# Information About Switch Profiles

Several applications require consistent configuration across Cisco Nexus Series switches in the network. For example, with a Virtual Port Channel (vPC), you must have identical configurations. Mismatched configurations can cause errors or misconfigurations that can result in service disruptions.

The configuration synchronization (config-sync) feature allows you to configure one switch profile and have the configuration be automatically synchronized to the peer switch. A switch profile provides the following benefits:

- Allows configurations to be synchronized between switches.
- Merges configurations when connectivity is established between two switches.
- Provides control of exactly which configuration gets synchronized.
- Ensures configuration consistency across peers through merge and mutual-exclusion checks.
- Provides verify and commit semantics.
- Supports configuring and synchronizing port profile configurations.
- Provides an import command to migrate existing vPC configurations to a switch profile.

## Switch Profile Configuration Modes

The switch profile feature includes the following configuration modes:

- Configuration Synchronization Mode
- Switch Profile Mode
- Switch Profile Import Mode

### Configuration Synchronization Mode

The configuration synchronization mode (config-sync) allows you to create switch profiles using the **config sync** command on the local switch that you want to use as the master. After you create the profile, you can enter the **config sync** command on the peer switch that you want to synchronize.

### Switch Profile Mode

The switch profile mode allows you to add supported configuration commands to a switch profile that is later synchronized with a peer switch. Commands that you enter in the switch profile mode are buffered until you enter the **commit** command.

### Switch Profile Import Mode

When you upgrade from an earlier release, you have the option to enter the **import** command to copy supported running-configuration commands to a switch profile. After entering the **import** command, the switch profile mode (config-sync-sp) changes to the switch profile import mode (config-sync-sp-import). The switch profile import mode allows you to import existing switch configurations from the running configuration and specify which commands you want to include in the switch profile.

Because different topologies require different commands that are included in a switch profile, the **import** command mode allows you to modify the imported set of commands to suit a specific topology. For example, a dual homed Fabric Extender (FEX) topology requires that most of the configuration is synchronized. In other vPC topologies, the configuration that needs to be synchronized might be a much smaller set of commands.

You need to enter the **commit** command to complete the import process and move the configuration into the switch profile. Because configuration changes are not supported during the import process, if you added new commands before entering the **commit** command, the switch profile remains unsaved and the switch remains in the switch profile import mode. You can remove the added commands or abort the import. Unsaved configurations are lost if the process is aborted. You can add new commands to the switch profile after the import is complete.

## Configuration Validation

Two types of configuration validation checks can identify two types of switch profile failures:

- Mutual Exclusion Checks
- Merge Checks

### Mutual Exclusion Checks

To reduce the possibility of overriding configuration settings that are included in a switch profile, mutual exclusion (mutex) checks the switch profile commands against the commands that exist on the local switch and the commands on the peer switch. A command that is included in a switch profile cannot be configured outside of the switch profile or on a peer switch. This requirement reduces the possibility that an existing command is unintentionally overwritten.

As a part of the commit process, the mutex-check occurs on both switches if the peer switch is reachable; otherwise, the mutex-check is performed locally. Configuration changes made from the configuration terminal occur only on the local switch.

If a mutex-check identifies errors, they are reported as mutex failures and they must be manually corrected.

The following exceptions apply to the mutual exclusion policy:

- Interface configuration—Port channel interfaces must be configured fully in either switch profile mode or global configuration mode.

**Note** Several port channel subcommands are not configurable in switch profile mode. These commands can be configured from global configuration mode even if the port channel is created and configured in switch profile mode.

For example, the following command can only be configured in global configuration mode:

```
switchport private-vlan association trunk primary-vlan secondary-vlan
```

- Shutdown/no shutdown
- System QoS

### Merge Checks

Merge checks are done on the peer switch that is receiving a configuration. The merge checks ensure that the received configuration does not conflict with the switch profile configuration that already exists on the receiving switch. The merge check occurs during the merge or commit process. Errors are reported as merge failures and must be manually corrected.

When one or both switches are reloaded and the configurations are synchronized for the first time, the merge check verifies that the switch profile configurations are identical on both switches. Differences in the switch profiles are reported as merge errors and must be manually corrected.

## Software Upgrades and Downgrades with Switch Profiles

When you downgrade to an earlier release, you are prompted to remove an existing switch profile that is not supported on earlier releases.

When you upgrade from an earlier release, you have the option to move some of the running-configuration commands to a switch profile. The **import** command allows you to import relevant switch profile commands. An upgrade can occur if there are buffered configurations (uncommitted); however, the uncommitted configurations are lost.

When you perform an In Service Software Upgrade (ISSU) on one of the switches included in a switch profile, a configuration synchronization cannot occur because the peer is unreachable.

## Prerequisites for Switch Profiles

Switch profiles have the following prerequisites:

- You must enable Cisco Fabric Series over IP (CFS over IP) distribution over mgmt0 on both switches by entering the **cfs ipv4 distribute** command.
- You must configure a switch profile with the same name on both peer switches by entering the **config sync** and **switch-profile** commands.
- Configure each switch as peer switch by entering the **sync-peers destination** command

## Guidelines and Limitations for Switch Profiles

The Switch profile has the following guidelines and limitations:

- You can only enable configuration synchronization using the mgmt0 interface.
- Configuration synchronization is performed using the mgmt 0 interface and cannot be performed using a management SVI.
- You must configure synchronized peers with the same switch profile name.
- Commands that are qualified for a switch profile configuration are allowed to be configured in the configuration switch profile (config-sync-sp) mode.
- Supported switch profile commands relate to virtual port channel (vPC) commands. Fiber Channel over Ethernet (FCoE) commands are not supported.

- One switch profile session can be in progress at a time. Attempts to start another session will fail.
- Supported command changes made from the configuration terminal mode are blocked when a switch profile session is in progress. You should not make unsupported command changes from the configuration terminal mode when a switch profile session is in progress.
- When you enter the **commit** command and a peer switch is reachable, the configuration is applied to both peer switches or neither switch. If there is a commit failure, the commands remain in the switch profile buffer. You can then make necessary corrections and try the commit again.
- We recommend that you enable preprovisioning for all Generic Expansion Modules (GEMs) and Cisco Nexus Fabric Extender modules whose interface configurations are synchronized using the configuration synchronization feature. Follow these guidelines in Cisco Nexus Fabric Extender active/active topologies where the Fabric Extenders might not be online on one switch and its configuration is changed and synchronized on the other switch. In this scenario, if you do not enable preprovisioning, a commit fails and the configuration is rolled back on both switches.
- Once a port channel is configured using switch profile mode, it cannot be configured using global configuration (config terminal) mode.

**Note**

Several port channel subcommands are not configurable in switch profile mode. These commands can be configured from global configuration mode even if the port channel is created and configured in switch profile mode.

For example, the following command can only be configured in global configuration mode:

```
switchport private-vlan association trunk primary-vlan secondary-vlan
```

- Shutdown and no shutdown can be configured in either global configuration mode or switch profile mode.
- If a port channel is created in global configuration mode, channel groups including member interfaces must also be created using global configuration mode.
- Port channels that are configured within switch profile mode may have members both inside and outside of a switch profile.
- If you want to import a member interface to a switch profile, the port channel including the member interface must also be present within the switch profile.

### Guidelines for Synchronizing After Reboot, Connectivity Loss, or Failure

- Synchronizing configurations after vPC peer link failure— If both switches are operational when a peer link fails, the secondary switch shuts down its vPC ports. In a Fabric Extender A/A topology, the A/A Fabric Extender disconnects from the secondary switch. If the configuration is changed using a switch profile on the primary switch, configurations are not accepted on the secondary switch unless the A/A Fabric Extender is preprovisioned. When using the configuration synchronization feature, we recommend that you preprovision all A/A Fabric Extenders.
- Synchronizing configurations after mgmt0 interface connectivity loss—When mgmt0 interface connectivity is lost and configuration changes are required, apply the configuration changes on both switches using the switch profile. When connectivity to the mgmt0 interface is restored, both switches synchronize automatically.

If a configuration change is made on only one switch, a merge occurs when the mgmt0 interface comes up and the configuration is applied on the other switch.

- Synchronizing configurations when an ISSU is performed on one switch and a configuration change is made on the peer switch—In a vPC topology, configuration changes on the peer switch are not allowed when an ISSU is performed on the other switch. In topologies without vPCs, configuration changes are allowed and the switch undergoing an ISSU synchronizes new configurations when the upgrade is complete.

## Configuring Switch Profiles

You can create and configure a switch profile. Enter the **switch-profile** *name* command in the configuration synchronization mode (config-sync).

### Before You Begin

You must create the switch profile with the same name on each switch and the switches must configure each other as a peer. When connectivity is established between switches with the same active switch profile, the switch profiles are synchronized.

### SUMMARY STEPS

1. **configure terminal**
2. **cfs ipv4 distribute**
3. **config sync**
4. **switch-profile** *name*
5. **sync-peers destination** *IP-address*
6. (Optional) **show switch-profile** *name* **status**
7. **exit**
8. (Optional) **copy running-config startup-config**

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>configure terminal</b>  <b>Example:</b> switch# configure terminal switch(config)#	Enters global configuration mode.
Step 2	<b>cfs ipv4 distribute</b>  <b>Example:</b> switch(config)# cfs ipv4 distribute switch(config)#	Enables CFS distribution between the peer switches.

	Command or Action	Purpose
<b>Step 3</b>	<b>config sync</b>  <b>Example:</b> switch# config sync switch(config-sync)#	Enters configuration synchronization mode.
<b>Step 4</b>	<b>switch-profile name</b>  <b>Example:</b> switch(config-sync)# switch-profile abc switch(config-sync-sp)#	Configures the switch profile, names the switch profile, and enters switch profile synchronization configuration mode.
<b>Step 5</b>	<b>sync-peers destination IP-address</b>  <b>Example:</b> switch(config-sync-sp)# sync-peers destination 10.1.1.1 switch(config-sync-sp)#	Configures the peer switch.
<b>Step 6</b>	<b>show switch-profile name status</b>  <b>Example:</b> switch(config-sync-sp)# show switch-profile abc status switch(config-sync-sp)#	(Optional) Views the switch profile on the local switch and the peer switch information.
<b>Step 7</b>	<b>exit</b>  <b>Example:</b> switch(config-sync-sp)# exit switch#	Exits the switch profile configuration mode and returns to EXEC mode.
<b>Step 8</b>	<b>copy running-config startup-config</b>  <b>Example:</b> switch(config)# copy running-config startup-config	(Optional) Saves the change persistently through reboots and restarts by copying the running configuration to the startup configuration.

The following example shows how to configure a switch profile and shows the switch profile status.

```
switch# configuration terminal
switch(config)# cfs ipv4 distribute
switch(config-sync)# switch-profile abc
switch(config-sync-sp)# sync-peers destination 10.1.1.1
switch(config-sync-sp)# show switch-profile abc status
Start-time: 15801 usecs after Mon Aug 23 06:21:08 2010
End-time: 6480 usecs after Mon Aug 23 06:21:13 2010

Profile-Revision: 1
Session-type: Initial-Exchange
Peer-triggered: Yes
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):
```

```

Peer information:
-----
IP-address: 10.1.1.1
Sync-status: In Sync.
Status: Commit Success
Error(s):
switch(config-sync-sp)# exit
switch#

```

## Adding a Switch to a Switch Profile

Enter the **sync-peers destination** *destination IP* command in switch profile configuration mode to add the switch to a switch profile.

Follow these guidelines when adding switches:

- Switches are identified by their IP address.
- Destination IPs are the IP addresses of the switches that you want to synchronize.
- The committed switch profile is synchronized with the newly added peers (when they are online) if the peer switch is also configured with configuration synchronization.

If you want to import a member interface to a switch profile, the port channel including the member interface must also be present within the switch profile.

### Before You Begin

After creating a switch profile on the local switch, you must add the second switch that will be included in the synchronization.

### SUMMARY STEPS

1. **config sync**
2. **switch-profile** *name*
3. **sync-peers destination** *destination IP*
4. **exit**
5. (Optional) **show switch-profile peer**
6. (Optional) **copy running-config startup-config**

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>config sync</b>  <b>Example:</b> switch# config sync switch(config-sync)#	Enters configuration synchronization mode.

	Command or Action	Purpose
Step 2	<b>switch-profile</b> <i>name</i>  <b>Example:</b> <pre>switch(config-sync)# switch-profile abc switch(config-sync-sp)#</pre>	Configures switch profile, names the switch profile, and enters switch profile synchronization configuration mode.
Step 3	<b>sync-peers destination</b> <i>destination IP</i>  <b>Example:</b> <pre>switch(config-sync-sp)# sync-peers destination 10.1.1.1 switch(config-sync-sp)#</pre>	Adds a switch to the switch profile.
Step 4	<b>exit</b>  <b>Example:</b> <pre>switch(config-sync-sp)# exit switch#</pre>	Exits switch profile configuration mode.
Step 5	<b>show switch-profile peer</b>  <b>Example:</b> <pre>switch# show switch-profile peer</pre>	(Optional) Displays the switch profile peer configuration.
Step 6	<b>copy running-config startup-config</b>  <b>Example:</b> <pre>switch# copy running-config startup-config</pre>	(Optional) Copies the running configuration to the startup configuration.

## Adding or Modifying Switch Profile Commands

To modify a command in a switch profile, add the modified command to the switch profile and enter the **commit** command to apply the command and synchronize the switch profile to the peer switch if it is reachable.

Follow these guidelines when adding or modifying switch profile commands:

- Commands that are added or modified are buffered until you enter the **commit** command.
- Commands are executed in the same order in which they are buffered. If there is an order-dependency for certain commands, for example, a QoS policy must be defined before being applied, you must maintain that order; otherwise, the commit might fail. You can use utility commands, such as the **show switch-profile name buffer** command, the **buffer-delete** command, or the **buffer-move** command, to change the buffer and correct the order of already entered commands.

### Before You Begin

After configuring a switch profile on the local and the peer switch, you must add and commit the supported commands to the switch profile. The commands are added to the switch profile buffer until you enter the **commit** command. The **commit** command does the following:

- Triggers the mutex check and the merge check to verify the synchronization.

- Creates a checkpoint with a rollback infrastructure.
- Applies the configuration on the local switch and the peer switch.
- Executes a rollback on all switches if there is a failure with an application on any of the switches in the switch profile.
- Deletes the checkpoint.

## SUMMARY STEPS

1. **config sync**
2. **switch-profile name**
3. *Command argument*
4. (Optional) **show switch-profile name buffer**
5. **verify**
6. **commit**
7. (Optional) **show switch-profile name status**
8. **exit**
9. (Optional) **copy running-config startup-config**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>config sync</b>  <b>Example:</b> <pre>switch# config sync switch(config-sync)#</pre>	Enters configuration synchronization mode.
<b>Step 2</b>	<b>switch-profile name</b>  <b>Example:</b> <pre>switch(config-sync)# switch-profile abc switch(config-sync-sp)#</pre>	Configures the switch profile, names the switch profile, and enters switch profile synchronization configuration mode.
<b>Step 3</b>	<i>Command argument</i>  <b>Example:</b> <pre>switch(config-sync-sp)# interface Port-channel100 switch(config-sync-sp-if)# speed 1000 switch(config-sync-sp-if)# interface Ethernet1/1 switch(config-sync-sp-if)# speed 1000 switch(config-sync-sp-if)# channel-group 100</pre>	Adds a command to the switch profile.
<b>Step 4</b>	<b>show switch-profile name buffer</b>  <b>Example:</b> <pre>switch(config-sync-sp)# show switch-profile abc buffer switch(config-sync-sp)#</pre>	(Optional) Displays the configuration commands in the switch profile buffer.

	Command or Action	Purpose
Step 5	<b>verify</b>  <b>Example:</b> switch(config-sync-sp)# verify	Verifies the commands in the switch profile buffer.
Step 6	<b>commit</b>  <b>Example:</b> switch(config-sync-sp)# commit	Saves the commands in the switch profile and synchronizes the configuration with the peer switch.
Step 7	<b>show switch-profile name status</b>  <b>Example:</b> switch(config-sync-sp)# show switch-profile abc status switch(config-sync-sp)#	(Optional) Displays the status of the switch profile on the local switch and the status on the peer switch.
Step 8	<b>exit</b>  <b>Example:</b> switch(config-sync-sp)# exit switch#	Exits the switch profile configuration mode.
Step 9	<b>copy running-config startup-config</b>  <b>Example:</b> switch# copy running-config startup-config	(Optional) Copies the running configuration to the startup configuration.

The following example shows how to create a switch profile, configure a peer switch, and add commands to the switch profile.

```
switch# configuration terminal
switch(config)# cfs ipv4 distribute
switch(config-sync)# switch-profile abc
switch(config-sync-sp)# sync-peers destination 10.1.1.1
switch(config-sync-sp)# interface port-channel100
switch(config-sync-sp-if)# speed 1000
switch(config-sync-sp-if)# interface Ethernet1/1
switch(config-sync-sp-if)# speed 1000
switch(config-sync-sp-if)# channel-group 100
switch(config-sync-sp)# verify
switch(config-sync-sp)# commit
switch(config-sync-sp)# exit
switch#
```

The following example shows an existing configuration with a defined switch profile. The second example shows how the switch profile command changed by adding the modified command to the switch profile.

```
switch# show running-config
switch-profile abc
  interface Ethernet1/1
    switchport mode trunk
    switchport trunk allowed vlan 1-10

switch# config sync
switch(config-sync)# switch-profile abc
switch(config-sync-sp)# interface Ethernet1/1
switch(config-sync-sp-if)# switchport trunk allowed vlan 5-10
```

```
switch(config-sync-sp-if)# commit

switch# show running-config
switch-profile abc
interface Ethernet1/1
  switchport mode trunk
  switchport trunk allowed vlan 5-10
```

## Importing a Switch Profile

You can import a switch profile based on the set of commands that you want to import. Using the configuration terminal mode, you can do the following:

- Add selected commands to the switch profile.
- Add supported commands that were specified for an interface.
- Add supported system-level commands.
- Add supported system-level commands excluding the physical interface commands.

When you import commands to a switch profile, the switch profile buffer must be empty.

If new commands are added during the import, the switch profile remains unsaved and the switch remains in the switch profile import mode. You can enter the **abort** command to stop the import. For additional information importing a switch profile, see the “Switch Profile Import Mode” section.

### SUMMARY STEPS

1. **config sync**
2. **switch-profile name**
3. **import** {*interface port/slot* | *running-config* [**exclude interface ethernet**]}
4. **commit**
5. (Optional) **abort**
6. **exit**
7. (Optional) **show switch-profile**
8. (Optional) **copy running-config startup-config**

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>config sync</b>  <b>Example:</b> switch# config sync switch(config-sync)#	Enters configuration synchronization mode.
Step 2	<b>switch-profile name</b>  <b>Example:</b> switch(config-sync)# switch-profile abc switch(config-sync-sp)#	Configures the switch profile, names the switch profile, and enters switch profile synchronization configuration mode.

	Command or Action	Purpose
Step 3	<b>import</b> { <i>interface port/slot</i>   <i>running-config</i> [ <b>exclude interface ethernet</b> ] }  <b>Example:</b> <pre>switch(config-sync-sp)# import ethernet 1/2 switch(config-sync-sp-import)#</pre>	Identifies the commands that you want to import and enters switch profile import mode. <ul style="list-style-type: none"> <li>• &lt;CR&gt;—Adds selected commands.</li> <li>• <b>interface</b>—Adds the supported commands for a specified interface.</li> <li>• <b>running-config</b>—Adds supported system-level commands.</li> <li>• <b>running-config exclude interface ethernet</b>—Adds supported system-level commands excluding the physical interface commands.</li> </ul>
Step 4	<b>commit</b>  <b>Example:</b> <pre>switch(config-sync-sp-import)# commit</pre>	Imports the commands and saves the commands to the switch profile.
Step 5	<b>abort</b>  <b>Example:</b> <pre>switch(config-sync-sp-import)# abort</pre>	(Optional) Aborts the import process.
Step 6	<b>exit</b>  <b>Example:</b> <pre>switch(config-sync-sp)# exit switch#</pre>	Exits switch profile import mode.
Step 7	<b>show switch-profile</b>  <b>Example:</b> <pre>switch# show switch-profile</pre>	(Optional) Displays the switch profile configuration.
Step 8	<b>copy running-config startup-config</b>  <b>Example:</b> <pre>switch# copy running-config startup-config</pre>	(Optional) Copies the running configuration to the startup configuration.

The following example shows how to import supported system-level commands excluding the Ethernet interface commands into the switch profile named sp:

```
switch(config-vlan)# conf sync
switch(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# show switch-profile buffer

switch-profile : sp
-----
Seq-no  Command
-----
```

```

switch(config-sync-sp)# import running-config exclude interface ethernet
switch(config-sync-sp-import)#
switch(config-sync-sp-import)# show switch-profile buffer

switch-profile : sp
-----
Seq-no  Command
-----
3      vlan 100-299
4      vlan 300
4.1    state suspend
5      vlan 301-345
6      interface port-channel100
6.1    spanning-tree port type network
7      interface port-channel105

switch(config-sync-sp-import)#

```

## Importing Configurations in a vPC Topology

You can import configurations in a two-switch vPC topology.

**Note** For specific information about the following steps, see the appropriate sections in this chapter.

- 1 Configure the switch profile with the same name on both switches.
- 2 Import the configurations to both switches independently.

**Note** Ensure that the configuration moved to the switch profile on both switches is identical; otherwise, a merge-check failure might occur.

- 3 Configure the switches by entering the **sync-peer destination** command.
- 4 Verify that the switch profiles are the same by entering the appropriate show commands.

## Verifying Commands in a Switch Profile

You can verify the commands that are included in a switch profile by entering the **verify** command in switch profile mode.

### SUMMARY STEPS

1. **config sync**
2. **switch-profile name**
3. **verify**
4. **exit**
5. (Optional) **copy running-config startup-config**

## DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>config sync</b>  <b>Example:</b> <pre>switch# config sync switch(config-sync)#</pre>	Enters configuration synchronization mode.
Step 2	<b>switch-profile <i>name</i></b>  <b>Example:</b> <pre>switch(config-sync)# switch-profile abc switch(config-sync-sp)#</pre>	Configures the switch profile, names the switch profile, and enters switch profile synchronization configuration mode.
Step 3	<b>verify</b>  <b>Example:</b> <pre>switch(config-sync-sp)# verify</pre>	Verifies the commands in the switch profile buffer.
Step 4	<b>exit</b>  <b>Example:</b> <pre>switch(config-sync-sp)# exit switch#</pre>	Exits the switch profile configuration mode.
Step 5	<b>copy running-config startup-config</b>  <b>Example:</b> <pre>switch# copy running-config startup-config</pre>	(Optional) Copies the running configuration to the startup configuration.

## Isolating a Peer Switch

You can isolate a peer switch in order to make changes to a switch profile. This process can be used when you want to block a configuration synchronization or when you want to debug configurations.

Isolating a peer switch requires that you remove the switch from the switch profile and then add the peer switch back to the switch profile.

To temporarily isolate a peer switch, follow these steps:

- 1 Remove a peer switch from a switch profile.
- 2 Make changes to the switch profile and commit the changes.
- 3 Enter debug commands.
- 4 Undo the changes that were made to the switch profile in Step 2 and commit.
- 5 Add the peer switch back to the switch profile.

# Deleting a Switch Profile

You can delete a switch profile by selecting the **all-config** or the **local-config** option:

- **all-config**—Deletes the switch profile on both peer switches (when both are reachable). If you choose this option and one of the peers is unreachable, only the local switch profile is deleted. The **all-config** option completely deletes the switch profile on both peer switches.
- **local-config**—Deletes the switch profile on the local switch only.

## SUMMARY STEPS

1. **config sync**
2. **no switch-profile name {all-config | local-config | profile-only}**
3. (Optional) **copy switch-profile-config**
4. **exit**
5. (Optional) **copy running-config startup-config**

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>config sync</b>  <b>Example:</b> <pre>switch# config sync switch(config-sync)#</pre>	Enters configuration synchronization mode.
<b>Step 2</b>	<b>no switch-profile name {all-config   local-config   profile-only}</b>  <b>Example:</b> <pre>switch(config-sync)# no switch-profile abc local-config switch(config-sync-sp)#</pre>	Deletes the switch profile as follows: <ul style="list-style-type: none"> <li>• <b>all-config</b>—Deletes the switch profile on the local and peer switch. If the peer switch is not reachable, only the local switch profile is deleted.</li> <li>• <b>local-config</b>—Deletes the switch profile and local configuration.</li> <li>• <b>profile-only</b>—Deletes the switch profile without the local configuration.</li> </ul>
<b>Step 3</b>	<b>copy switch-profile-config</b>  <b>Example:</b> <pre>switch (config-sync-sp)# copy switch-profile-config bootflash: switch (config-sync-sp)#</pre>	(Optional)
<b>Step 4</b>	<b>exit</b>  <b>Example:</b> <pre>switch(config-sync-sp)# exit switch#</pre>	Exits configuration synchronization mode.

	Command or Action	Purpose
Step 5	<b>copy running-config startup-config</b>  <b>Example:</b> switch# copy running-config startup-config	(Optional) Copies the running configuration to the startup configuration.

## Deleting a Switch from a Switch Profile

You can delete a switch from a switch profile.

### SUMMARY STEPS

1. **config sync**
2. **switch-profile** *name*
3. **no sync-peers destination** *destination IP*
4. **exit**
5. (Optional) **show switch-profile**
6. (Optional) **copy running-config startup-config**

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>config sync</b>  <b>Example:</b> switch# config sync switch(config-sync)#	Enters configuration synchronization mode.
Step 2	<b>switch-profile</b> <i>name</i>  <b>Example:</b> switch(config-sync)# switch-profile abc switch(config-sync-sp)#	Configures the switch profile, names the switch profile, and enters the switch profile synchronization configuration mode.
Step 3	<b>no sync-peers destination</b> <i>destination IP</i>  <b>Example:</b> switch(config-sync-sp)# no sync-peers destination 10.1.1.1 switch(config-sync-sp)#	Removes the specified switch from the switch profile.
Step 4	<b>exit</b>  <b>Example:</b> switch(config-sync-sp)# exit switch#	Exits the switch profile configuration mode.

	Command or Action	Purpose
<b>Step 5</b>	<b>show switch-profile</b>  <b>Example:</b> switch# show switch-profile	(Optional) Displays the switch profile configuration.
<b>Step 6</b>	<b>copy running-config startup-config</b>  <b>Example:</b> switch# copy running-config startup-config	(Optional) Copies the running configuration to the startup configuration.

## Displaying the Switch Profile Buffer

### SUMMARY STEPS

1. switch# **configure sync**
2. switch(config-sync) # **switch-profile profile-name**
3. switch(config-sync-sp) # **show switch-profile profile-name buffer**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	switch# <b>configure sync</b>	Enters configuration synchronization mode.
<b>Step 2</b>	switch(config-sync) # <b>switch-profile profile-name</b>	Enters switch profile synchronization configuration mode for the specified switch profile.
<b>Step 3</b>	switch(config-sync-sp) # <b>show switch-profile profile-name buffer</b>	Enters interface switch profile synchronization configuration mode for the specified interface.

The following example shows how to display the switch profile buffer for a service profile called sp:

```
switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync) # switch-profile sp
Switch-Profile started, Profile ID is 1
switch(config-sync-sp) # show switch-profile sp buffer
-----
Seq-no  Command
-----
1       vlan 101
1.1     ip igmp snooping querier 10.101.1.1
2       mac address-table static 0000.0000.0001 vlan 101 drop
3       interface Ethernet1/2
3.1     switchport mode trunk
3.2     switchport trunk allowed vlan 101
```

```

switch(config-sync-sp)# buffer-move 3 1
switch(config-sync-sp)# show switch-profile sp buffer
-----
Seq-no  Command
-----
1       interface Ethernet1/2
1.1     switchport mode trunk
1.2     switchport trunk allowed vlan 101
2       vlan 101
2.1     ip igmp snooping querier 10.101.1.1
3       mac address-table static 0000.0000.0001 vlan 101 drop
switch(config-sync-sp)#

```

## Synchronizing Configurations After a Switch Reboot

If a Cisco Nexus Series switch reboots while a new configuration is being committed on a peer switch using a switch profile, complete the following steps to synchronize the peer switches after reload:

### SUMMARY STEPS

1. Reapply configurations that were changed on the peer switch during the reboot.
2. Enter the **commit** command.
3. Verify that the configuration is applied correctly and both peers are back synchronized.

### DETAILED STEPS

- 
- Step 1** Reapply configurations that were changed on the peer switch during the reboot.
- Step 2** Enter the **commit** command.
- Step 3** Verify that the configuration is applied correctly and both peers are back synchronized.
- 

## Switch Profile Configuration show Commands

The following **show** commands display information about the switch profile.

Command	Purpose
<b>show switch-profile <i>name</i></b>	Displays the commands in a switch profile.
<b>show switch-profile <i>name</i> <b>buffer</b></b>	Displays the uncommitted commands in a switch profile, the commands that were moved, and the commands that were deleted.
<b>show switch-profile <i>name</i> <b>peer</b> <i>IP-address</i></b>	Displays the synchronization status for a peer switch.
<b>show switch-profile <i>name</i> <b>session-history</b></b>	Displays the status of the last 20 switch profile sessions.
<b>show switch-profile <i>name</i> <b>status</b></b>	Displays the configuration synchronization status of a peer switch.
<b>show running-config <b>expand-port-profile</b></b>	Displays details about the port profile.

Command	Purpose
<b>show running-config exclude-provision</b>	Displays the configurations for offline preprovisioned interfaces that are hidden.
<b>show running-config switch-profile</b>	Displays the running configuration for the switch profile on the local switch.
<b>show startup-config switch-profile</b>	Displays the startup configuration for the switch profile on the local switch.

For detailed information about the fields in the output from these commands, see the system management command reference for your platform.

## Configuration Examples for Switch Profiles

### Creating a Switch Profile on a Local and Peer Switch Example

The following example shows how to create a successful switch profile configuration on a local and peer switch including configuring QoS policies; a vPC peer-link, and a vPC in a switch profile.

#### SUMMARY STEPS

1. Enable CFSoIP distribution on the local and the peer switch.
2. Create a switch profile on the local and the peer switch.
3. Verify that the switch profiles are the same on the local and the peer switch.
4. Add the configuration commands to the switch profile on the local switch. The commands will be applied to the peer switch when the commands are committed.
5. View the buffered commands.
6. Verify the commands in the switch profile.
7. Apply the commands to the switch profile and to synchronize the configurations between the local and the peer switch.

#### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	Enable CFSoIP distribution on the local and the peer switch.  <b>Example:</b> switch# <b>configuration terminal</b> switch(config)# <b>cfs ipv4 distribute</b>	
<b>Step 2</b>	Create a switch profile on the local and the peer switch.  <b>Example:</b> switch(config-sync)# <b>switch-profile abc</b> switch(config-sync-sp)# <b>sync-peers destination 10.1.1.1</b>	

	Command or Action	Purpose
<p><b>Step 3</b></p>	<p>Verify that the switch profiles are the same on the local and the peer switch.</p> <p><b>Example:</b>  <pre>switch(config-sync-sp)# show switch-profile abc status  Start-time: 15801 usecs after Mon Aug 23 06:21:08 2010 End-time: 6480 usecs after Mon Aug 23 06:21:13 2010  Profile-Revision: 1 Session-type: Initial-Exchange Peer-triggered: Yes Profile-status: Sync Success  Local information: ----- Status: Commit Success Error(s):  Peer information: ----- IP-address: 10.1.1.1 Sync-status: In Sync. Status: Commit Success Error(s):</pre></p>	
<p><b>Step 4</b></p>	<p>Add the configuration commands to the switch profile on the local switch. The commands will be applied to the peer switch when the commands are committed.</p> <p><b>Example:</b>  <pre>switch(config-sync-sp)# class-map type qos c1 switch(config-sync-sp-cmap-qos)# match cos 2 switch(config-sync-sp-cmap-qos)# class-map type qos c2 switch(config-sync-sp-cmap-qos)# match cos 5 switch(config-sync-sp-cmap-qos)# policy-map type qos p1 switch(config-sync-sp-pmap-qos)# class c1 switch(config-sync-sp-pmap-c-qos)# set qos-group 2 switch(config-sync-sp-pmap-c-qos)# class c2 switch(config-sync-sp-pmap-c-qos)# set qos-group 3 switch(config-sync-sp-pmap-c-qos)# system qos switch(config-sync-sp-sys-qos)# service-policy type qos input p1 switch(config-sync-sp-sys-qos)# vlan 1-50 switch(config-sync-sp-vlan)# interface port-channel 100 switch(config-sync-sp-if)# vpc peer-link switch(config-sync-sp-if)# switchport mode trunk switch(config-sync-sp-if)# interface port-channel 10 switch(config-sync-sp-if)# vpc 1 switch(config-sync-sp-if)# switchport mode trunk switch(config-sync-sp-if)# switchport trunk allowed vlan 1, 10-50</pre></p>	
<p><b>Step 5</b></p>	<p>View the buffered commands.</p> <p><b>Example:</b>  <pre>switch(config-sync-sp-if)# show switch-profile switch-profile buffer  Seq-no  Command ----- 1       class-map type qos match-all c1 1.1    match cos 2</pre></p>	

	Command or Action	Purpose
	<pre> 2      class-map type qos match-all c2 2.1    match cos 5 3      policy-map type qos p1 3.1    class c1 3.1.1  set qos-group 2 3.2    class c2 3.2.1  set qos-group 3 4      system qos 4.1    service-policy type qos input p1 5      vlan 2-50 6      interface port-channel100 6.1    vpc peer-link 6.2    switchport mode trunk 7      interface port-channel10 7.1    vpc 1 7.2    switchport mode trunk 7.3    switchport trunk allowed vlan 1, 10-50 </pre>	
<b>Step 6</b>	<p>Verify the commands in the switch profile.</p> <p><b>Example:</b>  switch(config-sync-sp-if)# <b>verify</b>  Verification Successful</p>	
<b>Step 7</b>	<p>Apply the commands to the switch profile and to synchronize the configurations between the local and the peer switch.</p> <p><b>Example:</b>  switch(config-sync-sp)# <b>commit</b>  Commit Successful  switch(config-sync)#</p>	

## Verifying the Synchronization Status Example

The following example shows how to verify the synchronization status between the local and the peer switch:

```

switch(config-sync)# show switch-profile switch-profile status
Start-time: 804935 usecs after Mon Aug 23 06:41:10 2010
End-time: 956631 usecs after Mon Aug 23 06:41:20 2010

Profile-Revision: 2
Session-type: Commit
Peer-triggered: No
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):

Peer information:
-----
IP-address: 10.1.1.1
Sync-status: In Sync.
Status: Commit Success
Error(s):

switch(config-sync)#

```

## Displaying the Running Configuration

The following example shows how to display the running configuration of the switch profile on the local switch:

```
switch# configure sync
switch(config-sync)# show running-config switch-profile
switch-profile sp
  sync-peers destination 10.1.1.1
  class-map type qos match-all c1
    match cos 2
  class-map type qos match-all c2
    match cos 5
  policy-map type qos p1
    class c1
      set qos-group 2
    class c2
      set qos-group 3
  system qos
    service-policy type qos input p1
  vlan 2-50

interface port-channel10
  switchport mode trunk
  vpc 1
  switchport trunk allowed vlan 1,10-50

interface port-channel100
  switchport mode trunk
  vpc peer-link
switch(config-sync)#
```

## Displaying the Switch Profile Synchronization Between Local and Peer Switches

This example shows how to display the synchronization status for two peer switches:

```
switch1# show switch-profile sp status

Start-time: 491815 usecs after Thu Aug 12 11:54:51 2010
End-time: 449475 usecs after Thu Aug 12 11:54:58 2010

Profile-Revision: 1
Session-type: Initial-Exchange
Peer-triggered: No
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):

Peer information:
-----
IP-address: 10.193.194.52
Sync-status: In Sync.
Status: Commit Success
Error(s):

switch1#

switch2# show switch-profile sp status

Start-time: 503194 usecs after Thu Aug 12 11:54:51 2010
```

```

End-time: 532989 usecs after Thu Aug 12 11:54:58 2010

Profile-Revision: 1
Session-type: Initial-Exchange
Peer-triggered: Yes
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):

Peer information:
-----
IP-address: 10.193.194.51
Sync-status: In Sync.
Status: Commit Success
Error(s):

switch2#

```

## Displaying Verify and Commit on Local and Peer Switches

This example shows how to configure a successful verify and commit of the local and peer switch:

```

switch1# configure sync
Enter configuration commands, one per line.  End with CNTL/Z.
switch1(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1
switch1(config-sync-sp)# interface ethernet1/1
switch1(config-sync-sp-if)# description foo
switch1(config-sync-sp-if)# verify
Verification Successful
switch1(config-sync-sp)# commit
Commit Successful
switch1(config-sync)# show running-config switch-profile
switch-profile sp
  sync-peers destination 10.193.194.52
  interface Ethernet1/1
  description foo
switch1(config-sync)# show switch-profile sp status

Start-time: 171513 usecs after Wed Aug 11 17:51:28 2010
End-time: 676451 usecs after Wed Aug 11 17:51:43 2010

Profile-Revision: 3
Session-type: Commit
Peer-triggered: No
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):

Peer information:
-----
IP-address: 10.193.194.52
Sync-status: In Sync.
Status: Commit Success
Error(s):

switch1(config-sync)#

switch2# show running-config switch-profile
switch-profile sp
  sync-peers destination 10.193.194.51
  interface Ethernet1/1
  description foo

```

```

switch2# show switch-profile sp status

Start-time: 265716 usecs after Wed Aug 11 16:51:28 2010
End-time: 734702 usecs after Wed Aug 11 16:51:43 2010

Profile-Revision: 3
Session-type: Commit
Peer-triggered: Yes
Profile-status: Sync Success

Local information:
-----
Status: Commit Success
Error(s):

Peer information:
-----
IP-address: 10.193.194.51
Sync-status: In Sync.
Status: Commit Success
Error(s):

switch2#

```

## Successful and Unsuccessful Synchronization Examples

The following example shows a successful synchronization of the switch profile on the peer switch:

```

switch# show switch-profile abc peer

switch# show switch-profile sp peer 10.193.194.52
Peer-sync-status      : In Sync.
Peer-status           : Commit Success
Peer-error(s)        :
switch1#

```

The following example shows an unsuccessful synchronization of a switch profile on the peer switch, with a peer not reachable status:

```

switch# show switch-profile sp peer 10.193.194.52
Peer-sync-status      : Not yet merged. pending-merge:1 received_merge:0
Peer-status           : Peer not reachable
Peer-error(s)        :
switch#

```

## Configuring the Switch Profile Buffer, Moving the Buffer, and Deleting the Buffer

This example shows how to configure the switch profile buffer, the buffer-move configuration, and the buffer-delete configuration:

```

switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# vlan 101
switch(config-sync-sp-vlan)# ip igmp snooping querier 10.101.1.1
switch(config-sync-sp-vlan)# exit
switch(config-sync-sp)# mac address-table static 0000.0000.0001 vlan 101 drop
switch(config-sync-sp)# interface ethernet1/2
switch(config-sync-sp-if)# switchport mode trunk
switch(config-sync-sp-if)# switchport trunk allowed vlan 101
switch(config-sync-sp-if)# exit
switch(config-sync-sp)# show switch-profile sp buffer
-----

```

```

Seq-no  Command
-----
1       vlan 101
1.1     ip igmp snooping querier 10.101.1.1
2       mac address-table static 0000.0000.0001 vlan 101 drop
3       interface Ethernet1/2
3.1     switchport mode trunk
3.2     switchport trunk allowed vlan 101

switch(config-sync-sp)# buffer-move 3 1
switch(config-sync-sp)# show switch-profile sp buffer
-----
Seq-no  Command
-----
1       interface Ethernet1/2
1.1     switchport mode trunk
1.2     switchport trunk allowed vlan 101
2       vlan 101
2.1     ip igmp snooping querier 10.101.1.1
3       mac address-table static 0000.0000.0001 vlan 101 drop

switch(config-sync-sp)# buffer-delete 1
switch(config-sync-sp)# show switch-profile sp buffer
-----
Seq-no  Command
-----
2       vlan 101
2.1     ip igmp snooping querier 10.101.1.1
3       mac address-table static 0000.0000.0001 vlan 101 drop

switch(config-sync-sp)# buffer-delete all
switch(config-sync-sp)# show switch-profile sp buffer
switch(config-sync-sp)#

```

## Importing Configurations

The following example shows how to import an interface configuration:

```

switch# show running-config interface ethernet1/3

!Command: show running-config interface Ethernet1/3
!Time: Wed Aug 11 18:12:44 2010

version 5.0(2)N1(1)

interface Ethernet1/3
  switchport mode trunk
  switchport trunk allowed vlan 1-100

switch# configure sync
Enter configuration commands, one per line.  End with CNTL/Z.
switch(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1

switch(config-sync-sp)# import interface Ethernet1/3
switch(config-sync-sp-import)# show switch-profile sp buffer
-----
Seq-no  Command
-----
1       interface Ethernet1/3
1.1     switchport mode trunk
1.2     switchport trunk allowed vlan 1-100

switch(config-sync-sp-import)# verify
Verification Successful
switch(config-sync-sp-import)# commit
Commit Successful
switch(config-sync)#

```

The following example shows how to import the supported commands in a running configuration:

```
switch(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# import running-config
switch(config-sync-sp-import)# show switch-profile sp buffer
-----
Seq-no  Command
-----
1      logging event link-status default
2      vlan 1
3      port-profile type ethernet ppl
3.1    bandwidth 5000
3.2    bandwidth inherit
3.3    speed 10000
3.4    state enabled
4      interface port-channel3
4.1    switchport mode trunk
4.2    vpc peer-link
4.3    spanning-tree port type network
5      interface port-channel30
5.1    switchport mode trunk
5.2    vpc 30
5.3    switchport trunk allowed vlan 2-10
6      interface port-channel31
6.1    switchport mode trunk
6.2    vpc 31
6.3    switchport trunk allowed vlan 11-20
7      interface port-channel101
7.1    switchport mode fex-fabric
7.2    fex associate 101
8      interface port-channel102
8.1    switchport mode fex-fabric
8.2    vpc 102
8.3    fex associate 102
9      interface port-channel103
9.1    switchport mode fex-fabric
9.2    vpc 103
9.3    fex associate 103
10     interface Ethernet1/1
11     interface Ethernet1/2
12     interface Ethernet1/3
13     interface Ethernet1/4
13.1   switchport mode trunk
13.2   channel-group 3
14     interface Ethernet1/5
14.1   switchport mode trunk
14.2   channel-group 3
15     interface Ethernet1/6
15.1   switchport mode trunk
15.2   channel-group 3
16     interface Ethernet1/7
16.1   switchport mode trunk
16.2   channel-group 3
17     interface Ethernet1/8
18     interface Ethernet1/9
18.1   switchport mode trunk
18.2   switchport trunk allowed vlan 11-20
18.3   channel-group 31 mode active
19     interface Ethernet1/10
19.1   switchport mode trunk
19.2   switchport trunk allowed vlan 11-20
19.3   channel-group 31 mode active
20     interface Ethernet1/11
21     interface Ethernet1/12
...
45     interface Ethernet2/4
45.1   fex associate 101
45.2   switchport mode fex-fabric
45.3   channel-group 101
46     interface Ethernet2/5
46.1   fex associate 101
46.2   switchport mode fex-fabric
```

```

46.3    channel-group 101
47      interface Ethernet2/6
47.1    fex associate 101
47.2    switchport mode fex-fabric
47.3    channel-group 101
48      interface Ethernet2/7
48.1    fex associate 101
48.2    switchport mode fex-fabric
48.3    channel-group 101
49      interface Ethernet2/8
49.1    fex associate 101
...
89      interface Ethernet100/1/32
90      interface Ethernet100/1/33
91      interface Ethernet100/1/34
92      interface Ethernet100/1/35
93      interface Ethernet100/1/36
...
105     interface Ethernet100/1/48
switch(config-sync-sp-import)#

```

The following example shows how to import selected supported commands. First, show the port profile running configuration to identify the configuration that you are going to import:

```

switch# show running-config port-profile

!Command: show running-config port-profile
!Time: Thu Aug 12 12:09:11 2010

version 5.0(2)N1(1)
port-profile type ethernet ppl
  bandwidth 5000
  bandwidth inherit
  speed 10000
  state enabled

switch#

switch# configure sync
Enter configuration commands, one per line. End with CNTL/Z.
switch(config-sync)# switch-profile sp
Switch-Profile started, Profile ID is 1
switch(config-sync-sp)# import
switch(config-sync-sp-import)# port-profile type ethernet ppl
switch(config-sync-sp-import-if)# bandwidth 5000
switch(config-sync-sp-import-if)# bandwidth inherit
switch(config-sync-sp-import-if)# speed 10000
switch(config-sync-sp-import-if)# state enabled
switch(config-sync-sp-import-if)# show switch-profile sp buffer
-----
Seq-no  Command
-----
1       port-profile type ethernet ppl
1.1     bandwidth 5000
1.2     bandwidth inherit
1.3     speed 10000
1.4     state enabled

switch(config-sync-sp-import-if)# verify
Verification Successful
switch(config-sync-sp-import)# commit
Commit Successful
switch(config-sync)# show running-config switch-profile
switch-profile sp
  sync-peers destination 10.193.194.52
  port-profile type ethernet ppl
  bandwidth 5000
  bandwidth inherit
  speed 10000
  state enabled
switch(config-sync)#

```

## Sample Migrations Using the Import Command

### Migrating Cisco NX-OS Release 5.0(2)N1(1) in a Fabric Extender A-A Topology Example

This examples shows the tasks used to migrate to Cisco NX-OS Release 5.0(2)N1(1) in a Fabric Extender A-A topology. For details on the tasks, see the appropriate sections in this chapter.

#### SUMMARY STEPS

1. Ensure configurations are the same on both switches.
2. Configure the switch-profile with same name on both switches.
3. Enter the **import running config** command on both switches.
4. Enter the **switch-profile name buffer** command to ensure all configurations are correctly imported on both switches.
5. Remove unwanted configuration settings by editing the buffer.
6. Enter the **commit** command on both switches.
7. Enter the **sync-peers destination IP-address** command to configure the peer switch on both switches.
8. Enter the **switch-profile name status** command to ensure both switches are synchronized.

#### DETAILED STEPS

- 
- |               |  |
|---------------|--|
| <b>Step 1</b> | Ensure configurations are the same on both switches.   |
| <b>Step 2</b> | Configure the switch-profile with same name on both switches.  |
| <b>Step 3</b> | Enter the <b>import running config</b> command on both switches.   |
| <b>Step 4</b> | Enter the <b>switch-profile name buffer</b> command to ensure all configurations are correctly imported on both switches.  |
| <b>Step 5</b> | Remove unwanted configuration settings by editing the buffer.<br>For details, see <a href="#">Example: Configuring the Switch Profile Buffer, Buffer Move, and Deleting the Buffer</a> . |
| <b>Step 6</b> | Enter the <b>commit</b> command on both switches.  |
| <b>Step 7</b> | Enter the <b>sync-peers destination IP-address</b> command to configure the peer switch on both switches.  |
| <b>Step 8</b> | Enter the <b>switch-profile name status</b> command to ensure both switches are synchronized.  |

### Migrating Cisco NX-OS Release 5.0(2)N1(1) in a Fabric Extender Fabric Extender Straight-Through Topology Example

This example shows the tasks used to migrate to Cisco NX-OS Release 5.0(2)N1(1) in a Fabric Extender Straight-Through topology. For details on the tasks, see the appropriate sections in this chapter.

## SUMMARY STEPS

1. Ensure the vPC port-channel configurations are the same on both switches.
2. Configure the switch-profile with the same name on both switches.
3. Enter the **import interface port-channel** *x-y*, **port-channel** *z* command for all vPC port-channels on both switches.
4. Enter the **show switch-profile** *name* **buffer** command to ensure all configurations are correctly imported on both switches.
5. Remove unwanted configuration settings by editing the buffer.
6. Enter the **commit** command on both switches.
7. Enter the **sync-peers destination** *IP-address* command to configure the peer switch on both switches.
8. Enter the **show switch-profile** *name* **status** command to ensure both switches are synchronized.

## DETAILED STEPS

- 
- |               |  |
|---------------|--|
| <b>Step 1</b> | Ensure the vPC port-channel configurations are the same on both switches.  |
| <b>Step 2</b> | Configure the switch-profile with the same name on both switches.  |
| <b>Step 3</b> | Enter the <b>import interface port-channel</b> <i>x-y</i> , <b>port-channel</b> <i>z</i> command for all vPC port-channels on both switches.   |
| <b>Step 4</b> | Enter the <b>show switch-profile</b> <i>name</i> <b>buffer</b> command to ensure all configurations are correctly imported on both switches.   |
| <b>Step 5</b> | Remove unwanted configuration settings by editing the buffer.<br>For details, see <a href="#">Example: Configuring the Switch Profile Buffer, Buffer Move, and Deleting the Buffer</a> . |
| <b>Step 6</b> | Enter the <b>commit</b> command on both switches.  |
| <b>Step 7</b> | Enter the <b>sync-peers destination</b> <i>IP-address</i> command to configure the peer switch on both switches.   |
| <b>Step 8</b> | Enter the <b>show switch-profile</b> <i>name</i> <b>status</b> command to ensure both switches are synchronized.   |
