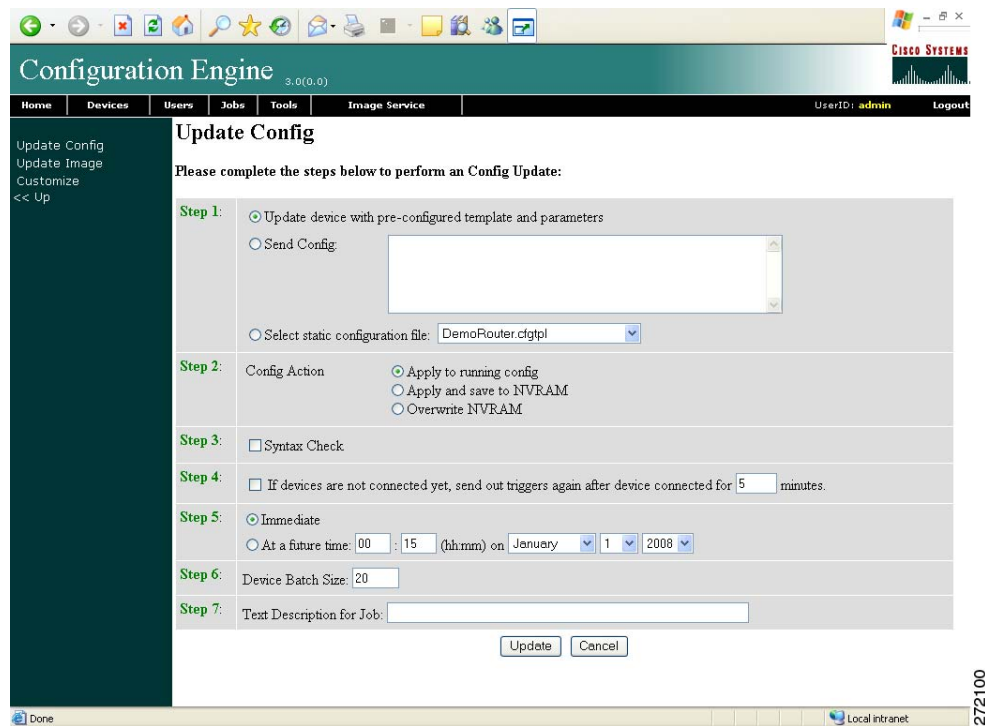

Step 5 If you want an email notification sent when the update job completes, fill in the information on this page, then click **Next**.

Note This page is optional. You can skip to the next page by clicking **Next**.

The update task dialog box appears (see [Figure 3-42](#)).

Figure 3-42 Update Task

Step 6 For Step 1, select the source of the configuration.

Step 7 For Step 2, choose the **Config Action** task you require.

- Apply to running config – applies the configuration to the current running configuration.
- Apply and save to NVRAM – applies the configuration without causing it to persist in NVRAM.
- Overwrite NVRAM – applies the change and causes it to persist in NVRAM.

Step 8 For Step 3, if required, check the **Syntax Check** check box.

Step 9 For Step 4, if devices are not connected, check this check box to send out triggers.

Step 10 For Step 5, select the date and time to send the configuration update.

Step 11 For Step 6, determine the batch size.

Tip The max batch size for IMGW should be set at 25.

Step 12 For Step 7, if applicable, enter a description for this update job.

Step 13 Click **Update**.

Updating Device Images

- Step 1** From the Update Device Functional Overview page, click **Update Image**.
The Groups list appears.
- Step 2** From the Groups list, select the group that holds the device you want to update.
- Step 3** Click the check box next to the icon for the device(s) you want to update (see [Figure 3-43](#)).

Figure 3-43 Update Image Group/Device Selection Page

Note PIX/ASA devices will not be visible on this page.

- Step 4** Click **Submit**.
The update notification page appears (see [Figure 3-41](#)).
- Step 5** If you want a notification sent when the update job completes, fill in the information on this page, then click **Next**.

Note This page is optional. You can skip to the next page by clicking **Next**.

The Update Image page appears (see [Figure 3-44](#)).

Figure 3-44 Image Selection Page

- Step 6** Select the image you want to use for updates, then click **Next**.
If you select to update the device by selecting an image other than its present image, the next page gives you a list of images from which to select.

The Update Image worksheet appears (see [Figure 3-45](#)).

Figure 3-45 Update Image Worksheet

Update Image

Please complete the steps below to perform an Image Update:

Step 1:	Option 1: <input type="checkbox"/> Distribute Image Option 2: <input type="checkbox"/> Activate Image
Step 2:	<input checked="" type="radio"/> Immediate <input type="radio"/> At a future time: 00 : 15 (hh:mm) on January 1 2009
Step 3:	Device Batch Size: 2
Step 4:	Setup Search Parameters to delete files: <div style="display: flex; justify-content: space-between;"> <div style="border: 1px solid gray; padding: 5px; width: 45%;"> <p style="text-align: center;">Available Search Parameters:</p> <p style="text-align: center;">End of list</p> </div> <div style="text-align: center;"> <input type="button" value=">>"/> <input type="button" value="<<"/> </div> <div style="border: 1px solid gray; padding: 5px; width: 45%;"> <p style="text-align: center;">Selected Search Parameters:</p> <p style="text-align: center;">End of list</p> </div> </div>
Step 5:	<input checked="" type="radio"/> Always perform delete file operation. <input type="radio"/> Perform delete file operation if free space is needed.
Step 6:	<input type="checkbox"/> If devices are not connected yet, send out triggers again after device connected for 5 minutes.
Step 7:	Text Description for Job: <input type="text"/>
Step 8:	<input checked="" type="radio"/> Apply activation template to nvram. <input type="radio"/> Overwrite startup-config with activation template.

Please check here if you want to perform an [Evaluation](#) and not an actual Image Update.

Step 7 To distribute the image, click the check box for **Distribute Image**.

Step 8 To activate the image, click the check box for **Activate Image**.

Tip

All three agents (event, partial config, and image) must be running on the device for the activation process to succeed.

Note

For the image to become active on the device, you must have a Configuration Control template associated with this device that contains the CLI commands for image activation (see [“Configuration Control Templates”](#) section on page 12-127).

Step 9 To update the image immediately, click the radio button for **Immediate**.

Step 10 To update the image at a specified time in the future, click the radio button for **At a future time**:

- a. Enter a time value.
- b. Enter a date value.

Step 11 Set the **Device Batch Size**.

This is the number of concurrent image updates. This feature allows you to limit the number of concurrent requests to a server. When one batch of image update requests has been satisfied, the next batch starts.

Tip The max batch size for IMGW should be set at 25. And for HTTP only (no event agent) mode, the batch size must be same as the number devices in the submitted job.

Note If you are running a device image update session to a mix of IMGW and agent devices, the effective device batch size limit for IMGW devices—concurrent Telnet session limit—is equal to the value (default = 25) set for this attribute in the **Setup** program (see *Cisco Configuration Engine Installation and Configuration Guide*).

Step 12 If applicable, enter a text description of the job.

Step 13 To perform an evaluation rather than an actual update, click the check box at the bottom of this pane.

Step 14 To continue, complete the steps called for, then click **Update**.

The Update Image Status page appears (see [Figure 3-46](#)). You can use this Job ID to perform job-related tasks (see [Chapter 5, “Configuration and Image Update Jobs Manager”](#)).

Figure 3-46 Job ID for Update Image

Update Image Status

Device Name	Distributed Image(s)	Activated Image(s)
Device2	image3 image2	image2

Your request has been assigned the job id: 1062710890226

101509

Customize Job Template

Step 1 From the Update Device Functional Overview page, click **Customize**.

The Groups list appears.

Step 2 From the Groups list, select the group that holds the device you want to update.

Step 3 Click the check box next to the icon for the device(s) you want to update (see [Figure 3-47](#)).

Figure 3-47 Custom Flow Control Device Update Selection Page

Update Device using Custom Flow Control Template

[Advanced Search>>](#)

Note PIX devices will not be visible on this page.

Step 4 Click **Submit**.

The Update Device using Customized Job Template appears (see [Figure 3-48](#)).

Figure 3-48 Customized Job Template Form

Update Device using Customized Job Template

Please complete the steps below to submit a Customized Job:

Step 1:	Customized Job Template: <input type="text" value="test1.inv"/>
Step 2:	<input checked="" type="radio"/> Immediate <input type="radio"/> At a future time: <input type="text" value="00"/> : <input type="text" value="15"/> (hh:mm) on <input type="text" value="January"/> <input type="text" value="1"/> <input type="text" value="2005"/>
Step 3:	Device Batch Size: <input type="text" value="2"/>
Step 4:	Text Description for Job: <input type="text"/>

Please check here if you want to perform an [Evaluation](#) and not an actual [job submission](#).

149119

Step 5 Complete the Customized Job Template form, then click **Submit**.

The next page shows the Job ID for this update task.

Step 6 To check the status of this job go to **Jobs > Query Jobs**, then click on the Job ID for this Job.

Configuration Control Template

To restart a device with a new image, you must issue the CLI commands that you would normally enter from the device console to activate a new image.

For example, if you want to restart a Cisco 3600 Series router with an image named `3600.image`, from the device console, you would issue the following CLI commands:

```
no boot system
boot system flash:3600.image
```

you must provide the device with a Configuration Control template that contains the required CLI commands for image activation.

If you do not have such a template, see [“Adding a Template” section on page 12-138](#). Also, you must associate this Configuration Control template with the particular device (see [“Adding Devices” section on page 3-31](#)).

The content of the Configuration Control template for image activation should contain the CLI commands that you would normally enter from the device console to activate a new image on the device.

Working with Subdevices

A subdevice is a configuration object for network modules in a modular router. When working with subdevices, it is very important to pick the correct type of interface card or module.

Note

PIX Firewall devices do not have subdevices.

To work with subdevices, from the Devices Functional Overview page, click **Subdevices**.

The Subdevices Functional Overview page appears showing:

- View Subdevice
- Add Subdevice
- Edit Subdevice
- Clone Subdevice
- Delete Subdevice

Viewing Subdevices

Step 1 From the Subdevices Functional Overview page, select **View Subdevice**.

The list of subdevices appears (see [Figure 3-49](#)).

Figure 3-49 View Subdevice

- Step 2** Click on the icon for the device configuration you want to view.
The Configuration for that device appears.

Note The subdevice configuration displayed is the configuration as it appears at the configuration server. It might not be the configuration running on the subdevice.

Adding Subdevices

- Step 1** From the Subdevices Functional Overview page, click **Add Subdevice**.
The Subdevice Information page appears (see [Figure 3-50](#)).

Figure 3-50 Subdevice Information Page

The screenshot shows the Subdevice Information page with the following fields and options:

- Device Name:** (required) Input field containing "card2b".
- Config ID:** (required) Input field containing "card2b".
- Device Type:** (required) Dropdown menu showing "AIM-COMPR2".
- Template File Name:**
 - Radio button selected for "Select file:" with a dropdown menu showing "DemoRouter.cfgtpl".
 - Radio button for "Enter URL:" with an empty input field.
 - "Test URL" button.

At the bottom, there are "Modify" and "Reset" buttons. A vertical ID number "129930" is visible on the right side of the form.

- Step 2** Enter a valid value (no spaces) in the **Device Name** field.
[Table 3-23](#) shows valid values for this task.

Table 3-23 Valid Values for Add Subdevice

Attribute	Description	Valid Values
Device Name	The name used as cn (common name) of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)
ConfigID	Configuration ID attribute of the device.	a-z A-Z 0-9 -(hyphen) _ (under-score) . (period)

Table 3-23 Valid Values for Add Subdevice (continued)

Attribute	Description	Valid Values
Device Type		From drop-down list
Template File Name	Name of the configuration template to associate with the device.	From drop-down list, or user-defined

- Step 3** Accept the default value that appears or enter another valid value (no spaces) in the **Config ID** field.
- Step 4** From the **Device Type** drop-down list, choose the type of device to which this subdevice is associated. Device type is the name of the network module as defined in the Cisco product catalog (price list).
- Step 5** Choose a template file.
To use a template on your Cisco Configuration Engine:
- Choose **Select file**.
 - Use the drop-down list to choose a template.
- OR
- To use an external template:
- Choose **Enter URL**.
 - Enter the full URL for the server, directory, and filename where the template is stored. Currently, only **http** is supported.
 - To test access to the external template, click **Test URL**.
If the server is unavailable or the external template cannot be accessed, an error appears. You can still save this logical subdevice, but the template is not available until you have access to the external template.
- Step 6** To clear your entries, click **Reset**.
- Step 7** To add this device, click **Add**.

Editing Subdevices

- Step 1** From the Subdevices Functional Overview page, click **Edit Subdevice**.
- Step 2** From the Edit Subdevice page, click on the icon for the subdevice you want to edit. The subdevice configuration appears with a menu of edit functions in the left navigation pane:
- Edit Information
 - Edit Template
 - Edit Parameter-Admin – Administrator-level view
 - Edit Parameter-Operator – Operator-level view; used by Administrator to verify what Operator can see after Administrator has used **Edit > AttributeInfo** under the Template Manager
 - Edit ContactInfo

- Step 3** From the left navigation pane, choose the edit function you want to use.
-

Editing Subdevice Information

- Step 1** From the Edit Subdevice page, click **Edit Information**.
The subdevice information editor dialog box appears (see [Figure 3-50](#)).
- Step 2** Modify all applicable fields.
For valid values, see [Table 3-23](#).
- Step 3** To clear your entries, click **Reset**.
- Step 4** To update device information, click **Modify**.
-

Editing Subdevice Template

- Step 1** From the Edit Subdevice left navigation pane, click **Edit Template**.
The template editor appears.
- Step 2** In the **Attributes** field, click the drop-down arrow.
- Step 3** Choose the attribute you want to add to the template, then click **Add**.
- Step 4** Repeat Steps 2 and 3 for all attributes you want to add to the template file.
- Step 5** Delete all unusable strings from the template file.
- Step 6** Edit strings as necessary.
The default multi-line begin and end tags are `^C` and `^C` respectively. The delimiter for these tags are: `~ ! @ ^ & * - = |`. Do not use `#` or `%`.
A multi-line test banner might be:
- ```
banner exec ^C
 This is a Test Banner
 1. Hi
 2. Hello
 3. Test is 1234567890
^C
```
- Step 7** To save your edits, click **Save**.
- Step 8** To save this version as a new template, click **Save as**.
-

## Editing Subdevice Parameters

- Step 1** From the Edit Subdevice left navigation pane, click **Edit Parameter-Admin**.  
The parameters editor appears.

**Note** Operator-level privileges do not include access to these parameters.

- Step 2** Modify parameters values as required.
- Step 3** To save your edits, click **Save Parameters**.

## Editing Contact Information

- Step 1** From the Edit Device left navigation pane, click **Edit ContactInfo**.  
The contact information appears.
- Step 2** Edit all active fields as required.
- Step 3** To clear your entries, click **Reset**.
- Step 4** To save your edits, click **Update**.

## Cloning Subdevices

- Step 1** From the Subdevices Functional Overview page, click **Clone Subdevice**.  
The Subdevice list appears (see [Figure 3-51](#)).

**Figure 3-51** Clone Subdevice Device List

1299355

**Step 2** The Step 1 page appears (see [Figure 3-52](#)).

**Figure 3-52** Clone Subdevice > Number of Copies

Clone Subdevice: card2b

Step 1: Enter Number Of copies

Number Of Copies:  (required)

Back Next Finish Cancel

129356

Enter the number of copies you want to make, then click **Next**.

The Step 2 page appears (see [Figure 3-53](#)).

**Figure 3-53** Clone Subdevice > Name and IDs

Clone Subdevice: card2b

Step 2: Create 1 copies of card2b using:

|                 | Prefix                              | Suffix                         |
|-----------------|-------------------------------------|--------------------------------|
| Sub-Device Name | <input type="text" value="copyOf"/> | <input type="text" value="1"/> |
| Unique ID       | <input type="text" value="copyOf"/> | <input type="text" value="1"/> |

Back Next Finish Cancel

129331

**Step 3** Enter prefix and suffix for each device copy, click **Next**.

The Step 3 page appears (see [Figure 3-54](#)).

**Figure 3-54** Clone Subdevice > Review Parameters

Clone Subdevice: card2b

Step 3: Review parameters

The following Sub-Devices will be created:

| Sub-Device Names | Unique Ids    |
|------------------|---------------|
| copyOfcard2b1    | copyOfcard2b1 |

The above devices will be created with the following attributes:

|                 |                   |
|-----------------|-------------------|
| Template        | DemoRouter.cfgtpl |
| IOSlinecardtype | AIM-COMPR2        |
| AdminDevType    | line_card         |

Back Next Finish Cancel

129357

**Step 4** Review the parameters you set for this clone.

- Step 5** If you want to make changes, click **Back**.
- Step 6** To finish this task, click **Finish**.

## Deleting Subdevices

- Step 1** From the Subdevices Functional Overview page, click **Delete Device**.  
The Delete Subdevice page appears (see [Figure 3-55](#)).

**Figure 3-55** Select Subdevices to Delete

- Step 2** Check to select the subdevice(s) you want to delete.
- Step 3** To proceed, click **Next**.  
A status page appears indicating that the subdevice has been selected for deletion (see [Figure 3-56](#)).

**Figure 3-56** Delete Subdevices Confirmation

The following sub-devices have been selected for deletion.

`cn=lineCardV1a,ou=LinecardDevices,ou=CNSDevices,ou=hibiki,o=cisco,c=us`

Delete

129452

- Step 4** To delete this subdevice, click **Delete**.

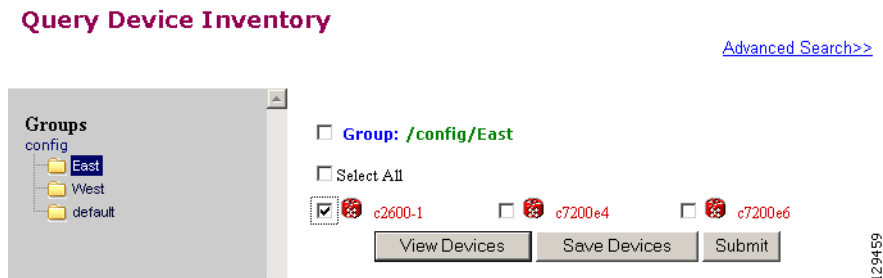

# Querying Device Inventory

You can use the Query Device Inventory feature to get a reports from devices about:

- Running image information
- Hardware information
- File system list

**Step 1** From the Devices Functional Overview page, click **Query Device Inventory**.  
The Query Device Inventory screen appears.

**Figure 3-57** Query Device Inventory Page

**Step 2** Check the device(s) for which you want to get an inventory report(s), then click **Submit**.  
The Query Notification Information page appears (see [Figure 3-58](#)).

**Figure 3-58** Query Notification Information Page

## Notification Information

Please mark the notification checkbox and complete the step below if a notification will be sent upon job complete.

|                |                                                                                                                                                                                                                     |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Step 1:</b> | <input type="checkbox"/> Send Notification                                                                                                                                                                          |
| <b>Step 2:</b> | Send upon: <ul style="list-style-type: none"> <li><input type="checkbox"/> Job complete success</li> <li><input type="checkbox"/> Job complete failure</li> <li><input type="checkbox"/> Job is canceled</li> </ul> |
| <b>Step 3:</b> | To: <input type="text"/><br>Subject: <input type="text"/><br>Note: <input type="text"/><br><div style="text-align: right;"> <input type="button" value="Next"/> <input type="button" value="Reset"/> </div>         |

129367

**Step 3** If you want an email notification sent when the query completes, fill in the information on this page, then click **Next**.

**Note** This page is optional. You can continue by clicking **Next**.

The Query Attributes Page appears (see [Figure 3-59](#)).

**Figure 3-59 Query Attributes Page.**

**Query Inventory**

Please complete the steps below to perform an Query Inventory:

The screenshot shows a web form with four steps:

- Step 1:** Radio buttons for "Immediate" (selected) and "At a future time: 00 : 15 (hh:mm) on January 1 2005".
- Step 2:** "Device Batch Size: 2" with a text input field.
- Step 3:** "Timeout (in Minute per Device): 0" with a text input field.
- Step 4:** "Text Description for Job:" with a long text input field.

At the bottom are "Query" and "Cancel" buttons. A vertical ID "129460" is on the right.

- Step 4** Set all applicable attributes, then click **Query**.  
The query is submitted as a **Job**. A page appears indicating the job number for this query.
- Step 5** To check the status of this job, go to **Jobs > Query Job**.
- Step 6** Use the drop-down arrow to select Completed Jobs.
- Step 7** For the Inventory Job you want, click either the job number or the entry in the Status column.  
The Job Status page appears (see [Figure 3-60](#)).

**Figure 3-60 Job Status Page**

**Job Status**

|                      |                              |

 At a future time: 00 : 15 (hh:mm) on January 1 2005

**Step 4:** Text Description for Job: \_\_\_\_\_

Preview Submit Cancel

129462

**Step 4** Complete the steps on this page, then to preview, click **Preview**.

**Step 5** When you are satisfied with the task parameters, click **Submit**.

## Dynamic Operations

Dynamic Operations allows you to perform operations on devices that all respond to having the same attributes based on the Query used to find them.

To use this feature you must have query objects available before starting Dynamic Operations. If no Queries have been created, you will see a message stating that there are no query objects available.

To create a Query, go to the [“Creating Queries”](#) section on page 8-108.

**Step 1** From the Devices Functional Overview page, click **Dynamic Operations**.

The Dynamic Operations page appears (see [Figure 3-65](#)).

**Figure 3-65** *Dynamic Operations Page*

**Dynamic Operations**

Search:

Select Query (required):

Add Group  
 Delete Device  
 Update Config  
 Update Image  
 Query Device Inventory  
 Delete Files on Device

129467

**Step 2** Use the down-arrow key to select the Query you want to use.

**Step 3** Select the operation you want to perform on devices that respond to the Query, then click **List Devices**. The result of the Query appears (see [Figure 3-66](#)).

**Figure 3-66** *Devices Responding to Query*

Following devices are returned after executing the query:

| Devices                                                                                       | Associated Groups |
|-----------------------------------------------------------------------------------------------|-------------------|
|  c7200-1   | /config/default   |
|  c7200-2   | /config/default   |
|  c7200-ha1 | /config/default   |
|  c7200-ha2 | /config/default   |
|  c7200-ha3 | /config/default   |

129468

**Step 4** To continue with the selected operation, click **Next**.
