Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Ethernet Management Ports

When connecting a PC to the Ethernet management port, you must first assign an IP address.

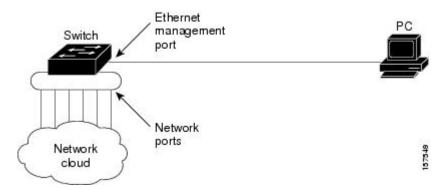

Information about the Ethernet Management Port

The Ethernet management port, also referred to as the *Fa0* or *fastethernet0* port, is a Layer 3 host port to which you can connect a PC. You can use the Ethernet management port instead of the switch console port for network management. When managing a switch stack, connect the PC to the Ethernet management port on a stack member.

Ethernet Management Port Direct Connection to a Switch

This figure displays how to connect the Ethernet management port to the PC for a switch or a standalone switch.

Figure 1: Connecting a Switch to a PC

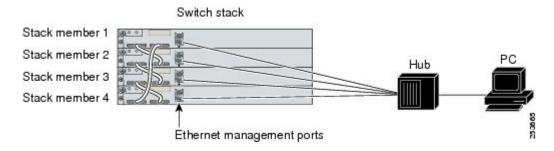

Ethernet Management Port Connection to Stack Switches using a Hub

In a stack with only stack switches, all the Ethernet management ports on the stack members are connected to a hub to which the PC is connected. The active link is from the Ethernet management port on the stack masterthrough the hub, to the PC. If the activeswitch fails and a new active switch is elected, the active link is now from the Ethernet management port on the new active switch to the PC.

This figure displays how a PC uses a hub to connect to a switch stack.

Figure 2: Connecting a Switch Stack to a PC

Supported Features on the Ethernet Management Port

The Ethernet management port supports these features:

- Express Setup (only in switch stacks)
- · Network Assistant
- Telnet with passwords

- TFTP
- Secure Shell (SSH)
- DHCP-based autoconfiguration
- SMNP (only the ENTITY-MIB and the IF-MIB)
- IP ping
- Interface features
 - ° Speed—10 Mb/s, 100 Mb/s, and autonegotiation
 - ^o Duplex mode—Full, half, and autonegotiation
 - Loopback detection
- Cisco Discovery Protocol (CDP)
- · DHCP relay agent
- IPv4 access control lists (ACLs)

Caution

Before enabling a feature on the Ethernet management port, make sure that the feature is supported. If you try to configure an unsupported feature on the Ethernet Management port, the feature might not work properly, and the switch might fail.

How to Configure the Ethernet Management Port

Disabling and Enabling the Ethernet Management Port

SUMMARY STEPS

- 1. configure terminal
- 2. interface fastethernet0
- 3. shutdown
- 4. no shutdown
- 5. exit
- 6. show interfaces fastethernet0

DETAILED STEPS

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example: Switch# configure terminal	
Step 2	interface fastethernet0	Specifies the Ethernet management port in the CLI.
	Example: Switch(config)# interface fastethernet0	
Step 3	shutdown	Disables the Ethernet management port.
	Example: Switch(config-if)# shutdown	
Step 4	no shutdown	Enables the Ethernet management port.
	Example: Switch(config-if)# no shutdown	
Step 5	exit	Exits interface configuration mode.
	<pre>Example: Switch(config-if)# exit</pre>	
Step 6	show interfaces fastethernet0	Displays the link status.
	Example: Switch# show interfaces fastethernet0	To find out the link status to the PC, you can monitor the LED for the Ethernet management port. The LED is green (on) when the link is active, and the LED is off when the link is down. The LED is amber when there is a POST failure.

What to Do Next

Proceed to manage or configure your switch using the Ethernet management port. Refer to the *Catalyst 2960-X Switch Network Management Configuration Guide*.
