### New and Changed Telemetry Features

Feature	Description	Changed in Release
<a href="#">gNMI Dial-Out via Tunnel Service</a>	Release 7.6.1	<p>This feature uses the tunnel service to allow the router (tunnel client) to dial out to a collector (tunnel server). After the session is established, the server-client switch directions where a server can act as a client to request gNMI services without altering the gNMI semantics. With this feature, the management software automatically learns when a new device is introduced in the network, thus saving you the manual, offline effort required to ensure the device connects to the management software.</p> <p>This feature introduces the keyword <b>tunnel</b> to the <b>grpc</b> command.</p>
