authentication (L2TP)

To enable L2TP authentication for a specified L2TP class name, use the **authentication** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

authentication

no authentication

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes L2TP class configuration

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

You can also enable L2TP authentication for a specified class name from L2TP class configuration submode. To enter this submode, enter the **l2tp-class** command followed by the class name.

Task ID	Operations
l2vpn	read, write

Examples The following example shows how to configure L2TP authentication for the specified L2TP class name "cisco":

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# authentication
```

Related Commands

Command	Description
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

backup (L2VPN)

To configure the backup pseudowire for the cross-connect, use the **backup** command in L2VPN xconnect p2p pseudowire configuration mode. To disable this feature, use the **no** form of this command.

backup neighbor *IP-address* **pw-id** *value*

no backup neighbor *IP-address* **pw-id** *value*

Syntax Description

neighbor <i>IP-address</i>	Specifies the peer to cross connect. The <i>IP-address</i> argument is the IPv4 address of the peer.
pw-id <i>value</i>	Configures the pseudowire ID. The range is from 1 to 4294967295.

Command Default

None

Command Modes

L2VPN xconnect p2p pseudowire configuration

Command History

Release	Modification
Release 3.8.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **backup** command to enter L2VPN xconnect p2p pseudowire backup configuration mode.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure backup pseudowires:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group gr1
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p p001
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# neighbor 10.1.1.1 pw-id 2
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)# backup neighbor 10.2.2.2 pw-id 5
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw-backup)#
```

Related Commands

Command	Description
backup disable (L2VPN), on page 8	Specifies how long a backup pseudowire should wait before resuming operation after the primary pseudowire goes down.
l2vpn, on page 49	Enters L2VPN configuration mode.
neighbor (L2VPN), on page 59	Configures a pseudowire for a cross-connect.
p2p, on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.
xconnect group, on page 151	Configures cross-connect groups.

backup disable (L2VPN)

To specify how long a backup pseudowire should wait before resuming primary pseudowire operation after the failure with primary pseudowire has been cleared, use the **backup disable** command in L2VPN pseudowire class configuration mode. To disable this feature, use the **no** form of this command.

backup disable {*delay value*| **never**}

no backup disable {*delay value*| **never**}

Syntax Description

delay <i>value</i>	Specifies the number of seconds that elapse after the failure with primary pseudowire has been cleared before the Cisco IOS XR software attempts to activate the primary pseudowire. The range, in seconds, is from 0 to 180. The default is 0.
never	Specifies that the secondary pseudowire does not fall back to the primary pseudowire if the primary pseudowire becomes available again, unless the secondary pseudowire fails.

Command Default

The default disable delay is the value of 0, which means that the primary pseudowire is activated immediately when it comes back up.

Command Modes

L2VPN pseudowire class configuration

Command History

Release	Modification
Release 3.8.0	This command was introduced.
Release 5.2.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how a backup delay is configured for point-to-point pseudowire in which the backup disable delay is set to 50 seconds:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class class1
RP/0/0/CPU0:router(config-l2vpn-pwc)# backup disable delay 50
RP/0/0/CPU0:router(config-l2vpn-pwc)# exit
RP/0/0/CPU0:router(config-l2vpn)# xconnect group A
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p rtrx
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# neighbor 10.1.1.1 pw-id 2
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)# pw-class class1
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)# backup neighbor 10.2.2.2 pw-id 5
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw-backup)#
```

Related Commands

Command	Description
l2vpn , on page 49	Enters L2VPN configuration mode.
neighbor (L2VPN) , on page 59	Configures a pseudowire for a cross-connect.
p2p , on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.
pw-class (L2VPN) , on page 65	Enters pseudowire class submode to define a pseudowire class template.
xconnect group , on page 151	Configures cross-connect groups.

clear l2tp counters control session

To clear L2TP control counters for a session, use the **clear l2tp counters control session** command in EXEC mode.

clear l2tp counters control session fsm [event| state transition]

Syntax Description

fsm	(Optional) Clears finite state machine counters.
event	(Optional) Clears state machine event counters.
state	(Optional) Clears state machine state counters.
transition	(Optional) Clears state machine transition counters.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear all L2TP state machine transition counters:

```
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw-backup)## clear l2tp counters control session fsm
state transition
```

Related Commands

Command	Description
clear l2tp counters control tunnel, on page 12	Clears L2TP control counters for a tunnel.
clear l2vpn counters l2tp, on page 17	Clears L2VPN statistical information, such as, packets dropped.

clear l2tp counters control tunnel

To clear L2TP control counters for a tunnel, use the **clear l2tp counters control tunnel** command in EXEC mode.

clear l2tp counters control tunnel {all| authentication| id *tunnel id*}

Syntax Description

all	Clears all L2TP counters, except authentication counters
authentication	Clears tunnel authentication counters.
id <i>tunnel id</i>	Clears a specified counter. Range is 1 to 4294967295.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear all L2TP control tunnel counters:

```
RP/0/0/CPU0:router# clear l2tp counters control tunnel all
```

Related Commands

Command	Description
clear l2tp counters control session , on page 10	Clears L2TP control counters for a session.

Command	Description
clear l2vpn counters l2tp, on page 17	Clears L2VPN statistical information, such as, packets dropped.

clear l2tp tunnel

To clear L2TP tunnels, use the **clear l2tp tunnel** command in EXEC mode.

clear l2tp tunnel {**all**| **id** *tunnel id*| **l2tp-class** *class name*| **local ipv4** *ipv4 address*| **remote ipv4** *ipv4 address*}

Syntax Description

all	Clears all L2TP tunnels.
id <i>tunnel id</i>	Clears a specified tunnel.
l2tp-class <i>class name</i>	Clears all L2TP tunnels based on L2TP class name.
local ipv4 <i>ipv4 address</i>	Clears all local tunnels based on the specified local IPv4 address.
remote ipv4 <i>ipv4 address</i>	Clears all remote tunnels based on the specified local IPv4 address.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear all L2TP tunnels:

```
RP/0/0/CPU0:router# clear l2tp tunnel all
```

Related Commands

Command	Description
clear l2tp counters control session, on page 10	Clears L2TP control counters for a session.
clear l2tp counters control tunnel, on page 12	Clears L2TP control counters for a tunnel.

clear l2vpn collaborators

To clear the state change counters for L2VPN collaborators, use the **clear l2vpn collaborators** command in EXEC mode.

clear l2vpn collaborators

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.4.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to clear change counters for L2VPN collaborators:

```
RP/0/0/CPU0:router# clear l2vpn collaborators
```

Related Commands	Command	Description
	show l2vpn collaborators , on page 100	Displays information about the state of the interprocess communications connections between l2vpn_mgr and other processes.

clear l2vpn counters l2tp

To clear L2VPN statistical information, such as, packets dropped, use the **clear l2vpn counters l2tp** command in EXEC mode.

clear l2vpn counters l2tp [**neighbor** *ip-address* [**pw-id** *value*]]

Syntax Description

l2tp	Clears all L2TP counters.
neighbor <i>ip-address</i>	(Optional) Clears all L2TP counters for the specified neighbor.
pw-id <i>value</i>	(Optional) Configures the pseudowire ID. The range is from 1 to 4294967295.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.4.0	This command was introduced.
Release 3.7.0	The pw-id keyword was added.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear all L2TP counters:

```
RP/0/0/CPU0:router# clear l2vpn counters l2tp
```

Related Commands

Command	Description
show l2vpn collaborators, on page 100	Displays information about the state of the interprocess communications connections between l2vpn_mgr and other processes.

clear l2vpn counters bridge mac-withdrawal

To clear the MAC withdrawal statistics for the counters of the bridge domain, use the **clear l2vpn counters bridge mac-withdrawal** command in EXEC mode.

clear l2vpn counters bridge mac-withdrawal {**all**| **group** *group-name* **bd-name** *bd-name*| **neighbor** *ip-address* **pw-id** *value*}

Syntax Description

all	Clears the MAC withdrawal statistics over all the bridges.
group <i>group-name</i>	Clears the MAC withdrawal statistics over the specified group.
bd-name <i>bd-name</i>	Clears the MAC withdrawal statistics over the specified bridge.
neighbor <i>ip-address</i>	Clears the MAC withdrawal statistics over the specified neighbor.
pw-id <i>value</i>	Clears the MAC withdrawal statistics over the specified pseudowire. The range is from 1 to 4294967295.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear the MAC withdrawal statistics over all the bridges:

```
RP/0/0/CPU0:router# clear l2vpn counters bridge mac-withdrawal all
```

clear l2vpn forwarding counters

To clear L2VPN forwarding counters, use the **clear l2vpn forwarding counters** command in EXEC mode.

clear l2vpn forwarding counters

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.4.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to clear L2VPN forwarding counters:

```
RP/0/0/CPU0:router# clear l2vpn forwarding counters
```

Related Commands	Command	Description
	show l2vpn forwarding, on page 105	Displays forwarding information from the layer2_fib manager on the line card.

clear l2vpn forwarding mac-address-table

To clear L2VPN forwarding MAC address tables, use the **clear l2vpn forwarding mac-address-table** command in EXEC mode.

clear l2vpn forwarding mac-address-table {*address address*| *bridge-domain name*| *interface type interface-path-id*| **location** *node-id*}

Syntax Description

<i>address</i>	Clears a specified MAC address.
bridge-domain <i>name</i>	Clears bridge domains learned from a MAC address table.
<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or a virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
location <i>node-id</i>	Clears L2VPN forwarding message counters for the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write, execute

Examples

The following example shows how to clear L2VPN forwarding MAC address tables on a specified node:

```
RP/0/0/CPU0:router# clear l2vpn forwarding mac-address location 1/1/1
```

Related Commands

Command	Description
show l2vpn forwarding, on page 105	Displays forwarding information from the layer2_fib manager on the line card.

clear l2vpn forwarding message counters

To clear L2VPN forwarding message counters, use the **clear l2vpn forwarding message counters** command in EXEC mode.

clear l2vpn forwarding message counters location *node-id*

Syntax Description	location <i>node-id</i>	Clears L2VPN forwarding message counters for the specified location.
--------------------	--------------------------------	--

Command Default	None
-----------------	------

Command Modes	EXEC
---------------	------

Command History	Release	Modification
	Release 3.5.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
------------------	---

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to clear L2VPN forwarding message counters on a specified node:
----------	---

```
RP/0/0/CPU0:router# clear l2vpn forwarding message counters location 0/6/CPU0
```

Related Commands	Command	Description
	show l2vpn forwarding , on page 105	Displays forwarding information from the layer2_fib manager on the line card.

clear l2vpn forwarding table

To clear an L2VPN forwarding table at a specified location, use the **clear l2vpn forwarding table** command in EXEC mode.

clear l2vpn forwarding table location *node-id*

Syntax Description	<div><div>location <i>node-id</i></div><div>Clears L2VPN forwarding tables for the specified location.</div></div>					
Command Default	None					
Command Modes	EXEC

Related Commands	<table><tr><th>Command</th><th>Description</th></tr><tr><td>show l2vpn forwarding, on page 105</td><td>Displays forwarding information from the layer2_fib manager on the line card.</td></tr></table>		Command	Description	show l2vpn forwarding , on page 105	Displays forwarding information from the layer2_fib manager on the line card.
Command	Description					
show l2vpn forwarding , on page 105	Displays forwarding information from the layer2_fib manager on the line card.					

description (GLOBAL)

To specify the description of a multisegment pseudowire globally, use the **description** command in l2vpn configuration mode. To revert, use the **no** form of the command.

description *description-name*

no description

Syntax Description	<i>description-name</i>	Name of the description of the multisegment pseudowire.
Command Default	None	
Command Modes	l2vpn	
Command History	Release	Modification
	Release 4.1.1	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.	
Task ID	Task ID	Operation
	l2vpn	read, write
Examples	The example shows how to specify the description of a multisegment pseudowire: RP/0/0/CPU0:router# configure RP/0/0/CPU0:router(config)# l2vpn RP/0/0/CPU0:router(config-l2vpn)# description S-PE1	
Related Commands	Command	Description
	description (XCONNECT), on page 26	Specifies the description of an l2vpn cross connect.

description (XCONNECT)

To specify the description of an l2vpn xconnect such as attachment circuit (AC) AC-AC, AC-PW, and multisegment pseudowire (MS-PW), use the **description** command in L2VPN xconnect mode. To revert, use the **no** form of the command.

description *description-name*

no description

Syntax Description

<i>description-name</i>	Name of the description of the cross connect.
-------------------------	---

Command Default

None

Command Modes

L2VPN xconnect

Command History

Release	Modification
Release 4.1.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
l2vpn	read, write

Examples

The example shows how to specify the description of a cross connect:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group MS-PW1
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p ms-pw1
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# description MS-PW from T-PE1 to T-PE2
```

Related Commands

Command	Description
description (GLOBAL) , on page 25	Specifies multisegment pseudowire global description.

digest (L2TP)

To configure digest options, use the **digest** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

digest {**check disable**| **hash** {**MD5**| **SHA1**}} **secret** {**0**| **7**| *word*}}

no digest {**check disable**| **hash** {**MD5**| **SHA1**}} **secret** {**0**| **7**| *word*}}

Syntax Description

check disable	Disables digest checking.
hash { MD5 SHA1 }	Configures the digest hash method (MD5 or SHA1). Default is MD5.
secret { 0 7 <i>word</i> }	Configures a shared secret for message digest.

Command Default

check disable: Digest checking is enabled by default.

hash: Default is MD5 if the **digest** command is issued without the secret keyword option and L2TPv3 integrity checking is enabled.

Command Modes

L2TP class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The digest secret and hash algorithm can be configured in the l2tp-class configuration for authentication of the control channel. For control channel authentication to work correctly, however, both sides of the L2TP control channel connection must share a common secret and hash algorithm.

To update of digest secret without network disruption, Cisco supports a maximum to two digest secrets. You can configure a new secret while keeping the old secret valid. You can safely remove the old secret after you update all affected peer nodes with a new secret,

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure digest options for L2TP:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# digest check disable
RP/0/0/CPU0:router(config-l2tp-class)# digest secret cisco hash md5
```

Related Commands

Command	Description
authentication (L2TP), on page 4	Enables L2TP authentication for a specified L2TP class name.
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

hello-interval (L2TP)

To configure the hello-interval value for L2TP (duration between control channel hello packets), use the **hello interval (L2TP)** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

hello-interval *interval*

no hello-interval *interval*

Syntax Description

<i>interval</i>	Interval (in seconds) between control channel hello packets. The range is from 0 to 1000. Default is 60 seconds.
-----------------	--

Command Default

interval: 60 seconds

Command Modes

L2TP class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the hello-interval value for L2TP to 22 seconds:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# hello-interval 22
```

Related Commands

Command	Description
authentication (L2TP) , on page 4	Enables L2TP authentication for a specified L2TP class name.

Command	Description
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

hidden (L2TP)

To enable hidden attribute-value pairs (AVPs), use the **hidden** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

hidden

no hidden

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes L2TP class configuration

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to enable hidden AVPs:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# hidden
```

Related Commands	Command	Description
	authentication (L2TP) , on page 4	Enables L2TP authentication for a specified L2TP class name.
	hello-interval (L2TP) , on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
	hostname (L2TP) , on page 33	Defines the name used in the L2TP hostname AVP.

Command	Description
l2tp-class , on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP) , on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP) , on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP) , on page 78	Configures retransmit retry and timeout values.

hostname (L2TP)

To define the name used in the L2TP hostname AVP, use the **hostname** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

hostname *name*

no hostname *name*

Syntax Description

<i>name</i>	Hostname used to identify the router during L2TP control channel authentication.
-------------	--

Command Default

None

Command Modes

L2TP class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure a hostname using the word “cisco”:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# hostname cisco
```

Related Commands

Command	Description
authentication (L2TP) , on page 4	Enables L2TP authentication for a specified L2TP class name.

Command	Description
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

interface (p2p)

To configure an attachment circuit, use the **interface** command in p2p configuration submode. To return to the default behavior, use the **no** form of this command.

interface *type interface-path-id* [**PW-Ether** | **PW-IW**]

no interface *type interface-path-id* [**PW-Ether** | **PW-IW**]

Syntax Description

<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or a virtual interface. Note Use the show interfaces command to see a list of all possible interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
PW-Ether	(Optional) Configures an Ethernet Interface.
PW-IW	(Optional) Configures an IP Interworking Interface.

Command Default

None

Command Modes

p2p configuration submode

Command History

Release	Modification
Release 3.4.0	This command was introduced.
Release 4.2.1	The following keywords were added: • PW-Ether • PW-IW

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure an attachment circuit on a TenGigE interface:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group gr1
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p p001
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# interface TenGigE 1/1/1/1
```

Related Commands

Command	Description
p2p, on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.

interworking ipv4

To configure IPv4 interworking, use the **interworking ipv4** command in the p2p configuration submode. To return to the default behavior, use the **no** form of this command.

interworking ipv4

no interworking ipv4

Command	Description					
p2p , on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.					

interworking ethernet

To configure ethernet interworking across a pseudowire that enables delivery of Ethernet frames, use the **interworking ethernet** command in p2p configuration submode. To undo the configuration, use the **no** form of this command.

interworking ethernet

no interworking ethernet

Syntax Description

ethernet	Specifies the type of pseudowire and the type of traffic that can flow across it.
-----------------	---

Command Default

None

Command Modes

p2p configuration submode

Command History

Release	Modification
Release 4.2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
l2vpn	read, write

Examples

This example shows how to configure an ethernet interface:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# Xconnect group grp1
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p AC1_to_PW1
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# interworking ethernet
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)#
```

Related Commands

Command	Description
p2p , on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.
interworking ipv4 , on page 37	Configures IPv4 interworking.

l2tp-class

To enter L2TP class configuration mode where you can define an L2TP signaling template, use the **l2tp-class** command in global configuration mode. To delete the L2TP class, use the **no** form of this command.

l2tp-class *l2tp-class-name*

no l2tp-class *l2tp-class-name*

Syntax Description

l2tp-class-name	L2TP class name.
-----------------	------------------

Command Default

No L2TP classes are defined.

Command Modes

Global configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

An L2TP class name must be defined before configuring L2TP control plane configuration settings.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to enter L2TP configuration mode to create a template of L2TP control plane configuration settings that can be inherited by different pseudowire classes (in this case, the word “cisco” is used):

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)#
```

l2tp-class configuration

To enter L2TP class configuration mode in which an L2TP signaling template is not defined, use the **l2tp-class configuration** command in global configuration mode. To delete the L2TP class configuration, use the **no** form of this command.

l2tp-class configuration

no l2tp-class configuration

Syntax Description This command has no arguments or keywords.

Command Default No L2TP classes are defined.

Command Modes Global configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to enter L2TP configuration mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class configuration
RP/0/0/CPU0:router(config-l2tp-class)#
```

Related Commands	Command	Description
	authentication (L2TP), on page 4	Enables L2TP authentication for a specified L2TP class name.
	hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).

Command	Description
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

l2transport

To configure a physical interface to operate in Layer 2 transport mode, use the **l2transport** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

l2transport

no l2transport

This command has no arguments or keywords.

Command Default

None

Command Modes

Interface configuration

Command History

Release	Modification
Release 3.4.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The l2transport command and these configuration items are mutually exclusive:

- IPv4 address and feature (for example, ACL) configuration
- IPv4 enable, address and feature (for example, ACL) configuration
- Bundle-enabling configuration
- L3 subinterfaces
- Layer 3 QoS Policy

Note

After an interface or connection is set to Layer 2 switched, commands such as **ipv4 address** are not usable. If you configure routing commands on the interface, **l2transport** is rejected.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure an interface or connection as Layer 2 switched under several different modes:

Ethernet Port Mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0
RP/0/0/CPU0:router(config-if)# l2transport
```

Ethernet VLAN Mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0.900 l2transport
RP/0/0/CPU0:router(config-if)# encapsulation dot1q 100dot1q vlan 999
```

Ethernet VLAN Mode (QinQ):

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0.900 l2transport
RP/0/0/CPU0:router(config-if)# encapsulation dot1q 20 second-dot1q 10vlan 999 888
```

Ethernet VLAN Mode (QinAny):

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0.900 l2transport
RP/0/0/CPU0:router(config-if)# encapsulation dot1q 30 second-dot1q dot1q vlan 999 any
```

Related Commands

Command	Description
show l2vpn forwarding , on page 105	Displays forwarding information from the layer2_fib manager on the line card.

l2transport cell-packing

To configure L2VPN cell packing parameters, use the **l2transport cell-packing** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

l2transport cell-packing *maximum timer*

no l2transport cell-packing *maximum timer*

Syntax Description

<i>maximum</i>	Maximum number of cells to be packed in a packet. Range is 2 to 86.
<i>timer</i>	Cell packing timer (1, 2, or 3).

Command Default

No default behavior or values

Command Modes

Interface configuration

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write
atm	read, write

Examples

The following example shows how to configure L2VPN cell packing parameters:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0
RP/0/0/CPU0:router(config-if)# l2transport cell-packing 33 2
```

Related Commands

Command	Description
show l2vpn forwarding, on page 105	Displays forwarding information from the layer2_fib manager on the line card.

l2transport propagate

To propagate Layer 2 transport events, use the **l2transport propagate** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

l2transport propagate remote-status

no l2transport propagate remote-status

Syntax Description

remote-status	Propagates remote link status changes.
----------------------	--

Command Default

None

Command Modes

Interface configuration

Command History

Release	Modification
Release 3.9.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **l2transport propagate** command provides a mechanism for the detection and propagation of remote link failure for port mode EoMPLS.

To display the state of l2transport events, use the **show controller internal** command in *Cisco IOS XR Interface and Hardware Component Configuration Guide for the Cisco XR 12000 Series Router*

For more information about the Ethernet remote port shutdown feature, see *Cisco IOS XR MPLS Configuration Guide for the Cisco XR 12000 Series Router*.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to propagate remote link status changes:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# interface GigabitEthernet 0/0/0/0
RP/0/0/CPU0:router(config-if)# l2transport propagate remote remote-status
```

Related Commands

Command	Description
show l2vpn forwarding, on page 105	Displays forwarding information from the layer2_fib manager on the line card.

l2vpn

To enter L2VPN configuration mode, use the **l2vpn** command in global configuration mode. To return to the default behavior, use the **no** form of this command.

l2vpn

no l2vpn

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes Global configuration

Command History	Release	Modification
	Release 3.4.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

All L2VPN configuration can be deleted using the **no l2vpn** command.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to enter L2VPN configuration mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)#
```

Related Commands

Command	Description
show l2vpn forwarding, on page 105	Displays forwarding information from the layer2_fib manager on the line card.

l2vpn switchover

To force a manual pseudowire switchover, use the **l2vpn switchover** command in EXEC mode.

l2vpn switchover xconnect neighbor *IP-address* pw-id *value*

Syntax Description

xconnect	Configures the switchover for the cross-connect.
neighbor <i>IP-address</i>	Configures the peer for the cross-connect.
pw-id <i>value</i>	Configures the pseudowire ID. The range is from 1 to 4294967295.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 4.1.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the backup exists, you can switch a primary router over to the backup router. You can use the **l2vpn switchover** command to reactivate the primary router.

Task ID

Task ID	Operations
l2vpn	read, write, execute

Examples

The following example shows how to switch a primary pseudowire to a backup pseudowire:

```
RP/0/0/CPU0:router# l2vpn switchover xconnect neighbor 10.1.1.1 pw-id 2
```

Related Commands

Command	Description
backup disable (L2VPN), on page 8	Specifies how long a backup pseudowire should wait before resuming operation after the primary pseudowire goes down.

logging (l2vpn)

To enable cross-connect logging, use the **logging** command in L2VPN configuration submode. To return to the default behavior, use the **no** form of this command.

logging pseudowire status

no logging pseudowire status

Syntax Description

pseudowire status	Enables pseudowire state change logging.
-------------------	--

Command Default

None

Command Modes

L2VPN configuration submode

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

All L2VPN configuration can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to enable cross-connect logging:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# logging pseudowire status
```

Related Commands

Command	Description
l2vpn, on page 49	Enters L2VPN configuration mode.

logging nsr

To enable non-stop routing logging, use the **logging nsr** command in L2VPN configuration submode. To return to the default behavior, use the **no** form of this command.

logging nsr

no logging nsr

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes L2VPN configuration submode

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

All L2VPN configuration can be deleted using the **no l2vpn** command.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to enable non-stop routing logging:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# logging nsr
```

Related Commands

Command	Description
l2vpn, on page 49	Enters L2VPN configuration mode.

mpls static label (L2VPN)

To configure static labels for MPLS L2VPN, use the **mpls static label** command in L2VPN cross-connect P2P pseudowire configuration mode. To have MPLS assign a label dynamically, use the **no** form of this command.

mpls static label *local label* *remote value*

no mpls static label *local label* *remote value*

Syntax Description

local label Configures a local pseudowire label. Range is 16 to 15999.

remote value Configures a remote pseudowire label. Range is 16 to 15999.

Command Default

The default behavior is a dynamic label assignment.

Command Modes

L2VPN cross-connect P2P pseudowire configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure static labels for MPLS L2VPN:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn xconnect group l2vpn
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p rtrA_to_rtrB
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)# mpls static label local 800 remote 500
```

Related Commands

Command	Description
l2vpn, on page 49	Enters L2VPN configuration mode.
neighbor (L2VPN), on page 59	Configures a pseudowire for a cross-connect.
p2p, on page 74	Enters p2p configuration submode to configure point-to-point cross-connects.
xconnect group, on page 151	Configures cross-connect groups.

neighbor (L2VPN)

To configure a pseudowire for a cross-connect, use the **neighbor** command in p2p configuration submode. To return to the default behavior, use the **no** form of this command.

neighbor *A.B.C.D* **pw-id** *value* [**backup**| **mpls** || **pw-class** | **tag-impose**]

no neighbor *A.B.C.D* **pw-id** *value* [**backup**| **mpls** || **pw-class** | **tag-impose**]

Syntax Description

<i>A.B.C.D</i>	IP address of the cross-connect peer.
pw-id <i>value</i>	Configures the pseudowire ID and ID value. Range is 1 to 4294967295.
tag-impose	Optional Specifies a tag during a VLAN ID configuration.

Command Default

None

Command Modes

p2p configuration submode

Command History

Release	Modification
Release 3.4.0	This command was introduced.
Release 3.4.1	The vccv disable keyword was added.
Release 3.7.0	These keywords were removed: <ul style="list-style-type: none"> • control-word • pw-static-label local • remote • vccv • transport-mode
Release 4.2.1	The keyword tag-impose was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A cross-connect may have two segments:

- 1 An Attachment Circuit (AC)
- 2 An second AC or a pseudowire

**Note**

The pseudowire is identified by two keys: neighbor and pseudowire ID. There may be multiple pseudowires going to the same neighbor. It is not possible to configure only a neighbor.

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

This example shows a point-to-point cross-connect configuration (including pseudowire configuration):

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn xconnect group l2vpn
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p rtrA_to_rtrB
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.1.1.2 pw-id 1000 pw-class class12
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.1.1.3 pw-id 1001 pw-class class13
RP/0/0/CPU0:router(config-xc)# p2p rtrC_to_rtrD
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.2.2.3 pw-id 200 pw-class class23
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.2.2.4 pw-id 201 pw-class class24
```

This example shows a point-to-point cross-connect configuration (including pseudowire configuration):

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn xconnect group l2vpn
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p rtrA_to_rtrB
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 10.1.1.2 pw-id 1000 pw-class foo
RP/0/0/CPU0:router(config-xc)# p2p rtrC_to_rtrD
RP/0/0/CPU0:router(config-xc-p2p)# neighbor 20.2.2.3 pw-id 200 pw-class bar1
```

Related Commands

nsr (L2VPN)

To configure non-stop routing, use the **nsr** command in L2VPN configuration submode. To return to the default behavior, use the **no** form of this command.

nsr

no nsr

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes L2VPN configuration submode

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note All L2VPN configuration can be deleted using the **no l2vpn** command.

Task ID	Task ID	Operation
	l2vpn	read, write

Examples The following example shows how to configure non-stop routing:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# nsr
```

Related Commands

Command	Description
l2vpn, on page 49	Enters L2VPN configuration mode.

password (L2TP)

To define the password and password encryption type for control channel authentication, use the **password** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

password [*0*|*7*] *password*

no password

Syntax Description

0	(Optional) Specifies that an unencrypted password will follow.
7	(Optional) Specifies that an encrypted password will follow.
<i>password</i>	Unencrypted or clear text user password.

Command Default

None

Command Modes

Global configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to define an unencrypted password using the word “cisco” for control channel authentication:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class sanjose
RP/0/0/CPU0:router(config-l2tp-class)# password 0 cisco
```

Related Commands

Command	Description
authentication (L2TP), on page 4	Enables L2TP authentication for a specified L2TP class name.
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.

pw-class (L2VPN)

To enter pseudowire class submode to define a pseudowire class template, use the **pw-class** command in L2VPN configuration submode. To delete the pseudowire class, use the **no** form of this command.

pw-class *class-name*

no pw-class *class-name*

Syntax Description	<div> <div><i>class-name</i></div> <div>Pseudowire class name.</div> </div>	
Command Default	None	
Command Modes	L2VPN configuration submode	
Command History	Release	Modification
	Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to define a simple pseudowire class template:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group l1vpn
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p rtrA_to_rtrB
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)# pw-class kanata01
```

Related Commands

Command	Description

pw-class encapsulation l2tpv3

To configure L2TPv3 pseudowire encapsulation, use the **pw-class encapsulation l2tpv3** command in L2VPN pseudowire class configuration mode. To return to the default behavior, use the **no** form of this command.

pw-class class name encapsulation l2tpv3 [**cookie size** {0|4|8}|**ipv4 source** *address*|**pmtu max** 68-65535|**protocol l2tpv3 class name**|**tos** {reflect *value* 0-255|*value* 0-255}|**ttl** *value*]

no pw-class class name encapsulation l2tpv3 [**cookie size** {0|4|8}|**ipv4 source** *address*|**pmtu max** 68-65535|**protocol l2tpv3 class name**|**tos** {reflect *value* 0-255|*value* 0-255}|**ttl** *value*]

Syntax Description

class name	Configures an encapsulation class name.
cookie size {0 4 8}	(Optional) Configures the L2TPv3 cookie size setting: <ul style="list-style-type: none"> • 0—Cookie size is 0 bytes. • 4—Cookie size is 4 bytes. • 8—Cookie size is 8 bytes.
ipv4 source <i>address</i>	(Optional) Configures the local source IPv4 address.
pmtu max 68-65535	(Optional) Configures the value of the maximum allowable session MTU.
protocol l2tpv3 class name	(Optional) Configures L2TPv3 as the signaling protocol for the pseudowire class.
tos {reflect <i>value</i> 0-255 <i>value</i> 0-255}	(Optional) Configures TOS and the TOS value. Range is 0 to 255.
ttl <i>value</i>	Configures the Time-to-live (TTL) value. Range is 1 to 255.

Command Default

None

Command Modes

L2VPN pseudowire class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note**

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to define L2TPV3 pseudowire encapsulation:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
RP/0/0/CPU0:router(config-l2vpn-pwc)# encapsulation l2tpv3
```

The following example shows how to set the encapsulation and protocol to L2TPV3:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
RP/0/0/CPU0:router(config-l2vpn-pwc)# encapsulation l2tpv3
RP/0/0/CPU0:router(config-l2vpn-pwc-l2tpv3)# protocol l2tpv3
```

Related Commands

Command	Description
pw-class (L2VPN), on page 65	Enters pseudowire class submode to define a pseudowire class template.
pw-class encapsulation mpls, on page 69	Configures MPLS pseudowire encapsulation.

pw-class encapsulation mpls

To configure MPLS pseudowire encapsulation, use the **pw-class encapsulation mpls** command in L2VPN pseudowire class configuration mode. To undo the configuration, use the **no** form of this command.

pw-class *class-name* **encapsulation mpls** {**control word**| **ipv4**| **load-balancing**| **preferred-path**| **protocol ldp**| **redundancy one-way**| **sequencing**| **tag-rewrite**| **transport-mode**| **vccv verification-type none**}

no pw-class *class-name* **encapsulation mpls** {**control word**| **ipv4**| **load-balancing**| **preferred-path**| **protocol ldp**| **redundancy one-way**| **sequencing**| **tag-rewrite**| **transport-mode**| **vccv verification-type none**}

Syntax Description

<i>class-name</i>	Encapsulation class name.
control word	Disables control word for MPLS encapsulation. Disabled by default.
ipv4	Sets the local source IPv4 address.
load-balancing	Sets flow label-based load balancing.
preferred-path	Configures the preferred path tunnel settings.
protocol ldp	Configures LDP as the signaling protocol for this pseudowire class.
redundancy one-way	Configures one-way PW redundancy behavior in the Redundancy Group.
sequencing	Configures sequencing on receive or transmit.
tag-rewrite	Configures VLAN tag rewrite.
transport-mode	Configures transport mode to be either Ethernet or VLAN.
vccv none	Enables or disables the VCCV verification type.

Command Default

None

Command Modes

L2VPN pseudowire class configuration

Command History

Release	Modification
Release 3.5.0	This command was introduced.
Release 3.8.0	The keywords control word disable and vccv none were replaced by the keywords control word and vccv verification-type none .
Release 3.9.0	The following keywords were added: <ul style="list-style-type: none"> • preferred-path • sequencing • tag-rewrite • transport-mode
Release 4.2.0	The keyword redundancy one-way was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

**Note**

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

This example shows how to define MPLS pseudowire encapsulation:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
RP/0/0/CPU0:router(config-l2vpn-pwc)# encapsulation mpls
```

Command History	Release	Modification
	Release 3.4.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
------------------	---

The name of the point-to-point cross-connect string is a free format description string.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows a point-to-point cross-connect configuration (including pseudowire configuration):
----------	--

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group group 1
RP/0/0/CPU0:router(config-l2vpn-xc)# p2p xc1
```

Related Commands

Command	Description
interface (p2p), on page 35	Configures an attachment circuit.

receive-window (L2TP)

To configure the receive window size for the L2TP server, use the **receive-window** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

receive-window *size*

no receive-window *size*

Syntax Description

<i>size</i>	Maximum number of packets that are received from a peer before back-off is applied. Default is 512.
-------------	---

Command Default

size: 512

Command Modes

L2TP class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the receive window size for the L2TP server to 10 packets:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# receive-window 10
```

Related Commands

Command	Description
authentication (L2TP) , on page 4	Enables L2TP authentication for a specified L2TP class name.

Command	Description
hello-interval (L2TP) , on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP) , on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP) , on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class , on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP) , on page 63	Defines the password and password encryption type for control channel authentication.
retransmit (L2TP) , on page 78	Configures retransmit retry and timeout values.

retransmit (L2TP)

To configure retransmit retry and timeout values, use the **retransmit** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

retransmit {**initial** *initial-retries*| **retries** *retries*| **timeout** {**max**| **min**} *timeout*}

no retransmit {**initial** *initial-retries*| **retries** *retries*| **timeout** {**max**| **min**} *timeout*}

Syntax Description

initial <i>initial-retries</i>	Configures the number of SCCRP messages resent before giving up on a particular control channel. Range is 1 to 1000. Default is 2.
retries <i>retries</i>	Configures the maximum number of retransmissions before determining that peer router does not respond. Range is 5 to 1000. Default is 15.
timeout { max min } <i>timeout</i>	Configures the maximum and minimum retransmission interval in seconds for control packets. Range is 1 to 8. Maximum timeout default is 8 seconds. Minimum timeout default is 1 second.

Command Default

initial retries: 2

retries: 15

min timeout: 1

max timeout: 8

Command Modes

L2TP class configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure a retransmit retry value to 1:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# retransmit initial retries 1
```

Related Commands

Command	Description
authentication (L2TP), on page 4	Enables L2TP authentication for a specified L2TP class name.
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.

rollover (L3VPN)

To configure rollover times for a tunnel-template, use the **rollover** command in tunnel encapsulation l2tp configuration mode. To return to the default behavior, use the **no** form of this command.

rollover *periodic time holdown time*

no rollover *periodic time holdown time*

Syntax Description

periodic <i>time</i>	Configures the periodic rollover time in seconds. Range is 60 to 31536000.
holddown <i>time</i>	Configures the holddown time for old session cookie values.

Command Default

None

Command Modes

tunnel encapsulation l2tp configuration

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The name of the point-to-point cross-connect string is a free format description string.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure rollover times for a tunnel-template:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# tunnel-template kanata_9
RP/0/0/CPU0:router(config-tuntem) encapsulation l2tp
RP/0/0/CPU0:router(config-tunencap-l2tp)# rollover
```

Related Commands

Command	Description
interface (p2p), on page 35	Configures an attachment circuit.

sequencing (L2VPN)

To configure L2VPN pseudowire class sequencing, use the **pw-class sequencing** command in L2VPN pseudowire class encapsulation mode. To return to the default behavior, use the **no** form of this command.

sequencing {both| receive| transmit {resynch 5-65535}}

no sequencing {both| receive| transmit {resynch 5-65535}}

Syntax Description

both	Configures transmit and receive side sequencing.
receive	Configures receive side sequencing.
transmit	Configures transmit side sequencing.
resynch 5-65535	Configures the threshold for out-of-sequence packets before resynchronization. Range is 5 to 65535.

Command Default

None

Command Modes

L2VPN pseudowire class encapsulation mode

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Do not configure **sequence resynch** on high speed circuits. On low speed circuits, do not configure a threshold lower than 10 to 20 seconds of traffic.

Note

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure L2VPN pseudowire class sequencing:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
RP/0/0/CPU0:router(config-l2vpn-pw)# encapsulation mpls
RP/0/0/CPU0:router(config-l2vpn-encap-mpls)# sequencing both
```

Related Commands

Command	Description
pw-class (L2VPN) , on page 65	Enters pseudowire class submode to define a pseudowire class template.

show generic-interface-list

To display information about interface-lists, use the **show generic-interface-list** in EXEC mode.

show generic-interface-list [**location** | **name** | **retry** | **standby**]

Syntax Description

location	(Optional) Displays information about interface-lists for the specified location.
name	(Optional) Displays information about interface-lists for the specified interface list name.
retry	(Optional) Displays retry-list information.
standby	(Optional) Displays Standby node specific information.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 4.3.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
l2vpn	read

Examples

The following example displays output for the **show generic-interface-list** command:

```
RP/0/0/CPU0:router# show generic-interface-list
Thu Aug  2 13:48:57.462 CDT
generic-interface-list: nsrIL (ID: 1, interfaces: 2)
  Bundle-Ether2 - items pending 0, downloaded to FIB
  GigabitEthernet0/0/0/1 - items pending 0, downloaded to FIB
Number of items: 400
List is downloaded to FIB
```

The following example displays output for the **show generic-interface-list retry private** command:

```
RP/0/0/CPU0:router# show generic-interface-list retry private
Thu Aug  2 14:20:42.883 CDT
total: 0 items
```

The following example displays output for the **show generic-interface-list standby** command:

```
RP/0/0/CPU0:router# show generic-interface-list standby
Thu Aug 2 14:25:01.749 CDT
generic-interface-list: nsrIL (ID: 0, interfaces: 2)
Bundle-Ether2 - items pending 0, NOT downloaded to FIB
GigabitEthernet0/0/0/1 - items pending 0, NOT downloaded to FIB
Number of items: 0
List is not downloaded to FIB
```

Related Commands

Command	Description
l2vpn , on page 49	Enters L2VPN configuration mode.

show l2tp class

To display information about an L2TP class, use the **show l2tp class** command in EXEC mode.

show l2tp class *name name*

Syntax Description

name <i>name</i>	Configures an L2TP class name.
-------------------------	--------------------------------

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows sample output for the **show l2vtp session class** command:

```
RP/0/0/CPU0:router# show l2tp class name kanata_02
```

```
l2tp-class kanata_02
  manually configured class
  configuration parameters:
    (not) hidden
    (no) authentication
    (no) digest
    digest check enable
    hello 60
    (no) hostname
    (no) password
    (no) accounting
    (no) security crypto-profile
    (no) ip vrf
    receive-window 888
    retransmit retries 15
```

```
retransmit timeout max 8
retransmit timeout min 1
retransmit initial retries 2
retransmit initial timeout max 8
retransmit initial timeout min 1
timeout setup 300
```

This table describes the significant fields shown in the display.

Table 2: show l2tp class brief Field Descriptions

Field	Description
l2tp-class	Shows the L2TP class name and the manner of its creation. For example, manually configured class.
configuration parameters	Displays a complete list and state of all configuration parameters.

Related Commands

Command	Description
l2tp-class , on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.

show l2tp counters forwarding session

To display L2TP forward session counters, use the **show l2tp counter forwarding session** command in EXEC mode.

show l2tp counters forwarding session [*id identifier*] **name** *local-name remote-name*]

Syntax Description

id <i>identifier</i>	(Optional) Configures the session counter identifier.
name <i>local-name remote name</i>	(Optional) Configures the local and remote names for a session counter.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification

l2vpn	read, write

Examples

The following sample output is from the **show l2tp session brief** command:

```
RP/0/RP00/CPU0:router(config-l2vpn-pw)# show l2tp session brief
Tue Jun 10 12:51:30.901 UTC
LocID      TunID      Peer-address  State      Username, Intf/sess/cir  Vcid, Circuit
1606803058 1487464659 26.26.26.26   est,UP     101, Gi0/2/0/1.101
3663696887 1487464659 26.26.26.26   est,UP     100, Gi0/2/0/1.100
```

This table describes the significant fields shown in the display.

Table 4: show l2tp session brief Field Descriptions

Field	Description
LocID	Local session ID.
TunID	Local tunnel ID for this session.
Peer-address	The IP address of the other end of the session.
State	The state of the session.
Vcid	The Virtual Circuit ID of the session. This is the same value of the pseudowire ID for l2vpn.

The following sample output is from the **show l2tp session detail** command:

```
RP/0/RP00/CPU0:router(config-l2vpn-pw)# show l2tp session detail
Tue Jun 10 12:53:19.842 UTC
Session id 1606803058 is up, tunnel id 1487464659, logical session id 131097
  Remote session id is 2602674409, remote tunnel id 2064960537
  Remotely initiated session
  Call serial number is 4117500017
  Remote tunnel name is ASR9K-PE2
  Internet address is 26.26.26.26:1248
  Local tunnel name is PRABHRAM-PE1
  Internet address is 25.25.25.25:4272
IP protocol 115
  Session is L2TP signaled
  Session state is established, time since change 00:07:28
  UDP checksums are disabled
  Session cookie information:
    local cookie, size 4 bytes, value 6d 3e 03 67
    remote cookie, size 4 bytes, value 0d ac 7a 3b
  Tie breaker is 0xfee65781a2fa2cfd, enabled TRUE.
  Sequencing is off
  Conditional debugging is disabled
  Unique ID is 101
Session Layer 2 circuit
  Payload type is Ethernet, Name is GigabitEthernet0_2_0_1.101
  Session vcid is 101
  Circuit state is UP
    Local circuit state is UP
    Remote circuit state is UP
```

show l2vpn collaborators

To display information about the state of the interprocess communications connections between l2vpn_mgr and other processes, use the **show l2vpn collaborators** command in EXEC mode.

show l2vpn collaborators

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes EXEC

Release	Modification
Release 3.4.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Operations
l2vpn	read, write

Examples The following example shows sample output for the **show l2vpn collaborators** command:

```
RP/0/0/CPU0:router# show l2vpn collaborators
L2VPN Collaborator stats:
Name                State      Up Cnts    Down Cnts
-----
IMC                  Down       0          0
LSD                  Up         1          0
```

This table describes the significant fields shown in the display.

Table 6: show l2vpn collaborators Field Descriptions

Field	Description
Name	Abbreviated name of the task interacting with l2vpn_mgr.

Field	Description
State	Indicates if l2vpn_mgr has a working connection with the other process.
Up Cnts	Number of times the connection between l2vpn_mgr and the other process has been successfully established.
Down Cnts	Number of times that the connection between l2vpn_mgr and the other process has failed or been terminated.

Related Commands

Command	Description
clear l2vpn collaborators , on page 16	Clears the state change counters for L2VPN collaborators.

show l2vpn database

To display L2VPN database, use the **show l2vpn database** command in EXEC mode.

show l2vpn database {ac| node}

Syntax Description

ac	Displays L2VPN Attachment Circuit (AC) database
node	Displays L2VPN node database.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 4.3.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
l2vpn	read

Examples

The following example displays output for the **show l2vpn database ac** command:

show l2vpn forwarding

To display forwarding information from the layer2_fib manager on the line card, use the **show l2vpn forwarding** command in EXEC mode.

show l2vpn forwarding {**xconnect**| **bridge-domain**| **counter**| **detail**| **hardware**| **inconsistent**| **interface**| **l2tp**| **location** [*node-id*]| **message**| **mstp**| **resource**| **retry-list**| **summary**| **unresolved**}

Syntax Description

xconnect	Displays the cross-connect related information.
bridge-domain	Displays bridge domain related forwarding information.
counter	Displays the cross-connect counters.
detail	Displays detailed information from the layer2_fib manager.
hardware	Displays hardware-related layer2_fib manager information.
inconsistent	Displays inconsistent entries only.
interface	Displays the match AC subinterface.
l2tp	Displays L2TPv3 related forwarding information.
location <i>node-id</i>	Displays layer2_fib manager information for the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
message	Displays messages exchanged with collaborators.
mstp	Displays multi-spanning tree related forwarding information.
resource	Displays resource availability information in the layer2_fib manager.
retry-list	Displays retry list related information.

summary	Displays summary information about cross-connects in the layer2_fib manager.
unresolved	Displays unresolved entries only.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.4.0	This command was introduced.
	Release 3.7.0	Sample output was updated to add MAC information for the layer2_fib manager summary.

Usage Guidelines To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read

Examples The following sample output is from the **show l2vpn forwarding bridge detail location** command for IOS-XR releases 5.3.1 and earlier:

```
RP/0/0/CPU0:router# show l2vpn forwarding bridge detail location 0/2/cpu0

l2vpn	read

Examples

This example shows the sample output of the **show l2vpn generic-interface-list** command:

```
RP/0/0/CPU0:router# show l2vpn generic-interface-list
generic-interface-list: l1 (ID: 2, interfaces: 2)  Number of items: 20
generic-interface-list: l2 (ID: 3, interfaces: 4)  Number of items: 15
```

This example shows the sample output of the **show l2vpn generic-interface-list detail** command:

```
RP/0/0/CPU0:router# show l2vpn generic-interface-list detail
generic-interface-list: l1 (ID: 2, interfaces: 2)
```

```
GigabitEthernet0/1/0/0 - items pending 2
GigabitEthernet0/1/0/1 - items pending 4
Number of items: 27
  PW-Ether: 1-10, 12-21
  PW-IW: 1-7

generic-interface-list: 12 (ID: 3, interfaces: 4)
  GigabitEthernet0/1/0/0 - items pending 2
  GigabitEthernet0/1/0/1 - items pending 4
  GigabitEthernet0/1/0/2 - items pending 1
  GigabitEthernet0/1/0/3 - items pending 0
Number of items: 20
  PW-Ether: 1-15
  PW-IW: 1-7
```

This example shows the sample output of the **show l2vpn generic-interface-list name | detail** command:

```
RP/0/0/CPU0:router# show l2vpn generic-interface-list name 11 detail
generic-interface-list: 11 (ID: 2, interfaces: 2)
  GigabitEthernet0/1/0/0 - items pending 2
  GigabitEthernet0/1/0/1 - items pending 4
Number of items: 20
  PW-Ether 1-10, 12-21
```

show l2vpn index

To display statistics about the index manager, use the **show l2vpn index** command in EXEC mode.

show l2vpn index [**location**| **private**| **standby**]

Syntax Description

location	(Optional) Displays index manager statistics for the specified location.
private	(Optional) Detailed information about all indexes allocated for each pool.
standby	(Optional) Displays Standby node specific information.

Release	Modification
Release 4.2.1	This command was introduced.
Release 4.3.0	The following keywords are introduced: <ul style="list-style-type: none"> • location • standby

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read

Examples

This example shows the sample output of the **show l2vpn index** command:

```
RP/0/0/CPU0:router# show l2vpn index
Pool id: 0x4, App: RD
Pool size: 32767
zombied IDs: 0
allocated IDs: 0

Pool id: 0x5, App: IFLIST
Pool size: 65535
zombied IDs: 0
allocated IDs: 2

Pool id: 0xff000001, App: PW/PBB/Virtual AC
Pool size: 40960
zombied IDs: 0
allocated IDs: 1

Pool id: 0xff000002, App: BD
Pool size: 4095
zombied IDs: 0
allocated IDs: 2

Pool id: 0xff000003, App: MP2MP
Pool size: 65535
zombied IDs: 0
allocated IDs: 1
```

This example shows the sample output of the **show l2vpn index standby** command:

```
RP/0/0/CPU0:router# show l2vpn index standby
Pool id: 0xfffc0000, App: Global
Max number of ID mgr instances: 1
ID mgr instances in use: 1
Pool size: 98304
zombied IDs: 0
allocated IDs: 0

Pool id: 0xfffc0002, App: BD
Max number of ID mgr instances: 1
ID mgr instances in use: 1
Pool size: 8192
zombied IDs: 0
allocated IDs: 0

Pool id: 0xfffc0003, App: MP2MP
Max number of ID mgr instances: 1
ID mgr instances in use: 1
Pool size: 65535
zombied IDs: 0
allocated IDs: 0
```

show l2vpn nsr

To display the status of l2vpn non-stop routing, use the **show l2vpn nsr** command in EXEC mode.

show l2vpn nsr [**location**| **standby**]

Syntax Description	
location	(Optional) Displays non-stop routing information for the specified location.
standby	(Optional) Displays Standby node specific information.

Command Default None

Command Modes EXEC

Memory	Displays memory status.

show l2vpn trace

To display trace data for L2VPN, use the **show l2vpn trace** command in EXEC mode.

show l2vpn trace [**checker**| **file**| **hexdump**| **last**| **location**| **reverse**| **stats**| **tailf**| **unique**| **usec**| **verbose**| **wide**| **wrapping**]

Syntax Description

checker	Displays trace data for the L2VPN Ubrverifier.
file	Displays trace data for the specified file.
hexdump	Display traces data in hexadecimal format.
last	Display last <n> entries
location	Displays trace data for the specified location.
reverse	Display latest traces first
stats	Display trace statistics
tailf	Display new traces as they are added
unique	Display unique entries with counts
usec	Display usec details with timestamp
verbose	Display internal debugging information
wide	Display trace data excluding buffer name, node name, tid
wrapping	Display wrapping entries

show l2vpn xconnect

To display brief information on configured cross-connects, use the **show l2vpn xconnect** command in EXEC mode.

show l2vpn xconnect [**brief**|**detail**|**encapsulation**|**group**|**groups**|**interface**|**location**|**mp2mp**|**mospw**|**neighbor**|**pw-class**|**standby**|**state**|**summary**|**type**|**state unresolved**]

Syntax Description

brief	(Optional) Displays encapsulation brief information.
detail	(Optional) Displays detailed information.
<i>encapsulation</i>	(Optional) Filters on encapsulation type.
group	(Optional) Displays all cross-connects in a specified group.
groups	(Optional) Displays all groups information.
interface	(Optional) Filters the interface and subinterface.
location	(Optional) Displays location specific information.
mp2mp	(Optional) Displays MP2MP information.
mospw	(Optional) Displays ms_pw information.
neighbor	(Optional) Filters the neighbor.
pw-class	(Optional) Filters on pseudowire class
standby	(Optional) Displays standby node specific information.
state	(Optional) Filters the following xconnect state types: <ul style="list-style-type: none"> • up • down
summary	(Optional) Displays AC information from the AC Manager database.
type	(Optional) Filters the following xconnect types: <ul style="list-style-type: none"> • ac-pw • locally switched

state unresolved	(Optional) Displays information about unresolved cross-connects.
-------------------------	--

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 3.4.0	This command was introduced.
	Release 3.4.1	VCCV-related show command output was added.
	Release 3.6.0	Preferred-path-related show command output was added.
	Release 3.7.0	Sample output was updated to display the backup pseudowire information.
	Release 4.3.0	The following keywords were introduced: <ul style="list-style-type: none"> • brief • encapsulation • groups • location • mp2mp • mspw • pw-class • standby

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If a specific cross-connect is specified in the command (for instance, AC_to_PW1) then only that cross-connect will be displayed; otherwise, all cross-connects are displayed.

When configuring Ethernet Connectivity Fault Management (CFM) over l2vpn cross-connect, the CFM Continuity Check Messages (CCM) packets are not accounted for in the cross-connect pseudowire packet counters displayed in this show command output.

This table describes the significant fields shown in the display.

Table 9: show l2vpn xconnect Command Field Descriptions

Field	Description
XConnect Group	Displays a list of all configured cross-connect groups.
Group	Displays the cross-connect group number.
Name	Displays the cross-connect group name.
Description	Displays the cross-connect group description. If no description is configured, the interface type is displayed.
ST	State of the cross-connect group: up (UP) or down (DN).

Related Commands

Command	Description
xconnect group , on page 151	Configures cross-connect groups.

show tunnel-template

To display tunnel template information, use the **show tunnel-template** command in the EXEC mode.

show tunnel-template *template-name*

Syntax Description

<i>template-name</i>	Name of the tunnel template.
----------------------	------------------------------

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

Task ID

Task ID	Operation
tunnel	read

Examples

The following example shows the output of the **show tunnel-template test** command for Local PE Tunnel:

```
RP/0/0/CPU0:router# show tunnel-template test
Fri Jan 30 06:22:46.428 UTC

Tunnel template
-----
Name:      test (ifhandle: 0x00080030)
MTU:      1464
TTL:      255
TOS:      0
Tunnel ID: 1
Source:    25.25.25.25
Session ID: 0x1D174108 Cookie: 8 bytes [0x24FD3ADAA4485333] being rolled into
           Session ID: 0x15A86E93 Cookie: 8 bytes [0xF486195660CCD522]
Next Session-id/Cookie rollover happens in 1 minute 49 seconds
Transmit:  14213298 pkts  1250770344 bytes
Cookie Mismatch: 0 pkts
MTU Violation: 0 pkts
```

The following example shows the output of the **show tunnel-template test** command for Remote PE Tunnel:

```
RP/0/0/CPU0:router# show tunnel-template test
```

Fri Jan 30 06:04:29.800 UTC

Tunnel template

```
-----
Name:      test (ifhandle: 0x00080030)
MTU:       600
TTL:       255
TOS:       0
Tunnel ID: 1
Source:    35.35.35.35   Address Pool: 36.36.36.0/28
Session ID: 0x111F4312 Cookie: 8 bytes [0xB95A806145BE9BE7]
Transmit:  122168722 pkts 10750845295 bytes
Cookie Mismatch: 0 pkts
MTU Violation: 0 pkts
```

Related Commands

Command	Description
tunnel-template , on page 150	Enters tunnel-template configuration submenu.

switching-tlv (L2VPN)

To advertise the switching point type-length variable (TLV) in the label binding, use the **switching-tlv** command in the pseudowire class configuration mode. To disable the display of the TLV, use the **no** form of this command.

switching tlv hide

no switching tlv

Syntax Description

hide	Hides TLV.
-------------	------------

Command Default

Switching point TLV data is advertised to peers.

Command Modes

L2VPN pseudowire class encapsulation mode

Command History

Release	Modification
Release 4.1.1	This command was introduced.

Usage Guidelines

The pseudowire switching point TLV information includes the following information:

- Pseudowire ID of the last pseudowire segment traversed
- Pseudowire switching point description
- Local IP address of the pseudowire switching point
- Remote IP address of the last pseudowire switching point that was crossed or the T-PE router

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure a timeout value for L2TP session setup of 400 seconds:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class cisco
RP/0/0/CPU0:router(config-l2vpn-pwc)# encapsulation mpls
RP/0/0/CPU0:router(config-l2vpn-pwc-mpls)# switching-tlv hide
RP/0/0/CPU0:router(config-l2vpn-pwc-mpls)#
```

Related Commands

Command	Description
pw-class (L2VPN), on page 65	Enters pseudowire class submode to define a pseudowire class template.

tag-impose

To specify a tag for a VLAN ID configuration, use the **tag-impose** command in l2vpn configuration submode. To remove the tag, use the **no** form of this command.

tag-impose *vlan value*

no tag-impose *vlan value*

Syntax Description

vlan	VLAN in tagged mode.
value	Tag value. The range is from 1 to 4094. The default value is 0.

Command Default

None

Command Modes

L2VPN configuration

Command History

Release	Modification
Release 4.2.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

This example shows how to specify a tag for a VLAN:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group xcl
RP/0/0/CPU0:router(config-l2vpn-xc)#p2p grp1
RP/0/0/CPU0:router(config-l2vpn-xc-p2p)#neighbor 10.1.1.2 pw-id 78
RP/0/0/CPU0:router(config-l2vpn-xc-p2p-pw)#tag-impose vlan 8
```

Related Commands

Command	Description
pw-class (L2VPN), on page 65	Enters pseudowire class submode to define a pseudowire class template.

tag-rewrite

To configure VLAN tag rewrite, use the **tag-rewrite** command in Encapsulation MPLS configuration mode. To disable VLAN tag rewrite, use the **no** form of this command.

tag-rewrite ingress vlan *vlan-id*

no tag-rewrite ingress vlan *vlan-id*

Syntax Description

ingress	Configures ingress mode.
vlan	Configures VLAN tagged mode
<i>vlan-id</i>	Specifies the value of the ID of the VLAN.

Command Default

None

Command Modes

Encapsulation MPLS configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **tag-rewrite** command is applicable only to pseudowires with MPLS encapsulation.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure preferred-path tunnel settings:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
RP/0/0/CPU0:router(config-l2vpn-pwc)# encapsulation mpls
RP/0/0/CPU0:router(config-l2vpn-pwc-encap-mpls)# tag-rewrite vlan 2000
RP/0/0/CPU0:router(config-l2vpn-pwc-encap-mpls)#
```

Related Commands

Command	Description
show l2vpn xconnect, on page 129	Displays brief information on configured cross-connects.

timeout setup (L2TP)

To configure timeout definitions for L2TP session setup, use the **timeout setup** command in L2TP class configuration mode. To return to the default behavior, use the **no** form of this command.

timeout setup *seconds*

no timeout setup *seconds*

Syntax Description	<i>seconds</i>	Time, in seconds, to setup a control channel. Range is 60 to 6000 seconds. Default is 300 seconds.
--------------------	----------------	--

Command Default	<i>seconds</i> : 300
-----------------	----------------------

Command Modes	L2TP class configuration
---------------	--------------------------

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
------------------	---

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to configure a timeout value for L2TP session setup of 400 seconds:
----------	---

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2tp-class cisco
RP/0/0/CPU0:router(config-l2tp-class)# timeout setup 400
```

Related Commands	Command	Description
	authentication (L2TP) , on page 4	Enables L2TP authentication for a specified L2TP class name.

Command	Description
hello-interval (L2TP), on page 29	Configures the hello-interval value for L2TP (duration between control channel hello packets).
hidden (L2TP), on page 31	Enables hidden attribute-value pairs (AVPs).
hostname (L2TP), on page 33	Defines the name used in the L2TP hostname AVP.
l2tp-class, on page 40	Enters L2TP class configuration mode where you can define an L2TP signaling template.
password (L2TP), on page 63	Defines the password and password encryption type for control channel authentication.
receive-window (L2TP), on page 76	Configures the receive window size for the L2TP server.
retransmit (L2TP), on page 78	Configures retransmit retry and timeout values.
show l2tp session, on page 90	Displays information about L2TP sessions.
show l2tp tunnel, on page 93	Displays information about L2TP tunnels.

transport mode (L2VPN)

To configure L2VPN pseudowire class transport mode, use the **transport mode** command in L2VPN pseudowire class MPLS encapsulation mode. To disable the L@VPN pseudowire class transport mode configuration, use the **no** form of this command.

transport mode {ethernet| vlan }

no transport mode {ethernet| vlan }

Syntax Description

ethernet	Configures Ethernet port mode.
vlan	Configures VLAN tagged mode.

Command Default

None

Command Modes

L2VPN pseudowire class MPLS encapsulation

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

All L2VPN configurations can be deleted using the **no l2vpn** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

This example shows how to configure Ethernet transport mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-class kanata01
```

```
RP/0/0/CPU0:router(config-l2vpn-pw)# encapsulation mpls  
RP/0/0/CPU0:router(config-l2vpn-encap-mpls)# transport-mode ethernet
```

Related Commands

Command	Description
pw-class (L2VPN), on page 65	Enters pseudowire class submode to define a pseudowire class template.

tunnel-template

To enter tunnel-template configuration submode, use the **tunnel-template** command in global configuration mode.

tunnel-template *template name*

no tunnel-template *template-name*

Syntax Description

<i>template-name</i>	Configures a name for the tunnel template.
----------------------	--

Command Default

None

Command Modes

Global configuration

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
tunnel	read, write

Examples

The following example shows how to enter tunnel-template configuration submode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# tunnel-template template_01
```

Related Commands

Command	Description
xconnect group , on page 151	Configures cross-connect groups.

xconnect group

To configure cross-connect groups, use the **xconnect group** command in L2VPN configuration mode. To return to the default behavior, use the **no** form of this command.

xconnect group *group-name*

no xconnect group *group-name*

Syntax Description	<i>group-name</i>	Configures a cross-connect group name using a free-format 32-character string.
---------------------------	-------------------	--

Command Default	None
------------------------	------

Command Modes	L2VPN configuration
----------------------	---------------------

Command History	Release	Modification
	Release 3.4.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Note

You can configure up to a maximum of 16K cross-connects per box.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to group all cross -connects for customer_atlantic:
-----------------	---

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# xconnect group customer_atlantic
```

Related Commands

Command	Description
show l2vpn xconnect , on page 129	Displays brief information on configured cross-connects.

Virtual Private LAN Services Commands

This module describes the commands used to configure, monitor, and troubleshoot Virtual Private LAN Services (VPLS).

For detailed information about virtual private network concepts, configuration tasks, and examples, refer to the *Virtual Private Configuration Guide*.

action (VPLS)

To configure the bridge behavior when the number of learned MAC addresses reaches the MAC limit configured, use the **action** command in L2VPN bridge group bridge domain MAC limit configuration mode. To disable this feature, use the **no** form of this command.

action {flood| no-flood| shutdown}

no action {flood| no-flood| shutdown}

Syntax Description

flood	Configures the action to flood all unknown unicast packets when the MAC limit is reached. If the action is set to flood, all unknown unicast packets, with unknown destinations addresses, are flooded over the bridge.
no-flood	Configures the action to no-flood so all unknown unicast packets are dropped when the MAC limit is reached. If the action is set to no-flood, all unknown unicast packets, with unknown destination addresses, are dropped.
shutdown	Stops forwarding when the MAC limit is reached. If the action is set to shutdown, all packets are dropped.

Command Default

No action is taken when the MAC address limit is reached.

Command Modes

L2VPN bridge group bridge domain MAC limit configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **action** command to specify the type of action to be taken when the action is violated.

The configured action has no impact if the MAC limit has not been reached.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the bridge bar to flood all unknown unicast packets when the number of MAC addresses learned by the bridge reaches 10:

```
RP/0/0/CPU0:router#configure
RP/0/0/CPU0:router(config)#l2vpn
RP/0/0/CPU0:router(config-l2vpn)#bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)#bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)#mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)#limit
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)#action flood
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)#maximum 10
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
limit (VPLS), on page 173	Sets the MAC address limit for action, maximum, and notification and enters L2VPN bridge group bridge domain MAC limit configuration mode.
l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
maximum (VPLS), on page 177	Configures the specified action when the number of MAC addresses learned on a bridge is reached.
notification (VPLS), on page 185	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

aging (VPLS)

To enter the MAC aging configuration submode to set the aging parameters such as time and type, use the **aging** command in L2VPN bridge group bridge domain configuration mode. To return to the default value for all parameters that are attached to this configuration submode, use the **no** form of this command.

aging

no aging

Syntax Description

This command has no keywords or arguments.

Command Default

No defaults are attached to this parameter since it is used as a configuration submode. See defaults that are assigned to the [time \(VPLS\)](#), [on page 218](#) and the [type \(VPLS\)](#), [on page 220](#) parameters.

Command Modes

L2VPN bridge group bridge domain MAC configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **aging** command to enter L2VPN bridge group bridge domain MAC aging configuration mode.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to enter MAC aging configuration submode and to set the MAC aging time to 120 seconds:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# aging
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-aging)# time 120
```

Related Commands

Commands	Description
bridge-domain (VPLS) , on page 159	Establishes a bridge domain and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS) , on page 161	Creates a bridge group so that it can contain bridge domains and then assigns network interfaces to the bridge domain.
l2vpn , on page 49	Enters L2VPN configuration mode.
mac (VPLS) , on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
time (VPLS) , on page 218	Configures the maximum aging time.
type (VPLS) , on page 220	Configures the type for MAC address aging.

bridge-domain (VPLS)

To establish a bridge domain and to enter L2VPN bridge group bridge domain configuration mode, use the **bridge-domain** command in L2VPN bridge group configuration mode. To return to a single bridge domain, use the **no** form of this command.

bridge-domain *bridge-domain-name*

no bridge-domain *bridge-domain-name*

Syntax Description

<i>bridge-domain-name</i>	Name of the bridge domain.
Note	The maximum number of characters that can be specified in the bridge domain name is 27.

Command Default

The default value is a single bridge domain.

Command Modes

L2VPN bridge group configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

Use the **bridge-domain** command to enter L2VPN bridge group bridge domain configuration mode.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure a bridge domain:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)#
```

Related Commands

Command	Description
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.

bridge group (VPLS)

To create a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain, use the **bridge group** command in L2VPN configuration mode. To remove all the bridge domains that are created under this bridge group and to remove all network interfaces that are assigned under this bridge group, use the **no** form of this command.

bridge group *bridge-group-name*

no bridge-group *bridge-group-name*

Syntax Description	
<i>bridge-group-name</i>	Number of the bridge group to which the interface belongs.

Command Default No bridge group is created.

Command Modes L2VPN configuration

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **bridge group** command to enter L2VPN bridge group configuration mode.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows that bridge group 1 is assigned:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)#
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
l2vpn, on page 49	Enters L2VPN configuration mode.

clear l2vpn bridge-domain (VPLS)

To clear the MAC addresses and to restart the bridge domains on the router, use the **clear l2vpn bridge-domain** command in EXEC mode.

clear l2vpn bridge-domain {**all**| **bd-name** *name*| **group** *group*}

Syntax Description

all	Clears and restarts all the bridge domains on the router.
bd-name <i>name</i>	Clears and restarts the specified bridge domain. The <i>name</i> argument specifies the name of the bridge-domain.
group <i>group</i>	Clears and restarts all the bridge domains that are part of the bridge group.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This is the method that allows a bridge to forward again after it was put in Shutdown state as a result of exceeding the configured MAC limit.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to clear all the MAC addresses and to restart all the bridge domains on the router:

```
RP/0/0/CPU0:router# clear l2vpn bridge-domain all
```

Related Commands

Command	Description
show l2vpn bridge-domain (VPLS), on page 193	Display information for the bridge ports such as attachment circuits and pseudowires for the specific bridge domains.

flooding disable

To configure flooding for traffic at the bridge domain level or at the bridge port level, use the **flooding disable** command in L2VPN bridge group bridge domain configuration mode. To return the bridge to normal flooding behavior when all unknown unicast packets, all broadcast packets, and all multicast packets are flooded over all other bridge domain network interfaces, use the **no** form of this command.

flooding disable

no flooding disable

This command has no keywords or arguments.

Command Default

The default behavior is that packets are flooded when their destination MAC address is not found.

Command Modes

L2VPN bridge group bridge domain configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **flooding disable** command to override the parent bridge configuration.

By default, bridge ports inherit the flooding behavior of the bridge domain.

When flooding is disabled, all unknown unicast packets, all broadcast packets, and all multicast packets are discarded.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to disable flooding on the bridge domain called bar:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# flooding disable
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mtu (VPLS), on page 181	Adjusts the maximum packet size or maximum transmission unit (MTU) size for the bridge domain.

flooding unknown-unicast disable (VPLS)

To disable flooding of unknown unicast traffic at the bridge domain level or at the bridge port level, use the **flooding unknown-unicast disable** command in L2VPN bridge group bridge domain configuration mode. To return the bridge to normal flooding behavior, use the **no** form of this command.

flooding unknown-unicast disable

no flooding unknown-unicast disable

Syntax Description This command has no keywords or arguments.

Command Default The default behavior is that packets are flooded when their destination MAC address is not found.

Command Modes L2VPN bridge group bridge domain configuration

Release	Modification
Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **flooding unknown-unicast disable** command to override the parent bridge configuration.

By default, bridge ports inherit the flooding behavior of the bridge domain.

When flooding is disabled, all unknown unicast packets are discarded.

Use this command on Layer 2 interfaces. This command is not applicable on BVI interfaces.

Task ID	Operations
l2vpn	read, write

Examples The following example shows how to disable flooding on the bridge domain called bar:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# flooding unknown-unicast disable
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mtu (VPLS), on page 181	Adjusts the maximum packet size or maximum transmission unit (MTU) size for the bridge domain.

interface (VPLS)

To add an interface to a bridge domain that allows packets to be forwarded and received from other interfaces that are part of the same bridge domain, use the **interface** command in L2VPN bridge group bridge domain configuration mode. To remove an interface from a bridge domain, use the **no** form of this command.

interface *type interface-path-id*

no interface *type interface-path-id*

Syntax Description

<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.

Command Default

None

Command Modes

L2VPN bridge group bridge domain configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **interface** command to enter L2VPN bridge group bridge domain attachment circuit configuration mode. In addition, the **interface** command enters the interface configuration submode to configure parameters specific to the interface.

By default, an interface is not part of a bridge.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the bundle Ethernet interface as an attachment circuit:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# interface gigabitethernet 0/1/0/9
RP/0/0/CPU0:router(config-l2vpn-bg-bd-ac)#
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.

learning disable (VPLS)

To override the MAC learning configuration of a parent bridge or to set the MAC learning configuration of a bridge, use the **learning disable** command in L2VPN bridge group bridge domain MAC configuration mode. To disable this feature, use the **no** form of this command.

learning disable

no learning disable

Syntax Description This command has no keywords or arguments.

Command Default By default, learning is enabled on all bridge domains and all interfaces on that bridge inherits this behavior.

Command Modes L2VPN bridge group bridge domain MAC configuration

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When set, the **learning disable** command stops all MAC learning either on the specified interface or the bridge domain.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples In the following example, MAC learning is disabled on all ports in the bridge domain called bar, which is applied to all interfaces in the bridge unless the interface has its own MAC learning enable command.

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# learning disable
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.

limit (VPLS)

To set the MAC address limit for action, maximum, and notification and to enter L2VPN bridge group bridge domain MAC limit configuration mode, use the **limit** command in L2VPN bridge group bridge domain MAC configuration mode. To remove all limits that were previously configured under the MAC configuration submodes, use the **no** form of this command.

limit

no limit

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	L2VPN bridge group bridge domain MAC configuration
----------------------	--

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Use the limit command to enter L2VPN bridge group bridge domain MAC limit configuration mode. The limit command specifies that one syslog message is sent or a corresponding trap is generated with the MAC limit when the action is violated.
--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how the MAC limit for the bridge bar is set to 100 with an action of shutdown. After the configuration, the bridge stops all forwarding after 100 MAC addresses are learned. When this happens, a syslog message and an SNMP trap are created.
-----------------	--

<pre>RP/0/0/CPU0:router# configure RP/0/0/CPU0:router(config)# l2vpn RP/0/0/CPU0:router(config-l2vpn)# bridge group 1 RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac</pre>
--

```

RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# limit
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# maximum 100
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# action shutdown
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# notification both

```

Related Commands

Command	Description
action (VPLS), on page 155	Configures bridge behavior when the number of learned MAC addresses reaches the MAC limit configured.
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
maximum (VPLS), on page 177	Configures the specified action when the number of MAC addresses learned on a bridge is reached.
notification (VPLS), on page 185	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

mac (VPLS)

To enter L2VPN bridge group bridge domain MAC configuration mode, use the **mac** command in L2VPN bridge group bridge domain configuration mode. To disable all configurations added under the MAC configuration submodes, use the **no** form of this command.

mac

no mac

Syntax Description	This command has no keywords or arguments.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	L2VPN bridge group bridge domain configuration
----------------------	--

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Use the **mac** command to enter L2VPN bridge group bridge domain MAC configuration mode.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to enter L2VPN bridge group bridge domain MAC configuration mode:
-----------------	---

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar

maximum (VPLS)

To configure the specified action when the number of MAC addresses learned on a bridge is reached, use the **maximum** command in L2VPN bridge group bridge domain MAC limit configuration mode. To disable this feature, use the **no** form of this command.

maximum *value*

no maximum *value*

Syntax Description

<i>value</i>	Maximum number of learned MAC addresses. The range is from 5 to 512000.
--------------	--

Command Default

The default maximum value is 4000.

Command Modes

L2VPN bridge group bridge domain MAC limit configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The action can either be flood, no flood, or shutdown. Depending on the configuration, a syslog, an SNMP trap notification, or both are issued.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows when the number of MAC address learned on the bridge reaches 5000 and the bridge stops learning but continues flooding:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
```

```
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# limit
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# maximum 5000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# action no-flood
```

Related Commands

Command	Description
action (VPLS), on page 155	Configures bridge behavior when the number of learned MAC addresses reaches the MAC limit configured.
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
limit (VPLS), on page 173	Sets the MAC address limit for action, maximum, and notification and enters L2VPN bridge group bridge domain MAC limit configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
notification (VPLS), on page 185	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

mpls static label (VPLS)

To configure the MPLS static labels and the static labels for the access pseudowire configuration, use the **mpls static label** command in L2VPN bridge group bridge domain VFI pseudowire configuration mode. To assign the dynamic MPLS labels to either the virtual forwarding interface (VFI) pseudowire or the access pseudowire, use the **no** form of this command.

mpls static label *local value value remote value*

no mpls static label *local value value remote value*

Syntax Description

local value	Configures the local pseudowire label.
Note	Use the show mpls label range command to obtain the range for the local labels.
remote value	Configures the remote pseudowire label.
Note	The range of values for the remote labels depends on the label allocator of the remote router.

Command Default

By default, the router attempts to assign dynamic labels to the pseudowire.

Command Modes

L2VPN bridge group bridge domain Access/VFI pseudowire configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Ensure that both ends of the pseudowire have matching static labels.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the VFI pseudowire 10.1.1.2 with pseudowire ID of 1000 to use MPLS label 800 and remote MPLS label 500:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi model
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)# mpls static label local 800 remote 500
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
neighbor (VPLS), on page 183	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).
pw-class (VFI), on page 189	Configures the pseudowire class template name to use for the pseudowire.
vfi (VPLS), on page 222	Configures virtual forwarding interface (VFI) parameters.

mtu (VPLS)

To adjust the maximum packet size or maximum transmission unit (MTU) size for the bridge domain, use the **mtu** command in L2VPN bridge group bridge domain configuration mode. To disable this feature, use the **no** form of this command.

mtu *bytes*

no mtu

Syntax Description

<i>bytes</i>	MTU size, in bytes. The range is from 46 to 65535.
--------------	--

Command Default

The default MTU value is 1500.

Command Modes

L2VPN bridge group bridge domain configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Each interface has a default maximum packet size or MTU size. This number generally defaults to the largest size possible for that interface type. On serial interfaces, the MTU size varies, but cannot be set smaller than 64 bytes.

The MTU for the bridge domain includes only the payload of the packet. For example, a configured bridge MTU of 1500 allows tagged packets of 1518 bytes (6 bytes DA, 6 bytes SA, 2 bytes ethertype, or 4 bytes qtag).

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example specifies an MTU of 1000 bytes:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
```

```
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mtu 1000
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
flooding disable, on page 165	Configures flooding for traffic at the bridge domain level or at the bridge port level.
l2vpn, on page 49	Enters L2VPN configuration mode.

neighbor (VPLS)

To add an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI), use the **neighbor** command in the appropriate L2VPN bridge group bridge domain configuration submode. To remove the pseudowire either from the bridge or from the VFI, use the **no** form of this command.

neighbor *A.B.C.D* **pw-id** *value*

no neighbor *A.B.C.D* **pw-id** *value*

Syntax Description

<i>A.B.C.D</i>	IP address of the cross-connect peer.
pw-id <i>value</i>	Configures the pseudowire ID and ID value. Range is 1 to 4294967295.

Command Default

None

Command Modes

L2VPN bridge group bridge domain configuration
L2VPN bridge group bridge domain VFI configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **neighbor** command to enter L2VPN bridge group bridge domain VFI pseudowire configuration mode. Alternatively, use the **neighbor** command to enter L2VPN bridge group bridge domain access pseudowire configuration mode.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure an access pseudowire directly under a bridge domain in L2VPN bridge group bridge domain configuration mode:

```
RP/0/0/CPU0:router# configure
```

```
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-pw)#
```

The following example shows how to configure the parameters for any pseudowire in L2VPN bridge group bridge domain VFI configuration mode:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi vl
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)#
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mpls static label (VPLS), on page 179	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
pw-class (VFI), on page 189	Configures the pseudowire class template name to use for the pseudowire.
static-mac-address (VPLS), on page 216	Configures the static MAC address to associate a remote MAC address with a pseudowire or any other bridge interface.
vfi (VPLS), on page 222	Configures virtual forwarding interface (VFI) parameters.

notification (VPLS)

To specify the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit, use the **notification** command in L2VPN bridge group bridge domain MAC limit configuration mode. To use the notification as only a syslog entry, use the **no** form of this command.

notification {both| none| trap}

no notification {both| none| trap}

Syntax Description

both	Sends syslog and trap notifications when the action is violated.
none	Specifies no notification.
trap	Sends trap notifications when the action is violated.

Command Default

By default, only a syslog message is sent when the number of learned MAC addresses reaches the maximum configured.

Command Modes

L2VPN bridge group bridge domain MAC limit configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A syslog message and an SNMP trap is generated. Alternatively, an SNMP trap is generated. Finally, no notification is generated.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how both a syslog message and an SNMP trap are generated with the bridge bar and learns more MAC addresses than the configured limit:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# limit
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-limit)# notification both
```

Related Commands

Command	Description
action (VPLS) , on page 155	Configures bridge behavior when the number of learned MAC addresses reaches the MAC limit configured.
bridge-domain (VPLS) , on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS) , on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn , on page 49	Enters L2VPN configuration mode.
mac (VPLS) , on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
maximum (VPLS) , on page 177	Configures the specified action when the number of MAC addresses learned on a bridge is reached.

port-down flush disable (VPLS)

To disable MAC flush when the bridge port is nonfunctional, use the **port-down flush disable** command in the L2VPN bridge group bridge domain MAC configuration mode. Use the **no** form of this command to enable the MAC flush when the bridge port is nonfunctional.

port-down flush disable

no port-down flush disable

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes L2VPN bridge group bridge domain MAC configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **port-down flush disable** command disables the MAC flush when the bridge port is nonfunctional.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to disable MAC flush when the bridge port is nonfunctional:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# port-down flush disable
```

Related Commands

l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
maximum (VPLS), on page 177	Configures the specified action when the number of MAC addresses learned on a bridge is reached.
notification (VPLS), on page 185	Specifies the type of notification that is sent when the number of learned MAC addresses exceeds the configured limit.

pw-class (VFI)

To configure the pseudowire class template name to use for the pseudowire, use the **pw-class** command in L2VPN bridge group bridge domain VFI pseudowire configuration mode. To delete the pseudowire class, use the **no** form of this command.

pw-class *class-name*

no pw-class *class-name*

Syntax Description

<i>class-name</i>	Pseudowire class name.
-------------------	------------------------

Command Default

None

Command Modes

L2VPN bridge group bridge domain VFI pseudowire configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to attach the pseudowire class to the pseudowire:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi v1
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)# pw-class canada
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mpls static label (VPLS), on page 179	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
neighbor (VPLS), on page 183	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).
vfi (VPLS), on page 222	Configures virtual forwarding interface (VFI) parameters.

pw-status (L2VPN)

To enable status signaling on a pseudowire, use the **pw-status** command in L2VPN configuration submode. To disable the pseudowire status signaling, use the **no** form of this command.

pw-status

no pw-status

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes L2VPN configuration submode

Command History	Release	Modification
	Release 4.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Cisco IOS XR software provides two methods for signaling pseudowires (PW) status:

- Using Label Withdraw Message
The provider edge routers (PEs) send Label Mapping Message to their peers as soon as the pseudowire is configured and administratively enabled. The pseudowire label should not be withdrawn unless the pseudowire is administratively disabled or deleted.
- Using PW status TLV
The PEs use LDP pseudowire status TLV to indicate pseudowire status to their peers. The LDP pseudowire status TLV contains additional information compared to the Label Withdraw Message.

Note Unless pseudowire status TLV is explicitly enabled under L2VPN configuration, the default signaling method is Label Withdrawal.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to enable pseudowire status signaling on configured pseudowires:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# pw-status
RP/0/0/CPU0:router(config-l2vpn)#
```

Related Commands

Command	Description
l2vpn , on page 49	Enters L2VPN configuration mode.

show l2vpn bridge-domain (VPLS)

To display information for the bridge ports such as attachment circuits and pseudowires for the specific bridge domains, use the **show l2vpn bridge-domain** command in EXEC mode.

show l2vpn bridge-domain [**bd-name** *bridge-domain-name* | **brief** | **detail** | **group** *bridge-domain-group-name* | **interface** *type interface-path-id*] **neighbor** *IP-address* [**pw-id** *value* | **summary**]

Syntax Description

bd-name <i>bridge-domain-name</i>	(Optional) Displays the bridges by the bridge ID. The <i>bridge-domain-name</i> argument is used to name a bridge domain.
brief	(Optional) Displays brief information about the bridges.
detail	(Optional) Displays the output for the Layer 2 VPN (L2VPN) to indicate whether or not the MAC withdrawal feature is enabled and the number of MAC withdrawal messages that are sent or received from the pseudowire.
group <i>bridge-domain-group-name</i>	(Optional) Displays filter information on the bridge-domain group name. The <i>bridge-domain-group-name</i> argument is used to name the bridge domain group.
interface	(Optional) Displays the filter information for the interface on the bridge domain.
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
neighbor <i>IP-address</i>	(Optional) Displays only the bridge domain that contains the pseudowires to match the filter for the neighbor. The <i>IP-address</i> argument is used to configure IP address of the neighbor.
pw-id <i>value</i>	(Optional) Displays the filter for the pseudowire ID. The range is from 1 to 4294967295.
summary	(Optional) Displays the summary information for the bridge domain.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

Use the **interface** keyword to display only the bridge domain that contains the specified interface as an attachment circuit. In the sample output, only the attachment circuit matches the filter that is displayed. No pseudowires are displayed.

Task ID

Task ID	Operations
l2vpn	read

Examples

This is the sample output for **show l2vpn bridge-domain** command with VxLAN parameters configured:

```

Table 11: show l2vpn bridge-domain brief Command Field Descriptions

Field	Description
Bridge Group/Bridge-Domain Name	Bridge domain group name followed by the bridge domain name are displayed.
ID	ID assigned to this bridge domain is displayed.
State	Current state of the bridge domain is displayed.

Field	Description
Num ACs/up	Total number of attachment circuits that are up in this bridge domain is displayed.
Num PWs/up	Total number of pseudowires that are up in this bridge domain is displayed. The count includes both VFI pseudowires and access pseudowires.

The following sample output shows detailed information:

RP/0/0/CPU0:router# **show l2vpn bridge-domain detail**

```

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0

This table describes the significant fields shown in the display.

Table 12: show l2vpn bridge-domain detail Command Field Descriptions

Field	Description
Bridge group	Name of bridge domain group is displayed.
bridge-domain	Name of bridge domain is displayed.
ID	ID assigned to this bridge domain is displayed.
state	Current state of the bridge domain is displayed.
MSTi	ID for the Multiple Spanning Tree.

The following sample output shows filter information about the bridge-domain group named g1:

```

RP/0/0/CPU0:router# show l2vpn bridge-domain group g1

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
Filter MAC addresses: 0
ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
List of ACs:
  Gi0/1/0/0, state: up, Static MAC addresses: 2, MSTi: 0 (unprotected)
List of Access PWs:
List of VFIs:
  VFI 1
    Neighbor 1.1.1.1 pw-id 1, state: up, Static MAC addresses: 0

```

The following sample output shows display the filter information for the interface on the bridge domain:

```

RP/0/0/CPU0:router# show l2vpn bridge-domain interface gigabitEthernet 0/1/0/0

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
Filter MAC addresses: 0
ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
List of ACs:
  Gi0/1/0/0, state: up, Static MAC addresses: 2, MSTi: 0 (unprotected)

```

The following sample output shows that the bridge domain contains the pseudowires to match the filter for the neighbor:

```

RP/0/0/CPU0:router# show l2vpn bridge-domain neighbor 1.1.1.1

Bridge group: g1, bridge-domain: bd1, id: 0, state: up, ShgId: 0, MSTi: 0
Aging: 300 s, MAC limit: 4000, Action: none, Notification: syslog
Filter MAC addresses: 0
ACs: 1 (1 up), VFIs: 1, PWs: 1 (1 up)
List of Access PWs:
List of VFIs:
  VFI 1
    Neighbor 1.1.1.1 pw-id 1, state: up, Static MAC addresses: 0

```

The following sample output shows the summary information for the bridge domain:

```

RP/0/0/CPU0:router# show l2vpn bridge-domain summary

```

show l2vpn bridge-domain (VPLS)

Number of groups: 1, bridge-domains: 1, Up: 1, Shutdown: 0
 Number of ACs: 1 Up: 1, Down: 0
 Number of PWs: 1 Up: 1, Down: 0

This table describes the significant fields shown in the display.

Table 13: show l2vpn bridge-domain summary Command Field Descriptions

Field	Description
Number of groups	Number of configured bridge domain groups is displayed.
bridge-domains	Number of configured bridge domains is displayed.
Shutdown	Number of bridge domains that are in Shutdown state is displayed.
Number of ACs	Number of attachment circuits that are in Up state and Down state are displayed.
Number of PWs	Number of pseudowires that are in Up state and Down state are displayed. This includes the VFI pseudowire and the access pseudowire.

Related Commands

Command	Description
clear l2vpn bridge-domain (VPLS), on page 163	Clears the MAC addresses and restarts the bridge domains on the router.

show l2vpn forwarding bridge-domain (VPLS)

To display information on the bridge that is used by the forwarding layer, use the **show l2vpn forwarding bridge-domain** command in EXEC mode.

show l2vpn forwarding bridge-domain [*bridge-domain-name*] {**detail**| **hardware** {**egress**| **ingress**}}
location *node-id*

Syntax Description

<i>bridge-domain-name</i>	(Optional) Name of a bridge domain.
detail	Displays all the detailed information on the attachment circuits and pseudowires.
hardware	Displays the hardware location entry.
egress	Reads information from the egress PSE.
ingress	Reads information from the ingress PSE.
location <i>node-id</i>	Displays the bridge-domain information for the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

For each bridge, you can display summary information about the number of bridge ports, number of MAC addresses, configured VXLANs and so forth.

The **detail** keyword displays detailed information on the attachment circuits and pseudowires, and is meant for field investigation by a specialized Cisco engineer.

**Note**

All bridge ports in the bridge domain on that line card are displayed. Therefore, if the bridge domain contains non-local bridge ports, those are displayed as well.

Task ID

Task ID	Operations
l2vpn	read

Examples

The following sample output shows bridge-domain information for location 0/1/CPU0:

RP/0/0/CPU0:router# **show l2vpn forwarding bridge-domain location 0/1/CPU0**

```
Bridge-Domain Name          ID      Ports addr  Flooding Learning State
-----
```

```

This table describes the significant fields shown in the display.

Table 14: show l2vpn forwarding bridge-domain Command Field Descriptions

Field	Description
Bridge-Domain Name	Name of bridge domain is displayed.
Bridge ID	ID assigned to this bridge domain is displayed.
Ports	Number of ports that are part of this bridge domain is displayed.
MAC Addr	Number of MAC addresses that are learned on this bridge domain is displayed.
Flooding	Flooding of packets are displayed if they are enabled on this bridge domain.
Learning	Learning of MAC addresses are displayed if they are enabled on this bridge domain.
State	Current state of the bridge domain is displayed.

Related Commands

Command	Description
clear l2vpn bridge-domain (VPLS) , on page 163	Clears the MAC addresses and restarts the bridge domains on the router.

show l2vpn forwarding bridge-domain mac-address (VPLS)

To display the summary information for the MAC address, use the **show l2vpn forwarding bridge-domain mac-address** command in EXEC mode.

show l2vpn forwarding bridge-domain [*bridge-domain-name*] **mac-address** {*MAC-address*| **detail**| **hardware** {**egress**| **ingress**}| **interface** *type interface-path-id*| **neighbor** *address* **pw-id** *pw-id*} **location** *node-id*

Syntax Description

<i>bridge-domain-name</i>	(Optional) Name of a bridge domain.
<i>MAC-address</i>	MAC address.
detail	Displays detailed information for the MAC address.
hardware	Reads information from the hardware.
egress	Reads information from the egress PSE.
ingress	Reads information from the ingress PSE.
interface	Displays the match for the attachment circuit subinterface.
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
neighbor <i>address</i>	Displays the match for the neighbor IP address.
pw-id <i>pw-id</i>	Displays the match for the pseudowire ID.
location <i>node-id</i>	Displays the bridge-domain information for the MAC address of the specified location. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

Related Commands

Command	Description
show l2vpn forwarding bridge-domain (VPLS) , on page 201	Displays information on the bridge that is used by the forwarding layer.

shutdown (Bridge Domain)

To shut down a bridge domain to bring the bridge and all attachment circuits and pseudowires under it to admin down state, use the **shutdown** command in L2VPN bridge group bridge domain configuration mode. To re-enable the bridge domain, use the **no** form of this command.

shutdown

no shutdown

Syntax Description This command has no keywords or arguments.

Command Default By default, the bridge is not shutdown.

Command Modes L2VPN bridge group bridge domain configuration

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When a bridge domain is disabled, all VFI's associated with the bridge domain are disabled. You can still attach or detach members to or from the bridge domain as well as the VFI's associated with the bridge domain.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to disable the bridge domain named bar:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# shutdown
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.

shutdown (VFI)

To disable virtual forwarding interface (VFI), use the **shutdown** command in L2VPN bridge group bridge domain VFI configuration mode. To re-enable VFI, use the **no** form of this command.

shutdown

no shutdown

Syntax Description This command has no keywords or arguments.

Command Default By default, the VFI is not shutdown.

Command Modes L2VPN bridge group bridge domain VFI configuration

Command History	Release	Modification
	Release 3.7.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to disable VFI:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi v1
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)# shutdown
```

Related Commands	Command	Description
	bridge-domain (VPLS) , on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.

Command	Description
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mpls static label (VPLS), on page 179	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
neighbor (VPLS), on page 183	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).

static-address (VPLS)

To add static entries to the MAC address for filtering, use the **static-address** command in L2VPN bridge group bridge domain MAC configuration mode. To remove entries profiled by the combination of a specified entry information, use the **no** form of this command.

static-address *MAC-address* **drop**

no static-address *MAC-address* **drop**

Syntax Description

<i>MAC-address</i>	Static MAC address that is used to filter on the bridge domain.
drop	Drops all traffic that is going to the configured MAC address.

Command Default

No static MAC address is configured.

Command Modes

L2VPN bridge group bridge domain MAC configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to add static MAC entries in L2VPN bridge group bridge domain MAC configuration mode. This entry causes all packets with destination MAC address 1.1.1 to be dropped.

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# static-address 1.1.1 drop
```

l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.

static-mac-address (VPLS)

To configure the static MAC address to associate a remote MAC address with a pseudowire or any other bridge interface, use the **static-mac-address** command in the appropriate L2VPN bridge group bridge domain configuration submode. To disable this feature, use the **no** form of this command.

static-mac-address *MAC-address*

no static-mac-address *MAC-address*

Syntax Description	<i>MAC-address</i> Static address to add to the MAC address.	
Command Default	None	
Command Modes	L2VPN bridge group bridge domain VFI pseudowire configuration L2VPN bridge group bridge domain attachment circuit configuration	
Command History	Release	Modification
	Release 3.7.0	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.	
Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to associate a remote MAC address with a pseudowire:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi model
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)# neighbor 10.1.1.2 pw-id 1000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi-pw)# static-mac-address 1.1.1
```

The following example shows how to associate a GigabitEthernet interface from a bridge domain to static MAC address 1.1.1:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# interface GigabitEthernet 0/1/0/0
RP/0/0/CPU0:router(config-l2vpn-bg-bd-ac)# static-mac-address 1.1.1
```

The following example shows how to associate an access pseudowire to static MAC address 2.2.2:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# neighbor 10.1.1.2 pw-id 2000
RP/0/0/CPU0:router(config-l2vpn-bg-bd-pw)# static-mac-address 2.2.2
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mpls static label (VPLS), on page 179	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
neighbor (VPLS), on page 183	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).
vfi (VPLS), on page 222	Configures virtual forwarding interface (VFI) parameters.

time (VPLS)

To configure the maximum aging time, use the **time** command in L2VPN bridge group bridge domain MAC aging configuration mode. To disable this feature, use the **no** form of this command.

time *seconds*

no time *seconds*

Syntax Description

<i>seconds</i>	MAC address table entry maximum age. The range is from 300 to 30000 seconds. Aging time is counted from the last time that the switch saw the MAC address. The default value is 300 seconds.
----------------	--

Command Default

seconds: 300

Command Modes

L2VPN bridge group bridge domain MAC aging configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If no packets are received from the MAC address for the duration of the maximum aging time, the dynamic MAC entry previously learned is removed from the forwarding table.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to increase the maximum aging time to 600 seconds. After 600 seconds of inactivity from a MAC address, the MAC address is removed from the forwarding table.

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
```

```
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac) # aging  
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-aging) # time 600
```

Related Commands

Command	Description
aging (VPLS), on page 157	Enters the MAC aging configuration submode to set the aging parameters such as time and type.
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
type (VPLS), on page 220	Configures the type for MAC address aging.

type (VPLS)

To configure the type for MAC address aging, use the **type** command in L2VPN bridge group bridge domain MAC aging configuration mode. To disable this feature, use the **no** form of this command.

type {absolute| inactivity}

no type {absolute| inactivity}

Syntax Description

absolute	Configures the absolute aging type.
inactivity	Configures the inactivity aging type.

Command Default

By default, the inactivity type is configured.

Command Modes

L2VPN bridge group bridge domain MAC aging configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In general, the type is set to inactivity. With an inactivity type configuration, a MAC address is removed from the forwarding table after the MAC address is inactive for the configured aging time.

With an absolute type configuration, a MAC address is always removed from the forwarding table after the aging time has elapsed once it is initially learned.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the MAC address aging type to absolute for every member of the bridge domain named bar:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
```

```
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# aging
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac-aging)# type absolute
```

Related Commands

aging (VPLS), on page 157	Enters the MAC aging configuration submode to set the aging parameters such as time and type.
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mac (VPLS), on page 175	Enters L2VPN bridge group bridge domain MAC configuration mode.
time (VPLS), on page 218	Configures the maximum aging time.

vfi (VPLS)

To configure virtual forwarding interface (VFI) parameters and to enter L2VPN bridge group bridge domain VFI configuration mode, use the **vfi** command in L2VPN bridge group bridge domain configuration mode. To remove all configurations that are made under the specified VFI, use the **no** form of this command.

vfi *vfi-name*

no vfi *vfi-name*

Syntax Description

<i>vfi-name</i>	Name of the specified virtual forwarding interface.
-----------------	---

Command Default

None

Command Modes

L2VPN bridge group bridge domain configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **vfi** command to enter L2VPN bridge group bridge domain VFI configuration mode.

You cannot configure a pseudowire directly under a bridge domain. Therefore, a pseudowire must be configured under a VFI, which is configured under a bridge domain.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to create a VFI:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# vfi vl
RP/0/0/CPU0:router(config-l2vpn-bg-bd-vfi)#
```

Related Commands

Command	Description
bridge-domain (VPLS), on page 159	Establishes a bridge domain, and enters L2VPN bridge group bridge domain configuration mode.
bridge group (VPLS), on page 161	Creates a bridge group so that it can contain bridge domains and then to assign network interfaces to the bridge domain.
l2vpn, on page 49	Enters L2VPN configuration mode.
mpls static label (VPLS), on page 179	Configures the MPLS static labels and the static labels for the access pseudowire configuration.
neighbor (VPLS), on page 183	Adds an access pseudowire port to a bridge domain or a pseudowire to a bridge virtual forwarding interface (VFI).

withdraw (VPLS)

To enable MAC address withdrawal for a specified bridge domain, use the **withdraw** command in L2VPN bridge group bridge domain MAC configuration mode. To disable this feature, use the **no** form of this command

withdraw { disable }

no withdraw { disable }

Syntax Description

disable	Disables MAC address withdrawal.
----------------	----------------------------------

Command Default

By default, MAC address withdrawal is enabled.

Command Modes

L2VPN bridge group bridge domain MAC configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to enable disable MAC withdrawal:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# withdraw disable
```

The following example shows how to disable sending MAC withdrawal messages to access pseudowires:

```
RP/0/0/CPU0:router# configure
RP/0/0/CPU0:router(config)# l2vpn
RP/0/0/CPU0:router(config-l2vpn)# bridge group 1
RP/0/0/CPU0:router(config-l2vpn-bg)# bridge-domain bar
```

```
RP/0/0/CPU0:router(config-l2vpn-bg-bd)# mac  
RP/0/0/CPU0:router(config-l2vpn-bg-bd-mac)# withdraw access-pw disable
```
