redundancy, definition 9-3	about 7-1
Registering 8-32	adding
	new computer behind a modem with NAT 7-32
<u></u>	new computer in fixed standard mode 7-10
3	second computer in promiscuous mode 7-31
Searching 8-48	bulk provisioning modems in promiscuous mode <b>7-25</b>
Search Operation 8-30	CableHome with firewall configuration 7-54
Secure Sockets Layer See SSL	creating API client 7-3
	disabling subscriber 7-13
Session Management 8-2	getting detailed device information <b>7-35</b>
Session Operations 8-6 shared secret	incremental provisioning of PacketCable eMTA 7-4
definition 9-3	logging
SNMP	batch completions using events 7-35
cloning on RDU, DPE	device deletions using events 7-33
PacketCable eMTA (use case) 7-44	modifying an existing modem 7-17
SSL	monitoring RDU connection using events 7-34
definition 9-3	moving device to another DHCP scope 7-32
Supported 8-51	optimistic locking 7-49
System 1-2	preprovisioning
	CableHome WAN-MAN <b>7-53</b>
	DOCSIS modems with configuration files 7-48
Т	first-time activation in promiscuous mode <b>7-27</b>
TCP <b>3-2</b>	modems and self-provisioned computers 7-15
template files, developing	PacketCable eMTA 7-42
template file definition 9-4	replacing existing modem 7-29
TLS	retrieving capabilities for CableHome WAN-MAN <b>7-56</b>
definition 9-4	searching for devices using class of service 7-41
See SSL	searching for devices using vendor prefix 7-41
Transactionality 8-2	searching using default class of service 7-40
Transport Layer Security	self-provisioning
See TLS	CableHome WAN-MAN 7-57
	first-time activation in promiscuous mode 7-22
U	first-time activation with NAT <b>7-31</b>
	modem, computer in fixed standard mode 7-7
Unregistering 8-36	SNMP cloning on PacketCable eMTA 7-44
Updating 8-43	subscriber bandwidth, temporarily throttling 7-51
use cases	unregistering, deleting subscriber device 7-18
