

K Commands

This chapter describes the Cisco NX-OS Multiprotocol Label Switching commands that begin with K.

key

To configure an authentication key on a keychain, use the **key** command. To return to the default setting, use the **no** form of this command.

key *key-id*

no key *key-id*

Syntax Description	<i>key-id</i> Key ID. The range is from 0 to 65535.				
Defaults	None				
Command Modes	Keychain key configuration mode				
SupportedUserRoles	network-admin vdc-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>5.2(1)</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	5.2(1)	This command was introduced.
Release	Modification				
5.2(1)	This command was introduced.				
Usage Guidelines	This command requires the MPLS Services license.				
Examples	<p>This example shows how to configure an authentication key on a keychain:</p> <pre>switch# configure terminal switch(config)# key chain keychain1 switch(config-keychain)# key 10 switch(config-keychain-key) #</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mpls ldp configuration</td><td>Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).</td></tr> </tbody> </table>	Command	Description	mpls ldp configuration	Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).
Command	Description				
mpls ldp configuration	Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).				

key chain

To configure a group of authentication keys, use the **key chain** command. To return to the default setting, use the **no** form of this command.

key chain *keychain-name*

no key chain *keychain-name*

Syntax Description	<i>keychain-name</i> Key chain name. The maximum size is alphanumeric 32 characters.				
Defaults	None				
Command Modes	Keychain configuration mode				
SupportedUserRoles	network-admin vdc-admin				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>5.2(1)</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	5.2(1)	This command was introduced.
Release	Modification				
5.2(1)	This command was introduced.				
Usage Guidelines	This command requires the MPLS Services license.				
Examples	<p>This example shows how to configure a group of authentication keys:</p> <pre>switch# configure terminal switch(config)# key chain keychain1 switch(config-keychain)# key 10 switch(config-keychain-key) #</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th><th>Description</th></tr> </thead> <tbody> <tr> <td>mpls ldp configuration</td><td>Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).</td></tr> </tbody> </table>	Command	Description	mpls ldp configuration	Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).
Command	Description				
mpls ldp configuration	Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).				

key-string

key-string

To configure an authentication string for a key, use the **key-string** command. To return to the default setting, use the **no** form of this command.

key-string *key*

no key-string *key*

Syntax Description	<i>key</i>	Authentication string for a key. The key can be from 1 to 80 uppercase or lowercase alphanumeric characters. The first character cannot be a numeral.
---------------------------	------------	---

Defaults	None
-----------------	------

Command Modes	Keychain key configuration mode
----------------------	---------------------------------

SupportedUserRoles	network-admin vdc-admin
---------------------------	----------------------------

Command History	Release	Modification
	5.2(1)	This command was introduced.

Usage Guidelines	This command requires the MPLS Services license.
-------------------------	--

Examples	This example shows how to configure an authentication string for a key:
<pre>switch# configure terminal switch(config)# key chain keychain1 switch(config-keychain)# key 10 switch(config-keychain-key)# key-string pwd1</pre>	

Related Commands	Command	Description
	mpls ldp configuration	Configures the Multiprotocol Label Switching (MPLS) Label Distribution Protocol (LDP).
