

Command Reference

This appendix contains necessary information on disk space management for all types of deployments and an alphabetical listing of the commands specific to the . The comprise the following modes:

- EXEC
 - System-level
 - Show
- Configuration
 - configuration submode

Use EXEC mode system-level config or configure command to access configuration mode.

Each of the commands in this appendix is followed by a brief description of its use, command syntax, any command defaults, command modes, usage guidelines, and one or more examples. Throughout this appendix, the server uses the name *ncs* in place of the server's hostname.

Note

If an error occurs in any command usage, use the **debug** command to determine the cause of the error.

- EXEC Commands, on page 1
- show Commands, on page 66
- Configuration Commands, on page 97

EXEC Commands

This section lists each EXEC command and each command page includes a brief description of its use, command syntax, any command defaults, command modes, usage guidelines, and an example of the command and any related commands.

application start

To start the application process, use the **application start** command in EXEC mode. There is **no** form of this command.

I

Note	This command does not work in FIPS release.		
	application start application-name		
Syntax Description	application-name	Name of the predefined application that you want to enable. Up to 255 alphanumeric characters.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Enables an application.		
	You cannot use this command to start the application can see that the is already running.	on. If you use this command to start the application, you	
	pi-system-117/admin# application start ncs % Application failed to start pi-system-117/admin#		

Related Commands	Command	Description
	application stop	Stops or disables an application.
	application upgrade	Upgrades an application bundle.
	show application	Shows application information for the installed application packages on the system.

application stop

To stop the PI process, use the **application stop** command in EXEC mode. There is no **No** form of this command.

Note	This command does not work in FIPS release.	
Syntax Description	application-name	Name of the predefined application that you want to disable. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	

Command Modes	EXEC
Usage Guidelines	Disables an application.
	pi-system-117/admin# application stop ncs % Application failed to stop pi-system-117/admin#

Related Commands

	Description
application start	Starts or enables an application.
application upgrade	Upgrades an application bundle.
show application	Shows application information for the installed application packages on the system.

application upgrade

To upgrade lower version to higher version (supported version), use the **application upgrade** command in EXEC mode.

application upgrade application-bundle repository-name

Syntax Description	application-bundle	Enter the upgrade bundle name.	
	remote-repository-name	Remote repository name (up to 80 alphanumeric characters).	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Upgrades an application bundle, and preserves any application configuration data.		
	If you enter the application upgrade command when another application upgrade operation is in progress, you will see the following warning message:		
۵	An existing application install,	remove, or upgrade is in progress. Try again shortly.	
Caution	Do not enter the backup or restore co database to be corrupted.	mmands when the upgrade is in progress. This action might cause the

	application stop	Stops or disables an application.	
		1	

Command	Description
show application	Shows application information for the installed application packages on the system.

backup

Appliance Backup: To perform a backup (including the and Cisco ADE OS data) and place the backup in a repository, use the **backup** command in EXEC mode.

Application Backup: To perform a backup of only the application data without the Cisco ADE OS data, use the **application** keyword command.

Command for Appliance Backup:

backup backup-name repository repository-name

Command for Application Backup

backup backup-name repository repository-name application application-name

Syntax Description	backup-name		of the backup file. Up to 26 alphanumeric ters is recommended.	
	repository-name		of the location where the files should be backed Up to 80 alphanumeric characters.	
	application-name	Applic	Application name. Up to 255 alphanumeric characters.	
		Note	Enter the application name as 'NCS' in uppercase.	
Command Default	No default behavior or values.			
Command Modes	EXEC			
Usage Guidelines	Performs a backup of the and Cisco AD	DE OS data and places	the backup in a repository.	
	To perform a backup of only the application	ation data without the	Cisco ADE OS data, use the application	

Example for Appliance Backup

pi-system-117/admin# backup MySysBkp repository defaultRepo

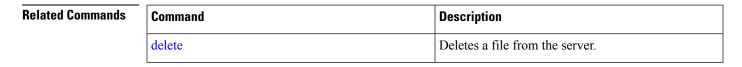

DO NOT press ^C while the backup is in progress Aborting backup with a ^C may terminate the backup operation or the backup file may \ be corrupted To restore this backup you will have to enter this password Password : Password Again :

command.

  Total Backup duration is: 0h:2m:1s
pi-system-117/admin#
```

Command	Description
repository	Enters the repository submode for configuration of backups.
restore	Restores from backup the file contents of a specific repository.
show backup history	Displays the backup history of the system.
show repository	Displays the available backup files located on a specific repository.

backup-logs

To back up system logs, use the **backup-logs** command in EXEC mode. There is no **no** form of this command.

backup-logs backup-name repository repository-name

Syntax Description	backup-name	Name of one or more files to back up. Up to 100 alphanumeric characters.
	repository-name	Location where files should be backed up to. Up to 80 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	

Usage Guidelines Backs up system logs.

```
pi-admin/admin# backup-logs log-backup repository defaultRepo
% Creating log backup with timestamped filename: log-backup-150621-1618.tar.gz
Transferring file ...
-- complete.
pi-system/admin#
```

Related Commands (

mmands	Command	Description
	repository	Enters the repository submode for configuration of backups.
	show repository	Shows the available backup files located on a specific repository.

banner

To set up messages while logging (pre-login) in to CLI, use the **banner install pre-login** command.

	repository-name	Repository name.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	admin# banner install pre-login test.txt re	epository defaultRepo
Related Commands	Command	Description

banner install pre-login banner-text-filename repository Repository-name

Related Commands	Command	Description
	show banner pre-login, on page 68	Enables you to display a pre-login banner.

clock

To set the system clock, use the **clock** command in EXEC mode. You cannot remove this function but reset the clock.

clock set [mmm dd hh:mm:ss yyyy]

Syntax Description	mmm	Current month of the year by name. Up to three alphabetic characters. For example, Jan for January.
	dd	Current day (by date) of the month. Value = 0 to 31 . Up to two numbers.
	hh:mm:ss	Current time in hours (24-hour format), minutes, and seconds.
	уууу	Current year (no abbreviation).
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Sets the system clock. You must re	estart the server after you reset the clock for the change to take effect.

pi-system/admin# clock set nov 16 18:00:00 2017 pi-system-81/admin# show clock Thu Nov 16 18:00:05 IST 2017 pi-system/admin#

Related Commands	Command	Description
	show clock	Displays the time and date set on the system software clock.

configure

To enter configuration mode, use the **configure** command in EXEC mode. If the **replace** option is used with this command, copies a remote configuration to the system which overwrites the existing configuration.

configure terminal

Syntax Description	terminal	Executes configuration commands from the terminal.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Use this command to enter configuration file as soon as you ent	ation mode. Note that commands in this mode write to the running er them (press Enter).
	To exit configuration mode and retu	rn to EXEC mode, enter end, exit, or pressCtrl-z.
	To view the changes that you have n EXEC mode.	nade to the configuration, use the show running-config command in
	Example 1	
	<pre>ncs/admin# configure Enter configuration commands, ncs/admin(config)#</pre>	one per line. End with CNTL/Z.
	Example 2	
	ncs/admin# configure terminal	

```
ncs/admin# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ncs/admin(config)#
```

Related Commands Command Description show running-config Displays the contents of the currently running configuration file or the configuration. show startup-config Displays the contents of the startup configuration file or the configuration.

сору

To copy any file from a source to a destination, use the copy command in EXEC mode.

Syntax Description	running-config	Represents the current running configuration file.	
	startup-config	Represents the configuration file used during initialization (startup).	
	protocol	See Table 1: Protocol Prefix Keywords for protocol keyword options.	
	hostname	Hostname of destination.	
	location	Location of disk:/ <dirpath>.</dirpath>	
	logs	The system log files.	
	all	Copies all log files from the system to another location. All logs are packaged as ncslogs.tar.gz and transferred to the specified directory on the remote host.	
	filename	Allows you to copy a single log file and transfer it to the specified directory on the remote host, with its original name.	
	log_filename	Name of the log file, as displayed by the show logs command (up to 255 characters).	
	mgmt	Copies the management debug logs and Tomcat logs from the system, bundles them as mgmtlogs.tar.gz, and transfers them to the specified directory on the remote host.	
	runtime	Copies the runtime debug logs from the system, bundles them as runtimelogs.tar.gz, and transfers them to the specified directory on the remote host.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	configuration file) from one location to a the file system, through which you can	command allows you to copy a file (such as a system image or another location. The source and destination for the file specified use specify any supported local or remote file location. The file system remote system) dictates the syntax used in the command.	
	You can enter on the command line all of the necessary source and destination information and the username		

You can enter on the command line all of the necessary source and destination information and the username and password to use; or, you can enter the **copy** command and have the server prompt you for any missing information. You can enter up to a maximum of 2048 characters of source and destination URL information on the command line.

The copy command in the copies a configuration (running or startup).

The active configuration stores itself in the RAM. Every configuration command you enter resides in the running configuration. If you reboot your server, you lose the running configuration. If you make changes that you want to save, you must copy the running configuration to a safe location, such as a network server, or save it as the server startup configuration.

You cannot edit a startup configuration directly. All commands that you enter store themselves in the running configuration, which you can copy into the startup configuration.

In other words, when you boot a server, the startup configuration becomes the initial running configuration. As you modify the configuration, the two diverge: the startup configuration remains the same; the running configuration reflects the changes that you have made. If you want to make your changes permanent, you must save the running configuration to the startup configuration using the **write memory** command. The **write memory** command makes the current running configuration permanent.

Note

If you do not save the running configuration, you will lose all your configuration changes during the next reboot of the server. You can also save a copy of the running and startup configurations using the following commands, to recover in case of loss of configuration:

copy startup-config location

copy running-config location

Note The **copy** command is supported only for the local disk and not for a repository.

Tip Aliases reduce the amount of typing that you need to do. For example, type **copy run start** (the abbreviated form of the **copy running-config startup-config** command).

The entire copying process might take several minutes and differs from protocol to protocol and from network to network.

Use the filename relative to the directory for file transfers.

Possible error is the standard FTP error message.

Table 1: Protocol Prefix Keywords

Keyword	Destination
ftp	URL for FTP network server. The syntax for this alias:
	ftp://location/directory

Keyword	Destination
sftp	URL for an SFTP network server. The syntax for this alias: sftp://location/directory
	SFTP Repositories may require the // between the IP address/FQDN and the physical path on the SFTP store. If you find that you cannot access the SFTP repository with single slashes, add the additional slash and try the operation again. For example: url sftp://server//path
	Note The remote sftp servers need to be enabled for 'password authentication' (keyboard-interactive mode does not work for sftp transfers). See the documentation on sshd server used at the remote end, to enable password authentication.
	Depending on the SFTP software used with the remote server, you may need to enable "password authentication" instead of "keyboard-interactive mode". Enabling "password authentication" is required; copy to remote SFTP servers will not work unless it is enabled. For example: With OpenSSH 6.6x, "keyboard-interactive mode" is the default. To enable "password authentication", edit the OpenSSH sshd_config file to set the PasswordAuthentication parameter to "yes", as follows: PasswordAuthentication yes.
tftp	URL for a TFTP network server. The syntax for this alias:
	tftp://location/directory

Example 1

```
ncs/admin# copy run start
Generating configuration...
ncs/admin#
```

Example 2

```
ncs/admin# copy running-config startup-config
Generating configuration...
ncs/admin#
```

Example 3

ncs/admin# copy start run
ncs/admin#

Example 4

```
ncs/admin# copy startup-config running-config
ncs/admin#
```

Example 5

```
ncs/admin# copy logs disk:/
Collecting logs...
ncs/admin#
```

Example 6

This command is used to copy the certificate from ftp tp pnp.

```
copy tftp://<PI Server IP Address>/server.key disk:/
copy tftp://<PI Server IP Address>/server.crt disk:/
copy tftp://<PI Server IP Address>/ncs_server_certificate.crt disk:/
```

Related Commands	Command	Description
	delete	Deletes a file from the server.
	dir	Lists a file from the server.

debug

To display errors or events for command situations, use the **debug** command in EXEC mode.

debug{all | application | backup-restore | cdp | config | icmp | copy | locks | logging | snmp | system | transfer | user | utils}

Syntax Description	all	Enables all debugging.
	application	Application files.
		• <i>all</i> —Enables all application debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>install</i> —Enables application install debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>operation</i> —Enables application operation debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
		• <i>uninstall</i> —Enables application uninstall debug output. Set level between 0 and 7, with 0 being severe and 7 being all.

backup-restore	Backs up and restores files.
	• <i>all</i> —Enables all debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>backup</i> —Enables backup debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>backup-logs</i> —Enables backup-logs debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	 <i>history</i>—Enables history debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>restore</i> —Enables restore debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
cdp	Cisco Discovery Protocol configuration files.
	• <i>all</i> —Enables all Cisco Discovery Protocol configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>config</i> —Enables configuration debug output for Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>infra</i> —Enables infrastructure debug output for Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.

level between 0 and 7, with 0 being so 7 being all. • backup—Enables backup configuratic output. Set level between 0 and 7, wit severe and 7 being all. • clock—Enables clock configuration infastr debug output. Set level between 0 and 7, wit severe and 7 being all. • infra—Enables configuration infrastr debug output. Set level between 0 and being severe and 7 being all. • krom—Enables command scheduler condebug output. Set level between 0 and being severe and 7 being all. • network—Enables network configuration upt. Set level between 0 and being severe and 7 being all. • network—Enables network configuration output. Set level between 0 and being severe and 7 being all. • network—Enables repository config debug output. Set level between 0 and being severe and 7 being all. • network—Enables repository config debug output. Set level between 0 and being severe and 7 being all. • network—Enables repository config debug output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables all debug output for ICMP eche configuration. copy Copy commands. Set level between 0 and 7, wit severe and 7 being all. locks Resource locking. • all—Enables all resource locking debi Set level	Configuration files.
output. Set level between 0 and 7, wit severe and 7 being all. • clock—Enables clock configuration infrastrudebug output. Set level between 0 and 7, wit severe and 7 being all. • infra—Enables configuration infrastrudebug output. Set level between 0 and being severe and 7 being all. • kron—Enables command scheduler condebug output. Set level between 0 and being severe and 7 being all. • kron—Enables command scheduler condebug output. Set level between 0 and being severe and 7 being all. • network—Enables network configuration output. Set level between 0 and 7, wit severe and 7 being all. • network—Enables network configuration output. Set level between 0 and being severe and 7 being all. • network—Enables repository config debug output. Set level between 0 and being severe and 7 being all. • network—Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service of guration output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables all debug output for ICMP echa configuration. all—Enable all debug output for ICMP echa configuration. copy Copy commands. Set level between 0 and 7, wit severe and 7 being all. locks Resource locking. • all—Enable all resource locking debug severe and 7 being all.	• <i>all</i> —Enables all configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
output. Set level between 0 and 7, wit severe and 7 being all. • <i>infra</i> —Enables configuration infrastru debug output. Set level between 0 and being severe and 7 being all. • <i>kron</i> —Enables command scheduler condebug output. Set level between 0 and being severe and 7 being all. • <i>kron</i> —Enables network configuration output. Set level between 0 and 7, wit severe and 7 being all. • <i>network</i> —Enables network configuration output. Set level between 0 and 7, wit severe and 7 being all. • <i>repository</i> —Enables repository configuration output. Set level between 0 and 7, wit severe and 7 being all. • <i>service</i> —Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. • <i>service</i> —Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. • <i>service</i> —Enables all debug output for ICMP eche configuration. Set level between 0 and 7, wit severe and 7 being all. copy Copy commands. Set level between 0 and 2, wit severe and 7 being all. locks Resource locking. • <i>all</i>	• <i>backup</i> —Enables backup configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
debug output. Set level between 0 and being severe and 7 being all. • kron—Enables command scheduler con debug output. Set level between 0 and being severe and 7 being all. • network—Enables network configurat output. Set level between 0 and 7, wit severe and 7 being all. • repository—Enables repository config debug output. Set level between 0 and 7, wit severe and 7 being all. • repository—Enables repository config debug output. Set level between 0 and being severe and 7 being all. • service—Enables service configuratio output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. icmp Internet Control Message Protocol (ICMP) response configuration. all—Enable all debug output for ICMP eche configuration. Set level between 0 and 7, wit severe and 7 being all. copy Copy commands. Set level between 0 and 7, wit severe and 7 being all. locks Resource locking. • all—Enables all resource locking debu Set level between 0 and 7, with 0 bein and 7 being all.	• <i>clock</i> —Enables clock configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
debug output. Set level between 0 and being severe and 7 being all. • network—Enables network configurat output. Set level between 0 and 7, wit severe and 7 being all. • repository—Enables repository config debug output. Set level between 0 and 7, wit severe and 7 being all. • repository—Enables service configuratio output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuratio output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuration output. Set level between 0 and 7, wit severe and 7 being all. icmp Internet Control Message Protocol (ICMP) response configuration. all—Enable all debug output for ICMP echo configuration. Set level between 0 and 7, wit severe and 7 being all. copy Copy commands. Set level between 0 and 7 being all. locks Resource locking. • all—Enables all resource locking debu Set level between 0 and 7, with 0 bein and 7 being all.	• <i>infra</i> —Enables configuration infrastructure debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
output. Set level between 0 and 7, wit severe and 7 being all. • repository—Enables repository config debug output. Set level between 0 and being severe and 7 being all. • service—Enables service configuratio output. Set level between 0 and 7, wit severe and 7 being all. • service—Enables service configuratio output. Set level between 0 and 7, wit severe and 7 being all. icmp Internet Control Message Protocol (ICMP) response configuration. all—Enable all debug output for ICMP echo configuration. being severe and 7 being all. locks Resource locking. • all—Enables all resource locking debu Set level between 0 and 7, with 0 bein and 7 being all.	<i>all</i> —Enable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.
• <i>all</i> —Enables all resource locking debu Set level between 0 and 7, with 0 bein and 7 being all.	Copy commands. Set level between 0 and 7, with 0 being severe and 7 being all.
Set level between 0 and 7, with 0 bein and 7 being all.	Resource locking.
	• <i>all</i> —Enables all resource locking debug output Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>file</i> —Enables file locking debug output. Set level between 0 and 7, with 0 being severe and 7 being all.

logging	Logging configuration files.
	<i>all</i> —Enables all logging configuration debug output Set level between 0 and 7, with 0 being severe and 7 being all.
snmp	SNMP configuration files.
	<i>all</i> —Enables all SNMP configuration debug output Set level between 0 and 7, with 0 being severe and 7 being all.
system	System files.
	• <i>all</i> —Enables all system files debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>id</i> —Enables system ID debug output. Set level between 0 and 7, with 0 being severe and 7 bein all.
	• <i>info</i> —Enables system info debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>init</i> —Enables system init debug output. Set level between 0 and 7, with 0 being severe and 7 bein all.
transfer	File transfer. Set level between 0 and 7, with 0 bein severe and 7 being all.
user	User management.
	• <i>all</i> —Enables all user management debug outpu Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>password-policy</i> —Enables user management debug output for password-policy. Set level between 0 and 7, with 0 being severe and 7 bein all.
utils	Utilities configuration files.
	<i>all</i> —Enables all utilities configuration debug outpu Set level between 0 and 7, with 0 being severe and being all.

Command Modes EXEC

Command Default

Usage Guidelines Use the **debug** command to identify various failures within the server; for example, setup failures or configuration failures.

```
ncs/admin# debug all
ncs/admin# mkdir disk:/1
ncs/admin# 6 [15347]: utils: vsh_root_stubs.c[2742] [admin]: mkdir operation success
ncs/admin# rmdir disk:/1
6 [15351]: utils: vsh_root_stubs.c[2601] [admin]: Invoked Remove Directory disk:/1 command
6 [15351]: utils: vsh_root_stubs.c[2663] [admin]: Remove Directory operation success
ncs/admin#
ncs/admin# undebug all
ncs/admin#
```

Related Commands

Command	Description
undebug	Disables the output (display of errors or events) of the debug command for various command situations.

delete

To delete a file from the server, use the **delete** command in EXEC mode. There is no **no** form of this command.

delete *filename* [*disk:/path*]

Syntax Description	filename	Filename.
	disk:/path	Location.
Command Default	No default behavior or value	es.
Command Modes	EXEC	
Usage Guidelines	5 1	configuration file or image, the system prompts you to confirm the deletion. Also, ast valid system image, the system prompts you to confirm the deletion.
	ncs/admin# delete disk: , ncs/admin#	/hs_err_pid19962.log
Related Commands	Command	Description

Related Commands Co	ommand	Description
dir	r	Lists all of the files on the server.

dir

To list a file from the server, use the **dir** command in EXEC mode. To remove this function, use the **no** form of this command.

dir [word][recursive]

Syntax Description	word	Directory name. Up to 80 alphanumeric characters. Requires disk: / preceding the directory name.
	recursive	Lists a local directory or filename recursively.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Related Commands	Command	Description
	delete	Deletes a file from the server.

exit

To close an active terminal session by logging out of the server or to move up one mode level from configuration mode, use the **exit** command in EXEC mode.

	exit
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	Use the exit command in EXEC mode to exit an active session (log out of the server) or to move up from configuration mode.

ncs/admin# **exit**

Related Commands	Command	Description
	end	Exits configuration mode.
	exit	Exits configuration mode or EXEC mode.
	Ctrl-z	Exits configuration mode.

forceout

To force users out of an active terminal session by logging them out of the server, use the **forceout** command in EXEC mode.

forceout username

I

Syntax Description	username	The name of the user. Up to 31 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	ncs/admin# forceout user1 ncs/admin#	
halt		
	To shut down and power off the system, us	e the halt command in EXEC mode.
	halt	
	This command has no arguments or keywo	rds.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	· · · · · · · · · · · · · · · · · · ·	that the is not performing any backup, restore, installation, upgrade, ommand while the is performing any of these operations, you will :
	WARNING: A backup or restore is curr	cently in progress! Continue with halt?
	WARNING: An install/upgrade/remove i	s currently in progress! Continue with halt?
	If you get any of these warnings, enter YEs	s to halt the operation, or enter NO to cancel the halt.
	If no processes are running when you use t message displayed, the asks you to respond	he halt command or if you enter Yes in response to the warning I to the following option:
	Do you want to save the current conf	iguration ?
	Enter YES to save the existing configuration	on. The displays the following message:
	Saved the running configuration to s	startup successfully
	<pre>pi-system/admin# halt Save the current ADE-OS running conf Generating configuration Saved the ADE-OS running configurati Continue with shutdown? [y/n] y Broadcast message from root (pts/0) The system is going down for system Server is shutting down</pre>	on to startup successfully (Wed May 5 18:37:02 2010):

Related Commands	Command	Description
	dir	Displays a list of files on the server.
	rmdir	Removes an existing directory.

ncs run client-auth

You can enable client certificate authentication on your Prime Infrastructure application using **ncs run client-auth** command.

ncs run client-auth enable

ncs run client-auth disable

Command Default No default behavior or values.

EXEC

pi-system-117/admin# ncs run client-auth enable

WARNING :

This feature requires the CA certificate to be installed on the system. Please use the command 'ncs key importcacert ..." to import the certificate of the CA used to sign the client certificates. Ignore this warning if the CA certificate is already installed.

Use the 'disable' option of this command, to disable client authentication, if not required.

client_auth status : enabled
pi-system-117/admin#

pi-system-117/admin# ncs run client-auth disable
client_auth status : disabled
pi-system-117/admin#

ncs run list

Command Modes

To display the list of commands associated with NCS, use ncs run list command in EXEC mode.

ncs run list

Command Default No default behavior or arguments

Command Modes EXEC

pi-system-61/admin# ncs run list commands : list - prints this list test iops - tests the disk write performance reset [db|keys] - reset database and keys to default factory settings csrf [disable|enable] - enable or disable CSRF protection client-auth [disable|enable] - enable or disable client certificate based authentication jms [disable|enable] - enable or disable message bus connectivity (port 61617) sshclient-nonfips-ciphers [disable|enable] - enable or disable non fips compliant ciphers for outgoing ssh client connections to devices ssh-server-dhlkey [disable|enable] - enable or disable DH group1 for SSH service. tls-server-versions <tls versions> - set the TLS versions to be enabled for TLS service -TLSv1.2 TLSv1.1 TLSv1 tls-server-ciphers <tls cipher groups> - set the TLS cipher group to be enabled for TLS service - tls-ecdhe tls-dhe tls-static ssl-static livelogs [all|secure|ade|messages] - view live audit logs loghistory [all|secure|ade|messages] - view audit logs

ncs run test iops

To test and view details of the input output operations on your Prime Infrastructure, use **ncs run test iops** command in EXEC mode.

ncs run test iops

Command Default No default behavior or values.

Command Modes EXEC

pi-242/admin# ncs run test iops
Testing disk write speed ...
8388608+0 records in
8388608+0 records out
8589934592 bytes (8.6 GB) copied, 33.4561 s, 257 MB/s

ncs run reset

You can use **ncs run reset** command to delete all private keys from your Prime Infrastructure server and to clean a corrupted Database. Resetting the DB clears all existing data and replaces it with empty data.

ncs run reset { db | keys }

Syntax Description	db	Resets DB wth empty data.
	keys	Deletes all private keys from Prime Infrastructure server.

Command Default No default behavior or values.

Command Modes EXEC

pi-system-61/admin# ncs run reset db

This example shows how to delete all private keys in server:

pi-system-61/admin# ncs run reset keys This will delete all the private keys and may impact webserver, SSH service etc. Do you want to proceed [yes/no] [no]? **yes**

ncs run csrf

The cross-site request forgery check can be disabled (not recommended). The CLI provided only for backward compatibility with API clients which are not programmed for CSRF protection. For CSRF protection, this option should be enabled using the following command.

ncs run csrf enable

To disable, use the following command:

ncs run csrf disable

Command Default	No default behavior or values.	

Command Modes EXEC

pi-cluster-93/admin# ncs run csrf enable

pi-cluster-93/admin# ncs run csrf disable

ncs run pnp-ciphers

You can enable or disable weak ciphers for the HTTPS port for Plug and Play using **ncs run pnp-ciphers** command. To enable or disable, use the following commands:

ncs run pnp-ciphers enable

ncs run pnp-ciphers disable

Command Default No default behavior or values.

Command Modes EXEC

pi-cluster-93/admin# ncs run pnp-ciphers enable
*** WARNING ***
The cipher suite "SSL_RSA_WITH_DES_CBC_SHA" is enabled. This cipher suite is
required for Plug and Play functionality to work with CNS Agent in Secure mode.
This is considered a weak cipher, and security scans may detect the presence of
this cipher suite and flag as a vulnerability.
Use the 'disable' option of this command, to disable this cipher, if not required.

ncs run jms

Prime Infrastructure can send notifications to a Java Message Server (JMS) whenever there are changes in inventory or configuration parameters that are part of an audit you have defined. You can enable or disable this feature using **ncs run jms** command.

ncs run jms enable

ncs run jms disable

Command Default No default behavior or values.

Command Modes EXEC

pi-cluster-93/admin# ncs run jms enable

pi-cluster-93/admin# ncs run jms disable Connectivity to the JMS (message bus) from external servers disabled. Connectivity is required for external PnP Gateway servers to interact with the Prime Infrastructure server.

Use the 'enable' option of this command, to enable connectivity again.

ncs run livelogs

You can run ncs run livelogs command to view live audit logs. **ncs run livelogs** { *all* | *secure* | *ade* | *messages* } No default behavior or values. **Command Default** EXEC **Command Modes** pi-system-120/admin# ncs run livelogs ***Available filter options to limit logs - all secure ade messages*** **************Press Ctrl+C for stop logging**** 2018-02-28T01:48:39.407787+05:30 pi-system-120 sshd[10309]: pam unix(sshd:session): \ session closed for user admin 2018-02-28T01:50:14.109435+05:30 pi-system-120 sshd[32038]: pam tally2(sshd:account): option unlock time=60 allowed in auth phase only 2018-02-28T01:50:14.109456+05:30 pi-system-120 sshd[32038]: pam tally2(sshd:account): unknown option: no reset 2018-02-28T01:50:14.112152+05:30 pi-system-120 sshd[32038]: pam unix(sshd:session): \ session opened for user admin by (uid=0) 2018-02-28T02:00:57.499844+05:30 pi-system-120 sshd[32038]: pam unix(sshd:session): session closed for user admin 2018-02-28T02:04:28.870085+05:30 pi-system-120 su: pam unix(su:session): session opened for user oracle by (uid=0) 2018-02-28T02:04:28.976462+05:30 pi-system-120 su: pam unix(su:session): session closed for user oracle 2018-02-28T02:21:30.485537+05:30 pi-system-120 sshd[6381]: pam tally2(sshd:account): option unlock time=60 allowed in auth phase only 2018-02-28T02:21:30.485556+05:30 pi-system-120 sshd[6381]: pam tally2(sshd:account): unknown option: no reset 2018-02-28T02:21:30.488589+05:30 pi-system-120 sshd[6381]: pam_unix(sshd:session): \ session opened for user admin by (uid=0)

ncs run tls-server-versions

To set the TLS (Transport Layer Security) version, use ncs run tls-server-versions command in EXEC mode.

	ncs run tls-server-version <tls th="" ve<=""><th>rsion></th></tls>	rsion>	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	The following example illustrates the	use of the ncs run set-tls-versionscommand:	
	Error : Invalid TLS version - T	s-server-versions TLSv1.1 TLSv1.2 .1,TLSv1.2	
Warning	•	nmediate software restart. It is suggested you perform a failover and in both primary and secondary servers.	
	Related Topics Ensuring Primary HA Server Ch	anges are Replicated	
ncs start			
	To start the server, use the ncs start of	command.	
	ncs start [verbose]		
Syntax Description	verbose	Displays the detailed messages during the start process.	

Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	To see the messages in the console, use the ncs start verbose command.		
	This example shows how to start the server:		
	pi-common-133/admin# ncs start verbose

Related	Commands
---------	----------

Command	Description
ncs start	Starts the server.
ncs stop	Stops the server.

ncs run tls-server-ciphers

You can enable a TLS cipher group using ncs run tls-server-ciphers command in EXEC mode.

ncs run tls-server-ciphers { *tls-ecdhe* | *tls-dhe* | *tls-static*

Syntax Description

tls-ecdhe

Refers to tls cipher group ecdhe

	tls-dhe	Refers to tls cipher group dhe
	tls-static	Refers to tls cipher group static
Command Default	No default behavior or values.	
	admin# ncs run tls-server-ciphers tls-ecdhe Enabled TLS cipher groups are - tls-ecdhe	

ncs password ftpuser

To change the FTP username and password, use the **ncs password ftpuser** command in EXEC mode.

Note

The value for ftpuser in the above command should always be set to ftp-user.

After you enable the ftp-user, you can FTP files to and from the /localdisk/ftp folder on standalone or, if configured, High Availability primary servers only. You cannot use change directory (cd) or list directory (ls) functionality with ftp-user.

ncs passwod ftpuser ftp-user password password

Restart is required for the changes to take effect

```
      Syntax Description
      ftp-user
      The FTP user name

      Command Default
      No default behavior or values.
      No default behavior or values.

      Command Modes
      EXEC
      EXEC

      This example shows how to change the FTP username and password:
      pi-system-65/admin# ncs password ftpuser ftp-user password Passwordl23

      Updating FTP password
      Saving FTP account password in credential store

      Synching FTP account password to system store
      Completed FTP password update

      pi-system-65/admin#
      Saving FTP account password to system store
```

ncs password root password

To change the root password, use the ncs password root password command in EXEC mode.

ncs password root password userpassword

.		
Syntax Description	userpassword	Password for the root user.
Command Default	No default behavior of	values.
Command Modes	EXEC	
	This example shows h	w to migrate archived files to server:
	pi-systems/admin# r Password updated fo pi-systems/admin#	s password root password Userpassword web root user
ncs ha authk	key	
	To enter the authentica	ion key for high availability (HA), use the ncs ha authkey command in EXEC mode.
	ncs ha authkey auth	rization key
Syntax Description	<i>authorization key</i> T	e authorization key for high availability. Up to 81 alphanumeric characters.
Command Default	No default behavior of	values.
Command Modes	EXEC	
Usage Guidelines The ncs ha authkey command changes the authorization for the health monitor.		mmand changes the authorization for the health monitor.
	This example shows h	w to set up the authorization key for high availability:
	Going to update pri Successfully update	ha authkey cisco123 Mary authentication key I primary authentication key Med Primary updated authentication key to Secondary Server
Related Commands	Command	Description
	ncs ha remove	Removes the high availability configuration settings from .
	ncs ha status	Provides the current status of high availability.

ncs ha remove

To remove the high availability configuration settings from , use the **ncs ha remove** command in EXEC mode.

ncs ha remove

I

Syntax Description	This command has no arguments or keywords.	
Command DefaultNo default behavior or values.Command ModesEXEC		
		Usage Guidelines
	High availability configuration will be removed. Do you wish to continue? (Y/N)	
	Example	
	pi-system/admin# ncs ha remove High availability configuration will be removed Do you wish to continue? (y/N) y	
	Removing primary configuration will remove all database information Primary is attempting to remove high availability configuration from both primary \ and secondary Successfully removed high availability configuration pi-system/admin#	

Related Commands	Command	Description
	ncs ha authkey	Allows you to enter the authentication key for high availability in . This command also changes the authorization for the health monitor.
	ncs ha status	Provides the current status of high availability.

ncs ha status

To display the current status of high availability (HA), use the ncs ha status command in EXEC mode.

	ncs ha status
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	Displays the current status of HA.
	If you enter the ncs ha status command when HA is not configured, you will see the following response:
	[State] Stand Alone

Example 1: When HA is not configured

```
pi-system/admin# ncs ha status
[Role] Primary [State] HA not Configured
pi-systems/admin#
```

Example 2: When HA is configured

In Primary server:

```
pi-system/admin# ncs ha status
[Role] Primary [Secondary Server] 10.197.71.162(10.197.71.162) [State] Primary
Active [Failover Type] Automatic
pi-system/admin#
```

In Secondary server:

```
pi-system/admin# ncs ha status
[Role] Secondary [Primary Server] pi-system-161(10.197.71.161) [State] Secondary
Syncing [Failover Type] Automatic
pi-system/admin#
```

Related Commands	Command	Description
	ncs ha authkey	Allows you to enter the authentication key for high availability in . This command also changes the authorization for the health monitor.
	ncs ha remove	Removes the high availability configuration.

ncs key genkey

To generate a new RSA key and self-signed certificate, use the **ncs key genkey** command. You can use this command in the following ways:

ncs key genkey -newdn -csr csrfilename repository repositoryname

Syntax Description	genkey	Generates a new RSA key and self-signed certificate. You can use the following options with this command:
		-csr: Generate Certificate Signing Request(CSR) file
		-newdn : Generate new RSA key and self-signed certificate with domain information
		<cr></cr> : Carriage return.

I

	-newdn	Generates a new RSA key and self-signed cert with	
		domain information. You can use the following options with this command:	
		-csr: Generate Certificate Signing Request(CSR) file	
		<cr></cr> : Carriage return.	
	-csr	Generates new CSR certificate file. You can use the following option with this command:	
		<word></word> : Type in certificate file name (Max Size - 80)	
	csrfilename	CSR filename.	
	repository	Repository command. This option is available when you use the -csr option.	
	repositoryname	Location where the files should be backed up to. Up to 80 alphanumeric characters.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	This example shows how to generate new rsa key and certificate files in the Prime Infrastructure server:		
	pi-cluster-88/admin# ncs key genkey -newdn -csr test.csr repository defaultRepo		
	Changes will take affect on the next Enter the fully qualified domain n. Enter the name of your organization Enter the name of your organization Enter the name of your city or lock Enter the name of your state or pre Enter the two letter code for your Specify subject alternate names. If none specified, CN will be use Use comma seperated list - DNS: <name< th=""><th><pre>ame of the server !!!!: pi-cluster-88.cisco.com n unit !!!!!!!!!!!!: cisco n !!!!!!!!!!!!!!: hcl ality !!!!!!!!!!!!!: chennai ovince !!!!!!!!!!!!! tn country !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!</pre></th></name<>	<pre>ame of the server !!!!: pi-cluster-88.cisco.com n unit !!!!!!!!!!!!: cisco n !!!!!!!!!!!!!!: hcl ality !!!!!!!!!!!!!: chennai ovince !!!!!!!!!!!!! tn country !!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!</pre>

	Key and CSR/Certificate will be gene Subject : /C=US/ST=tn/L=chennai/O=hcl/OU=cisco	rated with following details /CN=pi-cluster-88.cisco.com uster-88.cisco.com,IP:10.126.168.88	
		es will take affect on the next server restart d list of FQDN and IP of PI servers where you want to from CA.	

To import same CA in other server, you need to import the key from the server where you generate CSR and them import the CA certiifcates.

Note

You will get csr file generated in location where repository is pointing. Use that csr file get CA certificate or signed certificate from any CA agent.

Related Commands

Command	Description
ncs key importcacert	Applies a CA certificate to the trust store in Prime Infrastructure.
ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infrastructure trust store.
ncs key deletecacert	Deletes a CA certificates that exist in the Prime Infrastructure trust store.
ncs key importsignedcert	Applies an RSA key and signed certificate to Prime Infrastructure.
ncs key importkey	Applies an RSA key and certificate to Prime Infrastructure.

Note

After entering this command, enter the **ncs stop** and **ncs start** command to restart the Prime Infrastructure server to make changes take effect.

ncs key importcacert

To apply a CA certificate to a trust store in , use the **ncs key importcacert** command in the EXEC mode. To import the root certificate:

ncs key importcacert truststore system alias aliasname filename repository repositoryname

To import the subordinate certificate:

ncs key importcacert truststore system alias aliasname subordinate_filename repository repositoryname

Syntax Description	aliasname	A short name given for this CA certificate.
	ca-cert-filename	CA certificate file name.
	repository	Repository command.
	sub	Subordinate certificate.

	repositoryname	The repository name configured in where the ca-cert-filename is hosted.	e
Command Default	No default behavior or values.		
Command Modes	EXEC		
	This example shows how to apply the CA certifica	te file to a trust store in the server:	
	ncs key importcacert truststore system ali defaultRepo	as root trca-4096-sha2.cer repository	١
	Certificate is added to trust store. Chang restart	es will take affect on the next server	\
	ncs key importcacert truststore system ali defaultRepo	as sub tsca-4096-sha2.cer repository	١
	Certificate is added to trust store. Chang restart	es will take affect on the next server	\
Note	After applying this command, enter the ncs stop an the changes take effect.	d ncs start command to restart the server to make

Command	Description
ncs key genkey	Generates a new RSA key and self-signed certificate.
ncs key listcacerts	Lists all of the CA certificates that exist in the trust store.
ncs key deletecacert	Deletes a CA certificates that exist in the trust store.
ncs key importsignedcert	Applies an RSA key and signed certificate to .
ncs key importkey	Applies an RSA key and certificate to .

ncs key importkey

To apply an RSA key and signed certificate to the Prime Infrastructure, use the **ncs key importkey** command in EXEC mode.

To export key:

ncs key exportkey key-filename cert-filename repository repositoryname

To import key:

ncs key importkey key-filename cert-filename repository repositoryname

Syntax Description	key-filename	RSA private key file name.	
	cert-filename	Certificate file name.	
	repository	Repository command	
	repositoryname	The repository name configured in the Prime Infrastructure where the key-file and cert-file is hosted.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	This example shows how to apply the new RSA key and certificate files to the server.		
	ncs key exportkey private.key server.cer repository defaultRepo		
	ncs key importkey keyfile certfile repository ncs-sftp-repo		
	ncs key importkey keylile certille	repository nes-sitp-repo	
Note	After applying this command, enter the ncs stop and ncs start command to restart the server to make the changes take effect.		
Related Commands	Command	Description	
	ncs key genkey	Generates a new RSA key and self-signed certificate.	
	ncs key listcacerts	Lists all of the CA certificates that exist in the Prime Infratsructure trust store.	
	ncs key deletecacert	Deletes a CA certificates that exist in the Prime	
		Infratsructure trust store.	
	ncs key importsignedcert	Infratsructure trust store. Applies an RSA key and signed certificate to Prime Infratsructure.	

ncs key listcacerts

To list all of the CA certificates that exist in the trust store, use the ncs key listcacerts command EXEC mode.

ncs key listcacerts

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

This example shows how to list all of the CA certificates that exist in the trust store:

> ncs key listcacerts

Related Commands	Command	Description
	ncs key genkey	Generates a new RSA key and self-signed certificate.
	ncs key importkey	Applies an RSA key and signed certificate to the .
	ncs key deletecacert	Deletes CA certificates that exist in the trust store.
	ncs key importsignedcert	Applies an RSA key and signed certificate to the .
	ncs key importcacert	Applies a CA certificate to the trust store in .

ncs key deletecacert

To delete CA certificates that exist in trust store, use the ncs key deletecacert command in the EXEC mode.

ncs key deletecacert trustore system alias aliasname

Syntax Description	alias The short or alias name of the CA certificate which needs to be deleted from the trust store.
Command Default	No default behavior or values.
Command Modes	EXEC
	This example shows how to delete CA certificates that exist in the trust store:
	ncs key deletecacert truststore system alias root
	Deleting certificate from trust store

Related Commands	Command	Description
	ncs key genkey	Generates a new RSA key and self-signed certificate.
	ncs key importkey	Applies an RSA key and signed certificate to .
	ncs key listcacerts	Lists all of the CA certificates that exist in the trust store.
	ncs key importsignedcert	Applies an RSA key and signed certificate to .
	ncs key importcacert	Applies a CA certificate to the trust store in .

ncs key importsignedcert

To apply an RSA key and signed certificate, use the ncs key importsignedcert command EXEC mode.

nes key importsignedeert	signed-cert-filename repository repositoryname

Syntax Description	signed-cert-filename	Signed certificate filename.		
	repository	Repository command		
	repositoryname	The repository name configured in where the key-file and cert-file is hosted.		
Command Default	No default behavior or values.			
Command Modes	EXEC			
	This example shows how to apply signed certificate files to the server:			
	> ncs key importsingedcert signed-certfile repository ncs-sftp-repo			
	·····	> ncs key importsingeacert signea-certille repository ncs-sitp-repo		
Note	After applying this command, enter the make changes take effect.	e ncs stop and the ncs start command to restart the server to		
Related Commands	Command	Description		
	ncs key genkey	Generates a new RSA key and self-signed certificate.		
	ncs key importkey	Applies an RSA key and signed certificate to .

Command	Description
ncs key importcacert	Applies a CA certificate to the trust store in .

ncs cleanup

To clean up the following data, below datafree up and reclaim the disk space, use the **ncs cleanup** command in EXEC mode.

- Files under /opt/backup
- *.m-n.logs, *.n.logs, *.log.n log files under /opt/CSCOlumos/logs
- Regular files under /localdisk
- .hprof file under opt/CSCOlumos/crash
- Matlab*.log under /opt/tmp/
- .trm and .trc files under /opt/oracle/base/diag/rdbms/*/*/trace
- Older expired Archive logs and backup set under /opt/oracle/base/fast_recovery_area/WCS

ncs cleanup

Syntax Description	This command has no arguments or keywords.	
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	When does not have enough disk space, an alarm is raised to free up and reclaim the disk space. If you enter the ncs cleanup command, you will see the following confirmation message:	
	Do you want to delete all the files in the local disk partition? (Y/N) $% \left({\left {{\mathbf{Y}} \right _{n}} \right $	
	pi-system-117/admin# ncs cleanup	
	!!!!!! WARNING !!!!!!!	
	The clean up can remove all files located in the backup staging directory. Older log files will be removed and other types of older debug information will be removed ************************************	

	!!!!!! DATABASE CLEANUP WARNING !!!!!!!	
	Cleaning up database will stop the server while the cleanup is performed.	

The operation can take several minutes to complete

Do you wish to cleanup database? ([NO]/yes) yes

* * * * * * *

```
USER LOCAL DISK WARNING

ocsp

Online Certificate Status Protocol (OCSP) enables certificate-based authentication for web clients using OCSP responders. Typically, the OCSP responder's URL is read from the certificate's Authority Information Access (AIA). As a failover mechanism, you can configure the same URL on the Prime Infrastructure server as well. You can enable or disable a custom OCSP responder, and set or remove OCSP responder URLs, using **ocsp responder** command in EXEC mode.

ocsp responder { *remove* | *set* | *show* }

Syntax Description	clear	Clear OCSP responder URL
	custom	Enable or disable custom OCSP responder
	set	Set OCSP responder URL.
Command Default	No default behaviour.	
Command Modes	EXEC	
	ncs/admin# ocsp responder ncs/admin# ocsp responder custom enable	
	ncs/admin# ocsp responder set urll <word></word> <word> Enter ocsp url (Max Size - 1024)</word>	
	ncs/admin# ocsp responder clear url1	

ping

To diagnose the basic IPv4 network connectivity to a remote system, use the **ping** command in EXEC mode.

ping {ip-address | hostname} [Dfdf][packetsizepacketsize][pingcountpingcount]

Syntax Description	ip-address	IP address of the system to ping. Up to 32 alphanumeric characters.	
	hostname	Hostname of the system to ping. Up to 32 alphanumeric characters.	
	df	Specification for packet fragmentation.	
	df	Specifies the value as 1 to prohibit packet fragmentation, or 2 to fragment the packets locally, or 3 to not set df.	
	packetsize	Size of the ping packet.	
	packetsize	Specifies the size of the ping packet; the value can be between 0 and 65507.	
	pingcount	Number of ping echo requests.	
	pingcount	Specifies the number of ping echo requests; the value can be between 1 and 10.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines The ping command sends an echo request packet to an address, then await you evaluate path-to-host reliability, delays over the path, and whether you

ping6

To diagnose the basic IPv6 network connectivity to a remote system, use the **ping6** command in EXEC mode.

ping6 {ip-address | hostname} [GigabitEthernetpacketsizepacketsize][pingcountpingcount]

Syntax Description	ip-address	IP address of the system to ping. Up to 64 alphanumeric characters.
	hostname	Hostname of the system to ping. Up to 64 alphanumeric characters.
	GigabitEthernet	Selects the ethernet interface.
	packetsize	Size of the ping packet.
	packetsize	Specifies the size of the ping packet; the value can be between 0 and 65507.
	pingcount	Number of ping echo requests.
	pingcount	Specifies the number of ping echo requests; the value can be between 1 and 10.
Command Default	No default behavior or values.	
	No default behavior or values.

reload

To reload the operating system, use the **reload** command in EXEC mode.

	reload
Syntax Description	This command has no arguments or keywords.
Command Default	The command has no default behavior or values.
Command Modes	EXEC
Usage Guidelines	The reload command reboots the system. Use the reload command after you enter configuration information into a file and save the running-configuration to the persistent startup-configuration on the CLI and save any settings in the web Administration user interface session.
	Before you enter the reload command, ensure that the is not performing any backup, restore, installation, upgrade, or remove operation. If the performs any of these operations and you enter the reload command, you will notice any of the following warning messages:
	WARNING: A backup or restore is currently in progress! Continue with reload?
	WARNING: An install/upgrade/remove is currently in progress! Continue with reload?
	If you get any of these warnings, enter YES to halt the operation, or enter NO to cancel the halt.
	If no processes are running when you use the reload command or you enter YES in response to the warning message displayed, the asks you to respond to the following option:
	Do you want to save the current configuration ?
	Enter YES to save the existing configuration. The displays the following message:
	Saved the running configuration to startup successfully

```
ncs/admin# reload
Do you want to save the current configuration ? (yes/no) [yes] ? yes
Generating configuration...
Saved the running configuration to startup successfully
Continue with reboot? [y/n] y
Broadcast message from root (pts/0) (Fri Aug 7 13:26:46 2010):
The system is going down for reboot NOW!
ncs/admin#
```

restore

To perform a restore of a previous backup, use the restore command in EXEC mode.

Application Backup Restore:

Use the following command to restore data related only to application:

restore filename repository repository-name application application-name

Application Backup Restore

Use the following command to restore data related to the application and Cisco ADE OS:

restore filename repository repository-name

Syntax Description	filename	Name of the backed-up file that resides in the repository. Up to 120 alphanumeric characters.	
		Note You must add the .tar.gpg extension after the filename (for example, myfile.tar.gpg).	
	repository	The repository keyword.	
	repository-name	Name of the repository you want to restore from backup.	
	application	The application keyword.	
	application-name	The name of the application data to be restored. Up to 255 alphanumeric characters.	
		Note Enter the application name as 'PI' in upper case.	

Command Default No default behavior or values.

EXEC **Command Modes** A restore operation restores data related to the as well as the Cisco ADE OS. To perform a restore of a previous **Usage Guidelines** backup of the application data of the only, add the **application** command to the **restore** command in EXEC mode. When you use these two commands in the , the server restarts automatically. pi-system-153/admin# restore veeraiah-180306-1952 VER3.4.0.0.120 BKSZ10G CPU4 MEM3G RAM11G SWAP15G APP CK1753058 834.tar.gpg repository defaultRepo application NCS * NOTE * If the system console is disconnected or got cleared on session timeout run 'show restore log' to see the output of the last restore session. Restore will restart the application services. Continue? (yes/no) [yes] ? yes DO NOT press ^C while the restoration is in progress Aborting restore with a ^C may leave the system in a unrecoverable state Enter the backup password, if your backup is password protected. show

To show the running system information, use the **show** command in EXEC mode. The **show** commands are used to display the settings and are among the most useful commands.

The commands in Table A-6 require the **show** command to be followed by a keyword; for example, **show application status**. Some **show** commands require an argument or variable after the keyword to function; for example, **show application version**.

For detailed information on all of the show commands, see show Commands.

show keyword

Syntax Description Table 2: Summary of show Commands

Command(1)	Description
application	Displays information about the installed application;
(requires keyword)(2)	for example, status or version.
backup	Displays information about the backup.
(requires keyword)	
cdp	Displays information about the enabled Cisco
(requires keyword)	Discovery Protocol interfaces.
clock	Displays the day, date, time, time zone, and year of the system clock.
сри	Displays CPU information.
disks	Displays file-system information of the disks.
interface	Displays statistics for all of the interfaces configured on the Cisco ADE OS.
logging	Displays system logging information.
(requires keyword)	
logins	Displays login history.
(requires keyword)	
memory	Displays memory usage by all running processes.
ntp	Displays the status of the Network Time Protocol (NTP).
ports	Displays all of the processes listening on the active ports.
process	Displays information about the active processes of the server.

Command(1)	Description
repository	Displays the file contents of a specific repository.
(requires keyword)	
restore	Displays restore history on the server.
(requires keyword)	
running-config	Displays the contents of the currently running configuration file on the server.
startup-config	Displays the contents of the startup configuration of the server.
tech-support	Displays system and configuration information that you can provide to the TAC when you report a problem.
terminal	Displays information about the terminal configuration parameter settings for the current terminal line.
timezone	Displays the time zone of the server.
timezones	Displays all of the time zones available for use on th server.
udi	Displays information about the unique device identifier (UDI) of the .
uptime	Displays how long the system you are logged in to has been up and running.
users	Displays information for currently logged in users.
version	Displays information about the installed application version.
<u>12</u>	
¹ (1) The commands in this table require that t application.	he show command precedes a keyword; for example, sho

Command Modes EXEC

Command Default

Usage Guidelines All **show** commands require at least one keyword to function.

pi-system-117/admin# **show application**

Command Reference
```

Description

ssh

To start an encrypted session with a remote system, use the ssh command in EXEC mode.

Note	An Admin or Operator (user) can use this command (see Table 1-1).	
	ssh [ip-address hostname] userna	ameport[number]version[1 2] delete hostkeyword
Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 64 alphanumeric characters.
	username	Username of the user logging in through SSH.
	<pre>port [number]</pre>	(Optional) Indicates the port number of the remote host. From 0 to 65,535. Default 22.
	version [1 2]	(Optional) Indicates the version number. Default 2.
	delete hostkey	Deletes the SSH fingerprint of a specific host.
	word	IPv4 address or hostname of a remote system. Up to 64 alphanumeric characters.

Command Default Disabled.

name

Command Modes EXEC (Admin or Operator).

Usage Guidelines

The **ssh** command enables a system to make a secure, encrypted connection to another remote system or server. This connection provides functionality similar to that of an outbound Telnet connection except that the connection is encrypted. With authentication and encryption, the SSH client allows for secure communication over an insecure network.

Example 1

```
ncs/admin# ssh ncs1 admin
admin@ncs1's password:
Last login: Wed Jul 11 05:53:20 2008 from ncs.cisco.com
```

ncs1/admin#

Example 2

```
ncs/admin# ssh delete host ncs
ncs/admin#
```

tech dumptcp

To dump a Transmission Control Protocol (TCP) package to the console, use the **tech dumptcp** command in EXEC mode.

tech dumptcp gigabit-ethernet

Syntax Description	gigabit-ethernet	Gigabit Ethernet interface number 0 to 1.
Command Default	Disabled.	
Command Modes	EXEC	
	ncs/admin# tech dumptcp 0

telnet

To log in to a host that supports Telnet, use the **telnet** command in operator (user) or EXEC mode.

telnet [ip-address | hostname] port number

Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 64 alphanumeric characters.
	port number	(Optional) Indicates the port number of the remote host. From 0 to 65,535.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	ncs/admin# telnet 172.16.0.11 port 23 ncs.cisco.com login: admin	

```
ncs.cisco.com login: admin
password:
Last login: Mon Jul 2 08:45:24 on ttyS0
ncs/admin#
```

terminal length

To set the number of lines on the current terminal screen for the current session, use the **terminal length** command in EXEC mode.

 terminal length integer

 Syntax Description
 integer
 Number of lines on the screen. Contains between 0 to 511 lines, inclusive. A value of zero (0) disables pausing between screens of output.

 Command Default
 24 lines.

 Command Modes
 EXEC

 Usage Guidelines
 The system uses the length value to determine when to pause during multiple-screen output.

ncs/admin# terminal length 0
ncs/admin#

terminal session-timeout

To set the inactivity timeout for all sessions, use the terminal session-timeout command in EXEC mode.

terminal session-timeout minutes

Syntax Description	minutes	Sets the number of minutes for the inactivity timeout. From 0 to 525,600. Zero (0) disables the timeout.
Command Default	30 minutes.	
Command Modes	EXEC	
Usage Guidelines	Setting the terminal session-timeout command to zero (0) results in no timeout being set.	
	ncs/admin# terminal session-timeout 40 ncs/admin#	
Related Commands	Command	Description

terminal session-welcome

To set a welcome message on the system for all users who log in to the system, use the **terminal session-welcome** command in EXEC mode.

terminal session-welcome string

terminal session-welcome

Syntax Description	string	Welcome message. Up to 2,023 alphanumeric characters.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Specify a message using up to 2048 characters.		
	ncs/admin# terminal session-welcome Welcome ncs/admin#		
Related Commands	Command	Description	
	terminal session-timeout	Sets the inactivity timeout for all sessions.	

Sets a welcome message on the system for all users

who log in to the system.

terminal terminal-type

To specify the type of terminal connected to the current line for the current session, use the **terminal terminal-type** command in EXEC mode.

terminal terminal-type type

Syntax Description	<i>type</i> Defines the terminal name and type, and permits terminal negotiation by hosts that provide that type of service. Up to 80 alphanumeric characters.
Command Default	- VT100.
Command Modes	EXEC
Usage Guidelines	Indicate the terminal type if it is different from the default of VT100.
	ncs/admin# terminal terminal-type vt220

ncs/admin#

traceroute

To discover the routes that packets take when traveling to their destination address, use the **traceroute** command in EXEC mode.

traceroute [ip-address | hostname]

Syntax Description	ip-address	IP address of the remote system. Up to 32 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 32 alphanumeric characters.

Command Default No default behavior or values.

Command Modes EXEC

ncs/admin# traceroute 172.16.0.11
traceroute to 172.16.0.11 (172.16.0.11), 30 hops max, 38 byte packets
1 172.16.0.11 0.067 ms 0.036 ms 0.032 ms

ncs/admin#

undebug

To disable debugging functions, use the undebug command in EXEC mode.

Syntax Description	all	Disables all debugging.
	application	Application files.
		• <i>all</i> —Disables all application debug output.
		 <i>install</i>—Disables application install debug output.
		• <i>operation</i> —Disables application operation debug output.
		• <i>uninstall</i> —Disables application uninstall debug output.
	backup-restore	Backs up and restores files.
		• <i>all</i> —Disables all debug output for backup-restore.
		 backup—Disables backup debug output for backup-restore.
		• <i>backup-logs</i> —Disables backup-logs debug output for backup-restore.
		 <i>history</i>—Disables history debug output for backup-restore.
		• <i>restore</i> —Disables restore debug output for backup-restore.
	cdp	Cisco Discovery Protocol configuration files.
		 all—Disables all Cisco Discovery Protocol configuration debug output.
		• <i>config</i> —Disables configuration debug output for Cisco Discovery Protocol.
		• <i>infra</i> —Disables infrastructure debug output for Cisco Discovery Protocol.

undebug {*all* | *application* | *backup-restore* | *cdp* | *config* | *copy* | *icmp* | *locks* | *logging* | *snmp* | *system* | *transfer* | *user* | *utils*}

config	Configuration files.
	• <i>all</i> —Disables all configuration debug output.
	 backup—Disables backup configuration debug output.
	 <i>clock</i>—Disables clock configuration debug output.
	 <i>infra</i>—Disables configuration infrastructure debug output.
	 <i>kron</i>—Disables command scheduler configuration debug output.
	 network—Disables network configuration debug output.
	 <i>repository</i>—Disables repository configuration debug output.
	 service—Disables service configuration debug output.
сору	Copy commands.
істр	ICMP echo response configuration.
	<i>all</i> —Disable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.
locks	Resource locking.
	• all—Disables all resource locking debug output
	• <i>file</i> —Disables file locking debug output.
logging	Logging configuration files.
	<i>all</i> —Disables all debug output for logging configuration.
snmp	SNMP configuration files.
	<i>all</i> —Disables all debug output for SNMP configuration.
system	System files.
	• <i>all</i> —Disables all system files debug output.
	• <i>id</i> —Disables system ID debug output.
	• <i>info</i> —Disables system info debug output.
	• <i>init</i> —Disables system init debug output.

I

	transfer	File transfer.
	user	User management.
	4501	• <i>all</i> —Disables all user management debug output.
		 <i>password-policy</i>—Disables user management debug output for password-policy.
	utils	Utilities configuration files.
		all—Disables all utilities configuration debug output.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	ncs/admin# undebug all ncs/admin#	
Related Commands	Command	Description
	debug	Displays errors or events for command situations.
write	To copy, display, or erase server conf EXEC mode.	figurations, use the write command with the appropriate argument in
	write {erase memory terminal}	
Syntax Description	erase	Erases the startup configuration. This command is disabled by default.
	memory	Copies the running configuration to the startup configuration.
	terminal	Copies the running configuration to console.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	The following is an example of the w	vrite command with the erase keyword:
Note		disabled from Cisco Prime Infrastructure Release 2.0 and later. owing warning message is displayed.

```
pi-system/admin# write erase
% Warning: 'write erase' functionality has been disabled by application: NCS
pi-system/admin#
```

show Commands

This section lists **show** commands. Each command includes a brief description of its use, any command defaults, command modes, usage guidelines, an example of the command syntax and any related commands.

show application

To show application information of the installed application packages on the system, use the **show application** command in EXEC mode.

show application [status | version [app_name]]

Syntax Description	status	Displays the status of the installed application.
	version	Displays the application version for an installed application—the .
	app_name	Name of the installed application.

Table 3: Output Modifier Variables for Count or Last

	Output modifier variables:
	• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
	• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
	—Output modifier variables.
	• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
	• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
	—Output modifier variables (see Table A-8).

Command Default No default behavior or values.

Command Modes

Examples

EXEC

Example 1

```
pi-system/admin# show application
<name> <Description>
NCS Cisco Prime Infrastructure
pi-system/admin#
```

Related Commands

	Description
application start	Starts or enables an application.
application stop	Stops or disables an application.
application upgrade	Upgrades an application bundle.

show backup history

To display the backup history of the system, use the **show backup history** command in EXEC mode.

```
show backup history
                   This command has no arguments or keywords.
Syntax Description
                   No default behavior or values.
Command Default
                   EXEC
Command Modes
                   Example 2
                   pi-common-133/admin# show restore log
                   Started at : Wed Feb 21 15:07:27 2018
                   Initiating restore. Please wait ...

System will reboot to enable FIPS and proceed with PI server startup
Finished at : Wed Feb 21 16:39:59 2018
pi-common-133/admin#
```

Example 3

```
pi-system/admin# sh backup history
backup history is empty
pi-system/admin#
```

Related Commands

Command	Description
backup	Performs a backup (and Cisco ADE OS) and places the backup in a repository.
restore	Restores from backup the file contents of a specific repository.
repository	Enters the repository submode for configuration of backups.
show repository	Displays the available backup files located on a specific repository.

show banner pre-login

To display the banner that you installed, use the **show banner pre-login** command in EXEC mode.

show banner pre-login

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Example 1

pi-system/admin# show banner pre-login
No pre-login banner installed
pi-system/admin#

Example 2

pi-system/admin# **show banner pre-login** Banner-Test pi-system/admin#

I

Related Commands	Command		Description
	banner, on page 6		Enables you to install a pre-login banner.
show cdp			
	To display information about the enabled Cisco Discovery Protocol interfaces, use the show cdp cor in EXEC mode.		
	show cdp {all neighbors}		
Syntax Description	all		Shows all of the enabled Cisco Discovery Protocol interfaces.
	neighbors		Shows the Cisco Discovery Protocol neighbors.
Command Default	No default behavior or values		
Command Modes	EXEC		
	Example 1		
	<pre>ncs/admin# show cdp all CDP protocol is enabled broadcasting interval is every 60 seconds. time-to-live of cdp packets is 180 seconds. CDP is enabled on port GigabitEthernet0. ncs/admin#</pre>		
	Example 2		
	ncs/admin # show cdp neigh CDP Neighbor : 000c297840 Local Interface Device Type Port Address		0
	CDP Neighbor : isexp-esw5 Local Interface Device Type Port Address	: GigabitEthernet	-24TD
	CDP Neighbor : 000c29e299 Local Interface Device Type Port Address	: GigabitEthernet	0
	CDP Neighbor : 000c290fba Local Interface Device Type Port Address		0

ncs/admin#

Related Commands

Command	Description
cdp holdtime	Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from your router before discarding it.
cdp run	Enables the Cisco Discovery Protocol.
cdp timer	Specifies how often the server sends Cisco Discovery Protocol updates.

show clock

To display the day, month, date, time, time zone, and year of the system software clock, use the **show clock** command in EXEC mode.

show clock

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

ncs/admin# **show clock** Fri Aug 6 10:46:39 UTC 2010 ncs/admin#

Note The **show clock** output in the previous example includes Coordinated Universal Time (UTC) or Greenwich Mean Time (GMT), Great Britain, or Zulu time (see Tables A-16, Table 7: Australia Time Zones, and Table 8: Asia Time Zones on pages A-84 and A-85 for sample time zones).

Related Commands	Command	Description
	clock	Sets the system clock for display purposes.

show cpu

 To display CPU information, use the show cpu command in EXEC mode.

 show cpu [statistics] []] []]

 Syntax Description

 statistics
 Displays CPU statistics.

Output modifier variables:
 begin—Matched pattern. Up to 80 alphanumeric characters.
• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
—Output modifier variables (see Table A-9).
• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
—Output modifier variables (see Table A-9).

No default behavior or values. **Command Default**

Command Modes

Example 1

EXEC

ncs/admin# **show cpu**

processor : 0

model : Intel(R) Xeon(R) CPU speed(MHz): 1861.914 cache size: 4096 KB

ncs/admin#

Example 2

ncs/admin# show cpu statistics user time: 265175 kernel time: 166835 idle time: 5356204 i/o wait time: 162676 irq time: 4055

ncs/admin#

Related Commands

Command	Description
show disks	Displays the system information of all disks.

E5320 @ 1.86GHz

Command	Description
show memory	Displays the amount of system memory that each system process uses.

show disks

To display the disks file-system information, use the **show disks** command in EXEC mode.

show	disks	[]] []]	
------	-------	---------	--

Syntax Description	Out	put modifier variables:
		• <i>begin</i> —Matched pattern. Up to 80 alphanumeri characters.
		• <i>count</i> —Counts the number of lines in the output Add number after the word <i>count</i> .
		—Output modifier variables (see Table A-10)
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
		—Output modifier variables (see Table A-10)
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Isage Guidelines Only platforms that have a disk file system support the show disks command.	
	ncs/admin# show disks	
	temp. space 2% used (17828 of 988116) disk: 3% used (143280 of 5944440)	
	Internal filesystems: all internal filesystems have sufficient free s	pace
	ncs/admin#	

Related Commands	Command	Description
	show cpu	Displays CPU information.
	show memory	Displays the amount of system memory that each system process uses.

show icmp_status

To display the Internet Control Message Protocol echo response configuration information, use the **show icmp_status** command in EXEC mode.

```
show icmp_status {> file | |}
```

Syntax Description	>	Output direction.
	file	Name of file to redirect standard output (stdout).
		Output modifier commands:
		• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output. Add number after the word count.
		• —Output modifier commands (see Table A-11).
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• last—Displays last few lines of output. Add number after the word last. Up to 80 lines to display. Default 10.
		• —Output modifier commands (see Table A-11).
Command Default	No default behavior or values.	
Command Modes	EXEC	

Example 1

ncs/admin# show icmp_status

icmp	echo	response	is	turned	on
ncs/a	admin‡	ŧ			

Example 2

ncs/admin# show icmp_status
icmp echo response is turned off
ncs/admin#

Related Commands	Command	Description
	1	Configures the Internet Control Message Protocol (ICMP) echo requests.

show ip route

To display details the ip route details of the application, use show ip route command in EXEC mode.

	show ip route { }					
Syntax Description	> Output redirection					
		Output modifiers				
Command Default	No default behaviour.					
Command Modes	EXEC					
	ncs/admin# show ip route Kernel IP routing table					
	Destination Gateway 10.126.168.0 0.0.0.0 0.0.0.0 10.126.168.1	Genmask Flags Metric Ref Use Iface 255.255.255.0 U 0 0 eth0 0.0.0.0 UG 0 0 eth0				
	Kernel IPv6 routing table Destination	Next Hop	Flags			
	Metric Ref Use Iface 2001::/64	::	UA			
	256 0 0 eth0 fe80::/64 256 0 0 eth0	::	U			
	256 0 0 eth0 ::/0 1024 18 0 eth0	fe80::217:dfff:fe29:9800	UGDA			
	::1/128 0 10127 1 lo	::	U			
	2001::20c:29ff:fe6c:8f28/128 0 0 1 lo	::	U			
	2001::813d:2d75:7d6:564f/128 0 37 1 lo	::	U

	fe80::20c:29ff:fe6c:8f28/128 0 3 1 lo ff00::/8	::	U			

show interface

To display the usability status of interfaces configured for IP, use the **show interface** command in EXEC mode.

show interface [GigabitEthernet] |

Syntax Description	GigabitEthernet	Shows the Gigabit Ethernet interface. Either 0 or 1.
		Output modifier variables:
		• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludse lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	The first internet address (starting wit you need to have IPv6 route advertise link local address that does not have a	net 0 output, you can find that the interface has three IPv6 addresses. h 3ffe) is the result of using stateless autoconfiguration. For this to work, ement enabled on that subnet. The next address (starting with fe80) is a ny scope outside the host. You always see a link local address regardless CPv6 configuration. The last address (starting with 2001) is the result
	Example 1	
	inet addr:172.23.90.1 inet6 addr: fe80::20c UP BROADCAST RUNNING RX packets:48536 erro TX packets:14152 erro collisions:0 txqueuel	MiB) TX bytes:12443568 (11.8 MiB)

```
inet addr:127.0.0.1 Mask:255.0.0.0

RX packets:0 errors:0 dropped:0 overruns:0 frame:0
TX packets:0 errors:0 dropped:0 overruns:0 frame:0
TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:0
RX bytes:0 (0.0 b) TX bytes:0 (0.0 b)
```

ncs/admin#

Example 2

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
inet6 addr: 2001:558:ff10:870:8000:29ff:fe36:200/64 Scope:Global
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB)
Interrupt:59 Base address:0x2000
```

Related Commands Command Description interface Configures an interface type and enters the interface configuration submode. ipv6 address autoconfig Enables IPv6 stateless autoconfiguration on an interface. ipv6 address dhcp Enables IPv6 address DHCP on an interface.

show inventory

To display information about the hardware inventory, including the appliance model and serial number, use the **show inventory** command in EXEC mode.

show inventory |

Syntax Description	Output modifier variables:			
	• <i>begin</i> —Matched pattern. Up to 80 alphanumer characters.			
	• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .			
	• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.			
	• <i>exclude</i> —Excludse lines that match. Up to 80 alphanumeric characters.			
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.			
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.			
Command Default	No default behavior or values.			
Command Modes	EXEC			
	pi-system/admin# show inventory			
	<pre>NAME: "Cisco-VM chassis", DESCR: "Cisco-VM chassis" PID: Cisco-VM-SPID , VID: V01 , SN: GITQA6QC26B Total RAM Memory: 12167972 kB CPU Core Count: 4 CPU 0: Model Info: Intel(R) Xeon(R) CPU E5-4640 0 @ 2.40GHz CPU 1: Model Info: Intel(R) Xeon(R) CPU E5-4640 0 @ 2.40GHz CPU 2: Model Info: Intel(R) Xeon(R) CPU E5-4640 0 @ 2.40GHz CPU 3: Model Info: Intel(R) Xeon(R) CPU E5-4640 0 @ 2.40GHz Hard Disk Count(*): 1 Disk 0: Device Name: /dev/sda Disk 0: Capacity: 322.10 GB Disk 0: Geometry: 255 heads 63 sectors/track 39162 cylinders NIC Count: 1 NIC 0: Device Name: eth0 NIC 0: HW Address: 00:0C:29:11:51:83 NIC 0: Driver Descr: e1000: eth0: e1000_probe: Intel(R) PRO/1000 Network Connection</pre>			
	(*) Hard Disk Count may be Logical. pi-system-61/admin#			

show logging

To display the state of system logging (syslog) and the contents of the standard system logging buffer, use the **show logging** command in EXEC mode.

show logging {application [application-name]} {internal} {system} |

Syntax Description	application	Displays application logs.
--------------------	-------------	----------------------------

	application-name	Application name. Up to 255 alphanumeric characters.
		• <i>tail</i> —Tail system syslog messages.
		• <i>count</i> —Tail last count messages. From 0 to 4,294,967,295.
		—Output modifier variables (see below).
	internal	Displays the syslogs configuration.
	system	Displays the system syslogs.
		Output modifier variables:
		 begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	This command displays the state of sy logging destinations (console, monito	yslog error and event logging, including host addresses, and for which r, buffer, or host) logging is enabled.
	Example 1	
	ncs/admin# show logging system ADEOS Platform log:

show memory

To display the memory usage of all of the running processes, use the **show memory** command in EXEC mode.

Thu Aug 5 17:43 - 18:07 (00:24)

(02:02)

show memory

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

ncs/admin# **show memory** total memory: 1035164 kB

free memory:	27128	kВ
cached:	358888	kВ
swap-cached:	142164	kВ

ncs/admin#

show netstat

To display statistics about your network connection, use show netstat command in EXEC mode.

```
show netstat{ > | | }
```

0

tcp

0 :::10555

show ntp

To show the status of the NTP associations, use the **show ntp** command in EXEC mode.

	show ntp		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	EXEC ncs/admin# show ntp pi-system-241/admin# show ntp NTP Server 1 : 10.81.254.202 NTP Server 2 : 10.64.58.50 synchronised to NTP server (10.81.254.202) at stratum 2 time correct to within 173 ms polling server every 1024 s remote refid st t when poll reach delay offset jitter		
	==== *10.81.254.202 .GPS. 1 u 255 1024 377 272.081 1.756 1.850 +10.64.58.50 10.67.68.33 2 u 27 1024 377 0.388 -0.936 1.904 Warning: Output results may conflict during periods of changing synchronization.		
Related Commands	Command	Description	
	ntp server	Allows synchronization of the software clock by the NTP server for the system.	

show ports

To display information about all of the processes listening on active ports, use the **show ports** command in EXEC mode.

show ports [|] [|]

	Output modifier variables:
	 begin—Matched pattern. Up to 80 alphanumeric characters.
	• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
	-Output modifier variables (see Table A-12)
	• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
	• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
	-Output modifier variables (see Table A-12)
ior or values.	
e show ports command, the j	port must have an associated active session.

Table 4: Show Process Field Descriptions

Field	Description
USER	Logged-in user.
PID	Process ID.
TIME	The time that the command was last used.
TT	Terminal that controls the process.
COMMAND	Type of process or command used.

show repository

To display the file contents of the repository, use the show repository command in EXEC mode.

show repository repository-name

Syntax Description	repository-name	Name of the repository whose contents you want to view. Up to 30 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Related Commands	Command	Description
	backup	Performs a backup (and Cisco ADE OS) and places the backup in a repository.
	restore	Restores from backup the file contents of a specific repository.
	repository	Enters the repository submode for configuration of backups.
	show backup history	Displays the backup history of the system.

show restore

To display the restore history, use the show restore command in EXEC mode.

show restore {history}

I

Syntax Description	history Displays the restore history.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
	<pre>pi-common-133/admin# show restore history Wed Feb 21 16:39:50 IST 2018: restore</pre>		

Related Commands	Command	Description
	backup	Performs a backup (and Cisco ADE OS) and places the backup in a repository.
	restore	Restores from backup the file contents of a specific repository.
	repository	Enters the repository submode for configuration of backups.
	show backup history	Displays the backup history of the system.

Command Reference

show restore log

To display the last restore operation in the case of Auto logout console, use the **show restore log** command in EXEC mode. You can run this command even while performing a restore operation and a successful restore operation.

show restore log

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Example 1

pi-system/admin# show restore log No restore log available pi-system/admin#

Example 2

```
pi-system/admin# show restore log
Started at : Tue Nov 14 13:10:09 2017
Initiating restore. Please wait ...
 Restore Started at 11/14/17 13:10:09
  Stage 1 of 9: Transferring backup file ...

Related Commands

Command	Description
configure	Enters configuration mode.
show running-config	Displays the contents of the currently running configuration file or the configuration.

show security-status

To display the security-related configuration information, use the **show security-status** command in EXEC mode.

show security-status

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Example

pi-system-120/admin# show security-status Open TCP Ports : 22 443 1522 8082 9992 Open UDP Ports : 162 500 514 9991
FIPS Mode : enabled Non-FIPS ssh client ciphers: disabled
TFTP Service : disabled FTP Service : disabled
JMS port(61617) : disabled Root Access : enabled
TLS versions : TLSv1.2 TLS ciphers : tls-ecdhe,tls-dhe,tls-static
Note : Shows currently configured values Changes made after last system start if any,

will be effective after next restart

pi-system-120/admin#

show tech-support

To display technical support information, including email, use the **show tech-support** command in EXEC mode.

show tech-support file [word]

Syntax Description	file	Saves any technical support data as a file in the local disk.
	word	Filename to save. Up to 80 alphanumeric characters.
Command Default	Passwords and other security information do not a	appear in the output.
Command Modes	EXEC	
Usage Guidelines		ollecting a large amount of information about your server e output to technical support representatives when reporting
	ncs/admin# show tech-support ####################################	0.568

Related Commands

Command	Description
show interface	Displays the usability status of the interfaces.
show process	Displays information about active processes.
show running-config	Displays the contents of the current running configuration.

show terminal

To obtain information about the terminal configuration parameter settings, use the **show terminal** command in EXEC mode.

show terminal

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

ncs/admin# show terminal TTY: /dev/pts/0 Type: "vt100" Length: 27 lines, Width: 80 columns Session Timeout: 30 minutes ncs/admin#

show terminal describes the fields of the show terminal output.

Table 5: Show Terminal Field Descriptions

Field	Description
TTY: /dev/pts/0	Displays standard output to type of terminal.
Type: "vt100"	Type of current terminal used.
Length: 24 lines	Length of the terminal display.
Width: 80 columns	Width of the terminal display, in character columns.
Session Timeout: 30 minutes	Length of time, in minutes, for a session, after which the connection closes.

show timezone

To display the time zone set on the system, use the show timezone command in EXEC mode.

show timezone

Syntax Description This command has no arguments or keywords.

Command Default	No default behavior or values.
-----------------	--------------------------------

Command Modes EXEC

pi-system/admin# show timezone
Asia/Kolkata
pi-system/admin#

Related Commands

5	Command	Description
	clock timezone	Sets the time zone on the system.
	show timezones	Displays the time zones available on the system.

show timezones

To obtain a list of time zones from which you can select, use the show timezones command in EXEC mode.

show timezonesSyntax DescriptionThis command has no arguments or keywords.Command DefaultNo default behavior or values.Command ModesEXECUsage GuidelinesSee the clock timezone command, for examples of the time zones available for the server.

ncs/admin# show timezones Africa/Blantyre Africa/Dar es Salaam Africa/Dakar Africa/Asmara Africa/Timbuktu Africa/Maputo Africa/Accra Africa/Kigali Africa/Tunis Africa/Nouakchott Africa/Ouagadougou Africa/Windhoek Africa/Douala Africa/Johannesburg Africa/Luanda Africa/Lagos Africa/Djibouti Africa/Khartoum Africa/Monrovia Africa/Bujumbura

	clock timezone	Sets the time zone on the system.

show udi

To display information about the UDI of the Cisco ISE 3315 appliance, use the **show udi** command in EXEC mode.

show udi

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

EXEC

Command Modes

The following output appears when you run the show udi on Hyper Vappliance server.

Example 1

pi-system/admin# **sh udi** SPID: Cisco-HY-SPID VPID: V02 Serial: KDGGLLPDJDC

pi-system-241/admin#

The following output appears when you run the show udi on Gen 2 appliance server.

Example 2

pi-system/admin# sh udi
PID: PI-UCS-APL-K9

VPID: A0 Serial: FCH1842V1EH

pi-system-117/admin#

show uptime |

show uptime

To display the length of time that you have been logged in to the server, use the **show uptime** command in EXEC mode.

Syntax Description		(Optional) Output modifier variables:
		• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includse lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.	
Command Modes	EXEC	

ncs/admin# show uptime
3 day(s), 18:55:02
ncs/admin#

show users

To display the list of users logged in to the server, use the show users command in EXEC mode.

show users

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

ncs/admin# show	users			
USERNAME	ROLE	HOST	TTY	LOGIN DATETIME
admin	Admin	10.77.137.60	pts/0	Fri Aug 6 09:45:47 2010
ncs/admin#				

show version

To display information about the software version of the system, use the **show version** command in EXEC mode.

	show version
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	This command displays version information about the Cisco ADE-OS software running on the server, and displays the version.

Configuration Commands

This section lists the **configuration commands** along with a brief description of their use, command defaults, command syntax, command modes, usage guidelines, command examples, and related commands, where applicable.

Configuration commands include interface and repository.

Note Some of the configuration commands require you to enter the configuration submode to complete the command configuration.

To access configuration mode, you must use the configure command in EXEC mode.

aaa authentication

To configure external authentication, use the **aaa authentication** command in configuration mode.

aaa authentication tacacs+ server TACACS server address key plain shared-key

Syntax Description	TACACS server address	IP address or hostname of the TACACS+ server.
	shared-key	Indicates the shared secret text string.

Command Default No default behavior or values.

Command Modes Configuration

admin# aaa authentication tacacs+ server 1.1.1.5 key plain Secret admin# username tacacsuser password remote role admin

Ensure that the TACACS+ server has the same user name of the Prime Infrastructure server, and Prime Infrastructure and TACACS+ servers are integrated properly.

backup-staging-url

You can use this option to configure a Network File System (NFS) share on Cisco Prime Infrastructure when partition is low on disk space and a backup cannot be taken. You can do so by using the **backup-staging-url** command in configuration mode.

backup-staging-url word

Syntax Description	wordNFS URL for staging area. Up to 2048 alphanumeric characters. Use nfs://server:path(1).
Command Default	No default behavior or values.
Command Modes	Configuration
Usage Guidelines	The URL is NFS only. The format of the command is backup-staging-url nfs: //server:path.
Caution	Ensure that you secure your NFS server in such a way that the directory can be accessed only by the IP address of the server.
	<pre>ncs/admin(config)# backup-staging-url nfs://loc-filer02a:/vol/local1/private1/jdoe ncs/admin(config)#</pre>

cdp holdtime

To specify the amount of time for which the receiving device should hold a Cisco Discovery Protocol packet from the server before discarding it, use the **cdp holdtime** command in configuration mode. To revert to the default setting, use the **no** form of this command.

[no] cdp holdtime seconds

Syntax Description

seconds

Specifies the hold time, in seconds. Value from 10 to 255 seconds.

Command Default	180 seconds		
Command Modes	Configuration		
Usage Guidelines	Cisco Discovery Protocol packets transmit with a time to live, or hold time, value. The receiving device will discard the Cisco Discovery Protocol information in the Cisco Discovery Protocol packet after the hold time has elapsed.		
	The cdp holdtime command takes only c	one argument; otherwise, an error occurs.	
	ncs/admin(config)# cdp holdtime 60 ncs/admin(config)#		
Related Commands	_	Description

	cdp run	Enables the Cisco Discovery Protocol.	

clock timezone

To set the time zone, use the **clock timezone** command in configuration mode. To disable this function, use the **no** form of this command.

clock timezone timezone

Syntax Description	timezone	Name of the time zone visible when in standard time Up to 64 alphanumeric characters.	
Command Default	UTC		
Command Modes	Configuration		
Usage Guidelines	The system internally keeps time in Coordinated Universal Time (UTC). If you do not know your specific time zone, you can enter the region, country, and city (see Tables Table 6: Common Time Zones, Table 7: Australia Time Zones, and Table 8: Asia Time Zones for sample time zones to enter on your system).		
	Acronym or name	Time Zone Name	
	Europe		
	GMT, GMT0, GMT-0, GMT+0, UTC, Greenwich, Universal, Zulu	Greenwich Mean Time, as UTC	
	GB	British	
	GB-Eire, Eire	Irish	
	WET	Western Europe Time, as UTC	
	CET	Central Europe Time, as UTC + 1 hour	
	EET	Eastern Europe Time, as UTC + 2 hours	
	United States and Canada		
	EST, EST5EDT	Eastern Standard Time, as UTC -5 hours	
	CST, CST6CDT	Central Standard Time, as UTC -6 hours	
	MST, MST7MDT	Mountain Standard Time, as UTC -7 hours	
	PST, PST8PDT	Pacific Standard Time, as UTC -8 hours	
	HST	Hawaiian Standard Time, as UTC -10 hours	

Table 7: Australia Time Zones

AustraliaFootnote.			
ACTFootnote.	Adelaide	Brisbane	Broken_Hill
Canberra	Currie	Darwin	Hobart
Lord_Howe	Lindeman	LHIFootnote.	Melbourne
North	NSWFootnote.	Perth	Queensland

AustraliaFootnote.			
South	Sydney	Tasmania	Victoria
West	Yancowinna		

³ (1) Enter the country and city together with a forward slash (/) between them; for example, Australia/Currie.

 4 (2) ACT = Australian Capital Territory

 5 (3) LHI = Lord Howe Island

 6 (4) NSW = New South Wales

Table 8: Asia Time Zones

AsiaFootnote.				
AdenFootnote.	Almaty	Amman	Anadyr	
Aqtau	Aqtobe	Ashgabat	Ashkhabad	
Baghdad	Bahrain	Baku	Bangkok	
Beirut	Bishkek	Brunei	Calcutta

Dhakar	Dili	Dubai	Dushanbe	
Gaza	Harbin	Hong_Kong	Hovd	
Irkutsk	Istanbul	Jakarta	Jayapura	
Jerusalem	Kabul	Kamchatka	Karachi	
Kashgar	Katmandu	Kuala_Lumpur	Kuching	
Kuwait	Krasnoyarsk			

⁷ (1) The Asia time zone includes cities from East Asia, Southern Southeast Asia, West Asia, and Central Asia.

⁸ (2) Enter the region and city or country together separated by a forward slash (/); for example, Asia/Aden.

Note

Several more time zones are available to you. On your server, enter the **show timezones** command. A list of all of the time zones available in the server appears. Choose the most appropriate one for your time zone.

```
pi-admin/admin(config)# conf t
Enter configuration commands, one per line. End with CNTL/Z.
pi-admin/admin(config)# clock timezone Asia/Kolkata
pi-admin/admin(config)#
```

Related Commands

	Description
show timezones, on page 94	Displays a list of available time zones on the system.
show timezone, on page 93	Displays the current time zone set on the system.

do

To execute an EXEC-level command from configuration mode or any configuration submode, use the **do** command in any configuration mode.

do

Syntax Description

tion This command has no arguments or keywords.

Table 9: Command Options for the Do Command

	Description
application install	Installs a specific application.
application remove	Removes a specific application.
application start	Starts or enables a specific application
application stop	Stops or disables a specific application.
application upgrade	Upgrades a specific application.
backup	Performs a backup (and Cisco ADE OS) and places the backup in a repository.
backup-logs	Performs a backup of all of the logs on the server to a remote location.
clock	Sets the system clock on the server.
configure	Enters configuration mode.
сору	Copies any file from a source to a destination.
debug	Displays any errors or events for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.
delete	Deletes a file on the server.
dir	Lists files on the server.
forceout	Forces the logout of all of the sessions of a specific node user.
halt	Disables or shuts down the server.

	Description
mkdir	Creates a new directory.
nslookup	Queries the IPv4 address or hostname of a remote system.
patch	Install System or Application patch.
pep	Configures the Inline PEP node.
ping	Determines the IPv4 network activity on a remote system.
ping6	Determines the IPv6 network activity on a IPv6 remote system.
reload	Reboots the server.
restore	Performs a restore and retrieves the backup out of a repository.
rmdir	Removes an existing directory.
show	Provides information about the server.
ssh	Starts an encrypted session with a remote system.
tech	Provides Technical Assistance Center (TAC) commands.
telnet	Establishes a Telnet connection to a remote system.
terminal length	Sets terminal line parameters.
terminal session-timeout	Sets the inactivity timeout for all terminal sessions.
terminal session-welcome	Sets the welcome message on the system for all terminal sessions.
terminal terminal-type	Specifies the type of terminal connected to the current line of the current session.
traceroute	Traces the route of a remote IP address.
undebug	Disables the output (display of errors or events) of the debug command for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.
write	Erases the startup configuration that forces the setup utility to run and prompts the network configuration, copies the running configuration to the startup configuration, and displays the running configuration on the console.

Command Default	ult No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	Use this command to execute EXEC commands (such as show , clear , and debug commands) while configuring your server. After the EXEC command executes, the system will return to the configuration mode that you were using.		
	ncs/admin(config)# do show run Generating configuration ! hostname ncs

	<pre>ncs/admin(config)#</pre>		

end

I

To end the current configuration session and return to EXEC mode, use the **end** command in configuration mode.

end

Syntax Description This command has no arguments or keywords.

Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	This command brings you back to EXEC mode regardless of what configuration mode or submode you are in.		
	Use this command when you finish configuring the system and you want to return to EXEC mode to perform verification steps.		

ncs/admin(config)# end
ncs/admin#

Related Commands

ds	Command	Description
	exit	Exits configuration mode.
	exit (EXEC)	Closes the active terminal session by logging out of the server.

exit

To exit any configuration mode to the next-highest mode in the CLI mode hierarchy, use the **exit** command in configuration mode.

exit This command has no arguments or keywords. **Syntax Description** No default behavior or values. **Command Default** Configuration **Command Modes** The exit command is used in the server to exit the current command mode to the next highest command mode **Usage Guidelines** in the CLI mode hierarchy. For example, use the exit command in configuration mode to return to EXEC mode. Use the exit command in the configuration submodes to return to configuration mode. At the highest level, EXEC mode, the exit command exits the EXEC mode and disconnects from the server (see exit, for a description of the exit (EXEC) command). ncs/admin(config)# exit ncs/admin#

Related Commands

ands	Command	Description
	end	Exits configuration mode.

Command	Description
exit (EXEC)	Closes the active terminal session by logging out of the server.

hostname

I

	To set the hostname of the system, use the hostname command in configuration mode. To delete the hostname from the system, use the no form of this command, which resets the system to localhost.		
	[no] hostname word		
Syntax Description	word	Name of the host. Contains at least 2 to 64 alphanumeric characters and an underscore (_). The hostname must begin with a character that is not a space.	
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	A single instance type of command, hostname only occurs once in the configuration of the system. The hostname must contain one argument; otherwise, an error occurs.		
	<pre>ncs/admin(config)# hostname ncs-1 Changing the hostname or IP may result in undesired side effects, such as installed application(s) being restarted. Are you sure you want to proceed? [y/n] y Stopping NCS Monitoring & Troubleshooting Log Processor Stopping NCS Monitoring & Troubleshooting Log Collector Stopping NCS Monitoring & Troubleshooting Alert Process Stopping NCS Monitoring & Troubleshooting Session Database Stopping NCS Monitoring & Troubleshooting Session Database Stopping NCS Database processes Starting NCS Monitoring & Troubleshooting Session Database Starting NCS Monitoring & Troubleshooting Session Database Starting NCS Monitoring & Troubleshooting Log Collector Starting NCS Monitoring & Troubleshooting Log Processor Starting NCS Monitoring & Troubleshooting Alert Process Note: NCS Processes are initializing. Use 'show application status ncs' CLI to verify all processes are in running state. ncs-1/admin(config)# ncs-1/admin# show application status ncs NCS Database listener is running, PID: 11142 NCS Database is running, number of processes: 29 NCS Application Server is still initializing. NCS MAT Log Collector is running, PID: 11532 NCS MAT Log Processor is running, PID: 11555</pre>		

ncs-1/admin# icmp echo To configure the Internet Control Message Protocol (ICMP) echo responses, use the icmp echo command in configuration mode. icmp echo {off | on} **Syntax Description** off Disables ICMP echo response. Enables ICMP echo response. on The system behaves as if the ICMP echo response is on (enabled). **Command Default** Configuration **Command Modes** ncs/admin(config) # icmp echo off ncs/admin(config)# **Related Commands** Command Description Display ICMP echo response configuration show icmp_status

interface

To configure an interface type and enter interface configuration mode, use the **interface** command in configuration mode.

information.

Note	VMware virtual machine may have a number of interfaces available. This depends on how many network interfaces (NIC) are added to the virtual machine.			
	interface GigabitEthernet ip-address			
Syntax Description	GigabitEthernet	Configures the Gigabit Ethernet interface.		
	0 - 3	Number of the Gigabit Ethernet port to configure.		
Note	After you enter the Gigabit Ethernet configuration submode (see the following the foll	port number in the interface command, you enter config-GigabitEtherr		

	do	EXEC command. Allows you to perform any EXEC commands in this mode (see do).	
	end	Exits config-GigabitEthernet submode and returns you to EXEC mode.	
	exit	Exits the config-GigabitEthernet configuration submode.	
	ip	Sets IP address and netmask for the Ethernet interface (see ip address).	
	ipv6	Configures the IPv6 autoconfiguration address and IPv6 address from DHCPv6 server. (see ipv6 address autoconfig and ipv6 address dhcp).	
	no	Negates the command in this mode. Two keywords are available:	
		• ip—Sets the IP address and netmask for the interface.	
		• shutdown—Shuts down the interface.	
	shutdown	Shuts down the interface (see shutdown).	
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	You can use the interface command to configure subinterfaces to support various requirements.		
	<pre>ncs/admin(config)# interface GigabitEthernet ncs/admin(config-GigabitEthernet)#</pre>	. 0	
Related Commands	Command	Description	
	show interface	Displays information about the system interfaces.	
	ip address (interface configuration mode)	Sets the IP address and netmask for the interface.	

ipv6 address autoconfig

To enable IPv6 stateless autoconfiguration, use the **ipv6 address autoconfig** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

[no] ipv6 address autoconfig [default]0

shutdown (interface configuration mode)

Shuts down the interface (see shutdown).

Syntax Description	default	(Optional) If a default router is selected on this interface, the default keyword causes a default route to be installed using that default router.	
		The default keyword can be specified only on one interface.	
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	IPv6 stateless autoconfiguration has the security downfall of having predictable IP addresses. This downfall is resolved with privacy extensions. You can verify that the privacy extensions feature is enabled using the show command.		
	IPv6 address autoconfiguration is enabled by default in Linux. Cisco ADE 2.0 shows the IPv6 address autoconfiguration in the running configuration for any interface that is enabled.		
	Example 1		
	<pre>ncs/admin# configure terminal Enter configuration commands, one ncs/admin(config)# interface Giga ncs/admin(config)# (config-Gigabi ncs/admin(config)# (config-Gigabi ncs/admin#</pre>	ubitEthernet 0 tEthernet)# ipv6 address autoconfig	
	When IPv6 autoconfiguration is enable similar to the following:	d, the running configuration shows the interface settings	
	example 2, you can see that the interface 3ffe) is obtained using the stateless auto you must have IPv6 route advertisement	itEthernet 0 command to display the interface settings. In we has three IPv6 addresses. The first address (starting with boonfiguration. For the stateless autoconfiguration to work, t enabled on that subnet. The next address (starting with fe80) e any scope outside the host. You will always see a link local	
		guration or DHCPv6 configuration. The last address (starting	

Example 2

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
inet6 addr: 2001:558:ff10:870:8000:29ff:fe36:200/64 Scope:Global
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
```

RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB) Interrupt:59 Base address:0x2000

ncs/admin#

To verify that the privacy extensions feature is enabled, you can use the **show interface GigabitEthernet 0** command. You can see two autoconfiguration addresses: one address is without the privacy extensions, and the other is with the privacy extensions.

In the example 3 below, the MAC is 3ffe:302:11:2:20c:29ff:feaf:da05/64 and the non-RFC3041 address contains the MAC, and the privacy-extension address is 302:11:2:9d65:e608:59a9:d4b9/64.

The output appears similar to the following:

Example 3

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:9d65:e608:59a9:d4b9/64 Scope:Global
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1

L

ipv6 address static

To assign static IPv6 address, use the **ipv6 address static** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

	ipv6 address static [ipv6 address] 0		
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	None.		
	admin(config-GigabitEthernet)# ipv6 address static 0:0:0:0:0:ffff:a7e:a9d2 admin(config-GigabitEthernet)# ipv6 default-gateway 0:0:0:0:0:ffff:ffff:ffe0		

Related Commands Command Description ipv6 address autoconfig Enables IPv6 stateless autoconfiguration on an interface. ipv6 address dhcp, on page 111 Enables IPv6 address DHCP on an interface.

ip address

To set the IP address and netmask for the Ethernet interface, use the **ip address** command in interface configuration mode. To remove an IP address or disable IP processing, use the **no** form of this command.

[no] ip address ip-address netmask

Note	You can configure the same IP address on multiple interfaces. You might want to do this to limit the configuration steps that are needed to switch from using one interface to another.	
Syntax Description	ip-address	IPv4 version IP address.
	netmask	Mask of the associated IP subnet.
Command Default	Enabled.	
Command Modes	Interface configuration	
Usage Guidelines	Requires exactly one address a	and one netmask; otherwise, an error occurs.
		ace GigabitEthernet 1 thernet)# ip address 209.165.200.227 255.255.255.224 IP may result in undesired side effects,

```
such as installed application(s) being restarted.
.....
To verify that NCS processes are running, use the
'show application status ncs' command.
ncs/admin(config-GigabitEthernet)#
```

Related Commands

Command	Description
shutdown (interface configuration mode)	Disables an interface (see shutdown).
ip default-gateway	Sets the IP address of the default gateway of an interface.
show interface	Displays information about the system IP interfaces.
interface	Configures an interface type and enters the interface mode.

ip default-gateway

To define or set a default gateway with an IP address, use the **ip default-gateway** command in configuration mode. To disable this function, use the **no** form of this command.

[no] ip default-gateway ip-address

Syntax Description	ip-address IP address of the default gateway.		
Command Default	Disabled.		
Command Modes	Configuration		
Usage Guidelines	If you enter more than one argument or no arguments at all, an error occurs.		
	ncs/admin(config)# ip default-gateway 2 ncs/admin(config)#	09.165.202.129	
Related Commands	Command	Description	
	ip address (interface configuration mode)	Sets the IP address and netmask for the Ethernet	

ip domain-name

To define a default domain name that the server uses to complete hostnames, use the **ip domain-name** command in configuration mode. To disable this function, use the **no** form of this command.

interface.

[no] ip domain-name word

Syntax Description	word	Default domain name used to complete the hostnames. Contains at least 2 to 64 alphanumeric characters.
Command Default	Enabled.	
Command Modes	Configuration	
Usage Guidelines	If you enter more or fewer arguments, an error occurs	
	ncs/admin(config)# ip domain-name cisco.com ncs/admin(config)#	
Related Commands	_	Description
	ip name-server	Sets the DNS servers for use during a DNS query.

ip name-server

To set the Domain Name Server (DNS) servers for use during a DNS query, use the **ip name-server** command in configuration mode. You can configure one to three DNS servers. To disable this function, use the **no** form of this command.

Note	Using the no form of this command removes all of the name servers from the configuration. Using the no form of this command and one of the IP names removes only that IP name server.		
	[no] ip name-server ip-addres	ss [ip-address*]}	
Syntax Description	ip-address	Addres	ss of a name server.
	ip-address*	(Option	nal) IP addresses of additional name servers.
		Note	You can configure a maximum of three name servers.
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	The first name server that is adde system uses that server first to re	-	ommand occupies the first position and the
		•	once, until you reach the maximum (3). If you ust remove at least one server to add additional
	To place a name server in the first servers with the no form of this of		em uses it first, you must remove all name

```
ncs/admin(config)# ip name-server 209.165.201.1
To verify that NCS processes are running, use the
```

```
'show application status ncs' command.
ncs/admin(config)#
```

You can choose not to restart the server; nevertheless, the changes will take effect.

Related Commands	Command	Description
	ip domain-name	Defines a default domain name that the server uses to complete hostnames.

ip route

To configure the static routes, use the **ip route** command in configuration mode. To remove static routes, use the **no** form of this command.

ip route prefix mask gateway ip-address

no ip route prefix mask

Syntax Description prefix	prefix	IP route prefix for the destination.
	mask	Prefix mask for the destination.
	gateway	Route-specific gateway
	ip-address	IP address of the next hop that can be used to reach that network.

Command Default	No default behavior or values.
	Configuration.

Usage Guidelines Static routes are manually configured, which makes them inflexible (they cannot dynamically adapt to network topology changes), but extremely stable. Static routes optimize bandwidth utilization, because no routing updates need to be sent to maintain them. They also make it easy to enforce routing policy.

ncs/admin(config)# ip route 192.168.0.0 255.255.0.0 gateway 172.23.90.2
ncs/admin(config)#

kron occurrence

To schedule one or more Command Scheduler commands to run at a specific date and time or a recurring level, use the **kron occurrence** command in configuration mode. To delete this schedule, use the **no** form of this command.

[no] kron {occurrence} occurrence-name

Syntax Description

occurrence-name

Name of the occurrence. Up to 80 alphanumeric characters. (See the following note and Syntax Description.)

N

Note

After you enter the *occurrence-name* in the **kron occurrence** command, you enter the config-occurrence configuration submode (see the following syntax description).

at	Identifies that the occurrence is to run at a specified calendar date and time. Usage: at [<i>hh:mm</i>] [<i>day-of-week</i> <i>day-of-month</i> <i>month day-of-month</i>].
do	EXEC command. Allows you to perform any EXEC commands in this mode (see do).
end	Exits the kron-occurrence configuration submode and returns you to EXEC mode.
exit	Exits the kron-occurrence configuration mode.
no	Negates the command in this mode.
	Three keywords are available:
	• at—Usage: at [<i>hh:mm</i>] [<i>day-of-week</i> <i>day-of-month</i> <i>month day-of-month</i>].
	• policy-list—Specifies a policy list to be run by the occurrence. Up to 80 alphanumeric characters.
	 recurring—Execution of the policy lists should be repeated.
policy-list	Specifies a Command Scheduler policy list to be ruby the occurrence.
recurring	Identifies that the occurrences run on a recurring basis

Command Default No default behavior or values.

Command Modes Configuration

Usage Guidelines

s Use the **kron occurrence** and **policy-list** commands to schedule one or more policy lists to run at the same time or interval.

Use the **kron policy-list** command in conjunction with the **cli** command to create a Command Scheduler policy that contains the EXEC CLI commands to be scheduled to run on the server at a specified time. See the kron policy-list command.

Note

When you run the **kron** command, backup bundles are created with a unique name (by adding a time stamp) to ensure that the files do not overwrite each other.

Example 1:Weekly Backup

```
ncs/admin(config)# kron occurrence WeeklyBackup
ncs/admin(config-Occurrence)# at 14:35 Monday
ncs/admin(config-Occurrence)# policy-list SchedBackupPolicy
ncs/admin(config-Occurrence)# recurring
ncs/admin(config-Occurrence)# exit
ncs/admin(config)#
```

Example 2: Daily Backup

```
ncs/admin(config)# kron occurrence DailyBackup
ncs/admin(config-Occurrence)# at 02:00
ncs/admin(config-Occurrence)# exit
ncs/admin(config)#
```

Command	Description
kron policy-list	Specifies a name for a Command Scheduler policy.

kron policy-list

To specify a name for a Command Scheduler policy and enter the kron-Policy List configuration submode, use the **kron policy-list** command in configuration mode. To delete a Command Scheduler policy, use the **no** form of this command.

[no] kron {policy-list} list-name

 Syntax Description
 policy-list
 Specifies a name for Command Scheduler policies.

 list-name Name of the policy list. Up to 80 alphanumeric characters.

Note

After you enter the *list-name* in the **kron policy-list** command, you enter the config-Policy List configuration submode (see the following Syntax Description).

cli	Command to be executed by the scheduler. Up to 80 alphanumeric characters.
do	EXEC command. Allows you to perform any EXEC commands in this mode (see the do) command.
end	Exits from the config-policy list configuration submode and returns you to EXEC mode.

I

	exit	Exits this submode.	
	no	Negates the command in this mode. One keyword is available:	
		• cli—Command to be executed by the scheduler.	
Command Default	No default behavior or values.		
Command Modes	[–] Configuration		
Usage Guidelines	s Use the kron policy-list command in conjunction with the cli command to create a Command Sch policy that contains the EXEC CLI commands to be scheduled to run on the server at a specified ti the kron occurrence and policy list commands to schedule one or more policy lists to run at the server at the kron occurrence and policy list commands.		
	<pre>ncs/admin(config)# kron policy-list So ncs/admin(config-Policy List)# cli bac ncs/admin(config-Policy List)# exit ncs/admin(config)#</pre>	chedBackupMonday ckup SchedBackupMonday repository SchedBackupRepo	
Related Commands	Command	Description	
	ip route	Specifies schedule parameters for a Command Scheduler occurrence and enters config-Occurrence configuration mode.	
logging			
	To enable the system to forward logs to a remo in configuration mode. To disable this function	ote system or to configure the log level, use the logging command on, use the no form of this command.	
	[no] logging {ip-address hostname} {logler	vel level}	
Syntax Description	ip-address	IP address of remote system to which you forward logs. Up to 32 alphanumeric characters.	
	hostname	Hostname of remote system to which you forward logs. Up to 32 alphanumeric characters.	
	loglevel	The command to configure the log level for the logging command.	

	level	Number of the desired priority level at which you set the log messages. Priority levels are (enter the number for the keyword):
		• 0-emerg—Emergencies: System unusable.
		• 1-alert—Alerts: Immediate action needed.
		• 2-crit—Critical: Critical conditions.
		• 3-err—Error: Error conditions.
		• 4-warn—Warning: Warning conditions.
		 5-notif—Notifications: Normal but significant conditions.
		• 6-inform—(Default) Informational messages.
		• 7-debug—Debugging messages.
Command Default	No default behavior or values.	
Usage Guidelines	This command requires an IP address or hostname or the loglevel keyword; an error occurs if you enter or more of these arguments.	
	Example 1	
	<pre>ncs/admin(config)# logging 209.165.200.225 ncs/admin(config)#</pre>	
	Example 2	
	ncs/admin(config)# logging loglevel 0 ncs/admin(config)#	
Related Commands	Command	Description
	show logging	Displays the list of logs for the system.

ntp server

To allow for software clock synchronization by the NTP server for the system, use the **ntp server** command in configuration mode. Allows up to three servers.

ntp server { ntp-server}

For the unauthenticated NTP servers, use the following command:

ntp server { ntp-server}

Syntax Description	intp-server	IP address or hostname of the server providing the clock synchronization. Arguments are limited to 255 alphanumeric characters.	
Command Default	No servers are configured by default. Configuration		
Command Modes			
Usage Guidelines	Use this command if you want to a	llow the system to synchronize with a specified server.	
Note	The synchronization process can ta	ake up to 20 minutes to complete.	
Related Commands	Command	Description	
	show ntp	Displays the status information about the NTP associations.	

Example - NTP Server Addition

ncs/admin(config)# ntp server 192.0.2.1 10 plain password ncs/admin(config)# ntp server 192.0.2.2 20 plain pass123

Example - NTP Server Initialization

```
ncs/admin# sh ntp
pi-ha-test-237-75/admin# sh ntp
NTP Server 1 : 192.0.2.1 : keyid=10
NTP Server 2 : 192.0.2.2
NTP Server 3 : 192.0.2.3 : keyid=10
unsynchronised
time server re-starting
polling server every 64 s
remote refid st t when poll reach delay offset jitter
192.0.2.1 .INIT. 16 u - 64 0 0.000 0.000 0.000
192.0.2.2 .GPS. 1 u 43 64 7 250.340 0.523 1.620
192.0.2.3 192.0.2.2 2 u 41 64 7 231.451 7.517 3.434
```

Example - NTP Synchronization

```
ncs/admin# sh ntp
NTP Server 1 : 192.0.2.1 : keyid=10
NTP Server 2 : 192.0.2.2
NTP Server 3 : 192.0.2.3 : keyid=10
```

synchronised to NTP server (10.81.254.131) at stratum 2 time correct to within 569 ms polling server every 64 s				
remote	refid	st t wher	n poll reach del	ay offset jitter
192.0.2.1 .INIT. *192.0.2.2 .GPS. 192.0.2.3 192.0.2.2	1 u	12 6		
Warning: Output resul	ts may confl	ict durir	ng periods of char	nging synchronization.

password-policy

To enable or configure the passwords on the system, use the **password-policy** command in configuration mode. To disable this function, use the **no** form of this command.

[no] password-policy option

The **password-policy** command requires a policy option (see Syntax Description). You must enter the **password-expiration-enabled** command before the other password-expiration commands.

Syntax Description

Note

option

After you enter the **password-policy** command, you can enter config-password-policy configuration submode.

Different command options.

digit-required	Requires a digit in the password.
disable-repeat-characters	Disables the ability of the password to contain more than four identical characters.
disable-cisco-password	Disables the ability to use the word Cisco or any combination as the password.
do	EXEC command.
end	Exits from configure mode.
exit	Exits from this submode.
lower-case-required	Requires a lowercase letter in the password.
min-password-length	Specifies a minimum number of characters for a valid password. Integer length from 1 to 40.
no	Negates a command or set its defaults.

no-previous-password	Prevents users from reusing a part of their previous password.	
no-username	Prohibits users from reusing their username as a part of a password.	
password-expiration-days	Number of days until a password expires. Integer length from 1 to 3600.	
password-expiration-enabled	Enables password expiration.	
	Note You must enter the password-expiration-enabled command before the other password-expiration commands.	
password-expiration-warning	Number of days before expiration that warnings of impending expiration begin. Integer length from 0 to 3600.	
password-lock-enabled	Locks a password after several failures.	
password-lock-retry-count	Number of failed attempts before password locks. Integer length from 1 to 20.	
upper-case-required	Requires an uppercase letter in the password.	
special-required	Requires a special character in the password.	

Command Default

No default behavior or values.

```
Command Modes
```

Configuration

```
ncs/admin(config)# password-policy
ncs/admin(config-password-policy)# password-expiration-days 30
ncs/admin(config-password-policy)# exit
ncs/admin(config)#
```

repository

To enter the repository submode for configuration of backups, use the **repository** command in configuration mode.

repository repository-name

Syntax Description	repository-name	Name of repository. Up to 80 alphanumeric characters.
Note	After you enter the name of the rep	pository in the repository command, you enter repository configuration

submode.

Command Reference

do	EXEC command.
end	Exits repository config submode and returns you to EXEC mode.
exit	Exits this mode.
no	Negates the command in this mode.
	Two keywords are available:
	• url—Repository URL.
	• user—Repository username and password for access.
url	URL of the repository. Up to 80 alphanumeric characters (see Table A-20).
user	Configure the username and password for access. Up to 30 alphanumeric characters.

Table 10: URL Keywords

Keyword	Source of Destination
word	Enter the repository URL, including server and path info. Up to 80 alphanumeric characters.
cdrom:	Local CD-ROM drive (read only).
disk:	Local storage. You can enter the show repository <i>repository_name</i> command to view all of the files in the local repository.
	Note All local repositories are created on the /localdisk partition. When you specify disk:/ in the repository URL, the system creates directories in a path that is relative to /localdisk. For example, if you entered disk:/backup , the directory is created at /localdisk/backup.
ftp:	Source or destination URL for an FTP network server. Use url ftp://server/path(1).
nfs:	Source or destination URL for an NFS network server. Use url nfs://server:path1.

Keyword	Source of Destination
sftp:	Source or destination URL for an SFTP network server. Use url sftp://server/path1.
	NoteSFTP Repositories may require the // between the ip address/FQDN and the physical path on the SFTP store. If you find that you cannot access the SFTP repository with single slashes, add the additional slash and try the operation again.Example: Repository SFTP-Store url sftp://server//path
tftp:	Source or destination URL for a TFTP network server. Use url tftp://server/path1. Note You cannot use a TFTP repository for performing a upgrade.

Command Default

No default behavior or values.

```
Command Modes
```

Configuration

Example 1

```
ncs/admin#
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url sftp://example.com/repository/system1
ncs/admin(config-Repository)# user abcd password plain example
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
ncs/admin#
```

Example 2

```
ncs/admin# configure termainal
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url disk:/
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
```

Related Commands	Command	Description
	backup	Performs a backup (and Cisco ADE OS) and places the backup in a repository.
	restore	Performs a restore and takes the backup out of a repository.

Command	Description
show backup history	Displays the backup history of the system.
show repository	Displays the available backup files located on a specific repository.

service

To specify a service to manage, use the **service** command in configuration mode. To disable this function, use the **no** form of this command.

[no] service sshd

Syntax Description	sshd	Secure Shell Daemon. The daemon program for SSH.
Command Default	No default behavior or values.	
Command Modes	Configuration	

ncs/admin(config)# service sshd
ncs/admin(config)#

shutdown

To shut down an interface, use the **shutdown** command in interface configuration mode. To disable this function, use the **no** form of this command.

[no] shut	tdown
-----------	-------

Syntax Description	This command has no arguments or keywords.	
Command Default	No default behavior or values.	
Command Modes	Interface	
Usage Guidelines	When you shut down an interface using this command, you lose connectivity to the Cisco ISE-3315 appliance through that interface (even though the appliance is still powered on). However, if you have configured the second interface on the appliance with a different IP and have not shut down that interface, you can access the appliance through that second interface.	
	To shut down an interface, you can also modify the ifcfg-eth[0,1] file, which is located at <i>/etc/sysconfig/network-scripts</i> , using the ONBOOT parameter:	
	• Disable an interface: set ONBOOT="no"	
	• Enable an interface: set ONBOOT="yes"	
	You can also use the no shutdown command to enable an interface.	

ncs/admin(config)# interface GigabitEthernet 0
ncs/admin(config-GigabitEthernet)# shutdown

Related Commands

Command	Description
interface	Configures an interface type and enters interface mode.
ip address (interface configuration mode)	Sets the IP address and netmask for the Ethernet interface.
show interface	Displays information about the system IP interfaces.
ip default-gateway	Sets the IP address of the default gateway of an interface.

snmp-server community

To set up the community access string to permit access to the Simple Network Management Protocol (SNMP), use the **snmp-server community** command in configuration mode. To disable this function, use the **no** form of this command.

[no] snmp-server community word ro

Syntax Description	word	Accessing string that functions much like a password and allows access to SNMP. No blank spaces allowed. Up to 255 alphanumeric characters.	
	го	Specifies read-only access.	
Command Default	No default behavior or values.		
Command Modes	Configuration		
Usage Guidelines	The snmp-server community comma error occurs.	and requires a community string and the ro argument; otherwise, an	
	ncs/admin(config)# snmp-server community new ro ncs/admin(config)#		
Related Commands	Command	Description	
	snmp-server host	Sends traps to a remote system.	
	snmp-server location	Configures the SNMP location MIB value on the system.	

Command	Description
snmp-server contact	Configures the SNMP contact MIB value on the system.

snmp-server contact

To configure the SNMP contact Management Information Base (MIB) value on the system, use the **snmp-server contact** command in configuration mode. To remove the system contact information, use the **no** form of this command.

[no] snmp-server contact word

Syntax Description	word	String that describes the system contact information of the node. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	None.	
	ncs/admin(config)# snmp-server contact Abcd ncs/admin(config)#	

Related Commands	Command	Description
	snmp-server host	Sends traps to a remote system.
	snmp-server community	Sets up the community access string to permit access to the SNMP.
	snmp-server location	Configures the SNMP location MIB value on the system.

snmp-server host

To send SNMP traps to a remote user, use the **snmp-server host** command in configuration mode. To remove trap forwarding, use the **no** form of this command.

[no] snmp-server host {ip-address | hostname} version {1 | 2c} community

Syntax Description	ip-address	IP address of the SNMP notification host. Up to 32 alphanumeric characters.
	hostname	Name of the SNMP notification host. Up to 32 alphanumeric characters.

	version {1 2c}	(Optional) Version of the SNMP used to send the traps. Default = 1 .	
		If you use the version keyword, specify one of the following keywords:	
		• 1—SNMPv1.	
		• 2c—SNMPv2C.	
	community	Password-like community string that is sent with the notification operation.	
Command Default	Disabled.		
Command Modes	Configuration		
Usage Guidelines	The command takes arguments as listed; otherwise, an error occurs.		
	<pre>ncs/admin(config)# snmp-server co ncs/admin(config)# snmp-server ho ncs/admin(config)#</pre>	mmunity new ro st 209.165.202.129 version 1 password	
Related Commands	Command	Description	
	snmp-server community	Sets up the community access string to permit access to SNMP.	
	snmp-server location	Configures the SNMP location MIB value on the system.	
	snmp-server contact	Configures the SNMP contact MIB value on the	

snmp-server location

To configure the SNMP location MIB value on the system, use the **snmp-server location** command in configuration mode. To remove the system location information, use the **no** form of this command.

system.

[no] snmp-server location word

Syntax Description	word String that describes the physical location information of the system. Up to 255 alphanumeric characters.	
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	We recommend that you use underscores (_) or hyphens (-) between the terms within the <i>word</i> string. If you use spaces between terms within the <i>word</i> string, you must enclose the string in quotation marks (").	

Example 1

ncs/admin(config)# snmp-server location Building_3/Room_214
ncs/admin(config)#

Example 2

```
ncs/admin(config)# snmp-server location "Building 3/Room 214"
ncs/admin(config)#
```

Related Commands

Command	Description	
snmp-server host	Sends traps to a remote system.	
snmp-server community	Sets up the community access string to permit access to SNMP.	
snmp-server contact	Configures the SNMP location MIB value on the system.	

username

To add a user who can access the Cisco ISE-3315 using SSH, use the **username** command in configuration mode. If the user already exists, the password, the privilege level, or both change with this command. To delete the user from the system, use the **no** form of this command.

[no] username username password {hash | plain} password role {admin | user] [disabled [email email-address]] [email email-address]

For an existing user, use the following command option:

username username password role {admin | user} password

Syntax Description	username	You should enter only one word which can include hyphen (-), underscore (_) and period (.).
		Note Only alphanumeric characters are allowed at an initial setup.
	password	The command to use specify password and user role.
	password	Password character length up to 40 alphanumeric characters. You must specify the password for all new users.
	hash plain	Type of password. Up to 34 alphanumeric characters.
	role admin user	Sets the privilege level for the user.
	disabled	Disables the user according to the user's email address.

	email email-address	The user's email address. For example, user1@example.com.
Command Default	The initial user during setup.	
Command Modes	Configuration	
Usage Guidelines	The username command requires that the username and password keywords precede the hash plain and th admin user options.	
	Example 1	
	ncs/admin(config)# username admin pas : ncs/admin(config)#	sword hash ####### role admin
	Example 2	
	ncs/admin(config)# username admin pas : ncs/admin(config)#	sword plain Secr3tp@swd role admin
	Example 3	
	ncs/admin(config)# username admin pas admin123@example.com ncs/admin(config)#	sword plain Secr3tp@swd role admin email
