

Authentication

The Authentication REST APIs can be used by an external application to authenticate itself to the DCNM in order to control the Fabric Automation cluster. After calling logon to get the token, all the subsequent REST API requests need to set the DCNM-Token field with the token in the HTTPS header.

By default, the dcnm will support http. For https support, you need to run the command **appmgr update dcnm -h true**.

The following are the Authentication REST APIs:

- [Logon, page -5](#)
- [Logout, page -6](#)
- [Get DCNM Version, page -7](#)

Logon

Resource Name /logon

Description Logon to DCNM server to authenticate the user. Once the authentication is complete, a token will be returned as the response. All API calls to the DCNM server should use this token until it is expired or invalid. The logon API uses “username:password” with base64 encoded in https Authorization header. For example, “Authorization: Basic QWxhZGRpbjpvYGVuIHNlc2FtZQ==” will return the token in the payload.
