

New and Changed Information 1

Preface 1

- Audience 1
- Organization 1
- Document Conventions 2
- Related Documentation 3
 - Release Notes 3
 - Regulatory Compliance and Safety Information 3
 - Compatibility Information 3
 - Hardware Installation 3
 - Software Installation and Upgrade 4
 - Cisco NX-OS 4
 - Command-Line Interface 4
 - Intelligent Storage Networking Services Configuration Guides 4
 - Troubleshooting and Reference 4
- Obtaining Documentation and Submitting a Service Request 5

CHAPTER 1

Fabric Overview 1-1

- Virtual SANs 1-1
- Dynamic Port VSAN Membership 1-2
- SAN Device Virtualization 1-2
- Zoning 1-2
- Distributed Device Alias Services 1-3
- Fibre Channel Routing Services and Protocols 1-3
- Multiprotocol Support 1-3

CHAPTER 2

Configuring and Managing VSANs 2-1

- About VSANs 2-1
 - VSANs Topologies 2-2
 - VSAN Advantages 2-3
 - VSANs Versus Zones 2-4
- VSAN Configuration 2-5
- VSAN Creation 2-6

- Creating VSANs Statically 2-6
- Creating VSANs 2-6
- Port VSAN Membership 2-7
- Assigning Static Port VSAN Membership 2-7
- Displaying VSAN Static Membership 2-8
- Default VSAN 2-9
- Isolated VSAN 2-9
- Displaying Isolated VSAN Membership 2-9
- Operational State of a VSAN 2-9
- Static VSAN Deletion 2-9
- Deleting Static VSANs 2-10
- Load Balancing 2-11
- Configuring Load Balancing 2-11
- Interop Mode 2-11
- FICON VSANs 2-11
- Displaying Static VSAN Configuration 2-11
- Default Settings 2-12
- Displaying Fabric Switch Information 2-13

CHAPTER 3

Creating Dynamic VSANs 3-1

- About DPVM 3-1
 - About DPVM Configuration 3-2
 - Enabling DPVM 3-2
 - About DPVM Databases 3-3
 - Configuring DPVM Config and Pending Databases 3-3
 - Activating DPVM Config Databases 3-4
 - About Autolearned Entries 3-4
 - Enabling Autolearning 3-5
 - Clearing Learned Entries 3-5
- DPVM Database Distribution 3-5
 - About DPVM Database Distribution 3-6
 - Disabling DPVM Database Distribution 3-6
 - About Locking the Fabric 3-6
 - Locking the Fabric 3-7
 - Committing Changes 3-7
 - Discarding Changes 3-8
 - Clearing a Locked Session 3-8
- Database Merge Guidelines 3-8
 - About Copying DPVM Databases 3-9

Copying DPVM Databases	3-9
Comparing Database Differences	3-9
Displaying DPVM Merge Status and Statistics	3-10
Displaying DPVM Configurations	3-10
Sample DPVM Configuration	3-11
Default Settings	3-14

CHAPTER 4**Configuring and Managing Zones 4-1**

About Zoning	4-1
Zoning Example	4-2
Zone Implementation	4-3
Zone Member Configuration Guidelines	4-4
Active and Full Zone Set Considerations	4-4
Zone Configuration	4-6
Configuring a Zone	4-7
Zone Sets	4-8
Zone Set Creation	4-8
Activating a Zone Set	4-10
Default Zone	4-10
Configuring the Default Zone Access Permission	4-11
About FC Alias Creation	4-11
Creating FC Aliases	4-12
Creating Zone Sets and Adding Member Zones	4-13
Zone Enforcement	4-15
Zone Set Distribution	4-15
Enabling Full Zone Set Distribution	4-15
Enabling a One-Time Distribution	4-16
About Recovering from Link Isolation	4-16
Importing and Exporting Zone Sets	4-17
Zone Set Duplication	4-18
Copying Zone Sets	4-18
About Backing Up and Restoring Zones	4-18
Renaming Zones, Zone Sets, and Aliases	4-19
Cloning Zones, Zone Sets, FC Aliases, and Zone Attribute Groups	4-19
Clearing the Zone Server Database	4-19
Advanced Zone Attributes	4-20
About Zone-Based Traffic Priority	4-20
Configuring Zone-Based Traffic Priority	4-21
Configuring Default Zone QoS Priority Attributes	4-21

- About Broadcast Zoning 4-22
- Configuring Broadcast Zoning 4-23
- About Smart Zoning 4-23
- Smart Zoning Member Configuration 4-24
- Enabling Smart Zoning on a VSAN 4-24
- Setting Default Value for Smart Zoning 4-25
- Converting Zones Automatically to Smart Zoning 4-25
- Configuring Device Types for Zone Members 4-25
- Removing Smart Zoning Configuration 4-26
- Disabling Smart Zoning at Zone Level 4-26
- About LUN Zoning 4-27
- Configuring a LUN-Based Zone 4-28
- Assigning LUNs to Storage Subsystems 4-28
- About Read-Only Zones 4-28
- Configuring Read-Only Zones 4-29
- Displaying Zone Information 4-29
- Enhanced Zoning 4-38
 - About Enhanced Zoning 4-38
 - Changing from Basic Zoning to Enhanced Zoning 4-39
 - Changing from Enhanced Zoning to Basic Zoning 4-40
 - Enabling Enhanced Zoning 4-40
 - Modifying the Zone Database 4-41
 - Enabling Zone Pending Diff Display 4-41
 - Releasing Zone Database Locks 4-42
 - Creating Attribute Groups 4-42
 - Merging the Database 4-43
 - Configuring Zone Merge Control Policies 4-52
 - Preventing Zones From Flooding FC2 Buffers 4-52
 - Permitting or Denying Traffic in the Default Zone 4-53
 - Broadcasting a Zone 4-53
 - Configuring System Default Zoning Settings 4-54
 - Configuring Zone Generic Service Permission Settings 4-55
 - Displaying Enhanced Zone Information 4-55
- Compacting the Zone Database for Downgrading 4-58
- Zone and Zone Set Analysis 4-58
- Default Settings 4-61

CHAPTER 5

Distributing Device Alias Services 5-79

- About Device Aliases 5-79

About Device Alias Modes	5-79
Changing Mode Settings	5-80
Device Alias Mode Distribution	5-80
Merging Device Alias	5-80
Resolving Merge and Device Alias Mode Mismatch	5-81
Device Alias Features	5-81
Device Alias Requirements	5-82
Zone Aliases Versus Device Aliases	5-82
Device Alias Databases	5-83
Creating Device Aliases	5-83
About Device Alias Distribution	5-84
About Creating a Device Alias	5-84
About Device Alias Configuration Best Practices	5-84
Committing Changes	5-85
Enabling the Device Alias Pending Diff Display	5-86
5-86	
Discarding Changes	5-86
Fabric Lock Override	5-87
Disabling and Enabling Device Alias Distribution	5-87
About Legacy Zone Alias Configuration Conversion	5-88
Importing a Zone Alias	5-88
Device Alias Statistics Cleanup	5-89
Database Merge Guidelines	5-89
Device Alias Configuration Verification	5-89
Default Settings	5-92

CHAPTER 6**Configuring Fibre Channel Routing Services and Protocols 6-1**

About FSPF	6-2
FSPF Examples	6-2
FSPF Global Configuration	6-4
About SPF Computational Hold Times	6-4
About Link State Record Defaults	6-4
Configuring FSPF on a VSAN	6-5
Resetting FSPF to the Default Configuration	6-5
Enabling or Disabling FSPF	6-6
Clearing FSPF Counters for the VSAN	6-6
FSPF Interface Configuration	6-6
About FSPF Link Cost	6-6
Configuring FSPF Link Cost	6-7

- About Hello Time Intervals 6-7
- Configuring Hello Time Intervals 6-7
- About Dead Time Intervals 6-7
- Configuring Dead Time Intervals 6-8
- About Retransmitting Intervals 6-8
- Configuring Retransmitting Intervals 6-8
- About Disabling FSPF for Specific Interfaces 6-8
- Disabling FSPF for Specific Interfaces 6-9
- Clearing FSPF Counters for an Interface 6-9
- FSPF Routes 6-9
 - About Fibre Channel Routes 6-10
 - About Broadcast and Multicast Routing 6-11
 - About Multicast Root Switch 6-11
 - Setting the Multicast Root Switch 6-11
- In-Order Delivery 6-12
 - About Reordering Network Frames 6-12
 - About Reordering PortChannel Frames 6-13
 - About Enabling In-Order Delivery 6-13
 - Enabling In-Order Delivery Globally 6-14
 - Enabling In-Order Delivery for a VSAN 6-14
 - Displaying the In-Order Delivery Status 6-14
 - Configuring the Drop Latency Time 6-15
 - Displaying Latency Information 6-15
- Flow Statistics Configuration 6-16
 - About Flow Statistics 6-16
 - Counting Aggregated Flow Statistics 6-16
 - Counting Individual Flow Statistics 6-17
 - Clearing FIB Statistics 6-17
 - Displaying Flow Statistics 6-17
 - Displaying Global FSPF Information 6-18
 - Displaying the FSPF Database 6-18
 - Displaying FSPF Interfaces 6-20
- Default Settings 6-20

CHAPTER 7

Configuring Dense Wavelength Division Multiplexing 7-1

- About DWDM 7-1
- Configuring X2 DWDM Transceiver Frequency 7-1

CHAPTER 8**Managing FLOGI, Name Server, FDMI, and RSCN Databases 8-1**

- About FLOGI 8-1
 - Displaying FLOGI Details 8-1
- Name Server 8-3
 - Bulk Notification Sent from the Name Server 8-3
 - Enabling Name Server Bulk Notification 8-3
 - Disabling Name Server Bulk Notification 8-4
 - Name Server Proxy Registration 8-4
 - Registering Name Server Proxies 8-5
 - About Rejecting Duplicate pWWN 8-5
 - Rejecting Duplicate pWWNs 8-5
 - Name Server Database Entries 8-5
 - Optimizing Name Server Database Sync 8-5
 - Verifying the Number of Name Server Database Entries 8-6
 - Displaying Name Server Database Entries 8-6
- FDMI 8-7
 - Displaying FDMI 8-8
- RSCN 8-9
 - About RSCN Information 8-10
 - Displaying RSCN Information 8-10
 - multi-pid Option 8-11
 - Configuring the multi-pid Option 8-12
 - Suppressing Domain Format SW-RSCNs 8-12
 - Coalesced SW-RSCN 8-12
 - Enabling Coalesced SW-RSCNs 8-12
 - Disabling Coalesced SW-RSCNs 8-13
 - Clearing RSCN Statistics 8-13
 - RSCN Timer Configuration Distribution Using CFS 8-14
 - Configuring the RSCN Timer 8-14
 - Verifying the RSCN Timer Configuration 8-15
 - RSCN Timer Configuration Distribution 8-15
 - Default Settings 8-18
 - Enabling Port Pacing 8-18

CHAPTER 9**Discovering SCSI Targets 9-1**

- About SCSI LUN Discovery 9-1
 - About Starting SCSI LUN Discovery 9-1
 - Starting SCSI LUN Discovery 9-2

About Initiating Customized Discovery 9-2
 Initiating Customized Discovery 9-2
 Displaying SCSI LUN Information 9-2

CHAPTER 10

Configuring FICON 10-1

About FICON 10-1
 FICON Requirements 10-2
 MDS-Specific FICON Advantages 10-3
 FICON Cascading 10-7
 FICON VSAN Prerequisites 10-7
 FICON Port Numbering 10-7
 Default FICON Port Numbering Scheme 10-8
 Port Addresses 10-10
 Implemented and Unimplemented Port Addresses 10-11
 About the Reserved FICON Port Numbering Scheme 10-11
 Installed and Uninstalled Ports 10-11
 FICON Port Numbering Guidelines 10-12
 Assigning FICON Port Numbers to Slots 10-12
 Displaying the FICON Port Number Assignments 10-12
 About Port Numbers for FCIP and PortChannel 10-13
 Reserving FICON Port Numbers for FCIP and PortChannel Interfaces 10-13
 FC ID Allocation 10-14
 Configuring FICON 10-15
 About Enabling FICON on a VSAN 10-15
 Enabling FICON on the Switch 10-16
 Setting Up a Basic FICON Configuration 10-16
 Manually Enabling FICON on a VSAN 10-19
 Configuring the code-page Option 10-20
 Allowing the Host to Move the Switch Offline 10-20
 Allowing the Host to Change FICON Port Parameters 10-21
 Allowing the Host to Control the Timestamp 10-21
 Clearing the Time Stamp 10-21
 Configuring SNMP Control of FICON Parameters 10-22
 About FICON Device Allegiance 10-22
 Clearing FICON Device Allegiance 10-22
 Automatically Saving the Running Configuration 10-22
 Configuring FICON Ports 10-24
 Binding Port Numbers to PortChannels 10-24
 Binding Port Numbers to FCIP Interfaces 10-24

Configuring Port Blocking	10-25
Port Prohibiting	10-25
Assigning a Port Address Name	10-27
About RLIR	10-27
Specifying an RLIR Preferred Host	10-27
Displaying RLIR Information	10-28
Clearing RLIR Information	10-32
FICON Configuration Files	10-32
About FICON Configuration Files	10-33
Applying the Saved Configuration Files to the Running Configuration	10-33
Editing FICON Configuration Files	10-33
Displaying FICON Configuration Files	10-34
Copying FICON Configuration Files	10-35
Port Swapping	10-36
About Port Swapping	10-37
Swapping Ports	10-37
FICON Tape Acceleration	10-38
Configuring FICON Tape Acceleration	10-40
Configuring FICON Tape Read Acceleration	10-41
Configuring XRC Acceleration	10-42
Moving a FICON VSAN to an Offline State	10-42
CUP In-Band Management	10-42
Placing CUPs in a Zone	10-43
Displaying Control Unit Information	10-43
Displaying FICON Information	10-44
Receiving FICON Alerts	10-44
Displaying FICON Port Address Information	10-45
Displaying FICON Configuration File Information	10-46
Displaying the Configured FICON State	10-47
Displaying a Port Administrative State	10-48
Displaying Buffer Information	10-48
Viewing the History Buffer	10-49
Displaying FICON Information in the Running Configuration	10-49
Displaying FICON Information in the Startup Configuration	10-50
Displaying FICON-Related Log Information	10-51
Default Settings	10-51

SSL Certificate Requirements and Format	11-2
Configuring the CIM Server	11-2
Displaying CIM Information	11-3
Fibre Channel Time-Out Values	11-5
Timer Configuration Across All VSANs	11-6
Timer Configuration Per-VSAN	11-6
About fctimer Distribution	11-7
Enabling fctimer Distribution	11-7
Committing fctimer Changes	11-7
Discarding fctimer Changes	11-8
Fabric Lock Override	11-8
Database Merge Guidelines	11-8
Displaying Configured fctimer Values	11-9
World Wide Names	11-9
Displaying WWN Information	11-10
Link Initialization WWN Usage	11-10
Configuring a Secondary MAC Address	11-11
FC ID Allocation for HBAs	11-11
Default Company ID List	11-11
Verifying the Company ID Configuration	11-12
Switch Interoperability	11-13
About Interop Mode	11-13
Configuring Interop Mode 1	11-16
Default Settings	11-20
CHAPTER 12	Configuring Fibre Channel Common Transport Management Security
	12-1
About Fibre Channel Common Transport	12-1
Configuration Guidelines	12-1
Configuring the Fibre Channel Common Transport Query	12-2
Verifying Fibre Channel Common Transport Management Security	12-2
Default Settings	12-3
