

Upgrading a Standalone VSM

This chapter contains the following sections:

- [Upgrading a System with a Standalone VSM, page 1](#)
- [Upgrading a Standalone VSM, page 1](#)

Upgrading a System with a Standalone VSM

Upgrading a Standalone VSM

Note

The example may contain Cisco Nexus 1000V versions and filenames that are not relevant to your release. Refer to the *Cisco Nexus 1000V and VMware Compatibility Information* for your specific versions and filenames.

Procedure

Step 1 Log in to the VSM on the console.

Step 2 Log in to Cisco.com to access the links provided in this document.

To log in, go to the URL <http://www.cisco.com/> and click **Log In** at the top of the page. Enter your Cisco username and password.

Note Unregistered Cisco.com users cannot access the links provided in this document.

Step 3 Access the Software Download Center by using this URL: <http://www.cisco.com/public/sw-center/index.shtml>

Step 4 Navigate to the download site for your switch.

You see links to the download images for your switch.

Step 5 Select and download the Cisco Nexus 1000V zip file and extract the kickstart and system software files to a server.

Step 6 Ensure that the required space is available for the image files to be copied.

```
switch# dir bootflash:
.
.
.
Usage for bootflash://
 485830656 bytes used
1109045248 bytes free
1594875904 bytes total
```

Tip We recommend that you have the kickstart and system image files for at least one previous release of the Cisco Nexus 1000V software on the system to use if the new image files do not load successfully.

Step 7 Delete unnecessary files to make space available if you need more space on the VSM bootflash,

Step 8 If you plan to install the images from the bootflash:, copy the Cisco Nexus 1000V kickstart and system images to the active VSM bootflash using a transfer protocol. You can use ftp:, tftp:, scp:, or sftp:. The examples in this procedure use scp:.

Note When you download an image file, change to your FTP environment IP address or DNS name and the path where the files are located.

```
switch# copy scp://user@scpserver.cisco.com/downloads/
nexus-1000v-kickstart.5.2.1.SV3.1.3.bin
switch# copy scp://user@scpserver.cisco.com/downloads/
nexus-1000v-kickstart.5.2.1.SV3.1.3.bin
```

Step 9 Read the release notes for the related image file. See the *Cisco Nexus 1000V Release Notes*.

Step 10 Determine the VSM status.

```
switch# show system redundancy status
Redundancy role
-----
      administrative:  standalone
      operational:    standalone

Redundancy mode
-----
      administrative:  HA
      operational:    None

This supervisor (sup-1)
-----
      Redundancy state:  Active
      Supervisor state:  Active
      Internal state:   Active with no standby

Other supervisor (sup-2)
-----
      Redundancy state:  Not present
```

Step 11 Save the running configuration to the start configuration.

```
switch# copy running-config startup-config
```

Step 12 Update the boot variables and module images on the VSM.

```
switch# install all system bootflash:nexus-1000v.5.2.1.SV3.1.3.bin kickstart
bootflash: nexus-1000v-kickstart.5.2.1.SV3.1.3.bin
```

```
Verifying image bootflash:/nexus-1000v-kickstart-5.2.1.SV3.1.3.bin for boot variable
"kickstart".
[#####] 100% -- SUCCESS
```

```

Verifying image bootflash:/nexus-1000v-5.2.1.SV3.1.3.bin for boot variable "system".
[#####] 100% -- SUCCESS

Verifying image type.
[#####] 100% -- SUCCESS

Extracting "system" version from image bootflash:/nexus-1000v.5.2.1.SV3.1.3.bin.
[#####] 100% -- SUCCESS

Extracting "kickstart" version from image bootflash:/nexus-1000v-kickstart.5.2.1.SV3.1.3.bin.
[#####] 100% -- SUCCESS

Notifying services about system upgrade.
[#####] 100% -- SUCCESS
    
```

```

Compatibility check is done:
Module  bootable          Impact  Install-type  Reason
-----  -
      1      yes      disruptive      reset  Reset due to single supervisor
    
```

```

Images will be upgraded according to following table:
Module  Image          Running-Version  New-Version  Upg-Required
-----  -
      1      system        4.2(1)SV2(2.1)  5.2(1)SV3(1.3)  yes
      1  kickstart    4.2(1)SV2(2.1)  5.2(1)SV3(1.3)  yes
    
```

```

Module  Running-Version  ESX Version          VSM Compatibility  ESX Compatibility
-----  -
      3  4.2(1)SV2(2.1)  VMware ESXi 5.0.0   COMPATIBLE         COMPATIBLE
                          Releasebuild-1311175 (3.0)
    
```

```

Switch will be reloaded for disruptive upgrade.
Do you want to continue with the installation (y/n)? [n]
    
```

Step 13 Continue with the installation by pressing Y.

Note If you press N, the installation exits gracefully.

Install is in progress, please wait.

```

Setting boot variables.
[#####] 100% -- SUCCESS
    
```

```

Performing configuration copy.
[#####] 100% -- SUCCESS
    
```

Finishing the upgrade, switch will reboot in 10 seconds.

Step 14 After the switch completes the reload operation, log in and verify that the switch is running the required software version.

Example:

```

switch# show version
Cisco Nexus Operating System (NX-OS) Software
