Configuring IoT FND for IPv6 Tunnel Provisioning and Registration

IoT FND OVA supports only IPv4 tunnels and Registration out of the box.

To setup an IPv6 network for tunnel provisioning and registration, follow these steps:

Step 1   Ensure you have one interface with a valid IPv6 network which has a IPv6 prefix length less than125.

See the following example of the ens224 interface:

```
[root@iot-fnd ~]# ifconfig ens224

ens224: flags=4163[UP,BROADCAST,RUNNING,MULTICAST] mtu 1500

inet 2.2.56.117 netmask 255.255.0.0 broadcast 2.2.255.255

inet6 fe80::54f0:5d24:d320:8e38 prefixlen 64 scopeid 0x20[ink]

inet6 2001:420:7bf:5f::1522 prefixlen 64 scopeid 0x0[global]

ether 00:0c:29:18:1b:3a txqueuelen 1000 (Ethernet)

RX packets 97618 bytes 12391774 (11.8 MiB)

RX errors 1001 dropped 1011 overruns 0 frame 0

TX packets 3004 bytes 568097 (554.7 KiB)

TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

[root@iot-fnd ~]#
```

Step 2   Run the `./setup-IPv6-network.sh` script in the `/opt/fnd/scripts` directory to obtain the FND IPv6 address on the router for tunnel provisioning and registration.

Note: While specifying the IPv6 address for the network-mgmt-bridge, provide an Interface Name and a valid IPv6 address (and IP address prefix length) that is in the subnet of the provided host interface. If IPv6 address is in a different subnet, the IPv6 tunnel provisioning and registration will not be successful.

```
[root@iot-fnd scripts]# ./setup-IPv6-network.sh

Setup IPv6 Network For Containers
IPv6 Network setup process will require an active interface with a Global IPv6 Address.
IPv6 prefix length must be less than 125.

Enter Interface Name: ens32
Enter IPv6 Address: 2001:1111:2222:0:20c:29ff:fe44:ea4d
Enter IPv6 Prefix Length: 64

One of the IPv6 networks in /125 subnet from 2001:1111:2222:0:20c:29ff:fe44:ea4d/64 will be required to setup container network.
Enter IPv6 Address for network-mgmt-bridge from /125 subnet: 2001:1111:2222:0:20c:29ff:fe44:1515
