

Implementing LPTS

Local Packet Transport Services (LPTS) maintains tables describing all packet flows destined for the secure domain router (SDR), making sure that packets are delivered to their intended destinations.

For a complete description of the LPTS commands listed in this module, refer to the LPTS Commands module of *IP Addresses and Services Command Reference for Cisco NCS 6000 Series Routers*.

Feature History for Implementing LPTS

Release	Modification
Release 5.0.0	LPTS was introduced.

- [Prerequisites for Implementing LPTS , page 1](#)

- [Configuring LPTS Policer with IP TOS Precedence, page 2](#)
- [Configuration Examples for Implementing LPTS Policers, page 5](#)
- [Additional References, page 6](#)

Prerequisites for Implementing LPTS

The following prerequisites are required to implement LPTS:

You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Information About Implementing LPTS

To implement LPTS features mentioned in this document you must understand the following concepts:

LPTS Overview

LPTS uses two components to accomplish this task: the port arbitrator and flow managers. The port arbitrator and flow managers are processes that maintain the tables that describe packet flows for a logical router, known as the Internal Forwarding Information Base (IFIB). Pre-IFIB (PIFIB), which is an abbreviated copy of IFIB, is maintained by port arbitrator on route processor. The line card also downloads the PIFIB for fast lookup. While IFIB is only present on RP, PIFIB is present on both RP and LCs. The entries in PIFIB are used for a single lookup with an exact match. The IFIB, along with PIFIB are used to route received packets to the correct Route Processor or line card for processing.

LPTS interfaces internally with all applications that receive packets from outside the router. LPTS functions without any need for customer configuration. However, LPTS `show` commands are provided that allow customers to monitor the activity and performance of LPTS flow managers and the port arbitrator.

LPTS Policers

In Cisco IOS XR, the control packets, which are destined to the Route Processor (RP), are policed using a set of ingress policers in the incoming line cards. These policers are programmed statically during bootup by LPTS components. The policers are applied based on the flow type of the incoming control traffic. The flow type is determined by looking at the packet headers. The policer rates for these static ingress policers are defined in a configuration file, which are programmed on the line card during bootup.

You can change the policer values based on the flow types of these set of ingress policers. You are able to configure the rate per policer per node (locally) and globally using the command-line interface (CLI); therefore, overwriting the static policer values.

Configuring LPTS Policer with IP TOS Precedence

This task allows you to configure the LPTS policers with IP table of service (TOS) precedence:

SUMMARY STEPS

1. `configure`
2. `lpts pifib hardware police [location node-id]`
3. `flow flow_type {default | known}`
4. `precedence {number | name}`
5. `commit`
6. `show lpts pifib hardware policer [location {all | node_id}]`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<code>configure</code>	

	Command or Action	Purpose
Step 2	lpts pifib hardware police [location <i>node-id</i>] Example: RP/0/RP0/CPU0:router(config)# lpts pifib hardware police location 0/2/CPU0 or RP/0/RP0/CPU0:router(config)# lpts pifib hardware police	Configures the ingress policers. You can configure per node or all locations. The example shows configuration of pifib policer on an individual node and globally for all nodes respectively.
Step 3	flow <i>flow_type</i> {default known} Example: RP/0/RP0/CPU0:router(config-pifib-policer-per-node)# flow telnet default or RP/0/RP0/CPU0:router(config-pifib-policer-global)# flow telnet default	Configures the policer for the LPTS flow type. The example shows how to configure the policer for the telnet flow type per node or global mode (all locations). <ul style="list-style-type: none"> • Use the <i>flow_type</i> argument to select the applicable flow type. For information about the flow types, see <i>IP Addresses and Services Command Reference for Cisco NCS 6000 Series Routers</i>.
Step 4	precedence {number name} Example: RP/0/RP0/CPU0:router(config-pifib-policer-per-node)# precedence 5 6 7 or RP/0/RP0/CPU0:router(config-pifib-policer-global)# precedence 5 6 7	Configures IP TOS precedence against a flow type. You can specify either a precedence number or name. For more information about precedence , use the question mark (?) online help function. The example shows how to configure IP TOS precedence 5, 6, and 7 per node or global mode.
Step 5	commit	
Step 6	show lpts pifib hardware policer [location {all <i>node_id</i>}] Example: RP/0/RP0/CPU0:router# show lpts pifib hardware policer location 0/2/cpu0	Displays the policer configuration value set. <ul style="list-style-type: none"> • (Optional) Use the location keyword to display policer value for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. • Use the all keyword to specify all locations.

Configuring LPTS Policers

This task allows you to configure the LPTS policers.

SUMMARY STEPS

1. **configure**
2. **lpts pifib hardware police [location node-id]**
3. **flow flow_type {default | known} {rate rate}**
4. **commit**
5. **show lpts pifib hardware policer [location {all | node_id}]**

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure	
Step 2	lpts pifib hardware police [location node-id] Example: <pre>RP/0/RP0/CPU0:router(config)# lpts pifib hardware police location 0/2/CPU0 RP/0/RP0/CPU0:router(config-pifib-policer-per-node)# </pre> <pre>RP/0/RP0/CPU0:router(config)# lpts pifib hardware police RP/0/RP0/CPU0:router(config-pifib-policer-global)# </pre>	Configures the ingress policers and enters pifib policer global configuration mode or pifib policer per node configuration mode. The example shows pifib policer per node configuration mode and global.
Step 3	flow flow_type {default known} {rate rate} Example: <pre>RP/0/RP0/CPU0:router(config-pifib-policer-per-node)# flow ospf unicast default rate 20000 </pre>	Configures the policer for the LPTS flow type. The example shows how to configure the policer for the ospf flow type. <ul style="list-style-type: none"> • Use the <i>flow_type</i> argument to select the applicable flow type. For information about the flow types, see <i>IP Addresses and Services Command Reference for Cisco NCS 6000 Series Routers</i>. • Use the rate keyword to specify the rate in packets per seconds (PPS). The range is from 0 to 4294967295. <p>Note LPTS policy for ntp-default flow type, supports a flow rate of 100 pps on Cisco ASR 9000 Series Router.</p>
Step 4	commit	
Step 5	show lpts pifib hardware policer [location {all node_id}] Example: <pre>RP/0/RP0/CPU0:router# show lpts pifib hardware policer location 0/2/cpu0 </pre>	Displays the policer configuration value set. <ul style="list-style-type: none"> • (Optional) Use the location keyword to display pre-Internal Forwarding Information Base (IFIB) information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. • Use the all keyword to specify all locations.

Configuration Examples for Implementing LPTS Policers

This section provides the following configuration example:

Configuring LPTS Policers: Example

The following example shows how to configure LPTS policers:

```

configure
lpts pifib hardware police
  flow ospf unicast default rate 200
  flow bgp configured rate 200
  flow bgp default rate 100
!
lpts pifib hardware police location 0/2/CPU0
  flow ospf unicast default rate 100
  flow bgp configured rate 300
!
show lpts pifib hardware policer location 0/2/CPU0

      Node: 0/2/CPU0:
-----
flow_type          priority sw_police_id hw_policer_addr avgrate burst static_avgrate
avgrate_type
-----
-----
```

flow_type	priority	sw_police_id	hw_policer_addr	avgrate	burst	static_avgrate
