

collectd Output JSON Examples

This appendix provides examples collectd JSON output.

VTC has the following information to emit to the Centralized Collect-D :

1. Master or Slave
2. IP or Hostname of the VTC
3. Stats Category—say number of tenants
4. Stats Sub-Category—say the vtep name if we have tenants per vtep
5. Count—count of tenants

Collect-D offers minimum attributes to set. They are:

1. Host
2. Plugin
3. Plugin-Instance
4. Type
5. Type-Instance

Of this the default values of Type can be only gauge and counter. To have custom types, the collect-d types.db needs to be updated with the custom types.
