

Enabling Support for Tunable DWDM-XFP-C

The dense wavelength-division multiplexing (DWDM) wavelengths of the DWDM-XFP-C module on the Cisco ASR 900 Series router is tunable. You can configure the DWDM ITU wavelengths using the **itu channel** command in the interface configuration mode. The **itu channel** command ensures that the traffic continues to flow.

[Table 1: DWDM-XFP-C Wavelength Mapping](#), on page 1 contains the wavelength mapping information for the DWDM-XFP-C module.

Configuring the DWDM-XFP-C Module

Perform the following procedure to configure the DWDM-XFP-C module.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. interface tengigabitethernet *slot/port*
4. **itu channel** *number*

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router# enable	Enables the privileged EXEC mode. If prompted, enter your password.
Step 2	configure terminal Example: Router# configure terminal	Enters the global configuration mode.
Step 3	interface tengigabitethernet <i>slot/port</i> Example: Router(config)# interface tengigabitethernet 0/3	Specifies the 10-Gigabit Ethernet interface to be configured. <ul style="list-style-type: none"> • <i>slot/port</i>—Specifies the location of the interface.
Step 4	itu channel <i>number</i> Example: Router(config-if)# itu channel 28	Sets the ITU channel. <ul style="list-style-type: none"> • <i>number</i>—Specifies the ITU channel number. The acceptable values are from 1–82.

Verifying the ITU Configuration
