Preface

From Release 6.1.2 onwards, Cisco introduces support for the 64-bit Linux-based IOS XR operating system. Extensive feature parity is maintained between the 32-bit and 64-bit environments. Unless explicitly marked otherwise, the contents of this document are applicable for both the environments. For more details on Cisco IOS XR 64 bit, refer to the Release Notes for Cisco ASR 9000 Series Routers, Release 6.1.2 document.

The Preface contains these topics:

- Changes to This Document, on page xiii
- · Communications, Services, and Additional Information, on page xiv

Changes to This Document

This table lists the changes made to this document since it was first printed.

Table 1: Changes to This Document

Date	Change Summary
March 2017	Initial release of this document.
July 2017	Republished for Release 6.2.2.
March 2018	Republished for Release 6.3.2.
March 2018	Republished for Release 6.4.1.
July 2018	Republished for Release 6.5.1.
January 2019	Republished for Release 6.5.2.
March 2019	Republished for Release 6.5.3.
April 2019	Republished for Release 6.6.2.
December 2019	Republished for Release 6.6.3.
February 2021	Republished for Release 7.3.1.
July 2021	Republished for Release 6.8.1.

Date	Change Summary
July 2021	Republished for Release 7.4.1.

Communications, Services, and Additional Information

- To receive timely, relevant information from Cisco, sign up at Cisco Profile Manager.
- To get the business impact you're looking for with the technologies that matter, visit Cisco Services.
- To submit a service request, visit Cisco Support.
- To discover and browse secure, validated enterprise-class apps, products, solutions and services, visit Cisco Marketplace.
- To obtain general networking, training, and certification titles, visit Cisco Press.
- To find warranty information for a specific product or product family, access Cisco Warranty Finder.

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a web-based tool that acts as a gateway to the Cisco bug tracking system that maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. BST provides you with detailed defect information about your products and software.

ACL and ABF Commands

This module describes the Cisco IOS XR software commands used to configure the ACL and ABF commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- ipv4 access-group (BNG), on page 2
- ipv4 access-list(BNG), on page 5
- ipv6 access-group(BNG), on page 7
- ipv6 access-list(BNG), on page 9

Syntax

ipv4 access-group (BNG)

To control access to an interface, use the **ipv4 access-group** command in an appropriate configuration mode. To remove the specified access group, use the **no** form of this command.

	access-list-name {common acl-p {[acl1 ingress [hardware-count]] ingress} acl1 {ingress egress} [hardware-count] [interface-statistics]}
access-list-name	The name of the ipv4 access list as specified by the ipv4 access-list command.
common	The name of the common ACL. Common ACL is only supported on the ingress direction.
ingress	Filters on inbound packets.
egress	Filters on outbound packets.
hardware-count	(Optional) Specifies to access a group's hardware counters.
interface-statistics	(Optional) Specifies per-interface statistics in the hardware. Not available for common ACL.
	[interface-statistics] access-list-name common ingress egress hardware-count

Command Default The interface does not have an IPv4 access list applied to it.

Command Modes Global Configuration mode

Command History	Release	Modification
	Release 4.1.1	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

Use the **ipv4 access-group** command to control access to an interface. To remove the specified access group, use the **no** form of the command. Use the *access-list-name* argument to specify a particular IPv4 access list. Use the **ingress** keyword to filter on inbound packets or the egress keyword to filter on outbound packets. Use the *hardware-count* argument to enable hardware counters for the access group.

Permitted packets are counted only when hardware counters are enabled using the hardware-count argument. Denied packets are counted whether hardware counters are enabled or not.

To enter the dynamic template configuration mode, run **dynamic-template** command in the Global Configuration mode(applicable only for BNG).

Note Under the dynamic template configuration mode, only the egress and ingress keywords are displayed.

Task ID

	lote For packet filtering applications using the ipv4/ipv6 access-group command, packet counters are n in hardware for each direction. If an access group is used on multiple interfaces in the same direct packets are counted for each interface that has the hardware-count argument enabled.		
the a		software discar	dresses, the software continues to process the packet. If the access list denies rds the packet and returns an Internet Control Message Protocol (ICMP) host
If th	e specified	access list does	not exist, all packets are passed.
By a	default, the	unique or per-ir	nterface ACL statistics are disabled.

RP/0/RSP0/CPU0:router(config-if) #ipv4 access-group common acl-common acl-unique1 ingress

This is an example of a configured IPv4 ACL in the dynamic template configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 access-group a1 egress
```

ipv4 access-list(BNG)

To define an IPv4 access list by name, use the **ipv4 access-list** command in Global Configuration mode. To remove all entries in an IPv4 access list, use the **no** form of this command.

ipv4 access-list name

Syntax Description	name Name of the access list. Names cannot contain a space or quotation marks.		
Command Default	No IPv4 access list is defined.		
Command Modes	Global Configuration mode		
Command History	Release Modification		
	ReleaseThis command was3.7.2introduced.		
Usage Guidelines	-	to configure an IPv4 access list. This command places the router in access e denied or permitted access conditions must be defined with the deny	
	between consecutive entries in an exincrement by which to separate the	4 command if you want to add a permit , deny , or remark statement sisting IPv4 access list. Specify the first entry number (the <i>base</i>) and the entry numbers of the statements. The software renumbers the existing add new statements with the unused entry numbers.	
	Use the ipv4 access-group comr	nand to apply the access list to an interface.	
Task ID	Task Operations ID		
	acl read, write		
Examples	The following example shows how	to define a standard access list named Internetfilter:	
		92.168.34.0 0.0.0.255 72.16.0.0 0.0.255.255	
Related Commands	Command	Description	
	ipv4 access-group (BNG), on page	2 Filters incoming or outgoing IPv4 traffic on an interface.	

I

Command	Description
show access-lists ipv4	Displays the contents of all current IPv4 access lists.

ipv6 access-group(BNG)

To control access to an interface, use the **ipv6 access-group** command in interface configuration mode. To remove the specified access group, use the **no** form of this command.

ipv6 access-group *access-list-name* {**ingress** | **egress**} [**interface-statistics**]

Syntax Description			
	access-lis	st-name Name of an IPv6 access list as specified by an ipv6 access-list command.	
	ingress	Filters on inbound packets.	
	egress	Filters on outbound packets.	
	interface-s	statistics (Optional) Specifies per-interface statistics in the hardware.	
Command Default	The interfa	face does not have an IPv6 access list applied to it.	
Command Modes	Interface c	configuration	
Command History	Release	Modification	
	Release 3.7.2	This command was introduced.

Examples

The following example shows how to apply filters on packets inbound and outbound from GigabitEthernet interface 0/2/0/2:

RP/0/RSP0

/CPU0:router(config) # interface gigabitethernet 0/2/0/2
RP/0/RSP0

/CPU0:router(config-if) # ipv6 access-group p-in-filter ingress RP/0/RSP0

/CPU0:router(config-if) # ipv6 access-group p-out-filter egress

The following example shows how to apply per-interface statistics in the hardware:

RP/0/RSP0

```
/CPU0:router(config)# interface gigabitethernet 0/2/0/2
RP/0/RSP0
```

/CPU0:router(config-if) # ipv6 access-group p-in-filter ingress interface-statistics

Related Commands Command		Description	
	ipv6 access-list(BNG)	Defines an IPv6 access list and enters IPv6 access list configuration mode.	
	show ipv6 interface	Displays the usability status of interfaces configured for IPv6.	

ipv6 access-list(BNG)

To define an IPv6 access list and to place the router in IPv6 access list configuration mode, use the **ipv6** access-list command in Global Configuration mode. To remove the access list, use the **no** form of this command.

ipv6 access-list name

Syntax Description nme Name of the IPv6 access list. Names cannot contain a space or quotation mark, or begin with a numeric.

Command Default No IPv6 access list is defined.

Command Modes Global Configuration mode

Command History	Release Modification			
	Release 3.7.2	This command was introduced.		

Usage Guidelines

ines The **ipv6 access-list** command is similar to the **ipv4 access-list** command, except that it is IPv6-specific.

The IPv6 access lists are used for traffic filtering based on source and destination addresses, IPv6 option headers, and optional, upper-layer protocol type information for finer granularity of control. IPv6 access lists are defined by using the **ipv6 access-list** command in global configuration mode and their permit and deny conditions are set by using the **deny** and **permit** commands in IPv6 access list configuration mode. Configuring the **ipv6 access-list** command places the router in IPv6 access list configuration mode—the router prompt changes to router (config-ipv6-acl)#. From IPv6 access list configuration mode, permit and deny conditions can be set for the defined IPv6 access list.

Note

No more than one IPv6 access list can be applied to an interface per direction.

Note Every IPv6 access list has an implicit **deny ipv6 any any** statement as its last match condition. An IPv6 access list must contain at least one entry for the implicit **deny ipv6 any any** statement to take effect.

Note

IPv6 prefix lists, not access lists, should be used for filtering routing protocol prefixes.

Use the **ipv6 access-group** interface configuration command with the *access-list-name* argument to apply an IPv6 access list to an IPv6 interface.

Note Every IPv6 ACL has implicit permit icmp any any nd-na, permit icmp any any nd-ns, and deny ipv6 any any statements as its last match conditions. (The former two match conditions allow for ICMPv6 neighbor discovery.) An IPv6 ACL must contain at least one entry for the implicit deny ipv6 any any statement to take effect. permit icmp any any nd-na permit icmp any any nd-ns deny ipv6 any any deny ipv6 any any

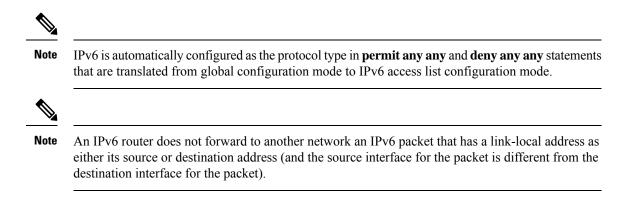

The IPv6 neighbor discovery process makes use of the IPv6 network layer service; therefore, by default, IPv6 ACLs implicitly allow IPv6 neighbor discovery packets to be sent and received on an interface. In IPv4, the Address Resolution Protocol (ARP), which is equivalent to the IPv6 neighbor discovery process, makes use of a separate data link layer protocol; therefore, by default, IPv4 ACLs implicitly allow ARP packets to be sent and received on an interface.

Task ID	Operations
acl	read, write
ipv6	read, write

Examples

The following example shows how to configure the IPv6 access list named list2 and applies the ACL to outbound traffic on interface GigabitEthernet 0/2/0/2. Specifically, the first ACL entry keeps all packets from the network fec0:0:0:2::/64 (packets that have the site-local prefix fec0:0:0:2 as the first 64 bits of their source IPv6 address) from exiting out of interface GigabitEthernet 0/2/0/2. The second entry in the ACL permits all other traffic to exit out of interface GigabitEthernet 0/2/0/2. The second entry is necessary because an implicit deny all condition is at the end of each IPv6 ACL.

```
RP/0/RSP0
/CPU0:router(config)# ipv6 access-list list2
RP/0/RSP0
/CPU0:router(config-ipv6-acl)# 10 deny fec0:0:0:2::/64 any
RP/0/RSP0
/CPU0:router(config-ipv6-acl)# 20 permit any any
RP/0/RSP0
/CPU0:router# show ipv6 access-lists list2
ipv6 access-list list2
ipv6 access-list list2
i0 deny ipv6 fec0:0:0:2::/64 any
20 permit ipv6 any any
RP/0/RSP0
/CPU0:router(config)# interface gigabitethernet 0/2/0/2
RP/0/RSP0
/CPU0:router(config)# ipv6 access-group list2 out
```

I

Address Pool Service Commands

This chapter describes the Cisco IOS XR software Address Pool Service commands for Broadband Network Gateway (BNG). For details regarding related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- address-range, on page 14
- exclude, on page 16
- network (BNG), on page 18
- pool ipv4, on page 20
- pool ipv6, on page 21
- pool onfly pppoe, on page 22
- pool vrf, on page 23
- prefix-length, on page 25
- prefix-range, on page 26
- utilization-mark, on page 27
- show pool ipv4 name, on page 29
- show pool ipv6 name, on page 33
- show pool vrf, on page 40

address-range

To specify address range for allocation, use the **address-range** command in Pool IPv4 or IPv6 configuration submode. To remove the address range, use the **no** form of this command.

address-range first_range last_range [block]

Syntax Description	first_range	<i>first_range</i> Specifies the first address in range from which the IP addresses can be assigned to clients.			
	last_range	ange Specifies the last address in range until which the IP addresses can be assigned to clients.			
	block	Dynamically blocks one of the networks in the address pool.			
Command Default	None				
Command Modes	Pool IPv4 co	onfiguration			
	Pool IPv6 cc	onfiguration			
Command History	Release	Modification			
	Release 4.2.0	This command was introduced.			
	Release 4.3.0	Support for IPv6 was added.			
	Release 6.2.1	Modified the command to include block option.			
Usage Guidelines		only specify the addresses that are assignable to client dresses should not be included in the address-range c			
		l ipv4 command to enter IPv4 pool configuration subn aration submode.	node and pool ipv6 command to enter IPv6		
	Multiple address-ranges are allowed within a pool.				
	change featu address with is enabled. F	ft pool migration as well as static IP address subscribe are is enabled using subscriber featurette identity-cl a DAPS and accordingly rejects the RENEW request f For more details, refer DHCP soft pool migration feature <i>Broadband Network Gateway Configuration Guid</i>	hange command. DHCP validates the IP from the client, only if the block command are in <i>Cisco ASR 9000 Series Aggregation</i>		
Task ID	Task ID	Operation			
	ip-services	read, write			

This is an example of configuring the **address-range** command for IPv4 in the Global Configuration mode:

L

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)# address-range 11.11.11.11 14.14.14.14
```

This is an example of configuring the **address-range** command for IPv6 in the Global Configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# address-range 2001::1 2001::100
```

This example shows how to enable dynamic soft pool migration by blocking one of the networks in the address pool:

```
RP/0/RSP0/CPU0:router#config
RP/0/RSP0/CPU0:router#pool vrf default ipv4 dhcp_192
RP/0/RSP0/CPU0:router#address-range 192.0.2.1 192.0.2.7 block
RP/0/RSP0/CPU0:router#address-range 192.0.2.11 192.0.2.20
```

Related Commands

Command	Description
pool ipv4, on page 20	Enables distributed address pool service on ipv4.
pool vrf, on page 23	Enables distributed address pool service on vrf.
exclude, on page 16	Specifies a range of IP addresses that distributed address pool service should not assign to clients.
subscriber featurette identity-change, on page 452	Enables identity change for DHCP Remote-Id parameter, thereby allowing modification of the subscriber service

exclude

To specify a range of IPv4 or Pv6 addresses that distributed address pool service (DAPS) must not assign to clients, use the **exclude** command in Pool IPv4 or IPv6 configuration submode. To remove the excluded IP addresses, use the **no** form of this command.

exclude {first_addresslast_address}

Syntax Description	first_address		Specifies the first address in the range that needs to be excluded for IPv4 and specifies the first address or prefix in the range for IPv6.	
	last_address		Specifies the last address in the range that needs to be excluded and specifies the last address or prefix in the range for IPv6.	
Command Default	None			
Command Modes	Pool IPv4 configuration	on		
	Pool IPv6 configuration	on		
Command History	Release Modific	ation	-	
	ReleaseThis cor4.2.0introduct	mmand was ced.	-	
	Release Support 4.3.0	for IPv6 was added.	-	
Usage Guidelines	Use the pool ipv4 com pool configuration sub		ool configuration submode and pool ipv6 command to enter IPv6	
			IP address of a reserved address command. Multiple exclude clude a single address, <highipaddress> can be omitted.</highipaddress>	
	Note The exclude com commands.	mand can be configur	ed along with the network , address-range , and the prefix-range	
Task ID	Task ID Operation			
	ip-services read, write			
	This is an example to	configure the exclude	command for IPv4:	
	RP/0/RSP0/CPU0:rout	ter# configure		

RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)# exclude 10.10.10.1 10.10.10.10

This is an example to configure the **exclude** command for IPv6:

```
RP/0/RSP0/CPU0:router# configure
```

```
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# exclude 2001::1
```

Related Commands C

Command	Description
pool ipv4, on page 20	Enables distributed address pool service on IPv4.
pool vrf, on page 23	Enables distributed address pool service on vrf.
network (BNG), on page 18	Specifies a set of addresses or prefixes inside a subnet.

network (BNG)

To specify a set of addresses or prefixes inside a subnet, use the **network** command in Pool IPv4 or IPv6 configuration submode. To remove the addresses or prefixes, use the **no** form of this command.

network {*IPv4_subnet/length* [**default-router** *default-router-address*]*IPv6_subnet/length*}

Syntax Description	IPv4_subne	ť	Specifie subnet n	s the decimal representation of the IPv4 nask.
	IPv6_subne	t	Specifie mask.	s the hexadecimal value for the IPv6 subnet
	length		Specifie	s the length of the prefix.
			Note	The prefix length must be a maximum of 16 bit more than the subnet mask.
	default-rou	iter	(Optional) Specifies the default-gateway address for the subnet. IPv4 address of the default-gateway.	
	default-rout	er-address		
Command Default	None			
Command Modes	Pool IPv4 co	onfiguration		
	Pool IPv6 co	onfiguration		
Command History	Release	Modification		
	Release 4.2.0	This command was introduced.		
	Release 4.3.0	Support for IPv6 was added.		
	Release 5.1	Support for IPv4 default-router was a	dded.	
Usage Guidelines	Use the pool ipv4 command to enter IPv4 pool configuration submode and pool ipv6 command to enter IPv6 pool configuration submode.			
	The prefix-length command must be configured whenever the network command is used. The prefix-length must be configured to 128 to signify singleton addresses and a smaller value to signify IPv6 prefixes. The number of addresses or prefixes that can be allocated by DAPS can become huge when this command is used. The prefix-length command should be configured to a number that limits the number of addresses or prefixes for each pool to 64K.			
	bit-length of	the prefix. For example, 192.168.1.0/2	4 is the pref	by a slash character (/), and ends with the fix of the IPv4 network starting at the given remaining 8 bits reserved for host addressing.

The IPv6 address specification 2001:db8::/32 is a large network with 2 96 addresses, having a 32-bit routing prefix. In IPv4 the routing prefix is also specified in the form of the subnet mask, which is expressed in quad-dotted decimal representation like an address. For example, 255.255.255.0 is the network mask for the 192.168.1.0/24 prefix.

The **default-router** option is supported only for IPv4 pools. The configured default-gateway address is automatically excluded from allocation to clients, if the address is within the subnet range.

isk ID	Task ID	Operation
	ip-services	,
		write

This is an example of configuring the network command for IPv4:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)# network 11.11.11.0/24 default-router 11.11.11.11
```

This is an example of configuring the **network** command for IPv6:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# network 10:1:1::/50
```

Related Commands	Command	Description
	pool ipv4, on page 20	Enables distributed address pool service on ipv4.
	pool vrf, on page 23	Enables distributed address pool service on vrf.
	prefix-length, on page 25	Specifies the length of the prefix that is assigned to the client.

pool ipv4

To enable distributed address pool service on IPv4 and to enter the pool IPv4 configuration submode, use the pool ipv4 command in the Global Configuration mode. To disable this feature, use the no form of this command.

pool ipv4 pool_name

Syntax Description Specifies the name of the IPv4 pool. pool_name

None **Command Default**

Global Configuration mode **Command Modes**

Command History Release **Modification** Release This command was introduced. 4.2.0

write

Use the **pool ipv4** command to enter IPv4 pool configuration submode. **Usage Guidelines**

Task ID Task ID Operation ip-services read,

This is an example of configuring the **pool ipv4** command in the Global Configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config) # pool ipv4 pool1
RP/0/RSP0/CPU0:router(config-pool-ipv4)# address-range 10.10.10.1 10.10.254
```

Related Commands

	pool vrf, c	on page 23	Enables distributed address pool service on vrf.	

pool onfly pppoe

To enable dynamic modification of DAPS pool for PPPoE sessions, use the **pool onfly pppoe** command in Global Configuration mode. To disable the feature, use the **no** form of this command.

pool onfly pppoe

Syntax Description This command has no keywords or arguments.

Command Default By default, dynamic modification of DAPS pool for PPPoE sessions is disabled.

Command Modes Global Configuration

Command History	Release	Modification
	Release 7.4.1	This command was introduced for Cisco IOS XR 64-bit platforms.
	Release 6.8.1	This command was introduced for Cisco IOS XR 32-bit platforms.

Usage Guidelines For the subscriber session to be released after the configuration changes are done, you may have to wait for approximately 5 to 20 minutes, depending on the number of IP addresses allocated from an address pool.

Task ID Task Operation ID tunnel read, write

This example shows how to enable dynamic modification of DAPS pool for PPPoE sessions:

Router#configure Router(config)#pool onfly pppoe Router(config)#commit

pool vrf

To enable distributed address pool service on a vrf and to enter the corresponding configuration submode, use the **pool vrf** command in the Global Configuration mode. To disable this feature, use the **no** form of this command.

Syntax Description	vrf_name		Specifies the name of the vrf.
	ipv4		Specifies IPv4 pool name. Each pool must have a unique name across all VRFs.
	ipv6		Specifies IPv6 pool name. Each pool must have a unique name across all VRFs.
	pool_name	2	Specifies the name of the pool for IPv4 or IPv6.
	all		Specifies the global pool.
Command Default	None		
Command Modes	Global Con	figuration mode	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
	Release 4.3.0	Support for IPv6 was added.	
Usage Guidelines		bl ipv4 command to enter IPv4 pool cor uration submode.	nfiguration submode and pool ipv6 command to enter IPv6
	Note Each p vrf2.	bool must have a unique name across al	I VRFs. For example, pool1 can not be created in both vrf1 and
	Some pools	s can be associated with all the VRFs a	nd these pools are configured with the all keyword.
	Task ID	Operation	
Task ID			

pool vrf {vrf_name | all} {ipv4pool_name | ipv6pool_name}

This is an example of configuring the **pool vrf** command for IPv4 in the Global Configuration mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)#

This is an example of configuring the **pool vrf** command for IPv6 in the Global Configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)#
```

Related Commands Command Description pool ipv4, on page 20 Enables distributed address pool service on IPv4. pool ipv6, on page 21 Enables distributed address pool service on IPv6.

prefix-length

To specify the length of the prefix that is assigned to the client, use the prefix-length command in IPv6 configuration submode. To remove the length of the prefix, use the no form of this command.

prefix-length prefix_length

Syntax Description	prefix_leng	<i>gth</i>	S	Specifies the length of the prefix.

This table describes the significant fields shown in the display.

Table 2: show pool ipv4 name Field Descriptions

Field	Description
VRF	Specifies the VRF the pool is associated with.
Pool ID	The unique pool ID of a specific pool.
Pool Scope	Pool scope belongs to the VRF specific pool.
Prefix Length	Length of the prefix specified.

Related Commands

Command	Description
pool vrf, on page 23	Enables distributed address pool service on vrf.
pool ipv4, on page 20	Enables distributed address pool service on ipv4.
exclude, on page 16	Specifies a range of IP addresses that distributed address pool service should not assign to clients.
address-range, on page 14	Specifies a range of IP addresses.

show pool ipv6 name

To show the status of an IPv6 pool, use the show pool ipv6 name command in the EXEC mode.

show pool ipv6 name pool_name {location | verbose | }

Syntax Description	pool_name	Specifies the name of the IPv6 p	pool.					
	location	Specifies the location of the IPv6	6 pool.					
	verbose	Displays all allocations for the p	pools.					
	Ι	Specifies the output modifiers.						
Command Default	None

Table 3: show pool ipv6 name Field Descriptions

Field	Description
VRF	Specifies the VRF the pool is associated with.
Pool ID	The unique pool ID of a specific pool.
Pool Scope	Pool scope belongs to the VRF specific pool.
Prefix Length	Length of the prefix specified.

Related Commands

Command	Description
pool vrf, on page 23	Enables distributed address pool service on vrf.
pool ipv6, on page 21	Enables distributed address pool service on ipv6.
exclude, on page 16	Specifies a range of IP addresses that distributed address pool service should not assign to clients.
address-range, on page 14	Specifies a range of IP addresses.

show pool vrf

To show the status of VRF pool, use the show pool vrf command in the EXEC mode.

	<pre>show pool vrf_name { ipv4 ipv6 }</pre>
Syntax Description	<i>vrf_name</i> Specifies the vrf name.
	all Displays all vrfs.
	ipv4 Specifies the IPv4 pool.
	ipv6 Specifies the IPv6 pool.
	Specifies the output modifiers.
Command Default	None
Command Modes	EXEC mode
Command History	Release Modification
	ReleaseThis command was introduced.4.2.0
	ReleaseSupport for IPv6 was added.4.3.0
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
	Use the pool ipv4 command to enter IPv4 pool configuration submode and pool ipv6 command to enter IPv6 pool configuration submode.
Task ID	Task ID Operation
	ip-services read
	This is the sample output of the show pool vrf command for IPv4:
	RP/0/RSP0/CPU0:router# show pool vrf vrf1 ipv4
	Allocation Summary

address-range, on page 14	Specifies a range of IP addresses.

Control Policy Commands

This module describes the Cisco IOS XR software commands used to configure the Control Policy commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- activate, on page 44
- authenticate (BNG), on page 46
- authorize, on page 47
- class-map type control subscriber, on page 49
- deactivate, on page 50
- decode, on page 52
- event, on page 53
- match (class-map), on page 56
- match option (DHCPv6), on page 58
- policy-map type control subscriber, on page 60
- policy-map type pbr, on page 61
- service-policy type control subscriber, on page 62
- show class-map, on page 63
- show policy-map, on page 65

activate

To activate the dynamic template in the class map sub-configuration mode, use the **activate** command. To deactivate the dynamic template, use the **deactivate** command.

activate dynamic-template {name aaa list {list_name | default} | service-from-line}

Syntax Description	dynamic-te	emplate	Specifies the actions related to dynamic templates.			
	name		Specifies the name of the dynamic template.			
	aaa		Specifies the AAA parameters.			
	list		Specifies the AAA method list that identifies the radius server from which to acquire the service definition.			
	default		Specifies the default AAA method list.			
	list_name		(Optional) Specifies the name of the AAA method list. If provided, the template is downloaded from radius. If not provided, then the template is expected to be locally configured.			
	service-fro	m-line	Activates the service encoded in the DHCP Remote-Id parameter.			
Command Default	None					
Command Modes	Class map s	ub-confi	guration			
Command History	Release	Modif	ication			
	Release 4.2.0	This c	command was introduced.			
	Release 6.2.1	Modif	fied the command to include service-from-line option.			
Usage Guidelines	You must configure decode command to decode (as per the defined AAA attribute format) the service encoded in the DHCP Remote-Id parameter. This particular service is the one referred as service-from-line in this context.					
Task ID	Task Ope ID	eration				
	qos rea wri					
	This is an ex	ample o	f configuring the activate command in the Global Configuration mode:			
			uter# configure			

RP/0/RSP0/CPU0:router(config) # policy-map type control subscriber PL1

RP/0/RSP0/CPU0:router(config-pmap)# event session-activate match-first RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber CL2 RP/0/RSP0/CPU0:router(config-pmap-c)# 1 activate dynamic-template DL1 aaa list default

This is an example of activating the service that was encoded in the DHCP Remote-Id parameter:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# policy-map type control subscriber PL1
RP/0/RSP0/CPU0:router(config-pmap)# event session-start match-first
RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber CL2 do-until-failure
RP/0/RSP0/CPU0:router(config-pmap-c)# 1 decode remote-id format my-format
RP/0/RSP0/CPU0:router(config-pmap-c)# 2 activate dynamic-template service-from-line
RP/0/RSP0/CPU0:router(config-pmap-c)# 3 authorize aaa list default identifier remote-id
password blank
```

authorize

To authenticate and specify the AAA method list that authorization should be made with in the class map sub-configuration mode, use the **authorize** command in the Global Configuration mode. To disable the AAA method list authorization, use the **no** form of this command.

authorize aaa list{*list_name* | default} {format *format_name* } | identifier {circuit-id | remote-id | source-address-ipv4 | source-address-mac | username} {password | {use-from-line*password*}}

Syntax Description		Succified the AAA non-meters	
Syntax Description	aaa	Specifies the AAA parameters.	
	list	Specifies AAA method list that authorization should be made with.	
	default	Specifies the default AAA method list.	
	list_name	Specifies the name of the AAA method list.	
	format	Specifies an authorize format name. Specifies to use format_name, which was defined using CLI 'aaa attribute format'. The result of format is used as user name in authorization request.	
	format_name		
	password	Specifies a password to be used for AAA request.	
	use-from-line	Specifies the line from which the password needs to be used.	
	password	Specifies a clear text password.	
	identifier	Specifies an authorize identifier.	
	circuit-id	Specifies to use circuit-id as the username in authorize request.	
	remote-id	Specifies to use remote-id as the username in authorize request	
	source-address-ipv4	Specifies to use source-address-ipv4 as the username in authorize request.	
	source-address-mac	Specifies to use source-address-mac as the username in authorize request.	
	username	Specifies an authorize username.

This exampl	e shows how to configure the event command in policy configuration mode:
RP/0/RSP0/0 RP/0/RSP0/0 RP/0/RSP0/0 RP/0/RSP0/0 dhcp_id_fo	CPU0:router(config)# policy-map type control subscriber pol1 CPU0:router(config-pmap)# event session-start match-first CPU0:router(config-pmap-e)# class type control subscriber ip_dhcp do-until-failure CPU0:router(config-cmap-c)# 1 activate dynamic-template ip_temp CPU0:router(config-cmap-c)# 10 authorize aaa list default identifier format rmat password xya CPU0:router(config-cmap-c)# end-policy-map
-	e shows how to configure the idle-timeout event in policy configuration mode, with the onitor for the subscriber policy:
RP/0/RSP0/0	CPU0:router(config)# policy-map type control subscriber pol1 CPU0:router(config-pmap)# event idle-timeout CPU0:router(config-pmap-e)# class type control subscriber ip_dhcp CPU0:router(config-cmap-c)# 1 monitor
	qos rea wri This example RP/0/RSP0// RP/0/RSP0// RP/0/RSP0// RP/0/RSP0// RP/0/RSP0// Chop_id_fo RP/0/RSP0//

This example shows how to configure the **exception** event in policy configuration mode, with the action as **disconnect**:

RP/0/RSP0/CPU0:router(config) # policy-map type control subscriber PL1

```
RP/0/RSP0/CPU0:router(config-pmap)# event exception match-first
RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber coa-rollback-failure
do-all
RP/0/RSP0/CPU0:router(config-cmap-c)# 10 disconnect
```

This example shows how to handle identity change of DHCP Remote-id parameter, to enable modification of subscriber service. For more details, refer the section on controlling subscriber plans using protocol options, in *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# policy-map type control subscriber PL1
RP/0/RSP0/CPU0:router(config-pmap)# event session-identity-change match-first
RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber CL2 do-until-failure
RP/0/RSP0/CPU0:router(config-pmap-c)# 1 decode remote-id format my-format
RP/0/RSP0/CPU0:router(config-pmap-c)# 2 deactivate dynamic-template service-from-line
RP/0/RSP0/CPU0:router(config-pmap-c)# 3 activate dynamic-template service-from-line
RP/0/RSP0/CPU0:router(config-pmap-c)# 4 authorize aaa list default identifier remote-id
password blank
```

This example shows how to enable AAA authorization on DHCP RENEW or REBIND:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# policy-map type control subscriber dhcpv4_policy
RP/0/RSP0/CPU0:router(config-pmap)# event authenticate-dhcp-renew match-all
RP/0/RSP0/CPU0:router(config-pmap-e)# 1 authorize aaa list default format username password
example
RP/0/RSP0/CPU0:router(config-pmap-e)# commit
```

RP/0/RSP0/CPU0:router(config-) # subscriber featurette dhcp-renew-author RP/0/RSP0/CPU0:router(config-pmap-c) # commit

Related Commands	Command	Description
	class-map type control subscriber, on page 49	Enables the class-map.
	policy-map type control subscriber, on page 60	Enables the policy-map.

match (class-map)

To configure match criteria for the corresponding class, use the **match** command in class-map configuration mode. To disable the match feature and exit the policy-map configuration mode, use the **no** form of this command.

match {authen-status {authenticated | unathenticated} | domain {domain_name | regexp string} format format_name | not | protocol {dhcpv4 | dhcpv6} | service-name {service-name | regexp string} | source-address {ipv4 | mac} | timer {string | regexp string} | username {string | regexp string}}

Syntax Description	authen-status	Specified the authentication status.	
	authenticated	Specified the authenticated status.	
	unauthenticated	Specified the unauthenticated status.	
	domain	Specifies the domain type.	
	domain_name	Specifies the name of the domain.	
	format	Specifies the format type.	
	format_name	Specifies the name of the format.	
	regexp	Specifies the regular expression.	
	string	Specifies the regular expression of a string.	
	not	Negates the match criteria.	
	protocol	Specifies the protocol type.	
	service-name	Specifies the service name.	
	service-name	Service name as a string.	
	source-address	Specifies the source address.	
	timer	Specifies the timer.	
	username	Specifies the name of the user.	
Command Default	None		
Command Modes	Class-map configu	ration mode	
Command History	Release Mod	lification	
	Release This 4.2.0	s command was introduced.	

L

	Release	Modification
	Release 5.2.2	The command was modified to add new keyword, service-name .
Usage Guidelines	Use the cla	ass-map type control subscriber command to enter class-map configuration mode.
	These are	the usage guidelines for match service-name:
	by ac	rks only for service activations through CoA. For services defined in dynamic-template and activated etion in policy-maps, the service-activate event is not enabled, and a class map with match ce-name is not useful in that case.
	• It doe reque	es not work in multi-action CoA (MA-CoA) where multiple services are enabled by a single CoA est.
	then t servic	order of configuration must be such that, the match service-name is configured in a class-map and the class-map is linked in the policy-map. The class-map must ideally be placed to match during a ce-start or service-stop event, where the service being started or stopped matches to the service s configured in the class-map. With other events, the class-map with match service-name is irrelevant.
Task ID	Task O ID	peration
	1	ead, vrite

This is an example of configuring the **class-map type control subscriber** command in the class-map configuration mode:

```
RP/0/RSP0/CPU0:router(config)# class-map type control subscriber CL1
RP/0/RSP0/CPU0:router(config-pmap)# match authen-status authenticated
RP/0/RSP0/CPU0:router(config-pmap-e)# match domain d1 format f1
RP/0/RSP0/CPU0:router(config-cmap-c)# match protocol ppp
RP/0/RSP0/CPU0:router(config-cmap-c)# match source-address ipv4 1.3.4.5 12.334.55.2
RP/0/RSP0/CPU0:router(config-cmap-c)# match timer time1
```

This is an example of configuring the **service-name** matching in the class-map (type subscriber) configuration mode:

```
RP/0/RSP0/CPU0:router(config)# class-map type control subscriber match-any match-svc
RP/0/RSP0/CPU0:router(config-cmap) # match service-name idle-to
RP/0/RSP0/CPU0:router(config-cmap) # match service-name regexp id*
RP/0/RSP0/CPU0:router(config-cmap)# match service-name regexp .*
```

match option (DHCPv6)

To enable DHCP option 16 filtering feature in BNG, use the **match option enterprise-id** or **match option vendor-class** or both commands in DHCP IPv6 server profile configuration mode. To disable this feature, use the **no** form of this command.

match option enterprise-id {default | hex hex-string} action {allow | drop}

match option enterprise-id {default | string string-value} action {allow | drop}

	_	
Syntax Description	default	Defines a default behavior for incoming DHCP SOLICIT packets.
	hex hex-string	Specifies the hexadecimal pattern of enterprise-ID in the DHCP option 16 to be matched.
	string string-value	Specifies the string value of vendor-class data in the DHCP option 16 to be matched.
	action	Specifies the action to be performed on DHCP SOLICIT packets.
	allow	Allows the DHCP SOLICIT packets based on the DHCP option 16 information.
	drop	Drops the DHCP SOLICIT packets based on the DHCP option 16 information.
Command Default	None	
Command Modes	[–] DHCP IPv6 server profile configuration	
Command History	Release Modification	
	Release 6.4.1 This command was introduced.	
Usage Guidelines	These configurations are invalid and are not supported:	
	• match vendor-class-data default action match enterprise-ID default action all	-
	• match vendor-class-data default action match enterprise-ID default action dro	

match vendor-class-data default action drop

match enterprise-ID default action drop

Task ID

Task ID Operation

ip-services read, write

This example shows how to enable DHCPv6 option 16 filtering feature in BNG. In this example, the BNG router drops all the DHCP SOLICIT packets by default, except the ones that are explicitly configured to be allowed.

```
RP/0/RSP0/CPU0:router(configure)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile server_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# match vendor-class-data string "ABC*"
action allow
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# match enterprise-ID hex FFF action
allow
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# match vendor-class-data default action
drop
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# match enterprise-ID default action
drop
```

Related Commands	Command	Description
	duid allowed-type, on page 89	Specifies the permitted DUID type for the incoming DHCP SOLICIT packets, as part of enabling DHCP option 16 filtering feature in BNG.

policy-map type control subscriber

To determine the list of events that are applicable to the subscriber lifecycle and to enter the policy-map configuration mode, use the **policy-map type control subscriber** command in Global Configuration mode. To disable the policy map type control subscriber and exit the policy-map configuration mode, use the **no** form of this command.

Broadband Network Gateway Command Reference for Cisco ASR 9000 Series Routers

BNG DHCP Commands

This module describes the Cisco IOS XR software commands used to configure the DHCP commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

aaa dhcp-option force-insert

To enable the insertion of DHCP options while replying to the DHCP client, regardless of the request from the DHCP host, use the **aaa dhcp-option force-insert** command in DHCP IPv4 or IPv6 server profile configuration mode. To disable this functionality, use the **no** form of this command.

aaa dhcp-option force-insert

Syntax Description	This command has no keywords or arguments.			
Command Default	None			
Command Modes	DHCP IPv4 server profile			
	DHCP IPv6 server profile			
Command History	Release Modification			
	Release 6.4.1 The command was extended for DHCP IPv6 server profile configuration mode.			
	Release 6.1.2 This command was introduced.			
Usage Guidelines	If DHCP server profile is configured on BNG, the per-subscriber-based DHCP options get preference over that.			
	You can configure a maximum of 8 DHCPv6 options for a single user profile. The AAA server can send a maximum of 120 hexadecimal bytes and 240 ASCII characters (approximately) to the BNG router.			
	For more information on Rich DHCP Option on RADIUS VSA feature, see the <i>Establishing Subscriber</i> Sessions chapter in the Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide.			
Task ID	Task ID Operation			
	ip-services read, write			
	This example shows how to enable rich DHCP option feature on BNG:			

RP/0/RSP0/CPU0:router(config-dhcpv4-server-profile)#aaa dhcp-option force-insert

address-pool

To specify the name of an address pool by integrating the DHCPv6 sever with distributed address pool service (DAPS), use the **address-pool** command in the DHCP IPv6 server profile class configuration mode. To remove the address pool name, use the **no** form of this command.

address-pool pool_name

Syntax Description	pool_nam	e Specifie	s the name of a address p	ool.					
Command Default	None								
Command Modes	DHCP IPv	6 server pr	cofile class configuration	n

aftr-name

To set the Address Family Transition Router's (AFTR) name for Dual-stack Lite support, use the **aftr-name** command in DHCPv6 server profile configuration mode. To disable the AFTR-name, use the **no** form of this command.

aftr-name *aftr-name*

 Syntax Description
 aftr-name
 Specifies the AFTR fully qualified domain name for the server profile.

 Command Default
 Dual-stack support is not enabled.

Command Modes DHCPv6 server profile configuration

Command History	Release	Modification		
	Release 4.3.0	This command was introduced.		

Usage Guidelines No specific guidelines impact the use of this command.

write

 Task ID
 Operation

 ip-services
 read,

This example shows how to configure the AFTR Fully Qualified Domain Name (FQDN) for a server profile:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# aftr-name aftr-server.example.com
```

authentication username

To specify the username format of IPv4 or IPv6 subscriber for authentication with the AAA server (as part of enabling DHCP L3 snoop feature in BNG), use the **authentication username** command in DHCP IPv4 (or IPv6) proxy profile configuration mode. To remove this configuration, use the **no** form of this command.

For IPv4:

authentication username {giaddr | mac}

For IPv6:

authentication username DUID

Syntax Description	giaddr	Specifies gateway address as the	sername for IPv4 subscriber.		
		A combination of gateway address and MAC address is used as the authorization username to enable DHCP L3 snooping in BNG.			
	mac	Specifies MAC address as the use	rname for IPv4 subscriber.		
	DUID	Specifies DUID as the username f	or IPv6 subscriber.		
Command Default	None				
Command Modes	DHCP IPv	4 proxy profile			
	DHCP IPv	76 proxy profile

	configurat	· · · ·	6 subscribers, and is available only in DHCP IPv6 pro- nd mac options are applicable only for IPv4 subscribers configuration mode.		
		option is mainly useful in routed o BNG through DHCP Option 79	DHCPv6-initiated sessions in case the MAC informat		
Task ID	Task ID	Operation			
	ip-services	1			

This example shows how to specify the MAC address-gateway address combination as the authorization username of IPv4 subscriber, to enable DHCP L3 snoop feature in BNG:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile example-profile proxy
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# authentication username mac giaddr
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# commit

Related Commands	Command	Description
	delayed authentication, on page 78	Delays the client authorization until DHCP REQUEST message is received from the client.

broadcast-flag policy check (BNG)

To configure Dynamic Host Configuration Protocol (DHCP) IPv4 Relay to broadcast only BOOTREPLY packets if the DHCP IPv4 broadcast flag is set in the DHCP IPv4 header, use the **broadcast-flag policy check** command in DHCP IPv4 relay profile configuration submode or DHCP IPv4 server profile configuration submode. By default, the DHCP IPv4 Relay always broadcasts BOOTREPLY packets. To restore the default, use the **no** form of this command.

broadcast-flag policy { check | unicast-always }

Syntax Description	checkChecks the broadcast flag in packets.
	unicast-always Sets the broadcast-flag policy to unicast-always.
Command Default	Relay agent always broadcasts DHCP IPv4 packets to a client.
Command Modes	DHCP IPv4 relay profile configuration
	DHCP IPv4 server profile
Command History	Release Modification
	Release 3.7.0 This command was introduced.
	Release 4.2.0 This command was supported for BNG.
	Release 5.1 The unicast-always keyword was added.
Usage Guidelines	No specific guidelines impact the use of this command.
Task ID	Task ID Operations
	ip-services read, write
Examples	This an example of the broadcast-flag policy check command:
	RP/0/RSP0/CPU0:router# config RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# broadcast-flag policy check
	This an example of the broadcast-flag policy command:
	RP/0/RSP0/CPU0:router# config RP/0/RSP0/CPU0:router(config)# dhcp ipv4

RP/0/RSP0/CPU0:router(config-dhcpv4) # profile TEST server

Related Commands	Command	Description
	dhcp ipv4 (BNG), on page 79	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
	helper-address	Configures the DHCP relay agent to relay packets to a specific DHCP server.
	relay information check (BNG), on page 128	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
	relay information option (BNG), on page 130	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
	relay information option allow-untrusted (BNG), on page 132	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.
	relay information policy (BNG), on page 134	Configures how a relay agent processes BOOTREQUEST messages that already contain a relay information option.

RP/0/RSP0/CPU0:router(config-dhcpv4-server-profile)# broadcast-flag policy unicast-always

class

To create a proxy profile class and to enter the proxy profile class sub configuration mode, use the **class** command in an appropriate configuration mode. To disable this feature and exit the profile mode, use the **no** form of this command.

class class_name {helper-address | match} {address-pool | dns-server | domain-name | prefix-pool}

Syntax Description	class_nam	e	Specifies the class name.		
	helper-ad	dress	Specifies the server address to relay packets. Inserts a match keyword.		
	match				
	address-p	ool	Specifies the name of the address pool		
	dns-serve	r	Specifies the name of a dns server.		
	domain-n	ame	Specifies the name of a domain.		
	prefix-poo	bl	Specifies the name of the prefix pool.		
Command Default	No class is	specified.			
Command Modes	DHCP IPv4	4 proxy profile configuration			
	DHCP IPve	6 proxy profile configuration			
	DHCP IPve	6 server profile configuration			
Command History	Release	Modification			
	Release 4.2.0	This command was introduced.			
	Release 4.3.0	The support for IPv6 was added.			
Usage Guidelines	configurati	on submodes. A class is associated	Pv6 proxy profile configuration and DHCP IPv6 server profile with a match criterion, which is used to determine if the class ne needs to be unique for the system.		
_					

The address-pool, dns-server, domain-name, and prefix-pool keywords appear only in the DHCP IPv6 server profile configuration mode. However, the helper-address keywords appears in both DHCP IPv4 proxy profile configuration and DHCP IPv6 proxy profile configuration modes.

Task ID Task ID Operation ip-services read,

write

This example shows how to create a class in the DHCP IPv4 proxy profile configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile dhcp_profile proxy
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# class blue

This example shows how to create a class in the DHCP IPv6 proxy profile configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile dhcp_profile1 proxy RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# class blue

This example shows how to create a class in the DHCP IPv6 server profile configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile dhcp_profile2 server
RP/0/RSP0/CPU0:router(config-dhcpv4-server-profile)# class red

Related Commands	Command	Description
	class-map type control subscriber, on page 49	This topic describes the class-map type control subscriber command.

delayed authentication

To delay the client authorization until DHCP REQUEST message is received from the client, use the **delayed authentication** command in DHCP IPv4 proxy profile configuration mode. This is used while enabling DHCP L3 snooping feature in BNG. To disable this configuration, use the **no** form of this command.

delayed authentication

Syntax Description	This comm	hand has no	keywords or argument	S.
Command Default	None			
Command Modes	DHCP IPv	4 proxy pro	file

dhcp ipv4 (BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv4 and to enter DHCP IPv4 configuration mode, use the **dhcp ipv4** command in Global Configuration mode. To disable DHCP for IPv4 and exit the DHCP IPv4 configuration mode, use the **no** form of this command.

dhcp ipv4

Syntax Description	This command has no keywords or arguments.			
Command Modes	None			
Command Modes	Global Cor	nfiguration n	node	
Command History	Release	Modific	ation	
	Release 3.7	7.2 This co	nmand was introduced.	
	Release 4.2	2.0 This cor	nmand was supported for BNG.	
Usage Guidelines	Use the dh	cp ipv4 com	mand to enter DHCP IPv4 configuration mode.	
Task ID	Task ID	Operations		
	ip-services	read, write		
Examples	This examp	ble shows ho	w to enable DHCP for IPv4:	

RP/0/RSP0/CPU0:router# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)#

dhcp ipv6 (BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv6 and to enter DHCP IPv6 configuration mode, use the **dhcp ipv6** command in Global Configuration mode. To disable the DHCP for IPv6, use the **no** form of this command.

dhcp ipv6

Syntax Description This command has no keywords or arguments.

Command Modes Global Configuration mode

Command History	Release	Modification
	Release 4.1.0	This command was introduced.
	Release 4.3.0	This command was supported for BNG.

Usage Guidelines Use the **dhcp ipv6** command to enter DHCP IPv6 configuration mode.

Task ID	Task ID	Operations
	ip-services	read, write

Examples This example shows how to enable DHCP for IPv6:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)#

dhcp-to-aaa option list

To enable control over the subscriber DHCP options to be sent to the AAA server by the BNG router, use the **dhcp-to-aaa option list** command in DHCP IPv4 server profile or proxy profile configuration mode. To disable this feature, use the **no** form of this command.

dhcp-to-aaa option list {alloption-value}

Syntax Description	all Enables the functionality to send all DHCPv4 options from the subscriber to the AAA server.			
	option-valu	<i>e</i> Specifies the particular D	HCPv4 options from the subscriber to be sent to the AAA server.	
Command Default	None			
Command Modes	DHCP IPv4	proxy profile		
	DHCP IPv4	server profile		
Command History	Release	Modification		
	Release 6.4.1	This command was introdu	ced.	
Usage Guidelines	You can sen	d a maximum of 13 options (on of the DHCP control pack	DHCPv4 options to the AAA server, if this command is configured. 12 DHCP options and a DHCP header) to the AAA server. The et is encoded as option type 0. The first 108 bytes of the header are

	This example shows how to enable control over the subscriber DHCP options to be sent to the AAA server:				
	Router (conf Router (conf	ig)# dhcp ipv6 ig-dhcpv6)# profile server -	dhcpv6-to-aaa option list 90 50		

dhcpv6 address-pool

To specify addresses for DHCPv6 when Radius does not provide IPv6 address, use the **dhcpv6 address-pool** command in the dynamic template configuration mode. To remove the IPv6 address pool name for DHCPv6, use the **no** form of this command.

dhcpv6 address-pool pool_name

Syntax Description	<i>pool_name</i> Specifies the name of a IPv6 address pool name for DHCPv6.			
Command Default	None			
Command Modes	Dynamic template configuration			
Command History	Release Modification			
	Release 4.3.0 This command was introduced.			
Usage Guidelines	To enter the dynamic template configuration mode, enter dynamic-template command in the Global Configuration mode.			
	The IPv6 address pool is used for both PPPoE and IPoE subscribers.			
Task ID	Task ID Operations			
	config-services read, write			
Examples	This is an example of creating an IPv6 address pool for PPPoE subscribers using the dhcpv6 address-pool command:			
	<pre>RP/0/RSP0/CPU0:router(config)# dynamic-template RP/0/RSP0/CPU0:router(config-dynamic-template)# type ppp my-ipv6-pppoe-tempate RP/0/RSP0/CPU0:router(config-dynamic-template-type)# dhcpv6 address-pool my-pppoe-addr-pool</pre>			
	This is an example of creating an IPv6 address pool for IPoE subscribers using the dhcpv6 address-pool command:			
	RP/0/RSP0/CPU0:router(config)# dynamic-template RP/0/RSP0/CPU0:router(config-dynamic-template)# type ppp my-ipv6-tempate RP/0/RSP0/CPU0:router(config-dynamic-template-type)# dhcpv6 address-pool my-ipsub-addr-pool			

dhcpv6 delegated-prefix-pool

To specify the default pool name for (IA-PD) prefix delegation when no pool name or prefix is provided by the Radius, use the **dhcpv6 delegated-prefix-pool** command in the dynamic template configuration mode. To remove the delegated prefix pool name, use the **no** form of this command.

dhcpv6 delegated-prefix-pool pool_name

Syntax Description	<i>pool_name</i> Specifies the name of a delegated prefix pool for DHCPv6.				
Command Default	None				
Command Modes	Dynamic temp	late configura	ation		
Command History	Release	Modification	l		
	Release 4.3.0	This comman	nd was introduced.		
Usage Guidelines	To enter the dy Configuration	-	te configuration mode	, enter dynamic-ten	nplate command in the Global
Task ID	Task ID	Operations			
	config-services	read, write			
Examples	This is an exam command:	ple of creatin	g a delegated prefix-po	ol name using the dl	hcpv6 delegated-prefix-pool
			onfig)# dynamic-tem onfig-dynamic-templ	-	scriber ipsubl

RP/0/RSP0/CPU0:router(config-dynamic-template-type)# dhcpv6 delegated-prefix-pool myPool

Broadband Network Gateway Command Reference for Cisco ASR 9000 Series Routers

dns-server (BNG)

To specify the Domain Name System (DNS) IPv6 servers available to a Dynamic Host Configuration Protocol (DHCP) for IPv6 client, use the **dns-server** command in an appropriate configuration mode. To remove the DNS server list, use the **no** form of this command.

dns-server ipv6-address

Syntax Description	<i>ipv6-address</i> IPv6 address of a DNS server.			
	This argument must be in the form documented in RFC 2373, where the address is specified in hexadecimal using 16-bit values between colons.			
Command Default	When a DHCP for IPv6 pool is first created, no DNS IPv6 servers are configured.			
Command Modes	DHCP IPv6 server profile configuration			
	DHCP IPv6 server profile class configuration			
Command History	Release Modification			
	Release 4.3.0 This command was supported in DHCP IPv6 server profile and class configuration mode in BNG.			
Usage Guidelines	Multiple Domain Name System (DNS) server addresses can be configured by issuing this command multiple times. New addresses do not overwrite old addresses.			
	To enter the DHCP IPv6 server profile configuration, enter profile <i>profile_name</i> server command in the DHCPv6 configuration mode.			
	To enter the DHCP IPv6 server profile class configuration, enter class <i>class_name</i> command in the DHCPv6 server profile configuration mode.			
Task ID	Task ID Operations			
	ip-services read, write			
Examples	This is an example of setting the DNS server name using the dns-server command:			
	RP/0/RSP0/CPU0:router(config)# dhcp ipv6 pool pool1 RP/0/RSP0/CPU0:router(config-dhcpv6-pool)# dns-server 10:10::10			
	This is an example of setting the DNS address - 2001:db8:1203::1 and 2001:db8:1204::1 - using the dns-server command in the DHCP IPv6 server profile configuration mode:			
	RP/0/RSP0/CPU0:router(config)# dhcp ipv6			

RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# dns-server 2001:db8:1203::1 and 2001:db8:1204::1

This is an example of setting the DNS address - 2001:db8:1203::1 and 2001:db8:1204::1 - using the **dns-server** command in the DHCP IPv6 server profile class configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class proxy-red RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-class)# dns-server 2001:db8:1203::1 and 2001:db8:1204::1

domain-name (DHCP IPv6 pool-BNG)

To configure a domain name for a Dynamic Host Configuration Protocol (DHCP) for IPv6 client, use the **domain-name** command in an appropriate configuration mode. To remove the domain name, use the **no** form of this command.

domain-name domain

Syntax Description	domain Specifies the domain name string to be used by the client.				
Command Default	When a DHCP for IPv6 pool is first created, no domain name for clients is configured.				
Command Modes	DHCP IPv6 server profile configuration				
	DHCP IPv6 server profile class configuration				
Command History	Release Modification				
	Release 4.3.0 This command was supported in DHCP IPv6 server profile and class configuration mode in BNG.				
Usage Guidelines	Multiple Domain Name System (DNS) domain names can be configured by issuing the domain-name command multiple times. The new domain name does not overwrite existing domain names.				
	To enter the DHCP IPv6 server profile configuration, enter profile <i>profile_name</i> server command in the DHCPv6 configuration mode.				
	To enter the DHCP IPv6 server profile class configuration, enter class <i>class_name</i> command in the DHCPv6 server profile configuration mode.				
	The domain name is defined in DHCP IPv6 server profile and DHCP IPv6 server profile class configuration. If the same parameters are defined in the class scope, then the values defined in the class scope takes precedence.				
Task ID	Task ID Operations				
	ip-services read, write				
Examples	This is an example of setting the domain name using the domain-name command in the DHCP IPv6 server profile configuration mode:				
	RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# domain-name my.domain.com				
	This is an example of setting the domain name using the domain-name command in the DHCP IPv6 server profile class configuration mode:				

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class proxy-red RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-class)# domain-name my.domain.com

duid allowed-type

To specify the permitted DUID type for the incoming DHCP SOLICIT packets in BNG, use the **duid allowed-type** command in DHCP IPv6 server profile configuration mode. To disable this feature, use the **no** form of this command.

duid allowed-type type

Syntax Description	<i>type</i> Specifies the permitted DUID type of the DHCP solicit packet.				
Command Default	None				
Command Modes	DHCP IPv6 server profile				
Command History	Release Modification				
	ReleaseThis command wa6.4.1	s introduced.			
Usage Guidelines	No specific guidelines impact th	e use of this command.			
Task ID	Task ID Operation				
	ip-services read, write				
	This example shows how to specify the permitted DUID type for the incoming DHCP SOLICIT packets, as part of enabling DHCP option 16 filtering feature in BNG :				
	RP/0/RSP0/CPU0:router(confi	-			
Related Commands	Command	Description			

natch option (DHCPv6), on page 58	Enables DHCP option 16 filtering feature in BNG.
	natch option (DHCPv6), on page 58

duplicate-mac-allowed

To allow duplicate client MAC addresses across different VLANs and interfaces, use the **duplicate-mac-allowed** command in the DHCP IPv4 configuration mode. To disallow duplicate client MAC addresses, use the **no** form of this command.

duplicate-mac-allowed [{exclude-vlan | include-giaddr}]

Syntax Description	exclude-vlan	Excludes VLANs from the client key; only MAC address and interface form the client key.			
	include-giaddr	Enables support for duplicate sessions having the same MAC address but different <i>gi-address</i> values, mainly in the case of routed sessions.			
Command Default	By default, duplicate MAC address support is disabled.				
Command Modes	DHCP IPv4 configurat				
Command History	Release	Modification			
	Release 6.3.2	Modified the command to include include-giaddr option as part of DHCP L3 snooping feature in BNG.			
	Release 6.1.2	This command was introduced in BNG, with an addition of exclude-vlan option to exclude VLANs from the client key.			
	Release 4.3.2	This command was introduced.			
Usage Guidelines	You can enable duplicate MAC addresses on relay, proxy, server, and snoop DHCP modes.				
	Do not enable the duplicate-mac-allowed command for mobile subscribers.				
	With exclude-vlan option enabled, both inner and outer VLANs get excluded. You cannot exclude just one of them.				
	The include-giaddr op XR 64-bit operating sy	n is used for DHCP L3 snooping feature in BNG. It is supported only on Cisco IOS m.			
Task ID	Task ID Operation				
	ip-services read, write				

L

Example

This examples shows how to allow duplicate client MAC addresses across different VLANs and interfaces, using the **duplicate-mac-allowed** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# duplicate-mac-allowed exclude-vlan
```

This examples shows how to enable support for duplicate sessions having the same MAC address but different *gi-address* values, for DHCP L3 snooping in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# duplicate-mac-allowed include-giaddr
```

Related Commands	Command	Description	
		Enables Dynamic Host Configuration Protocol (DHCP) for IPv4 and enters DHCP IPv4 configuration mode.	

enable-vlan-intf-session-limit

To enable VLAN or interface session-limit, use the enable-vlan-intf-session-limit command.

	enable-vlan-intf-session-limit		
Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	DHCP IPv4 server profile configuration		
	DHCP IPve	6 server pro	ofile configuration
Command History	Release	Modific	ation
	Release 7.3.1	This cor introduc	nmand is ed.
Usage Guidelines	None		
Task ID	Task ID	Operation	
	ip-services	read, write	
		write	

For DHCP IPv4 server sessions, use the **enable-vlan-intf-session-limit** command, as shown in this configuration snippet:

```
Router#configure
Router(config)#dhcp ipv4
Router(config-dhcpv4)#profile s1 server
Router(config-dhcpv4-server-profile)#enable-vlan-intf-session-limit
Router(config-dhcpv4-server-profile)#lease 1 0 0
Router(config-dhcpv4-server-profile)#exit
Router(config-dhcpv4)#interface bundle-ether 10.100 server profile s1
Router(config-dhcpv4)#commit
```

For DHCP IPv6 server sessions, use the **enable-vlan-intf-session-limit** command, as shown in this configuration snippet:

```
Router#configure
Router(config)#dhcp ipv6
Router(config-dhcpv6)#profile s1 server
Router(config-dhcpv6-server-profile)#enable-vlan-intf-session-limit
Router(config-dhcpv6-server-profile)#lease 1 0 0
Router(config-dhcpv6-server-profile)#exit
Router(config-dhcpv6)#interface bundle-ether 10.100 server profile s1
Router(config-dhcpv6)#commit
```

Related Commands	Command	Description

	dhcp ipv6 (BNG), on page 80	To enable Dynamic Host Configuration Protocol (DHCP) for IPv6 and to enter DHCP IPv6 configuration mode
	profile (BNG), on page 123	To specify a DHCP profile for the Dynamic Host Configuration Protocol (DHCP) IPv4 and IPv6 component and to enter the appropriate profile mode.

framed-prefix-pool

To specify the default pool name for ipv6 prefixes for assignment only from SLAAC (Stateless Address Auto-Configuration), use the **framed-prefix-pool** command in the dynamic template configuration mode. To remove the framed prefix pool name, use the **no** form of this command.

framed-prefix-pool pool_name

Syntax Description	pool_name S	specifies the name of a prefix po	ol.
Command Default	None		
Command Modes	Dynamic template configuration		
Command History	Release	Modification	-
	Release 4.3.0	This command was introduced	-
Usage Guidelines	To enter the dynamic template configuration mode, enter dynamic-template command in the Global Configuration mode.		
	The dynamic template configuration is used when Radius does not return pool name or prefix for the SLAAC.		
Task ID	Task ID	Operations	
	config-services	read, write	
Examples	This is an example of creating a framed prefix pool name using the framed-prefix-pool command:		
		UO:router(config)# dynamic UO:router(config-dynamic-t	-

RP/0/RSP0/CPU0:router(config-dynamic-template-type)# framed-prefix-pool my-slaac-pool

L

giaddr policy keep

While in proxy mode, to retain the gateway address in the DHCP control packets received at BNG from the relay agent, use the giaddr policy keep command in DHCP IPv4 proxy profile configuration mode. This is used while enabling DHCP L3 snooping feature in BNG. To disable this configuration, use the no form of this command.

giaddr policy keep

Syntax Description	This comn	This command has no keywords or arguments.			
Command Default	None				
Command Modes	DHCP IPv	4 proxy pro	file		
Command History	Release	Modific	ation	_	
	Release 6.3.2	This co	nmand was introduced		
Usage Guidelines	Without th	is configura	on Cisco IOS XR 64-1 tion, the <i>gi-address</i> va on the router configur	alue received at BNG while in proxy mode, is modified and a	
Task ID	Task ID	Operation			
	ip-services	read, write			
		ple shows h the relay ag	-	vay address in the DHCP control packets received at	

```

RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# giaddr policy keep
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# commit
```

Related Commands	Command	Description	
	initiator dhcp-snoop, on page 256	Configures DHCP to pass the control packets from BNG to the DHCP server to enable DHCP L3 snooping for an IP subscriber.	

helper-address (BNG)

To configure the Dynamic Host Configuration Protocol (DHCP) IPv4 or IPv6 relay agent to relay DHCP packets to a specific DHCP server, use the **helper-address** command in an appropriate configuration mode. Use the **no** form of this command to clear the address.

helper-address [**vrf** *vrf-name*] [*address*] [**giaddr** *gateway-address*]

Syntax Description	vrf-name	(Optional) Specifies the name of a particular VRF.				
	address IPv4 and Pv6 address in four part, dotted decimal format.					
	giaddr gateway-address	giaddr gateway-address (Optional) Specifies the gateway address to use in packets relayed to server. This keyword is applicable for IPv4 helper address.				
Command Default	Helper address is not configured.					
Command Modes	DHCP IPv6 proxy profile class configuration					
	DHCP IPv6 profile relay	configuration				
Command History	Release Modificat	ion				
	Release 3.7.2 This command was introduced.					
	Release 4.2.0 This command was supported for BNG.					
	Release 4.3.0 The support for IPv6 was added in BNG.					
	Release 5.2.2 This command is supported in DHCPv6 profile relay configuration submode.					
Usage Guidelines	A maximum of upto eigh	t helper addresses can be configured.				
Task ID	Task ID Operations					
	ip-services read, write					
Examples	-	to set the helper-address for a VRF using the helper-address command file class configuration mode:				
	RP/0/RSP0/CPU0:router	-				

Related Commands	Command	Description
	dhcp ipv4 (BNG), on page 79	Enables Dynamic Host Configuration Protocol (DHCP) for IPv4 and enters DHCP IPv4 configuration mode.
	relay information check (BNG), on page 128	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
	relay information option (BNG), on page 130	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
	relay information option allow-untrusted (BNG), on page 132	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.
	relay information policy (BNG), on page 134	Configures how a relay agent processes BOOTREQUEST messages that already contain a relay information option.

inner-cos

Command Default

To reset the default inner-cos value for DHCPv4 control packets sent on BNG subscriber interfaces, use the **inner-cos** command in DHCP IPv4 configuration mode. To set the inner-cos value back to the default value, use the **no** form of this command.

Syntax DescriptionvalueValue of inner-cos for DHCPv4 control packets.The range is from 0 to 7.

inner-cos value

Command Modes DHCP IPv4 configuration

None

Command History	Release	Modification
	Release 4.3.2	This command was introduced.
	Release 5.3.1	This command was modified.

Usage Guidelines The inner and outer Class of Service (CoS) values can be configured for DHCPv4 control packets. For broadcast packets, both the inner-cos and outer-cos commands can be used to configure CoS values. For unicast packets, the inner-cos command cannot be directly used. The outer CoS value configured using the outer-cos command is also set as the inner CoS value.

In the following example, for all broadcast DHCP control packets, the inner CoS value will be set as 5 and the outer CoS value will be set as 7. However, for unicast DHCP control packets, both inner and outer CoS values will be set as 7 (the **inner-cos 5** command does not affect the unicast packets).

```
RP/0/RSP0/CPU0:router(config) # dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4) #inner-cos 5
RP/0/RSP0/CPU0:router(config-dhcpv4) #outer-cos 7
RP/0/RSP0/CPU0:router(config-dhcpv4) #
```

Task ID

Task ID Operation

ip-services read, write

Example

This example shows how to reset the default inner-cos value for DHCPv4 control packets sent on BNG subscriber interfaces:

RP/0/RSP0/CPU0:router# configure

RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# inner-cos 0

Related Commands	Command	Description		
	outer-cos, on page 121	Resets the default outer-cos value for DHCPv4 control packets sent on BNG subscriber interfaces.		

interface (DHCP-BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv4 or IPv6 on an interface, use the **interface** command in the appropriate configuration mode. To disable DHCPv4 or DHCPv6 on an interface, use the **no** form of the command.

interface type interface-path-id { **base** | **proxy** | **relay** | **server** | **snoop** } **profile** profile-name

Syntax Description	type	Interface	type. For more information, use the question mark (?) online help function.				
	interface-path-id	Physical	interface or virtual interface.				
		Note Use the show interfaces command to see a list of all interfaces configured on the router.					
	For more information about the syntax for the router, use the question mar help function.						
	server	Attaches a server profile for the specified interface.					
	relay	Attaches a relay profile for the specified interface.					
	snoop	Attaches a snoop profile for the specified interface.					
	proxy	Attaches the proxy profile to an interface.					
	base Attaches a base profile for the specified interface.						
	profile <i>profile-name</i> Specifies the profile name.						
Command Default	None						
Command Modes	DHCP IPv6 configura	DHCP IPv6 configuration					
	DHCP IPv4 configura	tion					
Command History	Release		Modification				
	Release 4.1.0		This command was introduced.				
	Release 4.3.0		The support for IPv6 was added in BNG.				
	Release 5.1		Support for server profile was added.				

	Release	Modification				
	Release 5.2.2	Support for DHCP IPv6 relay was added.				
		The keyword base was added as part of DHCPv4 Service Based Mode Selection feature.				
	Release 6.2.1	Support for DHCP IPv6 base profile was added.				
Usage Guidelines	The support for base profile option for DHCP IPv6 is availated more details, refer <i>PPP Class-based DHCPv6 Mode Selection Services Router Broadband Network Gateway Configuration</i>	n feature in Cisco ASR 9000 Series Aggregation				
Task ID	Task ID Operations					
	ip-services read, write					
Examples	This is an example of attaching a base profile to an interface:					
	RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# interface gigabitEthernet 0/0/0/0 base profile BASE_PROFILE					
	This is an example of enabling the DHCP interface mode on a Packet over Sonet/SDH (POS) interface using the interface command:					
	RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# interface POS 0/5/0/0 relay					
	This is an example of enabling the DHCP interface mode on a Packet over Sonet/SDH (POS) interface using the interface command:					
	RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# interface POS 0/5/0/0 server profile TEST					
	This example shows how to attach a base profile to an interface, in DHCPv6 mode:					
	RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# interface Bun	dle-Ether302.2501 base profile base_TEST				

interface subscriber-pppoe profile

To enable the PPPoE subscribers to use a profile for all the PPPoE subscribers, use the **interface subscriber-pppoe profile** command in the DHCP IPv6 configuration mode. To disable this feature, use the **no** form of this command.

interface subscriber-pppoe profile profile_name

Syntax Description	profile_nc	ume Specifie	es the name of the profile.		
Command Default	VRF is dis	sabled.			
Command Modes	DHCP IP	v6 configura	tion		
Command History	Release	Modifi	cation		
	Release 4	.3.0 This co introdu	ommand was uced.		
Usage Guidelines	No specifi	ic guidelines	s impact the use of this cor	nmand.	
Task ID	Task ID	Operations			
	ip-services	read, write			
Examples		-	r enabling PPPoE subscrib s using the interface subs e	•	f-pppoe-green" profile for all command:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# interface subscriber-pppoe profile my-def-pppoe-green

lease

To set a client lease time at a global server profile level or class profile level, use the **lease** command in DHCPv6 server profile or class profile configuration mode. To disable the client lease time, use the **no** form of this command.

lease {*days* [*hours minutes*] | **infinite**}

Syntax Description	days Specifies the number of days for	or the lease time. The value ranges from 1 to 365.				
	hoursSpecifies the number of hours for the lease time. The value ranges from 0 to 23.minutesSpecifies the number of minutes for the lease time. The value ranges from 0 to 59.					
	infinite Specifies an infinite amount of	lease.				
Command Default	By default, the lease is 86400 seconds (o	ne day).				
Command Modes	DHCPv6 server profile configuration					
	DHCPv6 server class profile configuration	on				
Command History	Release Modification					
	ReleaseThe command was extended6.4.1	ed for lease timer support for class profile as well.				
	ReleaseThis command was introd4.3.0	uced.				
Usage Guidelines		and not to the whole profile. When both profile and class lease time lease time takes precedence. The default lease time is 1 day, if lease				
	The lease time is specified in seconds or	date format.				
Task ID	Task ID Operation					
	ip-services read, write					
	This example shows how to configure lease time for 1 day and 6 hours:					
	RP/0/RSP0/CPU0:router(config)# dhc RP/0/RSP0/CPU0:router(config-dhcpv					
	RP/0/RSP0/CPU0:router(config-dhcpv					

This example shows how to configure infinite amount of lease time:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
```

RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# lease infinite

This example shows how to configure lease time for class profile:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile server-profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class class1
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-c)# lease 0 0 20
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-c)# address-pool poolv6
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-c)# dns-server 2001:DB8::1
```

lease proxy client-lease-time

To specify the lease limit each circuit id each interface, use the **lease proxy client-lease-time** command in the DHCP IPv4 sub configuration mode. To disable the lease proxy client-lease-time, use the **no** form of this command.

lease proxy client-lease-time value

Syntax Description	<i>value</i> Specifies the time in seconds for the lease proxy client. The minimum value of lease proxy client-time is 600 seconds.					
Command Default	If you set t	If you set the default (no), then the lease proxy gets disabled.				
Command Modes	DHCP IPv4	4 configuration

L

match mode-class

To match the subscriber's PPPoE/IPoE class information in order to select the corresponding profile to perform the server or proxy functionality for IPv4/IPv6 prefix allocation to the end user, use the match mode-class command in the DHCP IPv4/IPv6 base profile configuration mode. To disable the match option, use the no form of the command.

match mode-class class-name **profile** profile-name {**server** | | **proxy**}

Syntax Description	class-name	Specifies the name of the class.	
	profile	Specifies the profile to select for a particular class.	
	profile-name	Specifies the name of the profile.	
	server	Specifies the server mode.	
	proxy	Specifies the proxy mode.	
Command Default	None		
Command Modes	DHCP IPv4/I	Pv6 base profile configuration mode	
Command History	Release	Modification	
	Release 6.2.1	This command was introduced for DHCPv6.	
	Release 6.6.2	This command was introduced for DHCPv4.	
Usage Guidelines	No specific g	uidelines impact the use of this command.	
Task ID	Task ID 0	peration	
	ip-services re w	rite	
	This is an exa configuration	ample of using the match mode-class command in mode:	the DHCP IPv4 base profile
	RP/0/RSP0/C RP/0/RSP0/C	PU0:router(config)# dhcp ipv4 PU0:router(config-dhcpv4)# profile BASE_PRC PU0:router(config-dhcpv4-base-profile)# mat	

SERVER PROFILE server

RP/0/RSP0/CPU0:router(config-dhcpv4-base-profile)# match mode-class PROXY CLASS profile PROXY_PROFILE proxy

RP/0/RSP0/CPU0:router(config-dhcpv4-base-profile)# match-default profile DEFAULT_SERVER server

RP/0/RSP0/CPU0:router(config-dhcpv4-base-profile)# dhcp-to-aaa option list 12 55 60 61 124 RP/0/RSP0/CPU0:router(config-dhcpv4-base-profile)# exit

RP/0/RSP0/CPU0:router(config-dhcpv4) # interface bundle-ether1.10 base profile BASE_PROFILE RP/0/RSP0/CPU0:router(config-dhcpv4) # interface pw-ether25000.10 base profile BASE_PROFILE RP/0/RSP0/CPU0:router(config-dhcpv4) # commit

This is an example of using the **match mode-class** command in the DHCP IPv6 base profile configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile BASE_PROFILE base RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)# match mode-class SERVER_CLASS profile SERVER_PROFILE server RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)# match-mode-class PROXY_CLASS profile PROXY_PROFILE proxy RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)# match-default profile DEFAULT_SERVER server RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)# dhcpv6-to-aaa option list all RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)# exit RP/0/RSP0/CPU0:router(config-dhcpv6)# interface bundle-ether1.10 base profile BASE_PROFILE RP/0/RSP0/CPU0:router(config-dhcpv6)# interface pw-ether25000.10 base profile BASE_PROFILE RP/0/RSP0/CPU0:router(config-dhcpv6)# commit

 Command
 Description

 class, on page 76
 Creates a proxy profile class and enters the proxy profile class sub configuration mode.

match option 60

To enable option 60-based DISCOVER packet filter in DHCPv4, use the **match option 60** command in DHCP IPv4 profile (server, proxy, base or dynamic) configuration mode. To disable this feature, use the **no** form of this command.

For server or proxy profile mode:

match option 60 {default | hex hex-string} action {allow | drop}

For base or dynamic profile mode:

match option 60 {default hex-string} action {allow | drop}

Syntax Description	default	Defines a default behavior in case any Vendor-Id specific option 60 filter is not configured.			
	hex hex-string	Specifies the hexadecimal pattern in DHCP option 60 to be matched.			
	action	Specifies the action to be performed on DISCOVER packets.			
	allow	Allows the DISCOVER packets based on DHCP option 60 information.			
	drop	Drops the DISCOVER packets based on DHCP option 60 information.			
Command Default	None				
Command Modes	DHCP IPv4 proxy profile configuration				
	DHCP IPv4 server profile configuration				
	DHCP IPv4 base profile configuration				
	DHCP IPv4 dynamic profile configuration				
Command History	Release Modification	-			
	Release 6.1.2 This command was introduced.	-			
Usage Guidelines	The DHCP option 60 filtering feature kicks in only for DISCOVER packets that have option 60 field available.				
	In case of dynamic mode, the preference is given to the base profile filter list over proxy or server model list, if available.				
Task ID	Task ID Operation				
	ip-services read, write				

This example shows how to allow DHCP client packets with option 60 hex string "1234" and "1256", and drop all others.

RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 hex 1234 action allow RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 hex 1256 action allow RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 default action drop

This example shows how to drop DHCP client packets with option 60 hex string "1234" and "1256", and allow all others.

RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 hex 1234 action drop RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 hex 1256 action drop RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# match option 60 default action allow

match vrf

To match class based on VRF name, use the **match vrf** command in the DHCP IPv4 proxy profile class configuration mode. To disable the match vrf, use the **no** form of the command.

match vrf vrf_name **Syntax Description** vrf_name Specifies the VRF name. None **Command Default** DHCP IPv4 proxy profile class configuration **Command Modes Command History** Release **Modification** Release This command was 4.2.0 introduced. 	https://operator.com/device/acmp				

outer-cos

To reset the default outer-cos value for DHCPv4 control packets sent on BNG subscriber interfaces, use the **outer-cos** command in DHCP IPv4 configuration mode. To set the outer-cos value back to the default value, use the **no** form of this command.

outer-cos value

Syntax Description	valueValue of outer-cos for DHCPv4 control packets.The range is from 0 to 7.				
Command Default	None				
Command Modes	DHCP IPv4	4 configuration			
Command History	Release	Modification			
	Release 4.3.2	This command was introd	uced.		
	Release 5.3.1	This command was modi	fied.		
Usage Guidelines	The inner and outer Class of Service (CoS) values can be configured for DHCPv4 control packets. For broadcast packets, both the inner-cos and outer-cos commands can be used to configure CoS values. For unicast packets, the inner-cos command cannot be directly used. The outer CoS value configured using the outer-cos command is also set as the inner CoS value.				
Task ID	Task ID ip-services	Operation read, write			
	Example				
	This example shows how to reset the default outer-cos value for DHCPv4 control packets sent on BNG subscriber interfaces:				
	RP/0/RSP0/	<pre>/CPU0:router# configure /CPU0:router(config)# dha /CPU0:router(config-dhcp)</pre>			
Related Commands	Command	I	Description		
	inner-cos,		lesets the default inner-cos value for DHCPv4 control packets sent n BNG subscriber interfaces.		

prefix-pool

To specify the name of prefix pool by integrating the DHCPv6 sever with distributed address pool service (DAPS), use the prefix-pool command in the DHCP IPv6 server profile class configuration mode. To remove the prefix pool name, use the **no** form of this command.

prefix-pool pool_name

Syntax Description	<i>pool_name</i> Specifies the name of a prefix pool.			
Command Default	When a DHCF	P for IPv6 pool is first created, r	to DNS IPv6 servers are configured.	
Command Modes	DHCP IPv6 se	DHCP IPv6 server profile class configuration		
Command History	Release	Modification		
	Release 4.3.0	This command was introduced.		
Usage Guidelines		HCP IPv6 server profile config iguration mode.	uration, enter profile <i>profile_name</i> server command in the	
		HCP IPv6 server profile class co configuration mode.	onfiguration, enter class <i>class_name</i> command in the DHCPv6	
Task ID	Task ID Ope	erations		

ľ

ip-services read, write

Examples

This is an example of creating a prefix-pool name using the **prefix-pool** command:

RP/0/RSP0/CPU0:router(config) # dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6) # profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class class dhcp RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-class)# prefix-pool pool1

profile (BNG)

To specify a DHCP profile for the Dynamic Host Configuration Protocol (DHCP) IPv4 and IPv6 component and to enter the profile mode, use the **profile** command in DHCP IPv4 or DHCP IPv6 configuration submode. To disable a profile and exit the profile mode, use the **no** form of this command.

profile profile_name { base | proxy | server }

Syntax Description	profile_na	me		Specifies the name of the profile that uniquely identifies the proxy or server.
	base			Creates a DHCP base profile.
	proxy			Creates a DHCP proxy profile.
	server			Creates a DHCP server profile.
Command Default	None			
Command Modes	DHCP IPv4	4 configurat	tion	
	DHCP IPv	6 configurat	tion	
Command History	Release	Modific	ation	
	Release 4.2.0	This co	mmand was introduced.	
	Release 4.3.0	Support	was added for IPv6.	
	Release 6.2.1	Support	for base profile was added for DHCP IPv6 in BN	IG.
Usage Guidelines	The profile	<i>e-name</i> and	the <i>class-name</i> should be unique per base profi	ile.
Task ID	Task ID	Operations	-	
	ip-services	read, write	-	
Examples			by to enable the dhcpv4 configuration mode and h cpv4 configuration submode:	now to create a profile called
	RP/0/RSP0,	/CPU0:rout	er(config)# dhcp ipv4 er(config-dhcpv4)# profile dhcp_profile j er(config-dhcpv4-proxy-profile)#	ргоху

This example shows how to enable the dhcpv6 configuration mode and how to create a profile called dhcp_v6 in the dhcpv6 configuration submode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile dhcp_v6 proxy RP/0/RSP0/CPU0:router(config-dhcpv6-proxy-profile)#

This example shows how to create a DHCPv6 base profile:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile dhcp_profile base
RP/0/RSP0/CPU0:router(config-dhcpv6-base-profile)#
```

L

rapid commit

This command aids to enable or disable the rapid commit option of the DHCP server. Enabling it renders the DHCPv6 server to use the two message exchange feature to address/prefix an assignment. Including the **rapid commit** option in the **SOLICIT** message and enabling the same in the server profile, enables the server to respond with the **REPLY** message. Else, it follows the normal four message exchange procedure to assign address/prefix an assignment.

rapid-commit

Syntax Description	This command has no keywords or arguments.						
Command Default	None						
Command Modes	DHCP IPv	6 server prof	file configuration				
Command History	Release	Modific	cation				
	Release 5.2	2.0 This cor	mmand was introduced.				
Usage Guidelines	No specific	guidelines	impact the use of this con	nmand.			
Task ID	Task ID	Operations	-				
	ip-services	read, write					
Examples	This is an e	example of e	enabling rapid-commit in t	he DHCP IPv	/6 server pro	ofile configuration n	10de:

RP/0/RSP0/CPU0:router(config) # dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6) # profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile) # rapid-commit

relay information authenticate (BNG)

To specify relay agent information option to the policy plane for authentication purposes, use the **relay information authenticate** command in the DHCP IPv4 proxy profile configuration mode. To disable the relay option, use the **no** form of this command.

relay information authenticate {received | inserted}

Syntax Description	received Authenticate using received relay agent information option.			
	inserted Authenticate using inserted relay agent information option.			
Command Default	None			
Command Modes	DHCP IPv4 proxy profile configuration			
Command History	Release Modification			
	Release 4.3.1 This command was introduced.			
Usage Guidelines	No specific guidelines impact the use of this command.			
Task ID	Task ID Operations			
	ip-services read, write			
Examples	This example shows how to specify the received relay agent information option for authentication using the relay information authenticate command in DHCP IPv4 proxy profile configuration mode:			
	RP/0/RSP0/CPU0:router# config RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# profile myprofile proxy RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# relay information authenticate received			

Related Commands	Command	Description

relay information policy (BNG), on page 134	Configures how a relay agent processes BOOTREQUEST messages that already contain a relay information option.

relay information check (BNG)

To configure a Dynamic Host Configuration Protocol (DHCP) IPv4 Relay to validate the relay agent information option in forwarded BOOTREPLY messages, use the **relay information check** command in DHCP IPv4 relay profile configuration submode. To disable this feature, use the **no** form of this command.

relay information check

Syntax Description This command has no keywords or arguments.

Command Default DHCP validates the relay agent information option.

Command Modes DHCP IPv4 relay profile configuration

 Command History
 Release
 Modification

 Release 3.7.2
 This command was introduced.

Release 4.2.0 This command was supported for BNG.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID Task ID Operations ip-services read, write basic-services read, write

This example shows how to use the **relay information check** command:

```
RP/0/RSP0/CPU0:router#config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information check
```

Related Commands	Command	Description
	dhcp ipv4 (BNG), on page 79	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
	helper-address	Configures the DHCP relay agent to relay packets to a specific DHCP Server.
	profile (BNG)	Configures a relay profile for the DHCP IPv4 component.

Command	Description
relay information option (BNG), on page 130	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
relay information option allow-untrusted (BNG), on page 132	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.

relay information option (BNG)

To configure Dynamic Host Configuration Protocol (DHCP) IPv4 relay or DHCP snooping Relay to insert relay agent information option in forwarded BOOTREQUEST messages to a DHCP server, use the relay information option command in DHCP IPv4 relay profile relay configuration or DHCP IPv4 profile snoop submode. To disable inserting relay information into forwarded BOOTREQUEST messages, use the no form of this command.

relay information option

Syntax Description	This command has no keywords or arguments.				
Command Default	None				
Command Modes	- DHCP IPv4 relay profile relay configuration DHCP IPv4 pr	ofile snoop c	configuration		
Command History	Release	Modificatio	n	_	
	Release 3.7.2	This comma	and was introduced.	_	
	Release 4.2.0	This comma	and was supported for BNG	_	
Usage Guidelines			ion command automaticall relay agent information op	y adds the circuit identifier suboption and the remote tion.	
	The relay information option command enables a DHCP server to identify the user (for example, cable access router) sending the request and initiate appropriate action based on this information. By default, DHCP does not insert relay information.				
	If the information option command is enabled, DHCP snooping mode does not set the giaddr field in the DHCP packet.				
		mation optio	on allow-untrusted config	nust be configured to accept this type of packet using uration. This configuration prevents the server or relay	
Task ID	Task ID	Operations			
	ip-services	read, write			
	basic-services	read, write			

This example shows how to use the relay information option command:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information option
```

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 79	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
helper-address	Configures the DHCP relay agent to relay packets to a specific DHCP Server.
relay information check (BNG), on page 128	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
relay information option allow-untrusted (BNG), on page 132	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.

relay information option allow-untrusted (BNG)

To configure the Dynamic Host Configuration Protocol (DHCP) IPv4 relay or DHCP snooping Relay not to drop discard BOOTREQUEST packets that have the relay information option set and the giaddr set to zero, use the **relay information option allow-untrusted** command in DHCP IPv4 relay profile configuration submode or DHCP IPv4 profile snoop configuration submode. To restore the default behavior, which is to discard the BOOTREQUEST packets that have the relay information option and set the giaddr set to zero, use the **no** form of this command.

	relay inform	ation optio	on allow-untrusted		
Syntax Description	This command has no keywords or arguments.				
Command Default	The packet is dropped if the relay information is set and the giaddr is set to zero.				
Command Modes	DHCP IPv4 relay profile relay configuration DHCP IPv4 pi	rofile cnoon	configuration		
			-	-	
Command History	Release	Modificatio	DN	_	
	Release 3.7.2	This comm	and was introduced.		
	Release 4.2.0	This comm	and was supported for BNG.	-	
Usage Guidelines	According to RFC 3046, relay agents (and servers) receiving a DHCP packet from an untrusted circuit with giaddr set to zero but with a relay agent information option already present in the packet shall discard the packet and increment an error count. This configuration prevents the server or relay from dropping the DHCP message.				
Task ID	Task ID	Operations			
	ip-services	read, write			
	basic-services	read, write			
Examples	This example	shows how t	to use the relay information	n option allow-untrusted command:	
		vU0:router(<pre>config config)# dhcp ipv4 config-dhcpv4)# profile</pre>	client relay	

RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information option allow-untrusted

Broadband Network Gateway Command Reference for Cisco ASR 9000 Series Routers

relay information policy (BNG)

To configure how the Dynamic Host Configuration Protocol (DHCP) IPv4 relay processes BOOTREQUEST packets that already contain a relay information option, use the **relay information policy** command in DHCP IPv4 relay profile configuration submode. To restore the default relay information policy, use the **no** form of this command.

relay information policy {drop | keep | encapsulate}

Syntax Description	drop Directs the DHCP IPv4 Relay to discard BOOTREQUEST packets with the existing relay information option.				
	keep Directs the DHCP IPv4 Relay not to discard a BOOTREQUEST packet that is received with an existing relay information option and to keep the existing relay information option value.				
	encapsulate Encapsulates the DHCP relay agent information option received from a prior relay agent in forwarded BOOTREQUEST messages.				
Command Default	Default The DHCP IPv4 Relay does not discard a BOOTREQUEST packet that has an existing relay information option. The option and the existing relay information option value is replaced.				
Command Modes	DHCP IPv4	relay profile c	configuration		
Command History	Release	Modificatio	on		
	Release 3.7.	.2 This comm	and was introduced.		
	Release 4.2.0 This command was supported for BNG.				
	Release 4.3	.1 The encaps	sulate keyword was added.		
Usage Guidelines	received from	m the first rela	y agent, if it is also configure	at to encapsulate option 82 information in a message ed to add its own option 82 information. This information from both relay agents.	
Task ID	Task ID	Operations			
	ip-services	read, write			
	basic-service	es read, write			
Examples	This is samp	ble output from	n executing the relay informs	ation policy command:	
	RP/0/RSP0/0		<pre>config config)# dhcp ipv4 config-dhcpv4)# profile</pre>	client relay	

RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information policy keep

This example shows how to encapsulate the DHCP relay agent information option:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information policy encapsulate
```

show dhcp ipv6 server interface

To display the server interface information for Dynamic Host Configuration Protocol (DHCP), use the **show dhcp ipv6 server interface** command in EXEC mode.

show dhcp ipv6 server interface{typeinterface-path-id} {locationlocation}

Syntax Description	type	Interface type. Fo	or more information, use the question mark (?) online help function.				
	 <i>interface-path-id</i> Either a physical interface instance or a virtual interface instance as follows: Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a between values is required as part of the notation. <i>rack</i>: Chassis number of the rack. 						
		• <i>slot</i> : Pł	nysical slot number of the modular services card or line card.				
		• module 0.	e: Module number. A physical layer interface module (PLIM) is always				
	• port: Physical port number of the interface.						
			In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.				
	• Virtual interface instance. Number range varies depending on interface type.						
		For more informa function.	ation about the syntax for the router, use the question mark (?) online help				
	location	Displays the nod	Displays the node location by Interface.				
	<i>location</i> Displays the fully qualified location specification of an interface.						
Command Default	None

BNG Interface Commands

This module describes the Cisco IOS XR software commands used to configure and verify the interfaces for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- encapsulation ambiguous dot1ad, on page 168
- encapsulation ambiguous dot1q, on page 170
- show ethernet tags, on page 172

encapsulation ambiguous dot1ad

To configure encapsulated ambiguous VLANs with IEEE 802.1ad Provider Bridging (PB) encapsulation type on an access-interface, use the **encapsulation ambiguous dot1ad** command in the interface configuration mode. To remove the encapsulated ambiguous VLANs, use the **no** form of this command.

encapsulation ambiguous dot1ad {any vlan-id vlan-range} [dot1q {any vlan-range}]

Syntax Description	any	Specifies the matching criteria as any VLAN tag in the range 1 to 4094.			
	vlan-id	VLAN-ID for the outer VLAN.			
	vlan-range	VLAN range for the outer and inner VLANs.			
	The range is given in comma-separated, or hyphen-separated format, or a combination of both.				
	dot1q	Indicates that the IEEE 802.1q standard encapsulation type is used for the inner tag.			
Command Default	None				
Command Modes	Interface con	nfiguration			
Command History	Release	Modification			
	Release 4.2.0	This command was introduced.			
	Release 5.2.0	The support for outer VLAN range was added in BNG.			
Usage Guidelines		ombinations of ambiguous VLAN configurations in BNG, with IEEE 802.1ad Provider Bridging ulation type are:			
	• encaps	ulation ambiguous dot1ad {any vlan-range }			
	• encaps	ulation ambiguous dot1ad vlan-id dot1q { any vlan-range }			
	encapsulation ambiguous dot1ad vlan-range dot1q any				
	Note Althoug	gh encapsulation ambiguous dot1ad is supported, it is not commonly used in BNG deploymer			
Task ID	 Task ID Op	peration			
	interface rea	ad,			

write

These examples show how to configure ambiguous VLANs with IEEE 802.1ad Provider Bridging (PB) encapsulation type on an access-interface.

Single-tagged ambiguous VLAN configuration where the matching criteria for the outer VLAN is specified as **any**:

```
RP/0/RSP0/CPU0:router#configure
RP/0/RSP0/CPU0:router(config)#interface Bundle-Ether100.10
RP/0/RSP0/CPU0:router(config-subif)#encapsulation ambiguous dot1ad any
```

Ambiguous VLAN configuration where the match criteria for outer VLAN is specified as VLAN-Id and that for inner VLAN is specified as a range:

RP/0/RSP0/CPU0:router(config-subif) #encapsulation ambiguous dotlad 14 dotlq 100,200,300-400

Ambiguous VLAN configuration with outer VLAN range:

(config-subif) #encapsulation ambiguous dot1ad 1-1000 dot1q any

Related Commands	Command	Description
	encapsulation ambiguous dot1q, on page 170	Configures encapsulated ambiguous VLANs with IEEE 802.1q encapsulation type, on an access-interface in BNG.

encapsulation ambiguous dot1q

To configure encapsulated ambiguous VLANs with IEEE 802.1q encapsulation type on an access-interface, use the **encapsulation ambiguous dot1q** command in the interface configuration mode. To remove the encapsulated ambiguous VLANs, use the **no** form of this command.

encapsulation ambiguous dot1q {any vlan-id vlan-range} [second-dot1q {any vlan-id vlan-range}]

Syntax Description	any	Specifies the matching criteria as any VLAN tag in the range 1 to 4094.			
	vlan-id	VLAN-ID for the outer and inner VLANs.			
		The range is from 0 to 4094.			
	vlan-range	VLAN range for the outer and inner VLANs.			
		The range is given in comma-separated, or hyphen-separated format, or a combination of both.			
Command Default	None				
Command Modes	Interface con	nfiguration			
Command History	Release	Modification			
Command History	Release 4.2.0	This command was introduced.			
	Release 4.3.1				
	Release 5.2.0	The support for outer VLAN range was added in BNG.			
Usage Guidelines	The valid co are:	ombinations of ambiguous VLAN configurations in BNG, with IEEE 802.1q encapsulation type			
	• encaps	ulation ambiguous dot1q {any vlan-range }			
	• encaps	ulation ambiguous dot1q <i>vlan-id</i> second-dot1q { any <i>vlan-range</i> }			
	• encaps	ulation ambiguous dot1q any second-dot1q { any vlan-id }			
	• encaps	ulation ambiguous dot1q vlan-range second-dot1q any			
	outer VLAN by adding 8 in such scen the MTU on	bus VLAN dot1q configuration where the match criteria is explicitly configured for inner and tags or where a range is specified or where any is used for outer VLAN tag, the MTU is calculated bytes (2xdot1q tags) to the default MTU. That is, if default is 1514, the MTU is set to 1522 bytes arios. Whereas, for configurations where the match criteria for inner VLAN is specified as any , the sub-interface is calculated by adding 4 (and not 8) bytes to the main interface MTU. That is, 1518 bytes. This behavior is applicable for both physical interfaces and bundle sub-interfaces.			

Task ID Task ID Operation

interface read, write

These examples show how to configure ambiguous VLANs with IEEE 802.1q encapsulation type on an access-interface.

Single-tagged ambiguous VLAN configuration where the match criteria for outer VLAN is specified as **any**:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether100.10
RP/0/RSP0/CPU0:router(config-subif)# encapsulation ambiguous dotlq any
```

Ambiguous VLAN configuration where the match criteria for outer VLAN is specified as VLAN-ID and that for inner VLAN is specified as a range:

RP/0/RSP0/CPU0:router(config-subif) # encapsulation ambiguous dot1q 14 second-dot1q 100-200

Ambiguous VLAN configuration where the match criteria for outer VLAN and inner VLAN is specified as **any**:

(config-subif) # encapsulation ambiguous dot1q any second-dot1q any

Ambiguous VLAN configuration with a single outer VLAN range and inner VLAN specified as **any**:

(config-subif) # encapsulation ambiguous dot1q 1-1000 dot1q any

Ambiguous VLAN configuration with 9 outer VLAN ranges and inner VLAN specified as any:

(config-subif)# encapsulation ambiguous dot1q 9-18, 19-25, 26, 27-30, 32, 33-40, 42, 43-50, 52 second-dot1q any

Related Commands	Command	Description
	encapsulation ambiguous dot1ad, on page 168	Configures encapsulated ambiguous VLANs with IEEE 802.1ad Provider Bridging (PB) encapsulation type, on an access-interface in BNG.

show ethernet tags

To display the ethernet tag match information, use the **show ethernet tags** command in EXEC mode.

show ethernet tags [interface-type interface-path-id] [detail] [location node-id] [match-order]

Syntax Description	interface-type	Interface	e type. For more in	formation, use	the question mark	(?) online help function.
	interface-path-id	Physical	interface or virtua	l interface.		
		Note	Use the show i configured on		mand to see a list of	of all interfaces currently
		For more help fund		t the syntax for	the router, use the	question mark (?) online
	match-order	Displays	the high priority r	natches first.		
Command Default	None					
Command Modes	EXEC mode					
Command History	Release Mo	dification				
	Release Thi 4.2.0	s comman	d was introduced.			
Usage Guidelines	outer VLAN tags of by adding 8 bytes in such scenarios. the MTU on the su	r where a (2xdot1q t Whereas, lb-interfac	range is specified o tags) to the default for configurations the is calculated by a	r where any is a MTU. That is, where the mate adding 4 (and n	used for outer VLA if default is 1514, t ch criteria for inner ot 8) bytes to the n	configured for inner and N tag, the MTU is calculated he MTU is set to 1522 bytes VLAN is specified as any , nain interface MTU. That is, nd bundle sub-interfaces.
Task ID	Task ID	Operation				
	ethernet-services	read				
	This is a sample of	utput of th	ne show ethernet t	ags command:		
	Ly: L2 - Swit Xtra C - Matcl	inistrat: tched lay n on Cos,	ively Down, Dn - yer 2 service, L , E - Match on	Down, Up - 3 = Terminat Ethertype, M		ce MAC
	Interface Te0/0/0/0.1		St MTU Ly Out Up 1522 L3 .1Q		Inner .1Q:100-200	Xtra -,+ - 0 0

This is a sample output of the **show ethernet tags detail** command for BNG outer VLAN range feature:

```
RP/0/RSP0/CPU0:router#show ethernet tags tengigE 0/1/0/10.12 detail
GigabitEthernet0/1/0/10.12 is up, service is L3
Interface MTU is 1518
Outer Match: DotlQ VLAN 11-20,21-30,31-60,61-100,101-140,141-180,181-220,221-260,261-300
Inner Match: DotlQ VLAN any
Local traffic encap: -
Pop 0 tags, push none
```

DIAMETER Commands

This module describes the Cisco IOS XR software commands used to configure DIAMETER interface for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

address (DIAMETER)

To configure IPv4 or IPv6 address of DIAMETER peer, use the **address** command in DIAMETER peer configuration mode. To remove the IPv4 or IPv6 address of DIAMETER peer, use the **no** form of this command.

address {ipv4 | ipv6} ipaddress

Syntax Description	ipaddr	ess Specifi	es the IPv4 or IPv6 address of DIAMETER peer.
Command Default	None		
Command Modes	Global	Configuratio	on mode
Command History	Releas	se Mod	ification
	Releas 5.3.0	e This	command was introduced.
Usage Guidelines	No spe	cific guidelii	nes impact the use of this command.
Task ID	Task ID	Operation	

This example shows how to configure an IPv4 address for DIAMETER peer in BNG:

RP/0/RSP0/CPU0:router(config)# diameter peer diam_server_1
RP/0/RSP0/CPU0:router(config-dia-peer)# address ipv4 2.2.2.2

I

clear diameter peer

To reset DIAMETER peer connection in BNG, use the clear diameter peer command in EXEC mode.

	clear diam	eter peer peer-name	
Syntax Description	peer-name	The DIAMETER peer name.	
Command Default	None		
Command Modes	EXEC		
Command History	Release	Modification	
	Release 5.3.0	This command was introduced.	
Usage Guidelines	This comma timeout.	and resets the peer connection. The	e connection to the peer is re-established after the connection
Task ID	Task Op ID	eration	
	aaa wr	ite	
	This examp	le shows how to reset DIAMETEI	R peer connection in BNG:
	RP/0/RSP0/	CPU0:router# clear diameter ;	peer peerl
Related Commands	Command		Description
	clear diame	eter statistics, on page 179	Clears DIAMETER peer statistics in BNG

clear diameter statistics

To clear DIAMETER pe	er statistics in BNG, use the	clear diameter statistics	command in EXEC mode.
----------------------	-------------------------------	---------------------------	-----------------------

	clear diameter statistics [{gx gy nas}]
Syntax Description	gx (Optional) Clears the statistics of Gx application.
	gy (Optional) Clears the statistics of Gy application.
	nas (Optional) Clears the statistics of NAS application.
Command Default	None
Command Modes	EXEC
Command History	Release Modification
	ReleaseThis command was introduced.5.3.0
Usage Guidelines	Executing the clear diameter statistics command without any arguments, clears all the DIAMETER peer statistics.
Task ID	Task Operation ID
	aaa write
	This example shows how to clear NAS statistics:
	RP/0/RSP0/CPU0:router# clear diameter statistics nas

Related Commands	Command	Description
	clear diameter peer, on page 178	Resets DIAMETER peer connection in BNG

destination host

			TER peer in BNG, use the destination host command in DIAMETER hostname of the DIAMETER peer, use the no form of this command.
	destinatio	n host host-name	
Syntax Description	host-name	e Specifies the hostname of the format.	he DIAMETER peer in Fully Qualified Domain Name(FQDN)
		This value is sent in various r	messages, so that intermediate proxies can route the packets properly.
Command Default	None		
Command Modes	DIAMETH	ER peer configuration.	
Command History	Release	Modification	
	Release 5.3.0	This command was introdu	ıced.
Usage Guidelines	No specifi	c guidelines impact the use of	this command.
Task ID	Task O ID	peration	
		ead, rite	
	This exam	ple shows how to configure the	e hostname of the DIAMETER peer in BNG:
		//CPU0:router(config)# dia //CPU0:router(config-dia-p	<pre>meter peer diam_server_1 weer) # destination host dccal.cisco.com</pre>
Related Commands	Command		Description
	destinatio	n realm, on page 181	Configures the realm to which the DIAMETER peer belongs to.

destination realm

To configure the realm to which the DIAMETER peer belongs to, use the **destination realm** command in DIAMETER peer configuration mode. To remove the realm configuration, use the **no** form of this command.

	destinatio	n relam realm-string	
Syntax Description	realm-stri	<i>ng</i> Specifies the hostname of the format.	DIAMETER peer in Fully Qualified Domain Name(FQDN)
		This value is sent in various m properly.	nessages, so that intermediate proxies can route the packets

diameter attribute list

To configure attribute list parameters for DIAMETER test command in BNG, use the **diameter attribute list** command in Global Configuration mode. To remove this configuration, use the **no** form of this command.

diameter attribute list *list-num* [**attribute** {*attr-id* | **vendor-id** *vendor-id*} *attr-format attr-value* [**mandatory**]]

Syntax Description	list-num	DIAMETER attribute list number
		The range is from 0 to 99.
	attribute	Specifies an attribute definition.
	attr-id	Attribute ID value.
		The range is from 1 to 65535.
	vendor-id	Specifies the vendor ID.
	vendor-id	Vendor ID value.
		The range is from 0 to 4294967295
	attr-format	Specifies the attribute format. The options are:
		• address
		• binary
		• boolean
		• diameter-identity
		• enum
		• grouped
		• string
		• ulong
	attr-value	Attribute value as per the attribute format.
		For boolean, enum and ulong formats, the range is from 0 to 4294967295.
		For grouped formats, the range is from 0 to 99.

Command Default None

Command Modes	Global Con	figuration mode			
Command History	Release	Modification	_		
	Release 5.3.0	This command was introduced	 1.		
Usage Guidelines		•	aa group diameter command, to define the attribute list. Based e sent as part of the test command.		
Task ID	Task ID	Operation			
	config-serv	ices read, write			
	This example shows how to configure attribute list parameters for DIAMETER test command in BNG:				
	RP/0/RSP0/ RP/0/RSP0/	/CPU0:router(config-dia-attr /CPU0:router(config-dia-attr	<pre>ter attribute list 1 elist)# attribute vendor-id 0 8 address 5.6.7.8 mandatory c-list)# attribute vendor-id 0 416 enum 1 mandatory c-list)# attribute vendor-id 9 14000 string</pre>

	test aaa gr	oup diameter, on page 200	Tests various DIAMETER application behaviors in BNG.		

diameter gx

To enable Gx application in BNG under the DIAMETER process, use the **diameter gx** command in Global Configuration mode. To disable Gx application in BNG, use the **no** form of this command, followed by a DIAMETER process restart.

diameter gx

Syntax Description	This command has no keywords or arguments.
Command Default	None

Command Modes Global Configuration mode

Release

Command History

Release	This command was introduced.
5.3.0	

Modification

Usage Guidelines

Note The **no** form of this command does not have any impact until followed by a DIAMETER process restart.

The no diameter gx command must not be executed when there are active subscriber sessions on the router.

Task ID	Operation
aaa	read, write

This example shows how to enable Gx application in BNG under the DIAMETER process:

RP/0/RSP0/CPU0:router(config) # diameter gx

Related Commands	Command	Description
	diameter gy, on page 187	Enables Gy application in BNG under the DIAMETER process.

diameter gx retransmit

To configure the retransmit count for Gx application, use the **diameter gx retransmit** command inGlobal Configuration mode. To remove this configuration, use the **no** form of this command.

diameter gx retransmit count

Syntax Description	<i>count</i> Specifies the value of the retransmit count, in seconds. The range is from 1 to 10; the default is 1.				
Command Default	If the retransmit cou	nt is not configured, it is 1	second, by default.		
Command Modes	Global Configuratio	n mode			
Command History	Release Modi	fication			
	Release This c 5.3.0	command was introduced.			
Usage Guidelines	No specific guidelin	es impact the use of this co	ommand.		
Task ID	Task Operation ID				
	aaa read, write				
	Example				
	This example shows how to set the retransmit count value to 8 seconds, for Gx application:				
	RP/0/RSP0/CPU0:ro	uter(config)# diameter	gx retransmit 8		
Related Commands	Command		Description		
	diameter gy retrans	mit, on page 188	Configures the retransmit count for Gy application.		

diameter gx tx-timer

To configure the transaction timer for Gx application, use the **diameter gx tx-timer** command inGlobal Configuration mode. To remove this configuration, use the **no** form of this command.

diameter gx tx-timer timer-value

Syntax Description	timer-value	Specifies the value of the transaction timer in seconds. The range is from 6 to 1000; the default is 15.
	-	

Command Default If the timer value is not configured, it is 15 seconds, by default.

diameter origin host

To configure the origin host information of DIAMETER server in BNG, use the **diameter origin host** command in Global Configuration mode. To remove this origin host information of DIAMETER server, use the **no** form of this command.

diameter origin host host-name

 Syntax Description
 host-name
 Specifies the DIAMETER server's origin host either as a fully qualified domain name (FQDN) or as an IPv4 or IPv6 address.

Command Default The origin host is set as a null string.

Command Modes Global Configuration mode

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines If you do not specify the origin host, a null string is assumed as the origin host name. Therefore, this is a mandatory configuration.

```
Task IDTask<br/>IDOperation<br/>operation<br/>aaaaaaread,<br/>write
```

Example

This example shows how to configure the DIAMETER origin host information in BNG:

RP/0/RSP0/CPU0:router(config)# diameter origin host BNG-1.cisco.com

Related Commands	Command	Description
	diameter origin realm, on page 191	Configures the origin realm information of DIAMETER server in BNG.

diameter origin realm

To configure the origin realm information of DIAMETER server in BNG, use the **diameter origin realm** command in Global Configuration mode. To remove this origin realm information of DIAMETER server, use the **no** form of this command.

diameter origin realm realm-string

Syntax Description	realm-strin	<i>g</i> Specifies the DIAMETE or as an IPv4 or IPv6 ad	R origin realm string either as a fully qualified domain name (FQDN) dress.				
Command Default	The default	realm name string is a null s	string.

test aaa group diameter

To test various DIAMETER application behaviors in BNG, use the **test aaa group diameter** command in EXEC mode.

test aaa group diameter {dcca | policy-if} list-num server-group timeout timeout-val

Syntax Description	dcca		Tests DIAMETER DCCA application messages.
	policy-if		Tests DIAMETER policy interface application messages.
	list-num		DIAMETER attribute list number.
	server-grou	ир	Specifies the configured server group to be used for testing.
	timeout		Specifies the duration that the test process need to wait for the response.
	timeout-va	l	Timeout value, in seconds.
			The range is from 1 to 99. The value must be greater than or equal to 5.
Command Default	None		
Command Modes	EXEC mod	e	
Command History	Release	Modification	-
	Release 5.3.0	This command was introduced.	
Usage Guidelines	You must u	se diameter attribute list comma	nd, to define the attribute list required for this test command.
Task ID	Task ID O	peration	
	network re wi	ad, rite	

This example shows how to execute the test aaa group diameter command in BNG:

RP/0/RSP0/CPU0:router# test aaa group diameter policy-if 1 default timeout 5

Related Commands

diameter attribute list, on page 182	Configures attribute list parameters for DIAMETER test command in BNG.

timer (DIAMETER)

To configure various DIAMETER base protocol timers, use the **timer** command in DIAMETER peer configuration mode or in Global Configuration mode (along with **diameter** keyword). To remove the DIAMETER base protocol timers, use the **no** form of this command.

timer {connection | transaction | watchdog} timer-value

Syntax Description	connection	Specifies the DIAMETER base protocol timer used for setting the frequency of transport connection attempts with the peer when there is no active connection to the peer.
		This timer is used to delay the connection establishment or re-establishment of client with the DIAMETER server.
	transaction	Specifies the timer used for setting the frequency of transaction attempts. That is, the duration for which the client waits for any response message from the peer.
	watchdog	Specifies the timer used to periodically send the Device-Watch-Dog to the DIAMETER server to test the link status.
	timer-value	Specifies the value for various DIAMETER base protocol timers.
		The range, in seconds, for transaction timer is from 1 to 1000; the default is 5.
		The range, in seconds, for connection timer and watchdog timer is from 6 to 1000; the default is 30.
Command Default	None	
Command Modes	DIAMETER peer configuration.	
	Clabel Configuration mode (when used with diameter languard)	

Global Configuration mode (when used with diameter keyword).

Command History	Release	Modifi	ication	—

```
RP/0/RSP0/CPU0:router(config)# diameter timer watchdog 300
```

transport (DIAMETER)

To configure the DIAMETER transport protocol to be used for establishing connection with the peer, use the **transport** command in DIAMETER peer configuration mode. To remove the DIAMETER transport protocol configuration, use the **no** form of this command.

transport tcp port port_num

Syntax Description	port_r	port_num Specifies the port number that the remote peer uses for DIAMETER messages.			
		The range is from 1 to 65535; the default is 3868.			
Command Default	If the	f the <i>port_num</i> is not configured, 3868 becomes the default port number.			
Command Modes	DIAM	AMETER peer configuration.			
Command History	Relea	se Mo	dification		
	Releas 5.3.0	se Th	s command was introduced.		
Usage Guidelines	When t anymo	Currently, only tcp is supported as the DIAMETER transport protocol in BNG. When the no form of the command is issued, all the sessions that are bound to the peer cannot use the connection anymore. In that case, the applications that initiated the pending messages, if any in the queue, are notified so that they can try alternate peers.

Dynamic Template Commands

This module describes the Cisco IOS XR software commands used to configure the Dynamic Template commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- dynamic-template, on page 220
- dynamic-template type ipsubscriber, on page 221
- dynamic-template type ppp, on page 222
- dynamic-template type service, on page 223
- monitor-session (interface-dynamic-template-BNG), on page 224
- service-policy (BNG), on page 226
- test radius coa activate, on page 228
- timeout idle, on page 230
- vrf (dynamic-template-BNG), on page 232

dynamic-template

To group a set of configuration items that can be applied to a group of subscribers and to enter the dynamic-template configuration mode, use the **dynamic-template** command in the Global Configuration mode. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type {ipsubscriber name | ppp name | service name}

Syntax Description	type Specifies the type of templates, for example, ppp or ipsubscriber or service.						
	<i>name</i> Specifies the name of the dynamic template type.						
	ipsubscriber	Specifies the ipsubscriber dynamic	template type.				
	ррр	Specifies the ppp dynamic template	e type.				
	service	Specifies the service dynamic temp	plate type.				
Command Default	None						
Command Modes	Global Config	guration mode					
Command History	Release	Modification					
	Release 4.2.0	This command was introduced.					
Usage Guidelines	Use the dyna	mic-template command to enter dy	namic template configuration mode.				
Task ID	Task ID	Operation					
	config-service	es read, write					
	This is an exa mode:	mple of configuring the dynamic-to	emplate command in the Global Configuration				
	RP/0/RSP0/CH	PU0:router# configure PU0:router(config)# dynamic-te PU0:router(config-dynamic-temp	-				
Related Commands	Command		Description				
	dynamic-tem	plate type ppp, on page 222	Enables the ppp dynamic template type.				
	dynamic-tem	plate type ipsubscriber, on page 221	Enables the ipsubscriber dynamic template type				
	dynamic-tem	plate type service, on page 223	Enables the service dynamic template type.				

dynamic-template type ipsubscriber

To group a set of configuration items that can be applied to a group of subscribers based on the ipsubscriber template type and to enter the dynamic-template configuration mode, use the **dynamic-template type ipsubscriber** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type ipsubscriber template-name

dynamic-template type service, on page 223

Syntax Description	template-name Specifies the dynam	nic template name.				
Command Default	None					
Command Modes	Dynamic template configuration mod	le				
Command History	Release Modification					
	ReleaseThis command was4.2.0introduced.					
Usage Guidelines	Use the dynamic-template comman	d to enter dynamic template configuration mode.				
Task ID	Task ID Operation					
	config-services read, write					
	This is an example of configuring the dynamic-template type ipsubscriber command:					
	RP/0/RSP0/CPU0:router# configu RP/0/RSP0/CPU0:router(config)# RP/0/RSP0/CPU0:router(config-dy					
Related Commands	Command	Description				
	dynamic-template, on page 220	Enables the dynamic template configuration mode.				
	dynamic-template type ppp, on page	Enables the ppp dynamic template type.				

Enables the service dynamic template type.

dynamic-template type ppp

To group a set of configuration items that can be applied to a group of subscribers based on the ppp template type and to enter the dynamic-template configuration mode, use the **dynamic-template type ppp** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type ppp template-name

Syntax Description	template-n	name Specifie	s the dynamic template	name.
Command Default	None			
Command Modes	Dynamic te	emplate configu	uration mode	
Command History	Release	Modificatio	n	
	Release 4.2.0	This comma introduced.	and was	
Usage Guidelines	Use the dy	namic-templat	te command to enter d	ynamic template configuration mode.
Task ID	Task ID	Operation		
	config-serv	ices read, write		
	This is an e	example of cont	figuring the dynamic -	template type ppp command:
	RP/0/RSP0		(config)# dynamic-t	emplate blate)# type ppp p1
Related Commands	Command			Description
	dynamic-te	emplate, on pag	ge 220	Enables the dynamic template configuration mode.
	dynamic-te	emplate type ips	subscriber, on page 221	Enables the ipsubscriber dynamic template type.
	dynamic-te	emplate type se	ervice, on page 223	Enables the service dynamic template type.

dynamic-template type service

To group a set of configuration items that can be applied to a group of subscribers based on the service template type and to enter the dynamic-template configuration mode, use the **dynamic-template type service** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type service template-name

Syntax Description	template-r	ame Specifies the dynamic	template name.
Command Default	None		
Command Modes	Dynamic te	emplate configuration mo	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
Usage Guidelines	Use the dy	namic-template comman	to enter dynamic template configuration mode.
Task ID	Task ID	Operation	
	config-serv	ices read, write	
	This is an e	example of configuring th	lynamic-template type service command:
	RP/0/RSP0	/CPU0:router# configu /CPU0:router(config)# /CPU0:router(config-d	ynamic-template amic-template)# type service s1
Related Commands	Command		Description
	dynamic-t	emplate, on page 220	Enables the dynamic template configuration mode.
	dynamic-t	emplate type ppp, on pag	22 Enables the ppp dynamic template type.
	dynamic-t	emplate type ipsubscribe	n page 221 Enables the ipsubscriber dynamic

template type.

monitor-session (interface-dynamic-template-BNG)

To associate a traffic mirroring session with a specific interface, use the **monitor-session** command in interface configuration mode or dynamic-template configuration mode. To remove the association between a traffic mirroring session and an interface, use the **no** form of this command.

monitor-session session-name [direction {rx-only | tx-only}] [port-level]

Syntax Description	session-name	2	Name of the monitor session to configure.			
	direction		Specifies that traffic replication is in only one direction.			
	rx-only		Specifies that only ingress traffic is replicated.			
	tx-only		Specifies that only egress traffic is replicated.			
Command Default	Replicates bot	th ingress and egress traffic.				
Command Modes	Interface conf	figuration				
	Dynamic tem	plate configuration (for BNG)				
Command History	Release	Modification				
	Release 3.9.1	This command was introduced.				
	Release 4.0.0 The acl and mirror first keywords were added.					
	Release 5.1 The support for this command under dynamic-template configuration mode was added for BNG.					
Usage Guidelines	monitor-sessi monitor-sessi this session w session, only	ion global configuration command. Afte ion interface configuration command or with a specific source interface. For BNG when the dynamic template is applied to fic on the interface is then replicated to the	a specific interface, you must define it using the er the traffic mirroring session is defined, use the dynamic template configuration command to associate sessions, the subscriber is attached to the monitor the subscriber. When the session is associated, all he destination location defined in the monitor session			
	The monitor-session interface configuration command also enters monitor session configuration mode for you to configure additional features of the mirroring session.					
	If a physical interface is configured for Layer 3, then the traffic mirroring session can be associated on physical interfaces. Example:					
	Interfaces. LA	ampic.				

If a physical interface has sub-interfaces configured for Layer 3, then the traffic mirroring session must be associated on each sub-interface. Example:

```
interface TenGigE0/1/0/1.601
ipv4 address 10.0.1.1 255.255.255.0
encapsulation dot1q 601
```

For more information about monitoring a session, see *Configuring Traffic Monitoring* chapter in *Cisco ASR* 9000 Series Aggregation Services Router Interface and Hardware Component Configuration Guide.

Task ID	Task ID	Operations
	interface	read, write
	config-services	read, write

Examples

This example shows how to enter monitor session configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface gigabitethernet0/0/0/11
RP/0/RSP0/CPU0:router(config-if)# l2transport
RP/0/RSP0/CPU0:router(config-if-l2)# monitor-session mon1
RP/0/RSP0/CPU0:router(config-if-mon)#
```

This example shows how to configure **monitor-session** command in the dynamic-template configuration mode for BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp ppp_template
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# monitor-session mon1 direction rx-only
```

```
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# acl
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# mirror first 100
```

service-policy (BNG)

To associate a service-policy to the dynamic template, use the **service-policy** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

service-policy {input | output | type} service-policy_name [acct-stats] [merge seq_num]

Syntax Description	input		Configures an ingress service-policy.		
	output		Configures an egress service-policy.		
	type		Creates the service policy for policy-based routing (PBR).		
	service-po	licy_nan	<i>ne</i> Name of the service policy.		
	acct-stats		(Optional) Enables service accounting.		
	merge		(Optional) Enables the policy to be merged.		
	seq_num		Sequence number of the policy. Range is from 0 to 255.		
Command Default	None				
Command Modes	Dynamic template configuration mode				
Command History	Release	Modi	fication		
	Release This command was introduced. 4.2.0				
	Release Support was added for policy based routing. 4.3.0				
	Release 4.3.1	acct- featu	stats and merge keywords were added to support service accounting and policy merge res.		
Usage Guidelines	Use the dyr	namic-te	emplate type ppp command to enter the ppp dynamic template type configuration mode		
Task ID	Task Ope ID	eration			
	qos rea wri	·			
	This is an ex mode:	kample o	of configuring the service-policy command in the dynamic template configuration		
		(a D I I 0			

RP/0/RSP0/CPU0:router# configure

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp pl RP/0/RSP0/CPU0:router(config-dynamic-template-type)# accounting aaa list default type session periodic-interval 60 dual-stack-delay 1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy input i1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output o1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy type pbr pbr_policy

This example shows how to enable service accounting feature in the dynamic template configuration mode using **service-policy** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type service s1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# accounting aaa list 11 type service
periodic-interval 500
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 access-group ACL1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy input QoS1 acct-stats
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output QoS2 acct-stats
```

This example shows how to merge policy maps using **service-policy** command in the dynamic template configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type service MyService
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy input i1 merge 20
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output o1 merge 30
```

Related Commands

Command	Description
dynamic-template, on page 220	Enables the dynamic template configuration mode.
dynamic-template type ppp, on page 222	Enables the ppp dynamic template type.
dynamic-template type ipsubscriber, on page 221	Enables the ipsubscriber dynamic template type.

test radius coa activate

To enable Traffic Mirroring, also known as Switch Port Analyzer (SPAN), on a BNG subscriber interface, use the **test radius coa activate** command in EXEC mode. To disable SPAN, use the **deactivate** form of this command.

test radius coa activate service name acct-ses-id id test radius coa deactivate service name acct-ses-id id

Syntax Description	service Specifies the service to be activated or de-activated.				
	<i>name</i> Name of the service, which is same as the dynamic-template name.				
	acct-ses-id Specifies the accounting session ID of the subscriber on which the template is to be activated or de-activated.				
	<i>id</i> ID of the accounting session, in hexadecimal format .				
Command Default	None				
Command Modes	EXEC mode				
Command History	Release Modification				
	Release This command was introduced. 5.1				
Usage Guidelines	Configure monitor sessions (using monitor-session command in Global Configuration mode) and configu source interface attachment to a monitor session (using dynamic templates), as a pre-requisite for executin test radius coa activate command.				
Task ID	Task ID Operation				
	network read, write				
	Example				
	This example shows how to enable SPAN on BNG subscriber interface by associating a dynamic template with a specific subscriber :				
	RP/0/RSP0/CPU0:router# test radius coa activate acct-ses-id 0x00000001 service service1				

This example shows how to disable SPAN on BNG subscriber interface by dis-associating a dynamic template with a specific subscriber :

RP/0/RSP0/CPU0:router# test radius coa deactivate acct-ses-id 0x00000001 service service1

Related Commands

Command	Description
monitor-session	Defines a traffic mirroring session and enters monitor session configuration mode.
monitor-session (interface-dynamic-template-BNG)	Associates a traffic mirroring session with a specific interface or dynamic template.
show monitor-session status	Displays status information about configured traffic mirroring sessions.
show monitor-session counters	Displays statistics regarding traffic mirroring sessions.
clear monitor-session counters	Clears the traffic mirroring session statistics.

timeout idle

To configure an idle timeout period for the IPoE and PPPoE subscriber sessions on BNG, use the **timeout idle** command in dynamic template type configuration mode. To disable this feature, use the **no** form of this command.

timeout idle seconds [threshold rate] [traffic {both | inbound | outbound}]

Syntax Description	seconds	Idle timeout value for the subscriber sessions, in seconds.		
		The range is from 60 to 4320000.		
	threshold	Configures a threshold to track the duration of session idleness.		
	duration	Duration of threshold, in minute(s) per packet.		
		The range is from 1 to 10000. Default is 0.		
		Note This value should be less than the idle timeout value.		
	traffic	Considers the direction of traffic while deriving the duration of session idleness.		
		The default is inbound direction.		
	both	Considers inbound and outbound traffic while deriving the duration of session idleness.		
	inbound	Considers inbound traffic only while deriving the duration of session idleness.		
	outbound	Considers outbound traffic only while deriving the duration of session idleness.		
Command Default	None			
Command Modes	Dynamic template type configuration			
Command History	Release	Modification		
	Release 4.2.1	This command was introduced.		
	Release 5.1	The support for threshold and traffic keywords were added.		
Usage Guidelines		he IPoE and PPPoE sessions are retained idle, when the idle vare release 4.2.3, only the IPoE sessions are terminated when		

the idle timeout period expires. Whereas, the PPPoE sessions are retained idle. From Cisco IOS XR software release 5.1.0 and later, both IPoE and PPPoE sessions are terminated on the expiry of the idle timeout period.

If packets sent or received by BNG, in the configured threshold interval is less than that threshold value, then that particular session is considered idle. For instance, if the **threshold** is configured as 2 packets/minute, and, if the number of packets received in every 2 minutes is only less than 2 (either 0 or 1), then that particular session is considered as idle. Whereas, if the number of packets received is 2 or above, then that session is considered as active.

By default, the sessions are disconnected if the threshold is not configured.

Task ID	Task ID	Operation
	config-services	
		write

Example

This example shows how to configure an idle timeout of 200 seconds, with a threshold of 2 minutes/packet and considering inbound and outbound traffic for determining the duration of session idleness:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp ppp1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# timeout idle 200 threshold 2 traffic
both
```

Related Commands	Command	Description
		Displays the feature accounting information of the subscriber.

vrf (dynamic-template-BNG)

To set the vrf in which the interface operates, use the **vrf** command in the dynamic template type configuration mode. To disable the VRF, use the **no** form of this command.

vrf vrf-name

Syntax Description	vrf_name	Specifies the name of the vrf.
Command Default	None	
Command Modes	Dynamic te	emplate type configuration mode
Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Use the dynamic-template command to enter dynamic template configuration mode.

write

Task ID Task ID Operation config-services read,

This is an example of configuring the **vrf** command in the dynamic template type configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template
RP/0/RSP0/CPU0:router(config-dynamic-template)# type service s1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# vrf vrf1
```

Command	Description
dynamic-template, on page 220	Enables the dynamic template configuration mode.
dynamic-template type ppp, on page 222	Enables the ppp dynamic template type.
dynamic-template type ipsubscriber, on page 221	Enables the ipsubscriber dynamic template type.

Excessive Punt Flow Trap Commands

This module describes the Cisco IOS XR software commands used to configure the Excessive Punt Flow Trap commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

Note

From Release 7.3.1, Excessive Punt Flow Trap feature is deprecated. To control user or subscriber traffic manually, we recommend you to use Access Control List and Access Control List-based Forwarding, Flow Aware QoS, or enable policing through MQC.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

lpts punt excessive-flow-trap dampening

To enable false positive suppression through dampening, use the **lpts punt excessive-flow-trap dampening** command in Global Configuration mode. To remove this configuration, use the **no** form of this command.

	lpts punt excessive flow trap dampening [time]				
Syntax Description	timeThe time (in milliseconds) within which a second bad actor notification must arrive to consider the flow as a repeated offender.The range is from 1 to 60000; the default is 30000 milliseconds (30 seconds).				
Command Default	By default, the dampening feature is disabled.				
Command Modes	Global Configuration mode				
Command History	Release	Modification			
	Release 5.3.0	This comman	d was introduced.		
Usage Guidelines	No specific	guidelines impa	ct the use of this co	nmand.	
Task ID	Task ID	Operation			
	config-servi	ces read, write			
	This examp	le shows how to	configure a dampe	ing time of 40 milliseconds:	

RP/0/RSP0/CPU0:router#configure
RP/0/RSP0/CPU0:router(config)#lpts punt excessive-flow-trap dampening 40

lpts punt excessive-flow-trap interface-based-flow

To enable interface-based flow (that is, considering all the packets received on a non-subscriber interface, irrespective of the source MAC address, to be a part of a single flow), use the **lpts punt excessive-flow-trap interface-based-flow** command in Global Configuration mode. To remove this interface-based flow configuration, use the **no** form of this command.

lpts punt excessive-flow-trap interface-based-flow

Syntax Description	This command has no keywords or arguments.					
Command Default	None					
Command Modes	Global Configu	iration				
Command History	Release	Modification	_			
	Release 5.3.0	This command was introduce	1.			
Usage Guidelines	Users cannot enable this command, if EPFT is turned on for the subscriber-interfaces and non-subscriber-interfaces MAC or vice versa. This is because, interface-based flow feature is mutually exclusive with MAC-based EPFT on non-subscriber interface feature.					
Task ID	Task ID	Operation				
	config-services	read, write				
	-	how how to enable interface	based flow:			

RP/0/RSP0/CPU0:router(config)#lpts punt excessive-flow-trap interface-based-flow

Ipts punt excessive-flow-trap non-subscriber-interfaces

To enable the Excessive Punt Flow Trap feature on non-subscriber interfaces, use the **lpts punt excessive-flow-trap non-subscriber-interfaces** command in Global Configuration mode. To disable the Excessive Punt Flow Trap feature on subscriber interfaces, use the **no** form of this command.

lpts punt excessive-flow-trap non-subscriber-interfaces [mac]

Syntax Description	mac			Enables MAC-based EPFT on non-subscriber interface.		
Command Default	None					
Command Modes	Global Configuration mode					
Command History	Release Modification					
	Release This command was introduced. 4.3.0					
	ReleaseThe command was modified to add mac keyword to enable MAC-based EPFT on5.3.0non-subscriber interfaces.					
Usage Guidelines	The user cannot enable lpts punt excessive-flow-trap interface-based-flow command, if EPFT is turned on for the subscriber-interfaces and non-subscriber interfaces mac.					
Task ID	Task ID	Operations				
	config-serv	ices read, write				
Examples	This example shows how to enable the Excessive Punt Flow Trap feature on the non-subscriber interfaces in the Global Configuration mode:					
	RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap non-subscriber-interfaces					
	This example shows how to enable EPFT on a non-subscriber VLAN sub-interface, based on the source MAC address:					
	RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap non-subscriber-interfaces mac					
Related Commands	Command			Description		
	show lpts punt excessive-flow-trap, on page 243 Displays the bad actor flows trapped by the Excessive Punt Flow Trap feature.					

lpts punt excessive-flow-trap penalty-rate

To set the penalty policing rate for a protocol, use the **lpts punt excessive-flow-trap penalty-rate** command in Global Configuration mode. To restore the default penalty-rate, use the **no** form of this command.

 $\label{eq:linear} \begin{array}{l} \mbox{punt excessive-flow-trap penalty-rate} \{\mbox{trace} \mid \mbox{arp} \mid \mbox{icmp} \mid \mbox{dhcp} \mid \mbox{pppoe} \mid \mbox{ppp} \mid \mbox{igmp} \mid \mbox{ip} \mid \mbox{l2tp} \mid \mbox{all} \mid \mbox{all} \mid \mbox{imp} \mid \mbox{arp} \mid \mbox{app} \mid \mbox$

Syntax Description	default	Sets the default penalty policing rate for all protocols.			
	arp	arp Sets the penalty policing rate for the ARP protocol.			
	icmp	Sets the penalty policing rate for the ICMP protocol.			
	dhcp	Sets the penalty policing rate for the DHCP protocol.			
	pppoe	Sets the penalty policing rate for the PPPoE protocol.			
	ррр	Sets the penalty policing rate for the PPP protocol.			
	igmp	Sets the penalty policing rate for the IGMP protocol.			
	ір	Sets the penalty policing rate for the IPv4 protocol. Sets the penalty policing rate for the L2TP protocol.			
	l2tp				
	unclassified	lassified Sets the penalty police rates for unclassified source MAC.			
	penalty_rate	Penalty rate in packets per second (pps).			
		The range, in pps, is from 2 to 100; default is 10.			
Command Default	None				
Command Modes	Global Configuration mode				
Command History	Release	Modification			
	Release 4.3.0	This command was introduced.			
	Release 5.3.0	The command was modified to add unclassified keyword to set the penalty police rates for unclassified source MAC.			
Usage Guidelines	No specific g	uidelines impact the use of this command.			
Task ID	Task ID	Operations			
	config-service	es read, write			

Examples

This example shows how to set the penalty policing rate of 4 pps for the ARP protocol in the Global Configuration mode:

RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap penalty-rate arp 4
RP/0/RSP0/CPU0:router(config)#

Related Commands	Command	Description

```
penalty-rate arp 15
```

```
penalty-rate pppoe 25
penalty-timeout arp 2
non-subscriber-interfaces
```

This is a sample output for show lpts punt excessive-flow-trap unclassified command:

```
Src MAC Addr: 0000.6416.0102
Parent Interface: Bundle-Ether1.1
Intf Handle: 0x08000260
                                                    Location: 0/0/CPU0
Protocol: UNCLASSIFIED
                                                    Punt Reason: Unclassified packets for
RSP
Penalty Rate: 0 pps (all packets dropped)
                                                    Penalty Timeout: 15 mins
Time Remaining: 13 mins 54 secs
```

This table describes the significant fields shown in the display.

Table 10: Field Descriptions of show lpts pu	nt excessive-flow-trap command:
--	---------------------------------

Field	Description
Penalty Rate	The penalty policing rate for a protocol. The range is from 2 to 100. The example shown here is for MAC- based EPFT, where all packets from the source MAC are dropped. Therefore, penalty rate is zero (0).
Penalty Timeout	The penalty timeout value for a protocol. A bad actor flow trapped for sending excessive protocol packets (arp, ppp or unclassified), is penalty policed for the period of penalty-timeout configured (in minutes). By default, it is 15 minutes.

initiator dhcp

To enable DHCP as first-sign-of-life protocol for IPv4 or IPv6 subscriber, use the **initiator dhcp** command in the appropriate configuration submode. To disable this feature, use the **no** form of this command.

initiator dhcp

Syntax Description	This command has no keywords or arguments.				
Command Default	None	None			
Command Modes	IP subscriber IPv4 L2-connected configurati				
	IP subscriber IPv6 L2-connected configuration				
<u></u>		er IPv4 routed configuration			
Command History	IP subscrib	er IPv4 routed configuration Modification			
Command History					

Usage Guidelines This command is not supported for IPv6 routed subscriber.

Task ID Task ID Operation

network read, write

This is an example of configuring the **initiator dhcp** command in the Interface configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv4 12-connected
RP/0/RSP0/CPU0:router(config-if-ipsub-ipv4-12conn)# initiator dhcp
```

This is an example of configuring the **initiator dhcp** command in the Interface configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv6 12-connected
RP/0/RSP0/CPU0:router(config-if-ipsub-ipv6-12conn)# initiator dhcp
```

Related Commands	Command	Description		
	show ipsubscriber summary, on page 275	Displays the ipsubscriber information.		

Command	Description
initiator unclassified-ip, on page 258	Enables packet-triggered IPv4 or IPv6 routed subscriber session in an access-interface.

initiator dhcp-snoop

To configure DHCP to pass the control packets from BNG to the DHCP server to enable DHCP L3 snooping for an IP subscriber, use the **initiator dhcp-snoop** command in the IP subscriber IPv4 (or IPv6) routed configuration mode. To disable this configuration, use the **no** form of this command.

For IPv4:

initiator dhcp-snoop

For IPv6:

initiator dhcp-snoop [prefix-len prefix-len]

Syntax Descriptionprefix-lenConfigures the prefix-length for IPv6 subscriber route to determine the mask to be used for
traffic classification.This option is applicable only for dhcp-snoop IPv6 sessions; not for IPv4 sessions.

prefix-len Specifies the value of subscriber route prefix-length. The range is from 0 to 127.

 Command Default
 None

initiator dhcp, on page 254	Enables I2-connected IP subscriber for IPv4 or IPv6.
ipsubscriber routed, on page 264	Enables an access-interface to host routed subscriber sessions.

initiator unclassified-ip

To enable packet-triggered routed subscriber sessions (IPv4 and IPv6) on an access-interface in BNG, use the **initiator unclassified-ip** command in the appropriate configuration sub mode. To disable this feature, use the **no** form of this command.

initiator unclassified-ip [prefix-len prefix-len]

Syntax Description	prefix-len Configures the prefix-length for IPv6 subscriber route.						
		This option is available only for	packet-triggered IPv6 sessions.				
	prefix-len Specifies the value of subscriber route prefix-length.						
		The range is from 0 to 127.					
Command Default	None						
Command Modes	IP subscribe	r IPv4 routed configuration					
	IP subscribe	r IPv6 routed configuration					
Command History	Release	Modification	-				
	Release 5.2.2	This command was introduced.	-				
Usage Guidelines	No specific	guidelines impact the use of this c	command.				
Task ID	Task ID Op	eration					

network read, write

This example shows how to host packet-triggered routed IPv4 subscriber sessions in an access-interface:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether101.201
RP/0/RSP0/CPU0:router(config-subif)# ipsubscriber ipv4 routed
RP/0/RSP0/CPU0:router(config-if-ipsub-ipv4-routed)# initiator unclassified-ip

This example shows how to host packet-triggered routed IPv6 subscriber sessions in an access-interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether101.201
RP/0/RSP0/CPU0:router(config-subif)# ipsubscriber ipv6 routed
```

RP/0/RSP0/CPU0:router(config-if-ipsub-ipv6-routed)# initiator unclassified-ip prefix-len
56

network read, write L

This is an example of configuring the **ipsubscriber 12-connected** command in the interface configuration mode for IPv4:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv4 12-connected initiator dhcp

This is an example of configuring the **ipsubscriber 12-connected** command in the interface configuration mode for IPv6:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv6 12-connected initiator dhcp
```

This example shows how to enable subscriber IP uniqueness check during first-sign-of-life processing:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv4 12-connected initiator unclassified-source
address-unique
```

Related Commands	Command	Description
	show ipsubscriber summary, on page 275	Displays the ipsubscriber information.

ipsubscriber routed

To host IPv4 or IPv6 routed subscriber sessions in an access-interface, use the **ipsubscriber routed** command in the interface configuration mode. To disable this feature, use the **no** form of this command.

ipsubscriber {ipv4 | ipv6} routed [initiator {dhcp | unclassified-ip [prefix-len]}]

Syntax Description	ipv4		Specifie	s IPv4 subscriber.	
	ipv6	ipv6		Specifies IPv6 subscriber.	
	initiator		Specifies session initiator for routed subscriber.		
	dhcp		-	res DHCP as the session for routed subscriber.	
			Note	initiator dhcp is not supported for IPv6 routed subscriber sessions.	
	unclassifie	unclassified-ip prefix-len		Configures unclassified packets as first-sign-of-life for IPv4 or IPv6 subscriber. Configures the prefix length of IPv6 subscriber.	
	prefix-len				
	prefix-len		Specifies the prefix length of IPv6 subscriber.		
			The range is from 1 to 127.		
Command Default	None				
Command Modes	Interface co	nfiguration			
Command History	Release	Modification			
	Release 5.1.1	This command was introduced.			
	Release 5.2.2	i 11 1 66			
	Release 7.8.1	This command was deprecated.			
Usage Guidelines		subscriber sessions come up only if a summary route is a ange in BNG must be in compliance with the summary r			

address range must also match the IP address subnet of the first hop router, which acts as the DHCP relay or proxy. Also, the summary route VRF must be same as the access-interface VRF in BNG router.

If DHCPv6 is used in standalone mode to provide IA-NA and IA-PD addresses (prefixes) to the routing gateway (RG), and if the RG is directly connected (or connected through an L2 cloud) to the BNG, then the summary route is not required.

Task ID	Task ID	Operation
	network	read, write

This example shows how to host DHCP-initiated IPv4 routed subscriber sessions in an access-interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether101.201
RP/0/RSP0/CPU0:router(config-subif)# ipsubscriber ipv4 routed initiator dhcp
```

This example shows how to host packet-triggered IPv6 routed subscriber sessions in an access-interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether101.201
RP/0/RSP0/CPU0:router(config-subif)# ipsubscriber ipv6 routed
RP/0/RSP0/CPU0:router(config-subif)# initiator unclassified-ip prefix-len 56
```

ipsubscriber session-limit

To limit the number of IP subscriber sessions on a subscriber interface, use the **ipsubscriber session-limit** command in the interface configuration mode. To disable this feature, use the **no** form of this command.

ipsubscriber session-limit{total | unclassified-source}per-vlan session_limit

Syntax Description	total Limits IP subscribers for all sources.
	unclassified-source Limits IP subscribers for unclassified sources.
	per-vlan Limits the per VLAN subscribers.
	<i>session-limit</i> Specifies the maximum number to which of the IP subscriber session can be limited.
Command Default	None
Command Modes	Interface configuration mode
Command History	Release Modification
	ReleaseThis command was introduced.4.3.0
Usage Guidelines	No specific guidelines impact the use of this command.
Task ID	Task Operation ID
	network read, write
	This is an example of configuring the ipsubscriber session-limit command in the interface configuration mode:
	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56 RP/0/RSP0/CPU0:router(config-if)# ipsubscriber session-limit

RP/0/RSP0/CPU0:router(config-ipsub-sess-limit) # total per-vlan 25

RP/0/RSP0/CPU0:router(config-ipsub-sess-limit) # unclassified-source per-vlan 452

ipsubscriber subscriber-templates

To enable template-based session provisioning for IPoE subscribers at an access-interface level, use the **ipsubscriber subscriber-templates** command in interface configuration mode. To disable subscriber templates on an access-interface, use the **no** form of this command.

	ipsubscribe	r subscriber-templates max_t	emplates
Syntax Description	<i>max_templates</i> Specifies maximum number of templates on the specified access-interface.		
	None	The range is from 1 to 10.	
Command Default	None		
Command Modes	Interface cor	nfiguration	
Command History	Release	Modification	
	Release 5.3.0	This command was introduced.	_

Table 16: show ipsubscriber summary Field Descriptions

Field	Description
Invalid	Specifies the number of invalid packets for DHCP and Packet Trigger.
Initialized	Specifies the number of packets that were initialized for DHCP and Packet Trigger.
Session creation started	Specifies the total number of session initiation that was created.
Control-policy executing	Specifies the control policies that are executing for DHCP and Packet Trigger.
Control-policy executed	Specifies the control policies that were executed for DHCP and Packet Trigger.
Session features applied	Specifies the number of session features that were applied for DHCP and Packet Trigger.
VRF configured	Specifies the VRFs configured.
Up	Specifies the number of packets that are in the UP state.
Down	Specifies the number of packets that are in the DOWN state.

Field	Description
Disconnecting	Specifies the number of packets that are disconnecting.
Disconnected	Specifies the number of packets that are disconnected.
Unknown State	Specifies the packets that are in the unknown state.
Error	Specifies the number of packets that are errored out.

Multicast Commands

This module describes the Cisco IOS XR software commands used to configure the Multicast commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- multicast (BNG), on page 282
- unicast-qos-adjust, on page 283

multicast (BNG)

To configure the mode in which the multicast components will work for subscriber sessions associated with a dynamic template, use the **multicast** command in the dynamic-template configuration mode. To disable this feature, use the **no** form of this command.

multicast [ipv4] {qos-correlation | passive}

	qos-correl	ation	Configures multicast in a IGMP-HQOS correlation mode.	
	passive		Configures multicast is an passive mode.	
	ipv4		Optional. Specifies configuration for IPv4 address family.	
Command Default	None			
Command Modes	Dynamic te	emplate configuration		
Command History	Release	Modification		
	Release 4.2.0	This command was introduced.		
	Release 6.2.1			
Usage Guidelines			to enter dynamic template type ppp configuration mode.	
Task ID	Task ID C	Dperation		
	multicast r	ead, vrite		
	This is an example of configuring the multicast command in the dynamic-template configuration mode for type PPP:			
	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dynamic-template RP/0/RSP0/CPU0:router(config-dynamic-template)# type ppp foo			
	RP/0/RSP0/ RP/0/RSP0/	/CPU0:router(config-dynamic-ter	nplate) # type ppp foo	
	RP/0/RSP0/ RP/0/RSP0/ RP/0/RSP0/	/CPU0:router(config-dynamic-ter	<pre>uplate)# type ppp foo uplate-type)# multicast ipv4 qos-correlation</pre>	

RP/0/RSP0/CPU0:router(config-dynamic-template-type)# multicast ipv4 qos-correlation

unicast-qos-adjust

To configure the IGMP QOS Shaper for subscriber unicast traffic, use the **unicast-qos-adjust** command in the IGMP configuration mode. To disable this feature, use the **no** form of this command.

unicast-qos-adjust{adjustment-delay | download-interval | holdoff}

Syntax Description	adjustment-dela	y Configures the time to wait before programming rate in QOS.				
	download-interval Configures the time before downloading a batch of interfaces to QOS.					
	holdoff	holdoff Configures the hold-off time before QOS clears the stale entries.				
Command Default	None					
Command Modes	GMP configuratio	on mode				
Command History	Release Mod	lification				
		oduced.				
Usage Guidelines	Use the dynamic -	template type ppp command to enter dynamic template type ppp configuration mode.				
Task ID	Task ID Operation	– 1				
	multicast read, write	_				
	This is an example mode:	e of configuring the unicast-qos-adjust command in the IGMP configuration				

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# router igmp
RP/0/RSP0/CPU0:router(config-igmp)# unicast-qos-adjust
```

ipv6 nd dad attempts (BNG)

To configure the number of consecutive neighbor solicitation messages that are sent on an interface while duplicate address detection is performed on the unicast IPv6 addresses of the interface, use the **ipv6 nd dad attempts** command in an appropriate configuration mode. To return the number of messages to the default value, use the **no** form of this command.

ipv6 nd dad attempts value

Syntax Description	value Number of neighbor solicitation messages. Range is 0 to 600. Configuring a value of 0 disab duplicate address detection processing on the specified interface; a value of 1 configures a sin transmission without follow-up transmissions.			
Command Default	Duplicate address detection on unicast IPv6 addresses with the sending of one neighbor solicitation message is enabled. The default is one message.			
Command Modes	Interface configuration (not applicable for BNG)			
	Dynamic template configuration (for BNG)			
Command History	Release Modification			
	Release 4.3.0 This command was supported in the dynamic template configuration mode for BNG.			
	Release 3.7.2 This command was introduced.			
Usage Guidelines	Duplicate address detection verifies the uniqueness of new unicast IPv6 addresses before the addresses are assigned to interfaces (the new addresses remain in a tentative state while duplicate address detection is performed). Duplicate address detection uses neighbor solicitation messages to verify the uniqueness of unicast IPv6 addresses.			
	The DupAddrDetectTransmits node configuration variable (as specified in RFC 2462, <i>IPv6 Stateless Address Autoconfiguration</i>) is used to automatically determine the number of consecutive neighbor solicitation messages that are sent on an interface while duplicate address detection is performed on a tentative unicast IPv6 address.			
	The interval between the sending of duplicate address detection neighbor solicitation messages (the duplicate address detection timeout interval) is specified by the neighbor discovery-related variable RetransTimer (as specified in RFC 2461, <i>Neighbor Discovery for IP Version 6 [IPv6]</i>), which is used to determine the time between retransmissions of neighbor solicitation messages to a neighbor when the address is being resolved or when the reachability of a neighbor is being probed. This is the same management variable used to specify the interval for neighbor solicitation messages during address resolution and neighbor unreachability detection. Use the ipv6 nd ns-interval command to configure the interval between neighbor solicitation messages that are sent during duplicate address detection.			
	Duplicate address detection is suspended on interfaces that are administratively down. While an interface is administratively down, the unicast IPv6 addresses assigned to the interface are set to a pending state. Duplicate address detection is automatically restarted on an interface when the interface returns to being administratively up.			
	For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run dynamic-template command in the Global Configuration mode.			

Note An interface returning to administratively up restarts duplicate address detection for all of the unicast IPv6 addresses on the interface. While duplicate address detection is performed on the link-local address of an interface, the state for the other IPv6 addresses is still set to tentative. When duplicate address detection is completed on the link-local address, duplicate address detection is performed on the remaining IPv6 addresses.

When duplicate address detection identifies a duplicate address, the state of the address is set to duplicate and the address is not used. If the duplicate address is the link-local address of the interface, the processing of IPv6 packets is disabled on the interface and an error message similar to the following is issued:

```
ipv6 nd[145]: %IPV6 ND-3-ADDRESS DUPLICATE : Duplicate address 111::1 has been detected
```

If the duplicate address is a global address of the interface, the address is not used and an error message similar to the following is issued:

```
%IPV6-4-DUPLICATE: Duplicate address 3000::4 on GigabitEthernet
```

All configuration commands associated with the duplicate address remain as configured while the state of the address is set to duplicate.

If the link-local address for an interface changes, duplicate address detection is performed on the new link-local address and all of the other IPv6 address associated with the interface are regenerated (duplicate address detection is performed only on the new link-local address).

solicitation messages for interf
the unicast IPv6 address config
RP/0/RSP0/CPU0:router# config
```

```
This example (not applicable for BNG) shows how to set the number of consecutive neighbor solicitation messages for interface 0/2/0/1 to 1 and then display the state (tentative or duplicate) of the unicast IPv6 address configured for an interface:
```

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface gigabitethernet 0/2/0/1
RP/0/RSP0/CPU0:router(config-if)# ipv6 nd dad attempts 1
RP/0/RSP0/CPU0:router(config-if)# Uncommitted changes found, commit them before
exiting(yes/no/cancel)? [cancel]:y
RP/0/RSP0/CPU0:router# show ipv6 interface
gigabitethernet2/2/0/0 is Up, line protocol is Up
IPv6 is disabled, link-local address unassigned
No global unicast address is configured
gigabitethernet2/2/0/1 is Up, line protocol is Up
IPv6 is enabled, link-local address is fe80::203:fdff:fe1b:4501
Global unicast address(es):
1:4::1, subnet is 1:4::/64 [DUPLICATE]
MTU is 1514 (1500 is available to IPv6)
```

ICMP redirects are disabled ND DAD is enabled, number of DAD attempts 1 ND reachable time is 0 milliseconds ND advertised retransmit interval is 0 milliseconds ND router advertisements are sent every 200 seconds ND router advertisements live for 1800 seconds Hosts use stateless autoconfig for addresses. gigabitethernet2/2/0/2 is Shutdown, line protocol is Down IPv6 is enabled, link-local address is fe80::200:11ff:fe11:1111 [TENTATIVE] Global unicast address(es): 111::2, subnet is 111::/64 [TENTATIVE] MTU is 1514 (1500 is available to IPv6) ICMP redirects are enabled ND DAD is enabled, number of DAD attempts 1 ND reachable time is 0 milliseconds ND advertised retransmit interval is 0 milliseconds ND router advertisements are sent every 200 seconds ND router advertisements live for 1800 seconds Hosts use stateless autoconfig for addresses.

For BNG, this example shows how to display the state (tentative or duplicate) of the unicast IPv6 address on the dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd dad attempts 1

Related Commands	Command	Description
		Configures the interval between IPv6 neighbor solicitation transmissions on an interface.

ipv6 nd framed-prefix-pool

To set the IPv6 Neighbor Discovery (ND) framed prefix pool, use the **ipv6 nd framed-prefix-pool** command in the dynamic template configuration mode. To disable the framed prefix pool configuration, use the **no** form of this command.

ipv6 nd framed-prefix-pool pool_name

ipv6 nd hop-limit

To configure the IPv6 ND router advertisement (RA) hop limit on the VLAN, use the **ipv6 nd hop-limit** command in the dynamic template or enbng-nal configuration mode. To clear IPv6 hop limit, use the **no** form of this command.

	ipv6 nd 1	hop-limit unspecified			
Syntax Description	unspecified	Notifies the unspecified IPv6 Neighbor Discovery (ND) RA hop limit value.			
		If the value is 0 it means the hop-limit is unspecified in the RAs originating on the current VLAN.			
Command Default	None				
Command Modes	Dynamic template configuration				
	enbng-nal con	nfiguration (for Cloud Native BNG)			
Command History	Release	Modification			
	Release 7.10.1	This command was supported in the cnbng-nal configuration mode for Cloud Native BNG.			
	Release 4.3.0 This command was introduced.				
Usage Guidelines	No specific g	uidelines impact the use of this command.			
Task ID	Task ID	Operation			
	config-service	es read, write			
	This example configuration	shows how to configure the IPv6 ND router advertisement hop limit in dynamic template mode:			
	Router(config)# dynamic-template type ppp p1 Router(config-dynamic-template-type)# ipv6 nd ipv6 nd hop-limit unspecified				
	This example shows how to configure the IPv6 ND router advertisement hop limit in cnbng-nal configuration mode for Cloud Native BNG:				

ipv6 nd managed-config-flag (BNG)

	To set the managed address configuration flag in IPv6 router advertisements, use the ipv6 nd managed-config-flag command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the no form of this command.						
	ipv6 nd managed-config-flag						
Syntax Description	This command	This command has no keywords or arguments.					
Command Default	The managed a	The managed address configuration flag is not set in IPv6 router advertisements.					
Command Modes	Interface configuration (not applicable for BNG)						
	Dynamic templ	late configuration (for BNG)					
	cnbng-nal conf	iguration (for Cloud Native BNG)					
Command History	Release Modification						
	Release 7.10.1	This command was supported in the cnbng-nal configuration mode for Cloud Native BNG.					
	Release 4.3.0 This command was supported in the dynamic template configuration mode for BNG.						
	Release 3.7.2 This command was introduced.						
Usage Guidelines	Setting the managed address configuration flag in IPv6 router advertisements indicates to attached host whether they should use stateful autoconfiguration to obtain addresses. If the flag is set, the attached host should use stateful autoconfiguration to obtain addresses. If the flag is not set, the attached hosts should use stateful autoconfiguration to obtain addresses.						
	Hosts may use	stateful and stateless address autoconfiguration simultaneously.					
		For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run dynamic-template command in the Global Configuration mode.					
	For Cloud Nati	ive BNG, ensure you run this command in the enbng-nal configuration mode.

	network	read, write					
	config-services	read, write					

Examples

This example (not applicable for BNG) shows how to configure the managed address configuration flag in IPv6 router advertisements on GigabitEthernet interface 0/1/1/0:

```
Router(config)# interface gigabitethernet 0/1/1/0
Router(config-if)# ipv6 nd managed-config-flag
```

For BNG, this example shows how to configure the managed address configuration flag in IPv6 router advertisements on dynamic template configuration mode:

```
Router(config)# dynamic-template type ppp p1
Router(config-dynamic-template-type)# ipv6 nd managed-config-flag
```

For Cloud Native BNG, this example shows how to configure the managed address configuration flag in IPv6 router advertisements in the cnbng-nalconfiguration mode:

```
Router#configure
Router(config)#interface Bundle-Ether1.1
Router(config-subif)# cnbng-nal ipv6 nd managed-config-flag
```

ipv6 nd ns-interval (BNG)

To configure the interval between IPv6 neighbor solicitation retransmissions on an interface, use the **ipv6 nd ns-interval** command in an appropriate configuration mode. To restore the default interval, use the **no** form of this command.

ipv6 nd ns-interval milliseconds

,	unspecified)	<i>milliseconds</i> Interval (in milliseconds) between IPv6 neighbor solicit transmissions. Range is 1000 to 3600000 (BNG) and 4294967295 (for Cloud Native BNG).				
0 milliseconds (unspecified) is advertised in router advertisements, and the value 1000 is used for the neighbor discovery activity of the router itself.

Examples

This example (not applicable for BNG) configures an IPv6 neighbor solicit transmission interval of 9000 milliseconds for GigabitEthernet interface 0/1/1/0:

```
Router(config)# interface gigabitethernet 0/1/1/0
Router(config-if)# ipv6 nd ns-interval 9000
```

For BNG, this example configures an IPv6 neighbor solicit transmission interval of 9000 milliseconds in the dynamic template configuration mode:

```
Router(config)# dynamic-template type ppp p1
Router(config-dynamic-template-type)# ipv6 nd ns-interval 9000
```

For Cloud Native BNG, this example configures an IPv6 neighbor solicit transmission interval of 9000 milliseconds in the cnbng-nal configuration mode:

```
Router#configure
Router(config)#interface Bundle-Ether1.1
Router(config-subif)# cnbng-nal ipv6 nd ns-interval 9000
```

ipv6 nd mtu suppress

To suppress the MTU option in IPv6 Neighbor Discovery (ND) Router Advertisement (RA) header, use the ipv6 nd mtu command in the dynamic template or cnbng-nal configuration mode. To disable IPv6 nd mtu, use the **no** form of this command.

ipv6	nd	mtu	suppress	
------	----	-----	----------	--

This example shows how to enable IPv6 neighbor un-reachability detection in dynamic template configuration mode:

```
Router(config) # dynamic-template type ppp p1
Router(config-dynamic-template-type) # ipv6 nd nud-enable
```

This example shows how to enable IPv6 neighbor un-reachability detection in cnbng-nal configuration mode for Cloud Native BNG:

```
Router#configure
Router(config)#interface Bundle-Ether1.1
Router(config-subif)# cnbng-nal ipv6 nd nud-enable
```

ipv6 nd other-config-flag (BNG)

To set the other stateful configuration flag in IPv6 router advertisements, use the **ipv6 nd other-config-flag** command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the **no** form of this command.

ipv6 nd other-config-flag

Command Default The other stateful configuration flag is not set in IPv6 router advertisements.

This command has no keywords or arguments.

Command Modes Interface configuration (not applicable for BNG)

Dynamic template configuration (for BNG)

Modification

cnbng-nal configuration (for Cloud Native BNG)

ReleaseThis command was supported in the cnbng-nal configuration mode for Cloud Native BNG.7.10.1

Release 4.3.0 This command was supported in the dynamic template configuration mode for BNG.

Release 3.7.2 This command was introduced.

Usage Guidelines

Command History

Syntax Description

The setting of the other stateful configuration flag in IPv6 router advertisements indicates to attached hosts how they can obtain autoconfiguration information other than addresses. If the flag is set, the attached hosts should use stateful autoconfiguration to obtain the other (nonaddress) information.

Release

Note If the managed address configuration flag is set using the **ipv6 nd managed-config-flag** command, then an attached host can use stateful autoconfiguration to obtain the other (nonaddress) information regardless of the setting of the other stateful configuration flag.

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the Global Configuration mode.

For cnBNG, ensure you run this command in the cnbng-nal configuration mode.

Task ID	Task ID	Operations
	ipv6	read, write
	network	read, write

Task ID	Operations
config-services	read, write

Examples

This example (not applicable for BNG) configures the "other stateful configuration" flag in IPv6 router advertisements on GigabitEthernet interface 0/1/1/0:

```
Router(config)# interface gigabitethernet 0/1/1/0
Router(config-if)# ipv6 nd other-config-flag
```

For BNG, this example configures the other stateful configuration flag for IPv6 router advertisements in the dynamic template configuration mode:

```
Router(config)# dynamic-template type ppp p1
Router(config-dynamic-template-type)# ipv6 nd other-config-flag
```

For Cloud Native BNG, this example configures other stateful configuration flag for IPv6 router advertisements in the enbng-nal configuration mode:

```
Router#configure
Router(config)#interface Bundle-Ether1.1
Router(config-subif)# cnbng-nal ipv6 nd other-config-flag
```

		Sets the managed address configuration flag in IPv6 router advertisements.

ipv6 nd ra dns server

To add the DNS server information in the IPv6 nd router advertisement message, use the **ipv6 nd ra dns** server command in the dynamic template configuration mode. To remove the DNS server information, use the **no** form of this command.

	ipv6 nd ra dns so	erver IPv6 address { lifetime infinite-lifetime zero-lifetime }
Syntax Description	dns server IPv6 address	s Specifies the DNS server IPv6 address.
		The format of the IPv6 address should be <i>x</i> : <i>x</i> :: <i>y</i> .
	lifetime	Specifies the IPv6 RA DNS server lifetime interval in seconds.
		It's a 32-bit unsigned integer. The maximum time in seconds over which these recursive DNS addresses are used for name resolution.
	infinite-lifetime	Sets the IPv6 RA DNS server lifetime to infinity and the lifetime doesn't expire.
	zero-lifetime	Sets the IPv6 RA DNS server lifetime to zero and DNS addresses is no longer used.
Command Default	None	
Command Modes	Dynamic template configu	uration (for BNG)
Command History	Release Modificat	ion
	Release This comr 7.10.1	nand was introduced.
Usage Guidelines	, ,	this command in the dynamic template configuration mode. To enter the dynamic ode, run the dynamic-template command in the Global Configuration mode.
Examples	For BNG, this example co configuration mode:	onfigures an IPv6 RA lifetime of 3500 seconds in the dynamic template
		<pre>ic-template type ppp PPP_PTA_TEMPLATE -template-type)# ipv6 nd ra dns server 2620:119:35::35 3500</pre>

ipv6 nd ra-initial

To set the IPv6 initial router advertisement count and interval, use the **ipv6 nd ra-initial** command in the dynamic template or enbng-nal configuration mode. To restore the default interval, use the **no** form of this command.

ipv6 nd ra-initial count interval

Syntax Description	<i>value</i> The initial count or the initial number of the IPv6 router advertisements. The value ranges from 0-32.		
	interval	The interval (in seconds) between IPv6 router advertisement counts. The value ranges from 4-1800.	
Command Default	None		
Command Modes	Dynamic template configuration cnbng-nal configuration		
Command History	Release	Modification	
	Release 7.10.1	This command was introduced for Cloud Native BNG.	
	Release 4	A.3.0 This command was supported in the dynamic template configuration mode for BNG.	
Usage Guidelines		he dynamic template configuration mode, run dynamic-template command in the Global tion mode.

Modification

cnbng-nal configuration (for Cloud Native BNG)

ReleaseThis command was supported in the cnbng-nal configuration mode for Cloud Native BNG.7.10.1

Release 4.3.0 This command was supported in the dynamic template configuration mode for BNG.

Release 3.7.2 This command was introduced.

Usage Guidelines The router lifetime value is included in all IPv6 router advertisements sent out the interface. The value indicates the usefulness of the router as a default router on this interface. Setting the value to 0 indicates that the router should not be considered a default router on this interface. The router lifetime value can be set to a nonzero value to indicate that it should be considered a default router on this interface. The nonzero value for the router lifetime value should not be less than the router advertisement interval.

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the Global Configuration mode.

For Cloud Native BNG, ensure you run this command in the cnbng-nal configuration mode.

ipv6 nd suppress-ra (BNG)

To suppress IPv6 router advertisement transmissions on a LAN interface, use the **ipv6 nd suppress-ra** command in an appropriate configuration mode. To reenable the sending of IPv6 router advertisement transmissions on a LAN interface, use the **no** form of this command.

ipv6 nd suppress-ra

Syntax Description This command has no keywords or arguments.

Command Default IPv6 router advertisements are automatically sent on other types of interlaces if IPv6 unicast routing is enabled on the interfaces. IPv6 router advertisements are not sent on other types of interfaces.

Command Modes Interface configuration (not applicable for BNG)

Dynamic template configuration (for BNG)

cnbng-nal configuration (for Cloud Native BNG)

Command History	Release	Modification
	Release 7.10.1	This command was supported in the cnbng-nal configuration mode for Cloud Native BNG.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.
	Release 3.7.2	This command was introduced.
Usage Guidelines	-	v6 nd suppress-ra command to enable the sending of IPv6 router advertisement transmissions nterface types (for example, serial or tunnel interfaces).

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the Global Configuration mode.

Task ID	Task ID	Operations
	ipv6	read, write
	network	read, write
	config-services	read, write

Examples

This example (not applicable for BNG) shows how to suppress IPv6 router advertisements on GigabitEthernet interface 0/1/1/0:

Router(config)# interface gigabitethernet 0/1/1/0
Router(config-if)# ipv6 nd suppress-ra

For BNG, this example shows how to suppress IPv6 router advertisements in the dynamic template configuration mode:

```
Router(config)# dynamic-template type ppp p1
Router(config-dynamic-template-type)# ipv6 nd suppress-ra
```

For Cloud Native BNG, this example shows how to suppress IPv6 router advertisements in the enbng-nal configuration mode:

```
Router# configure
Router(config)# interface Bundle-Ether1.1
Router(config-subif)# cnbng-nal ipv6 nd suppress-ra
```

BNG PPP Commands

This module describes the Cisco IOS XR software commands used to configure the PPP commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- show ppp summary, on page 341

ppp authentication (BNG)

To enable Challenge Handshake Authentication Protocol (CHAP), MS-CHAP, or Password Authentication Protocol (PAP), and to specify the order in which CHAP, MS-CHAP, and PAP authentication is selected on the interface, use the **ppp authentication** command in an appropriate configuration mode. To disable PPP authentication, use the **no** form of this command.

ppp authentication *protocol* [*protocol*] {*list-name* | **default**}

Syntax Description protocol Name of the authentication protocol used for PPP authentication. See Table 17: PPP Authentication Protocols for Negotiation, on page 317 for the appropriate keyword. You may select one, two, or all three protocols, in any order. *list-name* (Optional) Used with authentication, authorization, and accounting (AAA). Name of a list of methods of authentication to use. If no list name is specified, the system uses the default. The list is created with the aaa authentication ppp command. default (Optional) Specifies the name of the list of methods created with the aaa authentication ppp command. PPP authentication is not enabled. **Command Default** Interface configuration **Command Modes** Dynamic template configuration **Command History** Release Modification Release 3.9.0 This command was introduced. Release 4.2.0 This command was supported in the dynamic template configuration mode for BNG. When you enable CHAP or PAP authentication (or both), the local router requires the remote device to prove **Usage Guidelines** its identity before allowing data traffic to flow. PAP authentication requires the remote device to send a name and a password, which is checked against a matching entry in the local username database or in the remote security server database. CHAP authentication sends a challenge message to the remote device. The remote device encrypts the challenge value with a shared secret and returns the encrypted value and its name to the local router in a response message. The local router attempts to match the remote device's name with an associated secret stored in the local username or remote security server database; it uses the stored secret to encrypt the original challenge and verify that the encrypted values match. You can enable CHAP, MS-CHAP, or PAP in any order. If you enable all three methods, the first method specified is requested during link negotiation. If the peer suggests using the second method, or refuses the first method, the second method is tried. Some remote devices support only one method. Base the order in which you specify methods on the remote device's ability to correctly negotiate the appropriate method, and on the level of data line security you require. PAP usernames and passwords are sent as clear text strings, which can be intercepted and reused.

To enter the dynamic template configuration mode, run **dynamic-template** command in the Global Configuration mode.

Note If you use a *list-name* value that was not configured with the **aaa authentication ppp** command, then authentication does not complete successfully and the line does not come up.

Table 17: PPP Authentication Protocols for Negotiation, on page 317 lists the protocols used to negotiate PPP authentication.

Table 17: PPP Authentication Protocols for Negotiation

Protocol	Description
chap	Enables CHAP on an interface.
ms-chap	Enables Microsoft's version of CHAP (MS-CHAP) on an interface.
pap	Enables PAP on an interface.

Enabling or disabling PPP authentication does not affect the ability of the local router to authenticate itself to the remote device.

MS-CHAP is the Microsoft version of CHAP. Like the standard version of CHAP, MS-CHAP is used for PPP authentication. In this case, authentication occurs between a personal computer using Microsoft Windows NT or Microsoft Windows 95 and a Cisco router or access server acting as a network access server.

Enabling or disabling PPP authentication does not affect the local router authenticating itself to the remote device.

Task ID	Operations
ppp	read, write
aaa	read, write

Examples

In this example, CHAP is enabled on POS 0/4/0/1 and uses the authentication list MIS-access:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface POS 0/4/0/1
RP/0/RSP0/CPU0:router(config-if)# encapsulation ppp
RP/0/RSP0/CPU0:router(config-if)# ppp authentication chap MIS-access

This is an example of configuring the **ppp authentication** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp authentication chap ms-chap pap
```

Related Commands

Command	Description
aaa authentication ppp	Specifies one or more AAA authentication methods for use on serial interfaces running PPP.
encapsulation	Sets the encapsulation method used by the interface.
username	Configures a new user with a username, establishes a password, and grants permissions for the user.

ppp chap

To enable a router calling a collection of routers to configure a common Challenge Handshake Authentication Protocol (CHAP) for PPP interfaces, use the **ppp chap** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

ppp chap hostname chap_hostname

Syntax Description	hostname	Sets the CHAP hostname.			
	chap_hostname	Specifies the CHAP hostname.			
Command Default	None				
Command Modes	Dynamic templat	te configuration			
Command History	Release Mo	odification			
		is command was roduced.			
Usage Guidelines	Use the dynamic	-template type ppp command to e	enter the ppp dynamic template type configuration mode.		
Task ID	Task Operation	_ 1			
	ppp read, write	_			
	This is an example of configuring the ppp chap command in the dynamic template configuration mode:				
	RP/0/RSP0/CPU0	:router# configure :router(config)# dynamic-temp :router(config-dynamic-templa	late type ppp p1 te-type)# ppp chap hostname host1		
Related Commands	Command		Description		
	ppp authentication	on (BNG), on page 316	Sets PPP link authentication method.		

ppp ipcp

To set Internet Protocol Control Protocol (IPCP) negotiation options, use the **ppp ipcp** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

ppp ipcp [dns{ primary_ip_addresssecondary_ip_address } | mask peer_netmask_address |
peer-address{ defaultpeer_ipaddress | poolpool_name } | renegotiation ignore | wins
| primary_ipaddress | secondary_ipaddress]

Syntax Description	dns	Configures the dns options.
	primary_ip_address	Specifies the primary DNS IP addresses.
	secondary_ip_address	Specifies the secondary DNS IP addresses.
	mask	Specifies the IPv4 netmask to use for the peer.
	peer_netmask_address	Specifies the peer netmask address.
	peer-address	Specifies the change in peer-address configuration.
	default	Specifies the default peer IP address.
	peer_ipaddress	Specifies the peer IP address.
	pool	Configures the pool options.
	pool_name	Specifies the pool name.
	renegotiation	Specifies the peer negotiation options.
	wins	Specifies the WINS options.
Command Default	None	
Command Modes	Dynamic template con	figuration
Command History	Release Modifica	tion
	ReleaseThis con4.2.0introduct	amand was ed.
Usage Guidelines	Use the dynamic-tem	late type ppp command to enter the ppp dynamic template type configuration mode
Task ID	Task Operation ID	
	ppp read, write	

Task ID	Operation
aaa	read,
	write

This is an example of configuring the **ppp ipcp** command in the dynamic template configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp ipcp
```

Related Commands	Command	Description
	ppp authentication (BNG), on page 316	Sets PPP link authentication method.

ppp lcp

To enable the link control protocol (LCP) on PPP interfaces, use the **ppp lcp** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

ppp lcp [**delay** *delay_seconds delay_milliseconds* | **renegotiation ignore**]

Syntax Description	delay		Sets the time to de	elay before starting active	e LCP negotiations.
	delay_	seconds	Specifies the dela	y time in seconds. The va	alue ranges from 0-255.
	delay_r	milliseconds	Specifies the dela	y time in milliseconds. T	The value ranges from 0-999.
	renego	otiation	Specifies the peer	renegotiation options.	
	ignore		Specifies the num	ber of attempts that can b	be ignored by the peer to renegotiate LCP.
Command Default	None				
Command Modes	Dynamic template configuration				
Command History	Releas	e Modi	fication		
	ReleaseThis command was4.2.0introduced.				
Usage Guidelines	Use the	dynamic-te	emplate type ppp c	ommand to enter the ppp	o dynamic template type configuration mode
Task ID	Task ID	Operation			
	ppp	read, write			
	aaa	read, write			
	This is an example of configuring the ppp lcp command in the dynamic template configuration mode:				
	RP/0/RS	SP0/CPU0:r		ynamic-template type amic-template-type)#	
Related Commands	Comma	and		Description	

Sets PPP link authentication method.

ppp authentication (BNG), on page

L

ppp max-bad-auth (BNG)

To configure a PPP interface not to reset itself immediately after an authentication failure but instead to allow a specified number of authentication retries, use the **ppp max-bad-auth** command in the appropriate configuration mode. To reset to the default of immediate reset, use the **no** form of this command.

ppp max-bad-auth retries

Syntax Description	<i>retries</i> Number of retries after which the interface is to reset itself. Range is from 0 to 10. Default is 0 retries.			
Command Default	retries: 0			
Command Modes	Interface configuration			
	Dynamic template configuration			
Command History	Release Modification			
	Release 3.9.0 This command was introduced.			
	Release 4.2.0 This command was supported in the dynamic template configuration mode for BNG.			
Usage Guidelines	The ppp max-bad-auth command applies to any interface on which PPP encapsulation is enabled.			
	To enter the dynamic template configuration mode, run dynamic-template command in the Global Configuration mode.			
Task ID	Task Operations ID			
	ppp read, write			
	aaa read, write			
Examples	In this example, POS interface $0/3/0/1$ is set to allow two additional retries after an initial authentication failure (for a total of three failed authentication attempts):			
	<pre>RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface POS 0/3/0/1 RP/0/RSP0/CPU0:router(config-if)# encapsulation ppp RP/0/RSP0/CPU0:router(config-if)# ppp authentication chap RP/0/RSP0/CPU0:router(config-if)# ppp max-bad-auth 3</pre>			

This example shows how to allow two additional retries after an initial authentication failure in the dynamic template configuration mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp max-configure 5

ppp max-configure (BNG)

To specify the maximum number of configure requests to attempt (without response) before stopping the requests, use the **ppp max-configure** command in an appropriate configuration mode. To disable the maximum number of configure requests and return to the default, use the **no** form of this command.

ppp max-configure retries

Syntax Description	retries Maximum number of retries. Range is 4 through 20. Default is 10.				
Command Default	retries: 10				
Command Modes	Interface configuration				
	Dynamic template configuration				
Command History	Release Modification				
	Release 3.9.0 This command was introduced.				
	Release 4.2.0 This command was supported in the dynamic template configuration mode for BNG.				
Usage Guidelines	Use the ppp max-configure command to specify how many times an attempt is made to establish a Link Control Protocol (LCP) session between two peers for a particular interface. If a configure request message receives a reply before the maximum number of configure requests are sent, further configure requests are abandoned.				
	To enter the dynamic template configuration mode, run dynamic-template command in the Global Configuration mode.				
Task ID	Task Operations ID				
	ppp read, write				
	aaa read, write				
Examples	This example shows a limit of four configure requests:				
	<pre>RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface POS 0/3/0/1 RP/0/RSP0/CPU0:router(config-if)# encapsulation ppp RP/0/RSP0/CPU0:router(config-if)# ppp max-configure 4</pre>				
	This example shows how a limit of four configure requests is specified in the dynamic template configuration mode:				

I

RP/0/RSP0/CPU0:router# configure		
<pre>RP/0/RSP0/CPU0:router(config)# dynamic-template type</pre>	ppp	p1
<pre>RP/0/RSP0/CPU0:router(config-dynamic-template-type)#</pre>	ppp	ipcp

Related Commands	Command	Description
	ppp max-failure (BNG), on page 327	Configures the maximum number of consecutive CONFNAKs to permit before terminating a negotiation.

ppp max-failure (BNG)

To configure the maximum number of consecutive Configure Negative Acknowledgments (CONFNAKs) to permit before terminating a negotiation, use the **ppp max-failure** command in an appropriate configuration mode. To disable the maximum number of CONFNAKs and return to the default, use the **no** form of this command.

ppp max-failure retries

Syntax Description	<i>retries</i> Maximum number of CONFNAKs to permit before terminating a negotiation. Range is from 2 to 10. Default is 5.			
Command Default	retries: 5			
Command Modes	Interface configuration			
	Dynamic template configuration			
Command History	Release Modification			
	Release 3.9.0 This command was introduced.			
	Release 4.2.0 This command was supported in the dynamic template configuration mode for BNG.			
Usage Guidelines Task ID	To enter the dynamic template configuration mode, run dynamic-template command in the Global Configuration mode. Task Operations			
Idskib	ID			
	ppp read, write			
	aaa read, write			
Examples	The ppp max-failure command specifies that no more than three CONFNAKs are permitted before terminating the negotiation:			
	<pre>RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface POS 0/3/0/1 RP/0/RSP0/CPU0:router(config-if)# encapsulation ppp RP/0/RSP0/CPU0:router(config-if)# ppp max-failure 3</pre>			
	This example shows how no more than three CONFNAKs are permitted before terminating the			

negotiation in the dynamic template configuration mode:

I

I	RP/0/RSP0/CPU0:router# configure
I	RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
I	RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp max-failure 4

Related Commands	Command	Description	
	ppp max-configure (BNG), on page 325	Specifies the maximum number of configure requests to attempt (without response) before stopping the requests.	

ppp ms-chap

To configure CHAP using the point-to-point protocol, use the **ppp ms-chap** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

ppp ms-chap hostname chap_hostname

Syntax Description	hostname	Sets the MS-CHAP hostname.	
	chap_hostnar	<i>ne</i> Specifies the name of the MS-C.	HAP hostname.
Command Default	None		
Command Modes	Dynamic temp	plate configuration	
Command History	Release	Modification	
		This command was introduced.	
Usage Guidelines	Use the dynar	nic-template command to enter the	dynamic template configuration mode.
Task ID	Task Opera ID	tion	
	ppp read, write		
	aaa read, write		
	This is an exam mode:	nple of configuring the ppp ms-chap	command in the dynamic template configuration
		U0:router# configure U0:router(config)# dynamic-tem	mlate type ppp pl

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp ms-chap hostname host1

Related Commands	Command	Description
	ppp authentication (BNG), on page 316	Sets PPP link authentication method.

ppp timeout

To configure timeouts for PPP protocol, use the **ppp timeout** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

ppp timeout [absolute absolute_minutes | authentication auth_seconds | retry retry_seconds
]

Syntax Description	absol	ute	Specifies the absolute timeout for a PPP session.		
	authe	ntication	Specifies the maximum wait time to receive an authentication response.		
	retry		Specifies the maximum time to wait for a response during PPP negotiation.		
	absolı	ıte_minutes	Specifies the absolute timeout in minutes. This value ranges from 0-70000000.		
	auth_seconds		Specifies the authentication wait time in seconds. This value ranges from 3-30.		
	retry_	seconds	Specifies the retry timeout in seconds. This value ranges from 1-10.		
Command Default	None				
Command Modes	Dynan	nic template	e configuration		
Command History	Relea	se Mo	dification		
	Releas 4.2.0		s command was roduced.		
Usage Guidelines	Use the	e dynamic	-template command to enter the dynamic template configuration mode.		
Task ID	Task ID	Operation	-		
	ppp	read, write	-		

This is an example of configuring the **ppp timeout** command in the dynamic template configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout absolute 56
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout authentication 4
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout retry 5
```

Related Commands	Command Description	
	ppp authentication (BNG), on page 316	Sets PPP link authentication method.

show ppp interfaces (BNG)

To display PPP state information for an interface, use the show ppp interfaces command in EXEC mode.

show ppp interfaces [{brief | detail}] {all | type interface-path-id | location node-id}

Syntax Description	brief		< I	l) Displays brief output for all interfaces on r, for a specific POS interface instance, or	
				erfaces on a specific node.	
	detail		on the rou	(Optional) Displays detailed output for all interfaces on the router, for a specific interface instance, or for all interfaces on a specific node.	
	type			Interface type. For more information, use the question mark (?) online help function. Physical interface or virtual interface.	
	interface-pa	th-id	Physical		
			Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.	
				information about the syntax for the router, uestion mark (?) online help function.	
	all		(Optional nodes.	l) Displays detailed PPP information for all	
	location nod	de-id	designate	I) Displays detailed PPP information for the ed node. The <i>node-id</i> argument is entered in <i>slot/module</i> notation.	
Command Default	No default be	ehavior or values			
Command Modes	EXEC mode				
Command History	Release	Modification			
	Release 3.9.0 This command was introduced.				
	Release 4.2.0 This command was supported in the dynamic template configuration mode for BNG.				
	Release 5.3.	2 The command was modifie redundancy support for PP		put display field, SRG-state , as part of geo router.	
Usage Guidelines	There are sev Control Prote		able for either the Lin	k Control Protocol (LCP) or the Network	
	The command output displays a summary of the interface as it is in the PPP Interface Descriptor Block (IDB). The output includes the following information (where applicable):				

- Interface state
- Line protocol state
- Link Control Protocol (LCP) state
- Network Control Protocol (NCP) state
- Multilink PPP state
- Multilink PPP configuration
- Keepalive configuration
- Authentication configuration
- · Negotiated MRUs
- Negotiated IP addresses

This command can display information for a single interface, all interfaces on a specified node, or all interfaces on the router.

Multilink PPP and POS are not supported for BNG Geo Redundancy.

Task ID	Task Operations ID
	ppp read
Examples	This example shows how to display PPP state information for a POS interface:
	<pre>RP/0/RSP0/CPU0:router# show ppp interface POS 0/2/0/3</pre>
	POS0/2/0/3 is up, line protocol is up
	LCP: Open
	Keepalives enabled (10 sec)
	Local MRU: 4470 bytes
	Peer MRU: 4470 bytes
	Authentication
	Of Us: CHAP (Completed as 'test-user')
	Of Peer: PAP (Completed as 'peer-user')
	CDPCP: Listen
	IPCP: Open
	Local IPv4 address: 55.0.0.1
	Peer IPv4 address: 55.0.0.2
	Peer DNS Primary: 55.0.0.254
	Peer DNS Secondary: 155.0.0.254
	IPV6CP: Open
	Local IPv6 address: fe80::3531:35ff:fe55:5747/128
	Peer IPv6 address: fe80::3531:35ff:fe55:4213/128
	MPLSCP: Stopped

This example shows how to display PPP state information for a POS interface that is running as a Layer 2 attachment circuit:

```
RP/0/0/CPU0:# show ppp interface POS0/2/0/2
POS0/2/0/2 is up, line protocol is up
   LCP: Open
   Running as L2 AC
```

This example shows how to display PPP state information for a multilink interface:

```
RP/0/RSP0/CPU0:router:# show ppp interface Multilink 0/3/0/0/100
   Multilink0/3/0/0/100 is up, line protocol is down
     LCP: Open
        SSO-State: Standby-Up
        Keepalives disabled
     IPCP: Open
        SSO-State: Standby-Up
        Local IPv4 address: 100.0.0.1
        Peer IPv4 address: 100.0.0.2
      IPV6CP: Open
        Local IPv6 address: fe80::3531:35ff:fe55:4600/128
        Peer IPv6 address: fe80::3531:35ff:fe55:3215/128
      Multilink
        Local MRRU: 1500 bytes
        Peer MRRU: 1500 bytes
        Local Endpoint Discriminator: 1234567812345678
        Peer Endpoint Discriminator: 1111222233334444
        MCMP classes: Local 4, Remote 2
        Member links: 2 active, 6 inactive (min-active 2)
          - Serial0/3/1/3/1 ACTIVE
           - Serial0/3/1/3/2 ACTIVE
          - Serial0/3/1/3/3 INACTIVE : LCP not negotiated
           - Serial0/3/1/3/4 INACTIVE : Mismatching peer endpoint
           - Serial0/3/1/3/5 INACTIVE : Mismatching peer auth name
           - Serial0/3/1/3/6 INACTIVE : MRRU option rejected by Peer
           - Serial0/3/1/3/7 INACTIVE : Mismatching local MCMP classes
           - Serial0/3/1/3/8 INACTIVE : MCMP option rejected by peer
```

This example shows how to display PPP state information for a serial interface:

RP/0/RSP0/CPU0:router# show ppp interface Serial 0/3/1/3/1 Serial0/3/1/3/1 is down, line protocol is down LCP: Open SSO-State: Standby-Up Keepalives enabled (10 sec) Local MRU: 1500 bytes Peer MRU: 1500 bytes Local Bundle MRRU: 1500 bytes Peer Bundle MRRU: 1500 bytes Local Endpoint Discriminator: 1234567812345678 Peer Endpoint Discriminator: 1111222233334444 Local MCMP Classes: Not negotiated Remote MCMP Classes: Not negotiated Authentication Of Us: CHAP (Completed as 'test-user') Of Peer: PAP (Completed as 'peer-user') Multilink Multilink group id: 100

This is a sample output of the **show ppp interfaces** command in the BNG router, having subscriber redundancy group (SRG) in geo redundancy enabled for PPPoE sessions:

```
RP/0/RSP0/CPU0:router# show ppp interfaces
Bundle-Ether2.1.pppoel6534 is down, line protocol is up
SRG Role: Slave
LCP: Open
```

Member status: ACTIVE

```
Keepalives enabled (60 sec, retry count 5)
Local MRU: 1492 bytes
Peer MRU: 65531 bytes
Authentication
Of Peer: PAP (Completed as user1@domain.com)
Of Us: <None>
IPCP: Open
Local IPv4 address: 12.16.0.1
Peer IPv4 address: 12.0.250.23
IPv6CP: Initial
Local IPv6 address: fe80::
Peer IPv6 address: fe80::
```

Table 18: show ppp interfaces Field Descriptions

Field	Description
Ack-Rcvd	Configuration acknowledgemt was received; waiting for peer to send configuration request.
Ack-Sent	Configuration acknowledgemt was sent; waiting for peer to respond to configuration request.
Authentication	Type of user authentication configured on the local equipment and on the peer equipment. Possible PPP authentication protocols are Challenge Handshake Authentication Protocol (CHAP), MS-CHAP, and Password Authentication Protocol (PAP).
Closed	Lower layer is up, but this layer is not required.
Closing	Shutting down due to local change.
Initial	Connection is idle.
IPCP	 IP Control Protocol (IPCP) state. The seven possible states that may be displayed are as follows: Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state. Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent. Closed— IPCP is not currently trying to negotiate. Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered. Stopping—A Terminate-Request has been sent and the Restart timer is running, but a IPCP-Ack has not yet been received. Req-Sent. ACKsent—IPCP has received a request and has replied to it. ACKrcvd—IPCP has received a reply to a request it sent. Open—IPCP is functioning properly.

I

Field	Description
Keepalive	Keepalive setting and interval in seconds for echo request packets.
LCP	Indicates the current state of LCP. The state of the LCP will report the following states:
	• Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state.
	• Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent.
	• Closed— LCP is not currently trying to negotiate.
	• Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received.
	• Closing—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Upon reception of a Terminate-Ack, the Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered.
	• Stopping—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Req-Sent.
	• ACKsent—LCP has received a request and has replied to it.
	• ACKrcvd—LCP has received a reply to a request it sent.
	• Open—LCP is functioning properly
Local IPv4 address	IPv4 address for the local interface.
Local MRU	Maximum receive unit. The maximum size of the information transported, in bytes, in the PPP packet received by the local equipment.
Open	Connection open.

Field	Description					
OSICP	Open System Interconnection Control Protocol (OSICP) state. The possible states that may be displayed are as follows:					
	• Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state.					
	• Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent.					
	 Closed—OSICP is not currently trying to negotiate. Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. 					
	• Closing—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Upon reception of a Terminate-Ack, the Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered.					
	• Stopping—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Req-Sent.					
	• ACKsent—OSICP has received a request and has replied to it.					
	• ACKrcvd—OSICP has received a reply to a request it sent.					
	• Open—OSICP is functioning properly.					
Peer IPv4 address	IPv4 address for the peer equipment.					
Peer MRU	Maximum receive unit. The maximum size of the information transported, in bytes, in the PPP packet received by the peer equipment.					
Req-Sent	Configuration request was sent; waiting for peer to respond.					
Starting	This layer is required, but lower layer is down.					
Stopped	Listening for a configuration request.					
Stopping	Shutting down as a result of interactions with peer.					

show ppp statistics

To display the statistics information for PPP interfaces, use the **show ppp statistics** command in EXEC mode.

show ppp statistics {extended | {locationlocation} | interface | {interface-typeinterface-path-id} | summary
| {locationlocation}}

Syntax Description	extended		Displays interface	the extended PPP statistics across all es.		
	interface		Displays the PPP statistics for a single interface.			
	summary		Displays interface	aggregated PPP statistics across all es.		
	location		Displays	the PPP statistics for interfaces at a location.		
	location		Specifies	s the location details.		
	type		Interface type. For more information, use the question mark (?) online help function.			
	interface-pa	uth-id	Physical	interface or virtual interface.		
			Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.		
			For more information about the syntax for the router, use the question mark (?) online help function.

Broadband Network Gateway Command Reference for Cisco ASR 9000 Series Routers

PPPoE LAC-Specific Commands

This module describes the Cisco IOS XR software commands used to configure the PPPoE LAC-specific commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

l2tp-class

To create the l2tp class that needs to be used for L2TP parameters for the vpdn-group and to enter the l2tp class configuration submode, use the **l2tp-class** command in Global Configuration mode. To disable this feature, use the **no** form of this command.

 12tp-class {c1 | 11 | l2tp_class_name } [authentication | congestion-control | digest |

 hello-interval | hidden | hostname | ip | password | receive-window | retransmit | security

 | timeout | tunnel]

c1	Specifies the 12tp class name.
11	Specifies the 12tp class name.
l2tp_class_name	Specifies the 12tp class name.
authentication	Authenticates the L2TP control connection.
congestion-control	Enables L2Tp congestion control.
digest	Specifies message digest configuration for L2TPv3 control connection.
hello-interval	Hides AVPs in outgoing control messages.
hidden	Sets HELLO message interval.
hostname	Specifies the local hostname for control connection authentication.
ip	Specifies the settings for tunnel.
password	Specifies the password for control connection authentication.
receive-window	Receives the window size for control connection.
retransmit	Specifies the control message retransmission parameters.
security	Specifies the L2TP security command.
timeout	Specifies the control connection timeout parameters.
tunnel	Specifies the tunnel settings.

Command Default No de

No default behavior or values

Command Modes Global Configuration mode

Command History	Releas	e Mod	ification

	tunnel,	on page 351	Configures l2tp tunnel.	

l2tp-source-ip

To configure the tunnel source IP address for the subscriber redundancy group, use the **l2tp-source-ip** command in subscriber redundancy group configuration mode. To remove the tunnel source IP address configuration, use the **no** form of this command.

l2tp-source-ip ip-address

Syntax Description	ip-address	Source IP address of the L2TP tunnel.
Command Default	None	
Command Modes	Subscriber redundancy group configuration	
Command History	Release	Modification
	Release 5.3.2	This command was introduced.
Usage Guidelines	No specific guidelines impact the use of this command.	
Task ID	Task ID	Operation
	config-service	es read, write
	This example	shows how to configure the L2TP tunnel so

This example shows how to configure the L2TP tunnel source IP address for the subscriber redundancy group:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy group 1
RP/0/RSP0/CPU0:router(config-susbscr-red-group)# l2tp-source-ip 10.10.10.1
```

process-failures switchover

To force a switchover in case of a process failure, use the **process-failures switchover** command in VPDN redundancy configuration mode.

process-failures switchover

	- This some				
Syntax Description	I his comm	and has no keywo	ords or arguments.		
Command Default	None				
Command Modes	VPDN redu	undancy configura	ation mode		
Command History	Release	Modification			
	Release 4.3.1	This command introduced.	l was		
Usage Guidelines	No specific	e guidelines impac	et the use of this command.		
Task ID	Task Op ID	eration			
	tunnel rea wr				
	This is an example of enabling process-failures switchover.				
	RP/0/RSP0, RP/0/RSP0, RP/0/RSP0,	/CPU0:router(co	-		
Related Commands	Command		Description		
	vpdn, on p	age 352	Configures VPDN and enters the VPDN sub-configuration mode.		

redundancy (BNG), on page
348Enables VPDN redundancy and enters the VPDN redundancy configuration
mode.

redundancy (BNG)

To enable VPDN redundancy and to enter the VPDN redundancy configuration mode, use the **redundancy** command in VPDN configuration mode. To disable VPDN redundancy, use the **no** form of this command.

redundancy

352

Syntax Description	This command	has no keywords or arguments.			
Command Default	None				
Command Modes	VPDN configur	ration mode			
Command History	Release N	lodification			
		his command was troduced.			
Usage Guidelines	No specific guid	delines impact the use of this command.			
Task ID	Task Operatio	Dn Contraction of the second sec			
	tunnel read, write				
	This is an example of enabling the vpdn redundancy and entering the vpdn redundancy configuration submode:				
	RP/0/RSP0/CPU RP/0/RSP0/CPU	0:router# configure 0:router(config)# vpdn 0:router(config-vpdn)# redundancy 0:router(config-vpdn-redundancy)#			
Related Commands	Command	Description			
	vpdn, on page	Configures VPDN and enters the VPDN sub-configuration mode.			

session-limit (BNG)

To configure maximum simultaneous VPDN sessions, use the **session-limit** command in vpdn configuration mode. To disable this feature, use the **no** form of this command.

session-limit number

Syntax Description	<i>number</i> Specifies the number of sessions and the value can range between 1-131072.
Command Default	The default and max value for global session-limit is 65536(64k sessions).
Command Modes	VPDN configuration mode
Command History	Release Modification
	ReleaseThis command was4.2.0introduced.
Usage Guidelines	Use the vpdn command to enter vpdn configuration submode.
-	Note Per vpdn group session limiting is not supported on LAC.
	If limit is configured after a number of sessions are up, then those sessions remain up irrespective of the limit and new sessions will not come up based on the limit. The no form of the command results in removing limits on number of sessions and new sessions are accepted by vpdn.
Task ID	Task Operation ID

tunnel read, write

This is an example of configuring the **session-limit** command in vpdn configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# session-limit 567
```

template (BNG)

To configure the VPDN template and enter the vpdn template configuration mode, use the **template** command in vpdn configuration mode. To disable vpdn template, use the **no** form of this command.

template vpdn-template_name {description | caller-id | ip | dsl-line-forwarding | ipv4 | l2tp-class | tunnel | vpn}

Syntax Description	vpdn-temp	late_name	Specifies the vpdn template name.		
	descriptio	n	Specifies the description of the vpdn template.		
	caller-id		Specifies the options to apply on calling station id.		
	ір		Specifies the tos ip value.		
	dsl-line-fo	rwarding	Enables dsl line information forwarding. Specifies the ipv4 settings for tunnel.		
	ipv4				
	l2tp-class		Specifies the l2tp class name.		
	tunnel		Specifies the l2tp tunnel commands.		
	vpn		Specifies the vpn id/vrf name.		
	None				
Command Default	None				
Command Modes	VPDN con	figuration mode			
Command History	Release	Modification	-		
	Release 4.2.0	This command was introduced.	-		
Usage Guidelines	Use the vp	dn command, to enter vpdn config	guration submode.		
Task ID	Task Op ID	eration			
	tunnel rea wr				
	This is an e		ate command in vpdn configuration mode:		

This is an example of configuring the **template** command in vpdn configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# template temp1
RP/0/RSP0/CPU0:router(config-vpdn-temp)#
```

tunnel

To configure the amount of time that the peer will be put in a dead cache, use the **tunnel** command in vpdn template configuration mode. To disable this feature, use the **no** form of this command.

tunnel busy list timeout timeout_value

Syntax Description	<i>timeout_value</i> Specifies the amount of time in second	Is that the peer will remain in dead cache. This value
	ranges from 60 to 65535.	
Command Default	None	
Command Modes	VPDN template configuration	
Command History	Release Modification	
	ReleaseThis command was4.2.0introduced.	
Usage Guidelines	Use the vpdn template command to enter vpdn template	te configuration submode.
Task ID	Task Operation ID	
	tunnel read, write	
	This is an example of configuring the tunnel command	in vpdn template configuration mode:
	RP/0/RSP0/CPH0.router# configure	

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn template
RP/0/RSP0/CPU0:router(config-vpdn-template)# tunnel busy list timeout 56
```

Related Commands	Command	Description	
	vpdn, on page 352	Configures VPDN and to enter the VPDN sub-configuration mode.	

vpdn

To configure VPDN and to enter the VPDN configuration submode, use the **vpdn** command in Global Configuration mode. To disable vpdn, use the **no** form of this command. vpdn{caller-id | history | l2tp | logging | session-limit | softshut | template} Syntax Description caller-id Specifies the options to apply on calling station id. history Enables VPDN history logging. l2tp Specifies the l2tpv2 protocol commands. logging Enables logging for VPDN. session-limit Allows to configure maximum simultaneous VPDN sessions. softshut Specifies that a new session is no longer allowed. Specifies the VPDN template configuration. template None **Command Default** Global Configuration mode **Command Modes Command History** Release **Modification** Release This command was introduced. 4.2.0 Use the **vpdn** command in Global Configuration mode to enter vpdn sub-configuration mode. **Usage Guidelines** Task ID Task Operation ID tunnel read, write This is an example of configuring the **vpdn** command in Global Configuration mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# history failure
RP/0/RSP0/CPU0:router(config-vpdn)# softshut

vpn

To configure the VPN ID or VRF name, use the **vpn** command in vpdn template configuration mode. To disable this feature, use the **no** form of this command.

	vpn { id	<pre>vpn_index vrf_name }</pre>	
Syntax Description	id	Specifies the VPN ID.	
	vrf	Specifies the VRF.	
	vpn_index	Specifies a value between 0-ffffff.	
	vrf_name	Specifies the name of the vrf.	
Command Default	None		
Command Modes	VPDN temp	plate configuration mode	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
Usage Guidelines	Use the vpd	In template command to enter vpdn temp	plate
Task ID	Task Ope ID	ration	

tunnel read, write

This is an example of configuring the **vpn** command in vpdn template configuration mode:

configuration submode.

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn template
RP/0/RSP0/CPU0:router(config-vpdn-template)# vpn vrf vrf1

show I2tpv2

To display the tunnel-related information, use the show l2tpv2 command in the EXEC mode.

show l2tpv2{class | counters | session | statistics | tunnel}

Syntax Description	classDisplays the L2TP class details.					
	counters Displays the L2TP counter information.

Broadband Network Gateway Command Reference for Cisco ASR 9000 Series Routers

PPPoE Commands

This module describes the Cisco IOS XR software commands used to configure the PPPoE commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

pado delay

Command Default

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, use the **pado delay** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration, use the **no** form of this command.

pado delay delay

Syntax Description	delay	Delay value for PADO message, in milliseconds.
		The range is from 0 to 10000.

Command Modes PPPoE BBA-Group configuration

None

Command History	Release	Modification	
	Release 4.3.1	This command was introduced.	

Usage Guidelines Setting a value of 0 for *delay* means that no transmission delay is set for PADO message. Setting a value of 10000 means that an infinite delay is set for PADO message or in other words, PADO message is never sent.

Task ID	Operation
ppp	read, write

Example

This example shows how to configure a delay of 1000 milliseconds for the PADO message:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay 1000
```

Related Commands	Command	Description
	pado delay circuit-id, on page 369	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Circuit-ID received in PADI message.
	pado delay remote-id, on page 371	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Remote-ID received in PADI message.
	pado delay service-name, on page 373	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Service-Name received in PADI message.

pado delay circuit-id

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, based on the Circuit-ID received in PPPoE Active Discovery Initiator (PADI) message, use the **pado delay circuit-id** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration based on the Circuit-ID, use the **no** form of this command.

pado delay circuit-id {*delay* | {**string** | **contains**} *string delay*}

Syntax Description	delay		Delay value for PADO message, in milliseconds, based on the Circuit-ID.
			The range is from 0 to 10000.
	string		Delays the PADO message, when the Circuit-ID string received in PADI message matches the configured <i>string</i> .
	contains		Delays the PADO message, when the Circuit-ID received in PADI message contains the configured <i>string</i> .
	string		String received in PADI message, that needs to be exactly matching the Circuit-ID (when used along with string keyword) or the string received in PADI message, that needs to be contained within the Circuit-ID (when used along with the contains keyword).
Command Default	None		
Command Modes	PPPoE BB	A-Group configuration	
Command History	Release	Modification	-
	Release 4.3.1	This command was introduced.	_
Usage Guidelines	-	-	transmission delay is set for the PADO message. Setting a value for PADO message; or, in other words, the PADO message is
	Within the category of Circuit-ID matches, full string matches are preferred to sub-string matches. If more than one sub-string match occur, the selection is based on a random order.		
		n the PADI message), followed b	ing match, the configured Circuit-ID delay is used (if a Circuit-ID y the configured Remote-ID delay (if a Remote-ID is present in
	If there are	no matches, the configured pade	delay is used for PADO message.

Task ID Task Operation ID

ppp read, write

This example shows how to configure a delay of 1000 milliseconds for the PADO message:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id 1000
```

This example shows how to configure a delay of 8000 milliseconds for the PADO message, if the Circuit-ID received in the PADI message exactly matches the configured string (circuit1 in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id string circuit1 8000
```

This example shows how to configure a delay of 5000 milliseconds for the PADO message, if the Circuit-ID received in the PADI message contains the configured string (circuit2 in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id contains circuit2 5000
```

Related Commands	Command	Description
	pado delay, on page 368	Configures a specific delay for PPPoE PADO message for a PPPoE BBA-Group in BNG.
	pado delay remote-id, on page 371	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Remote-ID received in PADI message.
	pado delay service-name, on page 373	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Service-Name received in PADI message.

pado delay remote-id

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, based on the Remote-ID received in PPPoE Active Discovery Initiator (PADI) message, use the **pado delay remote-id** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration based on the Remote-ID, use the **no** form of this command.

pado delay remote-id {delay | {string | contains} string delay}

Syntax Description	delay		Delay value for PADO message, in milliseconds, based on the Remote-ID.
			The range is from 0 to 10000.
	string		Delays the PADO message, when the Remote-ID received in PADI message matches the configured <i>string</i> .
	contains		Delays the PADO message, when the Remote-ID received in PADI message contains the configured <i>string</i> .
	string		String received in PADI message, that needs to be matching the Remote-ID (when used along with string keyword) or the string received in PADI message, that needs to be contained within the Remote-ID (when used along with the contains keyword).
Command Default	None		
Command Modes	PPPoE BB	A-Group configuration	
Command History	Release	Modification	
	Release 4.3.1	This command was introduced.	
Usage Guidelines	-	•	smission delay is set for the PADO message. Setting a value PADO message; or, in other words, the PADO message is
		category of Remote-ID matches, full ib-string match occurs, the selection i	string matches are preferred to sub-string matches. If more is based on a random order.
			natch, the configured Circuit-ID delay is used (if a Circuit-ID nfigured Remote-ID delay (if a Remote-ID is present in PADI

Task ID Task Operation ID

ppp read, write

This example shows how to configure a delay of 1000 milliseconds for the PADO message:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay remote-id 1000
```

This example shows how to configure a delay of 8000 milliseconds for the PADO message, if the Remote-ID received in the PADI message exactly matches the configured string (**remote1** in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay remote-id string remote1 8000
```

This example shows how to configure a delay of 5000 milliseconds for the PADO message, if the remote-id received in the PADI message contains the configured string (**remote2** in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay remote-id contains remote2 5000
```

Related Commands	Command	Description
	pado delay, on page 368	Configures a specific delay for PPPoE PADO message for a PPPoE BBA-Group in BNG.

	pado delay service-name, on page 373	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Service-Name received in PADI message.

pado delay service-name

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, based on the Service-Name received in PPPoE Active Discovery Initiator (PADI) message, use the **pado delay service-name** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration based on the Service-Name, use the **no** form of this command.

pado delay service-name {string | contains} string delay

Syntax Description	string		Delays the PADO message, when the Service-Name string received in PADI message matches the configured <i>string</i> .	
	contains		Delays the PADO message, when the Service-Name received in PADI message contains the configured <i>string</i> .	
	string		String received in PADI message, that needs to be matching the Service-Name (when used along with string keyword) or the string received in PADI message, that needs to be contained within the Service-Name (when used along with the contains keyword).

	Within the category of service-name matches, full string matches are preferred to sub-string matches. If more than one sub-string match occurs, the selection is based on a random order.			
			ing match, the configured Circuit-ID delay is used (if a Circuit-ID e configured Remote-ID delay (if a Remote-ID is present in PADI	
	If there are	no matches, the configured pado	delay is used for the PADO message.	

Task ID Task Operation ID

ppp read, write

This example shows how to configure a delay of 8000 milliseconds for the PADO message, if the Service-Name received in the PADI message exactly matches the configured string (**service1** in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay service-name string service1 8000
```

This example shows how to configure a delay of 5000 milliseconds for the PADO message, if the Service-Name received in the PADI message contains the configured string (service in this example):

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay service-name contains service 5000
```

Related Commands	Command	Description
	pado delay, on page 368	Configures a specific delay for PPPoE PADO message for a PPPoE BBA-Group in BNG.
	pado delay circuit-id, on page 369	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Circuit-ID received in PADI message.
	pado delay remote-id, on page 371	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Remote-ID received in PADI message.

pppoe bba-group

To add configuration for a particular BBA-Group and to enter the BBA-Group submode, use the **pppoe bba-group** command in Global Configuration mode. To disable this feature, use the **no** form of this command.

pppoe bba-group {bba-group name | global} {ac | namenew_name | control-packets | priority_bits
| service | {namenew_name | selection | disable} | sessions | {access-interface | circuit-id | mac | mac-iwf
| {access-interface | pair | limit} | max | {access-interface | limit | throttle} } | limitsession_limit | tag |
{ppp-max-payload | {deny | minimum_name_payload}}}

Syntax Description	bba-group-name	Specifies the bba group name.		
	global	Specifies the global bba-group.		
		Note This is a reserved keyword for IOS XR PPPoE call flow, you must use a different keyword for subscriber redundancy group (SRG).		
	ac	Enables modification of the access concentrator configuration.		
	name	Indicates the name change to include in the AC tag.		
	new_name	Specifies the new name.		
	control-packets	Enables change of control-packets configuration.		
	priority	Sets the priority to use in PPPoE and PPP control packets.		
	priority_bits	Specifies the priority bits for outgoing PPPoE and PPP control packets. This ranges between 0 and 7, where 0 indicates highest priority and 7 indicates the lowest.		
	service	Enables modification of service configuration.		
	name	Configures the service name.		
	new_name	Specifies the new service name.		
	selection	Specifies the selection of unrequested service names.		
	disable	Disables the advertising of unrequested service names.		
	sessions	Enables modification of sessions configuration.		
	access-interface	Limits PPPoE sessions on any one access interface.		
	circuit-id	Limits PPPoE sessions with any one circuit-id.		
	mac	Limits or throttles PPPoE sessions from any one mac-address.		

	mac-iwf		Limits or throttles IWF PPPoE sessions from any one mac-address.	
	max		Sets a per-card session limit.	
	limit		Specifies the action of limiting the PPPoE sessions for various attributes.	
	session_lin	nit	Specifies the access-interface session limit. The value ranges from 1 to 65535.	
	tag		Enables modification of tag configuration.	
	ppp-max-j	payload	Modifies the ppp-max-payload configuration and allows to configure minimum and maximum payloads.	
	deny		Ignores the ppp-max-payload tag.	
	minimum		Configures the minimum payload.	
	minimum_	payload	Specifies the value of the minimum payload. The value ranges from 500 to 2000.	
Command Default	None			
Command Modes	Global Con	figuration mode		
Command History	Release	Modification		
	Release 4.2.0	This command was introduced.		
	Release 6.2.1	Modified the command to include	global BBA-Group.	
Usage Guidelines BBA-Groups are configured globally (these are essen			essentially configuration templates), containing the PPPoE	
	When this configuration changes to use a different BBA-Group, then all existing PPPoE sessions running under the interface are terminated.			
			nfigured on a router, one BBA-Group can be configured as a PPoE sessions is set under pppoe bba-group global	

Task ID

Note • For RP subscribers, the node is the complete chassis. • For LC subscribers, the node is the LC. For LC subscribers, each LC considers the maximum limit set by the global limit. But with multiple LC in the chassis, the session count in the chassis can be multiplied by the number of active LC. To use a BNG-wide limit for LC based subscribers, you can use either bundles or pre authentication. • For a single member, when you are using bundles, the sessions are maintained on the RP and the control is moved to the RP for all sessions. The bba group limit applies to all sessions regardless to the number of line cards carrying subscribers: interface GigabitEthernet0/0/0/0 bundle id 100 mode on • In a pre authentication method, when PADI is received, an authorization request is sent to AAA . An authorisation request determines the session count on radius for it to accept or reject the request. When the request is accepted, a PADO is sent. When the request is rejected the PADI is discarded and ignored. Global BBA-Group support in BNG is subjected to these restrictions: Currently global BBA-Group supports only configurations related to session limit, except AAA override configuration. For more details, see usage guidelines section of **pppoe sessions limit** command. You cannot change the configuration at run time for global BBA-Group. • The global BBA-Group is not valid for subscriber redundancy group (SRG) in BNG, and hence the pppoe bba-group global command must not be used in BNG geo redundancy scenarios. Task Operation ID read, ppp write

This is an example of configuring the **pppoe bba-group** command in Global Configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group global
RP/0/RSP0/CPU0:router(config-bbagroup)# sessions max limit 250
```

This is an example of configuring maximum PPPoE sessions limit for the entire router, under global PPPoE BBA-Group:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group global
RP/0/RSP0/CPU0:router(config-bbagroup)# sessions max limit 250
```

	pppoe sessions throttle, on page 384	Configures a throttle value for PPPoE sessions for a PPPoE BBA-Group in BNG.

pppoe sessions limit

To set the PPPoE sessions limit for a particular PPPoE BBA-Group or for the entire router, use the **sessions limit** command in PPPoE BBA-Group configuration mode. To remove the specified limit for PPPoE sessions, use the **no** form of this command.

sessions {access-interface | circuit-id | circuit-id-and-remote-id | inner-vlan | {mac | mac-iwf} [access-interface] | max | outer-vlan | remote-id | vlan } limit *limit-value* [threshold *threshold-value*]

Syntax Description	access-inter	rface	Limits PPPoE sessions on any one access interface.
	circuit-id		Limits PPPoE sessions with any one circuit-ID.
	circuit-id-a	nd-remote-id	Limits PPPoE sessions by circuit-id and remote-id.
	inner-vlan		Limits PPPoE sessions with any one inner-vlan id.
	mac		Limits PPPoE sessions from any one mac address.
	mac-iwf		Limits IWF PPPoE sessions from any one mac address.
	max		Sets a per-card session limit.
	outer-vlan		Limits PPPoE sessions with any one outer-vlan id.
	remote-id		Limits PPPoE sessions with any one remote-id.
	vlan		Limits PPPoE sessions with matching vlan ids.
	limit		Specifies the action of limiting the PPPoE sessions for various attributes.
	limit-value		Specifies the session limit value.
			The range is from 1 to 65535. The default is 65535.
	threshold		Specifies the action of generating a log message when the threshold has reached.
	threshold-ve	alue	Specifies the threshold value.
			The range is from 1 to 65535.
Command Default	None		
Command Modes	PPPoE BBA	-Group config	uration
Command History	Release	Modification	1
			nd was introduced.

Release	Modification
Release 4.3.1	The PPPoE sessions limit support was extended for mac access-interface , mac-iwf access-interface , inner-vlan , outer-vlan , vlan , and circuit-id-and-remote-id
	Support for the optional argument, threshold was added.
Release 6.2.1	Functionality was included to set a global PPPoE session limit, that is, a session limit for the entire router.

Usage Guidelines

If a session limit is configured after the limit has already been exceeded, the existing sessions are torn down until the number of sessions matches the configured limit.

If both mac limit and mac-iwf limit are configured, only IWF limit is used for IWF sessions, so that a higher IWF limit than the limit for non-IWF sessions can be used. The same is the case if both mac access-interface limit and mac-iwf access-interface limit are configured.

Note The sessions outer-vlan limit command limits the sessions only in single VLAN tag scenarios. You must use the sessions vlan limit command, to limit the sessions in double VLAN tag scenarios; this limits the maximum number of sessions allowed for each inner VLAN and outer VLAN, for each access-interface.

In order to set a global PPPoE session limit, use the **sessions max limit** command under **pppoe bba-group global** configuration mode. The combined number of sessions on all individual BBA-Groups cannot exceed this global limit. For example, consider a configuration where the global limit is set as 250, the limit of BBA-Group 1 (say, *bba1*) is set as 100, and the limit of BBA-Group 2 (say, *bba2*) is set as 200. If 100 sessions are already created with *bba1*, then only 150 sessions (that is, 250 - 100) can be created with *bba2*, even though *bba2* has a session limit of 200. Similarly there can be different combinations of sessions with local BBA-Groups as long as the global session limit is not exceeded. For more details, see **pppoe bba-group** command.

	pppoe bba-group, on page 375	Adds configuration for a particular BBA-Group and enters the BBA-Group submode.
	pppoe sessions throttle, on page 384	Configures a throttle value for PPPoE sessions for a PPPoE BBA-Group in BNG.
	show pppoe limits, on page 390	Shows the PPPoE session limit information.

pppoe sessions throttle

To set a throttle value for the PPPoE sessions for a particular PPPoE BBA-Group, use the **sessions throttle** command in PPPoE BBA-Group configuration mode. To remove the specified throttle value for PPPoE sessions, use the **no** form of this command.

sessions {circuit-id | circuit-id-and-remote-id | inner-vlan | mac [access-interface] | mac-iwf access-interface | outer-vlan | remote-id | vlan } throttle *request-count request-period blocking-period*

Syntax Description access-interface Throttles PPPoE sessions based on any one access interface circuit-id Throttles PPPoE sessions with any one circuit-id. circuit-id-and-remote-id Throttles PPPoE sessions by circuit-id and remote-id. Throttles PPPoE sessions with any one inner-vlan id. inner-vlan mac Throttles PPPoE sessions from any one mac address. mac-iwf Throttles Inter-Working Function (IWF) sessions from any one mac address. Throttles PPPoE sessions with any one outer-vlan id. outer-vlan remote-id Throttles PPPoE sessions with any one remote-id. vlan Throttles PPPoE sessions with matching vlan ids. throttle Specifies the action of throttling the PPPoE sessions for various attributes. Specifies the number of session requests allowed request-count before throttling. request-period Specifies the time interval during which the session requests are counted. blocking-period Specifies the time interval during which no more requests from the subscriber are accepted, when the subscriber has already been throttled. Sessions throttle is disabled by default. **Command Default** PPPoE BBA-Group configuration **Command Modes Command History** Modification Release This command was introduced. Release 4.2.0

Release	Modification
Release 4.3.1	The pppoe sessions throttle support was extended for circuit-id , remote-id , inner-vlan , outer-vlan , vlan and circuit-id-and-remote-id
	Support for the variables, request-count, request-period and blocking-period was added.

Usage Guidelines If both mac access-interface throttle and mac-iwf access-interface throttle are configured, only IWF throttle is used for IWF sessions, so that different throttling can be applied to IWF and non-IWF sessions.

k ID	Task ID	Operation
	ppp	read, write

This example shows how to configure a throttle for pppoe sessions for each circuit-id in a PPPoE BBA-Group:

RP/0/RSP0/CPU0:router# configure

show pppoe summary

To show the summary information for the PPPoE sessions, use the **show pppoe summary** command in the EXEC mode mode.

show pppoe summary {per-access-interface | total} { locationnode}

Syntax Description	per-access-interface	Summarizes PPPoE sessions running on each access-interface.			
	total	Shows the overall summary information of access-interfaces and sessions.			
	location	Shows PPPoE status for all sessions at a location.			
	node	Specifies the fully qualified location specification.			
ommand Default	None				
ommand Modes	EXEC mode				
ommand History	Release Modific	ation			
	Release This cor 4.2.0	nmand was introduced.

show pppoe throttles

To show the throttle information for the PPPoE sessions, use the **show pppoe throttles** command in the EXEC mode mode.

show pppoe throttles [active] [{access-interface type interface-path-id | bba-group bba-group-name | location node}]

Syntax Description	active Shows only those throttles that are currently blocking packets.				
	access-interface Shows PPPoE status for all sessions on a single access interface.				
	type	Interface type. For more information, use the question mark (?) online help function.			
	<i>interface-path-id</i> Physical interface or virtual interface.				
		Note Use the show interfaces command to see a list of all interfaces currently configured on the router.			
		For more information about the syntax for the router, use the question mark (?) online help function.			
	bba-group Shows throttles for all interfaces with a given bba-group.				
	<i>bba_group_name</i> Specifies the bba-group name.				
	location Shows PPPoE status for all sessions at a location.				
	<i>node</i> Specifies the fully qualified location specification.				
Command Default	None				
Command Modes	EXEC mode				
Command History	Release Mod	lification			
	Release This 4.2.0	command was introduced.

This table describes the significant fields displayed in the show pppoe throttles command output :

Field	Description
Block	Specifies that the throttle is active and that packets are dropped.
Idle	Specifies that the packets relevant to the throttle are not yet received.
Monitor	Specifies that the packets are counted, but the throttle is not yet active.

Field	Description
Time left	Specifies the time remaining until the throttle enters idle state, or if the throttle is already in idle state, the time until the throttle entry is removed.
Since reset	Specifies the time since the throttle counters were last reset. Throttle counters are reset upon entering the idle state.
PADI	Specifies the number of PADI messages received which match the entry criteria (say, mac address).
PADR	Specifies the number of PADR messages received which match the entry criteria (say, mac address).

Subscriber and Session Redundancy Commands

This module describes the Cisco IOS XR software commands used to configure the subscriber and session redundancy commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

access-tracking (BNG)

To configure object tracking for detecting access connectivity for the specific Subscriber Redundancy Group (SRG) or Session Redundancy Group (SERG), use the access-tracking command in the respective group configuration mode.

To remove the object tracking configuration, use the **no** form of this command.

access-tracking access-tracking-obj

Syntax Description	<i>access-tracking-obj</i> Access tracking object for the specific SRG.			
Command Default				
Command Modes	Subscriber redundancy group configuration. Session redundancy group configuration.			
Command History	Release	Modification		
	Release 5.2.2	This command was introduced for SRG.		
	Release 6.2.1	This command was introduced for SERG.		
Usage Guidelines		cking feature allows correlation of the role of BNG SRG/SERG with the role or g access-interface, and it is the key for automatic switchovers and for handling fa		
		configure the track object first and then configure that track object under the SR particular interface. This ensures that SRG/SERG primary or subordinate role folloe.		
	the same ac routes) is ac	ment of the summary route for the subscriber address/subnet pool can be also co access-tracking object (See example section). This ensures that the subscriber su activated only when the underlying access is up or active and only then it is re-di the subordinate does not advertise the route into the core.	mmary route (or	
	For details Series Rout	s on configuring track object, see System Management Configuration Guide for uters.	Cisco ASR 9000	

Task ID	Task ID	Operation	
	config-services	read,	
		write	

This example shows how to configure object tracking for detecting access connectivity for the specific SRG in MC-LAG scenario:

Configuring the track object:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# track mclag-bel
RP/0/RSP0/CPU0:router(config-track)# type line-protocol state
RP/0/RSP0/CPU0:router(config-track-line-prot)# interface Bundle-Ether1
```

Configuring that track object under the SRG which holds that particular interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)# access-tracking mc-lag-be1
```

Configuring access-tracking - Routing:

```
router static
address-family ipv4 unicast
200.0.0.0/16 Null0 track mc-lag-be1
address-family ipv6 unicast
20::/64 Null0 track mc-lag-be1
```

```
router isis 1
address-family ipv4 unicast
redistribute static
address-family ipv6 unicast
redistribute static
```

accounting interim variation

To introduce a random delay between successive interim accounting messages of sessions or services in BNG, use the **accounting interim variation** command in subscriber manager configuration mode. To remove this random delay, use the **no** form of this command.

accounting interim variation value

Syntax Description	value Interim timeout randomization value, in percentage.			
	The range is from 0 to 50. By default, this value is zero (0), which means there is no interim time randomization.			
Command Default	By default,	randomization is	s disabled.	
Command Modes	Subscriber 1	nanager configu	iration	
Command History	Release	Modification		-
	Release 5.2.2	This comman	nd was introduced.	-
Usage Guidelines	RandomIf inter of T (the second se	mization cannot im timeout is T s nat is, 0% varian	seconds, the value ace from T).	g randomization: small interim timeouts (that is, for timeouts less than 2 minutes). x is selected from an interval [L, T]. By default, L is 100 percent onds (that is, 15 minutes).
	<u> </u>			
Task ID	Task ID	Operation		
	config-servi	ices read, write		
	-		configure a rando	om delay of 50% variance between successive interim

accounting messages of sessions or services: RP/0/RSP0/CPU0:router# configure

RP/0/RSP0/CPU0:router(config)# subscriber manager RP/0/RSP0/CPU0:router(config-subscriber-manager)# accounting interim variation 50

bng-interface (subscriber)

To set the interface that need to be used as bng identifier, use the **bng-interface** command in the subscriber configuration mode.

bng-interface interface-name

Syntax Description	interface-nam	le		Specifies the interface that will be set as the bng-identifier. The IPv4/IPv6 address of this interface is used as the bng IP address.	
Command Default	None				
Command Modes	Subscriber cor	figuration			
Command History	Release	Modification			
	Release 6.5.1	This command	was introduced.		
Usage Guidelines	None				
Task ID	Task ID	Operation			
	config-services	read, write			
	This example shows how to set the bng-identifier interface.				
	RP/0/RSP0/CPU0:router(configure)# subscriber RP/0/RSP0/CPU0:router(config-subscriber)# bng-interface Loopback8				
Related Commands	Command			Description	
	http-enrichme	ent parameter-lis	st, on page 424	Enables http header enrichment feature for BNG subscribers.	
	http-enrichme page 426	ent parameter-lis	st (subscriber), on	Configures the primary list of all the parameters for http-enrichment.	

clear session-redundancy

To clear the sessions for an SERG use the clear session-redundancy command in EXEC mode mode.

	clearsession-redundancy [group <i>name</i> [interface <i>interface-type interface-name</i>]				
Syntax Description	interface-id	<i>l</i> Identifier value for the access i	nterface mapped to the subordinate SERG.		
Command Default	None				
Command Modes	Privileged E	Executive mode			
Command History	Release	Modification			
	Release 6.2.1	This command was introduced.			
Usage Guidelines	No specific	guidelines impact the use of this c	command.		
Task ID	Task ID Op	eration			
	network ex	ecute			

RP/0/RSP0/CPU0:router# clear session-redundancy group 1

clear subscriber session

To clear the subscriber sessions in BNG, use the clear subscriber session command in EXEC mode mode.

clear subscriber session {all | debug { subscriber-label } | identifier { access-interface interface-type interface-instance[{ipv4 | ipv6 IANA} ip-address] | interface interface-type interface-instance } } [location node-id]

Syntax Description	all	Clears all subscriber sessions.	
	debug subscriber-label	Clears debug tracking of unique subscriber session.	
	identifier	Clears the subscriber session information based on the identifier(s) you select.	
	access-interface	Clears the subscriber session based on the access interface name.	
	interface-type	Specifies the interface type whose subscriber sessions you want to delete. Specifies either a physical interface instance or a virtual interface instance that you want to delete.	
	interface-instance		
		The details of the interface instance are as follows:	
		 Physical interface instance. Naming notation is rack/slot/module/port and a slash between value is required as part of the notation. 	
		• <i>rack</i> : Chassis number of the rack.	
		• <i>slot</i> : Physical slot number of the modular services card or line card.	
		• <i>module</i> : Module number. A physical laye interface module (PLIM) is always 0.	
		• port: Physical port number of the interface	
		Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RPO or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.	
		 Virtual interface instance. Number range varie depending on interface type. 	

	ipv4		Clears the DHCP IPv4 subscriber session information specific to an interface and IPv4 network-address/prefix.			
	ipv6 IANA	<u> </u>	Clears the DHCP IPv6 subscriber session information specific to an interface and IPv6 address/prefix.			
	location		Clears the subscriber session information of a specific location.			
	node-id		Specifies the node whose subscriber sessions you want to delete. The node-id argument is entered in the rack/slot/module notation.			
Command Default	None					
Command Modes	EXEC mod	e				
Command History	Release	Modification				
	ReleaseThis command was modified to include the option to clear DHCP IPv6 IANA subscriber6.4.1sessions on an access-interface.					
	Release This command was introduced. 4.2.0					
Usage Guidelines	No specific	guidelines impact the use of this c	ommand.			
Task ID	Task ID Operation					
	network execute					
	This example shows how to clear all the subscriber sessions in a particular node location:					
	RP/0/RSP0/CPU0:router# clear subscriber session all location 0/RSP0/CPU0					
	This example shows how to clear DHCP IPv6 subscriber sessions on a particular access-interface:					
	This examp	ble shows how to clear DHCP IPv6	subscriber sessions on a particular access-interface.			
	RP/0/RSP0/		subscriber sessions on a particular access-interface.			
Related Commands	RP/0/RSP0/	/CPU0:router# clear subscribe :	-			

clear subscriber manager

To clear the subscriber managment internal manager information, use the **clear subscriber manager** command in EXEC mode.

clear subscriber managerservice-profileservice-name

Syntax Description	service-profile		Indicates the sububscriber management service profile information.	
	service-na	me service-name	Indicates the service name.	
Command Default	None			
Command Modes	EXEC			
Command History	Release	Modification		
	Release 6.3.3	This command introduced.	l was	
Usage Guidelines	database c Subscriber'' <i>service-nan</i>	onfiguration brie field. If the entry i <i>ne</i> command to cle	ice profile cache from the radius download. To do this, use the show subscriber of service-profile command to view the state of service in the "In Use By is "False", then use the clear subscriber manager service-profile service-name ear the service profile cache. If the entry is "True", then it indicates that the in use and therefore the service profile cache must not be cleared.	
Task ID	Task ID O			
	This examp	le shows how to c	clear the subscriber sessions.	

RP/0/RSP0/CPU0:router# clear subscriber manager service-profile service-name group1

clear subscriber srg

To clear the subscriber redundancy Group (SRG) subordinate and primary sessions use the **clear subscriber srg** command in EXEC mode mode.

clear subscriber srg { master | slave } session { all | afi { dual-partial-up | dual-up | in-progress | ipv4-only | ipv6-only | lac } | identifier { access-interface interface-type interface-instance [{ ipv4 | ipv6 IANA }] ipadress | interface interface-type interface-instance } | mac-address mac-address | subscriber-label id } [location node-id]

Syntax Description	master	Clears the subscriber management SRG primary information.
	slave	Clears the subscriber management SRG subordinate information.
	all	Clears all SRG primary or subordinate sessions.
	afi	Clears SRG primary or subordinate sessions based on the specified address-family.
		You can clear the SRG primary or subordinate sessions based on the following keywords:
		• dual-partial-up : Clears the dual stack subscriber sessions (IPv4 and IPv6) that are partially established.
		• dual-up : Clears the dual stack subscriber sessions (IPv4 + IPv6) that are fully established.
		• in-progress : Clears the subscriber sessions that are in progress.
		• ipv4-only: Clears the established single stack IPv4 subscriber.
		• ipv6-only: Clears the established single stack IPv6 subscriber sessions.
		• lac: Clears the L2TP subscriber sessions.
	identifier	Clears the SRG primary or subordinate sessions based on one or more identifiers you select.
	access-interface	Clears the SRG primary or subordinate sessions based on the access interface name.

	interface-type <i>interface-instance</i>	Specifies the int delete.	terface type whose SRG primary or subordinate sessions you want to			
		The details of the	ne interface instance are as follows:			
			terface instance. Naming notation is <i>rack/slot/module/port</i> and a slash alues is required as part of the notation			
		• Rack:	Chassis number of the rack			
		• slot: I	Physical slot number of the modular services card or line card			
	ipv4 ipv6 IANA location node-id		• <i>module</i> : Module number. A physical layer interface module (PLIM) is always 0.			
		• port:	Physical port number of the interface			
		Note	In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.			
		Virtual interface instance. Number range varies depending on interface type. Clears the DHCP IPv4 SRG primary or subordinate sessions specific to an interface and IPv4 network-address/prefix.				
		Clears the DHC and IPv6 addres	P IPv6 SRG primary or subordinate sessions specific to an interface ss/length.			
		Clears the SRG	primary or subordinate sessions of a specific location.			
		The node-id arg	gument is entered in the rack/slot/module notation.			
	mac-address	Clears the SRG	primary or subordinate sessions based on the MAC address specified			
	subscriber-label	Clears the SRG	primary or subordinate sessions based on the subscriber session ID			
Command Default	None					
Command Modes	Privileged Executive	mode				
Command History	Release Modification					
	Release This command was introduced. 6.5.2		uced.			
Usage Guidelines	Subscriber sessions s SRG subscriber sessi of all SRG subscriber	should always be ir ons manually. In an sessions using the c	aster session is equivalent to clear subscriber session. In sync between the SRG primary and subordinate. Don't clear all the exceptional situation, follow the recommended steps for safe clearing clear subscriber srg slave session all command. This example shows how to clear the SRG subordinate session based on identifier:

Router# clear subscriber srg slave session identifier access-interface bundle-ether 1 ipv4 192.1.1.1/24 location 0/0/1

This example shows how to clear the SRG subordinate session based on subscriber-label:

Router# clear subscriber srg slave session subscriber-label 1 location 0/0/1

This example shows how to clear the SRG subordinate session based on address family.

Router# clear subscriber srg slave session afi dual-partial-up location 0/0/1

This example shows how to clear all subscriber sessions manually for SRG subordinate sessions at the global configuration:

```
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1
RP/0/RSP0/CPU0(config-if)# shutdown
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy disable
RP/0/RSP0/CPU0:router#clear subscriber srg slave session all
```

RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# session redundancy

```
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1
RP/0/RSP0/CPU0(config-if)# no shutdown
```

This example shows how to clear all subscriber sessions manually for SRG master sessions at the global configuration:

```
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy switchover group 1
RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1
RP/0/RSP0/CPU0(config-if)# shutdown
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# disable
RP/0/RSP0/CPU0:router#clear subscriber srg master session all
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1
RP/0/RSP0/CPU0(config)# no shutdown
```

This example shows how to clear all subscriber sessions manually for SRG subordinate sessions at the group level configuration:

```
RP/0/RSP0/CPU0# configure
RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1
RP/0/RSP0/CPU0(config-if)# shutdown
```

RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# subscriber redundancy group 1 disable RP/0/RSP0/CPU0:router#clear subscriber srg slave session all

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy group 1

RP/0/RSP0/CPU0# configure RP/0/RSP0/CPU0(config)# interface Hu0/0/0/1 RP/0/RSP0/CPU0(config-if)# no shutdown

core-tracking

L

To configure an additional object for track connectivity to the core network (such as RADIUS or DHCP servers), and to initiate automatic switchover in the event of a BNG connectivity loss even while access is up or active, use the **core-tracking** command in subscriber redundancy group configuration mode. To remove the object tracking configuration, use the **no** form of this command.

core-tracking core-tracking-obj

Syntax Description	core-tracking-	obj Core trac	king object for the specific SRG.
Command Default	None		
Command Modes	Subscriber redu	indancy group	configuration.
Command History	Release	Modification	
	Release 5.2.2	This command	was introduced.
Usage Guidelines	This is an optio	nal command.	
Task ID	Task ID	Operation	
	config-services	read, write	
	This example s	nows how to co	onfigure object tracking for detect

This example shows how to configure object tracking for detecting core connectivity for the specific SRG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)# core-tracking route-to-radius
```

disable (BNG)

To disable BNG geo redundancy feature across all subscriber redundancy groups (SRGs) or session redundancy groups (SERG), use the **disable** command in the respective group configuration mode.

To disable a specific SRG/SERG, use the **disable** command in the respective group configuration mode. To remove the disable configuration, use the **no** prefix for this command.

disable

This command has no keywords or arguments.

Command Default	None subscriber redundancy	
Command Modes		
	subscriber redundancy group	
	session redundancy	
	session redundancy group	

Command History	Release	Modification
	Release 5.2.2	This command was introduced for SRG.
	Release 6.2.1	This command was introduced for SERG.

Usage Guidelines No specific guidelines impact the use of this command.

Operation

config-services read, write

Task ID

Subscriber Redundancy Group

This example shows how to disable geo redundancy feature for all SRGs:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# disable
```

This example shows how to disable a specific SRG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)# disable
```

Session Redundancy Group

This example shows how to disable geo redundancy feature for all SERGs:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# disable
```

This example shows how to disable a specific SERG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# disable
```

enable-fast-switchover

To enable traffic between peer-to-peer subscriber redundancy groups in BNG, use the **enable-fast-switchover** command in subscriber redundancy group configuration mode. To disable this feature, use the **no** form of this command.

enable-fast-switchover

Syntax Description	This command has no	keywords or arguments.
--------------------	---------------------	------------------------

Command Default	None

Command Modes Subscriber redundancy group configuration.

 Command History
 Release
 Modification

 Release
 This command was introduced.

 6.1.2

Usage Guidelines The enable-fast-switchover command must be configured prior to configuring state-control-route. If state-control-route is already configured, you must remove that configuration and re-configure it after enable-fast-switchover is configured.

Task ID	Task ID	Operation	
	config-services	read,	
		write	

This example shows how to enable traffic between peer-to-peer subscriber redundancy groups in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy group 110
RP/0/RSP0/CPU0:router(config-subscr-red-group)# enable-fast-switchover
```

hold-timer (BNG)

To configure the duration for which the dynamic switchover is suspended after a role change in BNG geo redundancy feature scenario, use the **hold-timer** command in subscriber/session redundancy configuration mode. To configure hold timer for a specific subscriber redundancy group (SRG) or a session redundancy group (SERG), use this command in the respective group configuration mode.

To remove the hold timer configuration, use the **no** prefix for this command.

hold-timer hold-timer **Syntax Description** hold-timer Hold timer value, in minutes. The range is from 1 to 65535. By default, the hold-time is zero. That is, back to back switchovers are allowed. **Command Default** Subscriber redundancy **Command Modes** Subscriber redundancy group Session redundancy Session redundancy group **Command History** Release Modification Release This command was introduced for SRG. 5.2.2 Release This command was introduced for SERG. 6.2.1 This is an optional command. **Usage Guidelines** Task ID Task ID Operation config-services read, write Session Redundancy Group

This example shows how to configure hold-timer across all SERGs, in BNG geo redundancy feature scenario:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# hold-timer 15
```

421

This example shows how to configure hold-timer for a specific SERG, in BNG geo redundancy feature scenario:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# hold-timer 20

holdtimer-default-disable

To disable the default hold timer configuration, use the holdtimer-default-disable command in subscriber redundancy configuration mode. To disable the default hold timer for a specific subscriber redundancy group (SRG), use this command in the respective group configuration mode.

To enable the default hold timer configuration, use the **no** prefix for this command.

holdtimer-default-disable

Syntax Description	This command	has no keyw	vords or arguments.	
Command Default	None			
Command Modes	Subscriber red	undancy		
	Subscriber red	undancy grou	up	
Command History	Release	Modification	1	-
	Release 7.2.1	This comma	nd was introduced for SRG.	-
Usage Guidelines	This is an optional command.			
-	the hold timer	based on the		Id-timer command, by default the system configures pecify the duration for which the dynamic switchover cy feature scenario.
Task ID	Task ID	Operation		
	config-services	s read, write		
	Session Redun	idancy Group	1	
	This example s	shows how to	o disable the default hold tir	ner:
	RP/0/RSP0/CP	U0:router#	configure	

RP/0/RSP0/CPU0:router(config)# session redundancy RP/0/RSP0/CPU0:router(config-session-red)# holdtimer-default-disable

This example shows how to disable the default hold timer for a group:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# holdtimer-default-disable
```

http-enrichment parameter-list

To enable the enrichment of the HTTP GET request header with the parameters specified and proxying of the enriched HTTP request, use the **http-enrichment parameter-list** action under the respective class-map in the policy-map configuration mode.

	http-enrichment parameter-list {bng-interfa	ace hostname subscriber-ip subscriber-mac}
Syntax Description	bng-interface	Specifies that the IPv4/IPv6 address of the interface that is configured as the BNG interface will be added as part of the enrichment header. If IPv4 address is not configured for the BNG interface it will be set as 0.0.0.0 and if IPv6 address is not configured it will be set as 0::0.
	hostname	Specifies that the hostname of the router will be added as enrichment header.
	subscriber-ip	Specifies that the subscriber's IPv4 and IPv6 address will be added as enrichment header.
	subscriber-mac	Specifies that the subscriber's MAC address will be added as enrichment header.
Command Default	None	
Command Modes	Policy-map configuration	
Command History	Release Modification	
	Release 6.5.1 This command was introduced.	
Usage Guidelines		le combinations of the defined parameters, that is,15 s required in the parameter list, the user will have to configure viously configured parameter-list.
Task ID	Task Operation ID	
	qos read, write	
	This example shows how to configure a PBR ba one of the classes.	used policy-map with http-enrichment enabled on

RP/0/RSP0/CPU0:router(configure) # policy-map type pbr http-enrichment-policy RP/0/RSP0/CPU0:router(config-pmap) # class type traffic open-garden-class RP/0/RSP0/CPU0:router(config-pmap-c) # transmit RP/0/RSP0/CPU0:router(config-pmap-c) # exit RP/0/RSP0/CPU0:router(config-pmap)# class type traffic http-enrich-class1 RP/0/RSP0/CPU0:router(config-pmap-c)# http-enrichment parameter-list subscriber-mac hostname bng-interface RP/0/RSP0/CPU0:router(config-pmap-c)# exit RP/0/RSP0/CPU0:router(config-pmap)# class class-default

RP/0/RSP0/CPU0:router(config-pmap-c)# drop

Related Commands	Command	Description
	http-enrichment parameter-list (subscriber), on page 426	Configures the primary list of all the parameters for http-enrichment.
	bng-interface (subscriber), on page 408	Specifies the interface that is the bng identifier.

http-enrichment parameter-list (subscriber)

To configure the primary list of all the parameters that are needed for http enrichment across all class-map http-enrichment actions, use the http-enrichment parameter-list command in the subscriber configuration mode.

	http-enrich	ment parameter-list {bng-interfa	ace hostname subscriber-ip subscriber-mac}
Syntax Description	n bng-interface		Specifies that the IPv4/IPv6 address of the interface that is configured as the BNG interface will be added as part of the enrichment header. If IPv4 address is not configured for the BNG interface it will be set as 0.0.0.0 and if IPv6 address is not configured it will be set as 0::0.
	hostname		Specifies that the hostname of the router will be added as enrichment header.
	subscriber-	ip	Specifies that the subscriber's IPv4 and IPv6 address will be added as enrichment header.
	subscriber-	mac	Specifies that the subscriber's MAC address will be added as enrichment header.
Command Default	None

	This exampl	e shows how to configure the prima	rv-list of http-enrichment parameters that are used

This example shows how to configure the primary-list of http-enrichment parameters that are used in http-enrichment actions configured across all class-maps.

RP/0/RSP0/CPU0:router(configure)# subscriber

RP/0/RSP0/CPU0:router(config-subscriber) # http-enrichment parameter-list subscriber-mac hostname bng-interface

Related Commands	Command	Description
	http-enrichment parameter-list, on page 424	Enables http header enrichment feature for BNG subscribers.
	bng-interface (subscriber), on page 408	Specifies the interface that is the bng identifier.

interface-list (BNG)

To configure the interface list (mapping list of all access ports) that are part of a specific subscriber redundancy group (SRG) or a session redundancy group (SERG), use the **interface-list** command in the respective group configuration mode. To remove the interface list configuration, use the **no** form of this command.

interface-list [interface interface-type interface-name {id interface-id | sub-if-range sub-if-start-range sub-if-end-range id-end-range id-end-range}]

Syntax Description	id Specifies the mapping identifier of the interface-list.			
		The identifier for particular interface must be same on both primary and subordinate nodes.		
	interface-id	Identifier value for the interface to be mapped on to the subordinate SRG/SERG.		
	sub-if-range	Specifies the range of sub-interfaces to be added for the given interface.		
	sub-if-start-ran	ge Start value of sub-interface range.		
		The range is from 0 to 2147483647.		
	sub-if-end-rang	<i>e</i> End value of sub-interface range.		
		The range is from 0 to 2147483647.Specifies the range of interface-list identifiers.Start ID of the interface to be mapped on to the SRG/SERG peer.The range is from 1 to 65535.End ID of the interface to be mapped on to the SRG/SERG peer.		
	id-range			
	id-start-range			
	id-end-range			
		The range is from 1 to 65535.		
Command Default	None			
Command Modes	Subscriber redu	lancy group configuration.		
Command History	Release N	lodification		
	Release T 5.2.2	his command was introduced for SRG.		
	Release T 6.2.1	his command was introduced for SERG.		
Usage Guidelines	Because BNG w the entire bundle	rorks only on sub-interfaces, it is required to configure sub-interfaces under SRG/SERG; no		
		n physical ports spanning different line cards (LC), or mix of physical port sub-interfaces an virtual interfaces like Pseudowire Headend) sub-interfaces is not allowed.		

One access sub-interface can belong to only one SRG/SERG.

Because the scope of mapping ID is only within a particular SRG/SERG, same ID can be used in a different SRG/SERG.

The ID assigned to sub-interfaces within an SRG/SERG is used for correlation or mapping of sub-interface pairings across the peer routers. This allows for pairing of different interface or port numbers or types across routers.

Access interfaces can also be explicitly configured even if those sub-interfaces are not existing. Those interfaces become operational under the SRG/SERG when they are actually created.

Removal or modification (for example, change of mapping ID) of sub-interfaces in SRG/SERG during runtime has the same effect of disabling redundancy on them. This results in corresponding sessions getting cleared on the subordinate side.

Task ID	Task ID	Operation
	config-services	read,
		write

Subscriber Redundancy Group

This example shows how to assign one or more access sub-interface under a subscriber redundancy group (SRG) in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)# interface-list
RP/0/RSP0/CPU0:router(config-subscr-red-grp-intf)# interface Bundle-Ether1.10 id 210
RP/0/RSP0/CPU0:router(config-subscr-red-grp-intf)# interface Bundle-Ether1.11 id 211
```

This example shows how to assign one or more access sub-interface (as a range) under an SRG in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red)# group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)# interface-list
RP/0/RSP0/CPU0:router(config-subscr-red-grp-intf)# interface Bundle-Ether1 sub-if-range 1
9 id-range 201 209
```

Session Redundancy Group

This example shows how to assign one or more access sub-interface under a session redundancy group (SERG) in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# interface-list
RP/0/RSP0/CPU0:router(config-session-red-grp-intf)# interface Bundle-Ether1.10 id 210
```

RP/0/RSP0/CPU0:router(config-session-red-grp-intf)# interface Bundle-Ether1.11 id 211

This example shows how to assign one or more access sub-interface (as a range) under an SERG in BNG:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# interface-list
RP/0/RSP0/CPU0:router(config-session-red-grp-intf)# interface Bundle-Ether1 sub-if-range 1
9 id-range 201 209

peer (BNG)

To configure the peer router for a subscriber redundancy group (SRG) or session redundancy group (SERG) in BNG, use the **peer** command in the respective group configuration mode.

To remove the peer router configuration, use the no prefix for this command.

peer peer-ip

Syntax Description The peer IPv4 or IPv6 address that is used to establish channel to the peering router in the peer-ip SRG/SERG. None **Command Default** Subscriber redundancy group configuration **Command Modes Command History** Release Modification Release This command was introduced for SRG. 5.2.2 This command was introduced for SERG. Release 6.2.1 The IPv4 or global IPv6 address of the source-interface configured on the peer router must be configured **Usage Guidelines** using this command. You must ensure that the configured addresses are reachable from the respective peer routers.

This example shows how to configure preferred role for a specific SERG as subordinate using the **slave** keyword, in BNG geo redundancy feature scenario:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# group 1
RP/0/RSP0/CPU0:router(config-session-red-group)# preferred-role slave
```

L

peer route-disable

To disable the route on geo redundancy hot-standby peer, so that the subscriber routes are not installed in the RIB even when the subscriber sessions are brought up on the standby peer, use the **peer route-disable** command in subscriber redundancy group configuration mode. To disable this feature, use the **no** form of this command.

peer route-disable

Syntax Description This command has no keywords or arguments.

Command Modes Subscriber redundancy group configuration.

Command History	Release	Modification
	Release 5.3.3	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operation
	config-services	read,
		write

None

Command Default

This example shows how to disable the route on geo redundancy hot-standby peer in BNG:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy group 110
RP/0/RSP0/CPU0:router(config-subscr-red-group)# peer route-disable

revertive-timer (BNG)

To set the auto-revertive timer in BNG to regain the primary role after a failover, use the **revertive-timer** in subscriber redundancy group configuration mode. To disable the timer, use the **no** form of this command.

revertive-timer timer-value maximum max-value

Syntax Description	timer-value	<i>timer-value</i> Specifies the timer value in minutes. The range is from 1 to 65535.					
	This value is doubled every time access tracking goes down after the first instance of auto-revert to the primary role. When the timer-value exceeds the <i>max-value</i> limit, it is reset to the originally configured value.						
	max-value	<i>ax-value</i> Specifies the maximum value until which the <i>timer-value</i> doubles for each instance of access down.					
Command Default	None						
Command Modes	Subscriber rec	Subscriber redundancy					
	Subscriber rec	Subscriber redundancy group					
	Session redundancy						
	Session redun	dancy group					
Command History	Release	Modification	n				
	Release 6.1.2	This comman	ind was introduced for SRG.				
	Release 6.2.1	This commar	nd was introduced for SERG.				
Usage Guidelines	The recommended value of <i>max-value</i> is 4 x <i>timer-value</i> .						
	If auto-revertive timer is configured at both subscriber redundancy level and at subscriber redundancy group level, the group level configuration takes precedence over the other.						
	Revertive-tim	er should not	be running in a primary node. If it does, it is an error condition.				
Task ID	Task ID	Operation					
	config-service	es read, write	- -				

Subscriber Redundancy Group

Subscriber Redundancy Group

This example shows how to configure source interface in subscriber redundancy sub-mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red) # source-interface loopback0
```

Session Redundancy Group

This example shows how to configure source interface in session redundancy sub-mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)# source-interface loopback0

session redundancy

To enable session redundancy feature globally in BNG and to enter the session redundancy configuration sub mode, use the **session redundancy** command in Global Configuration mode. To remove the configurations for session redundancy feature in BNG, use the **no** form of this command.

session redundancy

This command has no keywords or arguments.

Command Default	None						
Command Modes	Global cont	figuration.					
Command History	Release Modification						
	Release 6.2.1	This comman	d was introduced.				
Usage Guidelines	The option	slave-mode is no	ot supported in BN	G geo redundancy	. The default	redundancy mo	ode is hot-standby.
Task ID	Task ID	Operation					
	config-serv	ices read, write					
	This exame	ble shows how to	o enter session red	undancy sub mod	e to configur	e session redur	ndancy

This example shows how to enter session redundancy sub mode to configure session redundancy options:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy
RP/0/RSP0/CPU0:router(config-session-red)#
```

session redundancy group

To configure session redundancy group (SERG) in BNG, use the **session redundancy group** command in Global Configuration mode. To remove the session redundancy group configuration, use the **no** form of this command.

session redundancy group group-id [description line]

Syntax Description	group-id	<i>group-id</i> Group identifier name that needs to be configured on the BNG pair routers.					
	description	description Specifies the description for the specific SERG.					
	line	Description f	or the specific SERG, i	n words.			
Command Default	None						
Command Modes	Global config						
Command History	Release	Modification					
	Release 6.2.1	This comman	l was introduced.				
Usage Guidelines	For successfur routers.	ll peering betw	een the BNG pair route	rs, the same group-id must	be configured on both the		
	You can configure multiple groups (with unique IDs) for peering with the same peer router or across different peer routers.						
	The SERG do	bes not get acti	vated until the first acc	ess-interface is assigned unde	er it.		
Task ID	Task ID	Operation					
	config-service	es read, write					
	This example	shows how to	configure a session rec	lundancy group (SERG) in B	NG:		

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# session redundancy group 1
RP/0/RSP0/CPU0:router(config-session-red-group)#

session redundancy switchover

To execute session redundancy switchover in BNG, use the **session redundancy switchover** command in EXEC mode.

session redundancy switchover [{group group-num | location node-id}] [force]

Syntax Description	group	Specifies the session redundancy group (SERG) number to be switched over.					
	group-num	The SERG number.					
		The range is from 1 to 999.					
	location	Specifies a particular location to be switched over.					
	force	Specifies a forced switchover.					
Command Default	None						
Command Modes	Exec.						
Command History	Release	Modification					
	Release 6.2.1	This command was introduced.					
Usage Guidelines	The session redundancy activate command is currently not supported.						
	due to other implementat	s, the switchovers are triggered automatically by changes in the underlying access failures. This command is used for planned maintenance events or for exception ion of access-tracking is not possible or desired. It can be used to initiate switchover, or on a particular location or for a specific SERG.	al cases where				
	Switchover is triggered from the subordinate only when you choose the force option. The use of this option on either primary or subordinate overrides any negotiation or arbitration rules.						
	Even for manual (or admin-triggered) switchovers, it is highly recommended to initiate triggers through operations on the underlying access, to ensure consistency between the BNG and access roles or status. When switchover happens, logs that indicate the reason of the switchover, are generated on the system console and reported on a per SERG basis on both peering routers. After the switchover, you must check the SERG details on both peering routers to ensure consistency and to ensure that session service is not interrupted.						
	You must ensure consistency between the roles of the underlying access interfaces (active-standby or up-down) and the BNG SERG role (primary or subordinate). Failing this, the traffic may get disrupted especially when a proper access-tracking is not used.						
	To ensure network and service stability, it is recommended not to perform back to back switchovers (even though the feature allows it). After a reload, you must ensure sufficient stabilization time for any router or line card (LC) recovery and sync. Until then it must only be in subordinate or standby mode (through a hold-time or pre-empt mechanism in the underlying access). Depending on the integration aspects with RADIUS or PCRF, accounting updates may be sent from both primary and subordinate after the switchover. Therefore, it is recommended to give sufficient time for these operations to complete and stabilize.						

Task ID

Task IDOperationnetworkread,
write

This example shows how to initiate session redundancy switchover for a particular SERG:

RP/0/RSP0/CPU0:router# session redundancy switchover group 210

session redundancy synchronize

To initiate or verify synchronization or consistency between sessions on the primary and subordinate routers in a session redundancy scenario in BNG, use the **session redundancy synchronize** command in EXEC mode.

session redundancy synchronize [{**group** *group-num* | **location** *node-id*}]

Syntax Description	group	Specifies the session redundance	ey group (SERG) number to be synchronized.				
	group-num	The SERG number.					
		The range is from 1 to 999.					
	location	Specifies a particular location t	o be synchronized.				
Command Default	None						
Command Modes	Exec.						
Command History	Release	Modification					
	Release 6.2.1	This command was introduced.					
Usage Guidelines	Synchronization may be required in these scenarios:						
	• When errors are detected between primary and subordinate due to transient resource constraints.						
	• To fix in subordi		BNG or the SERG configuration is changed	on primary or			
	• Prior to performing a planned or admin-initiated maintenance activity.						
	This comma		on the router, or on a particular location or for y or subordinate (recommendation is to give o equired).				
	time for any		icate the status of synchronization. However, is ed and it must be verified using show session s rned session.	•			
Task ID	Task ID Op	eration					
	network rea wri						
	This example	e shows how to initiate session re	edundancy synchronization for a particular SE	RG:			

RP/0/RSP0/CPU0:router# session redundancy synchronize group 210

state-control-route

	To control the route advertisement to the core network, based on the role of the subscriber redundancy group (SRG), use the state-control-route command in subscriber redundancy group configuration mode. To disable this feature, use the no form of this command.							
	<pre>state-control-route {ipv4 ipv4-address ipv6 {iana iapd} ipv6-address} [vrf vrf-name] [tag tag-value]</pre>							
	no state-control-route {ipv4 <i>ipv4-address</i> ipv6 {iana iapd} <i>ipv6-address</i> } [vrf <i>vrf-name</i>] [tag <i>tag-value</i>]							
Syntax Description	tag <i>tag-value</i> Specifies the option to filter out summary routes to be redistributed through the routing protocol, to get advertised to the core.							
	vrf <i>vrf-name</i> Specifies the option to add summary route for a specific VRF, for a subscriber.							
	See Usage Guidelines section for more details.							
Command Default	Disabled							
Command Modes	Subscriber redundancy group							
Command History	Release Modification							
	Release 6.1.2 This command was introduced.							
	Release 6.3.1 Added the support for vrf option, as part of the support for multiple state control route for each subscriber redundancy group (SRG).							
Usage Guidelines	The route-policy with the respective tag (that is, tag 1 in this example) must be already defined, before configuring the state-control-route command.							
	The vrf <i>vrf-name</i> option helps to add state control routes in VRF routing table. If the vrf option is not specified, then the routes are added in the default VRF, that is, global routing table.							
	A maximum of 30 state control routes can be added in each subscriber redundancy group (SRG), with a limit of 10 state control routes for each route type. That is, user can have a maximum 10 IPv4 routes, 10 IANA routes and 10 IAPD routes in each SRG. In these 30 routes, user can have routes in either the default or the non-default VRF.							
Task ID	Task ID Operation							
	config-services read, write							
	This example shows how to filter out the summary routes to be advertised to the core:							

RP/0/RSP0/CPU0:router(config-subscr-red-group)#state-control-route ipv4 192.0.2.0/9 tag 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)#state-control-route ipv6 iana 2001:DB8::/32

tag 1
RP/0/RSP0/CPU0:router(config-subscr-red-group)#state-control-route ipv6 iapd 2001:DB8:1::1/32
tag 1

This example shows how to add multiple summary routes for each SRG:

RP/0/RSP0/CPU0:router(config-subscr-red-group)#state-control-route ipv4 192.0.2.0/9 vrf
vrf-name tag 1

L

subscriber arp scale-mode-enable

To prevent default ARP entry creations (mainly in deployment scenarios where the unnumbered subscriber access-interfaces inherit all the attributes, including the secondary IP addresses, from the associated loopback interface) per subscriber interface, use the **subscriber arp scale-mode-enable** command in Global Configuration mode. To disable this feature, use the **no** form of this command.

subscriber arp scale-mode-enable

	This example sl	nows how to en	nable uncondition	onal proxy ARP responses in BNG:		

RP/0/RSP0/CPU0:router# configure

RP/0/RSP0/CPU0:router(config) # subscriber arp uncond-proxy-arp-enable

subscriber database

Due to the occurrence of multiple events on the line cards, subscriber feature programming time varies. Sometimes, the line card is too busy in processing local events. This results in a large backlog for subscriber control plane activities. The backpressure-level parameter in subscriber database policy blocks new subscribers from coming up, if the XR infrastructure is not able to complete the operations in a timely fashion. Whereas, the batch-control parameter defines how long the system has to wait before generating the batches.

subscriber database [backpressure-level | batch-control] Syntax Description backpressure-level Higher level, aggressive back pressure mechanism. Values range from 0-3 seconds. Default is 2 seconds. 0-Disable. Does not perform adaptive handling of slow hardware. 1-Stops new subscriber programming, if the average time of hardware programming exceeds 37 seconds. Resumes after it drops to 29 seconds. 2-Stops new subscriber programming, if the average time of hardware programming exceeds 23 seconds. Resumes after it drops to 19 seconds. 3-Stops new subscriber programming, if the average time of hardware programming exceeds 17 seconds. Resumes after it drops to 13 seconds Higher level, better batching, more delay. batch-control Starting from Release 7.4.1, the following values are supported: Values range from 0-4. Default is 0. • 0-Disable. Subscribers are processed in batches of 50ms. 1-Subscribers are processed in batches of 100ms. 2-Subscribers are processed in batches of 200ms. 3-Subscribers are processed in batches of 400ms. • 4-Subscribers are processed in batches of 650ms. Note The following are the values supported, prior to Release 7.4.1: Values range from 0-4. Default is 4. 0-Disable. Subscribers are processed in batches of 75ms. 1-Subscribers are processed in batches of 150ms. 2-Subscribers are processed in batches of 300ms. • 3-Subscribers are processed in batches of 600ms. 4-Subscribers are processed in batches of 1000ms.

Command Default 2 for subscriber database backpressure-level and 4 for subscriber database batch-control.

Command History	Release	Modification
	Release 6.6.3	This command was introduced.
	Release 7.4.1	The value for the batch-control keyword was modified.

Usage Guidelines

Do not modify the default values unless explicitly suggested by Cisco TAC.

Configuring subscriber database parameters

```
RP/0/RSP0/CPU0:router(config)#subscriber database ?
backpressure-level backpressure level
batch-control batching performance control
RP/0/RSP0/CPU0:router(config)#subscriber database batch-control ?
<0-4> higher level, better batching, more delay. <0 - disable>
RP/0/RSP0/CPU0:router(config)#subscriber database batch-control 0
RP/0/RSP0/CPU0:router(config)#commit
```

subscriber featurette dhcp-renew-author

To enable AAA authorization during subscriber session lease renewal, use the **subscriber featurette dhcp-renew-author** command in Global Configuration mode. To disable this feature, use the **no** form of this command.

 subscriber featurette dhcp-renew-author

 Syntax Description
 This command has no keywords or arguments.

 Command Default
 None

virtual-mac-prefix, on page 463	Configures the gateway MAC (for the subscribers) used by BNG while being in primary redundancy mode.

virtual-mac-disable

To disable the inheritance of the virtual MAC prefix for a specific subscriber redundancy group (SRG), use the virtual-mac-prefix command in subscriber redundancy group configuration mode. To re-enable the inheritance of the virtual MAC prefix, use the no form of this command.

virtual-mac-disable

Syntax Description	This command has no	keywords or arguments.
--------------------	---------------------	------------------------

Command Default	None
Command Madaa	Subscriber redundancy group configuration

None

Subscriber redundancy group configuration. Command Modes

Command History Release Modification Release This command was introduced. 5.2.2

The virtual MAC configuration must be done before any subscriber session is set up because any change in **Usage Guidelines** this configuration affects the gateway MAC as seen by the CPE devices causing service disruption of existing sessions.

Task ID	Task ID	Operation
	config-services	read,
		write

This example shows how to disable the inheritance of the virtual MAC prefix for a specific subscriber redundancy group in BNG:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# subscriber redundancy
RP/0/RSP0/CPU0:router(config-subscr-red) # group 1
RP/0/RSP0/CPU0:router(config-subscr-red-group) # virtual-mac-disable
```

virtual-mac-prefix

To configure the gateway MAC (for the subscribers) used by BNG while being in primary redundancy mode, use the **virtual-mac-prefix** command in subscriber redundancy configuration mode. To remove this configuration, use the **no** form of this command.

virtual-mac-prefix virtual-mac

		L				
Syntax Description	<i>virtual-mac</i> Virtual mac prefix address.					
Command Default	None					
Command Modes	Subscriber r	edundancy configu	aration.			
Command History	Release	Modification				
	Release 5.2.2	This command w	was introduced.			
Usage Guidelines		The virtual MAC configuration must be done before any subscriber session is set up because any change in this configuration affects the gateway MAC as seen by the CPE devices causing service disruption of existing sessions.				
	The virtual MAC configuration is required for access protocols such as MST-AG, G.8032 and so on, where interface MAC is not same for the two peering routers.					
	The easiest way to provision virtual MAC is to select a locally-administered unicast MAC prefix (the last four digits must be zero (0)) and configure it on all redundant BNGs. This ensures that each subscriber redundancy group (SRG) gets its own vMAC, which is offset by the group ID, automatically.					
			vely be configured for a specific SRG by using virtual-mac command in configuration sub-mode.			
Task ID	Task ID	Operation				
	config-servi	ces read, write				
	This example shows how to configure virtual MAC prefix in a subscriber redundancy feature scenario in BNG:

	virtual-mac,	, on page 461	Configures the virtual MAC explicitly for a specific subscriber redundancy group (SRG), while BNG being in primary redundancy mode.			

show sessionmon license

To display the subscriber session statistics required for BNG Smart Licensing, use the **show sessionmon license** command in the EXEC mode.

show sessionmon license [detail] statistics

Syntax Description	statistics Displays the peak hour session statistics.						
	detail	(Optional) Displays the peak hour statistics.	detailed sessi	on statistics that include current statistics along with the			
Command Default	None						
Command Modes	EXEC mod	le					
Command History	Release	Modification					
	Release 6.1.2	This command was in	troduced.				
Usage Guidelines		One license is required for every group of 8000 subscribers or a fraction of it. For example, two licenses are required for 9000 subscribers.					
	The license	e is consumed based on the	he peak count	and not on the current count.			
Task ID	Task ID 0	peration					
	network re	ead					
	This is a sample output of the show sessionmon license statistics command for non-Geo redundancy sessions. Here, two A9K-BNG-LIC-8K licenses are triggered for active sessions, as the session count is more than 8000.						
		ow sessionmon license 1 18:34:10.726 IST	statistics

```

- -

Field	Description
Active	Number of active session on the router.
Standby	Number of standby session on the router.
Current	Current session count.
Peak (24 hours)	Peak number of session within a 24 hour time frame.

show subscriber database

To display the configuration details of subscriber database, use the **show subscriber database** command in the EXEC mode.

show subscriber database {association | configuration | connection | interface | session {state | subscriber-label label} | statistics | summary}

association	Displays the association between subscriber sessions and dynamic templates.			
configuration	Displays the configuration database information.			
connection	Displays subscriber client connection identifiers.			
interface	Displays the mapping between subscriber labels and interface handles.			
statistics	Displays the show subscriber database statistics information.			
summary	Displays the show subscriber database summary counts.			
None				
EXEC mode				
Release	Modification			
Release 4.2.0	This command was introduced.			
	A new output field, <i>Template Interface Id</i> , was added to show subscriber database sessi subscriber-label command, to indicate whether the subscriber uses templates or not.			
If the <i>Template Interface Id</i> field displays a value of 0x00000000, it indicates that the subscriber is not using templates. If that field displays a non-zero value (for example, 0x00802c80), it indicates that the subscriber is using template with that particular interface-handle value.

show subscriber database template

To display the template interface handle and template session information of a subscriber session, use the **show subscriber database template** command in the EXEC mode.

show subscriber database template [{**parent-if-handle** *if-handle* | **parent-if-name** *interface-type interface-name*}] [**location** *node-id*]

Syntax Description	parent-if-handle (Optional) Specifies parent interface handle.						
	<i>if-handle</i> Hex value of parent interface handle. The range is from 0 to ffffffff.						
	parent-if-name (Optional) Specifies the parent interface name.						
	<i>interface-type</i> Specifies the interface type.						
	interface-name						
	location (Optional) Displays the node location by interface.						
	node-id	Displays the fully qualified location specification of an interface.

show subscriber feature accounting

To display the feature accounting information of the subscriber, use the **show subscriber feature accounting** command in the EXEC mode.

show subscriber feature accounting ma {**statistics debug** [location location] | **subscriber-label** subscriber-id | **summary** [location location] | **trace** {**all** | **error** | **event**}}

Syntax Description	ma		splays the subscriber accounting feature anagement agent information.
	statistics	Di	splays the accounting feature statistics.
	debug	Di	splays the debug statistics.
	location	Sp	becifies the location of the node.
	location	Fu	Ily qualified location name.
	subscriber-	abel Sp	pecifies the unique subscriber ID.
	subscriber-i	d ID	of the subscriber, in hexadecimal.
	summary trace all error event		Displays the summary data.Displays the accounting feature ltrace data.Displays trace of all errors and events.Displays trace of errors.Displays trace of events.
Command Default	None		
Command Modes	EXEC mode		
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
	Release 5.1	The show command output was extended t	o display session Idle Timeout feature information
	Release 5.3.0	The show command output was extended	to display the prepaid feature information.
Usage Guidelines	No specific g	uidelines impact the use of this command.

This is the sample output of the **show subscriber feature accounting** command in the EXEC mode mode:

```
RP/0/RSP0/CPU0:router# show subscriber feature accounting ma subscriber-label 0x40
Subscriber Label: 0x40 Interface: Gi0/0/0/0.pppoel
Feature: Session Accounting Method-list: default
Feature: Session Idle Timeout
Timeout value: 200 seconds
Threshold value: 3 minutes per packet
Timeout direction: both
```

This table describes the significant fields displayed in the **show subscriber feature accounting** command output :

Field	Description
Timeout value	Specifies the timeout value configured for that particular subscriber session.
Threshold value	Specifies the threshold value configured for that particular subscriber session, to decide on the duration of the session inactivity.
Timeout direction: both	Specifies that both the ingress and egress traffic is considered for the determination of the idle time for that particular subscriber session.

This is a sample output of the **show subscriber feature accounting** command, with the DIAMETER prepaid feature configured:

RP/0/RSP0/CPU0:router# show subscriber feature accounting ma subscriber-label 0x42

Subscriber L	abel: 0x42 In	terface: Gi0/0/0/0.	pppoe3		
Feature: Session Accounting Method-list: default Periodic interval: 3000					
	Feature: Service Accounting Service-ID: 0x4000004 Method-list: default Periodic interval: 6000				
Flow Label: 0x4 Direction: Both Ingress and Egress Feature: Prepaid Prepaid-Config: foo4

show subscriber redundancy group

To display the operational summary (including the active subscriber sessions under each subscriber redundancy group (SRG) and the transient sessions awaiting synchronization to the peer) of all the configured SRGs, use the **show subscriber redundancy group** command in the EXEC mode mode.

show subscriber redundancy group [group-id [{session | tunnel}]] [location node-id]

Syntax Description	group Displays the summary information of all SRGs.				
	group-id Displays the detailed information of a specific SRG.				
	session Displays the key in	information about the sessions active under the SRG.			
	tunnel Displays the tunne	el information specific to each SRG group.			
Command Default	_ None				
Command Modes	EXEC				
Command History	Release	Modification			
	Release 5.3.2	This command was modified to add the new keyword tunnel .			
	Release 5.2.2	This command was introduced.			
Usage Guidelines	The details listed under the show subscriber redundancy group command for a specific SRG include:				
	Various applied operational parameters.				
	• Details of tracking objects registered on the SRG and their status. This shows if it is configured or not, if it is set in the SRG but unknown because the tracking object is not configured and shows the current status of object as reported.				
	• Details about the peer that include the status of connection and info (for example, its tracking status and roles) that it provided to this router in the previous negotiation, the timestamp of last negotiation and the time when the peer went up or down.				
	• Details about switchover that include the last role change along with the reason, number of switchovers and information regarding hold-timer (whether the timer is currently running and if running, the remaining time).				
	• The active subscriber session statistics and any pending updates or deletions to be sent to the peer.				
	• The session entries that experienced failures in synchronization with the peer. Generally, this may be seen on the subordinate where provisioning failed due to configuration mismatch or due to some other resource constraints.				
	• The number and list of ac	ctive access sub-interfaces under the SRG.			

The retry mechanisms of the subscriber redundancy feature take care of recovery from transient errors. Also, logs with more details on the specific errors are generated for persistent synchronization errors.

This is a sample output of the **show subscriber redundancy group** command:

RP/0/RSP0/CPU0:router#show subscriber redundancy group

Subscriber Redundancy Agent Group Summary

Session Summary Count(Master/Slave/Total): 8000/8000/16000

This table describes the significant fields shown in the display:

Field	Description
Initialize	Initial state when some configuration is incomplete or SRG is disabled.
Connecting or Listening or Registering	During the process of TCP connection establishment between client and server.
Connected or Established	TCP connection is done and moves to steady state after role negotiation.
Retry or Cleanup	Transient error conditions.

This is a sample output of the **show subscriber redundancy group** command that displays the key information about the sessions active under the SRG:

RP/0/RSP0/CPU0:router#show subscriber redundancy group 210

```
Subscriber Redundancy Group ID: 210
Description : <<not-configured>>
Status : Enabled
Init-Role : Master
```

Negotiated-Role	: Master	Current-Role :	Master

Command

show subscriber redundancy group, on page 486 Displays the operational summary of subscriber redundancy groups.

Description

show subscriber running-config

To display the subscriber running configuration derived from dynamic template, use the **show subscriber running-config** command in EXEC mode.

show subscriber running-config {location | subscriber-label}

Syntax Description	location	Displays subscriber database running configuration information for all sessions at specific location.
	subscriber-label	Allows to enter a hex value subscriber-value that ranges between 0X0-0xffffffff.
	Specifies the output modifiers.	
Command Default	None	
Command Modes	EXEC mode	
Command History	Release Mo	dification
	Release Thi 4.2.0	is command was introduced.
Usage Guidelines	No specific guide	lines impact the use of this command.
Task ID	Task ID Operation	- 1

show subscriber session filter

To show the search results of the subscriber sessions database based on the filter criteria, use the **show subscriber session filter** command in the EXEC mode.

show subscriber session filter [interface type interface-path-id | ipv4-address ipv4_address | ipv6-address IANA ipv6_address | mac-address mac_address | state subscriber_state | username user_name | vrf vrf_name] [detail | location]

Syntax Description	interface	Filters on local subscriber interface name.	
	ipv4-address	Filters on subscriber IPv4 address.	
	ipv6-address IAN	• Filters on subscriber IPv6 IANA address.	
	mac-address	Filters on subscriber MAC address.	
	state	Filters on subscriber session state.	
	username	Filters on user name.	
	vrf	Filters on subscriber within a particular vrf.	
Command Default	None		
Command Modes	EXEC		
Command History	Release Modi	ication	
		command was modified to include an option to riber sessions.	o display the output for DHCP IPv6 IANA
	Release This c 4.2.0	command was introduced.	
Usage Guidelines		d, you must be in a user group associated wit user group assignment is preventing you from sistance.	• •
	Use the dynamic-te	mplate command to enter dynamic template	configuration mode.
Task ID	Task ID Ope	ration	
	network read		
	config-services read	 I
