# Request Structure

Request Structure:

Requests are sent to the management center as HTTPS requests with the Uniform Resource Identifier (URI) of the form described below:

```
https://<management_center_IP_or_name>:<https_port>/<object_URL>/object_UUIDoptions
```

Where:

- <management\_center\_IP\_or\_name>

is the IP address or Fully Qualified Domain Name of the management center

- <https\_port>

is the port number used by the management center for HTTPS connections. This port is always 443.

- <object\_URL>

is the specific URL for the desired resource. These URLs are unique for each resource and are given below.

- *options*

are the options given with the request. Options can be used to modify the output and filter results.

- {UUID}

Many URLs contain one or more UUIDs which must be specified. Most URIs include the domain UUID, which can be found in the Authentication Token. When deleting or modifying an object, or requesting information about a specific object, the URI will end with the object UUID.

Available request methods are:

- GET

– Retrieves data from the specified object. GET is a read-only operation.

- PUT

– Adds the supplied information to the specified object; returns a 404 Resource Not Found error if the object does not exist.

**Note**

Currently PUT may be used to create a new object, but this ability may be removed in later releases. Use POST to create new objects and PUT to modify existing objects.

- 
- POST

– Creates the object with the supplied information. POST operations should be followed with a payload consisting of the JSON object to be created, enclosed in braces:

```
{object}
```

**Note** The maximum number of rules you can use depends on memory of the device. There is no set limit, because complex rules use more memory. For rule performance and optimization guidelines, see the management center Configuration Guide.

- **DELETE**

- Deletes the specified object.

- **PATCH**

- **Not supported.**

The API supports query parameters for almost all requests. For GET requests, the following query parameters can be used to control the number of returned objects and the pagination:

- **expanded**

- This is a True/False value which indicates whether you get a full listing of an item in a list or only a reference. Some fields will only show if this flag is set to true.

- **offset**

- Indicates the position in the list where you want to start.

- **limit**

- Indicates the number of items you want to retrieve in a page.

The API supports filtering on the basis of query parameters passed with a request. Filtering can be done based on specific attributes in a model. The parameters available for filtering vary by object, and are listed with the request below.

## Bulk Rule Posting

Multiple access control rules can be added with a POST command using the bulk insert feature. This feature allows as many as 1,000 rules to be added at once.

This feature is only available for access rules.

The URL for this feature is:

`https://fire_ip_or_name}:{https_port}/api/fire_config/v1/domain/{domain_UID}/policy/accesspolicies/{policy_UID}/accessrules?bulk=true`

The option:

`?bulk=true`

indicates that multiple rules will be used in the payload of this request.

All objects in the payload of the bulk POST request must be of the same type. You cannot mix different objects in the same bulk request.

Unlike a normal POST operation, the bulk POST requires a list of JSON objects. This list may have as many as 1,000 objects or as few as one. The individual JSON objects must be enclosed in braces. Each object must be separated by commas, and the entire list is enclosed in brackets:

## Response Structure

```
[{object}]
[{object1},{object2},{object3},{object4},{object5} ...]
```

The following query parameters are supported in bulk POST requests:

- `bulk=true`

This parameter specifies that the bulk POST feature is being used in the query. This parameter is **required** for bulk rule posting.

- `section=mandatory/default`

This parameter specifies the section into which the rules will be added. If this parameter is not used the section will be the default section. Only `mandatory` and `default` are allowed values. If a section is specified it must exist or the request will fail. If a section is specified, a category cannot be specified.

- `category=<Name of the category>`

This parameter specifies the category into which the rules will be added. If a category is specified it must exist or the request will fail. If a category is specified, a section cannot be specified.

- `insertAfter=<Index of rule>`

This parameter specifies that the rules will be inserted after the specified rule index. If no section or category is specified, the rules will be added to the section or category after the insertion point.

- `insertBefore=<Index of rule>`

This parameter specifies that the rules will be inserted before the specified rule index. If no section or category is specified, the rules will be added to the section or category before the insertion point.

`insertBefore` takes precedence over `insertAfter` - if both are specified, the `insertBefore` parameter will apply.

When a rule or group of rules are inserted at an index which is part of either a section or a category, the category or section parameter can be used along with index to specify the insertion location of the rule(s). If an index is given along with a section or category, but the index is not in that section or category, you will receive an error.

If no index is specified, rules will be inserted after the end of the access policy. If a category or section is specified but no index is specified, rules will be inserted at the end of the category or section.

In any given POST all of the rules will be inserted at a single point. You cannot specify multiple insertion locations in a POST request.

**Note**

Rule order affects how orders are parsed by the management center.

## Response Structure

**Note**

The REST API will serve only 25 results per page. This can be increased up to 1000 using the limit query parameter.

The response structure can be:

- LOCATION – Newly created resource ID; for POST only—holds the new resource ID (as a URI representation).
- CONTENT-TYPE – Media type describing the response message body; describes the representation and syntax of the response message body.
- Each response includes an HTTP status or error code. Available codes fall into these categories:
- 20x - A two-hundred series code indicates successful operation, including:
  - 200 200
    - "OK". Standard response for successful requests.
  - 201 201
    - "Created". Request completed; new resource created.
  - 202 202
    - "Accepted". Request accepted, but processing not complete.
  - 204 204
    - "No Content". Server successfully processed request; no content is being returned.
- 4xx - A four-hundred series code indicates a client-side error, including:
  - 400 400
    - "Bad Request". Invalid query parameters, including unrecognized parameters, missing parameters, or invalid values.

This can indicate that the object was edited or deleted via REST API such that the corresponding policy is invalidated.
  - 401 Invalid Session
    - Invalid session.
  - 404 404
    - "Not Found". The provided URL does not match an existing resource. For example, an HTTP DELETE may fail because the resource is unavailable.
  - 405 405
    - "Method Not Allowed". An HTTP request was presented that is not allowed on the resource; for example, a POST on a read-only resource.
  - 422 422
    - "Unprocessable Entity". The payload is too large. This will occur when you send a payload greater than 2048000 bytes.
    - The payload contains an unprocessable or unreadable entity such as an invalid attribute name or incorrect JSON syntax.
  - 429 Too Many Writes
    - Parallel add/update/delete operations are blocked. Please retry the request.

- 429 429
  - "Too Many Requests". Too many requests were sent to the API. This error will occur if you send more than 120 requests per minute.
  - Too many concurrent requests. The system cannot accept more than 10 parallel requests from all clients.
  - Too many write operations per server. The API will only allow one PUT, POST, or DELETE request per user on a server at a time.
- 5xx - A five-hundred series code indicates a server-side error.

In the case of an error, in addition to the error code, the return response may include an error object containing more details about the error. The JSON error/warning response schema is as follows:

```
{
  "error": {
    "category": "FRAMEWORK",
    "messages": [
      {
        "description": "Action is mandatory to be specified."
      }
    ],
    "severity": "ERROR"
  }
}
```

where the object properties are:

**Table 1: Object Properties**

Property	Type	Description
messages	List of Dictionaries	List of error or warning messages
code	String	Error/Warning/Info code
details	String	Detailed message corresponding to Error/Warning/Info

## Rate Limiting

The management center REST API implements rate limiting to reduce network load.

The API will accept no more than 120 messages per minute from an individual IP address. It will only allow 10 simultaneous connections per IP address. These are not configurable parameters.

If a client exceeds these limits, the API will give an HTTP 429 error.

# Payload Limiting

The API cannot accept a message with a payload greater than 2048000 bytes. This applies to both the REST API and to API Explorer. This is not a configurable parameter.

If a message exceeds this limit, the API will give an HTTP 422 error.

# Object Overrides

An override defines an alternate value for an object, which the system uses for the device or domain specified. In a single request user can create multiple overrides for multiple objects using bulk operation.

When an object is overriden, the alternate values will be provided for that object when it is requested. This does not overwrite the original values, which will return if the override is removed. The override gives alternate values for all fields in the object except for the `Name` and `Description` fields.

The URL for this feature is:

`https://:{fmc_ip_or_name}:{https_port}/api/fmc_config/v1/domain/{Domain_uuid} /object/hosts`

Request payload to create an override for object "testhost" on domain ""Global \\ RETAIL" with the override value being "1.2.3.5":

```
{
  "type": "Host",
  "value": "1.2.3.5",
  "overrides": {
    "parent": {
      "id": <Parent UUID>
      "type": "Host"
    },
    "target": {
      "name": "Global \\ RETAIL",
      "id": <target domain UUID>,
      "type": "Domain"
    }
  },
  "overridable": true,
  "description": " ",
  "name": "testhost",
}
```

Optional:

?bulk=true

indicates the override creation for more than one object.

GET:

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts/{host_UUID}?overrideTargetId={target_UUID}`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/hosts?overrideTargetId={target_UUID}`

**Note** When overridden, the parent object value will never change.

## Field Renaming

The following fields have been renamed to remove biased terminology in the documentation. Note that the old fields are entirely replaced as of version 7.1 and no longer exist.

**Table 2:**

Name	URL	Previous Field Name	New Field Name
ftddevicecluster	/config/v1/domain/{domainUUID}/master	masterDevice	controlDevice
		master_device_UUID	control_device_UUID
		slaveDevices	dataDevices
		slave1_device_UUID	data1_device_UUID
		slave2_device_UUID	data2_device_UUID
		slave3_device_UUID	data3_device_UUID
Observable	/api/fmc_platform/v1/domain/{domainUUID}/observable	whitelist	allowlist
Indicator	/api/fmc_platform/v1/domain/{domainUUID}/indicator	whitelist	allowlist
Incident	/api/fmc_platform/v1/domain/{domainUUID}/incident	whitelist	allowlist
Source	/api/fmc_platform/v1/domain/{domainUUID}/source	whitelist	allowlist

## Troubleshoot

### POST device

Request Type: **POST**

Description: Triggers the troubleshoot for a TPK Chassis.

URL: /api/fmc\_troubleshoot/v1/domain/{domainUUID}/troubleshoot/device

Permissions: Devices > Troubleshoot

### DELETE packettracerfiles

Request Type: **DELETE**

Description: Deletes PCAP files from management center. If no ID is specified, deletes all packet tracer files from the management center.

URL: /api/fmc\_troubleshoot/v1/domain/{domainUUID}/packettracer/files/

URL for Delete by ID:

/api/fmc\_troubleshoot/v1/domain/{domainUUID}/packettracer/files/{pcapFileName}

Permissions: Devices > Troubleshoot > Packet Tracer > Modify Packet Tracer

## POST task

Request Type: **POST**

Description: Creates a job or task.

URL: /api/fmc\_troubleshoot/v1/domain/{domainUUID}/task

Permissions: Deploy Configuration to Devices.

# Network Map

## GET netmaphosts

Request Type: **GET**

Description: Retrieves a host associated with the ID in the Network Map. If no ID is specified, retrieves list of all hosts in the Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/hosts/{objectId}

URL for GET by ID: /api/fmc\_netmap/v1/domain/{domainUUID}/hosts/{objectId}/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: ipAddress

## POST netmaphosts

Request Type: **POST**

Description: Creates a host in the Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/hosts

Permissions: Object Manager > Modify Object Manager

## DELETE netmaphosts

Request Type: **DELETE**

Description: Deletes the specified host in the Network Map. If no ID is specified, deletes the entire Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/hosts/

URL to delete a specific host: /api/fmc\_netmap/v1/domain/{domainUUID}/hosts/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET vulns

Request Type: **GET**

Description: Retrieves the vulnerability in the Network Map with the specified ID. If no ID is specified, retrieves list of all vulnerabilities in the Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/vulns/

URL for GET by ID: /api/fmc\_netmap/v1/domain/{domainUUID}/vulns/{objectId}/

Permissions: Policies > Network Discovery

Parameters available for filtering: ipAddress, source, port, protocol, id

## POST vulns

Request Type: **POST**

Description: Creates a vulnerability in the Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/vulns

Permissions: Policies > Network Discovery > Modify Network Discovery

## DELETE vulns

Request Type: **DELETE**

Description: Deletes the the vulnerability in the Network Map with the specified ID. If no ID is specified, deletes all vulnerabilities in the Network Map.

URL: /api/fmc\_netmap/v1/domain/{domainUUID}/vulns

URL for DELETE by ID: /api/fmc\_netmap/v1/domain/{domainUUID}/vulns/{objectId}

Permissions: Policies > Network Discovery > Modify Network Discovery

Parameters available for filtering: ipAddress, source, port, protocol, id

`source` must be included for DELETE

## Analysis

### GET activesessions

Request Type: **GET**

Description: Retrieve active sessions.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/activesessions

Permissions: Analysis > Users > Active Sessions

Parameters available for filtering: userid, loginTime, lastSeen, username, email, department, authenticationType, currentIP, user, realmId, realmName, firstName, lastName, phone, discoveryApplication

## DELETE activesessions

Request Type: **GET**

Description: Delete active sessions.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/activesessions

Permissions: Analysis > Users > Active Sessions

Parameters available for filtering: ids of sessions to logout, separated by commas

## GET analysisusers

Request Type: **GET**

Description: Retrieves users.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/analysisusers

Permissions: Analysis > Users > Users

Parameters available for filtering: userid, user, lastSeen, realmId, realmName, username, firstName, lastName, email, department, phone, discoveryApplication, activeSessioncount, availableForPolicy

## DELETE analysisusers

Request Type: **DELETE**

Description: Deletes users.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/analysisusers

Permissions: Analysis > Users > Users > Modify Users

## POST logout

Request Type: **POST**

Description: Administratively logout active user session.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/activesessions/logout

Permissions: Analysis > Users > Active Sessions > Modify Active Sessions

## GET useractivity

Request Type: **GET**

Description: Retrieves user activities.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/useractivity

Permissions: Analysis > Users > User Activity

**DELETE useractivity**

Parameters available for filtering: eventId, time, event, username, realmName, discoveryApplication, authenticationType, ipAddress, startPort, endPort, description, vpnSessionType, vpngroupPolicy, vpnConnectionProfile, vpnClientPublicIP, vpnClientCountry, vpnClientOS, vpnClientApplication, vpnConnectionDuration, vpnbytesOut, vpnbytesIn, securityGroupTag, endpointProfile, endpointLocation, device

**DELETE useractivity**

Request Type: **DELETE**

Description: Deletes user activities.

URL: /api/fmc\_config/v1/domain/{domainUUID}/analysis/useractivity

Permissions: Analysis > Users > User Activity > Modify User Activity Events

**Audit Services****GET auditrecords**

Request Type: **GET**

Description: Retrieves audit records.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/audit/auditrecords

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/audit/auditrecords/{objectID}

Permissions: System > Monitoring > Audit

Parameters available for filtering: username, subsystem, source, starttime, endtime

**GET configchanges**

Request Type: **GET**

Description: Retrieves the configuration changes associated with audit.

URL: /api/fmc\_platform/v1/domain/{domainUUID}/audit/configchanges

URL for GET by ID: /api/fmc\_platform/v1/domain/{domainUUID}/audit/configchanges/{object\_UUID}

Permissions: System > Configuration

Parameters Available for Filtering: auditLogId, snapshotId

**Change Management****GET previewchanges**

Request Type: **GET**

Description: Retrieves ticket based changes

URL:

/api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets/{containerUUID}/previewchanges

Permissions: Deploy Configuration to Devices

Parameters available for filtering: ParentEntityTypes

## GET tickets

Request Type: **GET**

Description: Retrieves the specified ticket. If no ID is specified, retrieves all the tickets for the logged in user.

URL: /api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets/{object\_UUID}

Permissions: Deploy Configuration to Devices

## PUT tickets

Request Type: **PUT**

Description: Modifies the specified ticket.

URL: /api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets/{objectId}

Permissions: Deploy Configuration to Devices

## POST tickets

Request Type: **POST**

Description: Creates a ticket.

URL: /api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets

Permissions: Deploy Configuration to Devices

## GET validationresults

Request Type: **GET**

Description: Retrieves validation result for the input ticket.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/changemanagement/tickets/{containerUUID}/validationresults

Permissions: Deploy Configuration to Devices

# Users

## GET authroles

Request Type: **GET**

Description: Retrieves the list of all existing user roles in the system.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/authroles

Permissions: System > User Management

Parameters available for filtering: none

## GET duoconfigs

Request Type: **GET**

Description: Retrieves the Duo configuration associated with the specified ID. If no ID is specified, retrieves list of all Duo configurations.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/duoconfigs/

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/users/duoconfigs/{objectId}

Permissions: System > User Management > Users

## PUT duoconfigs

Request Type: **PUT**

Description: Modifies the Duo configuration associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/duoconfigs/{objectId}

Permissions: System > User Management > Users

## GET SSO Config

Request Type: **GET**

Description: Retrieves the Single Signon Configuration for the device.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/ssoconfigs/{objectId}

Permissions: System > User Management > Single Sign-On

Parameters available for filtering: none

## PUT SSO Config

Request Type: **PUT**

Description: Modifies the Single Signon configuration for the device.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/ssoconfigs/{objectId}

Permissions: System > User Management > Single Sign-On

## GET users

Request Type: **GET**

Description: Retrieves information for the user with the specified ID. If no ID is specified, retrieves the list of all users on FMC.

URL: /api/fmc\_config/v1/domain/{domainUUID}/users/users

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/users/users/{object\_UUID}

Permissions: System > User Management > Users

# Deployment Services

## GET deployabledevices

Request Type: **GET**

Description: Retrieves list of all devices with configuration changes, ready to be deployed.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/deployment/deployabledevices

Permissions: Deploy Configuration to Devices

Parameters available for filtering: name

## POST deploymentrequests

Request Type: **POST**

Description: Creates a request for deploying configuration changes to the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/deployment/deploymentrequests/{object\_UUID}

Permissions: Deploy Configuration to Devices

## GET deployments

Request Type: **GET**

Description: Retrieves deployment details for device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/deployment/deployabledevices/{containerUUID}/deployments

Permissions: Deploy Configuration to Devices

Parameters available for filtering: startTime, endTime

**GET downloadreports**

Request Type: **GET**

Description: Retrieves the report for download.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories/{containerUUID}/operational/downloadreports`

Permissions: Overview > Reporting

**POST emailreports**

Request Type: **POST**

Description: Emails the deployment report.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories/{containerUUID}/operational/emailreports`

Permissions: Overview > Reporting

**GET jobhistories**

Request Type: **GET**

Description: Retrieves the specified deployment job. If no ID is provided, retrieves all the deployment jobs.

URL: `/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories/{objectId}`

Permissions: Deploy Configuration to Devices

Parameters available for filtering: Various filter criteria can be specified using the format

`deviceUUID:{uuid};startTime:start_time_in_secs;endTime:end_time_in_secs;rollbackApplicable:true_or_false`

**PUT jobhistories**

Request Type: **PUT**

Description: Modifies the deployment job with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/deployment/jobhistories/{objectId}`

Permissions: Deploy Configuration to Devices

**GET pendingchanges**

Request Type: **POST**

Description: Retrieves all the policy and object changes for the selected device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/deployment/deployabledevices/{containerUUID}/pendingchanges`

Permissions: Deploy Configuration to Devices

## POST pendingchangesrequests

Request Type: **POST**

Description: Creates a request for generating pending policy changes or pending CLI changes or both on devices.

URL: /api/fmc\_config/v1/domain/{domainUUID}/deployment/pendingchangesrequests

Permissions: Deploy Configuration to Devices

## POST rollbackrequests

Request Type: **POST**

Description: Creates a request for rollback configuration to devices.

URL: /api/fmc\_config/v1/domain/{domainUUID}/deployment/rollbackrequest

Permissions: Deploy Configuration to Devices

# Device Group Services

## GET devicegrouprecords

Request Type: **GET**

Description: Retrieves the device group associated with the specified ID. If no ID is specified, retrieves list of all device groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > View Devices

## PUT devicegrouprecords

Request Type: **PUT**

Description: Modifies a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST devicegrouprecords

Request Type: **POST**

Description: Creates a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords

**DELETE devicegrouprecords**

Permissions: Devices > Device Management > Modify Devices

**DELETE devicegrouprecords**

Request Type: **DELETE**

Description: Deletes a device group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/devicegrouprecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

**Device Clusters****GET ftddevicecluster**

Request Type: **GET**

Description: Retrieves or modifies the threat defense Cluster record associated with the specified ID. If no ID is specified for a GET, retrieves list of all threat defense Clusters.

The following fields have been replaced as of 7.1.0:

Previous Field Name	New Field Name
masterDevice	controlDevice
master_device_UUID	control_device_UUID
slaveDevices	dataDevices
slave1_device_UUID	data1_device_UUID
slave2_device_UUID	data2_device_UUID
slave3_device_UUID	data3_device_UUID

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{objectId}

Permissions: Devices > Device Management > View Devices

**PUT ftddevicecluster**

Request Type: **PUT**

Description: Modifies the threat defense Cluster record associated with the specified ID.

The following fields have been replaced as of 7.1.0:

Previous Field Name	New Field Name

masterDevice	controlDevice
master_device_UUID	control_device_UUID
slaveDevices	dataDevices
slave1_device_UUID	data1_device_UUID
slave2_device_UUID	data2_device_UUID
slave3_device_UUID	data3_device_UUID

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{objectId}

Permissions: Devices > Device Management > Modify Devices

## POST ftddevicecluster

Request Type: **POST**

Description: Creates an threat defense Cluster record.

The following fields have been replaced as of 7.1.0:

Previous Field Name	New Field Name
masterDevice	controlDevice
master_device_UUID	control_device_UUID
slaveDevices	dataDevices
slave1_device_UUID	data1_device_UUID
slave2_device_UUID	data2_device_UUID
slave3_device_UUID	data3_device_UUID

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/

Permissions: Devices > Device Management > Modify Devices

## DELETE ftddevicecluster

Request Type: **DELETE**

Description: Deletes the threat defense Cluster record associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{objectId}

Permissions: Devices > Device Management > Modify Devices

## POST ftdclusterreadinesscheck

Request Type: **POST**

**POST ftdclusterdevicecommands**

Description: Represents Cluster compatibility status for control(Readiness to become control) and data devices(compatible with control). This Readiness check is for platforms that support cluster bootstrap from management center (for e.g.4200).

URL: /api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftdclusterreadinesscheck

Permissions: Devices > Device Management > Modify Devices

Parameters available for filtering: `skipControlReadiness`: This is a query parameter, if given as true (`skipControlReadiness=true`) skips control readiness check and performs data devices compatibility with control.

## **POST ftdclusterdevicecommands**

Request Type: **POST**

Description: Executes given command on the threat defense Cluster.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/{containerUUID}/operational/ftdclusterdevicecommands

Filters available for use: Filter are `operation` and `deviceUUID`. Value of filter is of format:

```
deviceUUID:device
          uuid;operation:{enable|disable|control}
```

`.deviceUUID` is UUID of device and is a mandatory field. `operation` is the command that needs to be executed on device and is a mandatory field.

Permissions: Devices > Device Management > Modify Devices

## **GET clusterhealthmonitorsettings**

Request Type: **GET**

Description: Retrieves the health check monitor settings of the Firewall Threat Defense Cluster.

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{containerUUID}/clusterhealthmonitorsettings/{clusterUuid}/{object\_UUID}

Permissions: Devices > Device Management

## **PUT clusterhealthmonitorsettings**

Request Type: **PUT**

Description: Modifies the health check monitor settings of the Firewall Threat Defense Cluster.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/deviceclusters/ftddevicecluster/{containerUUID}/clusterhealthmonitorsettings/{clusterUuid}

Permissions: Devices > Device Management > Modify Devices

# Device HA Pair Services

## GET ftddevicehapairs

Request Type: **GET**

Description: Retrieves the details associated with the specified high availability container ID. If no ID is specified, retrieves a list of all high availability container objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

## PUT ftddevicehapair

Request Type: **PUT**

Description: Sets any one of the following actions for the threat defense high availability device:

- Sets the failover trigger criteria for the device
- Switches states within the device
- Breaks or force-breaks the device

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs/{ha\_container\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST ftddevicehapairs

Request Type: **POST**

Description: Creates a high availability device pair with the specified primary and secondary object IDs. Do not perform the POST operation for more than one high availability pair at a time. Ensure that the current POST operation is completed successfully before proceeding to the next POST operation.

**Note** Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see [GET taskstatuses, on page 194](#).

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftddevicehapairs

Permissions: Devices > Device Management > Modify Devices

**DELETE ftdddevicehapair**

Request Type: **DELETE**

Description: Deletes a device high availability pair with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

---

**Note** Run the *configure high-availability disable* command to remove the failover configurations from threat defense devices.

---

## GET failoverinterfacemacaddressconfigs

Request Type: **GET**

Description: Retrieves the threat defense high availability failover policy interface MAC addresses record associated with the specified threat defense HA pair. If no ID is specified for a GET, it retrieves the list of all threat defense high availability failover policy interface MAC addresses records.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs

URL for GET by ID :

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs/{object\_UUID}

Permissions: Devices > Device Management

## PUT failoverinterfacemacaddressconfigs

Request Type: **PUT**

Description: Modifies the threat defense high availability failover policy interface MAC addresses record associated with the specified threat defense high availability pair.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicehapairs/ftdddevicehapairs/{hacontainer\_UUID}/failoverinterfacemacaddressconfigs/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST failoverinterfacemacaddressconfigs

Request Type: **POST**

Description: Creates the threat defense high availability failover policy interface MAC addresses record associated with the specified threat defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/failoverinterfacemacaddressconfigs
```

Permissions: Devices > Device Management > Modify Devices

## **DELETE failoverinterfacemacaddressconfigs**

Request Type: **DELETE**

Description: Deletes the threat defense high availability failover policy interface MAC addresses record associated with the specified threat defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/failoverinterfacemacaddressconfigs
```

Permissions: Devices > Device Management > Modify Devices

## **GET monitoredinterfaces**

Request Type: **GET**

Description: Retrieves the threat defense high availability Monitored interface policy record associated with the specified threat defense HA pair. If no ID is specified for a GET, it retrieves the list of all threat defense high availability monitored interface policy records.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

URL for GET by ID :

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces/{object_UUID}
```

Permissions: Devices > Device Management

## **PUT monitoredinterfaces**

Request Type: **PUT**

Description: Modifies the threat defense high availability Monitored interface policy record associated with the specified threat defense high availability pair.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/devicehapairs/ftddevicehapairs/
{hacontainer_UUID}/monitoredinterfaces
```

Permissions: Devices > Device Management > Modify Devices

# Device Services

## GET bfdpolicies

Request Type: **GET**

Description: Retrieves the BFD Hops associated with the specified ID. If no ID is specified for a GET, retrieves list of all BFD Hops..

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{object_UUID}`

Permissions: Object Manager

## PUT bfdpolicies

Request Type: **PUT**

Description: Modifies the BFD Hops associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{objectId}`

Permissions: Object Manager > Modify Objects

## POST bfdpolicies

Request Type: **POST**

Description: Creates BFD Hops.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies`

Permissions: Object Manager > Modify Objects

## DELETE bfdpolicies

Request Type: **DELETE**

Description: Deletes the BFD Hops associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{objectId}`

Permissions: Object Manager > Modify Objects

## GET bgp routing

Request Type: **GET**

Description: Retrieves list of all BGP (ipv4 and ipv6) associated with the specified device for specified vrf. If no device is specified, retrieves list of all BGP.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp/{objectId}

Permissions: Devices > Device Management

## PUT bgp

Request Type: **PUT**

Description: Modifies BGP (ipv4 and ipv6) associated with the specified device for specified vrf.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp/{objectId}

Permissions: Devices > Device Management > Modify Devices

## POST bgp

Request Type: **POST**

Description: Creates BGP (ipv4 and ipv6) associated with the specified device for specified vrf.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp

Permissions: Devices > Device Management > Modify Devices

## DELETE bgp

Request Type: **DELETE**

Description: Deletes the specified bgp object.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgp/{objectId}

Permissions: Devices > Device Management > Modify Devices

## GET bgp general settings

Request Type: **GET**

Description: Retrieves BGP general settings associated with the specified device. If no device is specified, retrieves list of all BGP general settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings/{objectId}

Permissions: Devices > Device Management

**PUT bgpgeneralsettings**

Request Type: **PUT**

Description: Modifies the specified BGP general settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings/{objectId}

Permissions: Devices > Device Management > Modify Devices

**POST bgpgeneralsettings**

Request Type: **POST**

Description: Creates BGP general settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings

Permissions: Devices > Device Management > Modify Devices

**DELETE bgpgeneralsettings**

Request Type: **DELETE**

Description: Deletes the BGP general settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/bgpgeneralsettings/{objectId}

Permissions: Devices > Device Management > Modify Devices

**GET bridgegroupinterfaces**

Request Type: **GET**

Description: Retrieves the bridge group interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all bridge group interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces/{object\_UUID}

Permissions: Devices > Device Management

**PUT bridgegroupinterfaces**

Request Type: **PUT**

Description: Modifies a bridge group interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## POST bridgegroupinterfaces

Request Type: **POST**

Description: Creates bridge group interfaces associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## DELETE bridgegroupinterfaces

Request Type: **DELETE**

Description: Deletes a bridge group interface associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/bridgegroupinterfaces

Permissions: Devices > Device Management > Modify Device

## POST changemangers

Request Type: **POST**

Description: API to support migrating configuration management of FTD from FMC to CDO.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/operational/changemangers

Permissions: System > Configuration

## GET commands

Request Type: **GET**

Description: Retrieves the output for supported `show` commands on the device. Executes the command in the payload and retrieves the output of that command. If there is no command in the payload, returns an HTTP 500 error.

When specifying a command to execute, the payload must contain the command in the following format:

```
show {command}
```

This can include additional optional parameters. The parameters are separated by spaces after the first one:

```
show {command}&parameter={parameter1} {parameter2} {parameter3}...
```

The below table lists the commands which can be used with the `commands` service.

**GET commands**

Command
show aaa-server
show aaa-server&parameter={parameters}
show access-list&parameter={parameters}
show banner
show crypto
show crypto&parameter={parameters}
show dhcpd state
show failover
show failover&parameter={parameters}
show firewall
show ip
show ip&parameter={parameters}
show logging
show logging&parameter={parameters}
show network
show ntp
show route
show route&parameter={parameters}
show rule&parameter={parameters}
show snmp-server&parameter={parameters}
show snort3 status
show ssl
show ssl&parameter={parameters}
show version
show version&parameter={parameters}
show von-sessiondb
show vpn-sessiondb&parameter={parameters}

The `commands` service will only work on devices running version 6.6 or greater. It only allows ten concurrent requests in total, and only one per device.

Pagination is not supported. If there is any output beyond the first page it will be truncated. As such, do not attempt any command which will yield more output than one page.

Some specific commands should not be used, specifically `show running-config all`, `show running-config access-list` and similar commands, as they may not work as desired or may impact performance.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/commands

Permissions: Devices > Device Management

## POST copyconfigrequests

Request Type: **POST**

Description: Copies device configuration to the specified threat defense device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/copyconfigrequests

Permissions: Devices > Device Management > Modify Devices

## GET devicerecords

Request Type: **GET**

Description: Retrieves device information. If a device ID is specified, the information for the specified device is retrieved. If no ID is specified, retrieves information for all devices.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: hostName

## PUT devicerecords

Request Type: **PUT**

Description: Modifies the device record associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST devicerecords

Request Type: **POST**

Description: Registers the specified device to the management center.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords

Permissions: Devices > Device Management > Modify Devices

## DELETE devicerecords

Request Type: **DELETE**

Description: Unregisters the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{object\_UUID}

**GET devicesettings**

Permissions: Devices > Device Management > Modify Devices

**GET devicesettings**

Request Type: **GET**

Description: Retrieves the Device Settings.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/devicesettings/{containerUUID}

Permissions: Devices > Device Management

**PUT devicesettings**

Request Type: **PUT**

Description: Modifies the Device Settings.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/devicesettings/{containerUUID}

Permissions: Devices > Device Management > Modify Devices

**GET ddnssettings**

Request Type: **GET**

Description: Retrieves the DDNS policy associated with the specified container and device ID. If no ID is specified, retrieves list of all DDNS policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/ddnssettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/ddnssettings/{object\_UUID}

Permissions: Devices > Device Management

**PUT ddnssettings**

Request Type: **PUT**

Description: Modifies the DDNS policy associated with the specified container and device ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/ddnssettings/{objectId}

Permissions: Devices > Device Management > Modify Devices

**GET dhcprelaysettings**

Request Type: **GET**

Description: Retrieves the Device DHCP Relay associated with the specified container and device Id. If no device ID is specified, retrieves list of all DHCP Relays.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcprelaysettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcprelaysettings/{object\_UUID}

Permissions: Devices > Device Management

## PUT dhcprelaysettings

Request Type: **PUT**

Description: Modifies the Device DHCP Relay associated with the specified container and device ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcprelaysettings/{objectId}

Permissions: Devices > Device Management > Modify Devices

## GET dhcpserver

Request Type: **GET**

Description: Retrieves the DHCP Server policy associated with the specified container and device ID. If no device ID is specified, retrieves list of all DHCP Server policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcpserver

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcpserver/{object\_UUID}

Permissions: Devices > Device Management

## PUT dhcpserver

Request Type: **PUT**

Description: Modifies the DHCP Server policy associated with the specified container and device ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/dhcp/dhcpserver/{objectId}

Permissions: Devices > Device Management > Modify Devices

## GET ecmpzones

Request Type: **GET**

Description: Retrieves the ECMP Zone associated with the specified ID. If no ID is specified, retrieves list of all ECMP Zones.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones

**PUT ecmpzones**

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology

## PUT ecmpzones

Request Type: **PUT**

Description: Modifies the ECMP Zone associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

## POST ecmpzones

Request Type: **POST**

Description: Creates an ECMP Zone.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

## DELETE ecmpzones

Request Type: **DELETE**

Description: Deletes the ECMP Zone associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

## GET eigrproutes

Request Type: **GET**

Description: Retrieves the EIGRP associated with the specified ID. If no ID is specified, retrieves list of all EIGRP.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualRouterUUID}/eigrproutes/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualRouterUUID}/eigrproutes/{objectId}/{objectUUID}`

Permissions: Devices > Device Management

## PUT eigroutes

Request Type: **PUT**

Description: Modifies the EIGRP associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/eigroutes/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## POST eigroutes

Request Type: **POST**

Description: Creates an EIGRP.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/eigroutes`

Permissions: Devices > Device Management > Modify Devices

## DELETE eigroutes

Request Type: **DELETE**

Description: Deletes the specified EIGRP.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/eigroutes/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## GET etherchannelinterfaces

Request Type: **GET**

Description: Retrieves the ethernet channel interface associated with the specified NGFW device ID and interface ID. If no ID is specified, retrieves list of all ethernet channel interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/etherchannelinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/etherchannelinterfaces/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering:

## PUT etherchannelinterfaces

Request Type: **PUT**

Description: Modifies an ethernet channel interfaces on the specified device.

## POST etherchannelinterfaces

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/etherchannelinterfaces/

Permissions: Devices > Device Management > Modify Device

## POST etherchannelinterfaces

Request Type: **POST**

Description: Creates ethernet channel interfaces on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/etherchannelinterfaces/

Permissions: Devices > Device Management > Modify Device

## DELETE etherchannelinterfaces

Request Type: **DELETE**

Description: Removes ethernet channel interfaces from a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/etherchannelinterfaces/

Permissions: Devices > Device Management

## POST exports

Request Type: **POST**

Description: Package and export device configuration of specified threat defenses

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/operational/exports

Permissions: System > Tools > Import/Export

## GET fpinterfacestatistics

Request Type: **GET**

Description: Retrieves list of statistics for all interfaces associated with the specified NGIPS device ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/  
devicerecords/{container\_UUID}/fpinterfacestatistics

Permissions: Devices > Device Management

Parameters available for filtering: name

## GET fplogicalinterfaces

Request Type: **GET**

Description: Retrieves the logical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all logical interfaces associated with the specified NGIPS device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: name

## PUT fplogicalinterfaces

Request Type: **PUT**

Description: Modifies a logical interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## POST fplogicalinterfaces

Request Type: **POST**

Description: Creates logical interfaces on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fplogicalinterfaces

Permissions: Devices > Device Management > Modify Device

## DELETE fplogicalinterfaces

Request Type: **DELETE**

Description: Deletes logical interfaces on the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/fplogicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## GET fpphysicalinterfaces

Request Type: **GET**

Description: Retrieves information on the physical interface associated with the specified NGIPS device ID and interface ID. If no ID is specified, retrieves list of all physical interfaces associated with the specified NGIPS device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fpphysicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/fpphysicalinterfaces/{object\_UUID}

**PUT fpphysicalinterfaces**

Permissions: Devices > Device Management

Parameters available for filtering: name

## **PUT fpphysicalinterfaces**

Request Type: **PUT**

Description: Modifies a physical interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/fpphysicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## **GET ftdallinterfaces**

Request Type: **GET**

Description: Retrieves all types of interfaces.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/ftdallinterfaces

Permissions: Devices > Device Management

Parameters available for filtering: `filter`: This is a query parameter to fetch specific type of interfaces.

Supported Filter Criteria are :

`cclEligibleInterface:{boolean};interfaceMode:{mode};virtualRouterId:{uuid};named:{boolean};`  
`cclEligibleInterface` : Filter to get ccl eligible interface, filter value should always be `true`. `interfaceMode` : Filter using interface mode. Supported only for routed device. Allowed value is `ROUTED` Cannot be used with `cclEligibleInterface` filter. `virtualRouterId` : Supported only for routed device. Cannot be used with `cclEligibleInterface` filter. `named` : Supported only for routed device. Cannot be used with `cclEligibleInterface` filter.

## **POST imports**

Request Type: **POST**

Description: Import device configuration from specified source for threat defenses.

URL: /api/fmc\_config/v1/domain/{domainUUID}/devices/operational/imports

Permissions: System > Tools > Import/Export

## **GET inlinesets**

Request Type: **GET**

Description: Retrieves information on the inline set associated with the specified NGIPS device ID and inline set ID. If no inline set ID is specified, retrieves list of all inline sets associated with the specified NGIPS device ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management

Parameters available for filtering: name

## PUT inlinesets

Request Type: **PUT**

Description: Modifies an inline set on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## POST inlinesets

Request Type: **POST**

Description: Creates inline sets on the specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/inlinesets

Permissions: Devices > Device Management > Modify Device

## DELETE inlinesets

Request Type: **DELETE**

Description: Deletes inline sets on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/inlinesets/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## GET interfaceevents

Request Type: **GET**

Description: Retrieves list of all netmod events on the device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/interfaceevents

Permissions: Devices > Device Management

## POST interfaceevents

Request Type: **POST**

Description: Creates netmod events on the specified device.

**GET ipv4staticroutes**

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/interfaceevents`

Permissions: Devices &gt; Device Management &gt; Modify Device

**GET ipv4staticroutes**Request Type: **GET**

Description: Retrieves the IPv4 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv4 Static Routes.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes`

URL for GET ID::

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object_UUID}`

Permissions: Devices &gt; Devices Management

**PUT ipv4staticroutes**Request Type: **PUT**

Description: Modifies the IPv4 Static Route associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object_UUID}`

Permissions: Devices &gt; Devices Management &gt; Modify Devices

**POST ipv4staticroutes**Request Type: **POST**

Description: Creates an IPv4 Static Route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**DELETE ipv4staticroutes**Request Type: **DELETE**

Description: Deletes the IPv4 Static Route associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv4staticroutes/{object_UUID}`

Permissions: Devices &gt; Devices Management &gt; Modify Devices

## GET ipv6staticroutes

Request Type: **GET**

Description: Retrieves the IPv6 Static Route associated with the specified ID. If no ID is specified, retrieves list of all IPv6 Static Routes.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes

URL for GET ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object\_UUID}

Permissions: Devices > Device Management

## PUT ipv6staticroutes

Request Type: **PUT**

Description: Modifies the IPv6 Static Route associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## POST ipv6staticroutes

Request Type: **POST**

Description: Creates an IPv6 Static Route.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes

Permissions: Devices > Device Management > Modify Devices

## DELETE ipv6staticroutes

Request Type: **DELETE**

Description: Deletes the IPv6 Static Route associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ipv6staticroutes/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

## GET loopbackinterfaces

Request Type: **GET**

Description: Retrieves the loopback interface associated with the specified NGFW device ID and/or interface ID. If no ID is specified, retrieves list of all loopback interfaces.

**PUT loopbackinterfaces**

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/loopbackinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/loopbackinterfaces/{object_UUID}`

Permissions: Devices &gt; Device Management

**PUT loopbackinterfaces**Request Type: **PUT**

Description: Modifies the loopback interface associated with the specified NGFW device ID and/or interface ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/loopbackinterfaces/{objectId}`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**POST loopbackinterfaces**Request Type: **POST**

Description: Creates a loopback interface.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/loopbackinterfaces`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**DELETE loopbackinterfaces**Request Type: **DELETE**

Description: Deletes the loopback interface associated with the specified NGFW device ID and/or interface ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/loopbackinterfaces/{objectId}`

Permissions: Devices &gt; Device Management &gt; Modify Devices

**GET managementconvergencemode**Request Type: **GET**

Description: Retrieves the convergence state of the device

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/managementconvergencemode`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/managementconvergencemode/{object_UUID}`

Permissions: Devices &gt; Device Management

## POST managementconvergencemode

Request Type: **POST**

Description: Sets the convergence state of the device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/managementconvergencemode`

Permissions: Devices > Device Management > Modify Devices

## GET Metrics

Request Type: **GET**

Description: Retrieves HealthMonitor metrics for the device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/metrics`

Permissions: Devices > Device Management

Parameters available for filtering: metric

## POST modelmigrations

Request Type: **POST**

Description: Creates a modelmigrations object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/devices/operational/modelmigrations`

Permissions: Devices > Device Management > Modify Devices

## GET ospf interface

Request Type: **GET**

Description: Retrieves the OSPF interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all OSPF interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface/{objectId}`

Permissions: Devices > Device Management

## GET ospfv2routes

Request Type: **GET**

Description: Retrieves OSPF V2 routes associated with the specified ID. If no ID is specified, retrieves list of all OSPF v2 routes.

**GET ospfv3interfaces**

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv2routes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv2routes/{objectId}`

Permissions: Devices &gt; Device Management

**GET ospfv3interfaces**Request Type: **GET**

Description: Retrieves OSPF v3 interface associated with the specified ID. If no ID is specified, retrieves a list of all OSPF v3 interfaces.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3interfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3interfaces/{objectId}`

Permissions: Devices &gt; Device Management

**GET ospfv3routes**Request Type: **GET**

Description: Retrieves the OSPFv3 process associated with the specified ID. If no ID is specified, retrieves list of all OSPFv3 processes.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3routes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ospfv3routes/{objectId}`

Permissions: Devices &gt; Device Management

**POST packettracer**Request Type: **POST**

Description: Retrieves the Packet Tracer command output for a threat defense or Cluster.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/packettracer`

Permissions: Devices &gt; Troubleshoot &gt; Packet Tracer &gt; Modify Packet Tracer

**POST packettracerpcap**Request Type: **POST**

Description: Retrieves the Packet Tracer using a PCAP file command output for a device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/packettracerpcap

Permissions: Devices > Troubleshoot > Packet Capture > Modify Packet Capture

## GET physicalinterfaces

Request Type: **GET**

Description: Retrieves the physical interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all physical interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## PUT physicalinterfaces

Request Type: **PUT**

Description: Modifies physical interfaces on a specified device.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/physicalinterfaces

Permissions: Devices > Device Management > Modify Device

## GET policybasedroutes

Request Type: **GET**

Description: Retrieves the specified Policy Based Route. If no ID is specified, retrieves a list of all Policy Based Routes.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/policybasedroutes

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/policybasedroutes/{objectId}

Permissions: Devices > Device Management

## PUT policybasedroutes

Request Type: **PUT**

Description: Modifies the Policy Based Route.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/policybasedroutes/{objectId}

## POST policybasedroutes

Permissions: Devices > Device Management > Modify Devices

## POST policybasedroutes

Request Type: **POST**

Description: Creates the Policy Based Route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/policybasedroutes`

Permissions: Devices > Device Management > Modify Devices

## DELETE policybasedroutes

Request Type: **DELETE**

Description: Deletes the Policy Based Route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/policybasedroutes/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## GET redundantinterfaces

Request Type: **GET**

Description: Retrieves the redundant interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all redundant interfaces associated with the specified NGFW device ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces/{object_UUID}`

Permissions: Devices > Device Management

## PUT redundantinterfaces

Request Type: **PUT**

Description: Modifies redundant interfaces on a specified device.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/redundantinterfaces`

Permissions: Devices > Device Management > Modify Device

## POST redundantinterfaces

Request Type: **POST**

Description: Creates redundant interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/redundantinterfaces

Permissions: Devices > Device Management

## DELETE redundantinterfaces

Request Type: **DELETE**

Description: Removes redundant interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/redundantinterfaces

Permissions: Devices > Device Management

## GET staticroutes

Request Type: **GET**

Description: Retrieves the static route associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all static routes associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroute

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroutes/{objectId}

Permissions: Devices > Device Management

## GET subinterfaces

Request Type: **GET**

Description: Retrieves the sub-interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all sub-interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## PUT subinterfaces

Request Type: **PUT**

Description: Modifies a sub interface on the specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces/

**POST subinterfaces**

Permissions: Devices > Device Management > Modify Device

## **POST subinterfaces**

Request Type: **POST**

Description: Creates sub interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces

Permissions: Devices > Device Management

## **DELETE subinterfaces**

Request Type: **DELETE**

Description: Deletes sub interfaces on a specified device.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/subinterfaces

Permissions: Devices > Device Management

## **GET virtualaccessinterfaces**

Request Type: **GET**

Description: Retrieves the Virtual Access Interfaces on all the managed Firewall Threat Defenses.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/operational/virtualaccessinterfaces

Permissions: Devices > Device Management

Parameters available for filtering: dvtId

## **GET Virtual BFD Policies**

Request Type: **GET**

Description: Retrieves the BFD Policy associated with the specified ID. If no ID is specified for a GET, retrieves list of all BFD Policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{objectId}

Permissions: Object Manager

## **PUT Virtual BFD Policies**

Request Type: **PUT**

Description: Modifies the BFD policy associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{objectId}`

Permissions: Object Manager > Modify Objects

## POST Virtual BFD Policies

Request Type: **POST**

Description: Creates a a BFD Policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies`

Permissions: Object Manager > Modify Objects

## DELETE Virtual BFD Policies

Request Type: **DELETE**

Description: Deletes the BFD Policy associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bfdpolicies/{objectId}`

Permissions: Object Manager > Modify Objects

## GET virtual BGP

Request Type: **GET**

Description: Retrieves specified BGP (ipv4 and ipv6) on the specified virtual router. If no ID is specified, retrieves list of all BGP on the virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

Permissions: Devices > Device Management

## PUT virtual bgp

Request Type: **PUT**

Description: Modifies BGP (ipv4 and ipv6) associated with the specified device for specified vrf.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bgp/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**POST virtual bgp**

Request Type: **POST**

Description: Creates BGP (ipv4 and ipv6) associated with the specified device for specified vrf.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bgp`

Permissions: Devices > Device Management > Modify Devices

**DELETE virtual bgp**

Request Type: **DELETE**

Description: Deletes BGP (ipv4 and ipv6) associated with the specified device for specified vrf.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/bgp/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**GET virtual ecmpzones**

Request Type: **GET**

Description: Retrieves the ECMP Zone for the specified virtual router associated with the specified ID. If no ID is specified, retrieves list of all ECMP Zones.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ecmpzones`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology

**PUT virtual ecmpzones**

Request Type: **PUT**

Description: Modifies the ECMP Zone for the specified virtual router associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

**POST virtual ecmpzones**

Request Type: **POST**

Description: Creates an ECMP Zone for the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ecmpzones/`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

## DELETE virtual\_ecmpzones

Request Type: **DELETE**

Description: Deletes the ECMP Zone for the specified virtual router associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/ecmpzones/{objectId}`

Permissions: Policies > Network Discovery > Custom Topology > Modify Custom Topology

## GET virtual\_ipv4staticroutes

Request Type: **GET**

Description: Retrieves specified IPv4 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv4 static routes on the virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

## PUT virtual\_ipv4\_static\_routes

Request Type: **PUT**

Description: Modifies an IPv4 static route on the specified device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**POST virtual ipv4 static routes**

Request Type: **POST**

Description: Creates IPv4 static routes associated with the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes`

**Note** For static routes (IPv4), the methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**DELETE virtual ipv4 static routes**

Request Type: **DELETE**

Description: Deletes the specified IPv4 static route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv4staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**GET virtual ipv6staticroutes**

Request Type: **GET**

Description: Retrieves specified IPv6 static route on the specified virtual router. If no ID is specified, retrieves list of all IPv6 static routes on the virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

**Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management

## PUT virtual ipv6 static routes

Request Type: **PUT**

Description: Modifies a bridge group interface on the specified device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

- Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## POST virtual ipv6 static routes

Request Type: **POST**

Description: Creates IPv6 static routes associated with the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes`

- Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

## DELETE virtual ipv6 static routes

Request Type: **DELETE**

Description: Deletes the specified IPv6 static route.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ipv6staticroutes/{objectId}`

- Note** The methods and payload are same as for static route endpoints. If there is a route leak, a warning is returned with response code 400. However, if you make the REST call with query parameter ignoreWarning=true, the warning is ignored. This behavior is applicable with Global VRF static route as well.

Permissions: Devices > Device Management > Modify Device

**GET virtual ospf interface**

Request Type: **GET**

Description: Retrieves specified OSPF interface associated with the specified virtual router. If no ID is specified, retrieves list of all OSPF interfaces associated with the specified virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface`

URL for GET by ID:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfinterface/{objectId}`

Permissions: Devices > Device Management

**GET virtual ospfv2 routes**

Request Type: **GET**

Description: Retrieves specified OSPFv2 process associated with the specified virtual router. If no ID is specified, retrieves list of all OSPF v2 process associated with the specified virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfv2routes`

URL for GET by ID:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/ospfv2routes/{objectId}`

Permissions: Devices > Device Management

**GET virtualpolicybasedroutes**

Request Type: **GET**

Description: Retrieves the specified Policy Based Route associated for the specified virtual router. If no ID is specified, retrieves a list of all Policy Based Routes.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/policybasedroutes`

URL for GET by ID:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/policybasedroutes/{objectId}`

Permissions: Devices > Device Management

**PUT virtualpolicybasedroutes**

Request Type: **PUT**

Description: Modifies the Policy Based Route associated for the specified virtual router.

URL:

`/api/frc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/policybasedroutes/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## POST virtualpolicybasedroutes

Request Type: **POST**

Description: Creates the Policy Based Route associated for the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/policybasedroutes`

Permissions: Devices > Device Management > Modify Devices

## DELETE virtualpolicybasedroutes

Request Type: **DELETE**

Description: Deletes the Policy Based Route associated for the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/policybasedroutes/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## GET virtualrouters

Request Type: **GET**

Description: Retrieves the the virtual router with the specified ID. If no ID is specified, retrieves list of all virtual routers.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management

## PUT virtual routers

Request Type: **PUT**

Description: Modifies a virtual router on the specified device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management > Modify Device

## POST virtual routers

Request Type: **POST**

Description: Creates virtual routers associated with the specified container.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters`

**DELETE virtual routers**

Permissions: Devices > Device Management > Modify Device

**DELETE virtual routers**

Request Type: **DELETE**

Description: Deletes the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{objectId}`

Permissions: Devices > Device Management > Modify Device

**GET virtual static routes**

Request Type: **GET**

Description: Retrieves specified static routes (ipv4 and ipv6) associated with the specified virtual router. If no ID is specified, retrieves list of all Static routes (ipv4 and ipv6) associated with the specified virtual router.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroutes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/routing/virtualrouters/{virtualrouterUUID}/staticroutes/{objectId}`

Permissions: Devices > Device Management

**GET virtualswitches**

Request Type: **GET**

Description: Retrieves virtual switch associated with the specified NGIPS device ID and virtual switch ID. If no virtual switch ID is specified, retrieves list of all virtual switches associated with the specified NGIPS device ID.

**This method is only available on a Firepower 1010 device.**

URL: `/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/virtualswitches`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object_UUID}`

Permissions: Devices > Device Management

Parameters available for filtering: name

**PUT virtualswitches**

Request Type: **PUT**

Description: Modifies a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## POST virtualswitches

Request Type: **POST**

Description: Creates a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/virtualswitches

Permissions: Devices > Device Management > Modify Device

## DELETE virtualswitches

Request Type: **DELETE**

Description: Deletes a virtual switch on the specified device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{containerUUID}/virtualswitches/{object\_UUID}

Permissions: Devices > Device Management > Modify Device

## GET Virtual Tunnel Interfaces

Request Type: **GET**

Description: Retrieves the virtual tunnel interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all virtual tunnel interfaces associated with the specified NGFW device ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/virtualtunnelinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/virtualtunnelinterfaces/{objectId}

Permissions: Devices > VPN

Parameters available for filtering: none

## PUT Virtual Tunnel Interfaces

Request Type: **PUT**

Description: modifies the virtual tunnel interface associated with the specified NGFW device ID and/or interface ID.

**POST Virtual Tunnel Interfaces**

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/virtualtunnelinterfaces/{objectId}`

Permissions: Devices &gt; VPN &gt; Modify VPN

## **POST Virtual Tunnel Interfaces**

Request Type: **POST**

Description: Creates a virtual tunnel interface on the NGFW device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/virtualtunnelinterfaces`

Permissions: Devices &gt; VPN &gt; Modify VPN

## **DELETE Virtual Tunnel Interfaces**

Request Type: **DELETE**

Description: Deletes the virtual tunnel interface associated with the specified NGFW device ID and interface ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/virtualtunnelinterfaces/{objectId}`

Permissions: Devices &gt; VPN &gt; Modify VPN

## **GET vlaninterfaces**

Request Type: **GET**

Description: Retrieves the vlan interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves list of all vlan interfaces associated with the specified NGFW device ID.

**This method is only available on a Firepower 1010 device.**

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/devices/devicerecords/{container_UUID}/vlaninterfaces/{object_UUID}`

Permissions: Devices &gt; VPN

Parameters available for filtering: name

## **PUT vlaninterfaces**

Request Type: **PUT**

Description: Modifies the vlan interface associated with the specified NGFW device ID and interface ID.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/vlaninterfaces/{object\_UUID}

Permissions: Devices > VPN > Modify VPN

## POST vlaninterfaces

Request Type: **POST**

Description: Creates a vlan interface on the NGFW device.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/vlaninterfaces

Permissions: Devices > VPN > Modify VPN

## DELETE vlaninterfaces

Request Type: **DELETE**

Description: Deletes the vlan interface associated with the specified NGFW device ID and interface ID.

**This method is only available on a Firepower 1010 device.**

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/devices/devicerecords/{container\_UUID}/vlaninterfaces/{object\_UUID}

Permissions: Devices > VPN > Modify VPN

## GET vniinterfaces

Request Type: **GET**

Description: Retrieves the VNI interface associated with the specified NGFW device ID and interface ID. If no interface ID is specified, retrieves a list of all VNI interfaces on the NGFW device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vniinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vniinterfaces/{objectId}

Permissions: Devices > Device Management

## PUT vniinterfaces

Request Type: **PUT**

Description: Modifies the VNI interface associated with the specified NGFW device ID and interface ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vniinterfaces/{objectId}

Permissions: Devices > Device Management > Modify Devices

**POST vniinterfaces**

Request Type: **POST**

Description: Creates a VNI interface on the specified NGFW device.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vniinterfaces`

Permissions: Devices > Device Management > Modify Devices

**DELETE vniinterfaces**

Request Type: **DELETE**

Description: Retrieves the VNI interface associated with the specified NGFW device ID and interface ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vniinterfaces/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**GET vteppolicies**

Request Type: **GET**

Description: Retrieves the VTEP Policy associated with the specified NGFW device ID and policy ID. If no ID is specified, retrieves list of all VTEP Policies associated with the specified NGFW device ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vteppolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vteppolicies/{objectId}`

Permissions: Devices > Device Management

**PUT vteppolicies**

Request Type: **PUT**

Description: Modifies the VTEP Policy associated with the specified NGFW device ID and policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vteppolicies/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**POST vteppolicies**

Request Type: **POST**

Description: Creates a VTEP Policy on the specified NGFW device I.

URL: `/api/fmc_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vteppolicies`

Permissions: Devices > Device Management > Modify Devices

## DELETE vteppolicies

Request Type: **DELETE**

Description: Deletes the VTEP Policy associated with the specified NGFW device ID and policy ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/devices/devicerecords/{containerUUID}/vteppolicies/{objectId}

Permissions: Devices > Device Management > Modify Devices

# Health Services

## GET csdac

Request Type: **GET**

Description: Retrieves the Cisco Secure Dynamic Attributes Connector status for the device.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/csdac

Permissions: System > Health > Health Policy

## POST csdac

Request Type: **POST**

Description: Updates the Cisco Secure Dynamic Attributes Connector status for the device.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/csdac

Permissions: System > Health > Health Policy > Modify Health Policy

## GET Health Alerts

Request Type: **GET**

Description: Retrieves health alerts.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/alerts

Permissions: System > Health > Health Events

Parameters available for filtering: startTime, endTime, deviceUUIDs, status, moduleIDs

## GET Health Metrics

Request Type: **GET**

Description: Retrieves health monitor metrics for the device.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/metrics

Permissions: System > Health > Health Events

## GET pathmonitoredinterfaces

Parameters available for filtering: deviceUUIDs, metric, startTime, endTime, step, regexFilter, queryFunction

## GET pathmonitoredinterfaces

Request Type: **GET**

Description: Retrieves the path monitored interfaces.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/pathmonitoredinterfaces

Permissions: System > Health

## GET ravpngateways

Request Type: **GET**

Description: Retrieves the RA VPN Gateway Details. This includes RA VPN Certificate expiry dates, maximum sessions supported.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/ravpngateways

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/health/ravpngateways/{object\_UUID}

Permissions: Devices > VPN

## POST terminateravpnsessions

Request Type: **POST**

Description: Terminates Remote Access VPN Sessions.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/health/ravpnsessions/operational/terminateravpnsessions

Permissions: Devices > VPN > Modify VPN

## GET tunneldetails

Request Type: **GET**

Description: Retrieves the tunneldetails object associated with the ID. If no ID is specified, retrieves list of all tunneldetails objects associated with the ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/health/tunnelstatuses/{containerUUID}/tunneldetails

Permissions: System > Health > Health Events

## GET tunnelstatuses

Request Type: **GET**

Description: Retrieves tunnel status for S2S VPN on all managed threat defenses.

URL: /api/fmc\_config/v1/domain/{domainUUID}/health/tunnelstatuses

Permissions: Devices > Device Management

Parameters available for filtering: `vpnTopologyId:{uuid}` which filters the tunnel statuses by S2S VPN Topology id, `deviceId:{UUID}` which filters the tunnel statuses by Device id, `status:{TUNNEL_UP|TUNNEL_DOWN|UNKNOWN}` which filters the tunnel statuses by Tunnel Status and `sortBy{:|<|>} {Topology|Device|Status|LastChange}`. Filter operators : and < sorts in ascending order and > sorts in descending order.

## GET tunnelsummaries

Request Type: **GET**

Description: Retrieves aggregated summary of tunnel status for S2S VPN on all managed threat defenses.

URL: `/api/fmc_config/v1/domain/{domainUUID}/health/tunnelsummaries`

Permissions: Devices > Device Management

Parameters available for filtering: `vpnTopologyId:{uuid}` which filters the tunnel summary by S2S VPN Topology id, `deviceId:{UUID}` which filters the tunnel summary by Device id and `groupBy{Topology|Device}` which groups tunnel summary by Topology or Device.,

## Backup

- 

## POST devicebackup

Request Type: **POST**

Description: Creates the backup associated with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/backup/operational/devicebackup`

Permissions: System > Tools > Backup Management

## GET downloadbackup

Request Type: **GET**

Description: Downloads the backup associated with the specified UUID (In case of FMC the manager identifier should be entered in place of UUID). If no filter is specified for a GET, downloads the latest backup.

URL: `/api/fmc_config/v1/domain/{domainUUID}/backup/downloadbackup/{targetId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/backup/downloadbackup/{targetId}/{object_UUID}`

Permissions: System > Tools > Backup Management

## GET files

Request Type: **GET**

**DELETE files**

Description: Retrieves the backup associated with the specified UUID (In case of FMC the manager identifier should be entered in place of UUID). If no filter is specified for a GET, retrieves the latest backup.

URL: /api/fmc\_config/v1/domain/{domainUUID}/backup/files

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/backup/files/{object\_UUID}

Permissions: System > Tools > Backup Management

## **DELETE files**

Request Type: **DELETE**

Description: Deletes the backup associated with the specified UUID (In case of FMC the manager identifier should be entered in place of UUID).

URL: /api/fmc\_config/v1/domain/{domainUUID}/backup/files/{targetId}

Permissions: System > Tools > Backup Management

## **Chassis**

### **GET appinfo**

Request Type: **GET**

Description: Retrieves all the Image versions available for instance creation on the chassis.

URL: /api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/appinfo

Permissions: Devices > Device Management

### **POST breakoutinterfaces**

Request Type: **POST**

Description: Break interface.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/breakoutinterfaces

Permissions: Devices > Device Management > Modify Devices

### **GET chassisinterfaces**

Request Type: **GET**

Description: Retrieves the chassis interfaces associated with the ID. If no ID is specified, retrieves list of all chassis interfaces.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces/{interfaceUUID}

Permissions: Devices > Device Management

## GET chassisinterfaceevents

Request Type: **GET**

Description: Retrieves list of all netmod events on the device..

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaceevents

Permissions: Devices > Device Management

## POST chassisinterfaceevents

Request Type: **POST**

Description: Creates a netmod event on the device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaceevents

Permissions: Devices > Device Management > Modify Devices

## GET etherchannelinterfaces

Request Type: **GET**

Description: Retrieves the Chassis Etherchannel interfaces configuration associated with the ID. If no ID is specified, retrieves list of all Etherchannel interface configurations.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinterfaces/{object\_UUID}

Permissions: Devices > Device Management

## PUT etherchannelinterfaces

Request Type: **PUT**

Description: Modifies the specified Chassis EtherChannel interface configuration.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinterfaces/{interfaceUUID}

Permissions: Devices > Device Management > Modify Devices

**POST etherchannelinterfaces**

Request Type: **POST**

Description: Creates an Etherchannel interfaces configuration.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinterfaces`

Permissions: Devices > Device Management > Modify Devices

**DELETE etherchannelinterfaces**

Request Type: **DELETE**

Description: Deletes the specified Chassis EtherChannel interface configuration.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/etherchannelinterfaces/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**GET evaluateoperation**

Request Type: **GET**

Description: Validate interface usage.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/chassisinterfaces/{interfaceUUID}/evaluateoperation`

Permissions: Devices > Device Management

**GET faultsummary**

Request Type: **GET**

Description: Retrieves Fault data from the chassis.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/faultsummary`

Permissions: Devices > Device Management

**GET fmcmanagedchassis**

Request Type: **GET**

Description: Retrieves information on the specified chassis managed device. If no ID is given, retrieves list of all chassis managed devices.

URL: `/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}`

Permissions: Devices > Device Management

## POST fmcmanagedchassis

Request Type: **POST**

Description: Creates a chassis managed device on the Firewall Management Center.

URL: /api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis

Permissions: Devices > Device Management > Modify Devices

## DELETE fmcmanagedchassis

Request Type: **DELETE**

Description: Deletes the specified chassis managed device on the Firewall Management Center.

URL: /api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{objectId}

Permissions: Devices > Device Management > Modify Devices

## GET instancesummary

Request Type: **GET**

Description: Retrieves Instance summary data from the chassis.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/instancesummary

Permissions: Devices > Device Management

## GET interfaces

Request Type: **GET**

Description: Retrieves all chassis interfaces. If an interface UUID is provided, retrieves specific information for that interface.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfaces/{interface\_UUID}

Permissions: Devices > Device Management

## GET interfacesummary

Request Type: **GET**

Description: Retrieves Interface summary data from the chassis.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/interfacesummary

Permissions: Devices > Device Management

**GET inventorysummary**

Request Type: **GET**

Description: Retrieves Inventory summary data from the chassis.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/inventorysummary`

Permissions: Devices > Device Management

**POST joininterfaces**

Request Type: **POST**

Description: Join interfaces.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/joininterfaces`

Permissions: Devices > Device Management > Modify Devices

**GET logicaldevices**

Request Type: **GET**

Description: Retrieves the logical device associated with the specified ID. If no ID is specified, retrieves the list of all logical devices available on the specified chassis.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{object_UUID}`

Permissions: Devices > Device Management

**PUT logicaldevices**

Request Type: **PUT**

Description: Modifies the specified logical devices.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**POST logicaldevices**

Request Type: **POST**

Description: Creates a logical device on the specified chassis.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices`

Permissions: Devices > Device Management > Modify Devices

## **DELETE logicaldevices**

Request Type: **DELETE**

Description: Deletes the specified logical device.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/logicaldevices/{objectId}

Permissions: Devices > Device Management > Modify Devices

## **GET networkmodules**

Request Type: **GET**

Description: Retrieves the information about the network module object associated with the ID. If no ID is specified, retrieves list of all network modules.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/{objectId}

Permissions: Devices > Device Management

## **PUT networkmodules**

Request Type: **PUT**

Description: Modifies the specified network modules.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/networkmodules/{objectId}

Permissions: Devices > Device Management > Modify Devices

## **GET physicalinterfaces**

Request Type: **GET**

Description: Retrieves the chassis physical interface associated with the ID. If no ID is specified, retrieves list of all chassis physical interfaces.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/physicalinterfaces

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/physicalinterfaces/{interfaceUUID}

Permissions: Devices > Device Management

**PUT physicalinterfaces**

Request Type: **PUT**

Description: Modifies the chassis physical interface associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/physicalinterfaces/{interfaceUUID}`

Permissions: Devices > Device Management> Modify Devices

**GET snmpsettings**

Request Type: **GET**

Description: Retrieves the specified SNMP settings policy associated with the ID. If no ID is specified, retrieves all SNMP settings policies for particular chassis .

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings/{object_UUID}`

Permissions: Devices > Device Management

**PUT snmpsettings**

Request Type: **PUT**

Description: Modifies the specified SNMP settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/snmpsettings/{objectId}`

Permissions: Devices > Device Management > Modify Devices

**GET subinterfaces**

Request Type: **GET**

Description: Retrieves the Chassis Sub interface configuration associated with the ID. If no ID is specified, retrieves list of all Chassis Sub interface configurations.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{object_UUID}`

Permissions: Devices > Device Management

**PUT subinterfaces**

Request Type: **PUT**

Description: Modifies the specified Chassis Sub interface configuration.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{interfaceUUID}

Permissions: Devices > Device Management > Modify Devices

## POST subinterfaces

Request Type: **POST**

Description: Creates a Chassis Sub interface configuration.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces

Permissions: Devices > Device Management > Modify Devices

## DELETE subinterfaces

Request Type: **DELETE**

Description: Deletes the specified Chassis Sub interface configuration.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/subinterfaces/{objectId}

Permissions: Devices > Device Management > Modify Devices

## POST switchmode

Request Type: **POST**

Description: Operational API to convert a Chassis Mode from Native to Multi-Instance.

URL: /api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/operational/switchmode

Permissions: Deploy Configuration to Devices

## PUT syncnetworkmodule

Request Type: **PUT**

Description: Retrieve Network module data from FXOS and updates.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/chassis/fmcmanagedchassis/{containerUUID}/operational/syncnetworkmodule

Permissions: Devices > Device Management > Modify Devices

# Intelligence Services

## POST collections

Request Type: **POST**

Description: Adds a collections from a TAXII source.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/collections

Permissions: Intelligence

## POST discoveryinfo

Request Type: **POST**

Description: Adds information about TAXII collections available from a source.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/discoveryinfo

Permissions: Intelligence

## GET element

Request Type: **GET**

Description: Retrieves the intelligence-enabled sensor associated with the specified ID. If no ID is specified, retrieves list of all intelligence-enabled sensors.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/element

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/element/{object\_UUID}

Permissions: Intelligence

## GET incident

Request Type: **GET**

Description: Retrieves the intelligence incident associated with the specified ID. If no ID is specified, retrieves list of all intelligence incidents. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

---

**Note** As of 7.1.0 `whitelist` is now `allowlist`

---

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident/{object\_UUID}

Permissions: Intelligence

## PUT incident

Request Type: **PUT**

Description: Modifies an intelligence incident with the specified object ID.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/incident/{object\_UUID}

Permissions: Intelligence

## DELETE incident

Request Type: **DELETE**

Description: Deletes an incident.

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/taxiiconfig/incident/{object\_UUID}

Permissions: Intelligence

## GET indicator

Request Type: **GET**

Description: Retrieves the indicator associated with the specified ID. If no ID is specified, retrieves list of all indicators. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator

URL for GET by ID: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator/{object\_UUID}

Permissions: Intelligence

## PUT indicator

Request Type: **PUT**

Description: Modifies an indicator with the specified object ID.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: /api/fmc\_tid/v1/domain/{domain\_UUID}/tid/indicator/{object\_UUID}

Permissions: Intelligence

## GET observable

Request Type: **GET**

Description: Retrieves the observable associated with the specified ID. If no ID is specified, retrieves list of all observables. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

---

**Note** As of 7.1.0 `whitelist` is now `allowlist`

---

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable/{object_UUID}`

Permissions: Intelligence

## PUT observable

Request Type: **PUT**

Description: Modifies an observable with the specified object ID.

---

**Note** As of 7.1.0 `whitelist` is now `allowlist`

---

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/observable/{object_UUID}`

Permissions: Intelligence

## GET settings

Request Type: **GET**

Description: Retrieves the on/off settings for the specified value. If no ID is specified, retrieves list of all TID settings.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings`

URL for GET by value: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings/{value}`

Permissions: Intelligence

## PUT settings

Request Type: **PUT**

Description: Activates or deactivates an intelligence setting.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/settings/{value}`

Permissions: Intelligence

## GET source

Request Type: **GET**

Description: Retrieves the intelligence source associated with the specified ID. If no ID is specified, retrieves list of all intelligence sources. By default 25 results will be displayed on each page, this can be increased up to 40 using the `limit` parameter.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source`

URL for GET by ID: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source/{object_UUID}`

Permissions: Intelligence

## PUT source

Request Type: **PUT**

Description: Modifies an intelligence source with the specified object ID.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source/{object_UUID}`

Permissions: Intelligence

## POST source

Request Type: **POST**

Description: Adds a source for intelligence information.

---

**Note** As of 7.1.0 whitelist is now allowlist

---

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/tid/source`

Permissions: Intelligence

## DELETE source

Request Type: **DELETE**

Description: Deletes an intelligence source from the device.

URL: `/api/fmc_tid/v1/domain/{domain_UUID}/taxiiconfig/source/{object_UUID}`

Permissions: Intelligence

# License

## GET smartlicenses

Request Type: **GET**

Description: Retrieves the retrieving assigned device licenses associated with the ID. If no ID is specified, retrieves list of all assigned device licenses.

URL: /api/fmc\_platform/v1/license/smartlicenses

URL for GET by ID: /api/fmc\_platform/v1/license/smartlicenses/{object\_UUID}

Permissions: System > Licenses > Smart Licenses

## POST smartlicenses

Request Type: **POST**

Description: Updates device licenses.

URL: /api/fmc\_platform/v1/license/smartlicenses

Permissions: System > Licenses > Smart Licenses

## GET devicellicenses

Request Type: **GET**

Description: Retrieves the Device Licenses.

URL: /api/fmc\_platform/v1/license/devicellicenses/{objectId}

Permissions: Devices > Device Management

## PUT devicellicenses

Request Type: **PUT**

Description: Modifies the Device Licenses.

URL: /api/fmc\_platform/v1/license/devicellicenses/{objectId}

Permissions: Devices > Device Management > Modify Devices

# Search

## GET device

Request Type: **GET**

Description: Search for devices matching specified text.

URL: /api/fmc\_config/v1/domain/{domainUUID}/search/device

Permissions: Devices

## GET globalsearch

Request Type: **GET**

Description: Search for objects and policies matching specified text or IP address.

URL: /api/fmc\_config/v1/domain/{domainUUID}/search/globalsearch

Permissions: Analysis > Search

Parameters available for filtering: Text or IP address used for filtering.

## GET objectsearch

Request Type: **GET**

Description: Search for objects matching specified text or IP address.

URL: /api/fmc\_config/v1/domain/{domainUUID}/search/object

Permissions: Analysis > Search

Parameters available for filtering: Text or IP address used for filtering.

## GET policysearch

Request Type: **GET**

Description: Search for policies matching specified text or IP address (literal values in policies).

URL: /api/fmc\_config/v1/domain/{domainUUID}/search/policy

Permissions: Analysis > Search

Parameters available for filtering: Text or IP address used for filtering.

# Integration Services

## GET cdfmcsnapshot

Request Type: **GET**

Description: Retrieves the cdfmcsnapshot object associated with the ID. If no ID is specified, retrieves list of all cdfmcsnapshot objects associated with the ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/cdfmcsnapshot/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/integration/cdfmcsnapshot/{objectId}/{object_UUID}`

Permissions: Integration > Other Integrations > Cloud Services

## POST cdfmcsnapshot

Request Type: **POST**

Description: Creates a cdfmcsnapshot object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/cdfmcsnapshot`

Permissions: Integration > Other Integrations > Cloud Services

## GET cloudeventsconfigs

Request Type: **GET**

Description: Retrieves the cloud event configuration associated with the specified ID. If no ID is specified for a GET, retrieves a list of all cloud event configuration objects.

URL for listing: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager

## PUT cloudeventsconfigs

Request Type: **PUT**

Description: Modifies the cloud event configuration associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/cloudeventsconfigs/{objectId}`

Permissions: Object Manager > Modify Object Manager

## GET cloudregions

Request Type: **GET**

Description: Retrieves the cloud region configuration associated with the specified ID. If no ID is specified for a GET, retrieves list of all cloud regions.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/cloudregions/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/integration/cloudregions/{object\_UUID}

Permissions: System > Integration > Cloud Services

## PUT cloudregions

Request Type: **PUT**

Description: Modifies the cloud region configuration associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/cloudregions/{object\_UUID}

Permissions: System > Integration > Cloud Services

## GET datacenters

Request Type: **GET**

Description: Retrieves list of all the Umbrella data centers.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/umbrella/datacenters

Permissions: Integration > Security Analytics & Logging

## GET dynamicattributesfeeds

Request Type: **GET**

Description: Retrieves Dynamic Attributes Feeds.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/dynamicattributesfeeds

Permissions: Devices > VPN

## PUT dynamicattributesfeeds

Request Type: **PUT**

Description: Updates Dynamic Attributes Feeds.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/dynamicattributesfeeds

Permissions: Devices > VPN > Modify VPN

## GET ebssnapshot

Request Type: **GET**

Description: Retrieves the EBS snapshot. associated with the specified ID. If no ID is specified, retrieves list of all EBS snapshots.

**POST ebssnapshot**

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/ebssnapshot/{objectId}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/integration/ebssnapshot/{objectId}/{object\_UUID}

Permissions: Integration > Other Integrations

## **POST ebssnapshot**

Request Type: **POST**

Description: Creates an EBS snapshot..

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/ebssnapshot

Permissions: Integration > Other Integrations

## **GET externallookups**

### **GET externallookups**

Retrieves the externallookups object associated with the specified ID. If no ID, retrieves list of all externallookups objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

## **PUT externallookups**

Request Type: **PUT**

Description: Modifies externallookups objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## **POST externallookups**

### **POST externallookups**

Description: Creates externallookups objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups

Permissions: Object Manager>Modify Object Manager

## DELETE externallookups

### DELETE externallookups

Description: Deletes the external lookup objects with the specified UUID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/externallookups/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## GET External Storage

Request Type: **GET**

Description: Retrieves the external event storage configuration associated with the specified ID. If no ID is specified for a GET, retrieves a list of all external event storage configurations.

URL for listing: /api/fmc\_config/v1/domain/{domainUUID}/integration/externalstorage

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/integration/externalstorage/{objectId}

Permissions: System > Integration

Parameters available for filtering: None

## PUT External Storage

Request Type: **PUT**

Description: Modifies the external event storage configuration associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/externalstorage/{objectId}

Permissions: System > Integration

## GET FMC HA Statuses

Request Type: **GET**

Description: Retrieves management center HA Statuses.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/fmchastatuses

Permissions: System>Integration>High Availability

## GET packetanalyzerdevices

Request Type: **GET**

Description: Retrieves the packetanalyzerdevices object associated with the specified ID. If no ID, retrieves list of all packetanalyzerdevices objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/integration/packetanalyzerdevices

**PUT packetanalyzerdevices**

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

Parameters available for filtering:

## PUT packetanalyzerdevices

Request Type: **PUT**

Description: Modifies the packet analyzer object with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

## POST packetanalyzerdevices

Request Type: **POST**

Description: Creates PKI enrollments objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/packetanalyzerdevices`

Permissions: Object Manager

## DELETE packetanalyzerdevices

Request Type: **DELETE**

Description: Deletes the packet analyzer object with the specified UUID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/integration/packetanalyzerdevices/{object_UUID}`

Permissions: Object Manager>Modify Object Manager

## POST refreshsecurexconfigs

Request Type: **POST**

Description: Refresh SecureX configurations.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/operational/refreshsecurexconfigs`

Permissions: Integration > SecureX

## GET SecureX Configs

Request Type: **GET**

Description: Retrieves the SecureX configuration associated with the specified ID. If no ID is specified for a GET, retrieves list of all SecureX configurations.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/securexconfigs`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/integration/securexconfigs/{objectId}`

Permissions: System>SecureX

## PUT SecureX Configs

Request Type: **PUT**

Description: Modifies the SecureX configuration associated with the specified ID

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/securexconfigs/{objectId}

Permissions: System>SecureX

## POST testumbrellaconnections

Request Type: **POST**

Description: Tests connection to the umbrella cloud.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/operational/testumbrellaconnections

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## GET transcripts

Request Type: **GET**

Description: Retrieves Transcript for Umbrella deployment for a given device and topology.

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/integration/umbrella/tunneldeployments/{containerUUID}/transcripts/{objectId}/{object\_UUID}

Permissions: Integration > Security Analytics & Logging

## GET tunneldeployments

Request Type: **GET**

Description: Retrieves Tunnel deployment data on Umbrella.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/umbrella/tunneldeployments/{objectId}

Permissions: Devices > VPN

## POST tunneldeployments

Request Type: **POST**

Description: Creates a tunnel deployment.

URL: /api/fmc\_config/v1/domain/{domainUUID}/integration/umbrella/tunneldeployments

Permissions: Devices > VPN > Modify VPN

**GET tunneltranscripts**

Request Type: **GET**

Description: Retrieves Transcript for Umbrella deployment for a given device and topology..

URL:

`/api/fmc_config/v1/domain/{domainUUID}/integration/umbrella/tunneldeployments/{containerUUID}/transcripts/{objectId}`

Permissions: Devices > VPN

**GET umbrellaconnections**

Request Type: **GET**

Description: Retrieves the Umbrella connection configuration associated with the specified ID. If no ID is specified, retrieves a list of all Umbrella connections.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/umbrellaconnections/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/integration/umbrellaconnections/{objectId}/{object_UUID}`

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy

**PUT umbrellaconnections**

Request Type: **PUT**

Description: Modifies the specified Umbrella connections configuration.

URL: `/api/fmc_config/v1/domain/{domainUUID}/integration/umbrellaconnections/{objectId}`

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

**Object Services****GET AnyConnect Custom Attributes**

Request Type: **GET**

Description: Retrieves the AnyConnect Custom Attribute associated with the specified ID. If no ID is specified for a GET, retrieves list of all AnyConnect Custom Attribute objects.

URL for listing: `/api/fmc_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes/{objectId}`

URL to list all overrides:

`/api/fmc_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes/{containerUUID}/override`

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value

## PUT AnyConnect Custom Attributes

Request Type: **PUT**

Description: Modifies the AnyConnect Custom Attribute associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST AnyConnect Custom Attributes

Request Type: **POST**

Description: Creates an AnyConnect Custom Attribute.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes

Permissions: Object Manager > Modify Object Manager

## DELETE AnyConnect Custom Attributes

Request Type: **DELETE**

Description: Deletes the AnyConnect Custom Attribute associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectcustomattributes/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET AnyConnect Packages

Request Type: **GET**

Description: Retrieves the AnyConnect Package associated with the specified ID. If no ID is specified for a GET, retrieves list of all AnyConnect Package objects..

URL for listing: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectpackages

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectpackages/{objectId}

Permissions: Object Manager

## PUT anyconnectpackages

Request Type: **PUT**

Description: Modifies the AnyConnect Package associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectpackages/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST anyconnectpackages**

Request Type: **POST**

Description: Creates an anyconnectpackages object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectpackages

Permissions: Object Manager > Modify Object Manager

**DELETE anyconnectpackages**

Request Type: **DELETE**

Description: Deletes the AnyConnect Package associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectpackages/{objectId}

Permissions: Object Manager > Modify Object Manager

**GET anyconnectexternalbrowserpackages**

Request Type: **GET**

Description: Retrieves the AnyConnect External Browser Package associated with the specified ID. If no ID is specified for a GET, retrieves list of all AnyConnect External Browser Package objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectexternalbrowserpackages

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectexternalbrowserpackages/{objectId}

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

**PUT anyconnectexternalbrowserpackages**

Request Type: **PUT**

Description: Modifies the AnyConnect External Browser Package associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectexternalbrowserpackages/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST anyconnectexternalbrowserpackages**

Request Type: **POST**

Description: Creates an AnyConnect External Browser Package.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectexternalbrowserpackages

Permissions: Object Manager > Modify Object Manager

## DELETE anyconnectexternalbrowserpackages

Request Type: **DELETE**

Description: Deletes the AnyConnect External Browser Package associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectexternalbrowserpackages/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET AnyConnect Profiles

Request Type: **GET**

Description: Retrieves the AnyConnect Profile associated with the specified ID. If no ID is specified for a GET, retrieves list of all AnyConnect Profile objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectprofiles

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectprofiles/{objectId}

Permissions: Object Manager

Parameters available for filter: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

Parameters available for filter: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

## PUT anyconnectprofiles

Request Type: **PUT**

Description: Modifies the AnyConnect Profile associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectprofiles/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST anyconnectprofiles

Request Type: **POST**

Description: Creates an AnyConnect Profile.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectprofiles

Permissions: Object Manager > Modify Object Manager

## DELETE anyconnectprofiles

Request Type: **DELETE**

Description: Deletes the AnyConnect Profile associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/anyconnectprofiles/{objectId}

**GET anyprotocolportobjects**

Permissions: Object Manager > Modify Object Manager

## **GET anyprotocolportobjects**

Request Type: **GET**

Description: Retrieves the any protocol port object associated with the specified ID. If no ID is specified, retrieves list of all protocol port objects with the protocol set to All.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/anyprotocolportobjects`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/object/anyprotocolportobjects/{object_UUID}`

Permissions: Object Manager

## **GET applicationcategories**

Request Type: **GET**

Description: Retrieves the application category object associated with the specified ID. If no ID is specified, retrieves list of all application category objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationcategories`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationcategories/{object_UUID}`

Permissions: Object Manager

## **GET applicationfilters**

Request Type: **GET**

Description: Retrieves the application filter object associated with the specified ID. If no ID is specified, retrieves list of all application filter objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/applicationfilters`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/object/applicationfilters/{object_UUID}`

Permissions: Object Manager

## **PUT applicationfilters**

Request Type: **PUT**

Description: Modifies the application filter object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/applicationfilters/{objectId}`

Permissions: Object Manager > Modify Object Manager > Modify Object Manager

## POST applicationfilters

Request Type: **POST**

Description: Creates or overrides the application filter object with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/applicationfilters

Permissions: Object Manager > Modify Object Manager > Modify Object Manager

## DELETE applicationfilters

Request Type: **DELETE**

Description: Deletes the application filter object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/applicationfilters/{objectId}

Permissions: Object Manager > Modify Object Manager > Modify Object Manager

## GET applicationproductivities

Request Type: **GET**

Description: Retrieves the application productivity object associated with the specified ID. If no ID is specified, retrieves list of all application productivity objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationproductivities

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationproductivities/{object\_UUID}

Permissions: Object Manager

## GET applicationrisks

Request Type: **GET**

Description: Retrieves the application risk object associated with the specified ID. If no ID is specified, retrieves list of all application risk objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationrisks

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationrisks/{object\_UUID}

Permissions: Object Manager

## GET applications

Request Type: **GET**

Description: Retrieves the application object associated with the specified ID. If no ID is specified, retrieves list of all application objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applications

**GET applicationtags**

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applications/{object\_UUID}  
 Permissions: Object Manager

**GET applicationtags**

Request Type: **GET**

Description: Retrieves the application tag object associated with the specified ID. If no ID is specified, retrieves list of all application tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtags

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtags/{object\_UUID}

Permissions: Object Manager

**GET applicationtypes**

Request Type: **GET**

Description: Retrieves the application type object associated with the specified ID. If no ID is specified, retrieves list of all application type objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtypes

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/applicationtypes/{object\_UUID}

Permissions: Object Manager

**GET aspathlists**

Request Type: **GET**

Description: Retrieves the autonomous system path list associated with the specified ID. If no ID is specified, retrieves list of all autonomous system paths.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists/{objectId}

Permissions: Object Manager

**PUT aspathlists**

Request Type: **PUT**

Description: Modifies the AsPath List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST aspathlists

Request Type: **POST**

Description: Creates an AsPath List object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists

Permissions: Object Manager > Modify Object Manager

## DELETE aspathlists

Request Type: **DELETE**

Description: Deletes the AsPath List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/aspathlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET azureadrealms

Request Type: **GET**

Description: Retrieves the Azure AD Realm associated with the specified ID. If no ID is specified, retrieves list of all Azure AD Realms.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms/{object\_UUID}

Permissions: Object Manager

## PUT azureadrealms

Request Type: **PUT**

Description: Modifies the specified Azure AD realms.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST azureadrealms

Request Type: **POST**

Description: Creates an Azure AD Realm.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms

Permissions: Object Manager > Modify Object Manager

## DELETE azureadrealms

Request Type: **DELETE**

**GET azureadstatuses**

Description: Deletes the specified Azure AD realm.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms/{objectId}

Permissions: Object Manager > Modify Object Manager

**GET azureadstatuses**

Request Type: **GET**

Description: Retrieves Azure AD realm statuses.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadstatuses

Permissions: Object Manager

**GET bfdtemplates**

Request Type: **GET**

Description: Retrieves the bi-directional forwarding template associated with the ID. If no ID is specified, retrieves list of all bi-directional forwarding templates.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/bfdtemplates

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/bfdtemplates/{object\_UUID}

Permissions: Object Manager

**PUT bfdtemplates**

Request Type: **PUT**

Description: Modifies the specified bi-directional forwarding template.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/bfdtemplates/{objectId}

Permissions: Object Manager > Modify Objects

**POST bfdtemplates**

Request Type: **POST**

Description: Creates a bi-directional forwarding template..

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/bfdtemplates

Permissions: Object Manager > Modify Objects

**DELETE bfdtemplates**

Request Type: **DELETE**

Description: Deletes the specified bi-directional forwarding template.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/bfdtemplates/{objectId}

Permissions: Object Manager > Modify Objects

## POST bulkdynamicobjects

Request Type: **POST**

Description: Adds Dynamic Object Mappings for specific Dynamic Objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/bulkdynamicobjects

Permissions: Devices > VPN > Modify VPN

## GET certenrollments

Request Type: **GET**

Description: Retrieves the PKI enrollments object associated with the specified ID. If no ID is specified for a GET, retrieves list of all PKI enrollment objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/certenrollments

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/devicegroups/certenrollments/{parent\_object\_UUID}

Permissions: Devices > Device Management > View Devices

## PUT certenrollments

Request Type: **PUT**

Description: Modifies the Certificate Enrollment associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certenrollments/{objectId}

Permissions: Devices > VPN > Modify VPN

## POST certenrollments

Request Type: **POST**

Description: Creates a the Certificate Enrollment.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certenrollments

Permissions: Devices > VPN > Modify VPN

## DELETE certenrollments

Request Type: **DELETE**

Description: Deletes the Certificate Enrollment associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certenrollments/{objectId}

Permissions: Devices > VPN > Modify VPN

Request Type: **GET**

Description: Retrieves the Certificate Map associated with the specified ID. If no ID is specified for a GET, retrieves list of all Certificate Map objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certificatemaps

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/certificatemaps/{objectId}

Permissions: Devices > Certificates

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

## PUT certificatemaps

Request Type: **PUT**

Description: Modifies the Certificate Map associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certificatemaps/{objectId}

Permissions: Devices > VPN > Modify VPN

## POST certificatemaps

Request Type: **POST**

Description: Creates a Certificate Map.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certificatemaps

Permissions: Devices > VPN > Modify VPN

## DELETE certificatemaps

Request Type: **DELETE**

Description: Deletes the Certificate Map associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/certificatemaps/{objectId}

Permissions: Devices > VPN > Modify VPN

## GET ciphersuitelists

Request Type: **GET**

Description: Retrieves cipher suite lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ciphersuitelists

Permissions: Object Manager

## POST ciphersuitelists

Request Type: **POST**

Description: Creates a cipher suite list.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ciphersuitelists

Permissions: Object Manager > Modify Object Manager

## GET communitylists

Request Type: **GET**

Description: Retrieves the community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/communitylists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/communitylists/{objectId}

Permissions: Object Manager

## GET continents

Request Type: **GET**

Description: Retrieves the continent object associated with the specified ID. If no ID is specified, retrieves list of all continent objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/continents

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/continents/{object\_UUID}

Permissions: Object Manager

## GET countries

Request Type: **GET**

Description: Retrieves the country object associated with the specified ID. If no ID is specified, retrieves list of all country objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/countries

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/countries/{object\_UUID}

Permissions: Object Manager

## GET customsiiplistdownload

Request Type: **GET**

Description: Retrieves the custom Security Intelligence IP List with the specified UUID.

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/customsiiplistdownload/{objectId}/{object\_UUID}

**GET customsiiplists**

Permissions: Integration > Intelligence

**GET customsiiplists**

Request Type: **GET**

Description: Retrieves the custom Security Intelligence Network List object associated with the specified ID. If no ID is specified, retrieves list of all custom Security Intelligence Network List objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/customsiiplists`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/customsiiplists/{object_UUID}`

Permissions: Integration > Intelligence

**PUT customsiiplists**

Request Type: **PUT**

Description: Modifies the custom Security Intelligence Network List object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/customsiiplists/{objectId}`

Permissions: Integration > Intelligence

**POST customsiiplists**

Request Type: **POST**

Description: Creates a custom Security Intelligence Network List object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/customsiiplists`

Permissions: Integration > Intelligence

**DELETE customsiiplists**

Request Type: **DELETE**

Description: Deletes the custom Security Intelligence Network List object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/customsiiplists/{objectId}`

Permissions: Integration > Intelligence

**GET customsiurllistdownload**

Request Type: **GET**

Description: Retrieves the custom Security Intelligence URL List with the specified UUID.

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/object/customsiurllistdownload/{objectId}/{object_UUID}`

Permissions: Integration > Intelligence

## GET customsiurllists

Request Type: **GET**

Description: Retrieves the custom Security Intelligence URL List object associated with the specified ID. If no ID is specified, retrieves list of all custom Security Intelligence URL List objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/customsiurllists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/customsiurllists/{object\_UUID}

Permissions: Integration > Intelligence

## PUT customsiurllists

Request Type: **PUT**

Description: Modifies the custom Security Intelligence URL List object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/customsiurllists/{objectId}

Permissions: Integration > Intelligence

## POST customsiurllists

Request Type: **POST**

Description: Creates a custom Security Intelligence URL List object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/customsiurllists

Permissions: Integration > Intelligence

## DELETE customsiurllists

Request Type: **DELETE**

Description: Deletes the custom Security Intelligence URL List object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/customsiurllists/{objectId}

Permissions: Integration > Intelligence

## GET dhcpipv6pools

Request Type: **GET**

Description: Retrieves the DHCP IPv6 pool object associated with the specified ID. If no ID is specified, retrieves list of all DHCP IPv6 Pool objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dhcpipv6pools

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/dhcpipv6pools/{object\_UUID}

Permissions: Object Manager

**PUT dhcpipv6pools**

Request Type: **PUT**

Description: Modifies the DHCP IPv6 pool object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dhcpipv6pools/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST dhcpipv6pools**

Request Type: **POST**

Description: Creates a DHCP IPv6 pool object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dhcpipv6pools

Permissions: Object Manager > Modify Object Manager

**DELETE dhcpipv6pools**

Request Type: **DELETE**

Description: Deletes the DHCP IPv6 pool object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dhcpipv6pools/{objectId}

Permissions: Object Manager > Modify Object Manager

**GET distinguishednamegroups**

Request Type: **GET**

Description: Retrieves the list of all Distinguished Name group objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/distinguishednamegroups

Permissions: Devices > Certificates > Modify Certificates

**GET distinguishednames**

Request Type: **GET**

Description: Retrieves distinguished name objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/distinguishednames

Permissions: Devices > Certificates

**POST distinguishednames**

Request Type: **POST**

Description: Creates a distinguished names object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/distinguishednames

Permissions: Devices > Certificates > Modify Certificates

## GET dnsservergroups

Request Type: **GET**

Description: Retrieves the DNS server group associated with the specified ID. If no ID is specified, retrieves list of all dns server groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups/{object\_UUID}

Description: Retrieves all(Domain and Device) overrides on a ICMPV4 object. Response will always be in expanded form. If passed, the "expanded" query parameter will be ignored.

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domainUUID}/object/dnsservergroups/{containerUUID}/overrides/{objectId}

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domainUUID}/object/dnsservergroups/{containerUUID}/overrides

Permissions: Devices > Device Management > View Devices

## PUT dnsservergroups

Request Type: **PUT**

Description: Modifies a DNS server group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

Permissions: Devices > Device Management > Modify Devices

## POST dnsservergroups

Request Type: **POST**

Description: Creates a DNS server group group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups

Permissions: Devices > Device Management > Modify Devices

## DELETE dnsservergroups

Request Type: **DELETE**

Description: Deletes a DNS server group with the specified object ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/dnsservergroups/{object\_UUID}

Permissions: Devices > Device Management > Modify Devices

**POST Download Azure AD Realms**

Request Type: **GET**

Description: Download users and groups of the specific Azure AD Realm.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms/{realmId}/download

Permissions: Object Manager

**POST downloadinternalca**

Request Type: **POST**

Description: Retrieves and downloads the Internal Certificate Authority object in a PKCS12 file encrypted using the provided password.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/downloadinternalca

Permissions: Devices > Certificates > Modify Certificates

**POST dynamicobjectmappings**

Request Type: **POST**

Description: Adds Dynamic Object Mappings for specific Dynamic Objects

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjectmappings

Permissions: Object Manager > Modify Object Manager

**DELETE dynamicobjectmappings**

Request Type: **DELETE**

Description: Removes Dynamic Object Mappings for specific Dynamic Objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjectmappings

Parameters available for filtering:

Parameter	Values
Objects with ids:	"ids:id1,id2,..."
Unused objects:	"unusedOnly:true"
Name starts with:	"nameStartsWith:{name-pattern}"
Agent ID:	"agentId:{Agent ID}"

Permissions: Object Manager > Modify Object Manager

**GET dynamicobjects**

Request Type: **GET**

Description: Retrieves the Dynamic Object associated with the specified ID. If no ID is specified for a GET, retrieves list of all Dynamic Objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectIdOrName}

Permissions: Object Manager

Parameters available for filtering: name (Cannot be used if object ID is specified in path.)

## PUT dynamicobjects

Request Type: **PUT**

Description: Modifies the Dynamic Object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST dynamicobjects

Request Type: **POST**

Description: Creates or overrides the Dynamic Objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects

Permissions: Object Manager > Modify Object Manager

## DELETE dynamicobjects

Request Type: **DELETE**

Description: Deletes the Dynamic Object associated with the specified ID. If used without an ID, deletes objects selected by filtering.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/

URL for DELETE by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectIdOrName}

Parameters available for filtering:

Parameter	Values
Objects with ids:	"ids:id1,id2,..."
Unused objects:	"unusedOnly:true"
Name starts with:	"nameStartsWith:{name-pattern}"

Permissions: Object Manager > Modify Object Manager

**GET endpointdevicetypes**

Request Type: **GET**

Description: Retrieves the endpoint device type object associated with the specified ID. If no ID is specified, retrieves list of all endpoint device type objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/endpointdevicetypes

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/endpointdevicetypes/{object\_UUID}

Permissions: Object Manager

**GET expanded community lists**

Request Type: **GET**

Description: Retrieves the expanded community list associated with the specified ID. If no ID is specified, retrieves all community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists/{objectId}

Permissions: Object Manager

**PUT expandedcommunitylists**

Request Type: **PUT**

Description: Modifies the specified expanded community list.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST expandedcommunitylists**

Request Type: **POST**

Description: Creates an expanded community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists

Permissions: Object Manager > Modify Object Manager

**DELETE expandedcommunitylists**

Request Type: **DELETE**

Description: Deletes the specified expanded community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/expandedcommunitylists/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET extended access lists

Request Type: **GET**

Description: Retrieves extended access list associated with the specified ID. If no ID is specified, retrieves list of all extended access lists.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/extendedaccesslists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/extendedaccesslists/{object\_UUID}

Permissions: Devices > Device Management > View Devices

## PUT extendedaccesslists

Request Type: **PUT**

Description: Modifies the extended access list associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/extendedaccesslists/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST extendedaccesslists

Request Type: **POST**

Description: Creates an extended access lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/extendedaccesslists

Permissions: Object Manager > Modify Object Manager

## DELETE extendedaccesslists

Request Type: **DELETE**

Description: Deletes the extended access list associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/extendedaccesslists/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET extendedcommunitylists

Request Type: **GET**

Description: Retrieves the extended community list associated with the specified ID. If no ID is specified, retrieves list of all extended community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/extendedcommunitylists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/extendedcommunitylists/{objectId}

**PUT extendedcommunitylists**

URL for GET overrides:

`/api/fmc_config/v1/domain/{domainUUID}/object/extendedcommunitylists/{containerUUID}/overrides`

URL for GET overrides by ID:

`/api/fmc_config/v1/domain/{domainUUID}/object/extendedcommunitylists/{containerUUID}/overrides/{objectId}`

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value and "type:{type}" to search for specific type of the object. For ExtendedCommunityLists supported types are Standard and Expanded.

## **PUT extendedcommunitylists**

Request Type: **PUT**

Description: Modifies the extended community list with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/extendedcommunitylists/{objectId}`

Permissions: Object Manager > Modify Object Manager

## **POST extendedcommunitylists**

Request Type: **POST**

Description: Creates an extended community list.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/extendedcommunitylists`

Permissions: Object Manager > Modify Object Manager

## **DELETE extendedcommunitylists**

Request Type: **DELETE**

Description: Deletes extended community list with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/extendedcommunitylists/{objectId}`

Permissions: Object Manager > Modify Object Manager

## **GET externalcacertificategroups**

Request Type: **GET**

Description: Retrieves the list of all trusted CA groups.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/externalcacertificategroups`

Permissions: Devices > Certificates

## **GET externalcacertificates**

Request Type: **GET**

Description: Retrieves trusted CA objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/externalcacertificates

Permissions: Devices > Certificates

## POST externalcacertificates

Request Type: **POST**

Description: Creates a trusted CA object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/externalcacertificates

Permissions: Devices > Certificates > Modify Certificates

## GET externalcertificategroups

Request Type: **GET**

Description: Retrieves list of all the external certificate groups.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/externalcertificategroups

Permissions: Devices > Certificates

## GET externalcertificates

Request Type: **GET**

Description: Retrieves external certificate objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/externalcertificates

Permissions: Devices > Certificates

## POST externalcertificates

Request Type: **POST**

Description: Creates an external certificates object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/externalcertificates

Permissions: Devices > Certificates > Modify Certificates

## GET filecategories

Request Type: **GET**

Description: Retrieves the file category associated with the specified ID. If no ID is specified, retrieves a list of all the file categories.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/filecategories

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/filecategories/{object\_UUID}

**GET filetypes**

Permissions: Analysis > Files

**GET filetypes**

Request Type: **GET**

Description: Retrieves the file type associated with the specified ID. If no ID is specified, retrieves a list of all the file types.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/filetypes

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/filetypes/{object\_UUID}

Permissions: Analysis > Files

**POST findoverlaps**

Request Type: **POST**

Description: Retrieve overlaps for the given network objects/literals and port objects/literals.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/operational/findoverlaps

**GET fqdns**

Request Type: **GET**

Description: Retrieves the FQDN object associated with the specified ID. If no ID is specified for a GET, retrieves list of all FQDN objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{fqdn\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

**PUT fqdns**

Request Type: **PUT**

Description: Modifies the FQDN object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST fqdns

Request Type: **POST**

Description: Creates or overrides the FQDN objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE fqdns

Request Type: **DELETE**

Description: Deletes the FQDN object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all FQDN objects: /api/fmc\_config/v1/domain/{domain\_UUID}/object/fqdns/

Permissions: Object Manager > Modify Object Manager

## GET geolocation

Request Type: **GET**

Description: Retrieves the geolocation object associated with the specified ID. If no ID is specified, retrieves list of all geolocation objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/geolocations

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/geolocations/{object\_UUID}

Permissions: Object Manager

## PUT geolocations

Request Type: **PUT**

Description: Modifies the geolocation object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/geolocations/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST geolocations

Request Type: **POST**

Description: Creates or overrides the Geolocation objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/geolocations

**DELETE geolocations**

Permissions: Object Manager > Modify Object Manager

## **DELETE geolocations**

Request Type: **DELETE**

Description: Deletes the geolocation object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/geolocations/{objectId}

Permissions: Object Manager > Modify Object Manager

## **GET global time zones**

Request Type: **GET**

Description: Retrieves the global time zone object associated with the specified ID. If no ID is specified, retrieves list of all global time zone objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/globaltimezones

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/globaltimezones/{objectId}

Permissions: Object Manager

## **GET groupolicies**

Request Type: **GET**

Description: Retrieves the VPN group policies associated with the specified ID. If no ID is specified for a GET, retrieves list of all VPN group policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/groupolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/groupolicies/{objectId}

Permissions: Devices > VPN

## **PUT groupolicies**

Request Type: **PUT**

Description: Modifies the VPN group policies associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/groupolicies/{objectId}

Permissions: Devices > VPN > Modify VPN

## **POST groupolicies**

Request Type: **POST**

Description: Creates a VPN group policy

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/groupolicies

Permissions: Devices > VPN > Modify VPN

## **DELETE groupolicies**

Request Type: **DELETE**

Description: Deletes the VPN group policies associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/groupolicies/{objectId}

Permissions: Devices > VPN > Modify VPN

## **GET hosts**

Request Type: **GET**

Description: Retrieves the host object associated with the specified ID. If no ID is specified, retrieves list of all host objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{host\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{host\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## **PUT hosts**

Request Type: **PUT**

Description: Modifies a host object.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST hosts**

Request Type: **POST**

Description: Creates or overrides the host objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts?bulk=true

Permissions: Object Manager > Modify Object Manager

**DELETE hosts**

Request Type: **DELETE**

Description: Deletes the specified host object.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all hosts: /api/fmc\_config/v1/domain/{domain\_UUID}/object/hosts/

Permissions: Object Manager > Modify Object Manager

**GET hostscanpackages**

Request Type: **GET**

Description: Retrieves HostScan packages. If no ID is specified for a GET, retrieves list of all HostScan packages.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/hostscanpackages

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/hostscanpackages/{objectId}

Permissions: Devices

**PUT hostscanpackages**

Request Type: **PUT**

Description: Modifies the HostScan package with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/hostscanpackages/{objectId}

Permissions: Devices > Device Management > Modify Devices

**POST hostscanpackages**

Request Type: **POST**

Description: Creates a HostScan package.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/hostscanpackages

Permissions: Devices > Device Management > Modify Devices

**DELETE hostscanpackages**

Request Type: **DELETE**

Description: Deletes the HostScan package with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/hostscanpackages/{objectId}

Permissions: Devices > Device Management > Modify Devices

## GET icmpv4objects

Request Type: **GET**

Description: Retrieves the ICMPv4 object associated with the specified ID. If no ID, retrieves list of all ICMPv4 objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{icmpv4object\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{icmpv4object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## PUT icmpv4objects

Request Type: **PUT**

Description: Modifies ICMPv4 port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST icmpv4objects

Request Type: **POST**

Description: Creates or overrides the ICMPv4 port objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE icmpv4objects

Request Type: **DELETE**

Description: Deletes the specified ICMPv4 port.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all ICMPv4 objects: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv4objects/

**GET icmpv6objects**

Permissions: Object Manager > Modify Object Manager

## **GET icmpv6objects**

Request Type: **GET**

Description: Retrieves the ICMPv6 object associated with the specified ID. If no ID is specified, retrieves list of all ICMPv6 objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects/{icmp6object_UUID}/overrides`

URL for override for an object on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmp6objects/{icmp6object_UUID}?overrideTargetId={target_UUID}`

Permissions: Object Manager

## **PUT icmpv6objects**

Request Type: **PUT**

Description: Modifies ICMPv6 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

## **POST icmpv6objects**

Request Type: **POST**

Description: Creates or overrides the ICMPv6 port objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects?bulk=true`

Permissions: Object Manager > Modify Object Manager

## **DELETE icmpv6objects**

Request Type: **DELETE**

Description: Deletes the specified ICMPv6 port objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}`

URL to DELETE overrides on a particular object:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/icmpv6objects/{object_UUID}?overrideTargetId={target_UUID}
```

URL to delete all ICMPv6 objects: /api/fmc\_config/v1/domain/{domain\_UUID}/object/icmpv6objects/

Permissions: Object Manager > Modify Object Manager

## GET ikev1ipsecproposals

Request Type: **GET**

Description: Retrieves the IKEv1 IPsec Proposal associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev1ipsecproposals

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal\_UUID}

Permissions: Object Manager

## PUT ikev1ipsecproposals

Request Type: **PUT**

Description: Modifies the IKEv1 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST ikev1ipsecproposals

Request Type: **POST**

Description: Creates the IKEv1 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1ipsecproposals

Permissions: Object Manager > Modify Object Manager

## DELETE ikev1ipsecproposals

Request Type: **DELETE**

Description: Deletes the IKEv1 IPsec Proposal associated with the specified ID.

URL:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/ikev1ipsecproposals/{ikev1ipsecproposal_UUID}
```

Permissions: Object Manager > Modify Object Manager

## GET ikev1policies

Request Type: **GET**

**PUT ikev1policies**

Description: Retrieves the IKEv1 policy object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv1 policy objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev1policies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager

## **PUT ikev1policies**

Request Type: **PUT**

Description: Modifies the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST ikev1policies**

Request Type: **POST**

Description: Creates the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies

Permissions: Object Manager > Modify Object Manager

## **DELETE ikev1policies**

Request Type: **DELETE**

Description: Deletes the IKEv1 policy object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev1policies/{ikev1policy\_UUID}

Permissions: Object Manager > Modify Object Manager

## **GET ikev2ipsecproposals**

Request Type: **GET**

Description: Retrieves the IKEv2 IPsec Proposal associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv2 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev2ipsecproposals

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager

## PUT ikev2ipsecproposals

Request Type: **PUT**

Description: Modifies the IKEv2 IPsec Proposal associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST ikev2ipsecproposals

Request Type: **POST**

Description: Creates the IKEv2 IPsec Proposal associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals

Permissions: Object Manager > Modify Object Manager

## DELETE ikev2ipsecproposals

Request Type: **DELETE**

Description: Deletes the IKEv2 IPsec Proposal associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2ipsecproposals/{ikev2ipsecproposal\_UUID}

Permissions: Object Manager > Modify Object Manager

## GET ikev2policies

Request Type: **GET**

Description: Retrieves the IKEv2 object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IKEv2 IPsec Proposal objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ikev2policies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager

## PUT ikev2policies

Request Type: **PUT**

Description: Modifies the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST ikev2policies**

Request Type: **POST**

Description: Creates the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies

Permissions: Object Manager > Modify Object Manager

**DELETE ikev2policies**

Request Type: **DELETE**

Description: Deletes the IKEv2 object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ikev2policies/{ikev2policy\_UUID}

Permissions: Object Manager > Modify Object Manager

**GET interfacegroups**

Request Type: **GET**

Description: Retrieves the Interface group objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all interface group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{interfacegroups\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domainUUID}/object/interfacegroups/{interfacegroups\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

**PUT interfacegroups**

Request Type: **PUT**

Description: Modifies the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST interfacegroups

Request Type: **POST**

Description: Creates or overrides the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE interfacegroups

Request Type: **DELETE**

Description: Deletes the Interface group objects associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}

URL on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfacegroups/{object\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## GET interfaceobjects

Request Type: **GET**

Description: Retrieves list of all the interface objects both security zones and interface groups.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/interfaceobjects

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfaceobjects?overrideTargetId={target\_UUID}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfaceobjects/{object\_UUID}

URL to list all overrides on a particular object::

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfaceobjects/{interfaceobjects\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/interfaceobjects/{interfaceobjects\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## GET internalcas

Request Type: **GET**

Description: Retrieves the Internal CA associated with the specified ID. If no ID is specified, retrieves list of all Internal CAs.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcas

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcas/{object\_UUID}

Permissions: Devices > Certificates

**PUT internalcas**

Request Type: **PUT**

Description: Modifies the Internal CA associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcas/{objectId}

Permissions: Devices > Certificates > Modify Certificates

**POST internalcas**

Request Type: **POST**

Description: Creates an Internal CA.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcas

Permissions: Devices > Certificates > Modify Certificates

**DELETE internalcas**

Request Type: **DELETE**

Description: Deletes the Internal CA associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcas/{objectId}

Permissions: Devices > Certificates > Modify Certificates

**GET internalcertgroups**

Request Type: **GET**

Description: Retrieves the list of all Internal Certificate Groups.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcertgroups

Permissions: Object Manager

**GET internalcertificates**

Request Type: **GET**

Description: Retrieves the Internal Certificate associated with the specified ID. If no ID is specified, retrieves list of all Internal Certificates.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcertificates

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/internalcertificates/{object\_UUID}

Permissions: Devices > Certificates

## PUT internalcertificates

Request Type: **PUT**

Description: Modifies the Internal Certificate associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcertificates/{objectId}

Permissions: Devices > Certificates > Modify Certificates

## POST internalcertificates

Request Type: **POST**

Description: Creates an Internal Certificate.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcertificates

Permissions: Devices > Certificates > Modify Certificates

## DELETE internalcertificates

Request Type: **DELETE**

Description: Deletes the Internal Certificate associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/internalcertificates/{objectId}

Permissions: Devices > Certificates > Modify Certificates

## GET intrusionrulegroups

Request Type: **GET**

Description: Retrieves the Snort3 Intrusion rule group. If no ID is specified, retrieves a list of all Snort3 Intrusion rule groups.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrulegroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrulegroups/{objectId}

Permissions: Policies > Access Control > Intrusion Policy

Parameters available for filtering: Value is of format (including quotes): filter=name:Browser OR filter=name:Browser/Firefox OR filter=showonlyparents:true OR filter=showonlyparents:false OR filter=isystemdefined:true OR issystemdefined:false.

## PUT intrusionrulegroups

Request Type: **PUT**

Description: Modifies the Snort3 Intrusion rule group with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrulegroups/{objectId}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

**POST Intrusion Rule Groups**

Request Type: **POST**

Description: Creates or overrides the Snort3 Intrusion rule group with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrulegroups

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

**DELETE Intrusion Rule Groups**

Request Type: **DELETE**

Description: Deletes the specified Snort3 intrusion rule group.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrulegroups/{objectId}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

**GET intrusionrules**

Request Type: **GET**

Description: Retrieves the specified Snort3 rule. If no ID is specified, retrieves a list of all Snort3 rules.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules/{objectId}

Permissions: Policies > Access Control > Intrusion Policy

Parameters available for filtering:

filter=gid:123 OR filter=sid:123 OR filter=gid:123;sid:456 OR filter=overrides:true OR  
filter=overrides:true;ipspolicy:UUID1,UUID2,UUID3 OR filter=fts:123. ipspolicy is comma separated Snort3  
Intrusion Policy UUID.

**PUT intrusionrules**

Request Type: **PUT**

Description: Creates or modifies the Snort3 rule with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules

URL for PUT by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules/{objectId}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

**POST intrusionrules**

Request Type: **POST**

Description: Creates or overrides the Snort3 rules with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## DELETE intrusionrules

Request Type: **DELETE**

Description: Deletes the specified Snort3 rule.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/intrusionrules/{objectId}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## GET ipv4addresspools

Request Type: **GET**

Description: Retrieves the IPv4 Address Pool object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IPv4 Address Pool objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4addresspools

URL for overrides:

/api/fmc\_config/v1/domain/{domainUUID}/object/ipv4addresspools/{containerUUID}/overrides

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4addresspools/{objectId}

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

## PUT ipv4addresspools

Request Type: **PUT**

Description: Modifies the IPv4 Address Pool object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4addresspools/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST ipv4addresspools

Request Type: **POST**

Description: Creates an IPv4 Address Pool object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4addresspools

Permissions: Object Manager > Modify Object Manager

## DELETE ipv4addresspools

Request Type: **DELETE**

Description: Deletes the IPv4 Address Pool object associated with the specified ID.

**GET ipv6addresspools**

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET ipv6addresspools

Request Type: **GET**

Description: Retrieves the IPv6 Address Pool object associated with the specified ID. If no ID is specified for a GET, retrieves list of all IPv6 Address Pool objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools

URL for overrides:

/api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools/{containerUUID}/overrides

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools/{objectId}

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

## PUT ipv6addresspools

Request Type: **PUT**

Description: Modifies the IPv6 Address Pool object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST ipv6addresspools

Request Type: **POST**

Description: Creates an IPv6 Address Pool object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools

Permissions: Object Manager > Modify Object Manager

## DELETE ipv6addresspools

Request Type: **DELETE**

Description: Deletes the IPv6 Address Pool object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6addresspools/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET ipv4prefixlists

Request Type: **GET**

Description: Retrieves the IPv4 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv4 prefix lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4prefixlists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4prefixlists/{objectId}

Permissions: Object Manager

## PUT ipv4prefixlists

Request Type: **PUT**

Description: Modifies the IPv4 Prefix List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4prefixlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST ipv4prefixlists

Request Type: **POST**

Description: Creates an IPv4 Prefix List.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4prefixlists

Permissions: Object Manager > Modify Object Manager

## DELETE ipv4prefixlists

Request Type: **DELETE**

Description: Deletes the IPv4 Prefix List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv4prefixlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET ipv6prefixlists

Request Type: **GET**

Description: Retrieves the IPv6 prefix list associated with the specified ID. If no ID is specified, retrieves all IPv6 prefix lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6prefixlists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6prefixlists/{objectId}

Permissions: Object Manager

## PUT ipv6prefixlists

Request Type: **PUT**

Description: Modifies the IPv6 Prefix List associated with the specified ID.

**POST ipv6prefixlists**

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6prefixlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## **POST ipv6prefixlists**

Request Type: **POST**

Description: Creates an IPv6 Prefix List.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6prefixlists

Permissions: Object Manager > Modify Object Manager

## **DELETE ipv6prefixlists**

Request Type: **DELETE**

Description: Deletes the IPv6 Prefix List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ipv6prefixlists/{objectId}

Permissions: Object Manager > Modify Object Manager

## **GET isesecuritygrouptags**

Request Type: **GET**

Description: Retrieves the ISE security group tag object with the specified ID. If no ID is specified, retrieves list of all ISE security group tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/isesecuritygrouptags

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/isesecuritygrouptags/{object\_UUID}

Permissions: Object Manager

## **GET keychain**

Request Type: **GET**

Description: Retrieves the keychain object associated with the specified ID. If no ID is specified for a GET, retrieves list of all keychain objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to list all overrides on a particular object. If the object ID is not specified, displays all keychain objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychains\_UUID}/overrides/{objectId}

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains?overrideTargetId={target\_UUID}

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}?overrideTargetId={target\_UUID}

**Note** The target UUID could be that of a domain or a device.

Permissions: Object Manager

## PUT keychain

Request Type: **PUT**

Description: Modifies the keychain object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST keychain

Request Type: **POST**

Description: Creates or overrides the keychain objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

URL for Bulk Post:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains?bulk=true

URL to create an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains

**Attention** If override was not set when creating the key chain object:

1. Using PUT, update the override property of the key chain object to "true".
2. Create the POST override for the key chain object.

Permissions: Object Manager > Modify Object Manager

## DELETE keychain

Request Type: **DELETE**

Description: Deletes the keychain object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/keychains/{keychain\_UUID}?overrideTargetId={target\_UUID}

**GET localrealmusers**

**Note** The target UUID could be that of a domain or a device.

Permissions: Object Manager > Modify Object Manager

## GET localrealmusers

Request Type: **GET**

Description: Retrieves the local realm user object associated with the specified ID. If no ID is specified, retrieves list of all local realm user objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/localrealmusers`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/localrealmusers/{objectId}`

Permissions: System > Integration > Realms

Parameters available for filtering: To filter users by realm, use `realm:{realmUUID}`. To filter users by name, use `name:{name}`

## PUT localrealmusers

Request Type: **PUT**

Description: Modifies the local realm user object with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/localrealmusers/{objectId}`

Permissions: System > Integration > Realms > Modify Realms

## POST localrealmusers

Request Type: **POST**

Description: Creates or overrides the local realm user objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/localrealmusers`

Permissions: System > Integration > Realms > Modify Realms

## DELETE localrealmusers

Request Type: **DELETE**

Description: Deletes the specified local realm user object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/localrealmusers/{objectId}`

Permissions: Object Manager > Modify Object Manager

## GET mappings

Request Type: **GET**

Description: Retrieves the Dynamic Object Mappings associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectIdOrName}/mappings

Permissions: Object Manager

## PUT mappings

Request Type: **PUT**

Description: Adds Dynamic Object Mappings associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectId}/mappings

Permissions: Object Manager > Modify Object Manager

## DELETE mappings

Request Type: **DELETE**

Description: Removes the Dynamic Object Mappings associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/dynamicobjects/{objectId}/mappings

Parameters available for filtering:

Parameter	Values
Objects with ids:	"ids:id1,id2,..."
Unused objects:	"unusedOnly:true"
Name starts with:	"nameStartsWith:{name-pattern}"
Agent ID:	"agentId:{Agent ID}"

Permissions: Object Manager > Modify Object Manager

## GET networkaddresses

Request Type: **GET**

Description: Retrieves list of all network and host objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkaddresses?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## GET networkgroups

Request Type: **GET**

## PUT networkgroups

Description: Retrieves the network group object associated with the specified ID. If no ID is specified, retrieves list of all network group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{networkgroups\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{networkgroups\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## PUT networkgroups

Request Type: **PUT**

Description: Modifies a Network Group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST networkgroups

Request Type: **POST**

Description: Creates or overrides the network group with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE networkgroups

Request Type: **DELETE**

Description: Deletes the specified Network Group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all network groups: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networkgroups/

Permissions: Object Manager > Modify Object Manager

## GET networks

Request Type: **GET**

Description: Retrieves the network objects associated with the specified ID. If no ID is specified, retrieves list of all network objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networks?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{network\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{network\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## PUT networks

Request Type: **PUT**

Description: Modifies network objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST networks

Request Type: **POST**

Description: Creates or overrides the network objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE networks

Request Type: **DELETE**

Description: Deletes the specified network objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all networks: /api/fmc\_config/v1/domain/{domain\_UUID}/object/networks/

**GET ntpservers**

Permissions: Object Manager > Modify Object Manager

**GET ntpservers**

Request Type: **GET**

Description: Retrieves the NTP Server object associated with the specified ID. If no ID is specified for a GET, retrieves list of all DNS Server Group objects.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ntpservers`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/object/ntpservers/{object_UUID}`

Permissions: Object Manager

**PUT ntpservers**

Request Type: **PUT**

Description: Modifies the specified NTP Server object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ntpservers/{objectId}`

Permissions: Object Manager > Modify Object Manager

**POST ntpservers**

Request Type: **POST**

Description: Creates an NTP Server object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ntpservers`

Permissions: Object Manager > Modify Object Manager

**DELETE ntpservers**

Request Type: **DELETE**

Description: Deletes the NTP Server object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/ntpservers/{objectId}`

Permissions: Object Manager > Modify Object Manager

**POST overlaps**

Request Type: **POST**

Description: Creates an overlaps object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/operational/overlaps`

Permissions: Object Manager > Modify Object Manager

## GET packettracerpcaplist

Request Type: **GET**

Description: Retrieves all the PCAP files in the most recently uploaded fashion.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/packettracerpcaplist

Permissions: Devices > Troubleshoot > Packet Capture

## POST packettracerpcapupload

Request Type: **POST**

Description: Imports a PCAP file from Packet Tracer.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/packettracerpcapupload

Permissions: Devices > Troubleshoot > Packet Capture > Modify Packet Capture

## GET policy lists

Request Type: **GET**

Description: Retrieves the policy list associated with the specified ID. If no ID is specified, retrieves all policy lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists/{objectId}

Permissions: Object Manager

## PUT policylists

Request Type: **PUT**

Description: Modifies the Policy List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists/{objectId}

Permissions: Object Manager > Modify Objects

## POST policylists

Request Type: **POST**

Description: Creates a Policy List.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists

Permissions: Object Manager > Modify Objects

## DELETE policylists

Request Type: **DELETE**

**GET portobjectgroups**

Description: Deletes the Policy List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/policylists/{objectId}

Permissions: Object Manager > Modify Objects

## **GET portobjectgroups**

Request Type: **GET**

Description: Retrieves the port object group object associated with the specified ID. If no ID is specified, retrieves list of all port object group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?overrideTargetId={target\_UUID}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{portobjectgroup\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{portobjectgroup\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## **PUT portobjectgroups**

Request Type: **PUT**

Description: Modifies port object groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST portobjectgroups**

Request Type: **POST**

Description: Creates or overrides the port object groups with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE portobjectgroups

Request Type: **DELETE**

Description: Deletes the specified port object groups.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all port object groups:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/portobjectgroups/

Permissions: Object Manager > Modify Object Manager

## GET ports

Request Type: **GET**

Description: Retrieves list of all port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ports

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ports?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ports?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

## GET protocolportobjects

Request Type: **GET**

Description: Retrieves the protocol port object associated with the specified ID. If no ID is specified, retrieves list of all protocol port objects.

URL for listing:: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects?overrideTargetId={target\_UUID}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}

URL to list all overrides on a particular object::

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{protocolportobject\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{protocolportobject\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## PUT protocolportobjects

Request Type: **PUT**

**POST protocolportobjects**

Description: Modifies protocol port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

## **POST protocolportobjects**

Request Type: **POST**

Description: Creates or overrides the protocol port objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects?bulk=true

Permissions: Object Manager > Modify Object Manager

## **DELETE protocolportobjects**

Request Type: **DELETE**

Description: Deletes the specified protocol port objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all protocol port objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/protocolportobjects/

Permissions: Object Manager > Modify Object Manager

## **GET radiusservergroups**

Request Type: **GET**

Description: Retrieves the Radius Server Group associated with the specified ID. If no ID is specified for a GET, retrieves list of all Radius Server Group objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/radiusservergroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/radiusservergroups/{objectId}

Permissions: Object Manager

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value.

## **PUT radiusservergroups**

Request Type: **PUT**

Description: Modifies the Radius Server Group associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/radiusservergroups/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST radiusservergroups

Request Type: **POST**

Description: Creates a Radius Server Group.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/radiusservergroups

Permissions: Object Manager > Modify Object Manager

## DELETE radiusservergroups

Request Type: **DELETE**

Description: Deletes the Radius Server Group associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/radiusservergroups/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET ranges

Request Type: **GET**

Description: Retrieves the address range object associated with the specified ID. If no ID is specified, retrieves list of all address range objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{range\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{range\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager

## PUT ranges

Request Type: **PUT**

Description: Modifies an address range.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/ranges/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST ranges**

Request Type: **POST**

Description: Creates or overrides an address range with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ranges`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/ranges?bulk=true`

Permissions: Object Manager > Modify Object Manager

**DELETE ranges**

Request Type: **DELETE**

Description: Deletes the specified address range.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/ranges/{object_UUID}`

URL to DELETE overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/ranges/{object_UUID}?overrideTargetId={target_UUID}`

URL to delete all address ranges: `/api/fmc_config/v1/domain/{domain_UUID}/object/ranges/`

Permissions: Object Manager > Modify Object Manager

**GET realms**

Request Type: **GET**

Description: Retrieves the realm object associated with the specified ID. If no ID is specified, retrieves list of all realm objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/realms`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/realms/{object_UUID}`

Permissions: System > Integration > Realms

**PUT realms**

Request Type: **PUT**

Description: Modifies the realm object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/realms/{objectId}`

Permissions: System > Integration > Realms > Modify Realms

**POST realms**

Request Type: **POST**

Description: Creates or overrides the realm objects with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/realms`

Permissions: System > Integration > Realms > Modify Realms

## DELETE realms

Request Type: **DELETE**

Description: Deletes the specified realm object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/realms/{objectId}

Permissions: System > Integration > Realms > Modify Realms

## GET realmusergroups

Request Type: **GET**

Description: Retrieves the realm user group object associated with the specified ID. If no ID is specified, retrieves list of all realm user group objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusergroups

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusergroups/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

**Note** This is a required parameter.

## GET realmusers

Request Type: **GET**

Description: Retrieves the realm user object associated with the specified ID. If no ID is specified, retrieves list of all realm user objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusers

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/realmusers/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: realmUuid

**Note** This is a required parameter.

## GET resourceprofiles

Request Type: **GET**

**PUT resourceprofiles**

Description: Retrieves the ResourceProfile object associated with the specified ID. If no ID is specified, retrieves list of all ResourceProfile objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/resourceprofiles

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/resourceprofiles/{object\_UUID}

Permissions: Object Manager

## **PUT resourceprofiles**

Request Type: **PUT**

Description: Modifies the ResourceProfile object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/resourceprofiles/{objectId}

Permissions: Object Manager > Modify Object Manager

## **POST resourceprofiles**

Request Type: **POST**

Description: Creates a ResourceProfile object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/resourceprofiles

Permissions: Object Manager > Modify Object Manager

## **DELETE resourceprofiles**

Request Type: **DELETE**

Description: Deletes the ResourceProfile object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/resourceprofiles/{objectId}

Permissions: Object Manager > Modify Object Manager

## **GET route maps**

Request Type: **GET**

Description: Retrieves the route map associated with the specified ID. If no ID is specified, retrieves list of all route maps.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps/{objectId}

Permissions: Object Manager

## **PUT routemaps**

Request Type: **PUT**

Description: Modifies the RouteMap with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps/{objectId}

Permissions: Object Manager > Modify Objects

## POST routemaps

Request Type: **POST**

Description: Creates a RouteMap.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps

Permissions: Object Manager > Modify Objects

## DELETE routemaps

Request Type: **DELETE**

Description: Deletes the RouteMap with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/routemaps/{objectId}

Permissions: Object Manager > Modify Objects

## GET secureclientcustomizations

Request Type: **GET**

Description: Retrieves Secure Client Customization with the specified ID. If no ID is specified, retrieves list of all AnyConnect Customization Objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/secureclientcustomizations

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/secureclientcustomizations/{object\_UUID}

Permissions: Object Manager

## PUT secureclientcustomizations

Request Type: **PUT**

Description: Modifies the specified AnyConnect Customization object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/secureclientcustomizations/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST secureclientcustomizations

Request Type: **POST**

Description: Creates an AnyConnect Customization object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/secureclientcustomizations

Permissions: Object Manager > Modify Object Manager

**DELETE secureclientcustomizations**

Request Type: **DELETE**

Description: Deletes the specified AnyConnect Customization object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/secureclientcustomizations/{objectId}`

Permissions: Object Manager > Modify Object Manager

**GET securitygrouptags**

Request Type: **GET**

Description: Retrieves the custom security group tag object associated with the specified ID. If no ID is specified, retrieves list of all custom security group tag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/securitygrouptags`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/object/securitygrouptags/{object_UUID}`

Permissions: Object Manager

Parameters available for filtering: name

**PUT securitygrouptags**

Request Type: **PUT**

Description: Modifies the custom security group tag object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/securitygrouptags/{objectId}`

Permissions: Object Manager > Modify Object Manager

**DELETE securitygrouptags**

Request Type: **DELETE**

Description: Deletes the custom security group tag object associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/securitygrouptags/{objectId}`

Permissions: Object Manager > Modify Object Manager

**POST securitygrouptags**

Request Type: **POST**

Description: Creates a custom security group tag object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/securitygrouptags`

Permissions: Object Manager > Modify Object Manager

## GET securityzones

Request Type: **GET**

Description: Retrieves the security zone objects associated with the specified ID. If no ID is specified, retrieves list of all security zone objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager

Parameters available for filtering: name

## PUT securityzones

Request Type: **PUT**

Description: Modifies a securityzone object.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## POST securityzones

Request Type: **POST**

Description: Creates or overrides the securityzone objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE securityzones

Request Type: **DELETE**

Description: Deletes the specified securityzone objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/securityzones/{object\_UUID}

Permissions: Object Manager>Modify Object Manager

## GET SI DNS Feeds

Request Type: **GET**

Description: Retrieves the Security Intelligence DNS feed objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all Security Intelligence DNS feed objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sidnsfeeds

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/sidnsfeeds/{objectId}

**GET SI DNS Lists**

Permissions: Object Manager

**GET SI DNS Lists**

Request Type: **GET**

Description: Retrieves the Security Intelligence DNS list objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all Security Intelligence DNS list objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sidnslists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/sidnslists/{objectId}

Permissions: Object Manager

**GET sinetworkfeeds**

Request Type: **GET**

Description: Retrieves the Security Intelligence Network Feed objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all Security Intelligence Network Feed objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworkfeeds

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworkfeeds/{objectId}

Permissions: Object Manager

**PUT sinetworkfeeds**

Request Type: **PUT**

Description: Modifies the specified Security Intelligence network feed.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworkfeeds/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST sinetworkfeeds**

Request Type: **POST**

Description: Creates a Security Intelligence network feed.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworkfeeds

Permissions: Object Manager > Modify Object Manager

**DELETE sinetworkfeeds**

Request Type: **DELETE**

Description: Deletes the specified Security Intelligence network feed.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworkfeeds/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET SI Network Lists

Request Type: **GET**

Description: Retrieves the Security Intelligence network list objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all Security Intelligence network list objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworklists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/sinetworklists/{objectId}

Permissions: Object Manager

## GET Sinkholes

Request Type: **GET**

Description: Retrieves the Sinkhole objects associated with the specified ID. If no ID is specified for a GET, retrieves list of all Sinkhole objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/sinkholes

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/sinkholes/{objectId}

Permissions: Object Manager

## GET siurlfeeds

Request Type: **GET**

Description: Retrieves the Security Intelligence url feed object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url feed objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurlfeeds

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurlfeeds/{object\_UUID}

Permissions: Object Manager

## PUT siurlfeeds

Request Type: **PUT**

Description: Modifies the Security Intelligence URL Feed object associated with the specified ID..

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurlfeeds/{objectId}

Permissions: Object Manager > Modify Object Manager

## POST siurlfeeds

Request Type: **POST**

Description: Creates a Security Intelligence URL Feed object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurlfeeds

Permissions: Object Manager > Modify Object Manager

**DELETE siurfeeds**

Request Type: **DELETE**

Description: Deletes the Security Intelligence URL Feed object associated with the specified ID..

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurfeeds/{objectId}

Permissions: Object Manager > Modify Object Manager

**GET siurllists**

Request Type: **GET**

Description: Retrieves the Security Intelligence url list object associated with the specified ID. If no ID is specified, retrieves list of all Security Intelligence url list objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurllists

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/siurllists/{object\_UUID}

Permissions: Object Manager

**PUT siurllists**

Request Type: **PUT**

Description: Modifies the Security Intelligence URL List object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurllists/{objectId}

Permissions: Object Manager > Modify Object Manager

**POST siurllists**

Request Type: **POST**

Description: Creates a Security Intelligence URL List object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurllists

Permissions: Object Manager > Modify Object Manager

**DELETE siurllists**

Request Type: **DELETE**

Description: Deletes the Security Intelligence URL List object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/siurllists/{objectId}

Permissions: Object Manager > Modify Object Manager

**GET slamonitors**

Request Type: **GET**

Description: Retrieves the SLA Monitors associated with the specified ID. If no ID is specified, retrieves list of all SLA Monitors.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor

URL by GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor/{object\_UUID}

Permissions: Object Manager

## PUT slamonitors

Request Type: **PUT**

Description: Modifies the sla monitor object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## POST slamonitors

Request Type: **POST**

Description: Creates or overrides a SLA monitor with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE slamonitors

Request Type: **DELETE**

Description: Deletes the sla monitor object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/slamonitor/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

## GET SSO Servers

Request Type: **GET**

Description: Retrieves the SSO Server Policy Object associated with the specified ID. If no ID is specified, retrieves list of all SSO Server Policy Objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers

URL for all overrides:

/api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers/{containerUUID}/overrides

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers/{objectId}

Permissions: System > User Management> Single Sign-On (SSO)

**POST ssoservers**

Parameters available for filtering: To be used in conjunction with "unusedOnly:true" to search for unused objects and "nameOrValue:{nameOrValue}" to search for both name and value

**POST ssoservers**

Request Type: **POST**

Description: Creates an SSO Server Policy Object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers

Permissions: System > User Management > Single Sign-On (SSO)

**PUT ssoservers**

Request Type: **PUT**

Description: Modifies SSO Server Policy Object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers/{objectId}

Permissions: System > User Management > Single Sign-On (SSO)

**DELETE ssoservers**

Request Type: **DELETE**

Description: Deletes SSO Server Policy Object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/ssoservers/{objectId}

Permissions: System > User Management > Single Sign-On (SSO)

**GET standard access lists**

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists/{objectId}

Permissions: Object Manager

**PUT standardaccesslists**

Request Type: **PUT**

Description: Modifies the Standard Access List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists/{objectId}

Permissions: Object Manager > Modify Objects

## POST standardaccesslists

Request Type: **POST**

Description: Creates a Standard Access List.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists

Permissions: Object Manager > Modify Objects

## DELETE standardaccesslists

Request Type: **DELETE**

Description: Deletes the Standard Access List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardaccesslists/{objectId}

Permissions: Object Manager > Modify Objects

## GET standard community lists

Request Type: **GET**

Description: Retrieves the standard community list associated with the specified ID. If no ID is specified, retrieves all standard community lists.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists/{objectId}

Permissions: Object Manager

## PUT standardcommunitylists

Request Type: **PUT**

Description: Modifies the Standard Community List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists/{objectId}

Permissions: Object Manager > Modify Objects

## POST standardcommunitylists

Request Type: **POST**

Description: Creates a Standard Community List.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists

Permissions: Object Manager > Modify Objects

**DELETE standardcommunitylists**

Request Type: **DELETE**

Description: Deletes the Standard Community List associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/standardcommunitylists/{objectId}

Permissions: Object Manager > Modify Objects

**POST testazureadrealms**

Request Type: **POST**

Description: Tests Azure AD Realm connectivity.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/testazureadrealms

Permissions: Object Manager > Modify Object Manager

**GET time ranges**

Request Type: **GET**

Description: Retrieves the time range object associated with the specified ID. If no ID is specified, retrieves list of all time range objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager

**PUT time ranges**

Request Type: **PUT**

Description: Modifies a time range object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager

**POST time ranges**

Request Type: **POST**

Description: Creates or overrides a time range object with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges

Permissions: Object Manager > Modify Object Manager

**DELETE time ranges**

Request Type: **DELETE**

Description: Deletes the time range object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timeranges/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET time zone objects

Request Type: **GET**

Description: Retrieves the time zone object associated with the specified ID. If no ID is specified, retrieves list of all time zone objects.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

URL to list all overrides:

/api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{containerUUID}/overrides

Permissions: Object Manager

## PUT time zone objects

Request Type: **PUT**

Description: Modifies a time zone object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

Permissions: Object Manager

## POST time zone objects

Request Type: **POST**

Description: Creates or overrides a time zone object with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects

Permissions: Object Manager > Modify Object Manager

## DELETE time zone objects

Request Type: **DELETE**

Description: Deletes the time zone object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/timezoneobjects/{objectId}

Permissions: Object Manager > Modify Object Manager

## GET tunneltags

Request Type: **GET**

**PUT tunneltags**

Description: Retrieves the tunnel tag object associated with the specified ID. If no ID is specified, retrieves list of all tunnel tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager

**PUT tunneltags**

Request Type: **PUT**

Description: Modifies the tunnel tag object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST tunneltags**

Request Type: **POST**

Description: Creates or overrides a tunnel tag with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/tunneltags

Permissions: Object Manager > Modify Object Manager

**DELETE tunneltags**

Request Type: **DELETE**

Description: Deletes the tunnel tag object associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/tunneltags/{object\_UUID}

Permissions: Object Manager > Modify Object Manager

**GET umbrellaProtectionPolicies**

Request Type: **GET**

Description: Retrieves the umbrella protection policy associated with the specified ID from the umbrella cloud. If no ID is specified, retrieves list of all umbrella protection policies from the umbrella cloud.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/operational/umbrellaProtectionPolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/object/operational/umbrellaProtectionPolicies/{object\_UUID}

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy

**POST umbrellaProtectionPolicies**

Request Type: **POST**

Description: Creates an umbrella protection policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/operational/umbrellaprotectionpolicies

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## GET urlcategories

Request Type: **GET**

Description: Retrieves the url category object associated with the specified ID. If no ID is specified, retrieves list of all url category objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlcategories

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlcategories/{object\_UUID}

Permissions: Object Manager

## GET urlgroups

Request Type: **GET**

Description: Retrieves the url group objects associated with the specified ID. If no ID is specified, retrieves list of all url group objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{urlgroup\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{urlgroup\_UUID}?overrideTargetId={target\_UUID}

Permissions: Object Manager > Modify Object Manager

## PUT urlgroups

Request Type: **PUT**

Description: Modifies urlgroup objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{parent\_object\_UUID}

Permissions: Object Manager > Modify Object Manager

**POST urlgroups**

Request Type: **POST**

Description: Creates or overrides the urlgroup objects with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups

URL for Bulk Post : /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups?bulk=true

Permissions: Object Manager > Modify Object Manager

**DELETE urlgroups**

Request Type: **DELETE**

Description: Deletes the specified urlgroup objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all URL groups: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urlgroups/

Permissions: Object Manager > Modify Object Manager

**GET urls**

Request Type: **GET**

Description: Retrieves the url objects associated with the specified ID. If no ID is specified, retrieves list of all url objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{url\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{url\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?filter=unusedOnly:true

URL for searching by name or value:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?filter=nameOrValue:{name\_or\_value}

Permissions: Object Manager

**PUT urls**

Request Type: **PUT**

Description: Modifies a URL.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to edit or update an override on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{parent\_object\_UUID}

Permissions: Object Manager

## POST urls

Request Type: **POST**

Description: Creates or overrides the URLs with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls

URL for Bulk Post : /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls?bulk=true

Permissions: Object Manager > Modify Object Manager

## DELETE urls

Request Type: **GET**

Description: Deletes the specified URL.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}

URL to DELETE overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/{object\_UUID}?overrideTargetId={target\_UUID}

URL to delete all URLs: /api/fmc\_config/v1/domain/{domain\_UUID}/object/urls/

Permissions: Object Manager > Modify Object Manager

## GET Usage

Request Type: **GET**

Description:

Find usage of specified object uuid and type across objects and policies. Supported object types:

Type	Value
Network	NetworkAddress, Host, Network, Range, FQDN, NetworkGroup
Port	Port, ProtocolPortObject, PortObjectGroup, ICMPV4Object, ICMPV6Object, AnyProtocolPortObject
VLAN tag	VlanTag, VlanGroupTag
URL	Url, UrlGroup

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/operational/usage

Parameters available for filtering: Specify uuid "uuid:object-uuid" and "type:object-type" and type of object.

**GET usersandgroups**

Permissions: Object Manager

**GET usersandgroups**

Request Type: **GET**

Description: Retrieves users and groups associated with the specified Azure AD Realm.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/azureadrealms/{realmId}/usersandgroups

Permissions: Object Manager

**POST validatecertfile**

Request Type: **POST**

Description: Uploads and parses a given certificate/key file.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/validatecertfile

Permissions: Devices > Certificates > Modify Certificates

**GET variablesets**

Request Type: **GET**

Description: Retrieves the variable set object associated with the specified ID. If no ID is specified, retrieves list of all variable set objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/variablessets

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/variablessets/{object\_UUID}

Permissions: Object Manager

**GET vlangrouptags**

Request Type: **GET**

Description: Retrieves the vlan group tag objects associated with the specified ID. If no ID is specified, retrieves list of all vlan group tag objects.

URL for listing: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags

URL for all the overrides on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags?overrideTargetId={target\_UUID}

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{object\_UUID}

URL to list all overrides on a particular object:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{vlangrouptag\_UUID}/overrides

URL for override for an object on a particular domain or device:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags/{vlangrouptag\_UUID}?overrideTargetId={target\_UUID}

URL for listing only unused objects:

/api/fmc\_config/v1/domain/{domain\_UUID}/object/vlangrouptags?filter=unusedOnly:true

URL for searching by name or value:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?filter=nameOrValue:{name_or_value}`

Permissions: Object Manager > Modify Object Manager

## PUT vlangrouptags

Request Type: **PUT**

Description: Modifies vlangrouptag objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{object_UUID}`

URL to edit or update an override on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags/{parent_object_UUID}`

Permissions: Object Manager > Modify Object Manager

## POST vlangrouptags

Request Type: **POST**

Description: Creates or overrides the VLAN group tags with the specified parameters.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags`

URL for Bulk Post: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlangrouptags?bulk=true`

Permissions: Object Manager > Modify Object Managers

## DELETE vlangrouptags

Request Type: **DELETE**

Description: Deletes the specified vlan group tag object.

URL: `/api/fmc_config/v1/domain/{domainUUID}/object/vlangrouptags`

Permissions:

## GET vlantags

Request Type: **GET**

Description: Retrieves the vlantag objects associated with the specified ID. If no ID is specified, retrieves list of all vlantag objects.

URL for listing: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags`

URL for all the overrides on a particular domain or device:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?overrideTargetId={target_UUID}`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}`

URL to list all overrides on a particular object:

`/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{vlantag_UUID}/overrides`

**DELETE vlangrouptags**

URL for override for an object on a particular domain or device:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{vlantag_UUID}?overrideTargetId={target_UUID}
```

URL for listing only unused objects:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?filter=unusedOnly:true
```

URL for searching by name or value:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags?filter=nameOrValue:{name_or_value}
```

Permissions: Object Manager

**DELETE vlangrouptags**

Request Type: **DELETE**

Description: Deletes the specified vlan group tag object.

URL: /api/fmc\_config/v1/domain/{domainUUID}/object/vlangrouptags

Permissions:

**PUT vlantags**

Request Type: **PUT**

Description: Modifies VLAN tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{object\_UUID}

URL to edit or update an override on a particular object:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{parent_object_UUID}
```

Permissions: Object Manager > Modify Object Manager

**POST vlantags**

Request Type: **POST**

Description: Creates or overrides the VLAN tags with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags

URL for Bulk Post : /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags?bulk=true

Permissions: Object Manager > Modify Object Manager

**DELETE vlantags**

Request Type: **DELETE**

Description: Deletes the specified VLAN tag objects.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/{object\_UUID}

URL to DELETE overrides on a particular object:

```
/api/fmc_config/v1/domain/{domain_UUID}/object/vlantags/{object_UUID}?overrideTargetId={target_UUID}
```

URL to delete all VLAN tags: /api/fmc\_config/v1/domain/{domain\_UUID}/object/vlantags/

Permissions: Object Manager > Modify Object Manager

# Policy Services

## GET accesslistsettings

Request Type: **GET**

Description: Retrieves Access List policies for a particular Chassis Platform Settings Policy from the Management Center.

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/accesslistsettings/{object_UUID}`

Permissions: Policies > Access Control > Access Control Policy

Parameters available for filtering: ticket-id

## PUT accesslistsettings

Request Type: **PUT**

Description: Modifies Access List policies for a particular Chassis Platform Settings Policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/accesslistsettings/{objectId}`

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## GET accesspolicies

Request Type: **GET**

Description: Retrieves the access control policy associated with the specified ID. If no ID is specified, retrieves a list of all access control policies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{object_UUID}`

Permissions: Policies

## PUT accesspolicies

Request Type: **PUT**

Description: Modifies an access control policy.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{object_UUID}`

Permissions: Policies>Access Control Policy>Modify Access Control Policy

**POST accesspolicies**

Request Type: **POST**

Description: Creates an access control policy with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies

Permissions: Policies>Access Control Policy>Modify Access Control Policy

**DELETE accesspolicies**

Request Type: **DELETE**

Description: Deletes the access control policy with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{object\_UUID}

Permissions: Policies>Access Control Policy>Modify Access Control Policy

**DELETE accessrules**

Request Type: **DELETE**

Description: Deletes an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

**PUT accessrules**

Request Type: **PUT**

Description: Modifies an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

**POST accessrules**

Request Type: **POST**

Description: Creates an access control rule in the specified access control policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/accessrules

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

**GET accessrules**

Request Type: **GET**

Description: Retrieves the access control rule associated with the specified policy ID and rule ID. If no rule ID is specified, retrieves list of all access rules associated with the specified policy ID.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/accessrules`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/accesspolicies/{container_UUID}/accessrules/{object_UUID}`

Permissions: Policies>Access Control>Access Control Policy

## GET addressassignmentsettings

Request Type: **GET**

Description: Retrieves Address Assignment Setting inside a VPN RA Topology.

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/addressassignmentsettings/{objectId}`

Permissions: Devices > VPN

## PUT addressassignmentsettings

Request Type: **PUT**

Description: Modifies Address Assignment Setting inside a VPN RA Topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/addressassignmentsettings/{objectId}`

Permissions: Devices > VPN > Modify VPN

## GET advancedsettings

Request Type: **GET**

Description: Retrieves an advanced settings inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list containing a single AdvancedSettings entry of the topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/advancedsettings`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/advancedsettings/{advancedSetting_UUID}`

Permissions: Devices > VPN

## PUT advancedsettings

Request Type: **PUT**

Description: Modifies advanced settings inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/advancedsettings/{advancedSetting_UUID}`

**GET allowdnsrules**

Permissions: Devices > VPN > Modify VPN

**GET allowdnsrules**

Request Type: **GET**

Description: Retrieves all the allow rules for a given DNS Policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/dnspolicies/{containerUUID}/allowdnsrules

Permissions: Policies > Access Control > DNS Policy

Parameters available for filtering: name

**GET applicationgroups**

Request Type: **GET**

Description: Retrieves the Zero Trust Application Groups associated with the specified ID.. If no ID is specified, retrieves list of all Zero Trust Application Groups.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applicationgroups

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applicationgroups/{object\_UUID}

Permissions: Policies > Access Control > Zero Trust Application Policy

Parameters available for filtering: ticket-id

**PUT applicationgroups**

Request Type: **PUT**

Description: Modifies the Zero Trust Application Groups associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applicationgroups/{objectId}

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

**POST applicationgroups**

Request Type: **POST**

Description: Creates Zero Trust Application Groups

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applicationgroups

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## DELETE applicationgroups

Request Type: **DELETE**

Description: Deletes the Zero Trust Application Groups associated with the specified ID.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applicationgroups/{objectId}
```

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## GET applications

Request Type: **GET**

Description: Retrieves the Zero Trust Applications associated with the specified ID.. If no ID is specified, retrieves list of all Zero Trust Applications.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applications
```

URL for GET by ID:

```
/api/fmc_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applications/{object_UUID}
```

Permissions: Policies > Access Control > Zero Trust Application Policy

Parameters available for filtering: ticket-id

## PUT applications

Request Type: **PUT**

Description: Modifies the Zero Trust Applications associated with the specified ID.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applications
```

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## POST applications

Request Type: **POST**

Description: Creates Zero Trust Applications.

URL:

```
/api/fmc_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applications
```

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## DELETE applications

Request Type: **DELETE**

**GET autonatrules**

Description: Deletes the Zero Trust Applications associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{containerUUID}/applications

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

**GET autonatrules**

Request Type: **GET**

Description: Retrieves the NAT rule associated with the specific ID. If no ID is specified, retrieves a list of all NAT rules.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies{container\_UUID}/autonatrules/{object\_UUID}

Permissions: Devices>NAT>NAT List

**PUT autonatrules**

Request Type: **PUT**

Description: Modifies a NAT rule with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules/{autonatrule\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

**POST autonatrules**

Request Type: **POST**

Description: Creates a NAT policy with the specified parameters.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/autonatrules

Permissions: Devices>NAT>NAT List >Modify NAT policy

**DELETE autonatrules**

Request Type: **DELETE**

Description: Deletes the Auto NAT rule associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ftdnatpolicies/{containerUUID}/autonatrules

Permissions: Devices > NAT > NAT List > Modify NAT policy

## GET blockdnsrules

Request Type: **GET**

Description: Retrieves all the block rules for a given DNS Policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/dnspolicies/{containerUUID}/blockdnsrules

Permissions: Policies > Access Control > DNS Policy

Parameters available for filtering: name

## DELETE categories

Request Type: **DELETE**

Description: Deletes a category associated with the specified policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## PUT categories

Request Type: **PUT**

Description: Modifies the category associated with the specified policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## POST categories

Request Type: **POST**

Description: Creates a category for access control policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## GET categories

Request Type: **GET**

Description: Retrieves the category associated with the specified policy ID. If no ID is specified, retrieves list of all categories associated with the specified policy ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/categories/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy

**GET chassisplatformsettingspolicies**

Request Type: **GET**

Description: Retrieves the chassis platform settings policy associated with the ID. If no ID is specified, retrieves list of all chassis platform settings policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{object_UUID}`

Permissions: Policies > Actions > Scanners

**PUT chassisplatformsettingspolicies**

Request Type: **PUT**

Description: Modifies the specified chassis platform settings policy.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{objectId}`

Permissions: Policies > Actions > Scanners > Modify Scanners

**POST chassisplatformsettingspolicies**

Request Type: **POST**

Description: Creates a chassis platform settings policy.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies`

Permissions: Policies > Actions > Scanners > Modify Scanners

**DELETE chassisplatformsettingspolicies**

Request Type: **DELETE**

Description: Deletes the specified chassis platform settings policy.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{objectId}`

Permissions: Policies > Actions > Scanners > Modify Scanners

**GET connectionprofiles**

Request Type: **GET**

Description: Retrieves Connection Profile data inside a VPN RA Topology. If no ID is specified, retrieves a list of all connection profiles for the VPN RA topology.

URL for GET:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/connectionprofiles/`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/connectionprofiles/{objectId}`

Permissions: Devices > VPN

## PUT connectionprofiles

Request Type: **PUT**

Description: Modifies the Connection Profile data with the associated ID inside a VPN RA Topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/connectionprofiles/{objectId}

Permissions: Devices > VPN > Modify VPN

## POST connectionprofiles

Request Type: **POST**

Description: Creates a Connection Profile inside a VPN RA Topology.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/connectionprofiles

Permissions: Devices > VPN > Modify VPN

## DELETE connectionprofiles

Request Type: **DELETE**

Description: Deletes the Connection Profile data with the associated ID inside a VPN RA Topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/connectionprofiles/{objectId}

Permissions: Devices > VPN > Modify VPN

## GET decryptionpolicies

Request Type: **GET**

Description: Retrieves the decryption policy associated with the specified ID. If no ID is specified, retrieves list of all Decryption Policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{object\_UUID}

Permissions: Policies > Application Detectors

Parameters available for filtering: Name

## PUT decryptionpolicies

Request Type: **PUT**

Description: Modifies the specified decryption policy.

## POST decryptionpolicies

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{objectId}

Permissions: Policies > Application Detectors > Modify Application Detectors

## POST decryptionpolicies

Request Type: **POST**

Description: Creates a decryption policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies

Permissions: Policies > Application Detectors > Modify Application Detectors

## DELETE decryptionpolicies

Request Type: **DELETE**

Description: Deletes the specified decryption policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{objectId}

Permissions: Policies > Application Detectors > Modify Application Detectors

## GET decryptionpolicyrules

Request Type: **GET**

Description: Retrieves the decryption policy rule associated with the specified ID. If no ID is specified, retrieves list of all Decryption Policy Rules.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{containerUUID}/decryptionpolicyrules

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{containerUUID}/decryptionpolicyrules/{object\_UUID}

Permissions: Policies > Application Detectors

## PUT decryptionpolicyrules

Request Type: **PUT**

Description: Modifies the specified decryption policy rule.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{containerUUID}/decryptionpolicyrules/{objectId}

Permissions: Policies > Application Detectors > Modify Application Detectors

## POST decryptionpolicyrules

Request Type: **POST**

Description: Creates a decryption policy rule.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{containerUUID}/decryptionpolicyrules

Permissions: Policies > Application Detectors > Modify Application Detectors

## DELETE decryptionpolicyrules

Request Type: **DELETE**

Description: Deletes the specified decryption policy rule.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/decryptionpolicies/{containerUUID}/decryptionpolicyrules/{objectId}

Permissions: Policies > Application Detectors > Modify Application Detectors

## PUT defaultactions

Request Type: **PUT**

Description: Modifies the default action associated with the specified access control policy ID and default action ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy>Modify Access Control Policy

## GET defaultactions

Request Type: **GET**

Description: Retrieves the default action associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/defaultactions/{object\_UUID}

Permissions: Policies>Access Control>Access Control Policy

## GET dnsolicies

Request Type: **GET**

Description: Retrieves the DNS Policy. If no ID is specified, retrieves a list of all DNS policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/dnsolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/policy/dnsolicies/{objectId}

Permissions: Policies > Access Control > DNS Policy

Parameters available for filtering: name.

**GET dnssettings**

Request Type: **GET**

Description: Retrieves dns settings policy for a particular chassis platform settings policy. If no ID is specified, retrieves all dns settings for a particular chassis platform settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/dnssettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/dnssettings/{object_UUID}`

Permissions: Policies > Network Discovery

**PUT dnssettings**

Request Type: **PUT**

Description: Modifies the specified dns settings policy for a particular chassis platform settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/dnssettings/{objectId}`

Permissions: Policies > Network Discovery > Modify Network Discovery

**GET dynamicaccesspolicies**

Request Type: **GET**

Description: Retrieves the Dynamic Access Policy. If no ID is specified for a GET, retrieves list of all Dynamic Access Policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/dynamicaccesspolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/dynamicaccesspolicies/{objectId}`

Permissions: Devices > VPN

**PUT dynamicaccesspolicies**

Request Type: **PUT**

Description: Modifies the Dynamic Access Policy associated with the specified rule ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/dynamicaccesspolicies/{objectId}`

Permissions: Devices > VPN > Modify VPN

**POST dynamicaccesspolicies**

Request Type: **POST**

Description: Creates a Dynamic Access policy associated.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/dynamicaccesspolicies`

Permissions: Devices > VPN > Modify VPN

## DELETE dynamicaccesspolicies

Request Type: **DELETE**

Description: Deletes the Dynamic Access Policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/dynamicaccesspolicies/{objectId}

Permissions: Devices > VPN > Modify VPN

## GET endpoints

Request Type: **GET**

Description: Retrieves all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves list of all Endpoints of a topology.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/endpoints

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/endpoints/{endpoint\_UUID}

Permissions: Devices > VPN

## PUT endpoints

Request Type: **PUT**

Description: Modifies all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/endpoints/{endpoint\_UUID}

Permissions: Devices > VPN > Modify VPN

## POST endpoints

Request Type: **POST**

Description: Creates all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/endpoints

Permissions: Devices > VPN > Modify VPN

## DELETE endpoints

Request Type: **DELETE**

Description: Deletes all endpoints in a topology or a specific endpoint associated with the specified ID inside a VPN Site to Site Topology.

**GET filepolicies**

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/endpoints/{endpoint_UUID}`

Permissions: Devices &gt; VPN &gt; Modify VPN

**GET filepolicies**Request Type: **GET**

Description: Retrieves the file policy object associated with the specified ID. If no ID is specified, retrieves list of all file policy objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies`URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/filepolicies/{object_UUID}`

Permissions: Policies&gt;Access Control&gt;Malware &amp; File Policy

**PUT filepolicies**Request Type: **PUT**

Description: Modifies the File Policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{objectId}`

Permissions: Policies&gt;Access Control&gt;Malware &amp; File Policy&gt;Modify Malware &amp; File Policy

**POST filepolicies**Request Type: **POST**

Description: Creates a File Policy.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies`

Permissions: Policies&gt;Access Control&gt;Malware &amp; File Policy&gt;Modify Malware &amp; File Policy

**DELETE filepolicies**Request Type: **DELETE**

Description: Deletes the File Policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{objectId}`

Permissions: Policies&gt;Access Control&gt;Malware &amp; File Policy&gt;Modify Malware &amp; File Policy

**GET filerules**Request Type: **GET**

Description: Retrieves the file rule associated with the specified ID. If no ID is specified, retrieves a list of all the file rules.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{containerUUID}/filerules`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{containerUUID}/filerules/{object_UUID}`

Permissions: Policies>Access Control>Malware & File Policy

## PUT filepolicies

Request Type: **PUT**

Description: Modifies the File Policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{objectId}`

Permissions: Policies>Access Control>Malware & File Policy>Modify Malware & File Policy

## POST filerules

Request Type: **POST**

Description: Creates a file rules.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{containerUUID}/filerules`

Permissions: Policies>Access Control>Malware & File Policy>Modify Malware & File Policy

## DELETE filerules

Request Type: **DELETE**

Description: Deletes the file rule associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/filepolicies/{containerUUID}/filerules/{objectId}`

Permissions: Policies>Access Control>Malware & File Policy>Modify Malware & File Policy

## GET flexconfigpolicies

Request Type: **GET**

Description: Retrieves the Flexconfig Policy with the associated ID. If no ID is specified, retrieves list of all Flexconfig Policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/flexconfigpolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/flexconfigpolicies/{object_UUID}`

Permissions: Devices > Flexconfig Policy

## POST flexconfigpolicies

Request Type: **POST**

Description: Creates a Flexconfig Policy.

**GET ftdnatpolicies**

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ftdnatpolicies

Permissions: Devices > Flexconfig Policy > Modify Flexconfig Policy

## **GET ftdnatpolicies**

Request Type: **GET**

Description: Retrieves the threat defense NAT policy associated with the specified ID. If no ID is specified, retrieves a list of all threat defense NAT policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{object\_UUID}

Permissions: Devices>NAT>NAT List

## **PUT ftdnatpolicies**

Request Type: **PUT**

Description: Modifies an threat defense NAT policy with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **POST ftdnatpolicies**

Request Type: **POST**

Description: Creates a threat defense device NAT policy with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies

URL for Bulk Post: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies?bulk=true

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **DELETE ftdnatpolicies**

Request Type: **DELETE**

Description: Deletes the threat defense NAT policy with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{object\_UUID}

Permissions: Devices>NAT>NAT List >Modify NAT policy

## **GET ftdplatformsettingspolicies**

Request Type: **GET**

Description: Retrieves the FTDPlatformSettings Policy with the associated ID. If no ID is specified, retrieves a list of all FTDPlatformSettings Policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{object_UUID}`

Permissions: Devices > Device Management

## PUT ftdplatformsettingspolicies

Request Type: **PUT**

Description: Modifies the FTDPlatformSettings Policy with the associated ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## POST ftdplatformsettingspolicies

Request Type: **POST**

Description: Creates an FTDPlatformSettings Policy.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies`

Permissions: Devices > Device Management > Modify Devices

## DELETE ftdplatformsettingspolicies

Request Type: **DELETE**

Description: Deletes the FTDPlatformSettings Policy with the associated ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{objectId}`

Permissions: Devices > Device Management > Modify Devices

## GET ftnds2svpns

Request Type: **GET**

Description: Retrieves the threat defense Site to Site VPN topology associated with the specified ID. If no ID is specified, retrieves a list of all threat defense Site to Site VPN topologies.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}`

Permissions: Devices > VPN

## PUT ftnds2svpns

Request Type: **PUT**

Description: Modifies a threat defense Site to Site VPN topology associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}`

Permissions: Devices > VPN > Modify VPN

**POST ftds2svpns**

Request Type: **POST**

Description: Creates a threat defense Site to Site VPN topology with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns

Permissions: Devices > VPN > Modify VPN

**DELETE ftds2svpns**

Request Type: **DELETE**

Description: Deletes the threat defense Site to Site VPN topology associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}

Permissions: Devices > VPN > Modify VPN

**GET healthpolicies**

Request Type: **GET**

Description: Retrieves the Health Policy with the associated ID. If no ID is specified, retrieves a list of all Health Policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/healthpolicies/{objectId}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/healthpolicies/{objectId}/{object\_UUID}

Permissions: System > Health > Health Policy

**GET hitcounts**

Request Type: **GET**

Description: Retrieves the last collected hit count information for a device against an assigned policy or its rules, from the management center.

Note that during the GET operation, hit counts will be automatically pre-fetched from the device if it is the first retrieval being done against a specific device.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

## PUT hitcounts

Request Type: **PUT**

Description: Retrieves the latest hit count information for a device against an assigned policy, and stores it in the management center.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

## DELETE hitcounts

Request Type: **DELETE**

Description: Deletes the hit count information and resets the hit count to zero for an assigned policy or rule in a device, from the management center.

Note that the DELETE operation returns a 200 (OK) message upon successful completion of the operation.

URLs:

- /api/fmc\_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"
- /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{containerUUID}/operational/hitcounts?filter="{filterString}"

Permissions:

- Policies>Access Control Policy>Modify Access Control Policy
- Policies>Prefilter Policy>Modify Prefilter Policy

## GET httpaccesssettings

Request Type: **GET**

Description: Retrieves the FTD HTTP access settings associated with the ID. If no ID is specified, retrieves list of all FTD HTTP access settings.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/httpaccesssettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/httpaccesssettings/{object\_UUID}

Permissions: Policies > Network Discovery

**PUT httpaccesssettings**

Request Type: **PUT**

Description: Modifies the specified FTD HTTP access settings.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/httpaccesssettings/{objectId}`

Permissions: Policies > Network Discovery > Modify Network Discovery

**GET identitypolicies**

Request Type: **GET**

Description: Retrieves the Identity Policy associated with the specified ID. If no ID is specified, retrieves all Identity Policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/identitypolicies`

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/policy/identitypolicies/{objectId}`

Permissions: Policies > Access Control > Identity Policy

**GET ikesettings**

Request Type: **GET**

Description: Retrieves the IKE Settings associated with the specified ID inside a VPN Site to Site Topology. If no ID is specified for a GET, retrieves IKE Settings of a topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings/{ikesetting_UUID}`

Permissions: Devices > VPN

**PUT ikesettings**

Request Type: **PUT**

Description: Modifies the IKE Settings associated with the specified ID inside a VPN Site to Site Topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ikesettings/{ikesetting_UUID}`

Permissions: Devices > VPN > Modify VPN

**GET inheritancesettings**

Request Type: **GET**

Description: Retrieves the inheritance settings associated with specified Access Policy. If no ID is specified, retrieves a list of all inheritance settings.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/{object\_UUID}

Permissions: Policies > Access Control Policy

## PUT inheritancesettings

Request Type: **PUT**

Description: Modifies the inheritance settings associated with specified Access Policy.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/accesspolicies/{container\_UUID}/inheritancesettings/{object\_UUID}

Permissions: Policies > Access Control Policy > Modify Access Control Policy

## GET Inspector Configurations

Request Type: **GET**

Description: Retrieves the Snort3 custom NAP.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{containerUUID}/inspectorconfigs

Permissions: Policies > Access Control > Access Control Policy

## GET inspectoroverrideconfigs

Request Type: **GET**

Description: Retrieves the Snort3 custom NAP override.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{containerUUID}/inspectoroverrideconfigs

Permissions: Policies > Access Control > Access Control Policy

## PUT inspectoroverrideconfigs

Request Type: **GET**

Description: Modifies the Snort3 custom NAP override.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{containerUUID}/inspectorconfigs

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## GET intrusionpolicies

Request Type: **GET**

## PUT intrusionpolicies

Description: Retrieves the intrusion policy associated with the specified ID. If no ID is specified, retrieves list of all intrusion policies.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies/{object\_UUID}

Permissions: Policies > Access Control > Intrusion Policy

## PUT intrusionpolicies

Request Type: **PUT**

Description: Modifies the intrusion policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{objectId}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## POST intrusionpolicies

Request Type: **POST**

Description: Creates an intrusion policy with the specified parameters.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/intrusionpolicies

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## DELETE intrusionpolicies

Request Type: **DELETE**

Description: Deletes the intrusion policy associated with the specified ID.

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/intrusionpolicies/{object\_UUID}

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## GET intrusionrulegroups

Request Type: **GET**

Description: Retrieves the per-policy behaviour of the specified intrusion rule ID for the target intrusion policy ID. If no rule ID is specified for a GET, retrieves list of all Snort 3 intrusion rulegroups associated with the policy ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrulegroups/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrulegroups/{objectId}

Permissions: Policies > Access Control > Intrusion Policy

## PUT intrusionrulegroups

Request Type: **PUT**

Description: Modifies the per-policy behaviour of the specified intrusion rule ID for the target intrusion policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrulegroups/{objectId}`

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## POST intrusionrulegroups

Request Type: **PUT**

Description: Modifies the per-policy behaviour of the specified intrusion rule ID for the target intrusion policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrulegroups/{objectId}`

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## GET intrusionrules

Request Type: **GET**

Description: Retrieves the per-policy behaviour of the specified intrusion rule ID for the target intrusion policy ID. If no rule ID is specified for a GET, retrieves list of all Snort 3 intrusion rules associated with the policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrules`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrules/{objectId}`

Permissions: Policies > Access Control > Intrusion Policy

## PUT intrusionrules

Request Type: **PUT**

Description: Modifies the per-policy behaviour of the specified intrusion rule ID for the target intrusion policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/intrusionpolicies/{containerUUID}/intrusionrules/{objectId}`

Permissions: Policies > Access Control > Intrusion Policy > Modify Intrusion Policy

## GET ipsecadvancedsettings

Request Type: **GET**

**PUT ipsecadvancedsettings**

Description: Retrieves IPSec Advance Setting inside a VPN RA Topology. If no ID is specified for a GET, retrieves list containing a single IPSEC Advance Setting entry of the topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipsecadvancedsettings/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipsecadvancedsettings/{objectId}/{object_UUID}`

Permissions: Object Manager

**PUT ipsecadvancedsettings**

Request Type: **PUT**

Description: Modifies IPSec Advance Setting inside a VPN RA Topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipsecadvancedsettings/{objectId}`

Permissions: Object Manager > Modify Object Manager

**GET ipseccryptomaps**

Request Type: **GET**

Description: Retrieves IPSec Crypto Map Setting inside a VPN RA Topology. If no ID is specified, retrieves list containing a single IPSEC Crypto Map Setting entry of the topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipseccryptomaps/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipseccryptomaps/{objectId}/{object_UUID}`

Permissions: Object Manager

**PUT ipseccryptomaps**

Request Type: **PUT**

Description: Modifies IPSec Crypto Map Setting inside a VPN RA Topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ipseccryptomaps/{objectId}`

Permissions: Object Manager > Modify Object Manager

**GET ipsecsettings**

Request Type: **GET**

Description: Retrieves an IPsec Proposal Settings inside a VPN Site To Site Topology. If no ID is specified for a GET, retrieves list containing a single IPsec Settings entry of the topology.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/ftds2svpns/{topology_UUID}/ipsecsettings`

URL for GET by ID: /api/fmc\_config/v1/domain/DomainUUID/policy/ftds2svpns/{topology\_UUID}/ipsecsettings/{ipsecsetting\_UUID}

Permissions: Devices > VPN

## PUT ipsecsettings

Request Type: **PUT**

Description: Modifies an IPsec Proposal settings inside a VPN Site to Site Topology.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftds2svpns/{topology\_UUID}/ipsecsettings/{ipsecsetting\_UUID}

Permissions: Devices > VPN > Modify VPN

## GET ldapattributemaps

Request Type: **GET**

Description: Retrieves LDAP Attribute Maps inside a VPN RA Topology. If no ID is specified for a GET, retrieves list containing a single LDAP Attribute Maps of the topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ldapattributemaps/{objectId}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ldapattributemaps/{objectId}/{object\_UUID}

Permissions: Devices > VPN

## PUT ldapattributemaps

Request Type: **PUT**

Description: Modifies the LDAP Attribute Map with the specified ID inside a VPN RA Topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/ldapattributemaps/{objectId}

Permissions: Devices > VPN > Modify VPN

## GET loadbalancesettings

Request Type: **GET**

Description: Retrieves Load Balance Setting inside a VPN RA Topology. If no ID is specified for a GET, retrieves list containing a single Load Balance Setting entry of the topology.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/loadbalancesettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/loadbalancesettings/{object\_UUID}

Permissions: Devices > VPN

**PUT loadbalancesettings**

Request Type: **PUT**

Description: Modifies Load Balance Setting inside a VPN RA Topology.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/loadbalancesettings/{objectId}`

Permissions: Devices > VPN > Modify VPN

**GET loggingsettings**

Request Type: **GET**

Description: Retrieves the logging setting associated with the specified access control policy ID and default action ID. If no default action ID is specified, retrieves list of all default actions associated with the specified access control policy ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{object_UUID}`

Permissions: Policies

**PUT loggingsettings**

Request Type: **PUT**

Description: Modifies the logging setting associated with the specified access control policy ID and default action ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/loggingsettings/{objectId}`

Permissions: Policies>Access Control Policy>Modify Access Control Policy

**GET manualnatrules**

Request Type: **GET**

Description: Retrieves the manual NAT rule associated with the specified ID. If no ID is specified, retrieves a list of all manual NAT rules.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List

## PUT manualnatrules

Request Type: **PUT**

Description: Modifies the Auto NAT rule associated with the specified ID.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdnatpolicies/{containerUUID}/manualnatrules/{objectId}`

Permissions: Devices > NAT > NAT List > Modify NAT policy

## POST manualnatrules

Request Type: **POST**

Description: Creates manual NAT rules with the specified parameters.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules`

Permissions: Devices>NAT>NAT List >Modify NAT policy

## DELETE manualnatrules

Request Type: **POST**

Description: Deletes a manual NAT rule in the specified NAT policy.

URL:

`/api/fmc_config/v1/domain/{domain_UUID}/policy/ftdnatpolicies/{container_UUID}/manualnatrules/{object_UUID}`

Permissions: Devices>NAT>NAT List >Modify NAT policy

## POST migrate

Request Type: **POST**

Description: Initiates the flexConfig migration for specified devices.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/flexconfigpolicies/{containerUUID}/migrate`

Permissions: Devices > Flexconfig Policy > Modify Flexconfig Policy

## GET natexemprules

Request Type: **GET**

Description: Retrieves the VPN NatExempt Rules generated by the Site To Site VPN Topology for a device.

URL for GET by ID: `/api/fmc_config/v1/domain/{domainUUID}/policy/natexemprules/{deviceId}`

Permissions: Devices > NAT

## GET natrules

Request Type: **GET**

**GET netflowpolicies**

Description: Retrieves the list of all NAT rules (manual and auto) associated with the specified NAT policy.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/ftdnatpolicies/{container\_UUID}/natrules

Permissions: Devices>NAT>NAT List

## **GET netflowpolicies**

Request Type: **GET**

Description: Retrieves the Netflow Policy associated with the ID. If no ID is specified, retrieves list of all Netflow policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/netflowpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/netflowpolicies/{object\_UUID}

Permissions: Policies > Network Discovery

## **PUT netflowpolicies**

Request Type: **PUT**

Description: Modifies the Netflow Policy associated with the ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/netflowpolicies/{objectId}

Permissions: Policies > Network Discovery > Modify Network Discovery

## **GET networkanalysispolicies**

Request Type: **GET**

Description: Retrieves the network analysis policy with the specified ID. If no ID is specified, retrieves list of all network analysis policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{objectId}

Permissions: Policies > Access Control > Access Control Policy

## **PUT networkanalysispolicies**

Request Type: **PUT**

Description: Modifies the network analysis policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{objectId}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## POST networkanalysispolicies

Request Type: **POST**

Description: Creates a network analysis policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## DELETE networkanalysispolicies

Request Type: **DELETE**

Description: Deletes the network analysis policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/networkanalysispolicies/{objectId}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## DELETE natrules

Request Type: **DELETE**

Description: Deletes the NAT rule (manual or auto) associated with the specified policy ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ftdnatpolicies/{containerUUID}/natrules

Permissions: Devices > NAT > NAT List > Modify NAT policy

## GET policylocks

Request Type: **GET**

Description: Retrieves the policy lock statuses for access policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/operational/policylocks

Permissions: Policies > Access Control > Access Control Policy

## POST policylocks

Request Type: **POST**

Description: Locks or unlocks the specified Access Control policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/operational/policylocks

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

## GET prefilterpolicies

Request Type: **GET**

Description: Retrieves the prefilters policy associated with the specified ID. If no ID is specified, retrieves a list of all prefilters policies.

## PUT prefilterpolicies

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy

## PUT prefilterpolicies

Request Type: **PUT**

Description: Modifies a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## POST prefilterpolicies

Request Type: **POST**

Description: Creates a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## DELETE prefilterpolicies

Request Type: **DELETE**

Description: Deletes a prefilter policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## GET prefiltersrules

Request Type: **GET**

Description: Retrieves the prefilter rule associated with the specified rule ID. If no ID is specified, retrieves list of all prefilter rules.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{container\_UUID}/prefiltersrules/

URL for GET by ID:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{container\_UUID}/prefiltersrules/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy

## PUT prefiltersrules

Request Type: **PUT**

Description: Modifies the prefILTER rule associated with the specified rule ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{container\_UUID}/prefiltersrules/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## POST prefiltersrules

Request Type: **POST**

Description: Creates a prefILTER rule.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{container\_UUID}/prefiltersrules

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## DELETE prefiltersrules

Request Type: **DELETE**

Description: Deletes the prefILTER rule associated with the specified rule ID.

URL:

/api/fmc\_config/v1/domain/{domain\_UUID}/policy/prefilterpolicies/{container\_UUID}/prefiltersrules/{object\_UUID}

Permissions: Policies > Access Control > Prefilter Policy > Modify Prefilter Policy

## GET remoteaccessvpns

Request Type: **GET**

Description: Retrieves the threat defense RA VPN topology associated with the specified ID. If no ID is specified for a GET, retrieves list of all threat defense RA VPN topologies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{objectId}

Permissions: Devices > VPN

## PUT ravpns

Request Type: **PUT**

Description: Modifies Firewall Threat Defense RA VPN topology associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{objectId}

Permissions: Devices > VPN > Modify VPN

## POST ravpns

Request Type: **POST**

**DELETE ravpns**

Description: Creates a Firewall Threat Defense RA VPN topology.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns

Permissions: Devices > VPN > Modify VPN

**DELETE ravpns**

Request Type: **DELETE**

Description: Deletes Firewall Threat Defense RA VPN topology associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{objectId}

Permissions: Devices > VPN > Modify VPN

**GET s2svpnsummaries**

Request Type: **GET**

Description: Retrieves all the configured S2S VPN in the system , with short summary along with the health of the tunnels

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/s2svpnsummaries

Permissions: Devices > VPN

**GET secureclientcustomizationsettings**

Request Type: **GET**

Description: Retrieves Secure Client Customization Setting inside a VPN RA Topology. If no ID is specified for a GET, retrieves list containing a single Secure Client Customoization Setting entry of the topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/secureclientcustomizationsettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/secureclientcustomizationsettings/{object\_UUID}

Permissions: Policies > Access Control > SSL Policy

**PUT secureclientcustomizationsettings**

Request Type: **PUT**

Description: Modifies the specified Secure Client Customization Setting inside a VPN RA Topology.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/ravpns/{containerUUID}/secureclientcustomizationsettings/{objectId}

Permissions: Policies > Access Control > SSL Policy > Modify SSL Policy

**GET securityintelligencepolicies**

Request Type: **GET**

Description: Retrieves the security intelligence policy associated with the specified Access Policy. If no ID is specified for a GET, retrieves all security intelligence policies.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/securityintelligencepolicies`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/accesspolicies/{containerUUID}/securityintelligencepolicies/{objectId}`

Permissions: Intelligence

## GET sshclientsettings

Request Type: **GET**

Description: Retrieves ssh client setting policy for particular chassis platform settings policies associated with the ID. If no ID is specified, retrieves list of all ssh client setting policy for particular chassis platform settings policies.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshclientsettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshclientsettings/{object_UUID}`

Permissions: Policies > Access Control > SSL Policy

## PUT sshclientsettings

Request Type: **PUT**

Description: Modifies the specified ssh client setting policy for particular chassis platform settings policies.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshclientsettings/{objectId}`

Permissions: Policies > Access Control > SSL Policy > Modify SSL Policy

## GET sshserversettings

Request Type: **GET**

Description: Retrieves the ssh server setting policy for particular chassis platform settings policies associated with the ID. If no ID is specified, retrieves list of all ssh server setting policies for that particular chassis platform setting.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshserversettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshserversettings/{object_UUID}`

Permissions: Policies > Access Control > SSL Policy

**PUT sshserversettings**

Request Type: **PUT**

Description: Modifies the specified ssh server setting policy for a particular chassis platform settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/sshserversettings/{objectId}`

Permissions: Policies > Access Control > SSL Policy > Modify SSL Policy

**GET snmpalerts**

Request Type: **GET**

Description: Retrieves the SNMP alert object associated with the specified ID. If no ID is specified, retrieves a list of all SNMP alert objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/snmpalerts`

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/policy/snmpalerts/{object_UUID}`

Permissions: Policies > Actions > Alerts > View Alerts

**GET SNMP Settings**

Request Type: **GET**

Description: Retrieves the FTD SNMP Platform settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/snmpsettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/snmpsettings/{objectId}`

Permissions: Policies > Access Control

**PUT SNMP Settings**

Request Type: **PUT**

Description: Modifies the FTD SNMP Platform settings policy.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/ftdplatformsettingspolicies/{containerUUID}/snmpsettings`

Permissions: Policies > Access Control

**GET syslogalerts**

Request Type: **GET**

Description: Retrieves the syslog alert object associated with the specified ID. If no ID is specified, retrieves a list of all syslog alert objects.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/policy/syslogalerts`

URL for GET by ID: /api/fmc\_config/v1/domain/{domain\_UUID}/policy/syslogalerts/{object\_UUID}

Permissions: Policies > Actions > Alerts

## GET syslogsettings

Request Type: **GET**

Description: Retrieves the syslog settings policy for a particular chassis platform settings policy associated with the ID. If no ID is specified, retrieves list of all syslog settings policies for that particular chassis platform settings policy.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/syslogsettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/syslogsettings/{object\_UUID}

Permissions: System > Monitoring > Syslog

## PUT syslogsettings

Request Type: **PUT**

Description: Modifies the specified syslog settings policy for a particular chassis platform settings policy.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/syslogsettings/{objectId}

Permissions: System > Monitoring > Syslog

## GET timesynchronizationsettings

Request Type: **GET**

Description: Retrieves the specified time synchronization settings policy for particular chassis platform settings policies. If no ID is specified, retrieves list of all time synchronization settings policy for particular chassis platform settings policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timesynchronizationsettings

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timesynchronizationsettings/{object\_UUID}

Permissions: Devices > Device Management

## PUT timesynchronizationsettings

Request Type: **PUT**

Description: Modifies the specified time synchronization settings policy for particular chassis platform settings policies.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timesynchronizationsettings/{objectId}

**GET timezonesettings**

Permissions: Devices > Device Management > Modify Devices

## **GET timezonesettings**

Request Type: **GET**

Description: Retrieves time zone settings policy for particular chassis platform settings policies associated with the ID. If no ID is specified, retrieves list of all timezone settings policies for those particular chassis platform settings.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timezonesettings`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timezonesettings/{object_UUID}`

Permissions: Devices > Device Management

## **PUT timezonesettings**

Request Type: **PUT**

Description: Modifies the time zone settings policy for particular chassis platform settings policies.

URL:

`/api/fmc_config/v1/domain/{domainUUID}/policy/chassisplatformsettingspolicies/{containerUUID}/timezonesettings/{objectId}`

Permissions: Devices > Device Management

## **GET umbrelladnspolicies**

Request Type: **GET**

Description: Retrieves the umbrella DNS policy associated with the specified ID. If no ID is specified, retrieves list of all umbrella DNS policies.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{objectId}`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{objectId}/{object_UUID}`

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy

## **PUT umbrelladnspolicies**

Request Type: **PUT**

Description: Modifies the umbrella DNS policy associated with the specified ID.

URL: `/api/fmc_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{objectId}`

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## POST umbrelladnspolicies

Request Type: **POST**

Description: Creates an umbrella DNS policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## DELETE umbrelladnspolicies

Request Type: **DELETE**

Description: Deletes the umbrella DNS policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{objectId}

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## GET umbrelladnsrules

Request Type: **GET**

Description: Retrieves the the umbrella DNS Rule associated with the specified ID. If no ID is specified, retrieves list of all umbrella DNS rules.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{containerUUID}/umbrelladnsrules/{objectId}

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{containerUUID}/umbrelladnsrules/{objectId}/{object\_UUID}

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy

## PUT umbrelladnsrules

Request Type: **PUT**

Description: Modifies the umbrella DNS Rule associated with the specified ID.

URL:

/api/fmc\_config/v1/domain/{domainUUID}/policy/umbrelladnspolicies/{containerUUID}/umbrelladnsrules/{objectId}

Permissions: Policies > Access Control > DNS Policy > Umbrella DNS Policy > Modify Umbrella DNS Policy

## GET vpntunnelstatuses

Request Type: **GET**

Description: Retrieves the VPN Tunnel statuses.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/vpntunnelstatuses

**GET zerotrustpolicies**

Permissions: Devices > VPN

Parameters available for filtering: ticket-id

## **GET zerotrustpolicies**

Request Type: **GET**

Description: Retrieves the Zero Trust policy associated with the specified ID. If no ID is specified, retrieves list of all Zero Trust policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies

URL for GET by ID:

/api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{object\_UUID}

Permissions: Policies > Access Control > Zero Trust Application Policy

## **PUT zerotrustpolicies**

Request Type: **PUT**

Description: Modifies the Zero Trust policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{objectId}

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## **POST zerotrustpolicies**

Request Type: **POST**

Description: Creates a Zero Trust policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## **DELETE zerotrustpolicies**

Request Type: **DELETE**

Description: Deletes the specified Zero Trust policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/zerotrustpolicies/{objectId}

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## **GET ztnapolicies**

Request Type: **GET**

Description: Retrieves the ZTNA policy associated with the specified ID. If no ID is specified, retrieves list of all ZTNA policies.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ztnapolicies

URL for GET by ID: /api/fmc\_config/v1/domain/{domainUUID}/policy/ztnapolicies/{object\_UUID}

Permissions: Policies > Access Control > Zero Trust Application Policy

## PUT ztnapolicies

Request Type: **PUT**

Description: Modifies the ZTNA policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ztnapolicies/{objectId}

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## POST ztnapolicies

Request Type: **POST**

Description: Creates a ZTNA policy.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ztnapolicies

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

## DELETE ztnapolicies

Request Type: **DELETE**

Description: Deletes the ZTNA policy associated with the specified ID.

URL: /api/fmc\_config/v1/domain/{domainUUID}/policy/ztnapolicies/{objectId}

Permissions: Policies > Access Control > Zero Trust Application Policy > Modify Zero Trust Application Policy

# Policy Assignment Services

## PUT policyassignments

Request Type: **PUT**

Description: Modifies an assigned access policy to add a new device or a new device group.

URL: /api/fmc\_config/v1/domain/{domain\_UUID}/assignment/policyassignments/{object\_UUID}

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

**POST policyassignments**

Request Type: **POST**

Description: Assigns an unassigned access policy to devices or device groups.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments`

Permissions: Policies > Access Control > Access Control Policy > Modify Access Control Policy

**GET policyassignments**

Request Type: **GET**

Description: Retrieves the policy assignment associated with the specified ID. If no ID is specified, retrieves a list of all policy assignments to target devices.

URL: `/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments`

URL for GET by ID:

`/api/fmc_config/v1/domain/{domain_UUID}/assignment/policyassignments/{object_UUID}`

Permissions: Policies > Access Control > Access Control Policy

Parameters available for filtering: name

**Status Services****GET taskstatuses**

Description: Retrieves information about a previously submitted pending job/task with the specified ID. This is currently supported for device registration and deployment jobs.

URL for GET by ID: `/api/fmc_config/v1/domain/{domain_UUID}/job/taskstatuses/{object_UUID}`

Permissions: Modify Devices/Deployment

**System Information****GET domain**

Request Type: **GET**

Description: Requests version information for the domain. If no ID is specified, retrieves a list of all domains.

URL: `/api/fmc_platform/v1/info/domain/{domain_UUID}/`

URL for GET by ID: `/api/fmc_platform/v1/info/domain/{domain_UUID}/{object_UUID}`

Permissions: System > Domains

## GET serverversion

Request Type: **GET**

Description: Requests version information for the server. If no ID is specified, retrieves a list of all servers.

URL: /api/fmc\_platform/v1/info/serverversion

URL for GET by ID: /api/fmc\_platform/v1/info/serverversion/{objectID}

Permissions:

## Update Packages

### POST Cancel Upgrades

Request Type: **POST**

Description: This POST operation cancels software upgrade packages to applicable devices running threat defense.

URL: /api/fmc\_platform/v1/updates/cancelupgrades

Permissions: System > Tools > Scheduling

### POST Retry Ugrades

Request Type: **POST**

Description: This POST operation retries software upgrade packages to applicable devices running threat defense.

URL: /api/fmc\_platform/v1/updates/retryupgrades

Permissions: System > Updates

### DELETE upgradepackages

Request Type: **DELETE**

Description: Deletes a specific threat defense upgrade package from the managing management center.

URL: /api/fmc\_platform/v1/updates/upgradepackages/{package\_UUID}

Permissions: System > Tools > Scheduling

### GET upgradepackages

Request Type: **GET**

Description: Retrieves a list of locally available threat defense upgrade packages, including major upgrades, maintenances release upgrades, and hotfixes.

URL: /api/fmc\_platform/v1/updates/upgradepackages

**GET listapplicabledevices**

URL for GET by ID: /api/fmc\_platform/v1/updates/upgradepackages/{package\_UUID}

Permissions: System > Tools

## **GET listapplicabledevices**

Request Type: **GET**

Description: Lists registered device containers that support the specific upgrade package.

URL: /api/fmc\_platform/v1/updates/upgradepackages/{container\_UUID}/applicabledevices

Permissions: System > Tools > Scheduling

## **POST upgradepackage**

Request Type: **POST**

Description: Dependent on the parameters, this POST operation either pushes available software upgrade packages to applicable devices running threat defense or initiates the upgrade process for applicable devices running threat defense. This process is applicable for standalone, clustered, or high availability pairs with the following limitations:

- For all configurations, ensure that the current POST operation is completed successfully before proceeding to the next POST operation.
- Perform the POST operation on the primary node of a high availability pair. Do not perform the POST operation for more than one high availability pair at a time.
- Perform the POST operation on the

**Note**

Typically, the first POST operation responds within 60 seconds. Cisco recommends that you perform subsequent POST operations at least 120 seconds after the first POST operation was initiated. The response of the POST operation includes a task object, with a task ID and task status. You can monitor the completion of the task by performing a GET operation on the task object with its task ID. For more information, see [GET taskstatuses, on page 194](#).

URL: /api/fmc\_platform/v1/updates/upgrades/

Permissions: System > Tools > Scheduling

## **POST revertupgrades**

Request Type: **POST**

Description: Triggers reversion of an upgrade.

URL: /api/fmc\_platform/v1/updates/revertupgrades

Permissions: System > Tools > Scheduling

## GET upgradepackages: Monitor

Request Type: **GET**

Description: Monitors the upgrade process once you have executed the POST upgrade task.

URL: /api/fmc\_platform/v1/domain/{domain\_UUID}/job/taskstatuses/{task\_ID}

Permissions: System > Tools > Scheduling

## POST upgradesnapshot

Request Type: **POST**

Description: Creates an upgrade snapshot.

URL: /api/fmc\_platform/v1/updates/upgradesnapshot

Permissions: System > Tools

**POST upgradesnapshot**
