APPENDIX C

Fields that Require Punt to the Route Processor

First Published: March 29, 2013
Revised: March 26, 2015

Table C-1 describes the media monitoring/metadata metrics that require punt to the route processor (RP).

Table C-1   Media Monitoring/Metadata Metric Fields

Metric	NetFlow ID
Media Monitoring related fields	
collect counter flows	3
collect application media bytes rate	37006
collect application media packets rate	37009
collect application media packets rate variation	37010
collect application media event	37011
collect monitor event	37012
collect timestamp interval	37013
collect transport packets lost rate	37021
collect transport rtp jitter mean	37023
collect application media packets rate variation min	37038
collect application media packets rate variation max	37039
collect transport rtp flow count	37040
collect transport packets lost rate min	37047
collect transport packets lost rate max	37048
timestamp absolute monitoring-interval start	65500
timestamp absolute monitoring-interval end	65501
Metadata related fields	
collect application version	105
collect application version name	106
collect application vendor	107
collect metadata global-session-id	37054

Metric	NetFlow ID
Media Monitoring related fields	
collect metadata multi-party-session-id	37055
collect metadata clock-rate	37056
