

Affinity and Anti-Affinity Rules on VMware vCloud Director

Affinity and Anti-Affinity Rules on VMware vCloud Director, on page 1

Affinity and Anti-Affinity Rules on VMware vCloud Director

ESC supports affinity and anti-affinity placement policy for vCD. However, it does not support zone-host placement policy.

The affinity and anti-affinity implementation in ESC depends on the affinity rule (VM-VM affinity rule in vSphere) in the vCloud Director. The example below shows affinity and anti-affinity rules in the vCD VNF deployment datamodel.

```
<deployments>
    <deployment>
      <!-- vApp instance name -->
       <name>d1</name>
       <policies>
         <placement_group>
           <name>d1-placement-affinity-1</name>
           <type>affinity</type>
           <enforcement>strict</enforcement>
           <vm group>g1</vm group>
           <vm group>g2</vm group>
         </placement_group>
       </policies>
      ... . ... . ... . . . . . .
      ... • ... • ... • ... • ...
   </deployment>
</deployments>
```

For vCD deployment, see Deploying Virtual Network Functions on VMware vCloud Director (vCD).
