MACsec Encryption Commands

This module describes the commands used to configure MACsec encryption.

Command History

Release	Modification
Release 5.3.2	The following commands were introduced. • cipher-suite • conf-offset • key-server-priority • lifetime • macsec • macsec-policy • security-policy • window-size
Release 6.0.1	The vlan-tags-in-clear command was introduced.
Release 6.1.2	macsec-service command was introduced.
Release 6.1.3	The following commands were introduced. • key chain • fallback-psk-keychain

allow (macsec)

To specify MACsec policy exception to allow packets in clear text, use **allow** command under MACsec policy configuration mode. To remove this configuration, use the **no** form of this command.

allow lacp-in-clear

Syntax Description

lacp-in-clear	Allows Link Aggregation Control Plane protocol (LACP) packets in clear text.

Command Default

None

Command Modes

MACsec policy configuration mode

Command History

Release	Modification
Release 7.3.1	This command was introduced.

Usage Guidelines

The **policy-exception lacp-in-clear** command under MACsec policy configuration mode is deprecated. Hence, it is recommended to use the **allow lacp-in-clear** command instead, to allow LACP packets in clear-text format.

Task ID

Task ID	Operations
system	read, write

Examples

This example shows how to create a MACsec policy exception to allow LACP packets in clear text:

```
Router#configure
Router(config)#macsec-policy P1
Router(config-macsec-policy-P1)#allow lacp-in-clear
Router(config-macsec-policy-P1)#commit
```

cipher-suite

Configures the cipher suite for encrypting traffic with MACsec in the MAcsec policy configuration mode.

The first portion of the cipher name indicates the encryption method, the second portion indicates the hash or integrity algorithm, and the third portion indicates the length of the cipher (128/256).

To disable this feature, use the **no** form of this command.

cipher-suite *encryption_ suite*

Syntax Description

encryption_suite	The GCM encryption method that uses the AES encryption algorithm. The available encryption suites are: • GCM-AES-128 • GCM-AES-256 • GCM-AES-XPN-128 • GCM-AES-XPN-256

Command Default

The default cipher suite chosen for encryption is GCM-AES-XPN-256.

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **cipher-suite** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# cipher-suite GCM-AES-XPN-256
RP/0/RSP0/CPU0:router(config-mac_policy)#
```

conf-offset

Configures the confidentiality offset for MACsec encryption in the MACsec policy configuration mode.

To disable this feature, use the **no** form of this command.

conf-offset *offset_value*

Syntax Description

offset_value	Configures the offset value. The options are: • CONF-OFFSET-0 : Does not offset the encryption • CONF-OFFSET-30: Offsets the encryption by 30 characters • CONF-OFFSET-50: Offsets the encryption by 50 characters.

Command Default

Default value is 0.

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **conf-offset** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# conf-offset CONF-OFFSET-30
RP/0/RSP0/CPU0:router(config-mac_policy)#
```

cryptographic-algorithm (MACsec)

Configures the cryptographic algorithm used for authenticating a peer for MACsec encryption in the Keychain-key configuration mode.

To disable this feature, use the **no** form of this command.

cryptographic-algorithm *authentication algorithm*

Syntax Description

authentication algorithm	Configures the 128-bit or 256-bit AES encryption algorithm.

Command Default

No default behavior or values.

Command Modes

Keychain-key configuration.

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

If you do not specify the cryptographic algorithm, MAC computation and API verification would be invalid.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **cryptographic-algorithm** command for MACsec Encryption:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
11111111111111111111111111111111 cryptographic-algorithm aes-256-cmac
```

Examples

The following example shows how to use the **AES-128-CMAC authentication algorithm** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678 cryptographic-algorithm aes-128-cmac
```

Examples

The following example shows how to use the **AES-256-CMAC authentication algorithm** command:

```
RP/0/RSP0/CPU0:router#configure
RP/0/RSP0/CPU0:router# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec) # key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
aes-256-cmac
```

enable-legacy-fallback

To enable interoperability with peer devices that do not support MACsec active fallback feature, use the **enable-legacy-fallback** command in MACsec policy configuration mode. To remove the configuration, use the **no** form of this command.

enable-legacy-fallback

Syntax Description

This command has no keywords or arguments.

Command Default

Disabled, by default.

Command Modes

MACsec policy configuration mode

Command History

Release	Modification
Release 6.7.2	This command was introduced for Cisco IOS XR 32-bit platforms.
Release 7.1.2	This command was introduced for Cisco IOS XR 64-bit platforms.

Usage Guidelines

For more details on MACsec active fallback feature, see the *Fallback PSK* section in the *Configuring MACsec Encryption* chapter in the *System Security Configuration Guide for Cisco ASR 9000 Series Routers*.

Task ID

Task ID	Operation
system	read, write

This example shows how to enable interoperability with peer devices that do not support MACsec active fallback feature:

```
Router#configure
Router(config)#macsec-policy P1
Router(config-macsec-policy-P1)#enable-legacy-fallback
Router(config-macsec-policy-P1)#commit
```

fallback-psk-keychain

To create or modify a fallback psk keychain key, use the **fallback-psk-keychain** command in keychain-key configuration mode.

To disable this feature, use the **no** form of this command.

fallback-psk-keychain *key-id*

Syntax Description

key-id	64-character hexadecimal string.

Command Default

No default behavior or values.

Command Modes

Key chain configuration

Command History

Release	Modification
Release 6.1.3	This command is introduced.

Usage Guidelines

The key must be of even number of characters. Entering an odd number of characters will exit the MACsec configuration mode.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **key** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router# fallback-psk-keychain fallback_mac_chain
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
```

key

To create or modify a keychain key, use the **key** command in keychain-key configuration mode. To disable this feature, use the **no** form of this command.

key *key-id*

Syntax Description

key-id	64-character hexadecimal string.

Command Default

No default behavior or values.

Command Modes

Key chain configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

The key must be of even number of characters. Entering an odd number of characters will exit the MACsec configuration mode.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **key** command:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
```

key chain

To create or modify a keychain, use the **key chain** command in the key chain configuration mode.

To disable this feature, use the **no** form of this command.

key chain *key-chain-name*

Syntax Description

key-chain-name	Specifies the name of the keychain. The maximum length is 32 (128-bit encryption)/64 (256-bit encryption) character hexadecimal string.

Note If you are configuring MACsec to interoperate with a MACsec server that is running software prior to IOS XR 6.1.3, then ensure that the MACsec key length is of 64 characters. If the key length is lesser than 64 characters, authentication will fail.

Command Modes

Key chain configuration

Command Default

No default behavior or values

Command History

Release	Modification
Release 5.0.0	This command was introduced.

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how you can configure a key chain for MACsec encryption:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)#
```

key-string

To specify the text string for the key, use the **key-string** command in keychain-key configuration mode.

To disable this feature, use the **no** form of this command.

key-string [{**clear** | **password**}] *key-string-text*

Syntax Description

clear	Specifies the key string in clear-text form.
passwordpassword	Specifies the key in encrypted form.
key-string-text	Text string for the key, which is encrypted by the parser process before being saved to the configuration. The text string has the following character limitations: • Plain-text key strings—Minimum of 1 character and a maximum of 32 (128-bit encryption)/64 (256-bit encryption) characters (hexadecimal string). • Encrypted key strings—Minimum of 4 characters and no maximum.

Command Default

The default value is clear.

Command Modes

Key chain configuration

Command History

Release	Modification
Release 5.0.0	This command was introduced.

Usage Guidelines

For an encrypted password to be valid, the following statements must be true:

- String must contain an even number of characters, with a minimum of four.
- The first two characters in the password string must be decimal numbers and the rest must be hexadecimals.
- The first two digits must not be a number greater than 53.

Either of the following examples would be valid encrypted passwords:

1234abcd

or

50aefd

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **keystring** command:

```
! For AES 128-bit encryption

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678 cryptographic-algorithm AES-128-CMAC

! For AES 256-bit encryption

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
1234567812345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
AES-256-CMAC
```

key-server-priority

Configures the preference for a device to serve as the key server for MACsec encryption in the MACsec policy configuration mode. To disable this feature, use the **no** form of this command.

key-server-priority *value*

Syntax Description

value	Indicates the priority for a device to become the key server. Lower the value, higher the preference. The range is 0-255.

Command Default

Default value is 16.

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **key-server-priority** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# key-server-priority 16
RP/0/RSP0/CPU0:router(config-mac_policy)#
```

lifetime

Configures the validity period for the MACsec key or CKN in the Keychain-key configuration mode. To disable this feature, use the **no** form of this command.

The lifetime period can be configured with a duration in seconds, as a validity period between two dates (for example, Jan 01 2014 to Dec 31 2014), or with an infinite validity.

The key is valid from the time you configure in HH:MM:SS format. Duration is configured in seconds.

When a key has expired, the MACsec session is torn down and running the **show macsec mka session** command does not display any information. If you run the **show macsec mka interface** and **show macsec mka interface detail** commands, you can see that the session is unsecured.

lifetime *start_time start_date*
{
end_time end_date |
duration *validity* | **infinite**
}

Syntax Description

start-time	Start time in hh:mm:ss from which the key becomes valid. The range is from 0:0:0 to 23:59:59.
end-time	End time in hh:mm:ss at which point the key becomes invalid. The range is from 0:0:0 to 23:59:59.
start_date	The date in DD month YYYY format that the key becomes valid.
end_date	The date in DD month YYYY format that the key becomes invalid.
duration *validity*	The key chain is valid for the duration you configure. You can configure duration in seconds.
infinite	The key chain is valid indefinitely.

Command Default

No default behavior or values

Command Modes

Keychain-key configuration

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **lifetime** command:

```
! For AES 128-bit encryption

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
12345678123456781234567812345678 cryptographic-algorithm AES-128-CMAC
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# lifetime 05:00:00 20 february
 2015 12:00:00 30 september 2016

! For AES 256-bit encryption

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# key-string
1234567812345678123456781234567812345678123456781234567812345678 cryptographic-algorithm
AES-256-CMAC
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)# lifetime 05:00:00 20 february
 2015 12:00:00 30 september 2016
```

macsec

Enables MACsec on the router in the keychain configuration mode. To disable this feature, use the **no** form of this command.

macsec [**key** *key-id*]

Syntax Description

key-id	The key can be up to 64 bytes in length. The configured key is the CKN that is exchanged between the peers.

Command Default

No default behavior or values.

Command Modes

Keychain configuration

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Usage Guidelines

From Cisco IOS XR Software Release 6.7.2, Release 7.1.2 and later, the MACsec key IDs are considered to be case insensitive. These key IDs are stored as uppercase letters. For example, a key ID of value 'FF' and of value 'ff' are considered to be the same, and both these key IDs are now stored in uppercase as 'FF'. Whereas, prior to Release 6.7.2 and Release 7.1.2, both these values were treated as case sensitive, and hence considered as two separate key IDs. However, the support for this case insensitive IDs is applicable only for the configurations done through CLI, and not for configurations done through Netconf protocol. Hence, it is recommended to have unique strings as key IDs for a MACsec key chain to avoid flapping of MACsec sessions.

For example, the key IDs ('FF' and 'ff') in this example are not unique (although one is in uppercase and other is in lowercase), and hence this might cause a MACsec session flap.

```
key chain 1
 macsec
  key FF
   lifetime 02:01:01 may 18 2020 infinite
  !
  key ff
   lifetime 01:01:01 may 18 2020 infinite
```

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **macsec** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# key chain mac_chain macsec
```

```
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec)# key 1234abcd5678
RP/0/RSP0/CPU0:router(config-mac_chain-MacSec-1234abcd5678)#
```

macsec-service

Configures a MACsec service for MACsec encryption in Global Configuration mode. To disable this feature, use the **no** form of this command.

macsec-service decrypyt-port *interface_number /port_number***psk-keychain** *key_chain_name***[policy]** *[policy_name]*

Syntax Description

interface_number /port_number	The port or interface number. The interfaces or ports are: Tthe port configured to face the Customer Edge router. The MACsec encryption port The MACsec decryption port
key-chain_name	Name of the key chain configured using the **key chain** command.
(optional) policy_name	Name of the MACsec policy for encryption configured using the **mac-sec policy** command. This is an optional keyword.

Command Default

No default behavior or values.

Command Modes

Global Configuration mode

Command History

Release	Modification
Release 6.1.1	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **macsec-service** command:

```
RP/0/RSP0/CPU0:router# interface  <interface>15.10  l2transport
RP/0/RSP0/CPU0:router(config)# encapsulation dot1q 10
RP/0/RSP0/CPU0:router macsec-service  decrypt-port  <intf>17.10   psk-keychain
<keychain_name>   [policy <macsec_policy>]
```

macsec shutdown

To enable MACsec shutdown, use the **macsec shutdown** command in Global Configuration mode. To disable MACsec shutdown, use the **no** form of the command.

macsec shutdown

Syntax Description

This command has no keywords or arguments.

Command Default

The **macsec shutdown** command is disabled by default.

Command Modes

Global Configuration mode

Command History

Release	Modification
Release 6.3.3	This command was introduced.

Usage Guidelines

Enabling the **macsec shutdown** command, brings down all macsec sessions on the MACsec-enabled interfaces and resets ports to non-macsec mode. The already existing MACsec configurations remain unaffected by enabling this feature.

Disabling the **macsec shutdown** command, brings up MACsec sessions for the configured interfaces and enforces MACsec policy on the port.

Warning Configuring **macsec shutdown** command disables MACsec on all data ports, system wide. Execute **clear** command to erase cached configuration or **commit** command to continue.

Task ID

Task ID	Operation
system	read, write

Example

The following example shows how to enable MACsec shutdown:

```
RP/0/RSP0/CPU0:router# configure terminal
RP/0/RSP0/CPU0:router(config)# macsec shutdown
```

macsec-policy

Creates a MACsec policy for MACsec encryption in Global Configuration mode. To disable this feature, use the **no** form of this command.

macsec-policy *policy_name*

Syntax Description

policy_name	Name of the MACsec policy for encryption.

Command Default

No default behavior or values.

Command Modes

Global Configuration mode

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **macsec-policy** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)#
```

sak-rekey-interval

To set a timer value to rekey the MACsec secure association key (SAK) at a specified interval, use the **sak-rekey-interval** command in the macsec-policy configuration mode. To disable this feature, use the **no** form of this command.

sak-rekey-interval *timer-value*

Syntax Description

timer-value	Specifies the timer value, in seconds. Range is 60 to 2592000.

Command Default

The timer is set to OFF, by default

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 6.3.3	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

This example shows how to set a timer value to rekey the MACsec SAK:

```
Router#configure
Router(config)#macsec-policy test-policy
Router(config-macsec-policy)#sak-rekey-interval 120
Router(config-macsec-policy)#commit
```

security-policy

Configures the type of data that is allowed to transit out of the interface configured with MACsec in the MACsec policy configuration mode. To disable this feature, use the **no** form of this command.

security-policy {**should-secure** | **must-secure**}

Syntax Description

should-secure	Configures the interface on which the MACsec policy is applied, to permit all data.
must-secure	Configures the interface on which the MACsec policy is applied, to permit only MACsec encrypted data.

Command Default

Default value is **must-secure**.

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **security-policy** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# security-policy must-secure
RP/0/RSP0/CPU0:router(config-mac_policy)#
```

show macsec mka summary

To display the Summary of MACsec Sessions, use the **show macsec mka summary** command in EXEC mode.

show macsec mka summary

Syntax Description

This command has no keywords or arguments.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka summary** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows how to view MACsec mka summary information for a specific interface.

```
 Router# show macsec mka summary
Fri Dec 15 06:41:13.299 UTC

NODE: node0_RP0_CPU0
================================================================================================
   Interface-Name     Status     Cipher-Suite       KeyChain       PSK/EAP       CKN

    Secured Sessions   : 4
    Pending Sessions   : 0
    Suspended Sessions : 0
    Active  Sessions   : 0
```

show macsec mka session

To display the detailed Information of MACsec Sessions, use the **show macsec mka session** command in EXEC mode.

show macsec mka session interface *interface name* **location** *location name* **detail**

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.
detail	(Optional) Detailed information specific to session.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka session** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows how to view MACsec mka session information for a specific interface.

```
 Router# show macsec mka session
Fri Dec 15 06:31:38.457 UTC

NODE: node0_RP0_CPU0

```

show macsec mka interface detail

To display detailed information on MACsec interfaces, use the **show macsec mka interface detail** command in the EXEC mode.

show macsec mka interface *interface name* **detail**

Syntax Description

interface name	Specifies the name of the interface for which you want to view the MACsec details.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka interface detail** command is available only with the installation of the k9sec rpm.

The **show macsec mka interface detail** command displays information about all MACsec-enabled interfaces across all nodes. If you need MACsec information for a specific interface, use the **show macsec mka interface** *interface name* **detail** command.

Task ID

Task ID	Operation
system	read

This example shows how to view the MACsec information for a specific interface:

```
 Router# show macsec mka interface detail
Fri Dec 15 09:03:02.553 UTC

Number of interfaces on node node0_RP0_CPU0 : 4

```

show macsec mka statistics

To display MKA interface and session statistics, use the **show macsec mka statistics** command in EXEC mode.

show macsec mka statistics [**interface** *interface name* | **location** *location name*]

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location *location name*	(Optional) Location of the node to view global statistics of the MKA instance.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka statistics** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows the output for **show macsec mka statistics**:

```
 Router# show macsec mka statistics location 0/RP0/CPU0
Fri Dec 15 06:43:21.985 UTC

MKA Global Statistics

```

show macsec mka client

To display MACsec MKA client traces, use the **show macsec mka client** command in EXEC mode.

show macsec mka client [trace {all | errors | events | info}]

Syntax Description

all	(Optional) Show all MACsec MKA client traces for the specified node, or the current node if none is specified.
errors	(Optional) Show MACsec MKA client error traces for the specified node, or the current node if none is specified.
events	(Optional) Show MACsec MKA client event traces for the specified node, or the current node if none is specified
info	(Optional) Show MACsec MKA client info traces for the specified node, or the current node if none is specified

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka trace** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows the output for **show macsec mka client trace all**:

```
 Router# show macsec mka client trace all
Tue Dec  5 10:32:14.266 UTC
1 wrapping entries (10432 possible, 192 allocated, 0 filtered, 1 total)
Dec  4 09:56:25.544 macsec_mka/client/events 0/RP0/CPU0 t5544 TP257:aipc, server:driver,
client:default, init from pid:4779
```

show macsec mka standby

To display MACsec MKA information from hot standby node, use the **show macsec mka standby** command in EXEC mode.

show macsec mka standby [interface | session | statistics] { *interface name* **detail** } **[summary]**

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
detail	(Optional) detailed information specific to Interface/Session

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka standby** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows the output for **show macsec mka standby summary**:

```
 Router# show macsec mka standby summary
Tue Dec  5 10:38:29.004 UTC

Total MACSec Sessions  : 0
    Secured Sessions   : 0
    Pending Sessions   : 0
    Suspended Sessions : 0
     Active  Sessions : 0
```

show macsec mka trace

To display MACsec MKA traces, use the **show macsec mka trace** command in EXEC mode.

show macsec mka trace [all | base | config | errors | events | new-errors | new-events]

Syntax Description

all	(Optional) Show all MACsec MKA traces for the specified node, or the current node if none is specified.
base	(Optional) Show MACsec MKA base traces for the specified node, or the current node if none is specified.
config	(Optional) Show MACsec MKA config traces for the specified node, or the current node if none is specified.
errors	(Optional) Show MACsec MKA error traces for the specified node, or the current node if none is specified.
events	(Optional) Show MACsec MKA event traces for the specified node, or the current node if none is specified.
new-errors	(Optional) Show MACsec MKA new-errors traces for the specified node, or the current node if none is specified.
new-events	(Optional) Show MACsec MKA new-event traces for the specified node, or the current node if none is specified.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec mka trace** command is available only with the installation of the k9sec rpm.

show macsec secy

To display Interface based MACsec dataplane (SecY) statistics, use the **show macsec secy** command in EXEC mode.

show macsec secy [**stats** { **interface** *interface name* **sc** }]

Syntax Description

interface name	MACsec enabled Interface to be specified..
sc	(Optional) Display Secure Channel Statistics for both Rx-SC,SA and Tx-SC,SA specific to the given interface

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec secy** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows the output for **show macsec secy**:

```
 Router# show macsec mka secy stats interface HundredGigE 0/0/0/29 sc

```

show macsec ea

To display MACsec programming details for each interface, use the **show macsec ea** command in EXEC mode.

show macsec ea [idb { **interface** *interface name* | | **location** *location name* } **| trace {all | errors | events| base}**

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.
all	(Optional) Show **all** MACsec EA traces for the specified node, or the current node if none is specified.
base	(Optional) Show MACsec EA **base** traces for the specified node, or the current node if none is specified.
errors	(Optional) Show MACsec EA **error** traces for the specified node, or the current node if none is specified.
events	(Optional) Show MACsec EA **event** traces for the specified node, or the current node if none is specified.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec ea** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows how to view MACsec information for a specific interface located on location 0/RP0/CPU0.

```

show macsec platform hardware

To display hardware-specific details for MACsec on each interface, use the **show macsec platform hardware** command in EXEC mode.

show macsec platform hardware [flow | sa | stats] { **interface** *interface name* | **location** *location name* }

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec platform hardware** command is available only with the installation of the k9sec rpm.

Task ID

Task ID	Operation
interface	read

This example shows how to view MACsec platform hardware information for a specific interface located on location 0/RP0/CPU0.

```
 Router# show macsec platform hardware flow location 0/RP0/CPU0

```

```
Interface : TwentyFiveGigE0_0_0_24
```

show macsec platform idb

To display interface database (IDB) details specific to MACsec, use the **show macsec platform idb** command in EXEC mode.

show macsec platform idb { **interface** *interface name* | **location** *location name* }

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec platform idb** command is available only with the installation of the k9sec rpm.

show macsec platform stats

To display MACsec platform statistics, use the **show macsec platform stats** command in EXEC mode.

show macsec platform stats { **interface** *interface name* | **location** *location name* }

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.

Command Default

No default behavior or values.

show macsec platform trace

To display MACsec platform trace logs, use the **show macsec platform trace** command in EXEC mode.

show macsec platform hardware trace [all | detail | errors | events] { **interface** *interface name* | **location** *location name* }

Syntax Description

interface	Specifies the interface name to view MACsec details.
interface name	Enables MACsec mode for a specified interface.
location	Specifies the node location to enable the MACsec details.
location name	Enables MACsec mode for a specific node.
all	(Optional) Show **all** MACsec Platform traces for the specified node, or the current node if none is specified.
detail	(Optional) Show MACsec Platform**detail** traces for the specified node, or the current node if none is specified.
errors	Optional) Show MACsec Platform **error** traces for the specified node, or the current node if none is specified.
events	(Optional) Show MACsec Platform **event** traces for the specified node, or the current node if none is specified.

Command Default

No default behavior or values.

Command Modes

EXEC mode

Command History

Release	Modification
Release 7.0.1	This command was introduced.

Usage Guidelines

The **show macsec platform trace** command is available only with the installation of the k9sec rpm.

suspendFor

In an ISSU scenario, you can use the **suspendFor** command in macsec policy configuration mode to control the MACsec Key Agreement (MKA) protocol suspension initiation on the key server or the request for suspension from the non-key server. To remove the configuration, use the **no** form of this command

suspendFor disable

Syntax Description

disable	Disables the MKA protocol suspension initiation on the key server or disables the request for suspension from the non-key server.

Command Default

By default, the option is enabled.

Command Modes

Macsec policy configuration

Command History

Release	Modification
Release 7.1.1	This command was introduced.

Usage Guidelines

If the key server has the **suspendfor disable** command configured under the macsec policy, then it does not allow ISSU process from any non-key server.

Task ID

Task ID	Operation
system	read, write

This example shows how to disable MKA protocol suspension initiation on the key server or to disable the request for suspension from the non-key server:

```
Router(config)#macsec-policy test-policy-mp
Router(config-macsec-policy)#suspendFor disable
Router(config-macsec-policy)#commit
```

Related Commands

Command	Description
suspendOnRequest, on page 49	Initiates MKA protocol suspension if it is the key server and when another participant has requested for suspension.

suspendOnRequest

In an ISSU scenario, to control the MACsec Key Agreement (MKA) protocol suspension initiation if it is the key server and when another peer has requested for suspension, use the **suspendOnRequest** command in macsec policy configuration mode. To remove the configuration, use the **no** form of this command.

suspendOnRequest disable

Syntax Description

disable	Rejects the suspension request from the non-key server, in an ISSU scenario.

Command Default

By default, the option is enabled.

Command Modes

Macsec policy configuration

Command History

Release	Modification
Release 7.1.1	This command was introduced.

Usage Guidelines

This command is applicable only to the key server.

Task ID

Task ID	Operation
system	read, write

This example shows how to disable the suspension request from the non-key server, in an ISSU scenario:

```
Router(config)#macsec-policy test-policy-mp
Router(config-macsec-policy)#suspendOnrequest disable
Router(config-macsec-policy)#commit
```

Related Commands

Command	Description
suspendFor, on page 48	Controls MKA protocol suspension on the key server or the request for suspension from the non-key server in an ISSU scenario.

vlan-tags-in-clear

Configures the number of VLAN tags in clear for MACsec encryption in the MACsec policy configuration mode. To disable this feature, use the **no** form of this command.

vlan-tags-in-clear *number*

Syntax Description

number	Specifies the number of VLAN tags in clear. For 802.1q encapsulation with a single tag, the value is 1. For 802.1q encapsulation with two tags, the value is 2. For 802.1ad encapsulation with a single tag, the value is 1. For 802.1ad encapsulation with a two tags, the value is 2.

Command Default

Default value is 1.

Command Modes

MACsec policy configuration mode

Command History

Release	Modification
Release 6.0.1	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **vlan-tags-in-clear** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# vlan-tags-in-clear 1
```

window-size

Configures the replay protection window size in MACsec policy configuration mode. To disable this feature, use the **no** form of this command.

The replay protection window size indicates the number of out-of-sequence frames that can be accepted at the interface configured with MACsec, without being dropped.

window-size *value*

Syntax Description

value	Number of out-of-sequence frames that can be accepted at the interface without being dropped. The range is 0-1024.

Command Default

Default value is 64.

Command Modes

MACsec policy configuration.

Command History

Release	Modification
Release 5.3.2	This command was introduced.

Task ID

Task ID	Operations
system	read, write

Examples

The following example shows how to use the **window-size** command:

```
RP/0/RSP0/CPU0:router# configure t
RP/0/RSP0/CPU0:router(config)# macsec-policy mac_policy
RP/0/RSP0/CPU0:router(config-mac_policy)# window-size 64
```
