rmon collection stats

Use the **rmon collection stats** interface configuration command to collect Ethernet group statistics, which include usage statistics about broadcast and multicast packets, and error statistics about cyclic redundancy check (CRC) alignment errors and collisions. Use the **no** form of this command to return to the default setting.

rmon collection stats index [owner name]

no rmon collection stats *index* [**owner** *name*]

Syntax Description	index	Remote Network Monitoring (RMON) collection control index. The range is 1 to 65535.	
	owner name	(Optional) Owner of the RMON collection.	
Defaults	The RMON statistics co	ollection is disabled.	
Command Modes	Interface configuration		
Command History	Release	Modification	
	12.1(19)EA1	This command was introduced.	
Examples	This example shows ho	w to collect RMON statistics for the owner <i>root</i> :	
LAGIIIPIES	Switch(config)# interface gigabitethernet0/1 Switch(config-if)# rmon collection stats 2 owner root		
	You can verify your set	ting by entering the show rmon statistics privileged EXEC command.	
Related Commands	Command	Description	
	show rmon statistics	Displays RMON statistics.	
		For syntax information, select Cisco IOS Configuration	

sdm prefer

Use the **sdm prefer** global configuration command to configure the template used in Switch Database Management (SDM) resource allocation. You can use a template to allocate system resources to best support the features being used in your application. Use a template to provide maximum system usage for unicast routing or for VLAN configuration, or to select the dual IPv4 and IPv6 template to support IPv6 forwarding. Use the **no** form of this command to return to the default template.

sdm prefer {access | default | dual-ipv4-and-ipv6 {default | routing | vlan} | routing | vlan}

no sdm prefer

Syntax Description	access	Provide maximum system usage for access control lists (ACLs). Use this template if you have a large number of ACLs.
	default	Give balance to all functions.
	dual-ipv4-and-ipv6 {default routing vlan}	Select a template that supports both IPv4 and IPv6 routing.
		• default —Provide balance to IPv4 and IPv6 Layer 2 and Layer 3 functionality.
		• routing —Provide maximum system usage for IPv4 and IPv6 routing, including IPv4 policy-based routing.
		• vlan—Provide maximum system usage for IPv4 and IPv6 VLANs.
	routing	Provide maximum system usage for unicast routing. You would typically use this template for a router or aggregator in the middle of a network.
	vlan	Provide maximum system usage for VLANs. This template maximizes system resources for use as a Layer 2 switch with no routing.
Defaults	The default template	provides a balance to all features.

Command Modes Global configuration

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
	12.2(25)SEA	The dual-ipv4-and-ipv6 templates were added.
	12.2(25)SED	The access templates were added.
	12.2(25)SEE	The dual-ipv4-and-ipv6 routing template was added.

Usage Guidelines

You must reload the switch for the configuration to take effect. If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

Use the no sdm prefer command to set the switch to the default desktop template.

The access template maximizes system resources for access control lists (ACLs) as required to accommodate a large number of ACLs.

The default templates balance the use of system resources.

Use the **sdm prefer vlan** global configuration command only on switches intended for Layer 2 switching with no routing. When you use the VLAN template, no system resources are reserved for routing entries, and any routing is done through software. This overloads the CPU and severely degrades routing performance.

Do not use the routing template if you do not have routing enabled on your switch. Entering the **sdm prefer routing** global configuration command prevents other features from using the memory allocated to unicast routing in the routing template.

Do not use the ipv4-and-ipv6 templates if you do not plan to enable IPv6 routing on the switch. Entering the **sdm prefer ipv4-and-ipv6** {**default** | **routing** | **vlan**} global configuration command divides resources between IPv4 and IPv6, limiting those allocated to IPv4 forwarding.

Table 2-17 lists the approximate number of each resource supported in each of the IPv4-only templates for a switch. The values in the template are based on eight routed interfaces and approximately one thousand VLANs and represent the approximate hardware boundaries set when a template is selected. If a section of a hardware resource is full, all processing overflow is sent to the CPU, seriously impacting switch performance.

Resource	Access	Default	Routing	VLAN
Unicast MAC addresses	4 K	6 K	3 K	12 K
IGMP groups and multicast routes	1 K	1 K	1 K	1 K
Unicast routes	6 K	8 K	11 K	0
Directly connected hosts	4 K	6 K	3 K	0
Indirect routes	2 K	2 K	8 K	0
Policy-based routing access control entries (ACEs)	512	0	512	0
Quality of service (QoS) classification ACEs	512	512	512	512
Security ACEs	2 K	1 K	1 K	1 K
Layer 2 VLANs	1 K	1 K	1 K	1 K

Table 2-17 Approximate Number of Feature Resources Allowed by Each Template

Γ

Table 2-18 lists the approximate number of each resource supported in each of the dual IPv4-and IPv6 templates for a switch.

Resource	Default	Routing	VLAN
Unicast MAC addresses	2 K	1536	8 K
IPv4 IGMP groups and multicast routes	1 K	1K	1 K
Total IPv4 unicast routes:	3 K	2816	0
• Directly connected IPv4 hosts	2 K	1536	0
• Indirect IPv4 routes	1 K	1280	0
IPv6 multicast groups	1 K	1152	1 K
Total IPv6 unicast routes:	3 K	2816	0
• Directly connected IPv6 addresses	2 K	1536	0
Indirect IPv6 unicast routes	1 K	1280	0
IPv4 policy-based routing ACEs	0	256	0
IPv4 or MAC QoS ACEs (total)	512	512	512
IPv4 or MAC security ACEs (total)	1 K	512	1 K
IPv6 policy-based routing ACEs ¹	0	255	0
IPv6 QoS ACEs	510	510	510
IPv6 security ACEs	510	510	510

 Table 2-18
 Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates

1. IPv6 policy-based routing is not supported in this release.

Examples

This example shows how to configure the access template on a switch:

```
Switch(config)# sdm prefer access
Switch(config)# exit
Switch# reload
```

This example shows how to configure the routing template on a switch:

Switch(config)# sdm prefer routing
Switch(config)# exit
Switch# reload

This example shows how to configure the dual IPv4-and-IPv6 default template on a desktop switch:

```
Switch(config)# sdm prefer dual-ipv4-and-ipv6 default
Switch(config)# exit
Switch# reload
```

This example shows how to change a switch template to the default template.

```
Switch(config)# no sdm prefer
Switch(config)# exit
Switch# reload
```

You can verify your settings by entering the show sdm prefer privileged EXEC command.

Related Commands

Command	Description
show sdm prefer	Displays the current SDM template in use or displays the templates that can be used, with approximate resource allocation per feature.

service password-recovery

Use the **service password-recovery** global configuration command to enable the password-recovery mechanism (the default). This mechanism allows an end user with physical access to the switch to hold down the **Mode** button and interrupt the bootup process while the switch is powering up and to assign a new password. Use the **no** form of this command to disable part of the password-recovery functionality. When the password-recovery mechanism is disabled, interrupting the bootup process is allowed only if the user agrees to set the system back to the default configuration.

service password-recovery

no service password-recovery

Syntax Description This command has no arguments or keywords.

Defaults The password-recovery mechanism is enabled.

Command Modes Global configuration

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

Usage Guidelines As a s

As a system administrator, you can use the **no service password-recovery** command to disable some of the functionality of the password recovery feature by allowing an end user to reset a password only by agreeing to return to the default configuration.

To use the password-recovery procedure, a user with physical access to the switch holds down the **Mode** button while the unit powers up and for a second or two after the LED above port 1X turns off. When the button is released, the system continues with initialization.

If the password-recovery mechanism is disabled, this message appears:

The password-recovery mechanism has been triggered, but is currently disabled. Access to the boot loader prompt through the password-recovery mechanism is disallowed at this point. However, if you agree to let the system be reset back to the default system configuration, access to the boot loader prompt can still be allowed.

Would you like to reset the system back to the default configuration (y/n)?

If the user chooses not to reset the system to the default configuration, the normal bootup process continues, as if the **Mode button** had not been pressed. If you choose to reset the system to the default configuration, the configuration file in flash memory is deleted, and the VLAN database file, *flash:vlan.dat* (if present), is deleted. If you use the **no service password-recovery** command to control end user access to passwords, we recommend that you save a copy of the config file in a location away

from the switch in case the end user uses the password recovery procedure and sets the system back to default values. Do not keep a backup copy of the config file on the switch.

If the switch is operating in VTP transparent mode, we recommend that you also save a copy of the vlan.dat file in a location away from the switch.

You can verify if password recovery is enabled or disabled by entering the **show version** privileged EXEC command.

Examples This example shows how to disable password recovery on a switch so that a user can only reset a password by agreeing to return to the default configuration.

Switch(config)# no service-password recovery
Switch(config)# exit

Related Commands	Command	Description
	show version	Displays version information for the hardware and firmware.

service-policy

Use the **service-policy** interface configuration command to apply a policy map defined by the **policy-map** command to the input of a physical port or a switch virtual interface (SVI). Use the **no** form of this command to remove the policy map and port association.

service-policy input policy-map-name

no service-policy input policy-map-name

Syntax Description	input policy-map-r	Apply the specified policy map to the input of a physical port or an SVI.
Note		he command-line help strings, the history keyword is not supported, and you should that it gathers. The output keyword is also not supported.
Defaults	No policy maps are	attached to the port.
Command Modes	Interface configurat	ion
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
	12.2(25)SE	A policy map can now be applied to a physical port or an SVI.
	12.2(25)SED	Hierarchical policy-maps can now be applied to an SVI.
Usage Guidelines	Only one policy ma	p per ingress port is supported.
osage duidennes	Policy maps can be (QoS) is disabled by port, you can config the mls qos vlan-ba previously configur	configured on physical ports or on SVIs. When VLAN-based quality of service y using the no mls qos vlan-based interface configuration command on a physical gure a port-based policy map on the port. If VLAN-based QoS is enabled by using ased interface configuration command on a physical port, the switch removes the ed port-based policy map. After a hierarchical policy map is configured and applied face-level policy map takes effect on the interface.
	different interface-l	licy map to incoming traffic on a physical port or on an SVI. You can configure evel policy maps for each class defined in the VLAN-level policy map. For more ierarchical policy maps, see the "Configuring QoS" chapter in the software

configuration guide for this release.

Classification using a port trust state (for example, **mls qos trust** [**cos** | **dscp** | **ip-precedence**] and a policy map (for example, **service-policy input** *policy-map-name*) are mutually exclusive. The last one configured overwrites the previous configuration.

Examples

This example shows how to apply *plcmap1* to an physical ingress port:

```
Switch(config)# interface gigabitethernet0/1
Switch(config-if)# service-policy input plcmap1
```

This example shows how to remove *plcmap2* from a physical port:

```
Switch(config)# interface gigabitethernet0/1
Switch(config-if)# no service-policy input plcmap2
```

This example shows how to apply *plcmap1* to an ingress SVI when VLAN-based QoS is enabled:

```
Switch(config)# interface vlan 10
Switch(config-if)# service-policy input plcmap1
```

This example shows how to create a hierarchical policy map and attach it to an SVI:

```
Switch> enable
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config) # access-list 101 permit ip any any
Switch(config) # class-map cm-1
Switch(config-cmap) # match access 101
Switch(config-cmap)# exit
Switch(config) # exit
Switch#
Switch#
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config) # class-map cm-interface-1
Switch(config-cmap)# match input gigabitethernet0/1 - gigabitethernet0/2
Switch(config-cmap) # exit
Switch(config) # policy-map port-plcmap
Switch(config-pmap)# class-map cm-interface-1
Switch(config-pmap-c)# police 900000 9000 exc policed-dscp-transmit
Switch(config-pmap-c)# exit
Switch(config-pmap) #exit
Switch(config) # policy-map vlan-plcmap
Switch(config-pmap) # class-map cm-1
Switch(config-pmap-c)# set dscp 7
Switch(config-pmap-c) # service-policy port-plcmap-1
Switch(config-pmap-c)# exit
Switch(config-pmap) # class-map cm-2
Switch(config-pmap-c) # match ip dscp 2
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap)# exit
Switch(config-pmap)# class-map cm-3
Switch(config-pmap-c)# match ip dscp 3
Switch(config-pmap-c)# service-policy port-plcmap-2
Switch(config-pmap)# exit
Switch(config-pmap) # class-map cm-4
Switch(config-pmap-c)# trust dscp
Switch(config-pmap)# exit
Switch(config) # interface vlan 10
Switch(config-if)#
Switch(config-if) # ser input vlan-plcmap
Switch(config-if) # exit
Switch(config) # exit
```

You can verify your settings by entering the show running-config privileged EXEC command.

Related Commands	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
	show policy-map	Displays QoS policy maps.
	show running-config	Displays the running configuration on the switch. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference, Release 12.2 > File Management Commands > Configuration File Management Commands.

set

Use the **set** policy-map class configuration command to classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet. Use the **no** form of this command to remove traffic classification.

set {dscp new-dscp | [ip] precedence new-precedence}

no set {**dscp** *new-dscp* | [**ip**] **precedence** *new-precedence*}

Syntax Description	dscp new-dscp	New DSCP value assigned to the classified traffic. The range is 0 to 63. You also can enter a mnemonic name for a commonly used value.		
	[ip] precedence new-pre	<i>cedence</i> New IP-precedence value assigned to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.		
Defaults	No traffic classification is defined.			
Command Modes	Policy-map class configu	ration		
Command History	Release	Modification		
-	12.1(19)EA1	This command was introduced.		
	12.2(25)SE	The ip dscp <i>new-dscp</i> keyword was changed to dscp <i>new-dscp</i> .		
		The set dscp <i>new-dscp</i> command replaces the set ip dscp <i>new-dscp</i> command.		
	12.2(25)SEC	The ip keyword is optional.		
Jsage Guidelines	command to set dscp in t configuration command, You can use the set ip pr	p dscp policy-map class configuration command, the switch changes this he switch configuration. If you enter the set ip dscp policy-map class this setting appears as set dscp in the switch configuration. ecedence policy-map class configuration command or the set precedence		
	policy-map class configuration command. This setting appears as set ip precedence in the switch configuration.			
	The set command is mutually exclusive with the trust policy-map class configuration command within the same policy map.			
	For the set dscp <i>new-dscp</i> or the set ip precedence <i>new-precedence</i> command, you can enter a mnemonic name for a commonly used value. For example, you can enter the set dscp af11 command, which is the same as entering the set dscp 10 command. You can enter the set ip precedence critical command, which is the same as entering the set ip precedence 5 command. For a list of supported mnemonics, enter the set dscp ? or the set ip precedence ? command to see the command-line help strings.			

To return to policy-map configuration mode, use the **exit** command. To return to privileged EXEC mode, use the **end** command.

Examples This example shows how to assign DSCP 10 to all FTP traffic without any policers:

Switch(config)# policy-map policy_ftp
Switch(config-pmap)# class ftp_class
Switch(config-pmap-c)# set dscp 10
Switch(config-pmap)# exit

You can verify your settings by entering the show policy-map privileged EXEC command.

Related Commands	Command	Description
	class	Defines a traffic classification match criteria (through the police , set , and trust policy-map class configuration commands) for the specified class-map name.
	police	Defines a policer for classified traffic.
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
	show policy-map	Displays QoS policy maps.
	trust	Defines a trust state for traffic classified through the class policy-map configuration command or the class-map global configuration command.

setup

L

Use the setup privileged EXEC command to configure the switch with its initial configuration.

setup

Command Modes Privileged EXEC

 Release
 Modification

 12.1(19)EA1
 This command was introduced.

Usage Guidelines

When you use the **setup** command, make sure that you have this information:

- IP address and network mask
- Password strategy for your environment
- Whether the switch will be used as the cluster command switch and the cluster name

When you enter the **setup** command, an interactive dialog, called the System Configuration Dialog, appears. It guides you through the configuration process and prompts you for information. The values shown in brackets next to each prompt are the default values last set by using either the **setup** command facility or the **configure** privileged EXEC command.

Help text is provided for each prompt. To access help text, press the question mark (?) key at a prompt.

To return to the privileged EXEC prompt without making changes and without running through the entire System Configuration Dialog, press **Ctrl-C**.

When you complete your changes, the setup program shows you the configuration command script that was created during the setup session. You can save the configuration in NVRAM or return to the setup program or the command-line prompt without saving it.

Examples	This is an example of output from the setup command:
	Switch# setup System Configuration Dialog
	Continue with configuration dialog? [yes/no]: yes
	At any point you may enter a question mark '?' for help. Use ctrl-c to abort configuration dialog at any prompt. Default settings are in square brackets '[]'.
	Basic management setup configures only enough connectivity for management of the system, extended setup will ask you to configure each interface on the system.

Would you like to enter basic management setup? [yes/no]: yes Configuring global parameters: Enter host name [Switch]: host-name The enable secret is a password used to protect access to privileged EXEC and configuration modes. This password, after entered, becomes encrypted in the configuration. Enter enable secret: enable-secret-password The enable password is used when you do not specify an enable secret password, with some older software versions, and some boot images. Enter enable password: enable-password The virtual terminal password is used to protect access to the router over a network interface. Enter virtual terminal password: terminal-password Configure SNMP Network Management? [no]: yes Community string [public]: Current interface summarv Any interface listed with OK? value "NO" does not have a valid configuration Interface IP-Address OK? 		> Configuration File Management Commands.
	show version	Displays version information for the hardware and firmware.

setup express

Use the **setup express** global configuration command to enable Express Setup mode. Use the **no** form of this command to disable Express Setup mode.

setup express

no setup express

- Syntax Description This command has no arguments or keywords.
- **Defaults** Express Setup is enabled.
- **Command Modes** Global configuration

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

Usage Guidelines

When Express Setup is enabled on a new (unconfigured) switch, pressing the Mode button for 2 seconds activates Express Setup. You can access the switch through an Ethernet port by using the IP address 10.0.0.1 and then can configure the switch with the web-based Express Setup program or the command-line interface (CLI)-based setup program.

When you press the Mode button for 2 seconds on a configured switch, the LEDs above the Mode button start blinking. If you press the Mode button for a total of 10 seconds, the switch configuration is deleted, and the switch reboots. The switch can then be configured like a new switch, either through the web-based Express Setup program or the CLI-based setup program.

Note

As soon as you make any change to the switch configuration (including entering *no* at the beginning of the CLI-based setup program), configuration by Express Setup is no longer available. You can only run Express Setup again by pressing the Mode button for 10 seconds. This deletes the switch configuration and reboots the switch.

If Express Setup is active on the switch, entering the **write memory** or **copy running-configuration** startup-configuration privileged EXEC commands deactivates Express Setup. The IP address 10.0.0.1 is no longer valid on the switch, and your connection using this IP address ends.

The primary purpose of the **no setup express** command is to prevent someone from deleting the switch configuration by pressing the Mode button for 10 seconds.

Examples

This example shows how to enable Express Setup mode:

Switch(config)# setup express

You can verify that Express Setup mode is enabled by pressing the Mode button:

- On an unconfigured switch, the LEDs above the Mode button turn solid green after 3 seconds.
- On a configured switch, the mode LEDs begin blinking after 2 seconds and turn solid green after 10 seconds.

on If you *hold* the Mode button down for a total of 10 seconds, the configuration is deleted, and the switch reboots.

This example shows how to disable Express Setup mode:

Switch(config) # no setup express

You can verify that Express Setup mode is disabled by pressing the Mode button. The mode LEDs do not turn solid green *or* begin blinking green if Express Setup mode is not enabled on the switch.

Related Commands	Command	Description
	show setup express	Displays if Express Setup mode is active.

shell trigger

Use the **shell trigger** global configuration command to create an event trigger. Use the **no** form of this command to delete the trigger.

shell trigger identifier description

no shell trigger identifier description

Syntax Description	identifier	Specify the event trigger identifier. The identifier should have no spaces or hyphens between words.
	description	Specify the event trigger description text.
Defeute	71	
Defaults	-	-defined event triggers:
		DNE_EVENT
		ITCH_EVENT
	CISCO_ROU	UTER_EVENT
	CISCO_WIE	RELESS_AP_EVENT
	CISCO_WIE	RELESS_LIGHTWEIGHT_AP_EVENT
Command Modes	Global configura	tion
Command History	Release	Modification
	12.2(50)SE	This command was introduced.
Usage Guidelines	Use this commar configuration cos	nd to create user-defined event triggers for use with the macro auto execute global mmand.
		nic device discovery when using 802.1x authentication, configure the RADIUS rver to support the Cisco attribute-value (av) pair: auto-smart-port= <i>event trigger</i>
Examples	This example she	ows how to create a user-defined event trigger called RADIUS_MAB_EVENT:
	Switch# config Switch(config) Switch(config)#	shell trigger RADIUS_MAB_EVENT MAC_AuthBypass Event

Related Commands	Command	Description
	access-list	Configures a standard or extended numbered access list on the switch. For syntax information, select Cisco IOS IP Command Reference , Volume 1 of 3:Addressing and Services , Release 12.2 > IP Services Commands.
	ip access list	Configures a named IP access list on the switch. For syntax information, select Cisco IOS IP Command Reference, Volume 1 of 3:Addressing and Services, Release 12.2 > IP Services Commands.
	mac access-list extended	Configures a named or numbered MAC access list on the switch.

show archive status

Use the **show archive status** privileged EXEC command to display the status of a new image being downloaded to a switch with the HTTP or the TFTP protocol.

show archive status [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
_	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EX	XEC
Command History	Release	Modification
	12.2(20)SE	This command was introduced.
Usage Guidelines	•	e archive download-sw privileged EXEC command to download an image to a TFTP server, the archive download-sw command shows the status of the download.
	•	have a TFTP server, you can use Network Assistant or the embedded device manager to e image by using HTTP. The show archive status command shows the progress of the
	-	are case sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> ayed, but the lines that contain <i>Output</i> are displayed.
Examples	These are exa	amples of output from the show archive status command:
		w archive status grade in progress
		w archive status grade in progress
		w archive status tracting the image
		w archive status ifying software
		w archive status rade completed. Reload pending
Related Commands	Command	Description

elated Commands	Command	Description
	archive download-sw	Downloads a new image from a TFTP server to the switch.

show arp access-list

Use the **show arp access-list** user EXEC command to display detailed information about Address Resolution Protocol (ARP) access control (lists).

show arp access-list [acl-name] [| {begin | exclude | include} expression]

Syntax Description	acl-name	(Optional) Nam	ne of the ACL.
	begin	(Optional) Disp	play begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Disp	play excludes lines that match the <i>expression</i> .
	include	(Optional) Disp	play includes lines that match the specified <i>expression</i> .
	expression	Expression in the	he output to use as a reference point.
Command Modes	User EXEC		
Command History	Release	Mod	ification
	12.2(20)SE	This	command was introduced.
Examples	This is an exa	mple of output fr	rom the show arp access-list command:
		arp access-lis	-
	ARP access 1		
	-	p 10.101.1.1 0. p 20.3.1.0 0.0.	0.0.255 mac any 0.255 mac any
	pointo i	20101210 0101	
Related Commands	Command		Description
	arp access-lis	st	Defines an ARP ACL.
	deny (ARP a configuration		Denies an ARP packet based on matches against the Dynamic Host Configuration Protocol (DHCP) bindings.
	configuration		· · · ·

show authentication

Use the **show authentication** command (in either user EXEC or privileged EXEC mode) to display information about authentication manager events on the switch.

show authentication {interface interface-id | registrations | sessions [session-id session-id]
[handle handle] [interface interface-id] [mac mac] [method method]}

Syntax Description	interface interface-id	(Optional) Display all of the authentication manager details for the specified interface.
	method method	(Optional) Displays all clients authorized by a specified authentication method (dot1x , mab , or webauth)
	registrations	(Optional) Display authentication manager registrations
	sessions	(Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).
	session-id session-id	(Optional) Specify an authentication manager session.
	handle handle	(Optional) Specify a range from 1 to 4294967295.
	mac mac	(Optional) Display authentication manager information for a specified MAC address.
Command Default	This command has no d	efault settings.
Command Modes	Privileged EXEC and U	ser EXEC
Command History	Release	Modification
	12.2(50)SE	This command was introduced.
Usage Guidelines		e significant fields shown in the output of the show authentication comma
Note	The possible values for	the status of sessions are shown below. For a session in terminal state, Authz

 Table 2-19
 show authentication Command Output

Field	Description
Idle	The session has been initialized and no methods have run yet.
Running	A method is running for this session.
No methods	No method has provided a result for this session.

Success or Authz Failed is displayed along with No methods if no method has provided a result.

Catalyst 3560 Switch Command Reference

Field	Description
Authc Success	A method has resulted in authentication success for this session.
Authc Failed	A method has resulted in authentication fail for this session.
Authz Success	All features have been successfully applied for this session.
Authz Failed	A feature has failed to be applied for this session.

Table 2-19	show authentication Command Output	(continued)
------------	------------------------------------	-------------

Table 2-20 lists the possible values for the state of methods. For a session in a terminal state, *Authc Success, Authc Failed*, or *Failed over* are displayed. *Failed over* means that an authentication method ran and then failed over to the next method, which did not provide a result. *Not run* appears for sessions that synchronized on standby.

Table 2-20 State Method Valu

Method State	State Level	Description
Not run	Terminal	The method has not run for this session.
Running	Intermediate	The method is running for this session.
Failed over	Terminal	The method has failed and the next method is expected to provide a result.
Authc Success	Terminal	The method has provided a successful authentication result for the session.
Authc Failed	Terminal	The method has provided a failed authentication result for the session.

Examples

This is an example the **show authentication registrations** command:

```
Switch# show authentication registrations
Auth Methods registered with the Auth Manager:
Handle Priority Name
3 0 dot1x
2 1 mab
1 2 webauth
```

The is an example of the show authentication interface interface-id command:

Switch # show authentication interface gigabitethernet0/23

Client list: MAC Address Domain Status Handle Interface 000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet0/23 Available methods list: Handle Priority Name 3 0 dot1x Runnable methods list: Handle Priority Name 3 0 dot1x

This is an example of the **show authentication sessions** command:

Switch# show authentication sessions

Interface	MAC Address	Method	Domain	Status	Session ID
Gi3/45	(unknown)	N/A	DATA	Authz Failed	0908140400000007003651EC
Gi3/46	(unknown)	N/A	DATA	Authz Success	09081404000000080057C274

This is an example of the **show authentication sessions** command for a specified interface:

```
Switch# show authentication sessions int gigabitethernet 0/46
           Interface: GigabitEthernet0/46
         MAC Address: Unknown
          IP Address: Unknown
              Status: Authz Success
              Domain: DATA
      Oper host mode: multi-host
    Oper control dir: both
       Authorized By: Guest Vlan
         Vlan Policy: 4094
     Session timeout:
                      N/A
        Idle timeout:
                      N/A
   Common Session ID: 0908140400000080057C274
     Acct Session ID: 0x000000A
             Handle: 0xCC000008
Runnable methods list:
      Method State
             Failed over
      dot1x
```

This is an example of the show authentication sessions command for a specified MAC address:

Switch# show authentication sessions mac 000e.84af.59bd

Interface: GigabitEthernet0/46 MAC Address: 000e.84af.59bd Status: Authz Success Domain: DATA Oper host mode: single-host Authorized By: Authentication Server Vlan Policy: 10 Handle: 0xE0000000 Runnable methods list: Method State dotlx Authc Success

This is an example of the **show authentication session method** command for a specified method:

Switch# show authentication sessions method mab No Auth Manager contexts match supplied criteria Switch# show authentication sessions method dot1x MAC Address Domain Status Handle Interface 000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23

Related Commands	Command	Description
	authentication control-direction	Configures the port mode as unidirectional or bidirectional.
	authentication event	Sets the action for specific authentication events.
	authentication fallback	Configures a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
	authentication host-mode	Sets the authorization manager mode on a port.
	authentication open	Enables or disables open access on a port.
	authentication order	Sets the order of authentication methods used on a port.
	authentication periodic	Enables or disables reauthentication on a port.

Command	Description
authentication port-control	Enables manual control of the port authorization state.
authentication priority	Adds an authentication method to the port-priority list.
authentication timer	Configures the timeout and reauthentication parameters for an 802.1x-enabled port.

show auto qos

Use the **show auto qos** user EXEC command to display the quality of service (QoS) commands entered on the interfaces on which automatic QoS (auto-QoS) is enabled.

show auto qos [interface [interface-id]]

Syntax Description	interface [interface-id]	(Optional) Display auto-QoS information for the specified port or for all ports. Valid interfaces include physical ports.	
		for an ports. vand interfaces include physical ports.	
Command Modes	User EXEC		
Command History	Release	Modification	
Command History	12.1(19)EA1	This command was introduced.	
	12.2(20)SE	The information in the command output changed, and the user guidelines	
	12.2(20)02	were updated.	
	12.2(40)SE	The information in the command output changed.	
Usage Guidelines	-	mand output shows only the auto-QoS command entered on each interface. The	
	specific interface.	e interface-id command output shows the auto-QoS command entered on a	
	1	onfig privileged EXEC command to display the auto-QoS configuration and the	
	user modifications.		
	The show auto qos com	mand output also shows the service policy information for the Cisco IP phone.	
	To display information a commands:	bout the QoS configuration that might be affected by auto-QoS, use one of these	
	• show mls qos		
	 show mls qos maps 	s cos-dscp	
	• show mls qos inter	face [interface-id] [buffers queueing]	
	 show mls qos maps dscp-output-q] 	s [cos-dscp cos-input-q cos-output-q dscp-cos dscp-input-q	
	• show mls qos input-queue		
	• show running-conf	īg	
	0		
Examples	This is an example of ou	tput from the show auto qos command after the auto qos voip cisco-phone and	
LXamples		softphone interface configuration commands are entered:	
	Switch> show auto qos		
	GigabitEthernet0/4 auto gos voip cisco-s	oftphone	
	areo dos vorb creco-e		

```
GigabitEthernet0/5
auto qos voip cisco-phone
GigabitEthernet0/6
```

auto qos voip cisco-phone

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch> show auto qos interface gigabitethernet 0/5
GigabitEthernet0/5
auto qos voip cisco-phone
```

This is an example of output from the **show running-config** privileged EXEC command when the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

```
Switch# show running-config

Usage Guidelines	Expressions are case se are not displayed, but th This is an example of o display. Switch# show boot BOOT path-list: flash Config file:	nsitive. For example, if you enter exclude output , the lines that contain <i>output</i> he lines that contain <i>Output</i> are displayed.

Field	Description		
BOOT path-list	Displays a semicolon separated list of executable files to try to load and execute when automatically booting up.		
	If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash file system. In a depth-first search of a directory, each encountered subdirectory is completely searched before continuing the search in the original directory.		
	If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot up with the first bootable file that it can find in the flash file system.		
Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.		
Private Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.		
Enable Break	Displays whether a break during booting up is enabled or disabled. If it is set to yes, on, or 1, you can interrupt the automatic bootup process by pressing the Break key on the console after the flash file system is initialized.		
Manual Boot	Displays whether the switch automatically or manually boots up. If it is set to no or 0, the bootloader attempts to automatically boot up the system. If it is set to anything else, you must manually boot up the switch from the bootloader mode.		
Helper path-list	Displays a semicolon separated list of loadable files to dynamically load during the bootloader initialization. Helper files extend or patch the functionality of the bootloader.		
NVRAM/Config file buffer size	Displays the buffer size that Cisco IOS uses to hold a copy of the configuration file in memory. The configuration file cannot be larger than the buffer size allocation.		

Table 2-21	show boot Field Descriptions
------------	------------------------------

Related Commands	Command	Description
	boot config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
	boot enable-break	Enables interrupting the automatic boot process.
	boot manual	Enables manually booting up the switch during the next bootup cycle.
	boot private-config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the private configuration.
	boot system	Specifies the Cisco IOS image to load during the next bootup cycle.

show cable-diagnostics tdr

Use the **show cable-diagnostics tdr** privileged EXEC command to display the Time Domain Reflector (TDR) results.

show cable-diagnostics tdr interface interface-id [| {begin | exclude | include} expression]

Syntax Description	interface-id	Specify the interface on which TDR was run.					
	begin	(Optional) Display begins with the line that matches the expression.					
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .					
	include	(Optional) Display includes lines that match the specified expression.					
	expression	Expression in the output to use as a reference point.					
Command Modes	Privileged EXI	EC					
Command History	Release	Modification					
lsage Guidelines		This command was introduced. rted only on 10/100/1000 copper Ethernet ports. It is not supported on 10/100 orts. For more information about TDR, see the software configuration guide for	-

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command on a Catalyst 3560G-24PS or 3560G-48PS switch:

```
Switch# show cable-diagnostics tdr interface gigabitethernet0/2
```

TDR test last run on: March 01 20:15:40							
Interface	Speed	Local	pair	Pair	length	Remote pair	Pair status
Gi0/2	auto	Pair	A	0	+/- 4 meters	N/A	Open
		Pair	В	0	+/- 4 meters	N/A	Open
		Pair	С	0	+/- 4 meters	N/A	Open
		Pair	D	0	+/- 4 meters	N/A	Open

Table 2-22 lists the descriptions of the fields in the **show cable-diagnostics tdr** command output.

 Table 2-22
 Fields Descriptions for the show cable-diagnostics tdr Command Output

Field	Description				
Interface	Interface on which TDR was run.				
Speed	Speed of connection.				
Local pair	Name of the pair of wires that TDR is testing on the local interface.				
Pair length	Location on the cable where the problem is, with respect to your switch. TDR can only find the location in one of these cases:				
	• The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s.				
	• The cable is open.				
	• The cable has a short.				
Remote pair	Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.				
Pair status	The status of the pair of wires on which TDR is running:				
	• Normal—The pair of wires is properly connected.				
	• Not completed—The test is running and is not completed.				
	• Not supported—The interface does not support TDR.				
	• Open—The pair of wires is open.				
	• Shorted—The pair of wires is shorted.				
	• ImpedanceMis—The impedance is mismatched.				
	• Short/Impedance Mismatched—The impedance mismatched or the cable is short.				
	• InProgress—The diagnostic test is in progress				

This is an example of output from the **show interfaces** *interface-id* command when TDR is running:

Switch# show interfaces gigabitethernet0/2 gigabitethernet0/2 is up, line protocol is up (connected: TDR in Progress)

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command when TDR is not running:

Switch# show cable-diagnostics tdr interface gigabitethernet0/2 % TDR test was never issued on Gi0/2

If an interface does not support TDR, this message appears:

% TDR test is not supported on switch 1

Related Commands	Command	Description
	test cable-diagnostics tdr	Enables and runs TDR on an interface.

show cisp

Use the **show cisp** privileged EXEC command to display CISP information for a specified interface.

show cisp {[interface interface-id] | clients | summary} | {[begin | exclude | include} expression]}

Syntax Description	clients	(Optional) Display CISP client details
	interface interface-id	(Optional) Display CISP information about the specified interface. Valid
		interfaces include physical ports and port channels.
	summary	(Optional) Display
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

show cluster

Use the **show cluster** user EXEC command to display the cluster status and a summary of the cluster to which the switch belongs. This command can be entered on the cluster command switch and cluster member switches.

show cluster [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display	y begins with the line that matches the <i>expression</i> .				
	exclude		y excludes lines that match the <i>expression</i> .				
	include		y includes lines that match the specified <i>expression</i> .				
	<i>expression</i> Expression in the output to use as a reference point.						
Command Modes	User EXEC						
Command History	Release	Modification					
	12.1(19)EA1	This command wa	s introduced.				
Usage Guidelines	If you enter this control cluster member a		not a cluster member, the error message Not a management				
	On a cluster member switch, this command displays the identity of the cluster command switch, the switch member number, and the state of its connectivity with the cluster command switch.						
	It also shows the		displays the cluster name and the total number of members. e the status changed. If redundancy is enabled, it displays information.				
	-	ase sensitive. For example, but the lines that contain 6	if you enter exclude output , the lines that contain <i>output</i> <i>Output</i> are displayed.				
Examples	This is an exampl switch:	e of output when the show of	cluster command is entered on the active cluster command				
	Switch> show cl	uster					
	Command switch	for cluster "Ajang"					
	Status:	umber of members: nce last status change:	7 1 members are unreachable 0 days, 0 hours, 2 minutes				
	Status:	nce last status change: ncy: Standby command switch:	1 members are unreachable 0 days, 0 hours, 2 minutes Enabled Member 1				
	Status: Time sin	nce last status change: ncy:	1 members are unreachable 0 days, 0 hours, 2 minutes Enabled Member 1 Ajang_standby 110				
	Status: Time si Redunda Heartbe	nce last status change: ncy: Standby command switch: Standby Group:	1 members are unreachable 0 days, 0 hours, 2 minutes Enabled Member 1 Ajang_standby				

This is an example of output when the **show cluster** command is entered on a cluster member switch:

Switch1> show cluster	
Member switch for cluster "hapuna"	
Member number:	3
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

This is an example of output when the **show cluster** command is entered on a cluster member switch that is configured as the standby cluster command switch:

Switch> show cluster	
Member switch for cluster "hapuna"	
Member number:	3 (Standby command switch)
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

This is an example of output when the **show cluster** command is entered on the cluster command switch that has lost connectivity with member 1:

Switch>	show cluster	
Command	switch for cluster "Ajang"	
	Total number of members:	7
	Status:	1 members are unreachable
	Time since last status change:	0 days, 0 hours, 5 minutes
	Redundancy:	Disabled
	Heartbeat interval:	8
	Heartbeat hold-time:	80
	Extended discovery hop count:	3

This is an example of output when the **show cluster** command is entered on a cluster member switch that has lost connectivity with the cluster command switch:

Switch> show cluster	
Member switch for cluster "hapuna"	
Member number:	<unknown></unknown>
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

Related Commands	Command	Description
	cluster enable	Enables a command-capable switch as the cluster command switch, assigns a cluster name, and optionally assigns a member number to it.
	show cluster candidates	Displays a list of candidate switches.
	show cluster members	Displays information about the cluster members.

show cluster candidates

Use the show cluster candidates privileged EXEC command to display a list of candidate switches.

show cluster candidates [detail | mac-address H.H.H.] [| {begin | exclude | include} expression]

Syntax Description	detail	(Optional) Di	splay detailed inf	ormation for	r all candidates.
	mac-address H.H.H.	(Optional) M.	AC address of the	e cluster cand	didate.
	begin	(Optional) Di	splay begins with	the line that	t matches the <i>expression</i> .
	exclude	(Optional) Di	splay excludes lin	nes that mate	ch the <i>expression</i> .
	include	(Optional) Di	splay includes lin	es that mate	th the specified <i>expression</i> .
	expression	Expression in	the output to use	as a referen	ce point.
Command Modes	User EXEC				
Command History	Release	Modification			
-	12.1(19)EA1	This comman	d was introduced.		
	The SN in the display n switch is discovered thr	neans <i>switch mer</i> rough extended d <i>bber</i> is the upstrea	<i>nber number</i> . If E iscovery. This is an example of output from the show cluster members detail command:

Related Commands Command

s	Command	Description
	show cluster	Displays the cluster status and a summary of the cluster to which the switch belongs.
	show cluster candidates	Displays a list of candidate switches.

show controllers cpu-interface

Use the **show controllers cpu-interface** privileged EXEC command to display the state of the CPU network interface ASIC and the send and receive statistics for packets reaching the CPU.

show controllers cpu-interface [| {begin | exclude | include} expression]

	begin	(Optional)	Display be	gins with the	line that matches the <i>expression</i> .
	I exclude (Optional) Display excludes lines that match the <i>expression</i> .				
	include				
			1 1		a reference point.

Command	Description
show controllers ethernet-controller	Displays per-interface send and receive statistics read from the hardware or the interface internal registers.
show interfaces	Displays the administrative and operational status of all interfaces or a specified interface.

Description

show controllers ethernet-controller

Use the **show controllers ethernet-controller** privileged EXEC command without keywords to display per-interface send and receive statistics read from the hardware. Use with the **phy** keyword to display the interface internal registers or the **port-asic** keyword to display information about the port ASIC.

show controllers ethernet-controller [interface-id] [phy [detail]] [port-asic {configuration |
 statistics}] [fastethernet 0][| {begin | exclude | include} expression]

Syntax Description	interface-id	The physical interface (including type, module, and port number).	
	phy	(Optional) Display the status of the internal registers on the switch physical layer device (PHY) for the device or the interface. This display includes the operational state of the automatic medium-dependent interface crossover (auto-MDIX) feature on an interface.	
	detail	(Optional) Display details about the PHY internal registers.	
	port-asic	(Optional) Display information about the port ASIC internal registers.	
	configuration	Display port ASIC internal register configuration.	
	statistics	Display port ASIC statistics, including the Rx/Sup Queue and miscellaneous statistics.	
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .	
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .	
	include	(Optional) Display includes lines that match the specified expression.	
	expression	Expression in the output to use as a reference point.	
Command Modes	Privileged EXEC (only supported with the <i>interface-id</i> keywords in user EXEC mode) Release Modification		
,	12.1(19)EA1	This command was introduced.	
Usage Guidelines	or for the specifie When you enter th	out keywords provides traffic statistics, basically the RMON statistics for all interfaces ed interface. he phy or port-asic keywords, the displayed information is useful primarily for Cisco representatives troubleshooting the switch.	
	Expressions are c	ase sensitive. For example, if you enter exclude output, the lines that contain output	

Examples

This is an example of output from the **show controllers ethernet-controller** command for an interface. Table 2-23 describes the *Transmit* fields, and Table 2-24 describes the *Receive* fields.

Table 2-23Transmit Field Descriptions

Field	Description
Bytes	The total number of bytes sent on an interface.
Unicast Frames	The total number of frames sent to unicast addresses.
Multicast frames	The total number of frames sent to multicast addresses.
Broadcast frames	The total number of frames sent to broadcast addresses.
Too old frames	The number of frames dropped on the egress port because the packet aged out.
Deferred frames	The number of frames that are not sent after the time exceeds 2*maximum-packet time.
MTU exceeded frames	The number of frames that are larger than the maximum allowed frame size.
1 collision frames	The number of frames that are successfully sent on an interface after one collision occurs.
2 collision frames	The number of frames that are successfully sent on an interface after two collisions occur.
3 collision frames	The number of frames that are successfully sent on an interface after three collisions occur.
4 collision frames	The number of frames that are successfully sent on an interface after four collisions occur.

Field	Description
5 collision frames	The number of frames that are successfully sent on an interface after five collisions occur.
6 collision frames	The number of frames that are successfully sent on an interface after six collisions occur.
7 collision frames	The number of frames that are successfully sent on an interface after seven collisions occur.
8 collision frames	The number of frames that are successfully sent on an interface after eight collisions occur.
9 collision frames	The number of frames that are successfully sent on an interface after nine collisions occur.
10 collision frames	The number of frames that are successfully sent on an interface after ten collisions occur.
11 collision frames	The number of frames that are successfully sent on an interface after 11 collisions occur.
12 collision frames	The number of frames that are successfully sent on an interface after 12 collisions occur.
13 collision frames	The number of frames that are successfully sent on an interface after 13 collisions occur.
14 collision frames	The number of frames that are successfully sent on an interface after 14 collisions occur.
15 collision frames	The number of frames that are successfully sent on an interface after 15 collisions occur.
Excessive collisions	The number of frames that could not be sent on an interface after 16 collisions occur.
Late collisions	After a frame is sent, the number of frames dropped because late collisions were detected while the frame was sent.
VLAN discard frames	The number of frames dropped on an interface because the CFI ¹ bit is set.
Excess defer frames	The number of frames that are not sent after the time exceeds the maximum-packet time.
64 byte frames	The total number of frames sent on an interface that are 64 bytes.
127 byte frames	The total number of frames sent on an interface that are from 65 to 127 bytes.
255 byte frames	The total number of frames sent on an interface that are from 128 to 255 bytes.
511 byte frames	The total number of frames sent on an interface that are from 256 to 511 bytes.
1023 byte frames	The total number of frames sent on an interface that are from 512 to 1023 bytes.
1518 byte frames	The total number of frames sent on an interface that are from 1024 to 1518 bytes.
Too large frames	The number of frames sent on an interface that are larger than the maximum allowed frame size.
Good (1 coll) frames	The number of frames that are successfully sent on an interface after one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs.

Table 2-23 Transmit Field Descriptions (continued)

1. CFI = Canonical Format Indicator

Table 2-24 Receive Field Descriptions

Field	Description			
Bytes	The total amount of memory (in bytes) used by frames received on an interface, including the FCS^1 value and the incorrectly formed frames. This value excludes the frame header bits.			
Unicast frames	The total number of frames successfully received on the interface that are directed to unicast addresses.			
Multicast frames	The total number of frames successfully received on the interface that are directed to multicast addresses.			
Broadcast frames	The total number of frames successfully received on an interface that are directed to broadcast addresses.			

Field	Description
Unicast bytes	The total amount of memory (in bytes) used by unicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Multicast bytes	The total amount of memory (in bytes) used by multicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Broadcast bytes	The total amount of memory (in bytes) used by broadcast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Alignment errors	The total number of frames received on an interface that have alignment errors.
FCS errors	The total number of frames received on an interface that have a valid length (in bytes) but do not have the correct FCS values.
Oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size.
Undersize frames	The number of frames received on an interface that are smaller than 64 bytes.
Collision fragments	The number of collision fragments received on an interface.
Minimum size frames	The total number of frames that are the minimum frame size.
65 to 127 byte frames	The total number of frames that are from 65 to 127 bytes.
128 to 255 byte frames	The total number of frames that are from 128 to 255 bytes.
256 to 511 byte frames	The total number of frames that are from 256 to 511 bytes.
512 to 1023 byte frames	The total number of frames that are from 512 to 1023 bytes.
1024 to 1518 byte frames	The total number of frames that are from 1024 to 1518 bytes.
Overrun frames	The total number of overrun frames received on an interface.
Pause frames	The number of pause frames received on an interface.
Symbol error frames	The number of frames received on an interface that have symbol errors.
Invalid frames, too large	The number of frames received that were larger than maximum allowed MTU^2 size (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.
Valid frames, too large	The number of frames received on an interface that are larger than the maximum allowed frame size.
Invalid frames, too small	The number of frames received that are smaller than 64 bytes (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.
Valid frames, too small	The number of frames received on an interface that are smaller than 64 bytes (or 68 bytes for VLAN-tagged frames) and that have valid FCS values. The frame size includes the FCS bits but excludes the frame header bits.
Too old frames	The number of frames dropped on the ingress port because the packet aged out.
Valid oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size and have valid FCS values. The frame size includes the FCS value but does not include the VLAN tag.

Table 2-24 Receive Field Descriptions (contin

Field	Description
	The total number of frames received on an interface that have a valid length (in bytes) but that do not have the correct FCS values.
RxPortFifoFull drop frames	The total number of frames received on an interface that are dropped because the ingress queue is full.

This is an example of output from the show controllers utilization command on a specific port:

```
Switch> show controllers gigabitethernet0/1 utilization
Receive Bandwidth Percentage Utilization : 0
Transmit Bandwidth Percentage Utilization : 0
```

Table 2-25show controllers utilization Field Descriptions

Field	Description
Receive Bandwidth Percentage Utilization	Displays the received bandwidth usage of the switch, which is the sum of the received traffic on all the ports divided by the switch receive capacity.
Transmit Bandwidth Percentage Utilization	Displays the transmitted bandwidth usage of the switch, which is the sum of the transmitted traffic on all the ports divided it by the switch transmit capacity.
Fabric Percentage Utilization	Displays the average of the transmitted and received bandwidth usage of the switch.

show diagnostic

Use the **show diagnostic** user EXEC command to view the test results of the online diagnostics and to list the supported test suites.

show diagnostic content [| {begin | exclude | include} expression]

show diagnostic post [{begin | exclude | include} expression]

show diagnostic result [detail | test {test-id | test-id-range | all } [detail]] [| {begin | exclude |
include } expression]

show diagnostic schedule [| {begin | exclude | include} expression]

show diagnostic status [| {begin | exclude | include} expression]

show diagnostic [detail] [| { begin | exclude | include } expression]

Syntax Description	content	Display test information including test ID, test attributes, and supported coverage test levels for each test and for all modules.
	post	Display the power-on self-test (POST) results; the command output is the same as the show post command.
	result	Displays the test results.
	detail	(Optional) Displays the all test statistics.
	test	Specify a test.
	test-id	Identification number for the test; see the "Usage Guidelines" section for additional information.
	test-id-range	Range of identification numbers for tests; see the "Usage Guidelines" section for additional information.
	all	All the tests.
	schedule	Displays the current scheduled diagnostic tasks.
	status	Displays the test status.
	lbegin	(Optional) Display begins with the line that matches the expression.
	lexclude	(Optional) Display excludes lines that match the expression.
	linclude	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Defaults

This command has no default settings.

Command Modes User EXEC

Command History	Release	Modification
	12.2(35)SE	This command was introduced.

Usage Guidelines In the command output, the possible testing results are as follows: Passed (.) Failed (F) ٠ Unknown (U) **Examples** This example shows how to display the online diagnostics that are configured on a switch: Switch# show diagnostic content Diagnostics test suite attributes: B/* - Basic ondemand test / NA P/V/* - Per port test / Per device test / NA $\rm D/N/\star$ - Disruptive test / Non-disruptive test / NA $\mathrm{S/*}$ - Only applicable to standby unit / NA $\ensuremath{\mathbb{X}}\xspace/$ - Not a health monitoring test / NA F/* - Fixed monitoring interval test / NA E/* - Always enabled monitoring test / NA A/I - Monitoring is active / Monitoring is inactive R/\star - Switch will reload after test list completion / NA Thre-Test Interval ID Test Name attributes day hh:mm:ss.ms shold 1) TestPortAsicStackPortLoopback B*N****A** 000 00:01:00.00 n/a B*D*X**IR* not configured n/a 2) TestPortAsicLoopback B*D*X**IR* not configured n/a 3) TestPortAsicCam 4) TestPortAsicRingLoopback B*D*X**IR* not configured n/a B*D*X**IR* not configured n/a 5) TestMicRingLoopback B*D*X**IR* 6) TestPortAsicMem not configured n/a This example shows how to display the online diagnostic results for a switch: Switch# show diagnostic result Switch 1: SerialNo : Overall diagnostic result: PASS Test results: (. = Pass, F = Fail, U = Untested) 1) TestPortAsicStackPortLoopback ---> . 2) TestPortAsicLoopback -----> . 3) TestPortAsicCam ----> . 4) TestPortAsicRingLoopback -----> .

This example shows how to display the online diagnostic test schedule for a switch:

Switch# show diagnostic schedule Current Time = 14:39:49 PST Tue Jul 5 2005 Schedule #1: To be run daily 12:00 Test ID(s) to be executed: 1.

5) TestMicRingLoopback -----> .
6) TestPortAsicMem -----> .

Related Commands

Command	Description
clear arp inspection log	Configures the health-monitoring diagnostic test.
diagnostic schedule	Sets the scheduling of test-based online diagnostic testing.
diagnostic start	Starts the online diagnostic test.

show dot1q-tunnel

Use the **show dot1q-tunnel** user EXEC command to display information about IEEE 802.1Q tunnel ports.

show dot1q-tunnel [interface interface-id] [| {begin | exclude | include} expression]

Syntax Description	interface interface-id	(Optional) Specify the interface for which to display IEEE 802.1Q tunneling information. Valid interfaces include physical ports and port channels.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.

show dot1x

Use the **show dot1x** user EXEC command to display IEEE 802.1x statistics, administrative status, and operational status for the switch or for the specified port.

show dot1x [{all [summary] | interface interface-id} [details | statistics]] [| {begin | exclude |
include} expression]

Syntax Description	all [summary]	(Optional) Display the IEEE 802.1x status for all ports.
	interface interface-id	(Optional) Display the IEEE 802.1x status for the specified port (including type, module, and port number).
	details	(Optional) Display the IEEE 802.1x interface details.
	statistics	(Optional) Display IEEE 802.1x statistics for the specified port.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
12.2(25)SED		The display was expanded to include auth-fail-vlan in the authorization state machine state and port status fields.
	12.2(25)SEE	The command syntax was changed, and the command output was modified.
	12.2(35)SE	The display was expanded to include the status of a port that is configured as both a host and an IP phone (a Cisco IP phone or phone from another manufacturer).

Usage Guidelines If you do not specify a port, global parameters and a summary appear. If you specify a port, details for that port appear.

If the port control is configured as unidirectional or bidirectional control and this setting conflicts with the switch configuration, the **show dot1x** {**all** | **interface** *interface-id*} privileged EXEC command output has this information:

ControlDirection = In (Inactive)

Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* appear.

Examples

This is an example of output from the **show dot1x** user EXEC command:

Switch> show dot1x	
Sysauthcontrol	Enabled
Dot1x Protocol Version	2
Critical Recovery Delay	100
Critical EAPOL	Disabled

This is an example of output from the show dot1x all user EXEC command:

Switch> show dot1x all	
Sysauthcontrol	Enabled
Dot1x Protocol Version	2
Critical Recovery Delay	100
Critical EAPOL	Disabled

Dot1x Info for GigabitEthernet0/1

PAE	= AUTHENTICATOR

<Output truncated>

This is an example of output from the **show eap sessions interface** *interface-id* privileged EXEC command:

Switch#	show eap	sessions	gigabitether	net0/1
Role:		1	Authenticator	Decision:

Role:	Authenticator	Decision:	Fail
Lower layer:	Dot1x-Authentica	aInterface:	Gi0/1
Current method:	None	Method state:	Uninitialised
Retransmission count:	1 (max: 2)	Timer:	Authenticator
ReqId Retransmit (timeou	t: 30s, remaining	g: 13s)	
EAP handle:	0x5200000A	Credentials profile:	None
Lower layer context ID:	0x93000004	Eap profile name:	None
Method context ID:	0x00000000	Peer Identity:	None
Start timeout (s):	1	Retransmit timeout (s):	30 (30)
Current ID:	2	Available local methods:	None

Related Commands	Command	Description
	clear eap sessions	Clears EAP session information for the switch or for the specified port.

show env

Use the **show env** user EXEC command to show fan, temperature, redundant power system (RPS) availability, and power information for the switch.

show env {all | fan | power | rps [all | detail] | temperature [status] } [| {begin | exclude | include }
 expression]

Syntax Description	all	Display both fan and temperature environmental status.
	fan	Display the switch fan status.
	power	Display the switch power status.
	rps	Display whether an RPS 300 Redundant Power System (RPS 300), Cisco RPS675 Redundant Power System (RPS 675), or the Cisco Redundant Power System 2300 (RPS 2300) is connected to the switch.
	rps all	(Optional) Display all the redundant power systems that are connected to the standalone switch or the switch stack.
		These keywords are available only on Catalyst 3560v2 switches.
	rps detail	(Optional) Display the details about the redundant power systems that are connected to the switch or the switch stack.
		These keywords are available only on Catalyst 3560v2 switches.
	temperature	Display the switch temperature status.
	status	(Optional) Display the switch internal temperature (not the external temperature) and the threshold values. This keyword is available only on the Catalyst 3560G-48TS, 3560G-48PS, 3560G-24TS, and 3560G-24PS switches.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History	Release	Modification	
	12.1(19)EA1	This command was introduced.	
	12.2(20)SE3	The temperature status keyword was added.	
	12.2(50)SE1	The rps [all detail] keywords were added.	

Usage Guidelines

delines Though visible on all switches, the **show env temperature status** command is valid only for the Catalyst 3560G-48TS, 3560G-48PS, 3560G-24TS, and 3560G-24PS switches. If you enter this command on these switches, the command output shows the switch temperature states and the threshold levels. If you enter the command on a switch other than these four switches, the output field shows *Not Applicable*.

On a Catalyst 3560G-48PS or 3560G-24PS switch, you can also use the **show env temperature** command to display the switch temperature status. The command output shows the green and yellow states as *OK* and the red state as *FAULTY*. If you enter the **show env all** command on this switch, the command output is the same as the **show env temperature status** command output.

For more information about the threshold levels, see the software configuration guide for this release.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

Examples

This is an example of output from the **show env all** command:

```
Switch> show env all
FAN is OK
TEMPERATURE is OK
Temperature Value: 33 Degree Celsius
Temperature State: GREEN
Yellow Threshold : 56 Degree Celsius
Red Threshold : 66 Degree Celsius
SW PID
                 Serial# Status
                                          Sys Pwr PoE Pwr Watts
  ----- -----
                                         _____ ____
_ _
                                                        ____
1 Built-in
                                          Good
SW Status
               RPS Name
                              RPS Serial# RPS Port#
   _____
               _____
                             -----
_ _
```

This is an example of output from the show env fan command:

Switch> **show env fan** FAN is OK

This example shows how to display the temperature value, state, and the threshold values. Table 2-27 describes the temperature states in the command output.

```
Switch> show env temperature status
Temperature Value:28 Degree Celsius
Temperature State:GREEN
Yellow Threshold :70 Degree Celsius
Red Threshold :75 Degree Celsius
```

Table 2-27 States in the show env temperature status Command Output

State	Description
Green	The switch temperature is in the <i>normal</i> operating range.
Yellow	The temperature is in the <i>warning</i> range. You should check the external temperature around the switch.
Red	The temperature is in the <i>critical</i> range. The switch might not run properly if the temperature is in this range.

show errdisable detect

Use the show errdisable detect user EXEC command to display error-disabled detection status.

show errdisable detect [| {begin | exclude | include} expression]

Syntax Description	begin (C	Optional) Display b	egins with the line that matches the <i>expression</i> .
	exclude (0	Optional) Display e	xcludes lines that match the <i>expression</i> .
	include (C	Optional) Display in	ncludes lines that match the specified <i>expression</i> .

Time since last port bundled: 01d:20h:24m:44s Gi0/2
```

This is an example of output from the show etherchannel protocol command:

```
Switch# show etherchannel protocol
Channel-group listing:
----------
Group: 1
---------
Protocol: LACP
Group: 2
----------
Protocol: PAgP
```

Related Commands

Command	Description		
channel-group	Assigns an Ethernet port to an EtherChannel group.		
channel-protocol	Restricts the protocol used on a port to manage channeling.		
interface port-channel	Accesses or creates the port channel.		

show fallback profile

Use the **show fallback profile** privileged EXEC command to display the fallback profiles that are configured on a switch.

show fallback profile [append | begin | exclude | include | { [redirect | tee] url} expression]

Syntax Description		
	append	(Optional) Append redirected output to a specified URL
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	redirect	(Optional) Copy output to a specified URL.
	tee	(Optional) Copy output to a specified URL.
	expression	Expression in the output to use as a reference point.
	url	Specified URL where output is directed.

show interfaces

Use the **show interfaces** privileged EXEC command to display the administrative and operational status of all interfaces or a specified interface.

show interfaces [interface-id | vlan vlan-id] [accounting | capabilities [module number] |
counters | description | etherchannel | flowcontrol | private-vlan mapping | pruning | stats
| status [err-disabled] | switchport [backup | module number] | transceiver
{tengigabitethernet interface-id} | properties | detail [module number] | trunk] [| {begin |
exclude | include} expression]

Syntax Description	interface-id	(Optional) Valid interfaces include physical ports (including type, module, and port number) and port channels. The port-channel range is 1 to 48.					
	vlan vlan-id	(Optional) VLAN identification. The range is 1 to 4094.					
	accounting	(Optional) VEAR Identification. The range is 1 to 4004. (Optional) Display accounting information on the interface, including active protocols and input and output packets and octets.					
		Note The display shows only packets processed in software; hardware-switched packets do not appear.					
	capabilities	(Optional) Display the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.					
	module number	(Optional) Display capabilities , switchport configuration, or transceiver characteristics (depending on preceding keyword) of all interfaces on the switch. The only valid module number is 1. This option is not available if you enter a specific interface ID.					
	counters	(Optional) See the show interfaces counters command.					
	description	(Optional) Display the administrative status and description set for an interf					
	etherchannel	(Optional) Display interface EtherChannel information.					
	flowcontrol	(Optional) Display interface flowcontrol information					
	private-vlan mapping	(Optional) Display private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is available only if your switch is running the IP services image, formerly known as the enhanced multilayer image (EMI).					
	pruning	(Optional) Display interface trunk VTP pruning information.					
	stats	(Optional) Display the input and output packets by switching path for the interface.					
	status	(Optional) Display the status of the interface. A status of <i>unsupported</i> in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.					
	err-disabled	(Optional) Display interfaces in error-disabled state.					
	switchport	(Optional) Display the administrative and operational status of a switching (nonrouting) port, including port blocking and port protection settings.					
	backup	(Optional) Display Flex Link backup interface configuration and status for the specified interface or all interfaces on the switch.					
	tengigabitethernet	Display the status of a connected ten-gigabit module.					

transceiver [detail properties]	(Optional) Display the physical properties of a CWDM ¹ or DWDM ² small form-factor (SFP) module interface. The keywords have these meanings:			
	• detail —(Optional) Display calibration properties, including high and low numbers and any alarm information.			
	• properties —(Optional) Display speed, duplex, and inline power settings on an interface.			
trunk	Display interface trunk information. If you do not specify an interface, only information for active trunking ports appears.			
begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
exclude	(Optional) Display excludes lines that match the <i>expression</i> .			
include	(Optional) Display includes lines that match the specified expression.			
expression	Expression in the output to use as a reference point.			

2. Dense wavelength-division multiplexer

Though visible in the command-line help strings, the **crb**, **fair-queue**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
	12.2(20)SE	The private-vlan mapping , backup , transceiver calibration , detail , and properties , keywords were added.
	12.2(25)SEA	The calibration keyword was removed.
	12.2(25)SEE	The backup, counters, detail, and trunk keywords were added.
	12.2(44)SE	Added the tengigabitethernet interface-id transceiver detail keywords.

Usage Guidelines

The **show interfaces capabilities** command with different keywords has these results:

- Use the **show interfaces capabilities module 1** to display the capabilities of all interfaces on the switch. Entering any other number is invalid.
- Use the **show interfaces** *interface-id* **capabilities** to display the capabilities of the specified interface.
- Use the **show interfaces capabilities** (with no module number or interface ID) to display the capabilities of all interfaces on the switch.
- Use the **show interfaces switchport module 1** to display the switch port characteristics of all interfaces on the switch. Entering any other number is invalid.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

Examples	This is an example of output from the show interfaces command for an interface:						
	Switch# show interfaces gigabitethernet0/2						
	GigabitEthernet0/2is down, line protocol is down						
	Hardware is Gigabit Ethernet, address is 0009.43a7.d085 (bia 0009.43a7.d085)						
	MTU 1500 bytes, BW 10000 Kbit, DLY 1000 usec,						
	reliability 255/255, txload 1/255, rxload 1/255						
	Encapsulation ARPA, loopback not set						
	Keepalive set (10 sec)						
	Auto-duplex, Auto-speed						
	input flow-control is off, output flow-control is off						
	ARP type: ARPA, ARP Timeout 04:00:00 Last input never, output never, output hang never						
	Last clearing of "show interfaces" counters never						
	Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0						
	Queueing strategy: fifo						
	Output queue :0/40 (size/max)						
	5 minute input rate 0 bits/sec, 0 packets/sec						
	5 minute output rate 0 bits/sec, 0 packets/sec						
	2 packets input, 1040 bytes, 0 no buffer						
	Received 0 broadcasts, 0 runts, 0 giants, 0 throttles						
	0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored						
	0 watchdog, 0 multicast, 0 pause input						
	0 input packets with dribble condition detected						
	4 packets output, 1040 bytes, 0 underruns						
	0 output errors, 0 collisions, 3 interface resets						
	0 babbles, 0 late collision, 0 deferred						
	0 lost carrier, 0 no carrier, 0 PAUSE output						
	0 output buffer failures, 0 output buffers swapped out						
	This is an example of output from the show interfaces accounting command.

This is an example of output from the **show interfaces** *interface* **description** command when the interface has been described as *Connects to Marketing* by using the **description** interface configuration command.

```
Switch# show interfaces gigabitethernet0/2 descriptionInterface StatusProtocol DescriptionGi0/2updownConnects to Marketing
```

This is an example of output from the **show interfaces etherchannel** command when port channels are configured on the switch:

```
Switch# show interfaces etherchannel
_ _ _ _
Port-channel1:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port= 10/1Number of ports = 0GC= 0x00000000HotStandBy port = null
                   = Port-channel Ag-Not-Inuse
Port state
Port-channel2:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port = 10/2 Number of ports = 0
GC = 0x00000000 HotStandBy port = null
                     = Port-channel Ag-Not-Inuse
Port state
Port-channel3:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port = 10/3 Number of ports = 0
GC = 0x00000000 HotStandBy port = :
                                        HotStandBy port = null
Port state
                    = Port-channel Ag-Not-Inuse
```

This is an example of output from the **show interfaces private-vlan mapping** command when the private-VLAN primary VLAN is VLAN 10 and the secondary VLANs are VLANs 501 and 502:

This is an example of output from the **show interfaces** *interface-id* **pruning** command when pruning is enabled in the VTP domain:

```
Switch# show interfaces gigibitethernet0/2 pruning

Port Vlans pruned for lack of request by neighbor

Gi0/2 3,4

Port Vlans traffic requested of neighbor

Gi0/2 1-3
```

This is an example of output from the **show interfaces stats** command for a specified VLAN interface.

Switch# show interfaces vlan 1 stats						
Switching path	Pkts In	Chars In Pkts	s Out Cha	rs Out		
Processor	1165354	136205310	570800	91731594		
Route cache	0	0	0	0		
Total	1165354	136205310	570800	91731594		

This is an example of partial output from the **show interfaces status** command. It displays the status of all interfaces.

Switch# show interfaces status Port Name Status Vlan Duplex Speed Type a-half a-100 10/100BaseTX connected routed Fa0/1 notconnect 121,40 auto 10/100BaseTX Fa0/2 auto notconnect 1 Fa0/3 auto auto 10/100BaseTX Fa0/4 notconnect 18 auto auto Not Present notconnect 18 auto auto Not Present connected 121 a-full a-1000 10/100BaseTX Fa0/5 connected 122,11 a-full a-1000 10/100BaseTX Fa0/6 <output truncated> Gi0/1 notconnect 1 auto auto 10/100/1000BaseTX 1 Gi0/2 notconnect auto auto unsupported

These are examples of output from the show interfaces status command for a specific interface when private VLANs are configured. Port 2 is configured as a private-VLAN host port. It is associated with primary VLAN 20 and secondary VLAN 25.

Switch#	show interfaces	fastethernet0/2	status	
Port	Name	Status	Vlan	Duplex Speed Type
Fa0/2		connected	20,25	a-full a-100 10/100BaseTX

In this example, port 3 is configured as a private-VLAN promiscuous port. The display shows only the primary VLAN 20.

Switch#	show interfaces	fastethernet0/3	status	
Port	Name	Status	Vlan	Duplex Speed Type
Fa0/3		connected	20	a-full a-100 10/100BaseTX

This is an example of output from the show interfaces status err-disabled command. It displays the status of interfaces in the error-disabled state.

Switch#	show	interfaces	status	err-disable	∋đ
Port	Nan	ne	St	tatus	Reason
Gi0/2			ei	rr-disabled	dtp-flap

Γ

This is an example of output from the **show interfaces switchport** command for a port. Table 2-28 describes the fields in the display.

<u>Note</u>

Private VLAN trunks are not supported in this release, so those fields are not applicable.

```
Switch# show interfaces gigabitethernet0/1 switchport
Name: Gi0/1
Switchport: Enabled
Administrative Mode: dynamic auto
Operational Mode: static access
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: On
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Voice VLAN: none
Administrative private-vlan host-association:10 (VLAN0010) 502 (VLAN0502)
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Protected: false
```

Unknown unicast blocked: disabled Unknown multicast blocked: disabled

Voice VLAN: none (Inactive) Appliance trust: none

Table 2-28 show interfaces switchport Field Descriptions

Field	Description
Name	Displays the port name.
Switchport	Displays the administrative and operational status of the port. In this display, the port is in switchport mode.
Administrative Mode	Displays the administrative and operational modes.
Operational Mode	
Administrative Trunking Encapsulation	Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.
Operational Trunking Encapsulation	
Negotiation of Trunking	
Access Mode VLAN	Displays the VLAN ID to which the port is configured.
Trunking Native Mode VLAN	Lists the VLAN ID of the trunk that is in native mode. Lists the
Trunking VLANs Enabled	allowed VLANs on the trunk. Lists the active VLANs on the trunk.
Trunking VLANs Active	
Pruning VLANs Enabled	Lists the VLANs that are pruning-eligible.

Field	Description		
Protected	Displays whether or not protected port is enabled (True) or disabled (False) on the interface.		
Unknown unicast blocked Unknown multicast blocked	Displays whether or not unknown multicast and unknown unicast traffic is blocked on the interface.		
Voice VLAN	Displays the VLAN ID on which voice VLAN is enabled.		
Administrative private-vlan host-association	Displays the administrative VLAN association for private-VLAN host ports.		
Administrative private-vlan mapping	Displays the administrative VLAN mapping for private-VLAN promiscuous ports.		
Operational private-vlan	Displays the operational private-VLAN status.		
Appliance trust	Displays the class of service (CoS) setting of the data packets of the IP phone.		

Table 2-28 show interfaces switchport Field Descriptions (continued)

This is an example of output from the **show interfaces switchport** command for a port configured as a private VLAN promiscuous port. The primary VLAN 20 is mapped to secondary VLANs 25, 30, and 35:

```
Switch# show interfaces gigabitethernet0/2 switchport
Name: Gi01/2
Switchport: Enabled
Administrative Mode: private-vlan promiscuous
Operational Mode: private-vlan promiscuous
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: Off
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: 20 (VLAN0020) 25 (VLAN0025) 30 (VLAN0030) 35
(VLAN0035)
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dotlq
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan:
20 (VLAN0020) 25 (VLAN0025)
30 (VLAN0030)
35 (VLAN0035)
```

<output truncated>

This is an example of output from the **show interfaces switchport backup** command:

```
Switch# show interfaces switchport backup

Switch Backup Interface Pairs:

Active Interface Backup Interface State

Fa0/1 Fa0/2 Active Up/Backup Standby

Fa0/3 Fa0/5 Active Down/Backup Up

Po1 Po2 Active Standby/Backup Up
```

This is an example of output from the **show interfaces switchport backup** command. In this example, VLANs 1 to 50, 60, and 100 to 120 are configured on the switch:

Switch(config)#interface gigabitEthernet 0/6 Switch(config-if)#switchport backup interface gigabitEthernet 0/8 prefer vlan 60,100-120

When both interfaces are up, Gi0/8 forwards traffic for VLANs 60, 100 to 120, and Gi0/6 forwards traffic for VLANs 1 to 50.

Switch#show interfaces switchport backup Switch Backup Interface Pairs: Active Interface Backup Interface State

GigabitEthernet0/6 GigabitEthernet0/8 Active Down/Backup Up

Vlans on Interface Gi 0/6: 1-50 Vlans on Interface Gi 0/8: 60, 100-120

When a Flex Link interface goes down (LINK_DOWN), VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi0/6 goes down, Gi0/8 carries all VLANs of the Flex Link pair.

Switch#**show interfaces switchport backup** Switch Backup Interface Pairs:

 Active Interface
 Backup Interface
 State

 GigabitEthernet0/6 GigabitEthernet0/8 Active Down/Backup Up

Vlans on Interface Gi 0/6: Vlans on Interface Gi 0/8: 1-50, 60, 100-120

When a Flex Link interface comes up, VLANs preferred on this interface are blocked on the peer interface and moved to the forwarding state on the interface that has just come up. In this example, if interface Gi0/6 comes up, then VLANs preferred on this interface are blocked on the peer interface Gi0/8 and forwarded on Gi0/6.

Switch#show interfaces switchport backup Switch Backup Interface Pairs: Active Interface Backup Interface State GigabitEthernet0/6 GigabitEthernet0/8 Active Down/Backup Up Vlans on Interface Gi 0/6: 1-50 Vlans on Interface Gi 0/8: 60, 100-120

This is an example of output from the **show interfaces** interface-id **pruning** command:

Switch# show interfaces gigibitethernet0/2 pruning Port Vlans pruned for lack of request by neighbor This is an example of output from the **show interfaces** *interface-id* **trunk** command. It displays trunking information for the port.

Switch#	show	interfaces	gigabitethernet0/2	trunk
---------	------	------------	--------------------	-------

Port Gi0/1	Mode auto	Encapsulation	Status trunking	Native vlan 1
Port		lowed on trunk	er unkring	Ŧ

Related Commands C

Command	Description	
switchport access	Configures a port as a static-access or a dynamic-access port.	
switchport block	Blocks unknown unicast or multicast traffic on an interface.	
switchport backup interface	Configures Flex Links, a pair of Layer 2 interfaces that provide mutual backup.	
switchport mode	Configures the VLAN membership mode of a port.	
switchport mode private-vlan	Configures a port as a private-VLAN host or a promiscuous port.	
switchport private-vlan	Defines private-VLAN association for a host port or private-VLAN mapping for a promiscuous port.	
switchport protected	Isolates unicast, multicast, and broadcast traffic at Layer 2 from other protected ports on the same switch.	
switchport trunk pruning	Configures the VLAN pruning-eligible list for ports in trunking mode.	

show interfaces counters

Use the **show interfaces counters** privileged EXEC command to display various counters for the switch or for a specific interface.

show interfaces [interface-id | vlan vlan-id] counters [errors | etherchannel | protocol status |
trunk] [| {begin | exclude | include} expression]

Syntax Description	interface-id	(Optional) ID of the physical interface, including type, module, and port number.			
	errors (Optional) Display error counters.				
	etherchannel	(Optional) Display EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.			
	protocol status (Optional) Display status of protocols enabled on interfaces.				
	trunk	(Optional) Display trunk counters.			
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .			
	l include (Optional) Display includes lines that match the specified <i>expression</i> .				
	include	(Optional) Display includes lines that match the specified expression.			
	include expression	(Optional) Display includes lines that match the specified <i>expression</i> . Expression in the output to use as a reference point.			
Note	expression				
	expression	Expression in the output to use as a reference point.			
	expression	Expression in the output to use as a reference point.			
ommand Modes	<i>expression</i> Though visible in the	Expression in the output to use as a reference point.			
Note	expression Though visible in the Privileged EXEC	Expression in the output to use as a reference point.			

Usage Guidelines

If you do not enter any keywords, all counters for all interfaces are included.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

Examples

This is an example of partial output from the **show interfaces counters** command. It displays all counters for the switch.

Switch# show	interfaces co	ounters		
Port	InOctets	InUcastPkts	InMcastPkts	InBcastPkts
Gi0/1	0	0	0	0
Gi0/2	0	0	0	0

<output truncated>

This is an example of partial output from the **show interfaces counters protocol status** command for all interfaces.

Switch# show interfaces counters protocol status Protocols allocated: Vlan1: Other, IP Vlan20: Other, IP, ARP Vlan30: Other, IP, ARP Vlan40: Other, IP, ARP Vlan50: Other, IP, ARP Vlan60: Other, IP, ARP Vlan70: Other, IP, ARP Vlan80: Other, IP, ARP Vlan90: Other, IP, ARP Vlan900: Other, IP, ARP Vlan3000: Other, IP Vlan3500: Other, IP FastEthernet0/1: Other, IP, ARP, CDP FastEthernet0/2: Other, IP FastEthernet0/3: Other, IP FastEthernet0/4: Other, IP FastEthernet0/5: Other, IP FastEthernet0/6: Other, IP FastEthernet0/7: Other, IP FastEthernet0/8: Other, IP FastEthernet0/9: Other, IP FastEthernet0/10: Other, IP, CDP

<output truncated>

This is an example of output from the **show interfaces counters trunk** command. It displays trunk counters for all interfaces.

Switch# show inter	faces counters	trunk
--------------------	----------------	-------

Port	TrunkFramesTx	TrunkFramesRx	WrongEncap
Gi0/1	0	0	0
Gi0/2	0	0	0
Gi0/3	80678	4155	0
Gi0/4	82320	126	0
Gi0/5	0	0	0

<output truncated>

	show interfaces	Displays additional interface characteristics.

show inventory

Use the **show inventory** user EXEC command to display product identification (PID) information for the hardware.

show inventory [entity-name | raw] [| {begin | exclude | include} expression]

Syntax Description	entity-name	(Optional) Display the specified entity. For example, enter the interface (such as gigabitethernet0/1) into which a small form-factor pluggable (SFP) module is installed.
	raw	(Optional) Display every entity in the device.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC

show ip arp inspection

Use the **show ip arp inspection** privileged EXEC command to display the configuration and the operating state of dynamic Address Resolution Protocol (ARP) inspection or the status of this feature for all VLANs or for the specified interface or VLAN.

show ip arp inspection [interfaces [*interface-id*] | **log** | **statistics** [**vlan** *vlan-range*] | **vlan** *vlan-range*] [| {**begin** | **exclude** | **include**} *expression*]

Syntax Description	interfaces [interface-id]	(Optional) Display the trust state and the rate limit of ARP packets for the specified interface or all interfaces. Valid interfaces include physical ports and port channels.			
	log	(Optional) Display the configuration and contents of the dynamic ARP inspection log buffer.			
	statistics [vlan vlan-range]	(Optional) Display statistics for forwarded, dropped, MAC validation failure, IP validation failure, access control list (ACL) permitted and denied, and DHCP permitted and denied packets for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).			
		You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.			
	vlan vlan-range	(Optional) Display the configuration and the operating state of dynamic ARP inspection for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).			
		You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.			
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
	exclude	(Optional) Display excludes lines that match the expression.			
	include	(Optional) Display includes lines that match the specified expression.			
	expression	Expression in the output to use as a reference point.			

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(20)SE	This command was introduced.
	12.2(37)SE	The output changed to include Probe Logging information.

Usage Guidelines Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

Examples

This is an example of output from the show ip arp inspection command

Switch# show ip arp inspection

Source Mac	Validation	:	Disabled
Destination	n Mac Validation	:	Disabled
IP Address	Validation	:	Enabled
171 222	Configuration		Doration

Vlan	· · · · · · · · · · · · · · · · · · ·	-		Static ACL
1	Enabled	Active	deny-all	 No
Vlan	ACL Logging	DHCP Logg	ing Probe 1	Logging
1	Acl-Match	A11	Permit	
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
1	0	0	0	0
Vlan				Source MAC Failures
1	0	0	0	0
Vlan	Dest MAC Failures	IP Valid	ation Failures	Invalid Protocol Data
1	0		0	0

This is an example of output from the **show ip arp inspection interfaces** command:

```
Switch# show ip arp inspection interfaces
```

Interface	Trust State	Rate (pps)	Burst Interval
Gi0/1	Untrusted	15	1
Gi0/2	Untrusted	15	1
Gi0/3	Untrusted	15	1

This is an example of output from the **show ip arp inspection interfaces** interface-id command:

Switch# show ip	arp inspection	interfaces gigab	itethernet0/1
Interface	Trust State	Rate (pps)	Burst Interval
Gi0/1	Untrusted	15	1

This is an example of output from the **show ip arp inspection log** command. It shows the contents of the log buffer before the buffers are cleared:

```
Switch# show ip arp inspection log
Total Log Buffer Size : 32
Syslog rate : 10 entries per 300 seconds.
```

Interface	Vlan	Sender MAC	Sender IP	Num Pkts	Reason	Time
Gi0/1	5	0003.0000.d673	192.2.10.4	5	DHCP Deny	19:39:01 UTC
Mon Mar 1	1993					
Gi0/1	5	0001.0000.d774	128.1.9.25	6	DHCP Deny	19:39:02 UTC
Mon Mar 1	1993					
Gi0/1	5	0001.c940.1111	10.10.10.1	7	DHCP Deny	19:39:03 UTC
Mon Mar 1	1993					
Gi0/1	5	0001.c940.1112	10.10.10.2	8	DHCP Deny	19:39:04 UTC
Mon Mar 1	1993					
Gi0/1	5	0001.c940.1114	173.1.1.1	10	DHCP Deny	19:39:06 UTC
Mon Mar 1	1993					

Gi0/1	5	0001.c940.1115	173.1.1.2	11	DHCP Deny	19:39:07 UTC
Mon Mar 1	1993					
Gi0/1	5	0001.c940.1116	173.1.1.3	12	DHCP Deny	19:39:08 UTC
Mon Mar 1	1993					

If the log buffer overflows, it means that a log event does not fit into the log buffer, and the display for the show ip arp inspection log privileged EXEC command is affected. A -- in the display appears in place of all data except the packet count and the time. No other statistics are provided for the entry. If you see this entry in the display, increase the number of entries in the log buffer, or increase the logging rate in the ip arp inspection log-buffer global configuration command.

This is an example of output from the **show ip arp inspection statistics** command. It shows the statistics for packets that have been processed by dynamic ARP inspection for all active VLANs.

Switch#	show ip arp insp	ection statis	tics	
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
5	3	4618	4605	4
2000	0	0	0	0
Vlan	DHCP Permits	ACL Permits	Source MAC Fail	ures
5	0	12		0
2000	0	0		0
Vlan	Dest MAC Failure	s IP Valida	tion Failures	
5		0	9	
2000		0	0	

For the show ip arp inspection statistics command, the switch increments the number of forwarded packets for each ARP request and response packet on a trusted dynamic ARP inspection port. The switch increments the number of ACL or DHCP permitted packets for each packet that is denied by source MAC, destination MAC, or IP validation checks, and the switch increments the appropriate failure count.

This is an example of output from the show ip arp inspection statistics vlan 5 command. It shows statistics for packets that have been processed by dynamic ARP for VLAN 5.

	show ip arp insp	-		
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
5	3	4618	4605	4
Vlan	DHCP Permits	ACL Permits	Source MAC Fail	ures
5	0	12		0
Vlan	Dest MAC Failure	es IP Valida	tion Failures	Invalid Protocol Data
5		0	9	3

This is an example of output from the **show ip arp inspection vlan 5** command. It shows the configuration and the operating state of dynamic ARP inspection for VLAN 5.

```
Switch# show ip arp inspection vlan 5
Source Mac Validation :Enabled
Destination Mac Validation :Enabled
IP Address Validation :Enabled
       Configuration Operation ACL Match
Vlan
                                              Static ACL
                                               _____

Table 2-30 shows the DHCP snooping statistics and their descriptions:

DHCP Snooping Statistic	Description
Packets Processed by DHCP Snooping	Total number of packets handled by DHCP snooping, including forwarded and dropped packets.
Packets Dropped Because IDB not known	Number of errors when the input interface of the packet cannot be determined.
Queue full	Number of errors when an internal queue used to process the packets is full. This might happen if DHCP packets are received at an excessively high rate and rate limiting is not enabled on the ingress ports.
Interface is in errdisabled	Number of times a packet was received on a port that has been marked as error disabled. This might happen if packets are in the processing queue when a port is put into the error-disabled state and those packets are subsequently processed.
Rate limit exceeded	Number of times the rate limit configured on the port was exceeded and the interface was put into the error-disabled state.
Received on untrusted ports	Number of times a DHCP server packet (OFFER, ACK, NAK, or LEASEQUERY) was received on an untrusted port and was dropped.
Nonzero giaddr	Number of times the relay agent address field (giaddr) in the DHCP packet received on an untrusted port was not zero, or the no ip dhcp snooping information option allow-untrusted global configuration command is not configured and a packet received on an untrusted port contained option-82 data.
Source mac not equal to chaddr	Number of times the client MAC address field of the DHCP packet (chaddr) does not match the packet source MAC address and the ip dhcp snooping verify mac-address global configuration command is configured.
Binding mismatch	Number of times a RELEASE or DECLINE packet was received on a port that is different than the port in the binding for that MAC address-VLAN pair. This indicates someone might be trying to spoof the real client, or it could mean that the client has moved to another port on the switch and issued a RELEASE or DECLINE. The MAC address is taken from the chaddr field of the DHCP packet, not the source MAC address in the Ethernet header.
Insertion of opt82 fail	Number of times the option-82 insertion into a packet failed. The insertion might fail if the packet with the option-82 data exceeds the size of a single physical packet on the internet.
Interface Down	Number of times the packet is a reply to the DHCP relay agent, but the SVI interface for the relay agent is down. This is an unlikely error that occurs if the SVI goes down between sending the client request to the DHCP server and receiving the response.
Unknown output interface	Number of times the output interface for a DHCP reply packet cannot be determined by either option-82 data or a lookup in the MAC address table. The packet is dropped. This can happen if option 82 is not used and the client MAC address has aged out. If IPSG is enabled with the port-security option and option 82 is not enabled, the MAC address of the client is not learned, and the reply packets will be dropped.

Table 2-30	DHCP Snooping Statistics (continued)
------------	--------------------------------------

DHCP Snooping Statistic	Description
Reply output port equal to input port	Number of times the output port for a DHCP reply packet is the same as the input port, causing a possible loop. Indicates a possible network misconfiguration or misuse of trust settings on ports.
Packet denied by platform	Number of times the packet has been denied by a platform-specific registry.

Related Commands	Command	Description	
	clear ip dhcp snooping	Clears the DHCP snooping binding database, the DHCP snooping binding database agent statistics, or the DHCP snooping statistics counters.	

show ip igmp profile

Use the **show ip igmp profile** privileged EXEC command to display all configured Internet Group Management Protocol (IGMP) profiles or a specified IGMP profile.

show ip igmp profile [profile number] [| {begin | exclude | include} expression]

Syntax Description	profile number	(Optional) The IGMP profile number to be displayed. The range is 1 to
-,	project minister	4294967295. If no profile number is entered, all IGMP profiles are displayed.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Examples	-	es of output from the show ip igmp profile privileged EXEC command, with and g a profile number. If no profile number is entered, the display includes all profiles switch.
	Switch# show ip IGMP Profile 40 permit range 233.1.	igmp profile 40 1.1 233.255.255.255
	IGMP Profile 4 permit	<pre>igmp profile 9.0 230.9.9.0 9.0 229.255.255.255</pre>
Related Commands	Command	Description
	ip igmp profile	Configures the specified IGMP profile number.

show ip igmp snooping

Use the **show ip igmp snooping** user EXEC command to display the Internet Group Management Protocol (IGMP) snooping configuration of the switch or the VLAN.

show ip igmp snooping [groups | mrouter | querier] [vlan vlan-id] [| {begin | exclude | include}
expression]

groups	(Optional) See the show ip igmp snooping groups command.
mrouter	(Optional) See the show ip igmp snooping mrouter command.
querier	(Optional) See the show ip igmp snooping querier command.
vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094 (available only in privileged EXEC mode).
begin	(Optional) Display begins with the line that matches the <i>expression</i> .
exclude	(Optional) Display excludes lines that match the <i>expression</i> .
include	(Optional) Display includes lines that match the specified expression.
expression	Expression in the output to use as a reference point.
	mrouter querier vlan vlan-id begin exclude include

Command Modes User EXEC

Command History	Release	Modification		
	12.1(19)EA1	This command was introduced.		
	12.2(20)SE	The groups keyword was added. The show ip igmp snooping groups command replaced the show ip igmp snooping multicast command.		
Usage Guidelines	Use this command to dis	splay snooping configuration for the switch or for a specific VLAN.		
	VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.			
	Expressions are case sensitive. For example, if you enter exclude output, the lines that contain <i>output</i> do not appear, but the lines that contain <i>Output</i> appear.			
Examples	This is an example of ou characteristics for a spec	atput from the show ip igmp snooping vlan 1 command. It shows snooping cific VLAN.		
	Switch# show ip igmp Global IGMP Snooping			
	IGMP snooping IGMPv3 snooping (minin Report suppression TCN solicit query TCN flood query count Last member query int	:Enabled :Disabled :2

Command	Description		
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN. Enables the IGMP snooping configurable-leave timer.		
ip igmp snooping last-member-query-interval			
ip igmp snooping querier	Enables the IGMP querier function in Layer 2 networks.		
ip igmp snooping report-suppression	Enables IGMP report suppression.		
ip igmp snooping tcn	Configures the IGMP topology change notification behavior.		
ip igmp snooping tcn flood	Specifies multicast flooding as the IGMP spanning-tree topology change notification behavior.		
ip igmp snooping vlan immediate-leave	Enables IGMP snooping immediate-leave processing on a VLAN.		
ip igmp snooping vlan mrouter	Adds a multicast router port or configures the multicast learning method.		

Command	Description		
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.		
show ip igmp snooping groups	Displays the IGMP snooping multicast table for the switch.		
show ip igmp snooping mrouter	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.		
show ip igmp snooping querier	Displays the configuration and operation information for the IGMP querier configured on a switch.		

show ip igmp snooping groups

Use the **show ip igmp snooping groups** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping multicast table for the switch or the multicast information. Use with the **vlan** keyword to display the multicast table for a specified multicast VLAN or specific multicast information.

show ip igmp snooping groups [count | dynamic [count] | user [count]] [| {begin | exclude |
include} expression]

show ip igmp snooping groups vlan vlan-id [ip_address | count | dynamic [count] | user [count]]
 [| {begin | exclude | include} expression]

Syntax Description	count	(Optional) Display the total number of entries for the specified command options instead of the actual entries.
	dynamic	(Optional) Display entries learned by IGMP snooping.
	user	Optional) Display only the user-configured multicast entries.
	ip_address	(Optional) Display characteristics of the multicast group with the specified group IP address.
	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command History	Release	Modification
	12.2(20)SE	This command was introduced. It replaced the show ip igmp snooping multicast command.
Usage Guidelines	Use this comma	and to display multicast information or the multicast table.
-	VLAN IDs 1002 snooping.	2 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP
	Expressions are	

Examples

This is an example of output from the **show ip igmp snooping groups** command without any keywords. It displays the multicast table for the switch.

Switch# show ip igmp snooping groups

Vlan	Group	Туре	Version	Port List
104	224.1.4.2	igmp	v2	Gi0/1, Gi0/2
104	224.1.4.3	igmp	v2	Gi0/1, Gi0/2

This is an example of output from the **show ip igmp snooping groups count** command. It displays the total number of multicast groups on the switch.

Switch# show ip igmp snooping groups count Total number of multicast groups: 2

This is an example of output from the **show ip igmp snooping groups dynamic** command. It shows only the entries learned by IGMP snooping.

Switch#	show ip igmp	snooping group	s vlan 1 dy	namic
Vlan	Group	Туре	Version	Port List
104	224.1.4.2	igmp	v2	Gi0/1, Fa0/15
104	224.1.4.3	igmp	v2	Gi0/1, Fa0/15

This is an example of output from the **show ip igmp snooping groups vlan** *vlan-id ip-address* command. It shows the entries for the group with the specified IP address.

Switch#	show ip igm	o snooping groups	vlan 104	224.1.4.2
Vlan	Group	Туре	Version	Port List
104	224.1.4.2	igmp	v2	Gi0/1, Fa0/15

Command	Description Enables IGMP snooping on the switch or on a VLAN.			
ip igmp snooping				
ip igmp snooping vlan mrouter	Adds a multicast router port.			
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group. Displays the IGMP snooping configuration of the switch or the VLAN			
show ip igmp snooping				
show ip igmp snooping groups	Displays IGMP snooping multicast information for the switch or for the specified parameter.			

show ip igmp snooping querier

Use the **show ip igmp snooping querier detail** user EXEC command to display the configuration and operation information for the IGMP querier configured on a switch.

show ip igmp snooping querier [detail | vlan vlan-id [detail]] [| {begin | exclude | include}
expression]

Syntax Description	detail	Optional) Display detailed IGMP querier information.
	vlan vlan-id [detail]	Optional) Display IGMP querier information for the specified VLAN. The range is 1 to 1001 and 1006 to 4094. Use the detail keyword to display detailed information.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Related Commands

S	Command	Description
	ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
	ip igmp snooping querier	Enables the IGMP querier function in Layer 2 networks.
	show ip igmp snooping	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.

show ip source binding

Use the **show ip source binding** user EXEC command to display the IP source bindings on the switch.

show ip source binding [ip-address] [mac-address] [dhcp-snooping | static] [interface interface-id] [vlan vlan-id] [| {begin | exclude | include} expression]

Syntax Description	ip-address	(Optional)	Display IP sour	ce bindings for a	specific	c IP address.	
	mac-address	(Optional)	 (Optional) Display IP source bindings for a specific MAC address. (Optional) Display IP source bindings that were learned by DHCP snooping. (Optional) Display static IP source bindings. (Optional) Display IP source bindings on a specific interface. 				
	dhcp-snooping	· • • ·					
	static	(Optional)					
	interface interface-id	d (Optional)					
	vlan vlan-id	(Optional)	Display IP sour	ce bindings on a s	specific	VLAN.	
	begin	(Optional)	Display begins	with the line that	matche	es the <i>expression</i> .	
	exclude	(Optional)	Display exclude	s lines that match	the ex	pression.	
	I include (Optional) Display includes lines that match the specified <i>expression</i> .						
	expression	Expression	n in the output to	use as a referenc	e point		
Command History	Release	Modificatio	n				
Command History	12.2(20)SE		nd was introduc	ed			
Usage Guidelines	-	g binding databa	se. Use the show	ip dhcp snoopii		ally configured bindings ling privileged EXEC	
	Expressions are case sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> do not appear, but the lines that contain <i>Output</i> appear.						
Examples	This is an example of	output from the	show ip source	binding comman	d:		
	Switch> show ip sou MacAddress	rce binding IpAddress	Lease(sec)	Туре	VLAN	Interface	
	 00:00:00:0A:00:0B	11.0.0.1					

Related Commands	Command	Description
	ip dhcp snooping binding	Configures the DHCP snooping binding database.
ip source binding		Configures static IP source bindings on the switch.

show ip verify source

Use the **show ip verify source** user EXEC command to display the IP source guard configuration on the switch or on a specific interface.

show ip verify source [interface interface-id] [| { begin | exclude | include } expression]

				1 15	1 6 .	· C · · · · · C	
Syntax Description	interface <i>i</i>	nterface-id	(Optional) Di	splay IP source g	guard configuration o	n a specific interfac	
	I begin (Optional) Display begins with the line					ne that matches the <i>expression</i> .	
	I exclude (Optional) Display excludes lines that match the <i>expression</i> .						
	include		(Optional) Di	splay includes lin	nes that match the spe	ecified expression.

- The Gigabit Ethernet 2 interface is configured as trusted for DHCP snooping.
- On the Gigabit Ethernet 3 interface, DHCP snooping is not enabled on the VLANs to which the interface belongs.

- On the Gigabit Ethernet 4 interface, IP source guard with source IP and MAC address filtering is enabled, and static IP source bindings are configured on VLANs 10 and 11. For VLANs 12 to 20, the default port ACL is applied on the interface for the VLANs on which IP source guard is not configured.
- On the Gigabit Ethernet 5 interface, IP source guard with source IP and MAC address filtering is enabled and configured with a static IP binding, but port security is disabled. The switch cannot filter source MAC addresses.

This is an example of output on an interface on which IP source guard is disabled:

Switch> show ip verify source gigabitethernet 0/6 IP source guard is not configured on the interface gi0/6.

Related Commands	Command	Description
	ip verify source	Enables IP source guard on an interface.

show ipc

Use the **show ipc** user EXEC command to display Interprocess Communications Protocol (IPC) configuration, status, and statistics.

show ipc {mcast {appclass | groups | status } | nodes | ports [open] | queue | rpc | session {all |
 rx | tx } [verbose] | status [cumlulative] | zones } [| {begin | exclude | include } expression]

node		 appclass—Display the IPC multicast application classes. groups—Display the IPC multicast groups. 		
		• groups—Display the IPC multicast groups.		
		• status—Display the IPC multicast routing status.		
port	es	Display participating nodes.		
	s [open]	Display local IPC ports. The keyword has this meaning:		
		• open —(Optional) Display only the open ports.		
quei	16	Display the contents of the IPC transmission queue.		
rpc		Display the IPC remote-procedure statistics.		
sessi	on {all rx tx}	Display the IPC session statistics (available only in privileged EXEC mode). The keywords have these meanings:		
		• all—Display all the session statistics.		
		• rx —Display the sessions statistics for traffic that the switch receives		
		• tx—Display the sessions statistics for traffic that the switch forwards.		
verb	ose	(Optional) Display detailed statistics (available only in privileged EXEC mode).		
statu	ıs [cumlulative]	Display the status of the local IPC server. The keyword has this meaning:		
		• cumlulative —(Optional) Display the status of the local IPC server since the switch was started or restarted.		
zone	es	Display the participating IPC zones. The switch supports a single IPC zone.		
l beg	gin	(Optional) Display begins with the line that matches the <i>expression</i> .		
exc	lude	(Optional) Display excludes lines that match the expression.		
inc	lude	(Optional) Display includes lines that match the specified <i>expression</i> .		
expre	ession	Expression in the output to use as a reference point.		

Command	History
---------	---------

nand History	Release	Modification	
	12.1(19)EA1	This command was introduced.	
	12.2(25)SE	The mcast, rpc, and session keywords were added.	

Usage Guidelines Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Related Commands

mands	Command	Description
	ipv6 mld snooping	Enables and configures MLD snooping on the switch or on a VLAN.
	sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

show ipv6 mld snooping address

Use the **show ipv6 mld snooping address** user EXEC command to display all or specified IP version 6 (IPv6) multicast address information maintained by Multicast Listener Discovery (MLD) snooping.

۵, Note

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

vlan vlan-id	(Optional) Specify a VLAN about which to show MLD snooping multicast address information. The VLAN ID range is 1 to 1001 and 1006 to 4094.
ipv6-multicast-address	(Optional) Display information about the specified IPv6 multicast address. This keyword is only available when a VLAN ID is entered.
count	(Optional) Display the number of multicast groups on the switch or in the specified VLAN.
dynamic	(Optional) Display MLD snooping learned group information.
user	(Optional) Display MLD snooping user-configured group information.
begin	(Optional) Display begins with the line that matches the <i>expression</i> .
exclude	(Optional) Display excludes lines that match the <i>expression</i> .
include	(Optional) Display includes lines that match the specified <i>expression</i> .
expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History	Release	Modification
	12.2(25)SED	This command was introduced.

Usage Guidelines

ines Use this command to display IPv6 multicast address information.

You can enter an IPv6 multicast address only after you enter a VLAN ID.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Use the **dynamic** keyword to display information only about groups that are learned. Use the **user** keyword to display information only about groups that have been configured.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** global configuration command and reload the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

FF12::3 user v2

Examples	This is an example of output from the show snooping address user EXEC command:				
	Switch> show ipv6 mld snooping address				
	Vlan Group Type Version Port List				
	2 FF12::3 user Fa0/2, Gi0/2, Gi0/1,Gi0/3				
	This is an example of output from the show snooping address count user EXEC command:				
	Switch> show ipv6 mld snooping address count Total number of multicast groups: 2				
	This is an example of output from the show snooping address user user EXEC command:				
	Switch> show ipv6 mld snooping address user Vlan Group Type Version Port List				

Related Commands	Command	Description
	ipv6 mld snooping vlan	Configures IPv6 MLD snooping on a VLAN.
	sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

Fa0/2, Gi0/2, Gi0/1,Gi0/3

show ipv6 mld snooping mrouter

Use the **show ipv6 mld snooping mrouter** user EXEC command to display dynamically learned and manually configured IP version 6 (IPv6) Multicast Listener Discovery (MLD) router ports for the switch or a VLAN.

show ipv6 mld snooping mrouter [vlan vlan-id] [| {begin | exclude | include} expression]

S. Note

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.	
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History	Release	Modification
	12.2(25)SED	This command was introduced.

Usage Guidelines Use this command to display MLD snooping router ports for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** global configuration command and reload the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of output from the **show ipv6 mld snooping mrouter** command. It displays snooping characteristics for all VLANs on the switch that are participating in MLD snooping.

Switch> show ipv6 mld snooping mrouter

Vlan	ports
2	Gi0/11(dynamic)
72	Gi0/11(dynamic)
200	Gi0/11(dynamic)

This is an example of output from the **show ipv6 mld snooping mrouter vlan** command. It shows multicast router ports for a specific VLAN.

Table 2-32	show lacp counters Field Descriptions
------------	---------------------------------------

Field	Description
LACPDUs Sent and Recv	The number of LACP packets sent and received by a port.
Marker Sent and Recv	The number of LACP marker packets sent and received by a port.
Marker Response Sent and Recv	The number of LACP marker response packets sent and received by a port.
LACPDUs Pkts and Err	The number of unknown and illegal packets received by LACP for a port.

This is an example of output from the show lacp internal command:

```
Switch> show lacp 1 internal
Flags: S - Device is requesting Slow LACPDUs
       F - Device is requesting Fast LACPDUs
       A - Device is in Active mode

```

Table 2-33 describes the fields in the display:

Table 2-33show lacp internal Field Descriptions

Field	Description		
State	State of the specific port. These are the allowed values:		
	• – —Port is in an unknown state.		
	• bndl —Port is attached to an aggregator and bundled with other ports.		
	• susp —Port is in a suspended state; it is not attached to any aggregator.		
	• hot-sby —Port is in a hot-standby state.		
	• indiv —Port is incapable of bundling with any other port.		
	• indep —Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).		
	• down —Port is down.		
LACP Port Priority	Port priority setting. LACP uses the port priority to put ports s in standby mode when there is a hardware limitation that prevents all compatible ports from aggregating.		

Field	Description
Admin Key	Administrative key assigned to this port. LACP automatically generates an administrative key value as a hexadecimal number. The administrative key defines the ability of a port to aggregate with other ports. A port's ability to aggregate with other ports is determined by the port physical characteristics (for example, data rate and duplex capability) and configuration restrictions that you establish.
Oper Key	Runtime operational key that is being used by this port. LACP automatically generates this value as a hexadecimal number.
Port Number	Port number.
Port State	State variables for the port, encoded as individual bits within a single octet with these meanings:
	• bit0: LACP_Activity
	• bit1: LACP_Timeout
	• bit2: Aggregation
	• bit3: Synchronization
	• bit4: Collecting
	• bit5: Distributing
	• bit6: Defaulted
	• bit7: Expired
	Note In the list above, bit7 is the MSB and bit0 is the LSB.

                                               0x3C
```

This is an example of output from the **show lacp sys-id** command:

Switch> **show lacp sys-id** 32765,0002.4b29.3a00

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

Related Commands

Command	Description
clear lacp	Clears the LACP channel-group information.
lacp port-priority	Configures the LACP port priority.
lacp system-priority	Configures the LACP system priority.

show location

Use the show location user EXEC command to display location information for an endpoint.

show location admin-tag | [| {begin | exclude | include} expression]

show location civic-location {identifier id number | interface interface-id | static } | {begin |
 exclude | include} expression]

show location elin-location {identifier id number | interface interface-id | static } | {begin |
 exclude | include} expression]

Syntax Description	admin-tag	Display administrative tag or site information.
	civic-location	Display civic location information.
	elin-location	Display emergency location information (ELIN).
	identifier <i>id</i>	Specify the ID for the civic location or the elin location. The id range is 1 to 4095.
	interface interface-id	(Optional) Display location information for the specified interface or all interfaces. Valid interfaces include physical ports.
	static	Display static configuration information.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command History	Release 12.1(19)EA1	Modification This command was introduced.
	12.1(19)EA1	This command was infroduced.
Jsage Guidelines	Use the show location c	command to display location information for an endpoint.
	-	nsitive. For example, if you enter I exclude output , the lines that contain <i>output</i> nes that contain <i>Output</i> appear.
Examples	This is an example of ou information for an inter-	atput from the show location civic-location command that displays location face:
	Civic location inform	
	Identifier County Street number Building	 : 1 : Santa Clara : 3550 : 19

Room	:	C6
Primary road name	:	Cisco Way
City	:	San Jose
State	:	CA
Country	:	US

This is an example of output from the **show location civic-location** command that displays all the civic location information:

Switch> show location civic-location static Civic location information _____ Identifier: 1County: Santa ClaraStreet number: 3550 Building : 19 Room : C6 Primary road name : Cisco Way : San Jose City State : CA Country : US Ports : Gi0/1 _____ Identifier : 2 Street number : 24568 Street number suffix : West Landmark : Golden Gate Bridge Primary road name : 19th Ave : San Francisco City : US Country _____

This is an example of output from the **show location elin-location** command that displays the emergency location information:

Switch> show location elin-location identifier 1 Elin location information ------Identifier : 1 Elin : 14085553881 Ports : Gi0/2

This is an example of output from the **show location elin static** command that displays all emergency location information:

```
Switch> show location elin static
Elin location information
```

Identifier : 1 Elin : 14085553881 Ports : Gi0/2 Identifier : 2 Elin : 18002228999

Related Commands	Command	Description
	location (global configuration)	Configures the global location information for an endpoint.
	location (interface configuration)	Configures the location information for an interface.

show link state group

Use the show link state group privileged EXEC command to display the link-state group information.

show link state group [number] [detail] [| {begin | exclude | include} expression]

Syntax Description	number	(Optional) Number of the link-state group.
	detail	(Optional) Specify that detailed information appears.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Defaults	There is no default.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(25)SEE	This command was introduced.
Usage Guidelines	command without k	state group command to display the link-state group information. Enter this seywords to display information about all link-state groups. Enter the group number ion specific to the group.
	state group detail of or that have upstrea	word to display detailed information about the group. The output for the show link command displays only those link-state groups that have link-state tracking enabled up or downstream interfaces (or both) configured. If there is no link-state group group, it is not shown as enabled or disabled.
		e sensitive. For example, if you enter l exclude output , the lines that contain <i>output</i> but the lines that contain <i>Output</i> are displayed.
Examples	This is an example	of output from the show link state group 1 command:
	Switch> show link Link State Group:	

This is an example of output from the show link state group detail command:

```
Switch> show link state group detail
(Up):Interface up (Dwn):Interface Down (Dis):Interface disabled
Link State Group: 1 Status: Enabled, Down
Upstream Interfaces : Gi0/15(Dwn) Gi0/16(Dwn)
Downstream Interfaces : Gi0/11(Dis) Gi0/12(Dis) Gi0/13(Dis) Gi0/14(Dis)
Link State Group: 2 Status: Enabled, Down
Upstream Interfaces : Gi0/15(Dwn) Gi0/16(Dwn) Gi0/17(Dwn)
Downstream Interfaces : Gi0/11(Dis) Gi0/12(Dis) Gi0/13(Dis) Gi0/14(Dis)
(Up):Interface up (Dwn):Interface Down (Dis):Interface disabled
```

Related Commands	Command	Description
	link state group	Configures an interface as a member of a link-state group.
	link state track	Enables a link-state group.
	show running-config	Displays the current operating configuration. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference for Release 12.2 > Cisco IOS File Management Commands > Configuration File Commands.

show mac access-group

Use the **show mac access-group** user EXEC command to display the MAC access control lists (ACLs) configured for an interface or a switch.

show mac access-group [interface interface-id] [| {begin | exclude | include} expression]

Syntax Description		
	interface interface-id	(Optional) Display the MAC ACLs configured on a specific interface. Valid interfaces are physical ports and port channels; the port-channel range is 1 to 48 (available only in privileged EXEC mode).
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Usage Guidelines	-	nsitive. For example, if you enter exclude output , the lines that contain <i>output</i> nes that contain <i>Output</i> appear.
Usage Guidelines Examples	do not appear, but the li This is an example of o	

Related Commands	Command	Description
	mac access-group	Applies a MAC access group to an interface.

show mac address-table

Use the **show mac address-table** user EXEC command to display a specific MAC address table static and dynamic entry or the MAC address table static and dynamic entries on a specific interface or VLAN.

show mac address-table [| {begin | exclude | include} expression]

Syntax Description	begin	((Optional) Di	splay begins with the line that matches the <i>expression</i> .
	exclud	e ((Optional) Di	splay excludes lines that match the <i>expression</i> .
	include	e ((Optional) Di	splay includes lines that match the specified expression.
	expressi	on]	Expression in	the output to use as a reference point.
Command Modes	User EX	EC		
Command History	Release		Modification	
	12.1(19))EA1	This comman	d was introduced.
Usage Guidelines	-	ons are case sensit opear, but the lines		nple, if you enter exclude output , the lines that contain <i>outpu</i> <i>Output</i> appear.

	show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
	show mac address-table dynamic	Displays dynamic MAC address table entries only.
	show mac address-table interface	Displays the MAC address table information for the specified interface.
	show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
	show mac address-table static	Displays static MAC address table entries only.
	show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table address

Use the **show mac address-table address** user EXEC command to display MAC address table information for the specified MAC address.

show mac address-table address mac-address [interface interface-id] [vlan vlan-id] [| {begin |
 exclude | include} expression]

Suntax Description		
Syntax Description	mac-address	Specify the 48-bit MAC address; the valid format is H.H.H.
	interface interface-id	(Optional) Display information for a specific interface. Valid interfaces include physical ports and port channels.
	vlan vlan-id	(Optional) Display entries for the specific VLAN only. The range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Related Commands C

Command	Description
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table aging-time

Use the **show mac address-table aging-time** user EXEC command to display the aging time of a specific address table instance, all address table instances on a specified VLAN or, if a specific VLAN is not specified, on all VLANs.

show mac address-table aging-time [vlan vlan-id] [| {begin | exclude | include} expression]

Syntax Description	vlan vlan-id	(Optional) Display aging time information for a specific VLAN. The range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Usage Guidelines	Expressions are cas	er is specified, the aging time for all VLANs appears. e sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> he lines that contain <i>Output</i> appear.
Examples	This is an example	of output from the show mac address-table aging-time command:
Examples	Switch> show mac Vlan Aging Tim	address-table aging-time
Examples	Switch> show mac	address-table aging-time
Examples	Switch> show mac Vlan Aging Tim 1 300	address-table aging-time
Examples	Switch> show mac Vlan Aging Tim 1 300 This is an example Switch> show mac Vlan Aging Tim	address-table aging-time - of output from the show mac address-table aging-time vlan 10 command: address-table aging-time vlan 10
Examples	Switch> show mac Vlan Aging Tim 1 300 This is an example Switch> show mac	address-table aging-time - of output from the show mac address-table aging-time vlan 10 command: address-table aging-time vlan 10

Related Commands	Command	Description
	mac address-table aging-time	Sets the length of time that a dynamic entry remains in the MAC address table after the entry is used or updated.
	show mac address-table address	Displays MAC address table information for the specified MAC address.
	show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
	show mac address-table dynamic	Displays dynamic MAC address table entries only.
	show mac address-table interface	Displays the MAC address table information for the specified interface.
	show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
	show mac address-table static	Displays static MAC address table entries only.
	show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table count

Use the **show mac address-table count** user EXEC command to display the number of addresses present in all VLANs or the specified VLAN.

show mac address-table count [vlan vlan-id] [| {begin | exclude | include} expression]

Syntax Description	vlan vlan-id	(Optional) Display the number of addresses for a specific VLAN. The range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Usage Guidelines	If no VLAN nu	mber is specified, the address count for all VLANs appears.
	-	case sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> out the lines that contain <i>Output</i> appear.
Examples	This is an exam	ple of output from the show mac address-table count command:
	Mac Entries fo	
	Dynamic Addres Static Addres Total Mac Addr	s Count : 0

Related Commands	Command	Description
	show mac address-table address	Displays MAC address table information for the specified MAC address.

Usage Guidelines Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of output from the **show mac address-table static** command:

Switch> show mac address-table static

Mac Address Table			
Vlan	Mac Address	Туре	Ports
All	0100.0ccc.cccc	STATIC	CPU
All	0180.c200.0000	STATIC	CPU
A11	0100.0ccc.cccd	STATIC	CPU
A11	0180.c200.0001	STATIC	CPU
A11	0180.c200.0004	STATIC	CPU
A11	0180.c200.0005	STATIC	CPU
4	0001.0002.0004	STATIC	Drop
6	0001.0002.0007	STATIC	Drop
Total	Mac Addresses for	this cr	iterion: 8

Related Commands

Command	Description
mac address-table static	Adds static addresses to the MAC address table.
mac address-table static drop	Enables unicast MAC address filtering and configures the switch to drop traffic with a specific source or destination MAC address.
show mac address-table address	Displays MAC address table information for the specified MAC address.
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table vlan

Use the **show mac address-table vlan** user EXEC command to display the MAC address table information for the specified VLAN.

show mac address-table vlan vlan-id [| {begin | exclude | include} expression]

Syntax Description	vlan-id	(Optional)	Display a	lresses for a specific VLAN. The	range is 1 to 4094.	
	begin	(Optional)	Display b	gins with the line that matches the	expression.	
	exclude	(Optional)	Display e	cludes lines that match the express	sion.	
	l include (Optional) Display includes lines that match the specified <i>expression</i> .					
	expression	Expression	in the ou	ut to use as a reference point.

show macro auto

Use the show macro auto privileged EXEC command to display Auto Smartports macro information.

show macro auto [device | event manager | interface | address-group]

Syntax Description	device	(Optional) Display Auto Smartports device information.			
	event manager	(Optional) Display Auto Smartports embedded event manager information. The event manager keyword is visible but not support unless the switch is running an IP Services image.			
	interface	(Optional) Display Auto Smartports interface status.			
	address-group	(Optional) Display Auto Smartports address-group information.			
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	12.2(52)SE	This command was introduced.

macro auto sticky	Configures the Auto Smartports macro-persistent feature.		
shell trigger	Creates event triggers.		
show shell	Displays information about event triggers and macros.		

2-633

show mls qos

Use the **show mls qos** user EXEC command to display global quality of service (QoS) configuration information.

show mls qos [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Usage Guidelines	1	e sensitive. For example, if you enter exclude output , the lines that contain <i>output</i>
	do not appear, but the This is an example	he lines that contain <i>Output</i> appear. of output from the show mls qos command when QoS is enabled and DSCP
Usage Guidelines Examples	do not appear, but the This is an example transparency is enal	he lines that contain <i>Output</i> appear. of output from the show mls qos command when QoS is enabled and DSCP bled:
	do not appear, but the This is an example transparency is enal Switch> show mls QoS is enabled	he lines that contain <i>Output</i> appear. of output from the show mls qos command when QoS is enabled and DSCP bled:

show mls qos aggregate-policer

Use the **show mls qos aggregate-policer** user EXEC command to display the quality of service (QoS) aggregate policer configuration. A policer defines a maximum permissible rate of transmission, a maximum burst size for transmissions, and an action to take if either maximum is exceeded.

show mls qos aggregate-policer [aggregate-policer-name] [| {begin | exclude | include}
expression]

Syntax Description	aggregate-policer-name	(Optional) Display the policer configuration for the specified name.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Usage Guidelines	-	itive. For example, if you enter exclude output , the lines that contain <i>output</i> es that contain <i>Output</i> appear.
Examples	This is an example of out	put from the show mls qos aggregate-policer command:
	_	ggregate-policer policer1 cer1 1000000 2000000 exceed-action drop map
Related Commands	Command	Description
	mls qos aggregate-polic	er Defines policer parameters that can be shared by multiple classes

within a policy map.

2-635

show mls qos input-queue

Use the **show mls qos input-queue** user EXEC command to display quality of service (QoS) settings for the ingress queues.

show mls qos input-queue [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
		(optional) Display begins with the time that indeness the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
Usage Guidelines	12.1(19)EA1	This command was introduced.
-	Expressions are c do not appear, bu	ase sensitive. For example, if you enter I exclude output , the lines that contain <i>ou</i> the lines that contain <i>Output</i> appear.

Related Commands	Command	Description		
	mls qos srr-queue input bandwidth	Assigns shaped round robin (SRR) weights to an ingress queue. Allocates the buffers between the ingress queues.		
	mls qos srr-queue input buffers			
	mls qos srr-queue input cos-map	Maps assigned class of service (CoS) values to an ingress queue and assigns CoS values to a queue and to a threshold ID.		
	mls qos srr-queue input dscp-map	Maps assigned Differentiated Services Code Point (DSCP) values to an ingress queue and assigns DSCP values to a queue and to a threshold ID.		
	mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.		
	mls qos srr-queue input threshold	Assigns weighted tail-drop (WTD) threshold percentages to an ingress queue.		

show mls qos interface

Use the **show mls qos interface** user EXEC command to display quality of service (QoS) information at the port level.

show mls qos interface [interface-id] [buffers | queueing | statistics]
 [| {begin | exclude | include} expression]

Syntax Description	interface-id	(Optional) Display QoS information for the specified port. Valid interfaces include physical ports.
	buffers	(Optional) Display the buffer allocation among the queues.
	queueing	(Optional) Display the queueing strategy (shared or shaped) and the weights corresponding to the queues.
	statistics	(Optional) Display statistics for sent and received Differentiated Services Code Points (DSCPs) and class of service (CoS) values, the number of packets enqueued or dropped per egress queue, and the number of in-profile and out-of-profile packets for each policer.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Note

Though visible in the command-line help string, the **policer** keyword is not supported.

Command Modes User EXEC

Command History	Release	Modification	
	12.1(19)EA1	This command was introduced.	

Usage Guidelines Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is enabled:

Switch> show mls qos interface gigabitethernet0/1 GigabitEthernet0/1 trust state:not trusted trust mode:not trusted trust enabled flag:ena COS override:dis default COS:0

```
DSCP Mutation Map:Default DSCP Mutation Map
Trust device:none
qos mode:vlan-based
```

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is disabled:

```
Switch> show mls qos interface gigabitethernet0/2
GigabitEthernet0/2
trust state:not trusted
trust mode:not trusted
trust enabled flag:ena
COS override:dis
default COS:0
DSCP Mutation Map:Default DSCP Mutation Map
Trust device:none
gos mode:port-based
```

This is an example of output from the show mls qos interface interface-id buffers command:

```
Switch> show mls qos interface gigabitethernet0/2 buffers
GigabitEthernet0/2
The port is mapped to qset : 1
The allocations between the queues are : 25 25 25 25
```

This is an example of output from the **show mls qos interface** *interface-id* **queueing** command. The egress expedite queue overrides the configured shaped round robin (SRR) weights.

```
Switch> show mls qos interface gigabitethernet0/2 queueing
GigabitEthernet0/2
Egress Priority Queue :enabled
Shaped queue weights (absolute) : 25 0 0 0
Shared queue weights : 25 25 25 25
The port bandwidth limit : 100 (Operational Bandwidth:100.0)
The port is mapped to qset : 1
```

This is an example of output from the **show mls qos interface** *interface-id* **statistics** command. Table 2-34 describes the fields in this display.

```
Switch> show mls qos interface gigabitethernet0/2 statistics GigabitEthernet0/2
```

Table 2-34 show mls qos interface statistics Field Descriptions

Field		Description
DSCP	incoming	Number of packets received for each DSCP value.
	outgoing	Number of packets sent for each DSCP value.
CoS	incoming	Number of packets received for each CoS value.
	outgoing	Number of packets sent for each CoS value.
Policer	Inprofile	Number of in profile packets for each policer.
	Outofprofile	Number of out-of-profile packets for each policer.

Related Commands	Command	Description			
	mls qos queue-set output buffers	Allocates buffers to a queue-set.			
	mls qos queue-set output threshold	Configures the weighted tail-drop (WTD) thresholds, guarantees the availability of buffers, and configures the maximum memory allocation to a queue-set.			
	mls qos srr-queue input bandwidth	Assigns SRR weights to an ingress queue.			
	mls qos srr-queue input buffers	Allocates the buffers between the ingress queues.			
	mls qos srr-queue input cos-map	Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.			
	mls qos srr-queue input dscp-map	Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.			
	mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.			
	mls qos srr-queue input threshold	Assigns WTD threshold percentages to an ingress queue.			
	mls qos srr-queue output cos-map	Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.			

Command	Description
mls qos srr-queue output dscp-map	Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.
policy-map	Creates or modifies a policy map.
priority-queue	Enables the egress expedite queue on a port.
queue-set	Maps a port to a queue-set.
srr-queue bandwidth limit	Limits the maximum output on a port.
srr-queue bandwidth shape	Assigns the shaped weights and enables bandwidth shaping on the four egress queues mapped to a port.
srr-queue bandwidth share	Assigns the shared weights and enables bandwidth sharing on the four egress queues mapped to a port.

2-641

show mls qos maps

Use the **show mls qos maps** user EXEC command to display quality of service (QoS) mapping information. During classification, QoS uses the mapping tables to represent the priority of the traffic and to derive a corresponding class of service (CoS) or Differentiated Services Code Point (DSCP) value from the received CoS, DSCP, or IP precedence value.

Syntax Description	cos-dscp	(Optional) Display class of service (CoS)-to-DSCP map.
	cos-input-q	(Optional) Display the CoS input queue threshold map.
	cos-output-q	(Optional) Display the CoS output queue threshold map.
	dscp-cos	(Optional) Display DSCP-to-CoS map.
	dscp-input-q	(Optional) Display the DSCP input queue threshold map.
	dscp-mutation dscp-mutation	<i>ion-name</i> (Optional) Display the specified DSCP-to-DSCP-mutation map.
	dscp-output-q	(Optional) Display the DSCP output queue threshold map.
	ip-prec-dscp	(Optional) Display the IP-precedence-to-DSCP map.
	policed-dscp	(Optional) Display the policed-DSCP map.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release M	Iodification
	12.1(19)EA1 T	his command was introduced.
Usage Guidelines	Expressions are case sensitive do not appear, but the lines	ve. For example, if you enter exclude output , the lines that contain <i>output</i> that contain <i>Output</i> appear.
	1	o-CoS, and the DSCP-to-DSCP-mutation maps appear as a matrix. The d1 ignificant digit in the DSCP. The d2 row specifies the least-significant digit

in the DSCP. The intersection of the d1 and d2 values provides the policed-DSCP, the CoS, or the mutated-DSCP value. For example, in the DSCP-to-CoS map, a DSCP value of 43 corresponds to a CoS value of 5.

The DSCP input queue threshold and the DSCP output queue threshold maps appear as a matrix. The d1 column specifies the most-significant digit of the DSCP number. The d2 row specifies the least-significant digit in the DSCP number. The intersection of the d1 and the d2 values provides the queue ID and threshold ID. For example, in the DSCP input queue threshold map, a DSCP value of 43 corresponds to queue 2 and threshold 1 (02-01).

The CoS input queue threshold and the CoS output queue threshold maps show the CoS value in the top row and the corresponding queue ID and threshold ID in the second row. For example, in the CoS input queue threshold map, a CoS value of 5 corresponds to queue 2 and threshold 1 (2-1).

Related Commands	Command	Description
	mls qos queue-set output buffers	Allocates buffers to the queue-set.
	mls qos queue-set output threshold	Configures the weighted tail-drop (WTD) thresholds, guarantees the availability of buffers, and configures the maximum memory allocation of the queue-set.

show mls qos vlan

Use the **show mls qos vlan** user EXEC command to display the policy maps attached to a switch virtual interface (SVI).

show mls qos vlan vlan-id [| {begin | exclude | include} expression]

Syntax Description	vlan-id	Specify the VLAN ID of the SVI to display the policy maps. The range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.2(25)SE	This command was introduced.
Usage Guidelines	service (QoS) is Expressions are	the show mls qos vlan command is meaningful only when VLAN-based quality of enabled and when hierarchical policy maps are configured. case sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> ut the lines that contain <i>Output</i> appear.
Examples	This is an exam	ble of output from the show mls qos vlan command:
	Switch> show m Vlan10 Attached polic	ls qos vlan 10 y-map for Ingress:pm-test-pm-2
Related Commands	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports and enters policy-map configuration mode.

show monitor

Use the **show monitor** user EXEC command to display information about all Switched Port Analyzer (SPAN) and Remote SPAN (RSPAN) sessions on the switch. Use the command with keywords to show a specific session, all sessions, all local sessions, or all remote sessions.

show monitor [session { session_number | all | local | range list | remote } [detail]] [| {begin |
 exclude | include } expression]

Syntax Description	session	(Optional) Display information about specified SPAN sessions.
	session_number	Specify the number of the SPAN or RSPAN session. The range is 1 to 66.
	all	Display all SPAN sessions.
	local	Display only local SPAN sessions.
	range list	Display a range of SPAN sessions, where <i>list</i> is the range of valid sessions, either a single session or a range of sessions described by two numbers, the lower one first, separated by a hyphen. Do not enter any spaces between comma-separated parameters or in hyphen-specified ranges.
		Note This keyword is available only in privileged EXEC mode.
	remote	Display only remote SPAN sessions.
	detail	(Optional) Display detailed information about the specified sessions.
	begin	Display begins with the line that matches the <i>expression</i> .
	exclude	Display excludes lines that match the <i>expression</i> .
	include	Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

do not appear, but the lines that contain *Output* appear.

The output is the same for the show monitor command and the show monitor session all command.

Examples

This is an example of output for the **show monitor** user EXEC command:

```
Switch# show monitor
Session 1
-----
Type : Local Session
Source Ports :
RX Only : Fa0/1
Both : Fa0/2-3,Fa0/5-6
Destination Ports : Fa0/20
Encapsulation : Replicate
Ingress : Disabled
```

Session 2 -----Type : Remote Source Session Source VLANs : TX Only : 10 Both : 1-9 Dest RSPAN VLAN : 105

This is an example of output for the **show monitor** user EXEC command for local SPAN source session 1:

Switch# show monitor session 1 Session 1 ------Type : Local Session Source Ports : RX Only : Fa0/1 Both : Fa0/2-3,Fa0/5-6 Destination Ports : Fa0/20 Encapsulation : Replicate Ingress : Disabled

This is an example of output for the **show monitor session all** user EXEC command when ingress traffic forwarding is enabled:

Switch# show monitor session all
Session 1
----Type : Local Session
Source Ports :
Both : Fa0/2
Destination Ports : Fa0/3
Encapsulation : Native
Ingress : Enabled, default VLAN = 5
Ingress encap : DOT1Q
Session 2

```
Type : Local Session
Source Ports :
Both : Fa0/8
Destination Ports : Fa0/2
Encapsulation : Replicate
Ingress : Enabled, default VLAN = 4
Ingress encap : Untagged
```

Related Commands	Command	Description
	monitor session	Starts or modifies a SPAN or RSPAN session.

show mvr

Use the **show mvr** privileged EXEC command without keywords to display the current Multicast VLAN Registration (MVR) global parameter values, including whether or not MVR is enabled, the MVR multicast VLAN, the maximum query response time, the number of multicast groups, and the MVR mode (dynamic or compatible).

show mvr [| {begin | exclude | include} expression]

Syntax Description		
Syntax Description	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Fxamples	This is an example	of output from the show myr command:
Examples	Switch# show mvr MVR Running: TRUE MVR multicast VLA MVR Max Multicast MVR Current multi	Groups: 256 cast groups: 0 response time: 5 (tenths of sec)

Related Commands	Command	Description
	mvr (global configuration)	Enables and configures multicast VLAN registration on the switch.
	mvr (interface configuration)	Configures MVR ports.
	show mvr interface	Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the interface and members keywords are appended to the command.
	show mvr members	Displays all ports that are members of an MVR multicast group or, if there are no members, means the group is inactive.

show mvr interface

Use the **show mvr interface** privileged EXEC command without keywords to display the Multicast VLAN Registration (MVR) receiver and source ports. Use the command with keywords to display MVR parameters for a specific receiver port.

show mvr interface [interface-id [members [vlan vlan-id]]] [| {begin | exclude | include}
expression]

Syntax Description	interface-id		Optional) Display M nterface.	IVR type, status, and Immediate Leave setting for the
			/alid interfaces inclu umber.	de physical ports (including type, module, and port
	members	(Optional) Display al	1 MVR groups to which the specified interface belongs.
	vlan vlan-id		Optional) Display al o 4094.	Il MVR group members on this VLAN. The range is 1
	begin	(Optional) Display b	egins with the line that matches the expression.
	exclude	(Optional) Display e	xcludes lines that match the <i>expression</i> .
	include	(Optional) Display in	cludes lines that match the specified <i>expression</i> .
	expression	F	Expression in the out	put to use as a reference point.
Command History	Release	R	Andification

Related Commands

Command	Description
clear nmsp statistics	Clears the NMSP statistic counters.
nmsp	Enables Network Mobility Services Protocol (NMSP) on the switch.

show pagp

Use the **show pagp** user EXEC command to display Port Aggregation Protocol (PAgP) channel-group information.

show pagp [channel-group-number] {counters | dual-active | internal | neighbor} [| {begin |
 exclude | include} expression]]

Syntax Description	channel-group-number	(Optional) Number of the channel group. The range is 1 to 48.
	counters	Display traffic information.
	dual-active	Display the dual-active status.
	internal	Display internal information.
	neighbor	Display neighbor information.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History Release Modification		Modification
	12.1(19)EA1	This command was introduced.
	12.2(25)SE	The <i>channel-group-number</i> range was changed from 1 to 12 to 1 to 48.
	12.2(46)SE	The dual-active keyword was added.

Usage Guidelines You can enter any **show pagp** command to display the active channel-group information. To display the nonactive information, enter the **show pagp** command with a channel-group number.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* are appear.

Examples

This is an example of output from the **show pagp 1 counters** command:

Related Commands	Command	Description
	clear pagp	Clears PAgP channel-group information.

show parser macro

Use the **show parser macro** user EXEC command to display the parameters for all configured macros or for one macro on the switch.

Syntax Description	brief	(Optional) Display the name of each macro.			
	description [interface interface-id]	(Optional) Display all macro descriptions or the description of a specific interface.			
	name macro-name	(Optional) Display information about a single macro identified by the macro name.			
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .			
	include	(Optional) Display includes lines that match the specified <i>expression</i> .			
	expression	Expression in the output to use as a reference point.			
Command Modes	Privileged EXEC	Modification			
Command History	12.1(19)EA1	The command was introduced.			
Examples	 do not appear, but the lines that contain <i>Output</i> appear. This is a partial output example from the show parser macro command. The output for the Cisco-defa macros varies depending on the switch platform and the software image running on the switch: 				
	Switch# show parser macro Total number of macros = 6				
	Macro name : cisco-global Macro type : default global # Enable dynamic port error recovery for link state # failures errdisable recovery cause link-flap errdisable recovery interval 60				
	<output truncated=""></output>				
	Macro name : cisco-de: Macro type : default : # macro keywords \$AVII # Basic interface - En	interface D			

```
# Recommended value for access vlan (AVID) should not be 1
switchport access vlan $AVID
switchport mode access
<output truncated>
_____
Macro name : cisco-phone
Macro type : default interface
# Cisco IP phone + desktop template
# macro keywords $AVID $VVID
# VoIP enabled interface - Enable data VLAN
# and voice VLAN (VVID)
# Recommended value for access vlan (AVID) should not be 1
switchport access vlan $AVID
switchport mode access
<output truncated>
_____
Macro name : cisco-switch
Macro type : default interface
# macro keywords $NVID
# Access Uplink to Distribution
# Do not apply to EtherChannel/Port Group
# Define unique Native VLAN on trunk ports
# Recommended value for native vlan (NVID) should not be 1
switchport trunk native vlan $NVID
<output truncated>
_____
Macro name : cisco-router
Macro type : default interface
# macro keywords $NVID
# Access Uplink to Distribution
# Define unique Native VLAN on trunk ports
# Recommended value for native vlan (NVID) should not be 1
switchport trunk native vlan $NVID
<output truncated>
_____
Macro name : snmp
Macro type : customizable
#enable port security, linkup, and linkdown traps
snmp-server enable traps port-security
snmp-server enable traps linkup
snmp-server enable traps linkdown
#set snmp-server host
snmp-server host ADDRESS
#set SNMP trap notifications precedence
snmp-server ip precedence VALUE
```

This is an example of output from the show parser macro name command:

```
Switch# show parser macro name standard-switch10
Macro name : standard-switch10
Macro type : customizable
macro description standard-switch10
# Trust QoS settings on VOIP packets
auto qos voip trust
```

Allow port channels to be automatically formed channel-protocol pagp

This is an example of output from the show parser macro brief command:

```
Switch# show parser macro brief
  default global : cisco-global
  default interface: cisco-desktop
  default interface: cisco-phone
  default interface: cisco-switch
  default interface: cisco-router
   customizable : snmp
<output truncated>
```

This is an example of output from the show parser description command:

```
Switch# show parser macro description

Global Macro(s): cisco-global

Interface Macro Description(s)

------

Gi0/1 standard-switch10

Gi0/2 this is test macro
```

This is an example of output from the **show parser description interface** command:

Switch# show parser macro description interface gigabitethernet0/2 Interface Macro Description Gi0/2 this is test macro

Related Commands	Command	Description
	macro apply	Applies a macro on an interface or applies and traces a macro on an interface.
	macro description	Adds a description about the macros that are applied to an interface.
	macro global	Applies a macro on a switch or applies and traces a macro on a switch.
	macro global description	Adds a description about the macros that are applied to the switch.
	macro name	Creates a macro.
	show running-config	Displays the current operating configuration, including defined macros. For syntax information, select Cisco IOS Configuration Fundamentals Command Reference, Release 12.2 > File Management Commands > Configuration File Management Commands .

2-665

show policy-map

Use the **show policy-map** user EXEC command to display quality of service (QoS) policy maps, which define classification criteria for incoming traffic. Policy maps can include policers that specify the bandwidth limitations and the action to take if the limits are exceeded.

show policy-map [policy-map-name [class class-map-name]] [| {begin | exclude | include}
expression]

Syntax Description	policy-map-name	(Optional) Display the specified policy-map name.				
	class class-map-name	(Optional) Display QoS policy actions for a individual class.				
	begin	(Optional) Display begins with the line that matches the <i>expression</i>.(Optional) Display excludes lines that match the <i>expression</i>.				
	exclude					
	include	(Optional) Display includes lines that match the specified expression.				
	expression	Expression in the output to use as a reference point.				
Note	-	mmand-line help string, the control-plane and interface keywords are not ics shown in the display should be ignored.				
Command Modes	User EXEC					
Command History	Release	Modification				
	12.1(19)EA1	This command was introduced.				
Usage Guidelines	-	sitive. For example, if you enter I exclude output , the lines that contain <i>output</i> es that contain <i>Output</i> appear.				
Examples	This is an example of out	tput from the show policy-map command:				
	Switch> show policy-ma Policy Map videowizard class videowizard_1 set dscp 34 police 100000000 20	_policy2				
	Policy Map mypolicy class dscp5					

Related Commands	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.

show port-security

Use the **show port-security** privileged EXEC command to display port-security settings for an interface or for the switch.

show port-security [interface interface-id] [address | vlan] [| {begin | exclude | include}
expression]

Syntax Description	interface interface-id	(Optional) Display port security settings for the specified interface. Valid interfaces include physical ports (including type, module, and port number).
	address	(Optional) Display all secure MAC addresses on all ports or a specified port.
	vlan	(Optional) Display port security settings for all VLANs on the specified interface. This keyword is visible only on interfaces that have the switchport mode set to trunk .
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

Usage Guidelines

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter an *interface-id*, the command displays port security settings for the interface.

If you enter the **address** keyword, the command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter an *interface-id* and the **address** keyword, the command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

If you enter the **vlan** keyword, the command displays the configured maximum and the current number of secure MAC addresses for all VLANs on the interface. This option is visible only on interfaces that have the switchport mode set to **trunk**.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of the output from the **show port-security** command:

Switch# show port-security

Secure Port	MaxSecureAddr (Count)		SecurityViolation (Count)	Security Action
Gi0/1	1	0	0	Shutdown
Total Addresses	in System (excl	uding one mac	per port) : 1	

Max Addresses limit in System (excluding one mac per port) : 6272

This is an example of output from the **show port-security interface** *interface-id* command:

Switch# show port-security interface gigabitethernet0/1

```
Port Security : Enabled
Port status : SecureUp
Violation mode : Shutdown
Maximum MAC Addresses : 1
Total MAC Addresses : 0
Configured MAC Addresses : 0
Aging time : 0 mins
Aging type : Absolute
SecureStatic address aging : Disabled
Security Violation count : 0
```

This is an example of output from the show port-security address command:

Switch# show port-security address

Secure Mac Address Table

Vlan	Mac Address	Туре	Ports	Remaining Age (mins)
1	0006.0700.0800	SecureConfigured	Gi0/2	1
		(]];		. 1

Total Addresses in System (excluding one mac per port) : 1 Max Addresses limit in System (excluding one mac per port) : 6272

This is an example of output from the **show port-security interface gigabitethernet**0/2 **address** command:

Switch# show port-security interface gigabitethernet0/2 address Secure Mac Address Table

Vlan	Mac Address	Туре	Ports	Remaining Age (mins)
1	0006.0700.0800	SecureConfigured	Gi0/2	1
	Addresses: 1			

This is an example of output from the **show port-security interface** *interface-id* **vlan** command:

```
Switch# show port-security interface gigabitethernet0/2 vlan
Default maximum:not set, using 5120
VLAN Maximum Current
5 default 1
```

5	actuate	-
10	default	54
11	default	101
12	default	101
13	default	201
14	default	501

Related Commands	Command	Description
	clear port-security	Deletes from the MAC address table a specific type of secure address or all the secure addresses on the switch or an interface.
	switchport port-security	Enables port security on a port, restricts the use of the port to a user-defined group of stations, and configures secure MAC addresses.

show power inline

Use the **show power inline** user EXEC command to display the Power over Ethernet (PoE) status for the specified PoE port or for all PoE ports.

show power inline [interface-id | consumption] [| {begin | exclude | include} expression]

Syntax Description	interface-	id		ional) Dis fied inter		lated powe	er mana	gement information for the		
	consumpt	tion	(Opti	ional) Dis	splay the pow	ver allocat	ed to de	evices connected to PoE port		
	begin		(Opti	ional) Dis	splay begins	with the li	ne that	matches the expression.		
	exclude		(Optional) Display excludes lines that match the expression.							
	include		(Optional) Display includes lines that match the specified <i>expression</i> .							
	expression	ı	Expr	ession in	the output to	use as a i	referenc	ce point.

This is an example of output from the show power inline command on a port:

Switch> s	how pow	er inline f	astether	net0/1		
Interface	e Admin	Oper	Power	Device	Class	Max
			(Watts)			
Fa0/1	auto	on	6.3	IP Phone 7910	n/a	15.4

This is an example of output from the **show power inline consumption** command on all PoE switch ports:

Switch> **show power inline consumption** Default PD consumption : 15400 mW

Field	Description
Admin	Administration mode: auto, off, static
Oper	Operating mode:
	• on—the powered device is detected, and power is applied.
	• off—no PoE is applied.
	• faulty—device detection or a powered device is in a faulty state.
	• power-deny—a powered device is detected, but no PoE is available, or the maximum wattage exceeds the detected powered-device maximum.
Power	The supplied PoE in watts
Device	The device type detected: n/a, unknown, Cisco powered-device, IEEE powered-device, <name cdp="" from=""></name>
Class	The IEEE classification: n/a, Class <0–4>
Available	The total amount of PoE in the system
Used	The amount of PoE allocated to ports
Remaining	The amount of PoE not allocated to ports in the system. (Available – Used = Remaining)

Table 2-35show power inline interface Field Descriptions

Related Commands	Command	Description
	logging event power-inline-status	Enables the logging of PoE events.
	power inline	Configures the power management mode for the specified PoE port or for all PoE ports.
	show controllers power inline	Displays the values in the registers of the specified PoE controller.

show sdm prefer

Use the **show sdm prefer** privileged EXEC command to display information about the Switch Database Management (SDM) templates that can be used to maximize used for allocating system resources for a particular feature, or use the command without a keyword to display the template in use.

show sdm prefer [access | default | dual-ipv4-and-ipv6 {default | routing | vlan} | routing | vlan]
[| {begin | exclude | include} expression]

Syntax Description	access	(Optional) Display the template that maximizes system resources for ACLs.
	default	(Optional) Display the template that balances system resources among features.
	dual-ipv4-and-ipv6	(Optional) Display the dual templates that support both IPv4 and IPv6.
	{default routing vlan}	• default —Display the default dual template configuration.
	,	• routing —Display the routing dual template configuration.
		• vlan—Display the VLAN dual template configuration.
	routing	(Optional) Display the template that maximizes system resources for routing.
	vlan	(Optional) Display the template that maximizes system resources for Layer 2 VLANs.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

initialità inistory	nereuse	mounioution
	12.1(19)EA1	This command was introduced.
	12.2(25)SE	The dual-ipv4-and-ipv6 {default vlan) keywords were added.
	12.2(25)SED	The access keyword was added.
	12.2(25)SEE	The routing keyword was added for the dual IPv4 and IPv6 template.

Usage Guidelines

When you change the SDM template by using the **sdm prefer** global configuration command, you must reload the switch for the configuration to take effect. If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of output from the show sdm prefer command:

```
Switch# show sdm prefer
```

```
The current template is "desktop default" template.
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANS.
number of unicast mac addresses: 6K
number of igmp groups + multicast routes: 1K
number of unicast routes: 8K
```

number of unicast fouces:	0 K
number of directly connected hosts:	бK
number of indirect routes:	2K
number of policy based routing aces:	0
number of qos aces:	512
number of security aces:	1K

This is an example of output from the **show sdm prefer routing** command entered on a switch:

```
Switch# show sdm prefer routing
"desktop routing" template:
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANs.
 number of unicast mac addresses:
                                               3ĸ
 number of igmp groups + multicast routes:
                                               1 K
 number of unicast routes:
                                               11K
   number of directly connected hosts:
                                               3ĸ
   number of indirect routes:
                                               8K
 number of policy based routing aces:
                                               512
 number of qos aces:
                                               512
 number of security aces:
                                                1 K
```

This is an example of output from the **show sdm prefer dual-ipv4-and-ipv6 default** command entered on a switch:

```
Switch# show sdm prefer dual-ipv4-and-ipv6 default
"desktop IPv4 and IPv6 default" template:
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANs.
 number of unicast mac addresses:
                                                     2 K
 number of IPv4 IGMP groups + multicast routes:
                                                     1 K
 number of IPv4 unicast routes:
                                                     3ĸ
   number of directly-connected IPv4 hosts:
                                                     2K
   number of indirect IPv4 routes:
                                                     1 K
 number of IPv6 multicast groups:
                                                     1 K
 number of directly-connected IPv6 addresses:
                                                     2к
 number of indirect IPv6 unicast routes:
                                                     1 K
 number of IPv4 policy based routing aces:
                                                     0
 number of IPv4/MAC qos aces:
                                                     512
 number of IPv4/MAC security aces:
                                                     1 K
 number of IPv6 policy based routing aces:
                                                     0
 number of IPv6 qos aces:
                                                     510
 number of IPv6 security aces:
                                                     510
```

This is an example of output from the **show sdm prefer** command when you have configured a new template but have not reloaded the switch:

Switch# show sdm prefer

The current template is "desktop routing" template. The selected template optimizes the resources in

the switch to support this level of features 8 routed interfaces and 1024 VLANs.	for
number of unicast mac addresses:	3K
number of igmp groups + multicast routes:	1K
number of unicast routes:	11K
number of directly connected hosts:	3 K
number of indirect routes:	8K
number of qos aces:	512
number of security aces:	1K

On next reload, template will be "desktop vlan" template.

Related Commands	Command	Description
	sdm prefer	Sets the SDM template to maximize resources for routing or VLANs or to the
		default template, or to select a dual IPv4 and IPv6 template.

show setup express

Use the **show setup express** privileged EXEC command to display if Express Setup mode is active on the switch.

show setup express [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .			
	include	(Optional) Display includes lines that match the specified <i>expression</i> .			
	expression	Expression in the output to use as a reference point.			
Defaults	No default is defi	ned.

	macro auto execute	Defines mapping from an event trigger to a built-in macro.
	shell trigger	Creates an event trigger.

show spanning-tree

Use the show spanning-tree user EXEC command to display spanning-tree state information.

- show spanning-tree [bridge-group | active [detail] | backbonefast | blockedports | bridge | detail
 [active] | inconsistentports | interface interface-id | mst | pathcost method | root | summary
 [totals] | uplinkfast | vlan vlan-id] [| {begin | exclude | include} expression]
- show spanning-tree bridge-group [active [detail] | blockedports | bridge | detail [active] |
 inconsistentports | interface interface-id | root | summary] [| {begin | exclude | include}
 expression]
- show spanning-tree vlan vlan-id [active [detail] | blockedports | bridge | detail [active] |
 inconsistentports | interface interface-id | root | summary] [| {begin | exclude | include}
 expression]
- show spanning-tree {vlan vlan-id | bridge-group} bridge [address | detail | forward-time | hello-time | id | max-age | priority [system-id] | protocol] [| {begin | exclude | include} expression]
- show spanning-tree {vlan vlan-id | bridge-group} root [address | cost | detail | forward-time |
 hello-time | id | max-age | port | priority [system-id] [| {begin | exclude | include}
 expression]
- show spanning-tree interface interface-id [active [detail] | cost | detail [active] | inconsistency |
 portfast | priority | rootcost | state] [| {begin | exclude | include} expression]

show spanning-tree mst [configuration [digest]] | [instance-id [detail | interface interface-id
 [detail]] [| {begin | exclude | include} expression]

Syntax Description	bridge-group	(Optional) Specify the bridge group number. The range is 1 to 255.
	active [detail]	(Optional) Display spanning-tree information only on active interfaces (available only in privileged EXEC mode).
	backbonefast	(Optional) Display spanning-tree BackboneFast status.
	blockedports	(Optional) Display blocked port information (available only in privileged EXEC mode).
	bridge [address detail forward-time hello-time id max-age priority [system-id] protocol]	(Optional) Display status and configuration of this switch (optional keywords available only in privileged EXEC mode).
	detail [active]	(Optional) Display a detailed summary of interface information (active keyword available only in privileged EXEC mode).
	inconsistentports	(Optional) Display inconsistent port information (available only in privileged EXEC mode).
	interface interface-id [active [detail] cost detail [active] inconsistency portfast priority rootcost state]	(Optional) Display spanning-tree information for the specified interface (all options except portfast and state available only in privileged EXEC mode). Enter each interface separated by a space. Ranges are not supported. Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 48.

mst [configuration [digest]] [instance-id	(Optional) Display the multiple spanning-tree (MST) region configuration and status (available only in privileged EXEC mode).		
[detail interface	The keywords have these meanings:		
interface-id [detail]]	• digest —(Optional) Display the MD5 digest included in the current MST configuration identifier (MSTCI). Two separate digests, one for standard and one for prestandard switches, appear (available only in privileged EXEC mode).		
	The terminology was updated for the implementation of the IEEE standard, and the <i>txholdcount</i> field was added.		
	The new master role appears for boundary ports.		
	The word <i>pre-standard</i> or <i>Pre-STD</i> appears when an IEEE standard bridge sends prestandard BPDUs on a port.		
	The word <i>pre-standard</i> (<i>config</i>) or <i>Pre-STD-Cf</i> appears when a port has been configured to transmit prestandard BPDUs and no prestandard BPDU has been received on that port.		
	The word <i>pre-standard</i> (<i>rcvd</i>) or <i>Pre-STD-Rx</i> appears when a prestandard BPDU has been received on a port that has not been configured to transmit prestandard BPDUs.		
	A <i>dispute</i> flag appears when a designated port receives inferior designated information until the port returns to the forwarding state or ceases to be designated.		
	• <i>instance-id</i> —You can specify a single instance ID, a range of IDs separated by a hyphen, or a series of IDs separated by a comma. The range is 1 to 4094. The display shows the number of currently configured instances.		
	• interface <i>interface-id</i> —(Optional) Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 48.		
	• detail —(Optional) Display detailed information for the instance or interface.		
pathcost method	(Optional) Display the default path cost method (available only in privileged EXEC mode).		
root [address cost detail forward-time hello-time id max-age port priority [system-id]]			
summary [totals]	(Optional) Display a summary of port states or the total lines of the spanning-tree state section. The words <i>IEEE Standard</i> identify the MST version running on a switch.		
uplinkfast	(Optional) Display spanning-tree UplinkFast status.		
vlan vlan-id [active	(Optional) Display spanning-tree information for the specified VLAN (some keywords available only in privileged EXEC mode). You can		
[detail] backbonefast blockedports bridge [address detail forward-time hello-time id max-age priority	specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.		

	begin		(Optional) Display begins with the line that matches the <i>expression</i> .	
	exclude		(Optional) Display excludes lines that match the <i>expression</i> .	
	include		(Optional) Display includes lines that match the specified expression.	
	expression		Expression in the output to use as a reference point.	
Command Modes	User EXEC			
Command History	Release	M	odification	
	12.1(19)EA1	Th	nis command was introduced.	
	12.2(25)SEC		he digest keyword was added, and new digest and transmit hold count elds appear.	
Usage Guidelines	If the <i>vlan-id</i>	variable is omi	tted, the command applies to the spanning-tree instance for all VLANs.	
	Expressions are case sensitive. For example, if you enter exclude output, the lines that contain <i>output</i> do not appear, but the lines that contain <i>Output</i> appear.

Command	Description
clear spanning-tree counters	Clears the spanning-tree counters.
clear spanning-tree detected-protocols	Restarts the protocol migration process.
spanning-tree backbonefast	Enables the BackboneFast feature.
spanning-tree bpdufilter	Prevents an interface from sending or receiving bridge protocol data units (BPDUs).
spanning-tree bpduguard	Puts an interface in the error-disabled state when it receives a BPDU.
spanning-tree cost	Sets the path cost for spanning-tree calculations.
spanning-tree extend system-id	Enables the extended system ID feature.
spanning-tree guard	Enables the root guard or the loop guard feature for all the VLANs associated with the selected interface.
spanning-tree link-type	Overrides the default link-type setting for rapid spanning-tree transitions to the forwarding state.

Command	Description
spanning-tree loopguard default	Prevents alternate or root ports from becoming the designated port because of a failure that leads to a unidirectional link.
spanning-tree mst configuration	Enters multiple spanning-tree (MST) configuration mode through which the MST region configuration occurs.
spanning-tree mst cost	Sets the path cost for MST calculations.
spanning-tree mst forward-time	Sets the forward-delay time for all MST instances.
spanning-tree mst hello-time	Sets the interval between hello BPDUs sent by root switch configuration messages.
spanning-tree mst max-age	Sets the interval between messages that the spanning tree receives from the root switch.
spanning-tree mst max-hops	Sets the number of hops in an MST region before the BPDU is discarded and the information held for an interface is aged.
spanning-tree mst port-priority	Configures an interface priority.
spanning-tree mst priority	Configures the switch priority for the specified spanning-tree instance.
spanning-tree mst root	Configures the MST root switch priority and timers based on the network diameter.
spanning-tree port-priority	Configures an interface priority.
spanning-tree portfast (global configuration)	Globally enables the BPDU filtering or the BPDU guard feature on Port Fast-enabled interfaces or enables the Port Fast feature on all nontrunking interfaces.
spanning-tree portfast (interface configuration)	Enables the Port Fast feature on an interface and all its associated VLANs.
spanning-tree uplinkfast	Accelerates the choice of a new root port when a link or switch fails or when the spanning tree reconfigures itself.
spanning-tree vlan	Configures spanning tree on a per-VLAN basis.

show storm-control

Use the **show storm-control** user EXEC command to display broadcast, multicast, or unicast storm control settings on the switch or on the specified interface or to display storm-control history.

show storm-control [interface-id] [broadcast | multicast | unicast] [| {begin | exclude | include}
expression]

Syntax Description	interface-id	(Optional) Interface ID for the physical port (including type, module, and port number).
	broadcast	(Optional) Display broadcast storm threshold setting.
	multicast	(Optional) Display multicast storm threshold setting.
	unicast	(Optional) Display unicast storm threshold setting.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.

Command Modes User EXEC

Command History	Release	Modification
	12.1(19)EA1	This command was introduced.

Usage Guidelines Whe

When you enter an *interface-id*, the storm control thresholds appear for the specified interface.

If you do not enter an *interface-id*, settings appear for one traffic type for all ports on the switch.

If you do not enter a traffic type, settings appear for broadcast storm control.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of a partial output from the **show storm-control** command when no keywords are entered. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

Switch> show storm-control

Interface	Filter State	Upper	Lower	Current
Gi0/1	Forwarding	20 pps	10 pps	5 pps
Gi0/2	Forwarding	50.00%	40.00%	0.00%
<output td="" trun<=""><td>cated></td><td></td><td></td><td></td></output>	cated>			

This is an example of output from the **show storm-control** command for a specified interface. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

Switch> show	storm-control	gigabitether	net 0/1	
Interface	Filter State	Upper	Lower	Current
Gi0/1	Forwarding	20 pps	10 pps	5 pps

Table 2-36 describes the fields in the **show storm-control** display.

Table 2-36show storm-control Field Descriptions

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter:
	• Blocking—Storm control is enabled, and a storm has occurred.
	• Forwarding—Storm control is enabled, and no storms have occurred.
	• Inactive—Storm control is disabled.
Upper	Displays the rising suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Lower	Displays the falling suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Current	Displays the bandwidth usage of broadcast traffic or the specified traffic type (broadcast, multicast, or unicast) as a percentage of total available bandwidth. This field is only valid when storm control is enabled.

Related Commands

Command	Description
storm-control	Sets the broadcast, multicast, or unicast storm control levels for the switch.

show system mtu

Use the **show system mtu** privileged EXEC command to display the global maximum transmission unit (MTU) or maximum packet size set for the switch.

show system mtu [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
	ports; the system ro Expressions are cas	efers to ports operating at 10/100 Mb/s; the system jumbo MTU refers to Gigabit outing MTU refers to routed ports. The sensitive. For example, if you enter I exclude output , the lines that contain <i>output</i> the lines that contain <i>Output</i> appear.
Examples	This is an example	of output from the show system mtu command:
	-	s 1500 bytes size is 1550 bytes
	Routing MTU size	is 1500 bytes.
Related Commands	Routing MTU size	is 1500 bytes. Description

show udld

Use the **show udld** user EXEC command to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

show udld [interface-id] [| {begin | exclude | include} expression]

Syntax Description	interface-id	(Optional) ID of the interface and port number. Valid interfaces include physical ports and VLANs. The VLAN range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	User EXEC	
Command History	Release	Modification
	12.1(19)EA1	This command was introduced.
Examples	-	of output from the show udld <i>interface-id</i> command. For this display, UDLD is ds of the link, and UDLD detects that the link is bidirectional. Table 2-37 describes analy
	Switch> show udld Interface gi0/1 	gigabitethernet0/1
		istrative configuration setting: Follows device default
		tional state: Enabled onal state: Bidirectional al state: Advertisement - Single Neighbor detected 60

Field	Description
Interface	The interface on the local device configured for UDLD.
Port enable administrative configuration setting	How UDLD is configured on the port. If UDLD is enabled or disabled, the port enable configuration setting is the same as the operational enable state. Otherwise, the enable operational setting depends on the global enable setting.
Port enable operational state	Operational state that shows whether UDLD is actually running on this port.
Current bidirectional state	The bidirectional state of the link. An unknown state appears if the link is down or if it is connected to an UDLD-incapable device. A bidirectional state appears if the link is a normal two-way connection to a UDLD-capable device. All other values mean miswiring.
Current operational state	The current phase of the UDLD state machine. For a normal bidirectional link, the state machine is most often in the Advertisement phase.
Message interval	How often advertisement messages are sent from the local device. Measured in seconds.
Time out interval	The time period, in seconds, that UDLD waits for echoes from a neighbor device during the detection window.
Entry 1	Information from the first cache entry, which contains a copy of echo information received from the neighbor.
Expiration time	The amount of time in seconds remaining before this cache entry is aged out.
Device ID	The neighbor device identification.
Current neighbor state	The neighbor's current state. If both the local and neighbor devices are running UDLD normally, the neighbor state and local state should be bidirectional. If the link is down or the neighbor is not UDLD-capable, no cache entries appear.
Device name	The device name or the system serial number of the neighbor. The system serial number appears if the device name is not set or is set to the default (Switch).
Port ID	The neighbor port ID enabled for UDLD.
Neighbor echo 1 device	The device name of the neighbors' neighbor from which the echo originated.
Neighbor echo 1 port	The port number ID of the neighbor from which the echo originated.
Message interval	The rate, in seconds, at which the neighbor is sending advertisement messages.
CDP device name	The CDP device name or the system serial number. The system serial number appears if the device name is not set or is set to the default (Switch).

Table 2-37	show udld Field Descriptions
------------	------------------------------

Related Commands	Command	Description
	udld	Enables aggressive or normal mode in UDLD or sets the configurable message timer time.
	udld port	Enables UDLD on an individual interface or prevents a fiber-optic interface from being enabled by the udld global configuration command.
	udld reset	Resets all interfaces shutdown by UDLD and permits traffic to begin passing through them again.

show version

Use the **show version** user EXEC command to display version information for the hardware and firmware.

show version [| {begin | exclude | include} expression]

Syntax Description	begin	(Optional) Display begins with the line that matches the <i>expression</i> .			
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .			
	include	(Optional) Display includes lines that match the specified expression.			
	expression	Expression in the output to use as a reference point.			
Command Modes	User EXEC				
Command History	Release	Modification			
	12.1(19)EA1	This command was introduced.			
Usage Guidelines	_	te sensitive. For example, if you enter l exclude output , the lines that contain <i>output</i> he lines that contain <i>Output</i> appear.			
Examples	This is an example	of output from the show version command:

show vlan

Use the **show vlan** user EXEC command to display the parameters for all configured VLANs or one VLAN (if the VLAN ID or name is specified) on the switch.

show vlan [brief | dot1q tag native | id vlan-id | internal usage | mtu | name vlan-name |
private-vlan [type] | remote-span | summary] [| {begin | exclude | include} expression]

Syntax Description	brief	(Optional) Display one line for each VLAN with the VLAN name, status, and its ports.
	dot1q tag native	(Optional) Display the IEEE 802.1Q native VLAN tagging status.
	id vlan-id	(Optional) Display information about a single VLAN identified by VLAN ID number. For <i>vlan-id</i> , the range is 1 to 4094.
	internal usage	(Optional) Display a list of VLANs being used internally by the switch. These VLANs are always from the extended range (VLAN IDs 1006 to 4094), and you cannot create VLANs with these IDS by using the vlan global configuration command until you remove them from internal use.
	mtu	(Optional) Display a list of VLANs and the minimum and maximum transmission unit (MTU) sizes configured on ports in the VLAN.
	name vlan-name	(Optional) Display information about a single VLAN identified by VLAN name. The VLAN name is an ASCII string from 1 to 32 characters.
	private-vlan	(Optional) Display information about configured private VLANs, including primary and secondary VLAN IDs, type (community, isolated, or primary) and ports belonging to the private VLAN. This keyword is only supported if your switch is running the IP services image.
	type	(Optional) Display only private VLAN ID and type.
	remote-span	(Optional) Display information about Remote SPAN (RSPAN) VLANs.
	summary	(Optional) Display VLAN summary information.
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.

Though visible in the command-line help string, the ifindex keyword is not supported.

Command Modes

User EXEC

Command History

у	Release	Modification	
	12.1(19)EA1	This command was introduced.	
	12.2(20)SE	The mtu and private-vlan keywords were added.	
	12.2(25)SE	The dot1q tag native keywords were added.	

Usage Guidelines

In the **show vlan mtu** command output, the MTU_Mismatch column shows whether all the ports in the VLAN have the same MTU. When *yes* appears in this column, it means that the VLAN has ports with different MTUs, and packets that are switched from a port with a larger MTU to a port with a smaller MTU might be dropped. If the VLAN does not have an SVI, the hyphen (-) symbol appears in the SVI_MTU column. If the MTU-Mismatch column displays *yes*, the names of the port with the MinMTU and the port with the MaxMTU appear.

If you try to associate a private VLAN secondary VLAN with a primary VLAN before you define the secondary VLAN, the secondary VLAN is not included in the **show vlan private-vlan** command output.

In the **show vlan private-vlan type** command output, a type displayed as *normal* means a VLAN that has a private VLAN association but is not part of the private VLAN. For example, if you define and associate two VLANs as primary and secondary VLANs and then delete the secondary VLAN configuration without removing the association from the primary VLAN, the VLAN that was the secondary VLAN is shown as *normal* in the display. In the **show vlan private-vlan** output, the primary and secondary VLAN pair is shown as *non-operational*.

Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

<output truncated>

Table 2-38show vlan Command Output Fields

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Туре	Media type of the VLAN.
SAID	Security association ID value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.
BrdgMode	Bridging mode for this VLAN—possible values are source-route bridging (SRB) and source-route transparent (SRT); the default is SRB.
Trans1	Translation bridge 1.
Trans2	Translation bridge 2.
Remote SPAN VLANs	Identifies any RSPAN VLANs that have been configured.
Primary/Secondary/ Type/Ports	Includes any private VLANs that have been configured, including the primary VLAN ID, the secondary VLAN ID, the type of secondary VLAN (community or isolated), and the ports that belong to it.

This is an example of output from the **show vlan dot1q tag native** command:

Switch> **show vlan dotlq tag native** dotlq native vlan tagging is disabled

This is an example of output from the show vlan private-vlan command:

	show vlan Secondary	private-vlan	Ports	
10	501	isolated	Gi0/3	
10	502	community	Fa0/11	
10	503	non-operational3	-

                                     0
                  -
                     _
Remote SPAN VLAN
-----
Disabled
```

This is an example of output from the **show vlan internal usage** command. It shows that VLANs 1025 and 1026 are being used as internal VLANs for Fast Ethernet routed ports 23 and 24. If you want to use one of these VLAN IDs, you must first shut down the routed port, which releases the internal VLAN, and then create the extended-range VLAN. When you start up the routed port, another internal VLAN number is assigned to it.

Switch> **show vlan internal usage** VLAN Usage ---- -----1025 FastEthernet0/23 1026 FastEthernet0/24

Related Commands	Command	Description
	private-vlan	Configures a VLAN as a community, isolated, or primary VLAN or associates a primary VLAN with secondary VLANs.
	switchport mode	Configures the VLAN membership mode of a port.
	vlan (global configuration)	Enables VLAN configuration mode where you can configure VLANs 1 to 4094.

show vlan access-map

Use the **show vlan access-map** privileged EXEC command to display information about a particular VLAN access map or for all VLAN access maps.

show vlan access-map [mapname] [| {begin | exclude | include} expression]

Syntax Description	mapname	(Optional) Name of a specific VLAN access map.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .
	include	(Optional) Display includes lines that match the specified <i>expression</i> .
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification

		the lines that contain <i>Output</i> appear.
Examples	This is an example	e of output from the show vlan access-map command:
	-	-
	Action: forward	
Related Commands	Command	Description
	show vlan filter	Displays information about all VLAN filters or about a particular VLAN or

show vian inter	VLAN access map.
vlan access-map	Creates a VLAN map entry for VLAN packet filtering.
vlan filter	Applies a VLAN map to one or more VLANs.

show vlan filter

Use the **show vlan filter** privileged EXEC command to display information about all VLAN filters or about a particular VLAN or VLAN access map.

show vlan filter [access-map name | vlan vlan-id] [| {begin | exclude | include} expression]

Syntax Description	access-map name	(Optional) Display filtering information for the specified VLAN access map.
	vlan vlan-id	(Optional) Display filtering information for the specified VLAN. The range is 1 to 4094.
	begin	(Optional) Display begins with the line that matches the expression.
	exclude	(Optional) Display excludes lines that match the expression.
	include	(Optional) Display includes lines that match the specified expression.
	expression	Expression in the output to use as a reference point.
Command Modes	Privileged EXEC	
Command History	Release	Modification
-	12.1(19)EA1	This command was introduced.
Usage Guidelines	-	sensitive. For example, if you enter l exclude output , the lines that contain <i>output</i> lines that contain <i>Output</i> appear.

This is an example of output from the **show vmps statistics** command. Table 2-39 describes each field in the display.

Switch> show vmps statistics VMPS Client Statistics _____ 0 VQP Queries: VQP Responses: 0 VMPS Changes: 0 VQP Shutdowns: 0 VQP Denied: 0 VQP Wrong Domain: 0 VQP Wrong Version: 0 VQP Insufficient Resource: 0

Table 2-39 show vmps statistics Field Descriptions

Field	Description		
VQP Queries	Number of queries sent by the client to the VMPS.		
VQP Responses	Number of responses sent to the client from the VMPS.		
VMPS Changes	Number of times that the VMPS changed from one server to another.		
VQP Shutdowns	Number of times the VMPS sent a response to shut down the port. The client disables the port and removes all dynamic addresses on this port from the address table. You must administratively re-enable the port to restore connectivity.		
VQP Denied	Number of times the VMPS denied the client request for security reasons. When the VMPS response denies an address, no frame is forwarded to or from the workstation with that address (broadcast or multicast frames are delivered to the workstation if the port has been assigned to a VLAN). The client keeps the denied address in the address table as a blocked address to prevent more queries from being sent to the VMPS for each new packet received from this workstation. The client ages the address if no new packets are received from this workstation on this port within the aging time period.		
VQP Wrong Domain	Number of times the management domain in the request does not match the one for the VMPS. Any previous VLAN assignments of the port are not changed. This response means that the server and the client have not been configured with the same VTP management domain.		
VQP Wrong Version	Number of times the version field in the query packet contains a value that is higher than the version supported by the VMPS. The VLAN assignment of the port is not changed. The switches send only VMPS Version 1 requests.		
VQP Insufficient Resource	Number of times the VMPS is unable to answer the request because of a resource availability problem. If the retry limit has not yet been reached, the client repeats the request with the same server or with the next alternate server, depending on whether the per-server retry count has been reached.		

Related Commands	Command	Description
	clear vmps statistics	Clears the statistics maintained by the VQP client.
	vmps reconfirm (privileged EXEC)	Sends VQP queries to reconfirm all dynamic VLAN assignments with the VMPS.
	vmps retry	Configures the per-server retry count for the VQP client.
	vmps server	Configures the primary VMPS and up to three secondary servers.

show vtp

Use the **show vtp** user EXEC command to display general information about the VLAN Trunking Protocol (VTP) management domain, status, and counters.

show vtp {counters | devices [conflicts] | interface [interface-id] | password | status } [| {begin |
 exclude | include } expression]

Syntax Description	counters	Display the VTP statistics for the switch.				
	password	Display the configured VTP password.				
	devices	Display information about all VTP version 3 devices in the domain. This keyword applies only if the switch is not running VTP version 3.				
	conflicts	(Optional) Display information about VTP version 3 devices that have conflicting primary servers. This command is ignored when the switch is in VTP transparent or VPT off mode.				
	interface [interface-id]	Display VTP status and configuration for all interfaces or the specified interface. The <i>interface-id</i> can be a physical interface or a port channel.				
	status	Display general information about the VTP management domain status.				
	begin	(Optional) Display begins with the line that matches the <i>expression</i> .				
	exclude	(Optional) Display excludes lines that match the <i>expression</i> .				
	include	(Optional) Display includes lines that match the specified <i>expression</i> .

Number of config revision errors	:	0
Number of config digest errors	:	0
Number of V1 summary errors	:	0

VTP pruning statistics:

Trunk	Join Transmitted	d Join Received	Summary advts received from non-pruning-capable device
Fa0/47	0	0	0
Fa0/48	0	0	0
Gi0/1	0	0	0
Gi0/2	0	0	0

Table 2-40 show vtp counters Field Descriptions

Field	Description
Summary advertisements received	Number of summary advertisements received by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.
Subset advertisements received	Number of subset advertisements received by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.
Request advertisements received	Number of advertisement requests received by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.
Summary advertisements transmitted	Number of summary advertisements sent by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.

Field	Description			
Subset advertisements transmitted	Number of subset advertisements sent by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.			
Request advertisements transmitted	Number of advertisement requests sent by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.			
Number of configuration	Number of revision errors.			
revision errors	Whenever you define a new VLAN, delete an existing one, suspend or resume an existing VLAN, or modify the parameters on an existing VLAN, the configuration revision number of the switch increments.			
	Revision errors increment whenever the switch receives an advertisement whose revision number matches the revision number of the switch, but the MD5 digest values do not match. This error means that the VTP password in the two switches is different or that the switches have different configurations.			
	These errors means that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.			
Number of configuration	Number of MD5 digest errors.			
digest errors	Digest errors increment whenever the MD5 digest in the summary packet and the MD5 digest of the received advertisement calculated by the switch do not match. This error usually means that the VTP password in the two switches is different. To solve this problem, make sure the VTP password on all switches is the same.			
	These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.			
Number of V1 summary	Number of Version 1 errors.			
errors	Version 1 summary errors increment whenever a switch in VTP V2 mode receives a VTP Version 1 frame. These errors mean that at least one neighboring switch is either running VTP Version 1 or VTP Version 2 with V2-mode disabled. To solve this problem, change the configuration of the switches in VTP V2-mode to disabled.			
Join Transmitted	Number of VTP pruning messages sent on the trunk.			
Join Received	Number of VTP pruning messages received on the trunk.			
Summary Advts Received from non-pruning-capable device	Number of VTP summary messages received on the trunk from devices that do not support pruning.			

Table 2-40	show vtp counters	Field Description	ns (continued)
------------	-------------------	-------------------	----------------

This is an example of output from the **show vtp status** command for a switch running VTP version 2. Table 2-41 describes the fields in the display.

Switch> show vtp status		
VTP Version	:	2
Configuration Revision		0
Maximum VLANs supported locally	:	1005
Number of existing VLANs	:	45
VTP Operating Mode	:	Transparent
VTP Domain Name	:	shared_testbed1
VTP Pruning Mode	:	Disabled
VTP V2 Mode	:	Disabled
VTP Traps Generation	:	Enabled

MD5 digest

: 0x3A 0x29 0x86 0x39 0xB4 0x5D 0x58 0xD7

Field	Description	
VTP Version	Displays the VTP version operating on the switch. By default, the switch implements Version 1 but can be set to Version 2.	
Configuration Revision	Current configuration revision number on this switch.	
Maximum VLANs Supported Locally	Maximum number of VLANs supported locally.	
Number of Existing VLANs	Number of existing VLANs.	
VTP Operating Mode	Displays the VTP operating mode, which can be server, client, or transparent.	
	Server: a switch in VTP server mode is enabled for VTP and sends advertisements. You can configure VLANs on it. The switch guarantees that it can recover all the VLAN information in the current VTP database from NVRAM after reboot. By default, every switch is a VTP server.	
	Note The switch automatically changes from VTP server mode to VTP client mode if it detects a failure while writing the configuration to NVRAM and cannot return to server mode until the NVRAM is functioning.	
	Client: a switch in VTP client mode is enabled for VTP, can send advertisements, but does not have enough nonvolatile storage to store VLAN configurations. You cannot configure VLANs on it. When a VTP client starts up, it does not send VTP advertisements until it receives advertisements to initialize its VLAN database.	
	Transparent: a switch in VTP transparent mode is disabled for VTP, does not send or learn from advertisements sent by other devices, and cannot affect VLAN configurations on other devices in the network. The switch receives VTP advertisements and forwards them on all trunk ports except the one on which the advertisement was received.	
VTP Domain Name	Name that identifies the administrative domain for the switch.	
VTP Pruning Mode	Displays whether pruning is enabled or disabled. Enabling pruning on a VTP server enables pruning for the entire management domain. Pruning restricts flooded traffic to those trunk links that the traffic must use to access the appropriate network devices.	
VTP V2 Mode	Displays if VTP Version 2 mode is enabled. All VTP Version 2 switches operate in Version 1 mode by default. Each VTP switch automatically detects the capabilities of all the other VTP devices. A network of VTP devices should be configured to Version 2 only if all VTP switches in the network can operate in Version 2 mode.	
VTP Traps Generation	Displays whether VTP traps are sent to a network management station.	
MD5 Digest	A 16-byte checksum of the VTP configuration.	
Configuration Last Modified	Displays the date and time of the last configuration modification. Displays the IP address of the switch that caused the configuration change to the database.	

This is an example of output from the show vtp status command for a switch running VTP version 3. .
