Bulk Content Downloader (BCDL) Commands

This module describes the **show** commands that you can use to see the status of the Bulk Content Downloader (BCDL) process. The BCDL provides the Cisco IOS XR software with high-performance downloading capabilities. This capability is used by the following internal applications:

- IPv4 and IPv6 unicast routing protocols—To provide the ability to download forwarding information from the router Global Routing Information Base (GRIB) to the line cards.

- IPv4 and IPv6 multicast routing protocols—To download the Multicast Routing Information Base (MRIB) entries to consumers managing the Multicast Forwarding Information Base (MFIB) on the various line cards and distributed route processors (DRPs).

- MPLS—To download the Label Forwarding Information Base (LFIB) entries to the line card.

- LPTS—To maintain the Internal Forwarding Information Base (IFIB) table on all nodes that do IP forwarding to and from the DRPs.

- Fabric Management—To update memberships for individual fabric group IDs (FGIDs) to selected portions of the fabric hardware.

- CDS—Context Distribution Service.

There is no configuration necessary for the BCDL.
