

Scheduling

The following topics explain how to schedule tasks:

- [About Task Scheduling, on page 1](#)
- [Requirements and Prerequisites for Task Scheduling, on page 2](#)
- [Configuring a Recurring Task, on page 2](#)
- [Scheduled Task Review, on page 16](#)
- [History for Scheduled Tasks, on page 18](#)

About Task Scheduling

You can schedule various tasks to run at designated times, either once or on a recurring basis.

Tasks are scheduled in UTC on the back end, which means when they occur locally depends on the date and your specific location. Also, because tasks are scheduled in UTC, they do not adjust for Daylight Saving Time, summer time, or any such seasonal adjustments that you may observe in your location. If you are affected, scheduled tasks occur one hour "later" in the summer than in the winter, according to local time.

Some tasks are automatically scheduled or performed by the initial setup process:

- A one-time task to download and install the latest VDB.
- A weekly scheduled task to download the latest available software updates.
- A weekly scheduled task to perform a locally stored configuration-only backup of the FMC.

You should review the weekly tasks and adjust if necessary. Optionally, schedule new recurring tasks to actually update the VDB and/or software, and deploy configurations.

Important

We *strongly* recommend you review scheduled tasks to be sure they occur when you intend. Some tasks (such as those involving automated software updates or that require pushing updates to managed devices) may place a significant load on networks with low bandwidths. You should schedule tasks like these to run during periods of low network use. Other tasks, such as deploying configurations, can cause traffic interruptions. You should schedule tasks like these during maintenance windows.

Requirements and Prerequisites for Task Scheduling

Model Support

Any.

Supported Domains

Any

User Roles

- Admin
- Maintenance User

Configuring a Recurring Task

You set the frequency for a recurring task using the same process for all types of tasks.

Note that the time displayed on most pages on the web interface is the local time, which is determined by using the time zone you specify in your local configuration. Further, the FMC automatically adjusts its local time display for daylight saving time (DST), where appropriate. However, recurring tasks that span the transition dates from DST to standard time and back do not adjust for the transition. That is, if you create a task scheduled for 2:00 AM during standard time, it will run at 3:00 AM during DST. Similarly, if you create a task scheduled for 2:00 AM during DST, it will run at 1:00 AM during standard time.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** drop-down list, select the type of task that you want to schedule.
- Step 4** Click **Recurring** next to the **Schedule task to run** option.
- Step 5** In the **Start On** field, specify the date when you want to start your recurring task.
- Step 6** In the **Repeat Every** field, specify how often you want the task to recur.
- You can either type a number or click **Up** (▲) and **Down** (▼) to specify the interval. For example, type 2 and click **Days** to run the task every two days.
- Step 7** In the **Run At** field, specify the time when you want to start your recurring task.
- Step 8** For a task to be run on a weekly or monthly basis, select the days when you want to run the task in the **Repeat On** field.
- Step 9** Give the job a name.
- Step 10** Select the remaining options for the type of task you are creating:
- Backup - Schedule backup jobs as described in [Schedule FMC Backups, on page 3](#) .

- Download CRL - Schedule certificate revocation list downloads as described in [Configuring Certificate Revocation List Downloads, on page 5](#).
- Deploy Policies - Schedule policy deployment as described in [Automating Policy Deployment, on page 6](#).
- Nmap Scan - Schedule Nmap scans as described in [Scheduling an Nmap Scan, on page 7](#).
- Report - Schedule report generation as described in [Automating Report Generation, on page 8](#).
- Firepower Recommended Rules - Schedule automatic updates as described in [Automating Firepower Recommendations, on page 10](#).
- Download Latest Update - Schedule software or VDB update downloads as described in [Automating Software Downloads, on page 11](#) or [Automating VDB Update Downloads, on page 13](#).
- Install Latest Update - Schedule installation of software or VDB updates on a FMC or managed device as described in [Automating Software Installs, on page 12](#) or [Automating VDB Update Installs, on page 14](#).
- Push Latest Update - Schedule push of software updates to managed devices as described in [Automating Software Pushes, on page 12](#).
- Update URL Filtering Database - Schedule automatic update of URL filtering data as described in [Automating URL Filtering Updates Using a Scheduled Task, on page 15](#).

Step 11 Click **Save**.

Scheduled Backups

You can use the scheduler on a Firepower Management Center to automate its own backups. You can also schedule remote device backups from the FMC. For more information on backups, see [Backup/Restore](#).

Note that not all devices support remote backups.

Schedule FMC Backups

You can use the scheduler on the FMC to automate both FMC and device backups. Note that not all devices support remote backups. For more information, see [Backup/Restore](#).

Note As part of the initial configuration, the system schedules weekly configuration-only FMC backups (locally stored). We recommend you review this task and make changes if necessary, as described in [this topic](#).

Before you begin

Create a backup profile that specifies your backup preferences. See [Create a Backup Profile](#).

You must be in the global domain to perform this task.

Procedure

- Step 1** Choose **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** From the **Job Type** list, select **Backup**.
- Step 3** Specify whether you want to back up **Once** or **Recurring**.
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#).
- Step 4** Enter a **Job Name**.
- Step 5** For the **Backup Type**, click **Management Center**.
- Step 6** Choose a **Backup Profile**.
- Step 7** (Optional) Enter a **Comment**.
- Keep comments brief. They will appear in the Task Details section of the schedule calendar page.
- Step 8** (Optional) Enter an email address, or a comma-separated list of email addresses, in the **Email Status To:** field.
- For information on setting up an email relay server to send task status messages, see [Configuring a Mail Relay Host and Notification Address](#).
- Step 9** Click **Save**.
-

Schedule Remote Device Backups

You can use the scheduler on the FMC to automate both FMC and device backups. Note that not all devices support remote backups. For more information, see [Backup/Restore](#).

You must be in the global domain to perform this task.

Procedure

- Step 1** Choose **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** From the **Job Type** list, select **Backup**.
- Step 3** Specify whether you want to back up **Once** or **Recurring**.
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#).
- Step 4** Enter a **Job Name**.
- Step 5** For the **Backup Type**, click **Device**.
- Step 6** Select one or more devices.
- If your device is not listed, it does not support remote backup.

- Step 7** If you did not configure remote storage for backups, choose whether you want to **Retrieve to Management Center**.
- Enabled (default): Saves the backup to the FMC in `/var/sf/remote-backup/`.
 - Disabled: Saves the backup to the device in `/var/sf/backup/`.
- If you configured remote backup storage, backup files are saved remotely and this option has no effect. For more information, see [Manage Backups and Remote Storage](#).
- Step 8** (Optional) Enter a **Comment**.
- Keep comments brief. They will appear in the Task Details section of the schedule calendar page.
- Step 9** (Optional) Enter an email address, or a comma-separated list of email addresses, in the **Email Status To:** field.
- For information on setting up an email relay server to send task status messages, see [Configuring a Mail Relay Host and Notification Address](#).
- Step 10** Click **Save**.
-

Configuring Certificate Revocation List Downloads

You must perform this procedure using the local web interface for the FMC. In a multidomain deployment, this task is only supported in the Global domain for the FMC.

The system automatically creates the Download CRL task when you enable downloading a certificate revocation list (CRL) in the local configuration on an appliance where you enable user certificates or audit log certificates for the appliance. You can use the scheduler to edit the task to set the frequency of the update.

Before you begin

- Enable and configure user certificates or audit log certificates and set one or more CRL download URLs. See [Requiring Valid HTTPS Client Certificates](#) and [Require Valid Audit Log Server Certificates](#) for more information.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From **Job Type**, select **Download CRL**.
- Step 4** Specify how you want to schedule the CRL download, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** If you want to comment on the task, type a comment in the **Comment** field.

The comment field appears in the Task Details section of the schedule calendar page; keep comments brief.

- Step 7** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured on the FMC to send status messages.
- Step 8** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Automating Policy Deployment

After modifying configuration settings in the FMC, you must deploy those changes to the affected devices.

- Caution** When you deploy, resource demands may result in a small number of packets dropping without inspection. Additionally, deploying some configurations restarts the Snort process, which interrupts traffic inspection. Whether traffic drops during this interruption or passes without further inspection depends on how the target device handles traffic. See [Snort Restart Traffic Behavior](#) and [Configurations that Restart the Snort Process When Deployed or Activated](#).
-

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From **Job Type**, select **Deploy Policies**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** In the **Device** field, select a device where you want to deploy policies.
- Step 7** Select or deselect the **Skip deployment for up-to-date devices** check box, as required.
- By default, the **Skip deployment for up-to-date devices** option is enabled to improve performance during the policy deployment process.
- Note** The system does not perform a scheduled policy deployment task if a policy deployment initiated from the FMC web interface is in progress. Correspondingly, the system does not permit you to initiate a policy deployment from the web interface if a scheduled policy deployment task is in-progress.
- Step 8** If you want to comment on the task, type a comment in the **Comment** field.
- The comment field displays in the Tasks Details section of the schedule calendar page; keep comments brief.

- Step 9** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 10** Click **Save**.

Nmap Scan Automation

You can schedule regular Nmap scans of targets on your network. Automated scans allow you to refresh information previously supplied by an Nmap scan. Because the system cannot update Nmap-supplied data, you need to rescan periodically to keep that data up to date. You can also schedule scans to automatically test for unidentified applications or servers on hosts in your network.

Note that a Discovery Administrator can also use an Nmap scan as a remediation. For example, when an operating system conflict occurs on a host, that conflict may trigger an Nmap scan. Running the scan obtains updated operating system information for the host, which resolves the conflict.

If you have not used the Nmap scanning capability before, you configure Nmap scanning before defining a scheduled scan.

Related Topics

- [Nmap Scanning](#)

Scheduling an Nmap Scan

After Nmap replaces a host's operating system, applications, or servers detected by the system with the results from an Nmap scan, the system no longer updates the information replaced by Nmap for the host. Nmap-supplied service and operating system data remains static until you run another Nmap scan. If you plan to scan a host using Nmap, you may want to set up regularly scheduled scans to keep Nmap-supplied operating systems, applications, or servers up to date. If the host is deleted from the network map and re-added, any Nmap scan results are discarded and the system resumes monitoring of all operating system and service data for the host.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From **Job Type**, select **Nmap Scan**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** In the **Nmap Remediation** field, select an Nmap remediation.

- Step 7** In the **Nmap Target** field, select the scan target.
- Step 8** In the **Domain** field, select the domain whose network map you want to augment.
- Step 9** If you want to comment on the task, type a comment in the **Comment** field.
- Tip** The comment field appears in the Task Details section of the calendar schedule page; keep comments brief.
- Step 10** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 11** Click **Save**.

Automating Report Generation

You can automate reports so that they run at regular intervals.

Before you begin

- For reports other than risk reports: Create a report template. See [Report Templates](#) for more information.
- If you want to distribute email reports using the scheduler, configure a mail relay host and specify report recipients and message information. See [Configuring a Mail Relay Host and Notification Address](#) and (for reports other than risk reports) [Distributing Reports by Email at Generation Time](#) or (for risk reports) [Generating, Viewing, and Printing Risk Reports](#).
- (Optional) Set or change the file name, output format, time window, or email distribution settings of the scheduled report. See [Specify Report Generation Settings for a Scheduled Report, on page 9](#).
- If you will choose PDF as the report output format, look at the report template and verify that the number of results in each section of the template does not exceed the limit for PDFs. For information, see [Report Template Fields](#).

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select a job.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** In the **Report Template** field, select a risk report or report template.

- Step 7** If you want to comment on the task, type a comment in the **Comment** field.
The comment field appears in the Tasks Details section of the schedule calendar page; keep comments brief.
- Step 8** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Note** Configuring this option does **not** distribute the reports.
- Step 9** If you do not want to receive report email attachments when reports have no data (for example, when no events of a certain type occurred during the report period), select the **If report is empty, still attach to email** check box.
- Step 10** Click **Save**.
-

Specify Report Generation Settings for a Scheduled Report

You must have Admin or Security Analyst privileges to perform this task.

To specify or change the file name, output format, time window, or email distribution settings of a scheduled report:

Procedure

- Step 1** Select **Overview > Reporting > Report Templates**.
- Step 2** Click **Edit** for the report template to change.
- Step 3** If you will select PDF output:
- Look to see whether any of the sections in the report shows a yellow triangle beside the number of results.
 - If you see any yellow triangles, mouse over the triangle to view the maximum number of results allowable for that section for PDF output.
 - For each section with a yellow triangle, reduce the number of results to a number below the limit.
 - When there are no more yellow triangles, click **Save**.
- Step 4** Click **Generate**.
- Note** If you want to change report generation settings without generating the report now, you must click **Generate** from the template configuration page. Changes will not be saved if you click **Generate** from the template list view unless you generate the report.
- Step 5** Modify settings.
- Step 6** To save the new settings without generating the report, click **Cancel**.
To save the new settings and generate the report, click **Generate** and skip the rest of the steps in this procedure.
- Step 7** Click **Save**.
- Step 8** If you see a prompt to save even though you haven't made changes, click **OK**.
-

Automating Firepower Recommendations

You can automatically generate rule state recommendations based on network discovery data for your network using the most recently saved configuration settings in a custom intrusion policy.

Note If the system automatically generates scheduled recommendations for an intrusion policy with unsaved changes, you must discard your changes in that policy and commit the policy if you want the policy to reflect the automatically generated recommendations.

When the task runs, the system automatically generates recommended rule states, and modifies the states of intrusion rules based on the configuration of your policy. Modified rule states take effect the next time you deploy your intrusion policy.

Before you begin

- Configure Firepower recommended rules in an intrusion policy as described in the [Firepower Management Center Device Configuration Guide](#).
- If you want to email task status messages, configure a valid email relay server.
- You must have the Threat Smart License or Protection Classic License to generate recommendations.

Procedure

- Step 1** Choose **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From **Job Type**, choose **Firepower Recommended Rules**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Enter a name in the **Job Name** field.
- Step 6** Next to **Policies**, choose one or more intrusion policies where you want to generate recommendations. Check **All Policies** check box to choose all intrusion policies.
- Step 7** (Optional) Enter a comment in the **Comment** field.
- Keep comments brief. Comments appear in the Task Details section of the schedule calendar page.
- Step 8** (Optional) To email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field.
- Step 9** Click **Save**.
-

Configuring a Mail Relay Host and Notification Address

Software Upgrade Automation

You can automatically download and apply maintenance releases and patches.

To upgrade the FMC, schedule Download and Install tasks. To upgrade managed devices, schedule Download, Push, and Install tasks. Make sure you leave adequate time between the tasks; for example, installations scheduled to occur while a push is still running will fail.

This feature is not supported for major releases. Internet access is required to download upgrade packages. When scheduling upgrades to device groups, the upgrade will run on all grouped devices simultaneously.

Note As part of the initial configuration, the system schedules weekly downloads. We recommend you review this task and make changes if necessary, as described in [Automating Software Downloads, on page 11](#). This task only downloads the updates. It is your responsibility to install any updates this task downloads.

Related Topics

[Management Interfaces](#)
[Updates](#)

Automating Software Downloads

Use this procedure to schedule the download of select patches and maintenance releases. You must be in the global domain.

Before you begin

Make sure the FMC can access the internet.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Download Latest Update**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
 - For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** Next to **Update Items**, check **Software** check box.
- Step 7** If you want to comment on the task, type a comment in the **Comment** field.

The comment field appears in the Task Details section of the schedule calendar page; keep comments brief.

- Step 8** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 9** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Automating Software Pushes

If you want to automate the installation of software updates on managed devices, you must push the updates to the devices before installing.

When you create the task to push software updates to managed devices, make sure you allow enough time between the push task and a scheduled install task for the updates to be copied to the device.

You must be in the global domain to perform this task.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Push Latest Update**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** From the **Device** drop-down list, select the device that you want to update.
- Step 7** If you want to comment on the task, type a comment in the **Comment** field.
- The comment field appears in the Task Details section of the schedule calendar page; keep comments brief.
- Step 8** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 9** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Automating Software Installs

Make sure you allow enough time between the task that pushes the update to a managed device and the task that installs the update.

You must be in the global domain to perform this task.

Caution Depending on the update being installed, the appliance may reboot after the software is installed.

Procedure

- Step 1** Select **System** (⚙) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Install Latest Update**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** From the **Device** drop-down list, select the appliance (including the FMC) where you want to install the update.
- Step 7** Next to **Update Items**, check the **Software** check box.
- Step 8** If you want to comment on the task, type a comment in the **Comment** field.
- The comment field appears in the Task Details section of the schedule calendar page; keep comments brief.
- Step 9** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 10** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Vulnerability Database Update Automation

You can use the scheduling feature to update the Cisco vulnerability database (VDB), thereby ensuring that you are using the most up-to-date information to evaluate the hosts on your network. You must schedule the download, install, and subsequent deploy as separate tasks, allowing enough time between tasks.

Note The initial setup on the FMC automatically downloads and installs the latest VDB from Cisco as a one-time operation. Optionally, schedule tasks to download and install VDB updates and deploy configurations.

Related Topics

[Management Interfaces](#)

Automating VDB Update Downloads

You must be in the global domain to perform this task.

Before you begin

Make sure the FMC has internet access.

Procedure

-
- Step 1** Select **System** (⚙️) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Download Latest Update**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.
 - For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.
- Step 5** Type a name in the **Job Name** field.
- Step 6** Next to **Update Items**, check the **Vulnerability Database** check box.
- Step 7** (Optional) Type a brief comment in the **Comment** field.
- Step 8** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 9** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Automating VDB Update Installs

Allow enough time between the task that downloads the VDB update and the task that installs the update.

You must be in the global domain to perform this task.

Caution In most cases, the first deploy after a VDB update restarts the Snort process, interrupting traffic inspection. The system warns you when this will happen (updated application detectors and operating system fingerprints require a restart; vulnerability information does not). Whether traffic drops or passes without further inspection during this interruption depends on how the targeted device handles traffic. For more information, see [Snort Restart Traffic Behavior](#).

Procedure

-
- Step 1** Select **System** (⚙️) > **Tools** > **Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Install Latest Update**.
- Step 4** Specify how you want to schedule the task, **Once** or **Recurring**:

- For one-time tasks, use the drop-down lists to specify the start date and time.
- For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.

- Step 5** Type a name in the **Job Name** field.
- Step 6** From the **Device** drop-down list, select the FMC.
- Step 7** Next to **Update Items**, check the **Vulnerability Database** check box.
- Step 8** (Optional) Type a brief comment in the **Comment** field.
- Step 9** If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.
- Step 10** Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Automating URL Filtering Updates Using a Scheduled Task

In order to ensure that threat data for URL filtering is current, the system must obtain data updates from the Cisco Collective Security Intelligence (CSI) cloud.

By default, when you enable URL filtering, automatic updates are enabled. However, if you need to control when these updates occur, use the procedure described in this topic instead of the default update mechanism.

Although daily updates tend to be small, if it has been more than five days since your last update, new URL filtering data may take up to 20 minutes to download, depending on your bandwidth. Then, it may take up to 30 minutes to perform the update itself.

Before you begin

- Ensure the FMC has internet access; see [Security, Internet Access, and Communication Ports](#).
- Ensure that URL filtering is enabled. For more information, see the *Enable URL Filtering Using Category and Reputation* in the [Firepower Management Center Device Configuration Guide](#).
- Verify that **Enable Automatic Updates** is not selected on the **Cloud Services** under the **System (⚙️) > Integration** menu.
- You must be in the global domain to perform this task. You must also have the URL Filtering license.

Procedure

- Step 1** Select **System (⚙️) > Tools > Scheduling**.
- Step 2** Click **Add Task**.
- Step 3** From the **Job Type** list, select **Update URL Filtering Database**.
- Step 4** Specify how you want to schedule the update, **Once** or **Recurring**:
- For one-time tasks, use the drop-down lists to specify the start date and time.

- For recurring tasks, see [Configuring a Recurring Task, on page 2](#) for details.

Step 5 Type a name in the **Job Name** field.

Step 6 If you want to comment on the task, type a comment in the **Comment** field.

The comment field appears in the Task Details section of the schedule calendar page; keep comments brief.

Step 7 If you want to email task status messages, type an email address (or multiple email addresses separated by commas) in the **Email Status To:** field. You must have a valid email relay server configured to send status messages.

Step 8 Click **Save**.

Related Topics

[Configuring a Mail Relay Host and Notification Address](#)

Scheduled Task Review

After adding scheduled tasks, you can view them and evaluate their status. The View Options section of the page allows you to view scheduled tasks using a calendar and a list of scheduled tasks.

The Calendar view option allows you to view which scheduled tasks occur on which day.

The Task List shows a list of tasks along with their status. The task list appears below the calendar when you open the calendar. In addition, you can view it by selecting a date or task from the calendar.

You can edit a scheduled task that you previously created. This feature is especially useful if you want to test a scheduled task once to make sure that the parameters are correct. Later, after the task completes successfully, you can change it to a recurring task.

There are two types of deletions you can perform from the Schedule View page. You can delete a specific one-time task that has not yet run or you can delete every instance of a recurring task. If you delete an instance of a recurring task, all instances of the task are deleted. If you delete a task that is scheduled to run once, only that task is deleted.

Task List Details

Table 1: Task List Columns
