

Configure Affinity for OTN

This chapter describes the XR procedure for configuring Affinity Support for OTN GMPLS.

- [Configuring Affinity for GMPLS using Cisco IOS XR commands, on page 1](#)

Configuring Affinity for GMPLS using Cisco IOS XR commands

Procedure

Step 1 Define colours and assign bits to each colour using command : **affinity-map** *<colour>* **bit-position** *<bit position>*

Example:

```
RP/0/RP0:hostname# configure
RP/0/RP0:hostname(config)# mpls traffic-eng
RP/0/RP0:hostname(config-mpls-te)# affinity-map red bit-position 1
RP/0/RP0:hostname(config-mpls-te)# affinity-map green bit-position 0
```

Note Only one colour can be mapped to a particular bit position.

Note Same bit map should defined at all the connected nodes.

Step 2 Assign one or multiple colours to the OTN link using command **affinity-name***<colour>*

Example:

```
RP/0/RP0:hostname# configure
RP/0/RP0:hostname(config)# mpls traffic-eng
RP/0/RP0:hostname(config-mpls-te)# gmpls optical-nni
RP/0/RP0:hostname(config-te-gmpls-nni)# topology instance ospf abc area 5
RP/0/RP0:hostname(config-te-gmpls-nni-ti)# controller otu4 0/0/0/1
RP/0/RP0:hostname(config-te-gmpls-nni-ti-cntl)# affinity-name red blue green yellow
```

Note Assign colour to all the ports of the connected nodes.

Step 3 Define an attribute set using command **attribute-set path-option**

This will define the affinity constraints.

Example:

```
RP/0/RP0:hostname# configure terminal
RP/0/RP0:hostname(config)# mpls traffic-eng
RP/0/RP0:hostname(config-mpls-te)# attribute-set path-option Affinity1
RP/0/RP0:hostname(config-te-attribute-set)# affinity include red
```

Step 4 Configure **attribute-set** for **path-option** for OTN tunnel.

This will assign affinity constraints to OTN tunnel. Following are the constraint type:

- **include** : The TE link will be eligible for path-calculation if it has all the colours listed in the constraint. The link may have additional colours.
- **include-strict** : The TE link will be eligible for path-calculation only if it has the same set of colours listed in the constraint. The link should not have any additional colour.
- **exclude**: The TE link will be eligible for path-calculation if it does not have all the colours listed in the constraint
- **exclude-all**: This constraint is not associated with any colour. If this constraint is configured for a tunnel, path-calculator will only accept the links that do not have any colour.

Note In case of exclude-all constraint, other configured constraints for the same tunnel will be ignored.

Example:

```
RP/0/RP0:hostname# configure
RP/0/RP0:hostname(config)# mpls traffic-eng
RP/0/RP0:hostname(config-mpls-te)# gmpls optical-nni
RP/0/RP0:hostname(config-te-gmpls-nni)# controller Odu-Group-Te 7
RP/0/RP0:hostname(config-te-gmpls-tun-0x7)# signalled-bandwidth ODU2
RP/0/RP0:hostname(config-te-gmpls-tun-0x7)# destination ipv4 unicast 192.168.0.3
RP/0/RP0:hostname(config-te-gmpls-tun-0x7)# path-option 1 dynamic attribute-set Affinity1
protected-by 2 restored-from 3 lockdown
RP/0/RP0:hostname (config-te-gmpls-tun-0x7)# path-option 2 dynamic attribute-set Affinity2
lockdown
```

Step 5 Verify the configurations using show commands.**Example:**

```
RP/0/RP0:hostname# show mpls traffic-eng affinity-map
```

```
Tue Jun 26 15:12:01.948 IST
          Affinity Name      Bit-position      Affinity Value
Affinity Table
-----
Mapping                red                2                0x::4
Mapping                yellow             3                0x::8
Mapping                blue              21               0x::20:0
